2649. (*Mr. Ayerton.*) Would the effect of taxing a district be to tax the whole incomes of the country gentlemen, and to reduce the charges upon the merchant in conducting his business with a view to his ultimate profit?—Yes, and I think it would be very unfair.

2650. (*Mr. Dalglish.*) Would it not be unfair to tax the whole of the kingdom to benefit the railways in Ireland?—I take it that it would not be if it was an imperial tax.

Mr.
J. R. Tinsley.

17th May 1865.

Mr.
M. R. Ryan.

Mr.
M. R. Ryan.
7th May 1865.

place; the people are very poor and they have not got much money to pay for railway transit, and I think that if third-class trains were placed more within the reach and circumstances of the people they would be more available; but there is another matter which I think operates upon the traffic as much as the high prices, the want of a better arrangement as to keeping time between our principal lines of railway and the tributary ones. We have six lines of railway coming into Limerick, and by some extraordinary arrangement they do not at all keep time for the third-class passengers.

2656. Do you mean that that they do not keep the time as published in their time tables?—No; they keep that time, but they do not hit off the trains which arrive; that is to say they do not correspond. There is only one third-class train in the course of a day out of Limerick to Dublin; it leaves at half-past seven in the morning, and there are no other means or opportunity for third-class passengers to travel until the following morning; and all the country trains, those five or six trains of which I have spoken, arrive in Limerick after the departure of that train, and the passengers have consequently to remain at Limerick all that time and during the night in order to get off the following morning. If I may be allowed I will quote from a few memoranda which I have put down in writing upon this subject. What I am about to state will show the inconvenience and delay to the public, the result of the present railway system, particularly arising from small local companies. There are in connexion with the city of Limerick no less than six railway companies, namely, the Great Southern and Western, the Waterford and Limerick, the Cork and Limerick direct, Limerick and Foynes, Limerick and Ennis, and the Limerick, Castleconnell, and Killaloe. The passenger traffic between Limerick and Dublin is carried on by the Waterford and Limerick and the Great Southern and Western via the Limerick junction, also by the Limerick, Castleconnell, and Killaloe, and Great Southern and Western via Nenagh, and Roscrea and Parsonstown Junction via Limerick junction. There is only one third-class passenger train from Limerick to Dublin by this route. This train leaves Limerick at 7.30 a.m., and arrives at the Limerick junction at 8.35 a.m. Passengers, &c. are here detained until 10.44, over two hours, and then proceed by the train on the Great Southern and Western line by the train which left Cork at 8.0 a.m. This train arrives in Dublin at 3.35, whereby passengers, &c. going from Limerick to Dublin, a distance of 129 miles, are detained over eight hours on the road. This journey in the old coach times was performed in 12 hours. The next train for Dublin by this route is a mail train which carries the principal English mails, leaving Limerick at 11.0 a.m., and arriving at the Limerick Junction at 12.0 at noon; passengers and mails are here detained until 1.57 p.m., nearly two hours. This train arrives in Dublin at 5.35. If this train did not start from Limerick until 12.40 p.m. it would give the citizens of Limerick 1 hour and 46 minutes additional time to answer English letters received in the morning, and would also be a great convenience to passengers. There is no train from Limerick to Dublin on Sundays except the mail train at 10.45 p.m. In fact there is no train into or out of Limerick on Sundays except the night mail train, and an excursion train to Cork and Killaloe via Nenagh and Roscrea. There is no third-class train by this route. The first train by this route leaves Limerick at 10.15 a.m., and arrives in Nenagh at 11.30. Passengers, are detained in Nenagh until 2.0 p.m., two hours and a half, and arrive in Dublin at 5.35 p.m. 7 hours and 20 minutes on the road; whereas if this line was in the hands of one company, or the Government, the journey could be easily performed under five hours. The second train by this route leaves Limerick at 2.0 p.m., and arrives in Nenagh at 3.15 p.m.; again passengers are delayed until 5.15 p.m., two hours, and arrive in Dublin at 9.30, seven hours and a half on

the road. This line of railway is about five miles shorter than the one via Limerick junction, the distance by this route being 124, by Limerick junction 129. This route from Limerick to Dublin clearly exemplifies the evil of allowing railways to remain in the hands of rival and short companies. This railway is held by lease from the Limerick, Castleconnell, and Killaloe to the Limerick and Waterford Company as far as Birdhill, 14 miles, and of course the Waterford and Limerick Company throw every impediment in the way of passengers, &c., proceeding by this line, in order that they should go by the Limerick Junction on their own line. The Great Southern and Western own this line from Dublin to Birdhill, 110 miles, the Limerick, Castleconnell, and Killaloe from Birdhill to Limerick, 14 miles. Passengers can leave Nenagh, an unimportant town and only a few miles from Limerick, at 6.40 a.m., arrive in Dublin at 11.0 a.m., leave Dublin at 4.0 p.m., and arrive at their homes at 8.30 p.m. This line being in the hands of one company the public at Nenagh have the advantage of leaving their homes in the morning, have five hours to transact their business in Dublin, and can return same evening to their homes; and if the entire of this line was in the hands of one company or the Government the Limerick public would have the same advantage as Nenagh. The first train from Limerick arrives in Dublin at 3.35 p.m.; the last that leaves Dublin for Limerick is at 1.0 p.m. From the present railway system, so far as Limerick is concerned, the several companies connected with Limerick seem to throw every obstacle in the way of the public and put them to every possible inconvenience, and it is no great wonder their receipts should be so low. The Waterford and Limerick Company paid no dividend for many years; the last was about one per cent. The Limerick and Foynes, Limerick and Ennis, and the Limerick, Castleconnell, and Killaloe have paid no dividend since opened. The Government should by all means purchase up all railways, but more particularly small and non-paying ones, as they are great obstacles to large and extensive undertakings by running their trains at such times as are most inconvenient to them.

2657. The detention at the Limerick junction has been only a very recent occurrence?—Yes.

2658. Within the last two or three months?—Yes.

2659. Has the traffic between Limerick and Dublin diminished in consequence of that delay?—I should certainly think so, because persons who would otherwise go to Dublin more frequently do not wish to remain for a space of two hours in one of the most unpleasant places imaginable—the Limerick junction.

2660. Is there a considerable class of persons in Limerick who would be likely to travel to Dublin if they could return on the same day?—A very great number.

2661. Both first, second, and third class passengers?—Certainly.

2662. Do you think there would be a large third-class traffic between Limerick and Dublin?—Yes, not of the labouring class, but certainly of the shop-keeping class or the trading class. They obtain their supplies both from Dublin and from Cork, and they cannot travel to either of those places third-class and return on the same day.

2663. Not from Limerick to Cork and back on the same day?—I think not. I know that to Dublin they cannot do so. We had very great hopes when the Great Southern and Western Company were permitted to extend their line from Roscrea to Limerick, and they promised at that time to give us great facilities, to have a continuation of their line to Dublin, and that would have given us the same facility which they formerly gave us when a train started at 6 o'clock from Limerick, leaving Dublin at 4 o'clock again, so that the Limerick people had time to transact their business in Dublin and return to Limerick.

2664. To what do you attribute the discontinuance of that train?—I cannot officially say, but the im-

pression made was lest it might create a contest in opposition from the Waterford Company, who were, of course, anxious to carry goods through their own junction and 20 miles of their line; but the new line is perfectly useless because there is no third-class train from Limerick to Dublin via Nenagh.

2665. It was not discontinued, was it, in consequence of not paying?—I think not; the experiment has not been tried.

2666. You stated that at one time there was an early train from Limerick to Dublin by which you could go and return to Limerick on the same day?—Yes, by the junction before the opening of the Nenagh line, and which was a very great convenience.

2667. (*Capt. Galton.*) Was that a third-class train?—Yes.

2668. It came back from Dublin at 4 o'clock?—Yes.

2669. Did they issue return tickets for third-class passengers?—No, they charged full fares for them.

2670. (*Mr. Ayrton.*) What class of persons travelled by that train?—The persons, I think, were cattle dealers, and even poor shopkeepers—country shopkeepers—persons not in very good circumstances, who went to Dublin and selected their articles and then came back again. By the present arrangements a shopkeeper in Ennis, which is the capital of the county of Clare, and a very important town, as a third-class passenger, requires, in order to give him one day in Dublin to transact his business, four days to accomplish his journey.

2671. (*Capt. Galton.*) How do you make that out?—In this way; a third-class passenger must leave Ennis at 3 o'clock in the afternoon, that is, by the third-class train from Ennis, and remain in Limerick, which is distant only 25 miles, all night, and then proceed by the morning train to Dublin, which arrives at 3.35.

2672. At what time does the morning train leave?—At half-past 7; there is no train from Clare.

2673. That train does not correspond at the junction with another train?—No; and it waits at the Limerick junction for the train from Cork, which leaves Cork at 8 o'clock. The passenger must come the night before to Limerick, there being no train from Clare, and the passenger is 24 hours on the road, the distance being 154 miles by this arrangement. It takes the same time to return, as to go from Ennis to Dublin, and transact one's business. In the old coach times the journey would have been accomplished in the same time.

2674. This of course very much limits the third-class traffic between the district you have referred to and Dublin?—It entirely precludes it.

2675. (*Mr. Ayrton.*) Is there no afternoon train from Limerick to Ennis?—Yes, but it goes at a most inconvenient hour. It leaves before the arrival of the other local trains.

2676. It leaves before the arrival of the Dublin train?—Yes; and a person coming from Cork to Limerick, and wishing to go to Ennis third-class, cannot get off at night.

2677. (*Capt. Galton.*) It is cheaper for them to travel second-class than to stay a night in Limerick?—I fancy it is; but that class of people will not travel second class. You cannot make them understand it, when there is not a third-class train going from their homes they remain until there is one.

2678. Every impediment seems to be thrown in the way of third-class travellers?—I think so.

2679. (*Chairman.*) Do you attribute that fact mainly to the number of the small railway companies, and the conflicting interests which exist?—Yes. Each of the six lines to which I have referred is very short, and they have local directories, and they certainly do not hit off well. They appear not to understand each other; and I have not the slightest doubt that if all those lines of railway were under one central management, the times of the trains could be so adapted to

the convenience of the public that it would induce a large amount of additional traffic.

2680. (*Mr. Glyn.*) Has the Great Southern and Western Company ever tried to buy up the small railways?—I believe that they sought to buy up the Limerick and Castleconnell line, or to lease it.

2681. Have they power under their existing Acts to do so?—I think not.

2682. Nor any power with regard to the other lines?—I think not. I think they came to Parliament last session to buy up the Limerick and Castleconnell line from Nenagh to Birdhill, but they lost their bill, and the Waterford Company got an Act, and the Limerick and Waterford Company has the haulage of all those lines. It is an impression certainly of my own that it is from hostility on the part of the Limerick and Waterford Company and the Great Southern and Western Company that there is any impediment placed in the way of the traffic. It seems very odd that the direct route from Dublin via Nenagh should be perfectly useless, and that there should be no through traffic carried on, and no third-class train upon it, running uninterruptedly to Dublin, for it was made expressly upon those conditions.

2683. Is there no obligation upon the company under their Act of Parliament to put on a third-class train?—I cannot say; they run a third-class train to Nenagh.

2684. (*Mr. Ayrton.*) You think that all this inconvenience arises from the Waterford and Limerick Company trying to force traffic over the line from Limerick to Tipperary, rather than let it go over the line from Limerick to Nenagh?—I do; that is the legitimate channel for it, that is the straight line.

2685. (*Chairman.*) Do you wish to state any facts as to passenger fares on any other lines besides those between Limerick and Dublin?—I can state in general terms that the railways about Limerick are not doing the work of the country; carriers are still numerous on all the roads where railways are. I must state that we have not much experience on the subject, it has not been tested. The public think, from what the traffic managers tell them, that things are as low as they can go to pay, and those who are inexperienced in railways take that as the state of circumstances, and they have not pressed the matter; but my own impression is that when one sees the traffic of our own country all going by road by a route running parallel with railways, that the cattle are driven long distances, having been bought in the west of Limerick and Clare, and going up through Dublin on to Meath, where they are fattened—it strikes me that that being our principal traffic, as we have not got any manufactories, the attention of railway directors ought to be called to the matter to see how they could manage to get that traffic on to their lines; they say that it will not pay them to carry them under a certain rate, but the railway waggons go empty, and there is no prospect of filling them, when, if they even tried the experiment of taking them at a very considerable reduction, such a reduction as would pay the breeder of the cattle to rear them, I think that it would pay the railway companies something. There is no buyer who will drive cattle long distances without knowing that it deteriorates them very much, and brings them into bad condition, and who would not be willing to pay a moderate price for their carriage.

2686. Have you calculated the matter, and quite satisfied yourself that cattle would be carried profitably by the railway companies?—No, I have not; but there is a gentleman coming from my district, Mr. Cooper, of Cooperhill, who is extensively engaged in the cattle trade, and farms a large quantity of land, who is prepared, as I have understood from him, to give evidence on the subject, and he is certainly a very high authority, being a very large buyer of cattle.

2687. (*Mr. Glyn.*) Do the few passenger trains

Mr.
M. R. Ryan.

17th May 1865.

Mr.
M. R. Ryan.
17th May 1865.

which are run now, go tolerably full?—Indeed they do not, most of our trains are very empty indeed.

2688. Even without adding to their present expenses, with lower fares you think the traffic might be increased?—Decidedly; our smallest trains could carry many more passengers.

2689. (*Mr. Hamilton.*) If the fares were considerably reduced, do you think there would be a very large increase in the number of the third-class passengers?—I should anticipate such a result.

2690. (*Mr. Ayrton.*) From what do you think that increase would arise?—I think, with regard to the labouring classes, we have not many of those who would travel by a railway train, unless placed within the reach of their limited resources, but the small farmers and men going to market with their butter, corn, and other farm produce, would do so, who now drive their cars along the road carrying their butter to sell in the markets, and there are other persons who would go with their produce into a town and sell it, leaving their horse and car at home.

2691. (*Mr. Hamilton.*) Is it not the fact that the present high fares have compelled many persons to walk who would otherwise travel by the railway train?—There is no doubt of it, and in my own district. I am a shareholder in the Limerick and Foynes Railway; it has never paid one shilling dividend, and I do not expect that it ever will. The line runs parallel to the road leading to Askeaton and all that district; but the people never think of going by the railway, although the distance is very little more, if anything, than by the main road; the railway and the road are nearly parallel lines.

2692. (*Capt. Galton.*) I believe the fares are very low on that railway?—They have advanced them recently, but this is an instance of the effect—in April 1863 a considerable increase was made in the passenger charges of 10 or 12 per cent.; in the year previous to the change the number of passengers was 87,000, and in the year after the change the numbers fell to 63,000, showing a falling off of 24,000. So likewise there was a similar falling off in the traffic of the "Kelpy" steamer, working in connexion with the Foynes line, in which there was a similar raising of the fares, the falling off of passengers being from 15,000, making a receipt of 17,000*l.*, to 8,300, bringing 9,060*l.* That was the effect of increasing the rate.

2693. You reason from that, that if they lowered the rate they would get a still larger number of passengers?—Yes.

2694. Do many of the farmers of the agricultural community generally travel by railway within distances of 10 miles from Limerick to come to market?—No, they never think of doing so.

2695. Do they travel by railway within 15 miles of Limerick?—They very rarely do, I think, beyond the limit of 15 miles from Limerick; they do up to 15, but otherwise they employ their own horses and cars.

2696. If the fares were reduced would more persons travel by railway?—Yes; for I am certain that no farmer would take his horse and car into a town if he could avoid it, for he has to put his horse up at livery at very considerable cost, and, besides that, it takes his horse from the farm where it might be usefully employed.

2697. Are there no special passenger fares for market days?—Sometimes there are, but very rarely.

2698. Not as a regular rule?—No. One of the principal market towns on the Foynes railway is Rathkeale, which is a town of considerable importance; there are several fairs held there in a year, and the arrangement of the trains is such that a man can only get by any train half an hour to transact his business in the town, and then come back again.

2699. (*Mr. Ayrton.*) Do you know the precise nature of the passenger traffic in which the falling off took place?—Yes; it was in the general traffic from Clare. Persons pass over from Kilrush to the other side of the Shannon by a fast steamer and come to Foynes. Limerick was the supplying city for all the

small towns in Clare, and there is also a fashionable watering place called Kilkee on the coast of Clare.

2700. Was the falling off in the pleasure traffic or in the business traffic?—I cannot say, but I should say both. I know that there were a great number of persons who had their families down there, and who took lodgings in Kilkee to have the advantage of the cheap fares up and down the river; but when they found that the fares were advanced they went away to other watering places.

2701. That prevented a great number of persons from going backwards and forwards to that watering place?—Yes.

2702. Do you think that the falling off was chiefly in that class of persons, or in persons going to Limerick for business purposes?—I rather think it was in the former.

2703. (*Mr. Gower.*) I understand you to say that the shareholders have grounds for complaining of the management of their railways, and that if the rates were altered, and the trains differently arranged, they would receive larger profits than they do now?—That is really the feeling of the shareholders.

2704. Do they never remonstrate with the directors?—I have done so myself, and I have more than once heard other shareholders remonstrate with the directors at the half-yearly meetings; but our directors do not appear much to mind that. I was one of the promoters of the Foynes line at the original starting of it, and that was a line that was said to be required.

2705. In England, when shareholders are dissatisfied with their directors, they elect others. Has any attempt of that kind been made in Ireland?—The fact is that all our local lines have got into the hands of one party; a few persons who hold the shares and the few small shareholders who hold but a limited number of shares are powerless; the larger number of the shares are represented by one or two large holders of them, and they control the voting.

2706. But the interest of those shareholders is the same as that of the small shareholders?—Yes, it should be.

2707. (*Mr. Glyn.*) Are they satisfied with the present system of management?—They differ from me in opinion, and they do not reside locally. Our shares are principally held by one individual who does not live in Limerick and has no connexion with the place. I allude to Mr. Malcolmson.

2708. (*Mr. Ayrton.*) He has the greatest interest, has he not, in seeing that the railway is well managed?—Certainly.

2709. (*Mr. Gower.*) As to the third-class train from Limerick to Dublin, is it your opinion that if a later train was put on it would not be a loss to the company?—I think it would not; I think it would be a profit to them, as it would convey the passengers who arrive by the several local trains during the day. I think that there would be more persons travelling by it, and that it should be entirely a matter of discretion with the traffic manager, to put on a train that would catch the public traffic.

2710. Have you considered the effect it would have upon other trains by which there were no third-class fares, I mean second-class trains, in diminishing the number of the travellers?—I have not considered that very thoughtfully, but it strikes me that the class of persons who would go by a third-class train would not go by a second-class train; they abstain from going, and they probably make an arrangement with a neighbour from one particular village to go up and transact the business of three or four. I rather think that those persons would go up and do their business if the opportunity was placed within their reach.

2711. (*Capt. Galton.*) It has been stated by a witness that instead of people going to market towns themselves to sell their goods, or to buy fresh articles of consumption, it was the custom for hucksters to go through the country buying up the produce, and also selling small wares; is it the same in your part of Ireland?—Yes, it is.

2712. Do you think that that state of things would be altered if lower fares were charged?—I think so. I think that that is the impression on their minds, that the fares are high, and that they would not cover their expenses in addition to the price that they get at home, and that keeps them at home.

2713. Are eggs and butter sold in that way?—Yes.

2714. Would the produce of those persons who now sell them to hucksters be sufficient to make it worth their while to go to market and try to sell it if the fares were lower than they are?—Yes, I think so. On the line, about the Tipperary district, which is in the hands and management of the Limerick and Waterford Company, they encourage as much traffic as they can between Tipperary and the towns near Tipperary and Waterford. Persons going with their firkin, or perhaps two casks of butter, they give them a free pass to accompany it there, and the result is that a good deal of butter goes in that direction, and at moderate charges.

2715. In that case they charge for the firkin of butter, and not for the passenger?—Yes.

2716. Do you think that that creates much traffic?—It prevents this, that when these hucksters come to these people to buy, they will not deal with them; they go to the market themselves with their butter. In Limerick we complain of the absence of that accommodation; but probably it is not a question that should be considered when dealing with the question of the general management of the country. From those very points, Tipperary and nearer to Limerick than Tipperary, the charge upon butter is more than twice the price it is to Waterford, for the passenger has to pay his passage as well, so that the company that manages the other line gives a greater inducement to a person to send his butter in the direction of Waterford, and imposes a penalty upon the person sending it to Limerick.

2717. What is the object of that?—The fact is, that the chairman of the company is also the proprietor of the steamships going out of Waterford, and of course by getting the trade to Waterford the vessels earn freights which they would not earn if the trade came, and probably to a better market, in Limerick.

2718. You think that in order to drive the traffic into Waterford he actually allows the passengers to travel for nothing if they bring their firkins of butter with them?—Yes, he allows them to travel for nothing to Tipperary, which is nearer to Limerick than to Waterford.

2719. Is the butter sold in Tipperary?—Yes.

2720. To merchants?—Yes, and it is then sent to Waterford.

2721. Is it carried at a lower rate?—Yes, at a lower rate than to Limerick. I think the rate to Waterford is 9d.

2722. Would the same gentleman allow a person going a mile or two from Limerick to go to Tipperary for nothing?—Yes.

2723. Would he let him come into Limerick without paying the high charge?—No, and the consequence is, that in Limerick we feel that it is a very great grievance to our trade. We say that we have a shorter mileage, and we have a cheaper carriage by water, and if we could get an equivalent mileage rate, a certain portion of the trade nearer to Limerick would be done at Limerick instead of at Waterford.

2724. This kind of proceeding discourages trade from Limerick and favours it from Waterford?—Yes.

2725. (*Mr. Hamilton.*) You stated that you had a lower freight, to what place?—We have a cheaper freight from the Shannon by sea.

2726. As compared with Waterford?—Yes.

2727. How is that?—The general water carriage is cheaper.

2728. I understood you to mean that the sea freight was cheaper from Limerick than from Waterford?—No; the steamboat freight from Waterford is cheaper than the steamboat freight from Limerick, being on

the other side of the land; but the railway charge being added to the freight makes it higher.

2729. (*Capt. Galton.*) You say that the butter is allowed to be carried very cheaply to Tipperary?—Yes.

2730. It is, I suppose, as near from Tipperary to Cork as from Tipperary to Waterford?—I think not; at all events they must travel over the line of the Limerick and Waterford Company to get upon the line of the Great Southern and Western into Cork, so one check-mates the other.

2731. You say that the butter is sold to merchants in Tipperary?—Yes.

2732. Do these merchants forward it to Waterford?—Yes.

2733. If the merchants there could get a favourable rate from the Great Southern and Western Company they would probably not be induced to send it to Mr. Malcolmson's steamboats?—Probably so.

2734. (*Mr. Horsfall.*) To what extent do you think it would be necessary to reduce the rates both for passengers and goods in order to secure a traffic that would be remunerative to the shareholders?—I cannot venture to offer an opinion upon that. I am not sufficiently acquainted with the charges, or what would pay, to hazard an opinion.

2735. (*Chairman.*) Do you know what the fares were on the Limerick and Foynes line before they were raised?—The increase of the fares was between Limerick and Adare, from 1s. 8d. to 1s. 10d.

2736. For how many miles?—I think about seven miles, but I will see exactly by this time table.

2737. Was that the first-class fare?—I think so. Then the increase in the second-class fare was from 1s. 2d. to 1s. 4d.; and from 8d. to 11d. for the third class.

2738. Were those the lowest charges that were ever made?—I think so.

2739. Those were not low charges at any time, if the distance was only seven miles?—It is excessively difficult to get at the exact rate of carriage; we are under the impression that there are several rates made. I believe that the distance from Adare to Limerick is 11 miles.

2740. Is Adare on the line between Limerick and Foynes?—Yes.

2741. Can you give any evidence as to the goods traffic?—Very slightly; I have some knowledge of the management of some property in the neighbourhood, at Bruree, which is under my agency. I find that in that neighbourhood they are very much dissatisfied with the restricted price put upon turf as against coal.

2742. Do they complain that the coal traffic is encouraged at the expense of the turf?—Yes.

2743. Where is Bruree?—It is on the Cork and Limerick direct line. The hauling is done by the Great Southern and Western Company.

2744. From Cork?—Yes; it is between Charleville and Limerick.

2745. (*Capt. Galton.*) Where would the turf go from to that district to which you have just referred, Limerick or Cork?—To the Bruree district, not exactly from Limerick but from Kerry, from a bog called the "Rathmoor" bog on the Great Southern and Western line.

2746. Is coal carried more cheaply to that district than turf is?—Yes, it is.

2747. Can you state what are the relative rates?—Yes, I think I have got them here; a truck of coals from Cork to Bruree, containing five tons, is conveyed for 17s. 1d.

2748. How many miles?—41 miles. A truck of turf, or waggon, carries three tons; and the cost of conveying that from Rathmoor to Bruree is 1l. 7s. 9d., the distance being 49 miles.

2749. (*Chairman.*) Does it pass over the lines of different companies?—No, it is hawled by the same company, the Great Southern and Western.

2750. (*Mr. Hamilton.*) 1l. 7s. 9d. for carrying three tons 49 miles?—Yes.

Mr. M. R. Ryan.
17th May 1865.

Mr.
M. R. Ryan.
17th May 1865.

2751. (*Mr. Horsfall.*) Are there any manufactories at Bruree?—There is a very large flour mill there, indeed it is one of the largest in our part of the country.

2752. (*Mr. Glyn.*) Is it worked by steam power?—I do not know; I know that it is worked by water power. I was going to mention that this state of things is considerably felt by the tenants with whom I have to deal, and by the people generally, because it is one of the most extensive dairy districts in the vicinity of Limerick, and we find from practical experience that turf is much more suited for dairy purposes than coal is, it is much cleaner; and the advantages of it are that it does not soil either those who handle the butter, or the vessels which are used, and the people like it the more for that reason. Experience also shows us, and the people inquire very closely into these things, that it is cheaper; it is lighted immediately and it is extinguished immediately; and altogether there is no dairyman in the country who would not prefer working his dairy with turf in preference to coal.

2753. (*Chairman.*) In what way is it cheaper than coal; does not that depend upon a variety of circumstances, whether it is in the vicinity or far off?—Previously to the advance being made upon it, it had been used extensively in preference to coal, but since the advance has been put upon it its use has been discontinued.

2754. (*Mr. Ayrton.*) Is a low fire required for dairy purposes rather than a quick one?—I think so. The great thing is, that the girls do not dirty themselves, and there is much cleanliness required in making butter.

2755. (*Mr. Hamilton.*) Is the rate you have spoken of an exceptional rate, or is it about the ordinary rate per ton?—It is the ordinary rate.

2756. Have you calculated what it is per ton?—I have not.

2757. It is more than 2*d.* per ton per mile, and do you say that that is not an exceptional rate for the carriage of turf over Irish railways?—I am not aware that it is, it was lower some months since, probably some five or six months since; there was a large quantity of turf coming into Bruree; since that time it has been advanced, and a gentleman informs me by a letter I have received this morning, what I know to be the fact. He says, "The charge for a box of turf to Bruree had been 18*s.* 6*d.*, and "it is now 1*l.* 7*s.* 9*d.*; great complaints are made of "the want of fuel, and particularly among the dairy "farmers, who were in the habit of getting turf at "Bruree. You must know that the poor people must "feel it also."

2758. (*Chairman.*) Has there been a corresponding rise in the charge for the conveyance of coal?—No.

2759. Is it for the interest of the Great Southern and Western to carry coal rather than turf?—I do not know, indeed, but it is the interest of the steamboat proprietors to carry it, and there is a very large amount of steamboat influence exercised in the directory of this company, and it is the interest of the large steamboat proprietors to get freights for their ships, to the exclusion of our own fuel.

2760. (*Capt. Galton.*) The charge for the coal is a halfpenny per ton per mile, and the charge for turf is about 2*d.* and one-fifth per ton per mile; it used to be 1½*d.* per ton per mile?—Yes.

2761. (*Mr. Hamilton.*) Do you say that the increase in the rate for the carriage of turf is not exceptional, and that it is universal?—It is universal between those points which I have mentioned.

2762. You cannot speak as to other parts of the country?—No; I can only speak as to this particular locality.

2763. Do you attribute it to the circumstance of the railway company being interested in increasing the trade in coal?—I imagine so. I believe that the leading parties are largely connected with steam vessels running from all those ports, Waterford, Cork, and Dublin, and their interest is to bring as much

coal as they can into the country for the purpose of getting back freights.

2764. (*Mr. Ayrton.*) How many tons of turf do they load in a truck?—A waggon contains three tons of turf, and a waggon of coal contains five tons.

2765. Do you know whether the not being able to load up to the full weight in a truck has some effect upon the charge for haulage?—Yes, I should fancy it has, but it also ought to be considered that it is a less heavy article to haul and therefore that it runs lighter; if they are paid by weight it is easier for the engine to pull three tons of turf than to pull five tons of coal.

2766. (*Mr. Glyn.*) Are the directors of the Great Southern and Western Railway much engaged in steamboats?—I do not know, but I have said that I thought they were large shareholders; the public men in Dublin are almost all engaged in steam ship companies.

2767. (*Lord Donoughmore.*) Is not Mr. Pyke a very large steamboat owner in the port of Cork?—Yes, he is the principal owner of the line out of Cork.

2768. (*Mr. Hamilton.*) Is there no maximum charge in the Railway Acts beyond which the companies cannot raise the rates for goods traffic?—I am not aware at all.

2769. (*Chairman.*) Have you given much consideration to the question whether any great alteration could be introduced into the railway system in Ireland with advantage?—I have always considered that if we could have all our railways placed under one management the interests of particular towns and particular districts would not be interfered with from any interested motives, particularly as we are circumstanced on the west coast of Ireland; we have no directors there, the railways that run to Limerick are centred either in Waterford, Cork, or Dublin, and the eastern ports of shipment, and I think that those three directories vie with each other to see which port shall get the greatest loading for their steamers, and the port of Limerick does not get a fair mileage rate in consequence of that. As an instance, butter, per firkin, Bruree to Cork, 41½ miles, is 5*d.* per firkin, while from Bruree to Limerick, 19 miles, it is 9*d.*, being double the distance for half the price; that is, the charge to Limerick is fourfold in proportion to that to Cork. Again, timber from Cork to Bruree is charged 6*s.* 3*d.* per ton, while from Limerick to Bruree it is 4*s.* per ton. The proportionate charge, according to mileage, ought to be 2*s.* 10*d.* from Limerick.

2770. (*Lord Donoughmore.*) Is it not the fact that Sir David Roche was for many years a director of the Great Southern and Western Railway?—Yes.

2771. If he had any local interest it was in Limerick, was it not?—Yes, but he never shipped any produce from Limerick; he had a large flour mill in Limerick, but he never exported. I am glad that you referred to Sir David Roche, he has recently died, but his son, the present Sir David Roche, is now the owner of the very large mills there, and I am satisfied that there are very few men in the country who could give more information to this Commission as to the inconvenience which is suffered from the present state of things than the present Sir David Roche. I have known him complain very sadly with respect to his mills; he has one at Croome, and he does not use the railways at all; he keeps a stud of horses on the road, and he does not send a pound weight by the railways.

2772. (*Capt. Galton.*) On account of the high rates which are charged?—I suppose so.

2773. (*Chairman.*) What distance is it from Limerick to the mills you have spoken of?—I think the distance is about 12 miles.

2774. (*Capt. Galton.*) Is the railway communication in the hands of one company?—Yes; it is on the Cork and Limerick Direct line, and the haulage is done under the management of the Great Southern and Western Company.

2775. It appears by the map as if the traffic would run on the line of the Waterford and Limerick?—No, his produce would run into the Foynes line at Patrick's Well; there is a rental paid of 1,400*l.* a year by the Cork and Limerick direct line, and they run over it. He would have only to deal with the Great Southern and Western Company, who have the line; but he will be able to explain that to the Commission better than I can. I think that the Cork and Limerick directors have a voice in those rates, but the Great Southern and Western Company do the haulage for 40 or 45 per cent., and they have to consult the Cork and Limerick directors upon certain things. I know that Sir David Roche feels it very much. There is another miller in the same town. There are, also, very extensive flour mills belonging to Mr. Lyons, and he also keeps a stud of horses on the road, but he does not avail himself of the railway, though his mills are in the town of Croome, and close to the railway station.

2776. (*Chairman.*) Have you any definite scheme to submit to the Commission as to any alteration you would like to see introduced in the Irish system of railways?—My view is this: I should feel happy if the government of the country should take charge of the railways for some little time, and try the experiment whether one central management would do for them all. If the experiment was not successful, it could not be more unsuccessful than the present system.

2777. (*Capt. Galton.*) If it proved unsuccessful, how would you meet the loss that would accrue? by levying a rate upon the different towns in Ireland?—I should not do that at all. The towns in Ireland are now taxed for the support of the poor and other charges to their utmost ability, and could not endure more. I think the nation should be prepared to undertake any such contingency, but in my opinion it would be no loss incurred. I should say, try this experiment, for I think it is really of national importance, having regard to the development of the resources of the country. We have found that since the introduction of railroads, a great deal of good has been done, but not so much as I believe might be done; they have promoted good feeling among the people, and a better understanding with each other, by bringing them together; they travel more about the country, and more money is expended than there was before.

2778. (*Mr. Ayrton.*) But who is to bear the loss, if that is to be the result of the experiment?—I should think it ought to fall upon the country at large. I would extend it to this side of the Channel. Ireland's prosperity or adversity must affect the national interest; and as the people of England are the great consumers of our produce, they have a direct interest in removing the grievance we suffer under.

2779. You would extend the system of reducing fares upon railways to England?—Yes, if it required it—if the material improvement of the country were retarded by not doing it.

2780. (*Mr. Hamilton.*) If a loss was sustained by the experiment you have recommended, do you think the traffic would recover itself in a few years?—I do. I am entirely of that opinion. I cannot but believe, when there is a certain amount of population in Ireland, and a certain amount of produce from the soil, which is brought to this side of the Channel, and when I see that going by roads running parallel to railroads, that traffic ought to be got, and would be got, and when once the people would acquire a habit of railway travelling, they would be sure not to return to the old slow system.

2781. If the railway charges were lowered, you believe that there would be an increase in the produce?—Yes, for I believe that one of the things that prevents that increase is the expense of the transit. When produce is purchased, it is always subject to the charges of transportation; and the higher they are the less remunerative is the transaction to the farmer, and the less he is disposed to produce.

2782. (*Capt. Galton.*) What is the charge made for passengers, compared with what it was before the railways were opened, when they travelled by Bianconi's cars?—I do not know; but I know that when the first line ran out of Limerick from the Great Southern and Western, in 1848, the rate was only 8*s.* third-class to Dublin, and all the shares were at a premium, and they were able to declare large dividends, but since the increase in the charges those shares have gone down in price, and their dividends have diminished.

2783. Do you know what the fares used to be per mile by Bianconi's cars?—I do not.

2784. To Dublin, for instance?—I do not know.

2785. (*Chairman.*) Are there any other matters that you wish to submit to the Commission?—At the moment I cannot remember.

2786. You have mentioned the most important points within your knowledge?—I think so; but may add that there are cars running at the present time to certain points upon that line, and there is an immense traffic that is not taken by rail; from the Bruree district there is a four-horse car, and there are others running from Bruff, Kilmallock, and Killybeg to Limerick; and all people living between Bruff and Bruree, even some of those living in Bruree walk a distance of seven miles to get upon that car, because they only pay half fare. From Bruff to Limerick the charge is only 9*d.* for a distance of 12 miles.

2787. (*Mr. Ayrton.*) Is Bruff upon a railway?—No, it is seven miles from Bruree; but all those who live midway never go by the railway.

2788. What is the fare from Bruree?—I think it is 1*s.* 6*d.*; some of the people living about Bruree, which is seven miles off, walk to Bruff.

2789. (*Chairman.*) Is there a railway station at Bruree?—Yes; there is station in the town. I may quote an instance to the Commission to show how these cars are loaded. Last week a case came before the county sessions, and I happened to be on the bench at the time. A man was summoned for having 40 people on his car when he was licensed to carry only 24, and it was not the first offence. The man said that he could not help it; his evidence was that the people rushed upon the car, and that he was obliged to get the constabulary to assist him. He was only fined nominally 1*s.*, the bench believing that he was not courting trade. This offence is not unfrequent. Those four cars are allowed to carry 20 or 24 passengers each, and prove unequal for the traffic. It is reported other cars are to be put on the road.

2790. (*Mr. Ayrton.*) What was the fare by the car?—Ninepence for 12 miles. I refer to that case as affording evidence that if the railway fare were reduced to 9*d.*, I do not think anybody would travel on the outside of a car, exposed as they would be to the weather, if they could go by railway.

2791. (*Mr. Hamilton.*) Nor walk?—No.

2792. (*Chairman.*) Can you give any other instances of cars competing successfully with railways?—I believe there are other instances, but those I have given are the most familiar to me. I witnessed the other day a very curious thing; some people were coming from Kilmallock to the other side of the Shannon; there were about 70 emigrants going to Cork and Dublin, and coming from the west of Clare by Foynes; they arrived in the afternoon at Limerick, and those 70 persons had to remain in Limerick all night, there being no third-class train after that time to take them on to their place of embarkation. Some were going to Cork to embark by steamer for America, and others were going to Liverpool via Dublin. There was no means to convey them, and it was most pitiable to see those poor people disappointed in that way, being of course put to very great expense.

2793. (*Lord Donoughmore.*) Is it not the custom with railway companies in Ireland to give special rates for emigrants?—Not at present; they used to do so but they do not do so now, though they ought, and

Mr.
M. R. Ryan.

these are the reasons why I think, if there was one intelligent governing body sitting in Dublin, they would not let these things longer exist. I believe that the heavy expenses of separate management and separate establishment charges could be reduced to a considerable extent, which would be a set-off against any losses that might be incurred by the experiment.

The witness withdrew.

Dr.
M. Longfield.

Dr. MOUNTFORT LONGFIELD examined.

2794. (*Chairman.*) You are the chief judge of the Landed Estates Court in Ireland?—I am the senior judge.

2795. Have you given much attention to Irish railways?—I have.

2796. Have you formed any opinion as to the effect of the rates now charged upon those railways both for passengers and goods?—I think that we should have more passengers and more goods if the rates were reduced; but I think that we could not reduce the rates without diminishing our profits very much; I say our profits, because I have been for nearly 20 years a director of the chief railway in Ireland.

2797. You are a director of the Great Southern and Western Railway?—Yes.

2798. You are of opinion that it would not be safe for the directors to make any large reduction in the rates, either for passengers or goods?—I am. I think there would be a considerable diminution in our profits for several years at least; in the meantime many of the existing shareholders being deprived of their dividends must sell out and perhaps be ruined.

2799. Upon what grounds do you rest the opinion that there would ultimately be a large increase in the traffic?—Upon this, that there is a natural desire to travel, and there is a great deal of utility in it, and that would be felt more and more, and of course the effect of a reduction of the charge made for a very useful privilege, or upon any commodity, would increase the number of passengers and the consumption of the commodity.

2800. Has your company ever tried the effect of making low charges upon any portion of their line?—At one time we tried the effect of having fourpenny parcel rates, and it did not answer; perhaps it was not tried long enough.

2801. (*Capt. Galton.*) Will you be good enough to explain that?—I mean that it did not pay.

2802. Not the cost?—More than that; but it did not pay enough.

2803. (*Chairman.*) It paid better at the old rates than the reduced ones?—Yes.

2804. (*Capt. Galton.*) How long was it tried?—For about eight months.

2805. (*Chairman.*) Was there any considerable increase in the parcels traffic?—Not enough to justify its continuance.

2806. (*Mr. Gower.*) What was the reduction made from?—It varied; it was from 8d. and 1s. to 4d.

2807. (*Chairman.*) Was there any perceptible increase in the number of parcels sent?—Indeed we thought not. I think it is probable that the reduction was not well known. I was not satisfied that it had had a perfectly fair trial.

2808. Have any other experiments been tried upon other descriptions of traffic on that line?—I do not think there has been any experiment made; we are rather afraid of experiments.

2809. Do you think there would be a considerable increase in the passenger traffic if the fares were considerably reduced?—Yes; but not of course so much as in England, for the working classes are not so rich, and time is therefore not so valuable; they are not so well able to pay. Then the agricultural traffic does not admit of the same increase that the commercial traffic does; for instance, a fat beast has only one occasion in its lifetime to travel to town, and that is to be killed and sold.

I know that if I were to put myself in the position of the proprietors of all those lines of railway, or if I had anything to do with them in the way of management, I would have but one governing staff, only one establishment, because I am certain that that would work more harmoniously, and certainly more economically than several.

2810. (*Capt. Galton.*) Is it not the case that cattle are sent from one part of Ireland to another to be fed?—They are first bought by the graziers, who fatten them, from the people who breed them.

2811. Is there no opportunity of sending them by railway to the place where they are to be fattened?—Yes, there is some opportunity to send them, not very much.

2812. Is there a very large cattle traffic on the Great Southern and Western Railway?—There is a considerable traffic, but it has become diminished of late years with the reduction in the quantity of cattle in the country.

2813. (*Chairman.*) Is it chiefly fat or store cattle?—On the Great Southern and Western line it is chiefly fat cattle; there is a great number of store cattle driven along the roads, and some people attribute that to the high rates charged upon railways, but the reason, in my opinion, is that driving is more convenient, and for another reason, which is this, that the people who drive them sell them along the way to their customers, merely taking them from town to town.

2814. (*Lord Donoughmore.*) Supposing a Midland grazier buys a couple of store cattle in the fair at Ballinasloe, would it not be natural to get those cattle carried by railway at a reasonable rate so as to convey them to Meath sooner than by driving them along the road?—I think it is probable that if the charge for the carriage was very cheap he would do so.

2815. Do you think that a rate that would tempt a grazier to send his store cattle by railway would be so low as to be unremunerative to the railway company?—It would remunerate us, but not so much as the present rates, at least it would be doubtful, and people do not like trying experiments when the dividends are rather low.

2816. (*Capt. Galton.*) Your dividend is reduced from what it was, is it not?—Yes.

2817. To what do you attribute that?—To the bad harvests in the country, which have diminished the wealth and the population in the country to a great extent.

2818. (*Mr. Ayrton.*) Have you made any inquiries as to the quantity of store cattle driven along the roads and the quantity of cattle carried by railway with a view to ascertain whether there is really a diminution in the quantity carried on account of the excessive amount of the charge made?—Inquiries have been made, although not in a very official way; but inquiries have been made about the exportation of cattle from Ireland and the importation into England, and I have been informed that it has become reduced in about the same proportion as the number of the cattle that we have carried, showing that there has been a general decrease and that it is not confined to our railway.

2819. Apart from that, have you made any inquiries as to the cost of driving cattle as compared with carrying them by railway, which leads you to believe that you do not get all the traffic you ought to do on the railway?—No; but I am sure that the traffic would increase if we diminished the rate, although I cannot say in what proportion.

2820. (*Chairman.*) Does your board ever take into consideration any proposals which hold out a prospect of any increase of traffic of any description, minerals or otherwise?—Yes; if any person makes a sug-

gestion, that suggestion is taken into consideration, and we act accordingly.

2821. Have any proposals ever been made to your board which, after consideration, you have thought it advisable to decline?—A good many. We generally do decline them, for they are frequently made very recklessly by persons who promise a very large increase of traffic, and then when we come to inquire into it we find these persons have been consulting their own interests very much, and that there is nothing to countenance the idea that an increase of traffic will arise.

2822. Has there been any material increase upon any description of traffic within the last few years?—I do not think there has been.

2823. You do not think that any reduction in the rates charged could be made with profit to the railway companies?—I think with ultimate profit it could be, but not immediately.

2824. Upon what articles chiefly do you anticipate that a large reduction of the rates would ultimately bring an increased return to the railway companies?—I hope it would in coal, and probably in minerals. I think that the people would gradually find out the advantages to be gained by travelling and by the transmission of goods by railways; and (although we do not anticipate it beforehand), I think a great deal would arise from unexpected quarters.

2825. We have been informed that there are some mines in Tipperary, which I believe have been under consideration?—Yes.

2826. (*Lord Donoughmore.*) It is in evidence that there are mines in the county of Tipperary, the Adare mines, situated not very far from the Birdhill station, about six or seven miles from Birdhill, and that a railway should be connected with those mines, and it has been stated that the rates of carriage are so high as practically to prohibit the export of all the poorer descriptions of the ores. Have any complaints been addressed to you upon that subject?—I do not remember any, but I am sure that if the proprietor would show that he would supply us with sufficient traffic to return us a profit we should be glad to carry it.

2827. Would you be inclined to open a special station or make a special siding for him if he could show you that he could supply you with a certain number of hundred tons per week?—Certainly I should be in favour of it, and the entire board, I think, would willingly listen to it or to anything that we should not lose by.

2828. The witness stated that practically the rich ores are sent by cart from the mines to Birdhill, where they are placed on the line of the Castleconnell and Limerick Railway, and sent by Waterford to England, but he stated that if the Great Southern and Western Company would give him full facilities it would pay him better to send them by that line and from Dublin to England. Is it possible, do you think, for your board to tempt that gentleman to send his ores by Dublin instead of Waterford?—Until I know what he expects I could not say; but for the sake of getting traffic I am sure that the board would do everything that was reasonable, and that they would reduce their profit as low as possible.

2829. (*Mr. Glyn.*) If the proprietor was ready to send you a given quantity, you would reduce the rate now charged to a lower rate?—Yes, if he sent us full train loads.

2830. You would reduce the rates to him?—Yes.

2831. (*Mr. Ayrton.*) Has this subject ever been under the consideration of your board?—I do not remember the subject of the mines ever coming before the board, but the subject of reduced rates on particular occasions is discussed almost every board day.

2832. (*Chairman.*) But you have scarcely ever decided upon making any experiments?—Very seldom.

2833. (*Mr. Ayrton.*) I understand that when these suggestions are made you direct special inquiries

into the supposed sources of increased traffic, and you are guided by the result?—Yes.

2834. (*Mr. Glyn.*) I believe that some years ago, when Mr. Thomas Smith was one of the directors of the Great Southern and Western, he advocated very strongly a reduction of fares, founded upon his experience in England?—He never attended the board except upon a few occasions. I do not think that he attended twelve board meetings in his life.

2835. Did he not advocate a reduction of the rates?—I think he did several years ago, and another English director, who is now deceased, Mr. Boothby, opposed it.

2836. The subject has been very much discussed, has it?—Constantly.

2837. (*Chairman.*) Do you know whether a train to carry third-class passengers from Limerick to Dublin by Nenagh has ever been under the consideration of your board?—Yes.

2838. We have been informed that there is no train at present?—There must be a third-class train. According to the Act of Parliament we are obliged to carry passengers at a penny a mile once a day.

2839. I believe there is a third-class train from Dublin to Nenagh, but none between Nenagh and Limerick?—There must be; the company can be compelled to provide it. It is not our line, but the railway company can be compelled to run a third-class train from Limerick to Nenagh.

2840. Have you any power over the line from Nenagh to Limerick?—Yes.

2841. Have you running powers from Nenagh into Limerick?—Yes, I think so.

2842. (*Mr. Glyn.*) It has been stated that there is no possibility for a first-class passenger to get from Limerick to Dublin and back again conveniently in the same day; is that so?—I cannot say; but looking at the time table I think it is not improbable, and I think it is likely they would not much care for the privilege, for there is some little disadvantage in consequence of it, for in going from Limerick to Dublin they have to pass over two lines of railway not belonging to the same company, and which are not always working harmoniously.

2843. (*Mr. Ayrton.*) Are they at present in harmony, or is there much discord between them?—Not so much harmony as I should wish.

2844. Have you any joint committee to manage the traffic that is required to be worked through?—No.

2845. (*Lord Donoughmore.*) Was there not some time ago a proposition made on the part of your board of directors to amalgamate with the Waterford and Limerick Railway Company?—Yes.

2846. And that proposition was refused by the directors of the Waterford and Limerick line?—By the shareholders. I do not know whether the directors were favourable to it or not, but it was refused.

2847. Do you believe it would be a great advantage to the public if those two railway companies could be amalgamated?—Certainly.

2848. Would it facilitate the traffic arrangements all through that country?—Yes.

2849. (*Chairman.*) You could not offer terms to the Waterford and Limerick Company that they would accept?—No; and with regard to the terms that were then rejected, I thought they were a great deal too high, and I opposed them.

2850. (*Mr. Gower.*) The negotiation failed as to the terms?—Yes. We offered what I considered were too high terms, and they thought that they would be better by standing out for a time.

2851. (*Lord Donoughmore.*) Have the earnings of the Waterford and Limerick Company, since that offer was made and declined, been at all equal to the terms offered by the Great Southern and Western Company?—No; neither since that time nor before it, but whenever a negotiation is pending the public necessarily know it, and that raises the price of the line that is to be bought, and then the shareholders think that that rise in price is part of the intrinsic

Dr.
M. Longfield.
17th May 1865.

*Dr.
M. Longfield.*
17th May 1865.

value of the line, and they insist upon something more, and all these things cause delay.

2852. (*Mr. Ayrton.*) Have you ever been able to form any definite idea as to the percentage of reduction necessary to produce an increase of traffic, and the probable number of years that would be required to bring back the income to its present state on the Irish railways?—I think that everything of that kind must be merely vague conjecture. I think that every reduction of rates will produce some increase of traffic, and the greater the increase the longer the period that must elapse before it has its full effect upon the country.

2853. Have you considered the question sufficiently to be able to reduce the general proposition to any practical figures?—I should not venture to do so, it is entirely a matter of conjecture. A sanguine man will say that it will take place in four years, and another man will say it will take ten years, and another that it will never take place.

2854. Have you considered the matter sufficiently in detail to be able to suggest any particular item of traffic that would be capable of great development and increase consequent upon a reduction of the rates?—I think that corn and coal and third-class passengers would be the chief; but I think that a great many others would arise unexpectedly.

2855. With regard to coal, do you think that traffic in coal would arise from displacing the consumption of turf, or from increased consumption by manufactories, or for domestic purposes?—From all three causes. A great many persons would burn coal instead of turf, and a great many lines which are now inadequately worked would have greater returns from the increased consumption of fuel, and it also might assist in promoting the manufactures of the country.

2856. With regard to corn, in what way do you think that an increase in the quantity of corn carried would take place?—I think it is probable that there would be a great deal of corn sent backwards and forwards, according to the state of the local markets, if it was carried with sufficient cheapness.

2857. Apart from the movement of the existing quantity, it seems, from your experience in the cattle trade, that we should have to look entirely for an increased production in corn to agriculture?—I think not. I think that circumstances would enable corn to be more readily transported from place to place, but less for some time than in the case of cattle.

2858. With regard to the unexpected sources of traffic, to what sources do you refer, to minerals?—When I say unexpected, I can hardly venture to say what they would be; but I think that special trades will arise in the country, and that the people will find that such things as eggs may become a great article of traffic, and perhaps poultry, and a number of other things.

2859. With regard to third-class passengers, do you think that a new class of passengers could be set in motion, or that the existing passengers would travel more frequently?—I believe that both things would happen. I think that the people would more readily go in search of employment, and that they would go for lighter motives when they found that the fare was much reduced.

2860. Is there much tendency in Ireland to move about in search of employment, or are the people very constant to their particular locality?—They go great distances in search of employment.

2861. Have you formed any opinion as to the percentage of reduction that would be necessary to promote a great increase in the third-class passenger traffic?—I think that reducing it to a halfpenny a mile would produce a great increase; that would be 50 per cent., and of course by reducing it further we should get more.

2862. At the present time do the tradesmen and shopkeepers and small farmers all travel third-class in Ireland?—Most of them do.

2863. Do the peasantry travel third-class, and mechanics, or do they walk?—The peasantry do not

travel very much at all; they walk, except just for emigration purposes, when they have some luggage to carry.

2864. Do you think that at a halfpenny a mile they would be induced to travel by railway rather than walk?—A great many more would, of course.

2865. (*Capt. Galton.*) Have you tried to develop any third-class traffic in the vicinity of the markets by issuing return tickets at low fares, as upon our English railways?—No; but it has been spoken of, and probably it will be carried out before long; but we have not done it hitherto.

2866. Have you made no attempt to develop third-class traffic in that way?—No.

2867. Or in any other way?—No.

2868. (*Mr. Hamilton.*) Why have you not?—Of course, because it was not likely to be conducive to the interests of the company.

2869. (*Mr. Gower.*) You have stated that the directors are afraid to make experiments; are they more timid, do you think, than they need be, or, in other words, if they were less timid do you think it would be for the advantage of the railway companies?—In some cases they are not so timid as in others; I think they might make a few experiments with safety.

2870. (*Chairman.*) You cannot say that the directors ought to make experiments on a large scale?—No, I think they ought not.

2871. You are satisfied that ultimately there would be no loss?—Yes; and in the meantime there would be no loss at all proportioned to the gain that there would be to the public.

2872. Have you considered how the experiment is to be tried?—Yes, and the only way of trying it that I think is safe, would be to give the Government the power to nominate an official director on any line of railway that they thought proper; that official director to have full power of consulting the books and voting upon everything in the same manner as other directors, requiring information from the officers, and so forth. I would then let that official director make any experiments that he liked, guaranteeing the company against loss arising from the experiment so made, and receiving half of the gain in case there should be gain from it.

2873. Where is the guarantee to come from?—From the taxes of the country; I can see no other source but that.

2874. (*Capt. Galton.*) With regard to these experiments, you say that you should object to making experiments on a large scale?—Yes.

2875. Would not the experiment of issuing tickets at low fares on market days be a pure gain to the railway company?—Yes, if they got enough to exceed the working expenses, which are about 2s. 8d. a mile.

2876. You have certain trains which run between certain places?—Yes.

2877. And it would be only adding a certain number of additional carriages to those trains; could not more carriages be put on?—Unless we reduced our fares there would be no use in doing that, there are always carriages enough.

2878. If you issued return tickets on market days, in order to develop a traffic, would not that be an experiment that would cost nothing, comparatively?—It would not cost very much.

2879. That experiment, which would have a tendency to develop traffic, might be made without calling on the country to pay any loss that might arise?—It is not quite so simple as it appears to be, because it is to be remembered that it is very probable, in most cases, the hours of our trains would not suit the market purposes; and in order to make them useful, we should have to run them specially.

2880. (*Chairman.*) You think that you could not adapt many of your present trains to that purpose?—Very few of them, unless by accident in some particular case.

2881. (*Capt. Galton.*) The experiment in that particular case might be tried?—Yes.

2882. (*Mr. Hamilton.*) You are aware that in England it is regarded almost as a duty on the part of railway companies to provide facilities for moving about on market days, whether they yield a profit or not?—I do not know that they do anything from a sense of duty that does not lead to a profit.

2883. On market days you will find that some distances are travelled over at very much lower fares than on ordinary days?—If they do that in fact, the profit to the railway and the utility to the public, in such cases, nearly go together; but unless there is a profit you do not do much good to the public. I will mention a circumstance to show how erroneous the idea is that an increase of traffic might produce an increase of the expenses; any book on the statistics of railways will show that the traffic varies between 20*l.* a mile and 75*l.* a mile; some railways have as little traffic as 20*l.*, and others as much as 75*l.*; but you will find that the proportion of the working expenses is about the same in both.

2884. (*Mr. Ayrton.*) What is your view with regard to repaying any loss that might be occasioned by the Government director reducing the rates? Is that to be repaid out of the increased income over and above that at which he found it when he made the reduction?—Certainly, in the first instance, and if that did not pay it, then the nation should pay it if they required a compulsory reduction to be made.

2885. Do you say that whenever the income of the railway went beyond the point at which he had commenced the reduction, then that the surplus income should be appropriated to making good any loss the country might have incurred by the reduction?—I see no objection to that.

2886. (*Capt. Galton.*) If all the loss was to be made good to the railway company, would not that be rather taking away from the directors an inducement to work very economically?—I think not, especially if the company got half the gain and the other half only went to the nation.

2887. (*Chairman.*) By your plan the special director could insist upon any reduction being tried that he thought proper?—Yes, and upon any increase in the number of trains, or anything that he thought would be convenient to the public.

2888. (*Mr. Ayrton.*) You would take as a basis the contracts which exist between the Indian Government and the railway proprietors, only taking the dividends at the present amount rather than five per cent.?—Yes, nearly so. I do not understand that the Government has had the complete power over the Indian railways that I would give the official directors over the Irish railways.

2889. (*Chairman.*) If your scheme was tried, is it important in your opinion that some of the smaller lines should be amalgamated with the larger companies?—I think it is; to have a complete network there should be amalgamation, but substantially they would be amalgamated if they had an official director on each railway; he would be supreme on all points.

2890. (*Mr. Ayrton.*) If your system is carried out on one of the larger lines—your own, for instance—that would be a sufficient experiment to test the full value of it?—I think it would. I think that some lines should be selected that would obviously afford a fair experiment. A short suburban line would not do so, for by reducing the fares there you can increase the traffic indefinitely.

2891. (*Mr. Glyn.*) All the lines ought to be worked under the same system?—Yes, to have it well carried out.

2892. (*Lord Donoughmore.*) Would there not be this difficulty, supposing that the Government took into their hands the management of one of the larger lines in Ireland, or placed it under the management of an official director, guaranteeing the shareholders of the company against loss, that if that line competed with the line of another independent company at any point, it would in fact be Government capital com-

peting in the market against private capital?—Yes, that objection is apparent, and, of course, that fact should be before the official director when he was reducing the fares; and he should either take a great network of railways into his consideration, or take care that in making the reduction he did not compete improperly with a rival line.

2893. (*Chairman.*) Is there any part of the Irish system on which you think the experiment could be tried without much clashing with the interests of other companies?—If you take the great buff line on the map, with the exception of the line from Athlone to Tullamore, there would be no clashing with any rival line.

2894. (*Mr. Ayrton.*) You are speaking of the lines as they now are?—Yes.

2895. (*Chairman.*) Is it necessary, do you think, for the Limerick and Waterford line to be included in the scheme?—Yes, I think it ought to be.

2896. Is there a line for which an Act has been obtained between Wexford and Waterford?—I am not aware of such a line.

2897. If there was a communication between Waterford and Wexford it would be almost necessary, would it not, to include the Wicklow and Wexford line in the scheme?—If new lines were made it might be necessary to enlarge the scheme, but under the scheme they would have an opportunity to make the trial very fully before any new line came into operation.

2898. You would leave out the section between Tullamore and Athlone?—Yes; I think it is necessary to do so, and it would obviously be no inconvenience to the inhabitants, because they have the other way of going to Dublin, and going very well, a little shorter.

2899. (*Mr. Hamilton.*) Have you through booking rates with all the railway companies?—We have through booking rates with the Limerick and Waterford Company. I am not aware that there is an opportunity of having through booking rates with any other company.

2900. Not in the north of Ireland?—No, I do not think we have.

2901. Have you through booking rates with any of the railways in this country?—I believe we have for excursion trains, but there is very little of it.

2902. Not for general traffic?—For goods we have.

2903. Not for passengers?—I am not aware that we have, except for excursions.

2904. (*Capt. Galton.*) Do you run any excursion trains?—Yes, occasionally.

2905. How many in a year?—I cannot tell you, but not very many.

2906. Do they fill well?—Whenever we run them they do fill well, but I am not very favourable to them, because I think they interfere with the general traffic. I would rather have all the trains cheap than run occasional trains excessively cheap.

2907. You do not seem to run all the trains at low fares?—No; but if any reduction were made I would rather give every one the benefit of it than have those crowded excursion trains, which are a little dangerous and interfere with the regular working of the lines.

2908. Do you charge lower fares to reapers coming to England at a certain time of the year?—I do not think we do; the reapers are almost all from the west.

2909. (*Mr. Hamilton.*) With regard to through tickets, take Killarney for instance, according to your system, could a person, being in London, take a through ticket to Killarney?—Yes.

2910. By which route?—If he took a through ticket from London he would go to Holyhead by the London and North-western line, and then cross over to Dublin, and then go by the line which you see on that map, through Templemore, Thurles, and Mallow, and then branch off to Killarney.

2911. Supposing he wanted to go by South Wales, could he not get a through ticket in that way?—Not from us.

Dr.
M. Longfield.
17th May 1868

- Dr. M. Longfield.*
7th May 1865.
2912. (*Capt. Galton.*) You do not issue through tickets by the South Wales line?—No, I do not think so. We were never asked to do so. We should not object, but they are not worth giving; the traffic would be very trifling.
2913. (*Mr. Hamilton.*) It has been stated to the Commissioners that an application has been made to the company and that it has been declined?—I was not present when it was made. I have no objection to it, but I should imagine that the traffic would be very slight.
2914. (*Mr. Ayrton.*) Has it come under your notice that the traffic from Tipperary to Waterford, and from Tipperary to Limerick, is regulated by other considerations than those of the distance?—Yes; it is very well known that the most influential proprietor in the Waterford and Limerick Company has a very considerable interest in the port of Waterford, and that he does his best to develop the traffic to Waterford.
2915. Has that been a source of embarrassment to your company in making traffic arrangements to go from one line on to the other?—That has been our opinion, but whether just or not I cannot say.
2916. (*Chairman.*) Your line has no communication with the deep water at Dublin?—None.
2917. Do you think it would have a tendency materially to increase the traffic upon your line if it communicated with the water at Dublin?—I know that that opinion is entertained by some, but there are many who do not entertain it. I do not think that the traffic would be materially increased.
2918. I believe you consider that the coal traffic is one which is capable of great increase?—Yes.
2919. Would not communication with the water materially increase the facilities for conducting the coal traffic?—I think it would; as to passengers I think it would have not much effect; a man pays 1s. and he gets to the Kingstown station, and for another 1s. he gets to the packet.
2920. (*Capt. Galton.*) Still he has to go across in a car?—Yes, he has.
2921. Is not every change of that sort an inconvenience?—It is so slight in comparison to the whole journey that one can hardly think it would seriously affect the traffic; for instance, if a man was going from Mallow to London I do not think it would matter if he travelled upon a car three quarters of a mile.
2922. (*Chairman.*) Is your coal traffic chiefly from Cork or from Dublin?—From Dublin. There is not

much from Cork. I think we forward it to Mallow, but we find it very insignificant.

2923. (*Capt. Galton.*) Do your rails run down to a wharf at Cork?—They run down to what was intended to be a dock, but that has rather failed.

2924. Has the coal to be carted both at Cork and in Dublin?—No, the coals can be brought up very close to our line at Cork.

2925. Can they be lifted from the ships into your trucks?—No, they are landed into a yard which is quite close to the trucks. I think Mr. Pyke has a coal yard quite close to us.

2926. (*Chairman.*) The coal traffic is not of very great importance, is it?—No.

2927. (*Mr. Glyn.*) In Dublin they are carted?—Yes, for a considerable distance, at a cost, I should think, of about 2s. a ton.

2928. (*Capt. Galton.*) Have you ever been asked to give low rates for coals?—It has been suggested, and we have frequently had the matter under consideration, but we have never reduced the rates materially. The rate is now about a penny a ton per mile.

2929. Twice as much as it is in England?—Yes.

2930. (*Mr. Glyn.*) If you dealt largely in the coal trade must you not carry the railway down to the water side?—I think that to have a large coal trade there should be such a connexion in Dublin, for 2s. a ton is a great impediment.

2931. (*Chairman.*) Does that include everything, all the charges between the ship and the railway?—Yes.

2932. Do you wish to state anything further with regard to the official director?—No; I do not think any further explanation is necessary. I had been writing on the subject, and I handed the paper to a gentleman, but I have not seen it since.

2933. (*Mr. Ayrton.*) Does the penny a ton include the trucks?—Yes.

2934. Does it include all the terminal charges?—Yes.

2935. (*Chairman.*) Are you prepared to put in the paper you have written as part of your evidence?—I do not think the paper is evidence, for it was rather intended to form the basis of a pamphlet.

2936. Have you any objection to its being put into the Appendix?—No. (*The same was handed in, vide Appendix F.*)

The witness withdrew.

Adjourned to Friday next at 12 o'clock.

Friday, 19th May 1865.

PRESENT:

THE RIGHT HON. THE EARL OF DONOUGHMORE.
THE HON. E. F. LEVESON GOWER, M.P.
SIR ROWLAND HILL, K.C.B., F.R.S.
T. B. HORSFALL, Esq., M.P.
ROBERT DALGLISH, Esq., M.P.

GEO. CARR GLYN, Esq., M.P.
A. S. AYRTON, Esq., M.P.
CAPT. DOUGLAS GALTON, R.E., F.R.S.
WILLIAM POLE, Esq., F.R.S., *Secretary.*

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., CHAIRMAN.

THE RIGHT HONOURABLE THE EARL OF LUCAN examined.

The Right Hon. the Earl of Lucan.
19th May 1865.

2937. (*Chairman.*) Your lordship is chairman of the Great Northern and Western Railway Company of Ireland?—I am, and I have been so since the formation of the company.

2938. Will you be so good as to state where that railway runs from?—It runs from Athlone to Castlebar; the line is constructing from Castlebar to Westport, and we have an Act to extend from Castlebar to Ballina.

2939. (*Mr. Glyn.*) When opened the total length will be 106 miles, will it not?—Yes, of which 72 are open.

2940. (*Chairman.*) Are you of opinion that Ireland has not derived any great advantage from railways up to the present time?—I think that the material interests of Ireland have not benefited to the extent to which they ought to have done.

2941. Are you of opinion that under a different system of management those material interests would have been more largely benefited?—Undoubtedly. I have devoted myself to the construction of the line from Athlone under the conviction that nothing ought to benefit Ireland so much as railways. I consider that the reason why the railways have conferred so

little benefit upon Ireland is that the companies are too poor to work the traffic at prices which would encourage the people to make use of the railways.

2942. (*Mr. Glyn.*) The receipts are so small?—The receipts are very small. In the case of our own company I am firmly of opinion that, if we could afford to have a smaller dividend for the next four or five years, by lowering our fares considerably, not less than 50 per cent., at the end of five years we should pay a larger dividend than at present.

2943. Are you carrying on your railway now nearly at the maximum rates?—Yes; the fares are very much the same as the fares which exist in England. For first-class passengers we charge per mile $2\frac{1}{6}d.$; the second-class is $1\frac{1}{6}d.$; and the third-class fare is $1d.$

2944. (*Mr. Horsfall.*) What dividend does that line pay at present?—We have paid from the time of opening to Castlebar up to last January three per cent. In January we paid $2\frac{1}{2}$ per cent.

2945. (*Capt. Galton.*) Do you run many passenger trains per day between Athlone and Castlebar?—We run very few trains. From Athlone to Castlereagh there are daily, excepting on Sundays, a passenger train, a night mail, and a goods train; from Castlereagh to Castlebar there are only a passenger train and a goods train daily, but our goods trains carry passengers in carriages attached for that purpose.

2946. Then no one could go from Athlone or Roscommon to Castlebar and return the same day?—No.

2947. Then that is a passenger train?—It carries passengers, but is very slow and very irregular.

2948. (*Mr. Glyn.*) Do you charge the same rate for the passengers who go by the luggage train?—Yes.

2949. Then there are no low fares to that particular train?—No. Our line is worked by the Midland Company under a ten years' agreement, and they put on what trains we desire, at a cost of $1s. 6\frac{3}{4}d.$ per mile between Athlone and Castlereagh, and $2s.$ per mile from Castlereagh to Castlebar.

2950. (*Mr. Glyn.*) You taking all the receipts?—No; they take the receipts and pay us the balance. We work the line at about 40 per cent.

2951. Is the accommodation in respect of the facility of getting from one place to the other very much better than it was before the railway was opened?—Certainly, I do not mean to say that the railway has not been a great convenience.

2952. (*Capt. Galton.*) If no one can go and come back in the same day from Athlone and Castlereagh or Castlebar, is that a development of the traffic which is sufficient to induce a large traffic?—No, I do not think it is; I think it is insufficient. It is certainly insufficient between Castlereagh and Castlebar.

2953. (*Mr. Glyn.*) Have you the power of calling upon the Midland Railway Company to put on more trains?—Yes, they are very glad to put on as many as we like.

2954. Under the terms of your arrangement?—Under the terms of our arrangement they must provide us with any number of trains we ask for.

2955. (*Chairman.*) Has your board ever considered the propriety of trying the experiment of running trains at cheap fares?—If our line were completed, no doubt we could afford to do so, but we could not at the present time, and for this reason, we have the greatest possible difficulty in floating even our preference shares, and it is manifest that unless the ordinary capital is paying a dividend, the preference shares will not float, and are valueless; and it is upon them that we must rely for completing our extension to Westport and Ballina.

2956. (*Capt. Galton.*) Do you think it will not be possible to try the experiment of reducing the fares on a certain class of traffic in the first instance; for example, carrying your third-class passengers cheaper, or coals. If you carried one particular commodity at a time at a low rate would that create a great loss?—A greater loss than it would be prudent for us to incur under present circumstances. At present our trucks travel at $6d.$ per mile for the first 50 miles, at $5d.$ per

mile for the next 25 miles, and $4\frac{1}{2}d.$ per mile the remaining distance; the cost of a cattle truck between Castlebar and Dublin is $60s.$, which is very much too high.

2957. That you pay to the Midland Company?—No, this is the charge to the public.

2958. Who finds the trucks?—The Midland Company find everything, work the traffic, and maintain the line.

2959. You fix the charges?—We fix the rates and the fares.

2960. You fix your goods rates, do you not, at so much per ton, or is it so much per truck?—Sometimes the one and sometimes the other; we generally entrust the manager of the Midland Company to charge the Midland rates and fares on our line.

2961. (*Mr. Glyn.*) How long has the line been opened?—It has been opened to Castlebar between two and three years.

2962. Has there been any increase of traffic upon it during those three years?—There has not; on the contrary, there is a small decrease in the present half-year when compared with the corresponding half-year of 1864. Our receipts do not amount to $7l.$ per mile per week; did we receive $10l.$ per mile weekly, we should pay five per cent. upon both ordinary and preference capital.

2963. What is the amount of the paid-up capital, including the borrowed capital?— $581,000l.$ The debenture capital of $413,000l.$ is held by the Government, from whom we are now borrowing a further sum of $21,000l.$

2964. (*Mr. Glyn.*) How much do you want to complete the railway?—The whole of our authorized capital; we have still $70,000l.$ of preference shares, and $61,000l.$ of debentures to raise.

2965. (*Capt. Galton.*) What interest do you pay upon the Government securities?—The money was advanced to us at five per cent., but I succeeded last year in getting Mr. Gladstone to reduce it to four. The Treasury are making an alteration which I think will be troublesome; they propose converting the loan into a 22 years' annuity.

2966. (*Mr. Glyn.*) At $6\frac{1}{2}$ per cent., or at what rate?—The capital sum is $113,000l.$; the proposed annuity is $7,819l.$

2967. That would be a much larger pressure upon your company?—It would be exceedingly inconvenient to us, because every year we should have to go into the market to borrow money to keep up the debenture capital to its full amount.

2968. (*Capt. Galton.*) Why?—Because the debenture capital, forming one-third part of the capital of the company, was used in the construction of the line, and could not properly be paid off out of revenue. We should be driven to raise money at five per cent. to pay off the capital portion of the annuity, which now only costs us four per cent.

2969. (*Mr. Glyn.*) Your preference would come second?—Yes.

2970. (*Mr. Gower.*) What interest do you pay on the debentures?—We are paying four per cent.

2971. (*Chairman.*) What is your preference stock?—Our preference stock pays five per cent. We cannot float it in London. I think that the best preference shares are not worth more than 90 or 95 per cent. at the present time.

2972. (*Capt. Galton.*) Are you speaking of Irish preference shares?—Yes; I think at this moment it is impossible to get more than 90 per cent. for our preference stock. Few people are aware how very low Irish credit is in the London market. If the Commission will allow me, I will relate what once happened to me. I was taken by Mr. Hankey, the banker, to the Bank of England, and was introduced to the governor and the deputy governor. My object at that time was to get the Bank of England to advance money upon our debenture stock; those gentlemen heard me, and Mr. Hankey, who was connected with the company, confirmed all I said; it ended by the governor telling me—"This is all

*The Right Hon.
the Earl of
Lucan.*

19th May 1865.

The Right Hon.
the Earl of
Lucan.
19th May 1865.

"very good. If you wish it, I will put it before the Board of Governors to-morrow; but allow me to inform you the Bank of England have never yet advanced one farthing upon an Irish security, and in my opinion they never will." There is a certain word often used, "lock-up;" an Irish railway security is considered in the English market a "lock-up," that is, not a saleable security. I have no hesitation in saying that the difference between a Government English security and an Irish security would be as between 90 and 130 per cent.

2973. (*Mr. Glyn.*) Would not this annuity materially interfere with your preference stock? How can you keep up your payment of five per cent. on preference stock if you are obliged to find $6\frac{1}{2}$ per cent. on debenture stock?—We must borrow to pay part of the annuity, as we cannot deprive the shareholders of their dividend.

2974. Has this been done as a boon?—It has, I believe, been so intended, but it is a great mistake. I strongly suspect that the object is to secure a more regular payment of the instalments, which have been badly paid. By combining interest and principal, Mr. Gladstone thinks he will secure the regular payment of both.

2975. In fact it is making a sinking fund for the payment of the principal the first charge upon the railway?—Certainly.

2976. (*Capt. Galton.*) Is it not the custom almost always with the Exchequer Loan Commissioners to lend money in that way? Is not the other mode of lending it exceptional—for instance, the money that was lent to the people in Ireland for improving their land?—Those advances in Ireland were not made by the Loan Commissioners, but were granted by Parliament.

2977. (*Chairman.*) Can you state to the Commission any facts on which you base your opinion that a large reduction of fares would ultimately pay the company?—I think that, unless you reduce the fares 50 per cent., you will not materially increase the traffic. I would propose that the first-class passenger should be carried for 1*d.* per mile, the second-class passenger for $\frac{2}{3}$ *d.* per mile, and the third-class passenger for $\frac{1}{3}$ *d.* per mile. I would propose that the truck, which I believe is generally charged in England 6*d.*, and also in Ireland 6*d.*, should be reduced to 3*d.* I would propose that all heavy goods be carried for $\frac{1}{2}$ *d.* per ton per mile. I have not the smallest hesitation in saying that, if this could be done, in the course of four or five years there would be such an increase of traffic as would entirely restore the revenue. But the thing I look to as most important is the transport of cattle. In the west of Ireland store beasts are not put upon the railway, but travel by the road. A truck would take ten store beasts. If they could be carried for 3*d.* per mile, I feel sure that there would not be a single beast in that part of the country which would not travel by rail. Again, with regard to heavy goods, my belief is, that the whole of the corn of the country would be sent by rail, if it could reach Dublin at $\frac{1}{2}$ *d.* per ton per mile, or at a cost of 6*s.* 3*d.* for the 150 miles.

2978. Do they send away much grain?—An immense quantity of grain now leaves the west of Ireland by sea. At the rates I propose, not only grain, but potatoes would be sent by rail in large quantities; in short, the heavy traffic would be enormously increased and more than doubled.

2979. (*Sir R. Hill.*) Do you think this would require time?—I think it would require some four or five years.

2980. Is your lordship prepared to recommend any means of meeting the deficiency which would arise meanwhile?—I think the only course to take is for the Government to possess themselves of the whole of the railways in Ireland.

2981. (*Mr. Glyn.*) In what mode? Do you recommend that they should buy them up?—Yes.

2982. At the present price of the stock?—No, Government should negotiate, and my belief is, that

the whole of the ordinary stock of the railways could be purchased at 75 per cent. by a $3\frac{1}{2}$ per cent. stock, which would virtually be purchasing the ordinary stock at about 50 per cent. of the nominal value.

2983. (*Lord Donoughmore.*) That is on the average?—Yes.

2984. (*Sir R. Hill.*) Half the sum which has been expended upon them?—No, I am talking of the ordinary stock only.

2985. (*Mr. Glyn.*) What proportion would the share capital bear to the loans?—Two-thirds.

2986. (*Sir R. Hill.*) Of the 30,000,000*l.*, 24,000,000*l.* are ordinary capital?—No, in this both preference and ordinary are included.

2987. (*Capt. Galton.*) Is not the proportion about 6,000,000*l.* or 7,000,000*l.* of loans, 10,000,000*l.* of preference shares, and 14,000,000*l.* ordinary shares?—Yes, I believe it is.

2988. (*Chairman.*) 40,000,000*l.* is the total capital?—Yes. There might be a difficulty in the purchase of the preference shares, but even should this stock be purchased at par, there would still be the difference between 5 per cent. paid by the companies, and $3\frac{1}{2}$ per cent. to be paid by the Government; the same may be said of the debenture stock.

2989. (*Mr. Horsfall.*) Have the preference shareholders their maximum dividend?—Generally, I believe they have, but preference shareholders on the different lines are differently circumstanced; in some cases their stock is redeemable, in others they receive some more and some less than five per cent.

2990. Upon the preference shares?—Yes.

2991. Then there would be no objection to allowing those preference shares to remain in the hands of shareholders, the Government buying up the others?—It would be objectionable, as the Government would have to pay a dividend of five per cent. when, by purchasing them, they would only cost $3\frac{1}{2}$ per cent.

2992. (*Sir R. Hill.*) Would not your preference shareholders be willing to submit to some reduction?—I think that the preference shareholders generally, would accept a $3\frac{1}{2}$ per cent. stock for a five per cent. dividend.

2993. (*Mr. Glyn.*) Except the reduction of rates?—Yes.

2994. Do you feel quite certain of that, because in point of fact, by the Government taking the ordinary stock of the railway into their hands, the preference shareholders' position is very much improved?—Undoubtedly.

2995. Why should I give up my five per cent. if I have it in perpetuity?—In my opinion the purchase, by Government, of the railways in Ireland would be most popular. On the part of some of the directors there might, and probably would, be objections, but not on the part of the shareholders, and certainly not on the part of the public.

2996. (*Sir R. Hill.*) Your lordship does not recommend compulsory powers, I presume?—Not at first. My belief is that the greater part could be bought by negotiation, and in the other cases by compulsory arbitration.

2997. (*Mr. Glyn.*) Would you force the individual to take less than his contract?—I do not anticipate that the thing would be necessary.

2998. (*Mr. Horsfall.*) Has not that principle been adopted with regard to the turnpike trusts in England?—I do not know much of the turnpike trusts of England.

2999. (*Lord Donoughmore.*) When you have put these railways into the possession of the Government what would you do with them?—The Government could not manage railways in any country properly; in this country there would be jobbing to a frightful extent; in my opinion there could be no safety in travelling upon a Government line.

3000. (*Sir R. Hill.*) May I ask what dangers your lordship apprehends?—My recommendation is, that the Government should at once possess themselves of the different railways, now not less than 54 in

number, and that they should lease them to large companies. I would prefer a large English railway company to any other. For my part I should be very glad to see the London and North-western Railway Company work the line between Dublin and Westport, and I believe it would be to the advantage of the North-western Company to do so. I consider that the whole of the 54 Irish railways should be leased to three companies only.

3001. (*Mr. Glyn.*) How would your lordship divide the districts in Ireland?—I would divide them into the south, the midland, and the north. All the country between Ennis and Cork I would call the south district; between Ennis and Enniskillen should be called the midland district; and from Enniskillen to Belfast the northern district.

3002. (*Chairman.*) Would you forbid all competition where the systems adjoined one another?—If these lines were let by the Government, they must be let under conditions. One of the conditions would be a maximum fare, and another a minimum accommodation. These objects must be secured; after which I would allow of no competition whatever.

3003. (*Mr. Glyn.*) Then you would amalgamate all the smaller companies into these three large companies?—I would. Nothing would be more simple, and it could very easily be managed by a board sitting in London, but not in Dublin.

3004. Why do you prefer a board sitting in London?—A board sitting in Dublin would be too near the Castle.

3005. (*Chairman.*) You would place the companies to whom you propose to lease the lines under the control of a Government board sitting in London?—Certainly.

3006. Do you contemplate any control to be exercised over the companies, or would you allow them a considerable amount of liberty?—I would give them as much liberty as possible, after securing from them the conditions of maximum fares and minimum service.

3007. Then you contemplate the interference of the Government board only occasionally?—Yes.

3008. (*Mr. Glyn.*) Does your lordship think a board sitting in London would have a sufficient acquaintance with the wants of the district to enable it to manage it properly?—Certainly. Our railway is managed in London. A great many of the Irish boards sit in London.

3009. The London board has the advantage of your lordship's information?—I should be very far from wishing to exclude Irishmen from the London board, although I should be sorry to see them meet in Dublin. I think a very small board, with the Chancellor of the Exchequer and the President of the Board of Trade as honorary members, would conduct the business with little trouble.

3010. (*Mr. Glyn.*) When did this new annuity system come into operation?—I cannot say it has come into operation; it has been proposed to us.

3011. Is it to be undertaken by the companies necessarily, or have they any option in connexion with it?—I really do not know whether it will be obligatory or not.

3012. Is it put to the companies to do so in default of their paying interest, or paying off a certain proportion?—I have no doubt that Mr. Gladstone thinks that we shall accept it cheerfully, but I see great difficulties. I would rather continue under the old system.

3013. (*Sir R. Hill.*) Have not the loans been made upon the condition that they shall be paid off by instalments in certain periods?—Yes.

3014. Have those instalments hitherto been regularly paid?—No, I believe not regularly.

3015. I presume then this is a measure adopted in consequence of the nonpayment of the instalments?—I think it is proposed in order to secure more regularity in the payment of the principal monies.

3016. (*Mr. Glyn.*) I understand that the loans were made by the commissioners upon debentures?—Yes.

3017. Had those debentures a certain fixed time to run?—Our debenture capital was taken by the Government under a mortgage of the line, and on condition that the principal money should be repaid by annual instalments within 20 years; as yet we have not been enabled to pay off any of the instalments which have become due. In the English market it is nearly impossible to raise money upon Irish railway securities.

3018. (*Chairman.*) Do you contemplate that any loss which might accrue, either temporarily or permanently, may be borne by the country at large?—My idea is, that at the end of four or five years, or perhaps less, there would be no loss from the reduced rates and fares. I recommend, what loss should occur in the receipts in the meantime, should be added to the amount paid in the purchase of the railways.

3019. (*Mr. Glyn.*) Do you think that the company should have the power to raise the capital?—No, I have one plan and no other, and that is, that the Government should possess themselves of the railways.

3020. Who is to raise the capital out of which the deficit is to be paid?—Assuredly the Government. If, at the end of say five years the traffic did not increase to the extent expected it would be for the Government to increase the fares, but in my opinion the receipts would more than recover themselves. I consider that the Government should neither lose nor benefit by the railways in Ireland. These should pay $3\frac{1}{2}$ per cent. for the Government monies, and the fares and rates should be regulated accordingly.

3021. Then you would have the deficit raised by a Government loan of $3\frac{1}{2}$ per cent., in fact?—Yes, I would.

3022. (*Chairman.*) Have you considered whether it is probable that companies could be found willing to lease the lines to the Government?—I am very much inclined to think that English companies would take them. I do not believe there would be the smallest difficulty in finding companies to work Irish lines.

3023. Have you considered how additional lines are to be made, supposing the existing lines to fall into the hands of the Government?—I think there would be very few additional lines required. The Government, in my opinion, should only construct new lines where the counties agree to give the land, and where a certain amount of local subscription is offered. These lines would be chiefly single lines, and would seldom cost more than 4,000*l.* per mile.

3024. (*Lord Donoughmore.*) That is not including the land?—Yes, our land throughout has cost between six and seven hundred pounds per mile; for one part of our line the contractors received for the land 700*l.* per mile, in addition to what they were paid for the works. The total cost of our railway will amount to something like 6,580*l.* per mile.

3025. (*Sir R. Hill.*) Is it a single or double line?—A single line with double over works.

3026. (*Chairman.*) Is that through a heavy country, either many cuttings or embankments?—It is a flat, easy country. It might have been done even cheaper.

3027. If you had ready money it might be done cheaper?—If we had had ready money, I am perfectly certain the line need not have cost more than 3,500*l.* per mile. With Government credit we should have saved 1,000*l.* per mile and more. It was proposed that 6,000*l.* per mile should include all expenses, but monies were wasted upon stations, and above 20,000*l.* lost in parliamentary contests.

3028. (*Chairman.*) What would you do with the lines which are now actually in process of construction, or those for which Acts have been obtained, although no works have been commenced upon them? All the lines authorized by Parliament, whether in process of construction or not, should be completed on the earliest day, and were Government credit to be given, there would be a great saving in the cost.

3029. Would you force the Government to complete those lines?—Undoubtedly the lines must be

*The Right Hon.
the Earl of
Lucan.*

19th May 1865.

*The Right Hon.
the Earl of
Lucan.*

19th May 1865.

completed by the company or by the Government. It would save great expense, and therefore be greatly to the interests of the public, to substitute the credit of the Government for the credit of the companies; of course, under proper control and supervision.

3030. (*Lord Donoughmore.*) Are there many new lines proposed in the present session?—Not in my district, nor in the district of the Midland Company. The great object in Ireland is to reach the English market at the smallest cost; the Germans and Dutch send their cattle at a much less cost than we can. Should the rates be lowered to the extent I propose, a beast from the most distant western point of Ireland would reach the London market for 1*l.* 1*s.*, and a fat sheep for 4*s.* or 4*s.* 6*d.* The London and North-western Railway Company now bring beasts at 17*s.* 6*d.* per head, and sheep at 3*s.* 3*d.* from Dublin to London.

3031. Are the rates that you have mentioned between Dublin and London very much lower than the rates charged on Irish railways?—Much lower. The distance between Dublin and London is about 330 miles, whilst between Dublin and Castlebar the distance is only 150 miles. To send a sheep the 330 miles only costs 3*s.* 3*d.*, while to send it the shorter distance costs 2*s.* 3*d.*

3032. (*Mr. Horsfall.*) Your lordship spoke of the grain round Castlebar being shipped by sea from Westport?—From Westport and Ballina.

3033. Have you entered into any calculation as to what reduction would be necessary to enable the railway to compete with the shipment by sea?—We compete already. I am quite satisfied that if we could send heavy goods at $\frac{1}{2}$ *d.* per ton per mile, we could compete very successfully with the boats.

3034. (*Mr. Glyn.*) Is there a coal trade?—There was undoubtedly a coal trade one year in the west of Ireland; this was purely accidental, and arose from the people having failed, from a constant wet, to save their turf. It had, I believe, never happened before, certainly not to the same extent. In my opinion there never can be a permanent coal trade with the west of Ireland, and for the simple reason that, carry the coal at any price you like, or for nothing, still turf will always be the cheapest fuel. To show this, I must observe that I have two steam engines, one in Middlesex of 8-horse power, a second at Castlebar of 13-horse power; the Middlesex engine, at 20*s.* per ton for coals, costs me 10*s.* per day of 12 hours; the larger engine of 13-horse power at Castlebar consumes two cribs of turf only, at a cost of 4*s.* per day. It may therefore be said that the difference between the cost of turf and coal is not less than 4 against 16. Under these circumstances it will, I think, be the opinion of the Commission that to expect to introduce a coal trade with the west of Ireland would be irrational.

3035. (*Chairman.*) Then it is the difference between 4*s.* and 16*s.*?—Yes.

3036. (*Capt. Galton.*) Do they burn turf in the locomotive engines on railways?—I think not.

3037. Why not?—I do not know.

3038. (*Mr. Glyn.*) You have no back freight for these coal trucks?—At low rates there should be no difficulty.

3039. (*Chairman.*) Is the increase in the coal traffic the principal source from which you consider the increased traffic would come on to your line?—At $\frac{1}{2}$ *d.* per ton per mile, or 3*d.* per mile for a truck, a large quantity of corn and potatoes would be sent by rail. The traffic in heavy goods would be enormously increased, more than doubled.

3040. (*Capt. Galton.*) As your lordship entertains

such a confident opinion that a large increase of traffic would follow a reduction of the rates, I wish to ask why has not that experiment been tried upon one article or two articles at a time, so as to see whether there was any increase?—Our rates could not be lowered advantageously without the Midland Company lowering their rates to the same extent, and I am certain that they would not consent to reduce their rates to enable us to try experiments.

3041. One of your difficulties is being a separate company from the Midland Company?—We are two perfectly independent companies.

3042. (*Mr. Glyn.*) Are the rates for goods upon the Midland very high?—They are exactly the same as ours. We have always allowed the managers of the Midland to levy the same rates upon ours as they do upon their own line.

3043. In what description of goods does your lordship think there would be a great increase of traffic, excluding grain and potatoes?—The country produces meat, corn, flax, and roots; in all of these the traffic would greatly increase.

3044. You do not want much back?—At times a large quantity of Indian corn is sent down, and we have received a tolerable income from this traffic; this year oats have been so cheap as to interfere with it.

3045. (*Chairman.*) Where do you get your timber from?—A great deal of that comes direct by sea.

3046. To Westport and Ballina?—Yes.

3047. (*Capt. Galton.*) Does the railway carry much timber from Westport into the interior to the local stations?—I do not think we carry much timber.

3048. But the timber which has to be used by the people living in Roscommon must come either from the west or from Dublin?—It might come by canal from Dublin.

3049. Is there a canal from Dublin?—Yes.

3050. (*Mr. Glyn.*) I presume groceries go from Dublin?—Everything of that sort goes from Dublin or England. We have through rates with the London and North-western Railway Company, therefore we receive a good deal from Liverpool, Manchester, and other places.

3051. (*Chairman.*) It has been stated by one of the former witnesses that he was of opinion, under all circumstances, that store cattle would continue to be driven along the road, from the fact that it gave the drovers an opportunity of disposing of a portion of them on the way. Do you think there is much consideration to be given to that?—Certainly not. I do not believe it at all. I am perfectly certain that at a very low rate, the greater part if not the whole of the store cattle would travel by rail.

3052. (*Mr. Glyn.*) A great deal of it would come to the English feeders?—In the west of Ireland they do not breed many cattle; they come from the south, and are bought as calves; at three or four years old they come to the English market. The whole of the cattle now coming to the west and leaving the west would travel by rail, if the rates were lowered.

3053. (*Lord Donoughmore.*) When your line is open to the sea at Westport and Ballina do you expect you will have any fish traffic?—We should have the whole of the traffic at this moment, if we had a night train.

3054. That is for fresh fish and salmon?—Yes.

3055. Is not that traffic very considerable in amount?—Very considerable.

3056. Is there any sea fishing at Westport?—Yes.

3057. Would a low rate enable you to create a traffic in carrying Westport fish to the Dublin market?—Yes, and to England also.

Wednesday, 24th May 1865.

PRESENT :

THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
THE HON. E. F. LEVESON GOWER, M.P.
THE RIGHT HON. ROBERT LOWE, M.P.
SIR ROWLAND HILL, K.C.B., F.R.S.
T. B. HORSFALL, Esq., M.P.
ROBERT DALGLISH, Esq., M.P.

GEO. CARR GLYN, Esq., M.P.
A. S. AYRTON, Esq., M.P.
CAPT. DOUGLAS GALTON, R.E., F.R.S.
E. T. HAMILTON, Esq.
WILLIAM POLE, F.R.S., *Secretary.*

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

MR. THOMAS F. BRADY examined.

Mr.
T. F. Brady.
24th May 1865.

3182. (*Chairman.*) You are secretary to the Special Commission on Irish Fisheries?—Yes.

3183. And you have been inspector of fisheries in Ireland?—Yes.

3184. In the discharge of the duties of your office have you had occasion to become intimately acquainted with the state of the Irish fisheries, both in the fresh water and in the sea?—Yes.

3185. Is there any great extent of the Irish coast which, in your opinion, is well adapted for carrying on sea fisheries?—There is a very large extent.

3186. Will you adduce any particular parts of the coast that you consider the best?—All the west coast—in fact from the south-west coast from Dunmore round by Galway, Westport, Sligo, Donegal, and round to Moville—all that coast abounds in cod, ling, and flat fish, the finest turbot, soles, brit—the very finest classes of fish that can be taken; the largest

turbots are to be found in large quantities round that west coast.

3187. Is the number of the population employed in the fisheries increasing or diminishing?—Decreasing.

3188. Since what time has that decrease taken place?—Since 1844, so far as the Board of Works, who are charged with the administration of the laws relating to the Irish Sea fisheries, has received returns from the coast guard, the coast guard of the country being specially charged with the revision and registry of the fishing vessels, and the number of men and boats employed. I can give you the number of men and boats employed on the Irish fisheries during the last year.

3189. The extension of railways in Ireland has not led to any increase in the produce of the Irish fisheries?—It has not.

3190. In fact, the extension of railways has been simultaneous with the decrease in the produce of the

Irish fisheries?—It has. The extension of railways has removed a great deal of the ordinary conveyances of the country away. The fishermen used to send the fish by carts and cars and the general modes of conveyance, before the establishment of railways, through the interior of the country; the population of the whole country has very much decreased, and those conveyances are removed. The railways have not given those facilities of transit that would induce the fishermen, I think, to follow their occupation with diligence.

3191. Which was the chief market for fish taken on the west coast of Ireland?—Before the extension of railways it was in the interior; we had no central markets. Galway sold its own fish in Galway, and in the interior of the country, carried by hawkers or jolters. Since the extension of railways, the Galway fish, principally the finer portions of the fish, come to Dublin, and from thence to London, Liverpool, Birmingham, Manchester, and all the principal towns in England.

3192. Has there been a falling off in the demand in Ireland itself for this fish?—I think in the seaport towns there is a falling off in consequence of the population falling off; the English markets being now so near us and so quickly reached, it takes a great quantity of fish away that would otherwise be consumed in the country. Fish has reached an enormous price in Dublin and in other places in Ireland.

3193. Is the supply in Dublin unequal to the demand?—Quite unequal to the demand.

3194. Where is Dublin chiefly supplied from?—It is chiefly supplied from Galway, from the east coast, and some portions of fish come from Castlebar, and from Waterford, Kinsale, and Dunmore also. There is a very large fleet of trawlers engaged in the fisheries on the east coast that trawl the Kish bank and the Nymph bank, and on down to Dunmore—these bring in a great quantity of fish to the Dublin market, and it is sent then on to the different English towns.

3195. Are you of opinion that the rates of carriage for fish on the Irish railways tends to depress that branch of industry?—I think that the rates of carriage on fish, particularly on small parcels, tend very much to depress it. Fishermen, unless they can get the means of sending away small parcels of fish, each man sending his parcel to a factor in Dublin, must sell it to some hawker or others, who send it away, and the consequence is that the hawker is the man who gets the profit, and the fisherman gets very little for his trouble.

3196. Although the rates on the railways are high, there must be greater facilities for getting the fish away now than before the construction of the railways?—No doubt.

3197. Then how do you account for the produce of that branch of industry having fallen off?—The railways are taking the fish now away from the seaport towns where the fish are caught, and before it used to be brought into the interior of the country; they had probably a greater market, and although not as profitable as now, there was a greater demand than there is at present.

3198. (*Lord Stanley.*) Is not the main cause of the decrease this, that the local demand is much smaller than it was, consequent upon a diminution of the population?—Yes, quite so; it is much smaller in consequence of the decrease in the population.

3199. Setting that local demand aside, do you think that there is any decrease either in the demand or the supply?—I do not think there is any decrease in the demand; it would be hard to say whether there is a decrease in the supply; there is a decrease in the number of men and boats to a large extent, but whether there is a decrease in the supply I cannot tell.

3200. Is that decrease in the number of boats and men employed more than may be fairly accounted for by the diminution of the local demand, consequent upon emigration?—I think not; probably the decrease is just in proportion to the decrease in the population.

At the same time I think that if railways afforded greater facilities you would give greater encouragement to the coast population to fish; for now they will take any ordinary employment rather than follow that very precarious one of fishing, unless they have good markets and facilities.

3201. Who are the persons who buy the fish from these fishermen?—They are called jolters in the country; they are hawkers.

3202. Do they buy large quantities of fish and send it in large quantities to Dublin?—Yes; they buy them in large quantities in Galway; they watch the boats coming in, and then they buy each vessel's load as it comes in, and send the fish away themselves.

3203. (*Mr. Ayrton.*) You stated that the price of fish had risen?—Very much.

3204. And that it was in consequence of the demand for fish for the English market?—I think that that has been a good deal the cause of it.

3205. Is the fish sent to the English market round by sea from the west coast, or is it sent by railway?—Salmon is sent from Ballina. What I have been speaking about has been the coarse fish, turbot and soles, wishing to distinguish them from salmon. From Ballina they send the salmon round the whole of the north coast in sailing smacks to Liverpool, in preference to sending them by railway from Castlebar.

3206. That is all the salmon?—Yes; they pack them in boxes with ice. They send them round a very long distance from Ballina, round the north coast of Ireland, on to Liverpool, in preference to sending them from Castlebar by railway.

3207. What has the rise in the price been in any given period?—Salmon is now worth 1s. 3d. or 1s. 4d. a pound in the wholesale market.

3208. In what market?—In either the Dublin or the English markets. There is very little difference between them at present.

3209. What is the price of the salmon at the place where it is caught and from which it is sent?—That is about the price, because wherever you have salmon fisheries the fish all comes to the Dublin or English markets, and the prices are regulated by the Dublin or the London market. The price I have given is the price to the person capturing the fish.

3210. What was the former price at any given period?—Salmon was down very low at one time, as low as 3½d. and 4d. a pound before facilities were afforded by railways, and they could get ice.

3211. Do you mean that the wholesale price was 4d. a pound?—Yes.

3212. At what time was that?—I think I bought it in the Dublin market for 4d. a pound probably 15 or 16 years or 20 years ago.

3213. I do not understand why the price of salmon should rise in the Liverpool market in consequence of railway facilities being afforded?—The English markets take so much salmon now, and it is so easy to get at it, that I think it must rise in price.

3214. You mean that it is distributed from Liverpool into the interior of England to such an extent, and the demand in Liverpool has so greatly increased, that there is no corresponding rise in the price in Liverpool?—Yes.

3215. With regard to the coarse fish, has there been any rise in price in that?—There has been a great rise in the price of coarse fish—turbot, soles, and cod.

3216. Has there been a corresponding rise in price at the places where they are caught in Galway and all along the coast?—There must be, to a certain extent, a rise in the price, but the poor fisherman is not the man who reaps the advantages of it.

3217. Can you state what the present price is, and what the former price was of the fish to the fisherman at the great fishing places on the west coast of Ireland?—I will take turbot, which is worth at the present time from 10s. to 11. a piece, while formerly it could be bought at the fishing places for 2s. 6d.

3218. What is the price at the fishing places now, in Galway?—I cannot state exactly what the fish

*Mr.
T. F. Brady.
—
24th May 1865.*

*Mr.
T. F. Brady.*
24th May 1865.

sells for, but I will give the Commission an instance which occurred on the north coast. At one time in Belfast Lough I saw cod fish sold at the rate of 2s. 6d. for 13 fish. The fishermen themselves had no means of sending them to market on their own account, and they had to sell them to hawkers who sold them again, and then they were sent on. These people had facilities for sending them on to the markets, and they reaped the advantages of the high price, but the fishermen did not reap it.

3219. To what period are you now referring?—Five or six years ago.

3220. At the present time do the same class of people get the fish more freely?—I do not think they do.

3221. Has there been little or no change in the price paid for the fish to the fishermen?—Not much as to the coarse fish in the price paid to the fishermen. I speak of the distant stations; of course the fishermen who fish on the east coast bring their fish in their own smacks to Dublin, and there they have reaped advantages from the high price.

3222. Do you think that the intermediate agents have got the full benefit of the rise in prices?—I think they have.

3223. (*Mr. Glyn.*) You have stated that the fishermen wanted an opportunity to send small parcels of fish, and that facilities should be given to the fishermen on the coast, but what quantity do you mean by small parcels of fish, what weight?—Less than one hundredweight of fish. I think that each fisherman ought to have facilities afforded him for sending his own parcel of fish to his factor in Dublin; then he would get his money direct the next day to himself.

3224. What is the present charge by railway?—I have made out a return of the different charges made since 1852 down to the present year on different lines of railways.

3225. From what places have you taken them?—I have taken all the railways—from Cork, the Great Southern and Western, the Waterford and Limerick, the Galway line, the line from Castlebar joining Ballina, the Dublin and Drogheda line, and lately only the Dublin and Waterford line; we have had no returns until last year from the Dublin and Waterford line. These returns are culled from the different reports of the Commissioners made to Parliament.

3226. What is the rate upon the Great Midland Railway?—I should say that on comparing the prices charged in the different years from 1852, the rates vary so much that I cannot ascertain upon what data they make these charges at all. For salmon under 10 cwt. the charge was 3s. 6d. per cwt. in 1852, and over 10 cwt. it was 2s. 6d., from Galway, the distance being 126 miles. In 1864 they charged 31s. a ton from Galway; they charged 39s. 9d. from Castlebar, and they charged 24s. 6d. a ton from Sligo, the distance being 134 miles, while they charged 34s. from Collooney, a distance of 128 miles, six miles less than the previous distance I gave, and the charge being 10s. a ton higher on the same line of railway. From Ballysadare they charged 34s. 6d., the distance being two miles more.

3227. What is the minimum quantity that is carried?—Under 5 cwt. I am now speaking of the Midland line.

3228. (*Mr. Horsfall.*) Can you at all account for these unequal rates?—I cannot. I have examined this return prepared from the different reports made by the Commissioners to Parliament. I have examined it most carefully, in order to ascertain why these charges could be made, and I cannot understand at all on what principle it is that they carry fish on the same line of railway for a much greater distance at a much less charge.

3229. Has any representation been made to the railway companies as to these unequal rates?—Yes, and the Commissioners of Fisheries have remarked upon it in their various reports to Parliament that they have had frequent interviews with the directors

of the two great lines of railway, but that they had not effected any alteration.

3230. (*Mr. Glyn.*) Does the rate charged on the Great Southern and Western Railway differ very much from the rate charged on the Midland Railway?—The Great Southern and Western rate does vary very much from it.

3231. (*Mr. Ayerton.*) You have spoken of an intermediate person being able to buy up the fish at a price of 3s., and selling it at 6s.?—Yes.

3232. For how many pounds of fish do they give 3s.?—They send it away in bulk, and then they can send it by cheap carriage at so much per ton; they give different rates, that is, under 5 cwt. so much, and over 5 cwt. so much less.

3233. The railway charge for conveying fish the whole length of the Midland Railway comes to something under a farthing a pound?—Yes.

3234. It is a fifth of a penny?—Yes.

3235. Will you be good enough to explain how the charge of a fifth of a penny could influence the trade where the difference in price is such as you have mentioned?—A farthing a pound is considered to be a great difference when you deal with fish in any large quantities.

3236. Will you compare that with the different prices you have mentioned, for I want to know how this infinitesimal sum could influence the trade in any way?—I am really not prepared to answer that question.

3237. (*Sir R. Hill.*) You have spoken of the profits of the middlemen as being something enormous?—Yes.

3238. Have they any monopoly given to them?—No; except in the way I state there is no monopoly. These poor fishermen are obliged to sell, and it is the general complaint there, of these people.

3239. What obliges them to do so?—It is because they cannot send their own parcels to a factor. If they have only a small parcel of fish the rates are so excessively high that they cannot do it. The returns that I gave you were for a weight over 5 cwt., but the parcel rates are considerably higher.

3240. What would the rate for a single hundredweight be?—I can give you an instance. On the Midland Great Western Railway, one-eighth of the distance, 65 lbs. of salmon cost 5s. 10d. coming to Dublin from Castlebar.

3241. That would be a little more than a penny per pound?—Yes. From Cork, a distance of 15 miles further, by the Great Southern and Western it would only cost 3s.

3242. What was there to prevent those fishermen sending their fish to Dublin and paying a penny per pound, two or three of them joining together to make up the hundredweight?—In practice they have not done it.

3243. But why do they not do it?—I cannot explain that further than by saying that they do not do it.

3244. Can you conceive any possible change as to the charges on railways which would induce them to do it?—I think if the parcel rates were low per hundredweight they might do it.

3245. I understood you to say that the fish is sold to the middlemen; at what price?—I cannot tell you that. The fish may vary in price from 2d. to 8d. and 1s. a pound, but some coarse fish is not worth more than 2d. a pound. Hake is not worth more than a penny a pound when the hake fishing sets in.

3246. You stated, as I understood you, that the fishermen sell their fish at a low price to the middlemen, and that the middlemen send the fish to Dublin, and there get a very high price for it?—Yes, that is, a price considerably greater than the working fishermen get.

3247. I do not see how that state of things, which to me is very inexplicable, is to be remedied by any practical lowering of the price charged for the conveyance of the fish from the place where it is caught to Dublin?—There is a great difference between the

Mr
T. F. Brady.
24th May 1865.

parcel rates and the rate per hundredweight or five hundredweight.

3248. The parcel rate is very high, you say?—On salmon it is, but salmon will bear it, because it is a very valuable high-priced commodity, but coarse fish is not able to bear that high rate. Fish that is sold at a penny a pound cannot bear a halfpenny a pound for carriage, or a farthing a pound.

3249. Is the price of coarse fish at the ports so low as a penny per pound?—Hake is sold at less than a penny per pound.

3250. What is the price of soles?—At certain seasons soles are worth more.

3251. Just give us an average?—I cannot give you an average of the prices of the different kinds of fish, because that depends upon the description of fish, the quality and quantity.

3252. Cannot you give us some idea of the ordinary price of fish?—Turbot is worth from 6d. to 8d. per pound, retail, in the Dublin market.

3253. I am speaking of the price of turbot where it is caught, and the price which the fisherman obtains from the middleman?—The fisherman does not sell it by weight at all, he sells it merely by bulk.

3254. Cannot you convert the price by bulk into a price by weight?—I cannot.

3255. Give it then in any shape that you can?—A fisherman sells perhaps about a dozen turbot to a hawker, and he may not get more than 1s. apiece for them.

3256. Then supposing the turbot are sent to Dublin, what are they sold there for?—They may be sold in Dublin for 6s. apiece.

3257. That is a state of things which appears to me utterly inexplicable, that a turbot bought at one end of a line of railway for 1s., should be then carried for a penny a pound to the Dublin market, and be there sold for 6s.?—That is so.

3258. (Chairman.) Are the middlemen, under this system, making very large profits?—In many cases they have done so.

3259. (Sir R. Hill.) Are there a great many of these middlemen?—Yes.

3260. (Mr. Ayrton.) What is the nature of the fish markets at the places where the fish are caught?—There are no markets at the different places. The fish are brought on to the beach and stranded, and a man comes and buys them in bulk; there is no market.

3261. And the fish are sold on the strand as they are on the English coast?—I suppose so.

3262. Are there no competitors on the strand to buy the fish?—In some places there are; on the east coast there are competitors.

3263. Do you think it is according to the usual course of business for fishermen to send their fish on their own account to distant markets?—I think if they were able to send their fish they would of course do away with the profit which is now obtained by the middlemen.

3264. Is it the custom with people of that class to send their goods to distant markets, consisting only of small quantities at the place of production, or do they usually sell them to some agent?—They usually sell them to some agent.

3265. (Mr. Horsfall.) Is not the system the same as that which prevails in England?—I believe so; but I do not know what the system in England is.

3266. (Capt. Galton.) You seem rather to think that the fisherman should send his fish to the Dublin market; but I do not gather from you that he is at all precluded from doing so by the high price charged for carriage. You say that he gets 1s. for a turbot on the sea coast, which turbot is sold for 6s. in the Dublin market, the cost of carriage being a penny per pound. The turbot does not weigh, I suppose, more than 12 lbs.; therefore if the fisherman charged the Dublin fishmonger 3s. and paid the carriage, the Dublin fishmonger would gain 2s.?—Yes, he would.

3267. Therefore it does not appear that the railway carriage in any way precludes him from sending the fish to the Dublin market?—As you put it to me now, I do not think it does really.

3268. (Mr. Ayrton.) What we desire to understand is, whether he is precluded by the railway rate, or by those social and trading circumstances which affect the conduct of business of this sort?—I think it is affected probably in both ways; it is affected not only by the railways, but also by the social circumstances of the case.

3269. (Mr. Hamilton.) Do you suppose that there is a considerable part of the fish sold by the fisherman to the middleman which spoils before the middleman can get it to market?—I cannot say; but if they have not got a train by which they can send the fish off to Dublin or to markets at certain times, particularly in such weather as the present, a great quantity of it must spoil. At Castlebar, for instance, there is no train from 11 o'clock in the day, so that all the western fish that is brought in fresh caught must remain over until the following day.

3270. (Capt. Galton.) You mean that there is only one train a day from Castlebar?—Yes.

3271. (Mr. Hamilton.) If the fish became spoiled, the profit to the middleman would be materially reduced?—Yes.

3272. (Sir R. Hill.) I understood you to say that you thought the fishermen were, in some way, injured by the establishment of railways?—I do not think that the railways have benefited the fisheries as it was originally contemplated they would do.

3273. It would seem that from Castlebar the railway does not carry the fish after a certain hour of the day?—The railway carries the fish, but not at convenient times.

3274. What is there to prevent the fisherman from resorting to the old means of conveyance by cars?—All those conveyances have been taken off the road by the introduction of railways.

3275. (Mr. Ayrton.) Allowing for the delay which may take place in consequence of the trains not running at convenient times, does not the fish nevertheless arrive sooner in the market than it did when they were sent by cars?—They were not then brought such distances by cars as they are now by the railways, the fish then was only taken to the markets in the interior, and not to the great markets; it did not get to England.

3276. (Capt. Galton.) Is it not the fact that the fisheries on the western coast of Ireland have been much injured by a system like trades unions, and the boats and nets have been destroyed?—No instance of that kind has occurred on the west coast, except at Galway. The Claddagh people have been very violent and opposed to the introduction of new modes of fishing, such as trawling in the bay, and they have destroyed the nets on various occasions, and attempts have been made to scuttle the boats.

3277. (Mr. Ayrton.) Was there not a fishing company established at Galway which came into direct relation with the fishermen, and which gave them the benefit of a rise in the prices?—There was a London company.

3278. Did not that company provide every requisite for the most scientific and most economical modes of fishing?—Yes, for scientific modes, but that company was carried out in a way that was calculated to fail; it was carried out in such an expensive way that it could not succeed.

3279. Having done so much, it failed?—Yes; it broke down from mismanagement.

3280. Did it not find great difficulty in carrying on its business from the obstructions offered to it by the people there?—Never.

3281. Was it well supported by the fishermen there?—I have not the slightest doubt of it. I have not the least doubt that if a company were started, well conducted, and which acted with economy, they would meet with every support all round the west coast, and, indeed, all round the coast of Ireland. There may be

Mr.
T. F. Brady.
24th May 1865.

prejudices existing among the people in Galway, but that is the only place that I know of where there are any.

3282. When the company I have referred to broke down, did any private enterprise spring up; were there parties ready to carry out the same operations?—Yes, there are parties fishing there, but I am sorry to say that there is very little private enterprise in Ireland with respect to fishing.

3283. (*Sir R. Hill.*) Is not that the root of all the evil?—It is the root of a great deal of difficulty in Ireland—the want of private enterprise.

3284. (*Chairman.*) Did the company which has been mentioned meet with any obstruction from the railway companies in making arrangements for the conveyance of the fish?—I think not. That company was established at Galway, and the direct Galway line had trucks to carry the fish at 12 o'clock at night by the mail train, and they afforded great facilities. If the same facilities were afforded from Castlebar and Sligo there would be a very different state of things.

3285. Do you think, as far as Galway is concerned, that the railway company affords every facility that they could be expected to do?—Yes, I think they afford every facility.

3286. Is the trade to any great extent carried on between Galway and Dublin?—I can give you the quantities of fish that were carried by the Galway line from 1852. In that year there were 523 tons of fish carried.

3287. (*Sir R. Hill.*) No more than that in a year?—No, that was all, including oysters, cured fish, eels, cod, and salmon. In 1862 they only carried 785 tons.

3288. (*Mr. Glyn.*) What quantity did they carry last year?—Last year they carried 1,136 tons.

3289. Is the quantity increasing?—It was just increased for that one year; but if you take the returns altogether you will find that the quantity has increased very little.

3290. (*Chairman.*) Is that the most important fish trade that is carried on on any Irish railway?—The Great Southern and Western Railway carry on a very important salmon trade, and in other fish also. They carried 1,249 tons of fish last year, and 1,145 tons the year before.

3291. (*Mr. Glyn.*) Where was it brought from?—From Cork; it is collected from Cork, Limerick, and Waterford, and on all the Southern Lines. The herring fishing now on the east coast is a very profitable one. They sold last year alone, on the quay of Howth, 94,000*l.* worth, and upwards, the produce of 110 days fishing.

3292. Have you reason to believe that any reduction in the charges by railway would materially increase the quantity of fish sent from Galway?—From Galway, I think not; but from stations such as Sligo and Ballina, to which railways are not extended, they have to bring the fish 16 or 18 miles by cart first, and of course you have to add the additional expense of the carting from the fishery to the railway station, and then to add the railway charge to that.

3293. Would it pay the railway companies to afford additional facilities to Ballina and Castlebar?—I think it ought to pay them if it has paid the Galway Company to do so.

3294. (*Mr. Ayrton.*) Would it not be cheaper to employ small steamers to bring the fish up from Sligo?—They send all the salmon from Ballina all round the north coast by sailing smacks in preference to sending it by railway. All that traffic is lost to the railways because they can send them for about 4*s.* 6*d.* a cwt. round by sailing smacks, and they run all the risks rather than send them by railway in consequence of the expense.

3295. (*Capt. Galton.*) How long does it take to go round by the sailing smacks?—It depends, of course, upon the weather; but they do it now in 48 hours to Liverpool.

3296. Do you mean 4*s.* 6*d.* a cwt. ?—Yes, or 4*l.* 10*s.* per ton.

3297. (*Chairman.*) Have any communications taken place between the Irish Fishery Commissioners and the Directors of the Irish railways?—They have had interviews, there have been no written communications, and the Commissioners have reported upon the subject. I can refer to the reports made by the Commissioners, which I have brought with me, and can, if I may be allowed to do so, read extracts from them.

3298. (*Mr. Ayrton.*) Do you think that the fish is conveyed in sailing smacks rather than by railway on account of the greater expense, or because the fish are better preserved in sailing boat than on a railway?—They are not better preserved in a boat than on a railway.

3299. There is no advantage in the boat in that respect?—No; on the contrary I have heard from the largest proprietor of salmon fisheries on the west coast—I refer to the Ballina fishery—that he would prefer sending the fish by railway if he could; but he does not send parcels of fish by railway when he has small parcels to send; they have to cart it 16 miles into Castlebar. They would rather cart the fish from Ballina into Castlebar and send it by train to Dublin, and thence to Liverpool and the English markets, than send it, running the chance of bad weather, round by the coast.

3300. What is the cost of carting the fish from Ballina to the railway?—I do not know what the cost of the road carriage is, but these people generally have their own spring vans and conveyances to do these things. At Ballyshannon they send the fish 24 miles on to Sligo, and they send them by Sligo in preference to sending them by a nearer route from Enniskillen to Dublin, in consequence of the high charges made on the line, and there is also water carriage on Lough Erne.

3301. (*Capt. Galton.*) Is the fishing trade such a trade as would enable the fish to be brought in at a specified time every day, or is there uncertainty about it, so that the railway company cannot start a train at a fixed time?—I think there is no uncertainty about it. They start the Galway train at 12 o'clock at night; that is the mail train, and all the boats are in long before that, and all the fish is carried away.

3302. If there was a similar train from Sligo or Castlebar, would not that be a great advantage?—It would materially assist the fisheries of that district I know from complaints which have been made to me, not only by the proprietors of salmon fisheries there, but by the common fishermen, that they are not afforded the necessary facilities on that line for sending their fish to market.

3303. (*Chairman.*) Are the coarse fish now generally packed in ice?—In some places they are, and in some they are not. In Galway, for instance, I do not think there is any ice, and they send the fish away direct without any ice in the hampers.

3304. When the fish is packed in ice, a few hours delay are not of any importance?—No. In Kinsale the buyers have a regular ice establishment, and they pack the fish in boxes in ice and send it to Dublin.

3305. (*Sir R. Hill.*) Does the middleman pack the fish in ice?—Yes; that is, in one or two places; in Kinsale he does, but he does not in Galway, nor in Ballina, nor in Sligo; at Moville they do. From the Londonderry coast a steam packet takes the fish on from Londonderry to Liverpool and to Glasgow.

3306. (*Mr. Glyn.*) Has there been a large take of fish at Kinsale?—Yes, last year there was. The principal fisheries there are herrings and mackerel, and French fishermen come over there.

3307. (*Mr. Horsfall.*) Is there not a good supply of fish in Dublin Bay?—Yes, but those are not affected by railway carriage; the fish are brought into Dublin by the captors, and they make their market direct there.

3308. That, in some measure, supplies the Dublin market with fish?—Yes; but the buyers in the Dublin market send the fish off to the English markets because it pays them better. The city of Dublin is

Mr.
T. F. Brady.
24th May 1865

badly supplied with fish. With the permission of the Commission, having the various Reports of the Commissioners before me, I will read a few extracts from them, and, first, from the Report of 1850:—
“No branch of industry is likely to derive a more direct and immediate benefit than our coast fisheries from the completion of those great lines of railway now in progress, while our large inland towns, as well as the metropolis, are even now furnished with an abundant supply of fine fish within a few hours after its capture. The turbot and black soles of Dingle and Ballinskelligs Bays taken out of the water on the morning of Thursday are on the Dublin tables on the following day, thanks to the persevering efforts of the Royal Irish Fisheries Company’s establishment at Dingle, and not less to the liberal arrangements of Mr. Bianconi, who has invariably rendered his conveyances auxiliary to the great object of speedy transit to the nearest lines of railway; in short, there is a complete revolution in the trade in Ireland. The supply of the fresh market is now the main object, and in proportion as facilities of conveyance are afforded this trade must increase. We look with great confidence to the completion of the Midland Great Western Railway to Galway and the Killarney Junction to Mallow. Our metropolis will then become the great centre of attraction, and, after its ample supply, the markets of England, approachable within a few hours, will to an unlimited extent take our surplus. To promote this important end two objects seem to be most desirable; first, a determination on the part of railway companies to fix their scale of prices so moderately as to afford encouragement to a large transit trade. It is quite notorious that no article of traffic is more precarious in every respect than fish, from its capture to its last sale to the consumer; it is full of uncertainty. It never can bear continuous heavy expenditure, and if the various operations be not conducted with the most rigid economy, promptness, and care the undertaking must fail.” Then they go on with their Report.

3309. (*Sir R. Hill.*) Those anticipations have not been realized?—No. Then they report in 1853, “Nothing more importantly exemplifies the best, and, as it has always appeared to us, the only sound means of improving this trade, namely, quick and cheap transit to good markets, than the accounts of the increased carriage of fish by railways and steam navigation. Our anticipations on this subject have not been in any degree disappointed, and we look forward with confidence to the steady gradual operation of the railway system, the prime mover of commercial prosperity, especially in remote districts, in developing the resources of both the sea and inland fisheries of this country.” Then in 1854 they report, “Several enterprising persons at Waterford, Kinsale, Galway, and on the banks of Lough Foyle have entered extensively into this trade; and although they afford a constant demand for all the fish brought to these places, it is generally at prices necessarily rendered very low by the cost of transport by the principal railway companies, who apparently do not see the advantage of encouraging the traffic by a reduced scale of charges; for, no doubt, a number of small dealers along the coast would form connexions in Dublin, and send daily supplies of fresh fish to the metropolis if the charges for conveyance were proportionate to the weight. The plan of giving increased advantage to large dealers may, as a general principle, be quite reasonable, if it be more profitable to the companies; but under the peculiar circumstances which affect the trade in fish, from its capture to its disposal, it would be beneficial to the local traders if some modification in the charges of small parcels were made. We have at all times expressed an opinion in our several reports that the encouragement afforded in the facility of transit by railway communication pre-

sented the best prospects of improvement in our fisheries, and we have endeavoured to cultivate with the directors of the two leading lines an intercourse which might lead to mutually beneficial results to the companies and to the fisheries.”

3310. (*Mr. Ayrton.*) Having regard to your knowledge of how the business is carried on, would not the natural way be that the wholesale dealer should send his agent to the fish captor, rather than that the fish captor should have an agent at a distance to transact his business with the wholesale dealer?—The wholesale dealer does not do that, except on the east coast, and there the wholesale dealer has a man watching the boats coming in and buying direct from them.

3311. (*Mr. Hamilton.*) I suppose the middleman buys a boat load of fish?—Quite so.

3312. And a great deal of that I suppose is unfit to be forwarded by railway?—Yes; a great deal of it is thrown away by the middleman, who will not take it. I have seen him casting aside the waste fish. He would not buy it, and it lay there on the fisherman’s hands.

3313. Then it is not your opinion, I presume, that the profit of the middleman is so enormous?—It is enormous compared with the amount that the working man, the fisherman, receives; but it is not so enormous, that which goes into his own pocket, when you come to enter into a calculation of the losses which he may sustain.

3314. Supposing his profits were so enormous, you would naturally expect to see more middlemen in the market?—No doubt.

3315. (*Chairman.*) It will be hardly necessary to read extracts from every Report of the Fisheries Commissioners, but you can read from some of the more important ones.—The extract which I am about to read is from the Report of 1855: “They also complain of being in a great measure deprived of the advantage of the market of the metropolis by the increased rate for conveyance charged by the railway company from Cork to Dublin, which, added to the cost of transit from Kinsale to the former place by cart, a distance of 20 miles, absorbs the very small profit on fresh fish, in consequence of which the Dublin market has been wholly deprived of any supply from that important district.”

3316. (*Mr. Glyn.*) Was there an increase in the rate for that year?—Yes. They speak of the increased rate in that year. The charge was 10s. a ton on that coarse fish. The charge on cod in 1853 was only 1s. per cwt., and in 1855 it was 30s. a ton. I find that in 1851 it was only 16s. a ton, so that the charge had been nearly doubled in 1855, as it was only 16s. in 1851.

3317. There appears to have been a great increase in the rate since the opening of the railways?—Yes, a great increase, and it has been also most fluctuating, for in almost every year the rates have varied.

3318. (*Mr. Ayrton.*) It would be about the sixth of a penny per pound, the advanced rate?—Yes. When you reduce it to a pound of fish only, an increase of a sixth of a penny upon that would appear to amount to very little.

3319. It was a twelfth of a penny before, and do you think that an increase of a sixth of a penny seriously interfered with the consumption of fish by the inhabitants of Dublin?—No, not with the consumption; I do not think it interfered with that, but the Report says, “it absorbs the very small profit on fresh fish, in consequence of which the Dublin market has been wholly deprived of any supply from that important district.”

3320. To make that proposition good, the people of Dublin must have ceased to eat fish because there was an increase in the price of one twelfth of a penny per pound?—It might look in that way, but if the fishermen got nearly the same price in the local markets, then of course he would sell it there.

3321. If fish is consumed in Dublin, and the residents there continue to consume that fish, they can

Mr.
T. F. Brady.
24th May 1865.

afford to pay the enhanced price of one twelfth of a penny, and I do not understand how that would prevent the consumption?—I do not think that makes any difference to the consumer.

3322. Does he not pay the increased cost of production?—Yes. I do not think the increased rate by railway would enter into his calculation.

3323. Do you not think that the retail trader could put on the increased price of one twelfth of a penny without stopping the consumption?—Yes, and a much larger increase.

3324. Therefore the increase of price to that extent would not affect the sale of fish in Dublin?—It would not; but with regard to the fisherman, if he could get a market there, seeing an increased rate put on the carriage of his fish, he would send it to the local market.

3325. If the trader could enhance the price by one twelfth of a penny, he could afford, could he not, to give it to the producer?—Yes.

3326. (*Capt. Galton.*) Has not the fishmonger who retails the fish sometimes to sustain a considerable loss from the weather, and therefore the additional twelfth of a penny per pound for the carriage would become more serious than at first sight it would appear to be?—Of course it would be so. There was a company working in Galway on one occasion, in 1855, called the Royal Irish Fishery Company, and it worked very profitably for many years, until some quarrelling took place amongst the directors, and the company was wound up; but the profits were very large, and the Report made in 1855 to the Commissioners states, "We are the only buyers of ling at this station; were it not for us the fishermen could not bring their fish to a profitable market, nevertheless we give rather a higher price there, for we look upon the people as our own men. In fact, we are getting ling now at 4s. 6d. per dozen of 13 elsewhere, and we give at this station 1s. per couple, because we think the men, by their endurance and industry, deserve all we can do for them."

3327. (*Chairman.*) Do the subsequent reports refer to this subject?—Yes. There are reports of the Fishery Commissioners and the Board of Works which refer to this subject.

3328. Are they all much to the same effect as those which you have already read?—Yes.

3329. Are there any subsequent periods to which you wish particularly to call the attention of the Commissioners?—There are the Reports of 1860 and 1861, and there are passages in those reports which I think are worthy of attention. The Report of 1861 was the last report which the Commissioners made on the subject.

3330. As I understand you, you have had no interviews with the Boards of Directors?—The Commissioners have had interviews with them.

3331. What has been the result of those interviews?—They have ended in nothing.

3332. Have the railway companies said that it would not be to their profit to make any alteration in the rates they charged?—They have not reduced their charges.

3333. (*Mr. Hamilton.*) Do you believe that any reduction in the freight would increase the consumption of fish brought from the western coast?—I think it would be an encouragement to the fishermen on the western coast if, not only a reduction were made in the freight, but if facilities for transit were afforded. I think that one is as important as the other.

3334. (*Mr. Ayrton.*) Do you mean that there is a want of trains to carry the fish?—Yes; the want of facilities, which is alluded to in the reports, at Castlebar and Sligo, they are most important.

3335. Do you think that in either of those cases a full fish train could be made up?—Upon the great Southern and Western Line, when they have large packages of fish, they make up a train.

3336. I mean in the cases in which you say facilities are wanted?—No, I think not—no special train;

but what I would suggest is, that trucks should be attached to the ordinary trains that are run now to carry the fish. I think that the facilities which are required ought to be afforded.

3337. Do the railway companies decline to make a special traffic of the fish traffic in that way?—We have no such thing as special trains for fish.

3338. Have the railway companies refused to attach trucks to passenger trains?—I do not know that they have refused to do so, but I know that they do not do it.

3339. (*Mr. Glyn.*) Have applications been made to them to do so?—I am not aware that there have.

3340. (*Mr. Ayrton.*) I suppose that there is no special traffic in fish, but they might, as in England, put on fish trucks in connexion with passenger trains?—They do not put on fish trucks generally with the passenger trains, they send it by the goods trains, and by that means it takes a long time to get to the market in the first place, and then the train does not start at an hour to suit the senders; for instance, at Castlebar, if a night mail train was put on there, all the fish from that coast could be brought up to Dublin, and be in the market the following morning; but at the present time the fish which is caught on a Monday cannot leave Castlebar until Tuesday at 11 o'clock, and therefore it does not get into Dublin till six in the evening, and it does not get into the market till the following morning.

3341. The railway company does what you suggest from Galway?—Yes.

3342. I suppose it would do the same from Castlebar if there was any desire on the part of the traders to have such accommodation?—No; they do not run a train at all at that hour.

3343. (*Sir R. Hill.*) There is no mail train from Castlebar?—No; the mail train comes from Castlereagh, and between those two places there is a long distance; the mail train from there starts at 12 or 1 at night for Dublin; it does not go on to Castlebar.

3344. (*Mr. Dalglisk.*) Do the trains that are run suit the general demands and wants of the people of the district?—There are general complaints made in that district about the trains.

3345. Are complaints made that the trains are not suited to the wants of the people, either as to passengers or to goods?—Neither to the passengers nor the goods, there being only one train at 11 o'clock in the day, so that people starting from any part of that country must start early in the morning in order to reach Castlebar, which is 16 miles from Ballina.

3346. The train is started at 11 o'clock to allow the people time to come in from distant places in the country?—I suppose that that is the reason as to the passenger train, but the consequence is that not only does the fish lose a market in Dublin, but it arrives at an hour when it is too late to send it on, even if it comes at 11 o'clock, by the Dublin packet boats to England, for they start before the fish arrives, and the fish therefore loses the Liverpool market.

3347. You say that the fish traffic is a very small affair?—It is at present a small affair, but I think it might be much increased.

3348. Do you think it would be right or reasonable for the railway company to alter all their arrangements just to suit the traffic of the country beyond Castlebar, and for the sake of the fish traffic?—I do not think that the arrangements of the railway company there have given satisfaction to any party in the country; there is a general complaint of want of accommodation, not only for passengers, but also with regard to goods, from that district of the country.

3349. (*Lord Stanley.*) Is not this very much a question of judgment, and is it not the fact that a poor country with a very small amount of traffic cannot afford to run trains so frequently or so cheaply as would be run in a country that was otherwise circumstanced?—Yes, I think that follows as a matter of course.

3350. Have you considered how far that which you complain of, namely, an insufficiency of the railway accommodation, is due to that cause, and how far that cause could be removed?—I think it can hardly be so. I think the deficiency can hardly be due to that cause. At night the mail train starts from Castlereagh, and you have to travel from Castlebar, a distance of 20 or 30 miles, to Castlereagh over a very bad road, and at night, before you can get into the mail train at Castlereagh; whereas if they started that train from Castlebar, as I think they formerly did, that would, in my opinion, meet all the requirements of that district, not only as to passengers and goods, but as to the general traffic.

3351. (*Mr. Dalglish.*) Do they never run other trains from Castlereagh?—There is only one train from Castlebar, which starts at 11 o'clock. I think they used to do, but I am not quite sure about that.

3352. (*Sir R. Hill.*) The train from Castlereagh is a mail train?—Yes.

3353. Then the expense of that train is probably borne by the Post Office?—The greater part of the expense, I believe, is borne by the Post Office.

3354. Does not that account for there being no night train from Castlebar to Castlereagh, the Post Office not wishing to have it put on?—I do not know whether the Post Office wishes to have it or not, or whether the Post Office have taken the railway from Castlereagh because they could not get it from Castlebar; but I believe that the whole of that district of country would be better suited and accommodated by the Post Office taking their mails from Castlebar, which is a very important town, rather than from Castlereagh, which is a very poor one.

3355. If the correspondence is small the cost of a mail train could not be borne by the Post Office?—The correspondence from Castlebar and Ballina must be very large. Ballina is a very fine seaport town, and Castlebar is a large fine town.

3356. Are you aware that in Ireland when the Post Office runs night trains for the conveyance of the mails, the Post Office frequently pays very much more than the cost of the whole train?—I did not know that; but from Galway the mail trains have their trucks for the carriage of fish. There are only two trains altogether from Castlebar.

3357. (*Chairman.*) Have you any suggestion to make as to the remedies which you think ought to be applied with respect to the deficiencies on the Irish railways, both as to the passenger and goods traffic?—As to the passenger traffic we labour, no doubt, under a great many difficulties in the way of getting from place to place in consequence of the trains not running in connexion with one another; for example, if you want to come from the west to the south you have a delay at Athlone probably of one or two hours; you also have a delay at Portarlington of one or two hours before you can catch the train on the Great Southern and Western Line. Then if you want to go to Belfast you must remain for four hours at Portadown before you can get a train to go on. And in the same way, if you want to come from Limerick to Dublin you are obliged to stop at the Limerick Station, which is a very bad station, for two hours or two hours and a half before you can get on to Dublin; and there is no accommodation what-

The witness withdrew.

WILLIAM MALCOMSON, Esq., examined.

3363. (*Chairman.*) Are you the chairman of several Irish railways?—I am.

3364. Will you be good enough to mention their names?—I am chairman of the Waterford and Limerick Railway, of the Limerick and Ennis Railway, of the Limerick and Foynes Railway, of the Limerick, Castleconnell and Killaloe, and of the extension from Kilkenny which is now being made to Maryborough; it is opened as far as Ballyragget, as shown on the map.

3365. You are a director, I believe, of other rail-

ever at the Limerick Junction, that is in consequence of the Waterford and Limerick Railway and the Great Southern and Western Railway not running in connexion with each other.

3358. Can you make any suggestion to the Commission as to how these inconveniences can be remedied?—No, I can hardly do so, except that I think the public are suffering by not being able to carry one through continuous route from place to place in consequence of all these opposing interests on the part of the Waterford and Limerick Company, the Great Southern and Western Company, and the Northern Lines, for they are all running, as it were, almost antagonistically to one another, and not suiting each other in any way. If these opposing interests were united in some way it is clear that the public would be very much benefited by it, not alone with regard to facilities being afforded, but probably the necessary expenditure would be very much reduced.

3359. (*Mr. Ayrton.*) In your opinion is the third-class accommodation sufficient in Ireland?—No, it is very bad in Ireland. A third-class passenger, for instance, on the Great Southern and Western Line cannot go to Limerick in a third-class carriage, he must stop at the junction and must book second-class. Then again, a third-class passenger, if he wants to come to Dublin to attend the market, must start early in the morning, although he cannot get back at night, and he does not come up in time for his market in Dublin, but he must remain there till the next day, and then he can get no train back the next day, he must remain there until the third morning, so that in point of fact he pays more than a first-class passenger in consequence of the delays which take place. The number of the third-class passengers is most enormous compared with the first-class; they are four times as many as the first-class passengers in Ireland.

3360. Notwithstanding this want of facilities of which you complain?—Yes, they must travel, but the poorer classes of the people do not seem to understand the value of money or time in that way. They have to attend these markets, and they entirely forget that it would be cheaper for them to travel by a first-class train and get a return ticket, and by that means get back again, as it is from the delays they expend more than the first class-passengers.

3361. Do you think that if greater facilities were afforded by the railway companies a larger number of third-class passengers would travel, or that those who travel would travel more than they go now?—I do not know that a greater number would travel, but I think that it is a very great hardship on the third-class passengers to be obliged to pay more than the first-class passengers.

3362. (*Mr. Hamilton.*) Would not their time be saved if they travelled first class?—Yes; but it is a misfortune just now that the poor man does not feel or understand the value of his time; he forgets that from having lost two days in Dublin, although he has travelled so much cheaper, he has not gained anything. I have observed in some statistics that there were over six millions and a half of third-class passengers who travelled in 1863, while only a million and a half were first-class passengers; the passenger rates are very disproportionate.

ways?—Yes, I am a director in four other railways which are making or are made.

3366. Are they in the same district?—I am a director of the Waterford and Kilkenny, and of a line which is now being made from Rathkeale to Newcastle, and also another from Clara to join the Shannon near Banagher.

3367. Has your attention been called for many years to Irish railways?—Yes; within the last five years more particularly, since I became chairman of the Waterford and Limerick Railway.

Mr.
T. F. Brady.
24th May 1865

W. Malcomson,
Esq.

W. Malcomson,
Esq.
24th May 1865.

3368. Are you of opinion that the present state of the Irish railways is satisfactory either to the shareholders or to the public?—Not generally so to the shareholders, but the public I conceive are generally fully convenience by our railways.

3369. Have you any suggestions to make to the Commission as to any additional conveniences which the public could derive from the railways in Ireland, or by which the railways could be made more profitable to the shareholders?—I am of opinion that a large amount of relief could be conceded to the railway interests of Ireland by obtaining from Government advances like those which they are at present offering to navigation in the different parts of the country. For instance, at the present time I am a member of the Harbour Board at Waterford, who are obtaining from the Government an advance of money for the purpose of deepening a ford which interferes with the navigation between the city of Waterford and the sea; we are obtaining a loan for that purpose, which is to be repaid within, I think, 40 years.

3370. (*Mr. Ayrton.*) At what rate of interest is the money to be obtained?—I think the interest is to be $4\frac{1}{2}$ per cent., 1 per cent. being to recoup the principal.

3371. (*Sir R. Hill.*) What is the amount of the loan?—25,000*l.*

3372. (*Mr. Glyn.*) Is the rate of interest to be $5\frac{1}{4}$ per cent. ?— $3\frac{1}{4}$ per cent.

3373. (*Lord Stanley.*) You propose that assistance should be given to the railway companies in Ireland by the Government?—Yes, to those railway companies who could show, as the Harbour Commissioners of Waterford did to the Government officials, that they had an income beyond the working expenses of their line that would be a sufficient guarantee for the repayment of the interest and the advance made.

3374. You propose that such loans should be granted on the terms you have named, viz., $3\frac{1}{4}$ per cent., exclusive of sinking fund?—Yes.

3375. If you were to go into the market to borrow the money, would you borrow it at $4\frac{1}{2}$ per cent. ?—We are obliged to pay 5 per cent. and in some instances 6 per cent. where the income of the company is not so much in excess of the working expenses as to afford to the public a guarantee that their loans are perfectly safe.

3376. That is to say, in many cases these companies cannot give perfectly good security, and they are compelled to borrow money on higher terms?—Yes.

3377. Your proposal is that the Government should take a bad security, and should enable you to borrow money at the low rate of interest which usually accompanies the highest class of security?—I propose it where the Government can be satisfied that there is a fund beyond the working expenses of a line, an income that will recoup the interest and the money which the Government should advance. We have a large amount of securities which are called railway debentures, and of those originally the Government, in order to facilitate the making of railways, advanced a third, so that if a railway company obtained powers under their Act to borrow 90,000*l.* by issuing debentures, the Government advanced, say, 30,000*l.*; that was in the early stages of railways.

3378. (*Mr. Hamilton.*) Has that money been repaid?—Almost all of our railway companies are in the course of repaying it, those who have had it.

3379. They are repaying the advance made by the Government?—Yes.

3380. (*Lord Stanley.*) What you suggest is, that the Government should lend the railway companies money at a rate of interest at least 1 per cent. less, and perhaps 2 per cent. less, than you can get the money for anywhere else?—Yes; these debentures are issued for some three, five, or seven years, and they are coming in for re-issue now, and what I would suggest is, that the railway companies, having satisfied the Government that they have a solvent

income wherewith to repay them, should have a facility afforded to them of exchanging those debentures for—in fact, obtaining the money from the Government as they come in.

3381. Do you propose that the Government should lend to you upon the terms on which you could obtain money in the market, or do you propose that the Government should lend to you on much lower terms, making you, in fact, a present of the difference between the two rates of interest?—The Government appear to be willing to facilitate or improve one class of communication, that is, the water communication, by making advances for improvements. There is no question but that Ireland has been advantaged by railways, and may be further advantaged, and by obtaining money in this way it would cheapen the working of the railways, and obtain, for railways perhaps that are to be made, advances from capitalists, on the prospective probability or possibility that when the lines were working that capital could then be exchanged for Government advances.

3382. Will you explain the reason why if this course of proceeding is peculiarly appropriate to Ireland, it does not also apply to the case of any English company?—We have but a limited number of parties in Ireland who have money to invest in railway debentures, and from other sources they have opportunities for getting interest, say, by making advances on land, which there is not the same opportunity of doing in England. Five per cent. can frequently be had for advances on land, and the Irish investing public are very fond of a mortgage on land when they can get it through their solicitor or others; and we have to compete with that class of security in the market, and we must in order to obtain the money often give higher rates of interest.

3383. (*Mr. Ayrton.*) Do you propose that the difference in the amount of the interest shall be a boon or a bonus for the benefit of the railway shareholders, that it should go into their pockets?—It will cheapen the working expenses by so much.

3384. Do you contemplate that benefit being obtained for the advantage of the railway proprietors or for the public?—I think I have shown how it would facilitate and increase the making of railways in Ireland, instead of having to come, as they do generally, to the English market for the money requisite to make a railway.

3385. If you obtain a loan of money at a lower rate of interest there would be so much more for dividends, would there not?—Yes, because as we cheapen the working expenses we can work so much the cheaper.

3386. Do you contemplate any addition to the dividend of the shareholder consequent upon his gain of interest?—The shareholders would benefit and the public too, because as we could work cheaper we should haul cheaper.

3387. Do you contemplate any increase of dividend from the reduction of interest?—Some benefit must result to the shareholders.

3388. Is that the principle upon which you contemplate any reduction of interest?—I think the great object is an increased extension of railways, because—I will take any of the main lines of railway, such as the Waterford and Limerick, or the Great Southern and Western,—as small lines are made into other districts they bring increased traffic on to those lines, but those small lines will not be made unless the capital can be obtained from capitalists.

3389. Do you conceive that the main object of this saving of money by the railway companies is to make lines of railway profitable that would not be profitable without it?—That is one object, and another object is to cheapen the working expenses connected with the system of working railways in Ireland, which we all believe will be a general benefit to the country.

3390. If you propose a reduction of rates which would give the benefit of this interest to the public,

will you state what arrangements you propose that Parliament should make to ensure that reduction of rates in the conduct of your business, and to ensure to the public the benefit to arise from a reduction of interest?—I am not prepared to lay down any plan for that purpose.

3391. What guarantee should we have that the bonus which would be given to the railway companies would be applied for the benefit of the public rather than for the benefit of the shareholders?—I could not suggest any form of guarantee.

3392. Or any arrangement by which we could secure that object as the legal consequence of the benefit that would be conferred?—No.

3393. (*Sir R. Hill.*) The railway companies have maximum fares prescribed?—They have.

3394. Do you think that the companies would consent to reduce the maximum charge if the Government should make the advances which you recommend?—If the advance was made consequent upon such a consideration, I am sure the railway directors would see their interest in doing it, merely to carry out the view which so many entertain, that as you reduce the rates you rather increase the traffic, that is, that there is a per-centage of increase as the rates are reduced.

3395. (*Mr. Glyn.*) Do you think that would be to any considerable extent?—No; I believe that Ireland is peculiarly circumstanced as to a reduction of rates; we have not the population, and we are not inclined to travel so much.

3396. (*Mr. Horsfall.*) Are all the railways with which you are connected dividend-paying lines?—No, some of them pay no dividend.

3397. What rate of dividend do the different lines with which you are connected pay?—There is only one, the Waterford and Limerick, and the dividend has varied from 1 to 2 per cent.; the last dividend was but 1 per cent.

3398. What are the rates upon that line as compared with the rates in England, say on the London and North-western line?—We follow the Parliamentary rates very much in our charges, 1d. a mile for third-class, 2d. for second-class, and 3d. for first-class passengers.

3399. You stated just now that you thought the public were fully inconvenienced by the railways?—Yes.

3400. Is that the opinion of the public themselves?—The public are very difficult to satisfy in the matter of railway accommodation.

3401. Have you had some complaints made?—Yes; but I do not think they have been made with much reason.

3402. Have complaints been made as to the number of trains run or the fares, or both?—More as to the facility of going to one point and returning from it in a day. There is a very general idea that for long distances many persons would like to go and return in a day, but we do not find, particularly with our third-class passengers, that it suits either their convenience or their wants to be able to return in one day.

3403. You do not afford them an opportunity of doing so, do you?—Except upon very short lines; we give them a full opportunity of doing so on short lines, such as we call local traffic. We convenience them on those lines, and on certain days in the week we issue what are called market tickets, which we believe convenience the third-class passenger traffic in the districts which our system serves.

3404. (*Mr. Glyn.*) Do you run those trains at reduced fares?—Yes.

3405. One half?—A little over what would be a single fare for third-class passengers—perhaps a third.

3406. (*Mr. Horsfall.*) Do you find that that pays you?—Yes.

3407. Has not that induced you to make a general reduction of your fares?—We have tried reductions

of fares continuously for a week, and we have not found any advantage result from them.

3408. What per-centage of reduction did you make?—From Kilkenny to Waterford we issued third-class tickets, which we thought were likely to be remunerative, but we abandoned that plan and ran third-class carriages with all our trains.

3409. What was the per-centage of the reduction that you made?—I cannot say just at the moment; it is perhaps four years ago since we tried it, and I cannot speak exactly to it.

3410. (*Sir R. Hill.*) Was the experiment tried for any length of time?—I think from one to two years.

3411. (*Capt. Galton.*) Did you issue return tickets to third-class passengers?—We ran third-class carriages both ways.

3412. You did not give them return tickets, but they paid the full fare each way?—Yes.

3413. Have you ever tried return tickets for third-class passengers except by the market trains?—We tried them for less than a year between the town of Carrick-on-Suir and Waterford, a distance of 15 miles, and we found that our receipts were but 1s. a train mile, and we require at least 2s. a train mile to pay for running a train, exclusive of profit.

3414. Did you do that by attaching third-class carriages?—We ran a special train every morning.

3415. Between what stations did you run the market trains?—We took passengers from Grange, about 10 miles from Waterford, and we charged 1s. for a return ticket there and back.

3416. Do you run market trains to Limerick?—Yes, between Tipperary and Limerick, and the short stations have market tickets twice a week.

3417. From those stations to Limerick and back?—Yes.

3418. Do you find that those market trains succeed well?—They do. We do not reckon that they have largely benefited our income, and I may state, for the information of the Commission—it is peculiar in the Irish at least—that we cannot get the Irish farmers to use largely trains going distances shorter than from eight to 10 miles from town; whether it is that they bring their own horses and carts I do not know; they do not come in by the railway. I speak of this as having come under my own observation. There is a train run for a distance of about nine miles from Waterford to Grange, and the market ticket there and back is 1s. I have watched the income for two years, and I have obtained a return showing the receipts comparatively in the different weeks of each year, and I have not found that the reduction in the rate charged has sensibly increased our receipts.

3419. (*Sir R. Hill.*) Had it the effect of decreasing the receipts?—I have not the returns by me to enable me to say, but I know that I was greatly disappointed. I was an advocate myself for running local trains at low rates, but where there is a farming district, we cannot get the people to use the railway as we would wish for a short distance.

3420. Do you think the experiment has been carried sufficiently far to enable you to arrive at a certain conclusion upon the point?—It requires a long time to teach an Irishman the advantages of travelling in this way.

3421. I think you have expressed an opinion that upon condition of the Government making advances of money at a low rate of interest, the railway companies would consent to a reduction in the maximum charges?—The Government might make it optional with them before they made the advance if they chose to do so. It is one of the things that a railway company must weigh with its traffic manager, whether the advantage would be equal to the risk.

3422. Do you think that the railway companies would make any considerable reduction?—I have never looked at it in that light, and therefore I can scarcely give an opinion upon it.

3423. (*Mr. Glyn.*) Have any of the railway companies with which you are connected already been

W. Malcomson,
Esq.

24th May 1865

W. Malleson, Esq. borrowers from the Exchequer Loan Commissioners?—All of them.

24th May 1865. 3424. Has the interest been regularly paid upon those loans?—Yes.

3425. And the sinking fund also?—Yes.

3426. It has always been paid regularly?—Yes. The money was generally lent for 20 years, to be paid off at so much a year; and only quite lately the Government has assented to the system which I proposed, that the repayment should not be so rapid. That has been conceded, with regard to some of our lines.

3427. What is the rate of interest now?— $6\frac{1}{2}$ per cent., payable in 22 years.

3428. What was the original rate at which you borrowed it?—4 per cent.

3429. With a sinking fund of 1 per cent.?—The repaying was to take place in so many years; the money was to be paid in 16 or 20 years.

3430. (*Sir R. Hill.*) Have those instalments always been punctually paid?—The Loan Fund Commissioners have never had to proceed against any one, and I think that that is all we can say; perhaps we have been a little slow, and the Commissioners will understand the difficulty there has been in re-borrowing this money. If a railway company does not stand well with the moneyed public, and we have to repay 20,000*l.* in so many years, we have to re-issue what we have been paying the Government 4 per cent. upon, at 5 or 6 per cent., and there has been no doubt a slowness in the re-issuing, but all the payments have been made.

3431. (*Mr. Glyn.*) I suppose in the case of some of the small railways you cannot borrow the money again in the market?—We have had great difficulty in doing so.

3432. Have you done it, or have the Directors been obliged to make themselves personally liable?—The Directors have been obliged to make themselves personally liable.

3433. The money was not borrowed upon the security of the railway alone?—The repaid capital has been mostly borrowed, and there have been cases in which the Directors have been obliged to give collateral security.

3434. In the case of the Ennis and Limerick Company did the Directors give their personal security?—No.

3435. In the first case did they give their personal security?—No.

3436. (*Capt. Galton.*) In the case of the loans from the Exchequer Loan Commissioners for the improvement of the Harbour of Waterford was the money lent to a company or to a trust?—To a trust.

3437. There was no beneficial interest to the members?—No, but there was a beneficial interest to the locality.

3438. (*Mr. Horsfall.*) Do any of the railway companies with which you are connected run in conjunction with steamboats?—There is a through booking system over the Limerick and Waterford Railway with reference to England.

3439. You are connected with steamboats, are you not?—Yes.

3440. It would be to your interest to have a reduction in the fares charged upon railways, would it not?—Yes.

3441. (*Sir R. Hill.*) I think you stated that there are several new lines of railway in which you are concerned now in progress?—Yes.

3442. May I ask you what is the motive for constructing new lines when the old ones seem to be so unremunerative?—It is found that the prices of agricultural produce where railways are introduced improve in proportion, and that makes it advantageous to the owners of property in the locality to encourage the making of railways. In some districts the landed proprietors give us the land and take shares for the value of it, and in other ways they encourage the making of railways, and by these means I believe that the price of agricultural produce does increase by a considerable per-centage.

3443. Taking into account the advantages derived by the landowner and by the farmer from the improved prices of his produce, even these unremunerative lines may upon the whole be advantageous to the shareholders?—They are certainly advantageous to the locality.

3444. Taking all parties concerned into account?—Yes. Taking the community at large into account they are no doubt advantageous, and it is upon the broad principle of benefiting the general interests of the country that I would press the claim of the Irish interests for advances in the shape which I have mentioned. Take the county of Kerry, for instance, in which there is very little railway communication; there has been an indication on the part of the grand jury of that county that they will guarantee a certain amount of interest if railways are made through the county, and we have found the same in other districts where we have been anxious, that is, the Limerick and Waterford Company have been anxious, that their system should be extended with the view of increasing the traffic over that line, but up to this time those lines of railway are not yet in progress nor being made. But the landed gentry are now finding out that the price of cattle and what the farmer produces increases from 5 per cent. to perhaps a larger per-centage by the facilities which railways afford.

3445. Those advantages to the landowners and others would be, I presume, still further increased if the charges upon the railways were reduced?—Clearly.

3446. But that reduction you believe would lead to loss, so far as the proprietors of the railways are concerned?—Yes. I believe that the railways carry the greater proportion of the produce of the country at the present time.

3447. Are there any means, in your opinion, by which the railway proprietors could be compensated by the landowners and others who would be benefited for any reduction which they might make in the fares?—I believe that it would be quite legitimate to associate the land at certain distances from the line with the taxation that might be required. In some districts I believe that the landed gentry would be willing to bear a part.

3448. You are probably aware that several gentlemen from Ireland have recommended to this Commission that the Government should purchase the railways, and then make a large reduction in the charges for conveyance?—Yes; I am aware of that.

3449. Do you think that if the Government were to become purchasers of the railways the landowners in Ireland and others who would be benefited by a large reduction in the charges would be willing to share with the Government the loss?—I should hope they would.

3450. Do you think they would?—I think that all parties in Ireland derive a benefit from railway communications in the country, and from the facility with which their produce in the shape of fresh meat reaches the English markets; that has no doubt largely benefited them, and in that way I think they would derive more benefit than would be equivalent to the additional cost which might be created. The income might have to be supplemented by a charge.

3451. If they took an enlightened view of their own interests, you are of opinion that they probably would be willing to contribute something?—I think that they are becoming increasingly sensible of the advantage of railways, and that they would be willing to be taxed; but to what extent I do not know.

3452. In order to meet the loss that a large reduction of fares would involve?—Yes; the country has been and would be benefited far beyond any calculation that I could make.

3453. (*Mr. Ayrton.*) Mr. Ryan in his evidence, speaking of a practice which he says has grown up of agents going into the agricultural districts to buy up the produce instead of the producers coming to mar-

ket with it themselves, has stated in answer to question 2714 "would the produce of those persons who now sell them to hucksters be sufficient to make it worth their while to go to market and try to sell it if the fares were lower than they are?—Yes; I think so. On the Tipperary line and about the Tipperary district, which is in the hands and management of the Limerick and Waterford Company, they encourage as much traffic as they can between Tipperary and the towns near Tipperary and Waterford. Persons going with their firkin, or perhaps two casks of butter, they give them a free pass to accompany it there, and the result is that a good deal of butter goes in that direction and at moderate charges. In that case they charge for the firkin of butter and not for the passenger?—Yes. Do you think that that creates much traffic?—It prevents this, that when these hucksters come to these people to buy, they will not deal with them; they go to the market themselves with their butter. In Limerick we complain of the absence of that accommodation; but probably it is not a question that should be considered when dealing with the question of the general management of the country. From those very points, Tipperary and nearer to Limerick than Tipperary, the charge upon butter is more than twice the price it is to Waterford, for the passenger has to pay his passage as well, so that the company that manages the other line gives a greater inducement to a person to send his butter in the direction of Waterford, and imposes a penalty upon the person sending it to Limerick. What is the object of that?—The fact is that the chairman of the company is also the proprietor of the steamships going out of Waterford; and, of course, by getting the trade to Waterford the vessels earn freights which they would not earn if the trade came, and probably to a better market in Limerick. You think that in order to drive the traffic into Waterford he actually allows the passengers to travel for nothing if they bring their firkins of butter with them?—Yes; he allows them to travel for nothing to Tipperary, which is nearer to Limerick than to Waterford?—Yes; but Mr. Ryan's information is not exactly correct on that subject. Soon after I joined the railways I arranged over the whole system that a farmer with a firkin of butter should be charged 1d. for the firkin, and 1s. for his ticket. That was universal over the system, that he might take it either way, taking either Clonmel or Tipperary. Either way he paid 1s., and each firkin was charged 1d., and that was done in order to induce the farmer himself to go and sell his butter, and not to have to deal with an intermediate party like a huckster. I was disappointed in the results as to the number of persons who availed themselves of it; but Limerick has not been prejudiced as to that. Other lines of railway with which I am connected, and that are worked by the Waterford and Limerick Company, are worked under joint committees; but the directors on some of those lines were not agreeable to such a system, and it was not followed on the Ennis and Limerick, nor I think on the Limerick and Foynes. On the main line from Limerick to Waterford a farmer could go where he liked.

3454. The same rule prevails over the whole of the line from Limerick to Waterford?—Yes.

3455. The farmer may go either way at precisely the same charges?—Yes.

3456. On the lines in which you are a co-director you proposed to establish the same system, and your colleagues declined to adopt it?—Yes.

3457. It is stated also in the same evidence that there are different rates of mileage, whether you go to Waterford, or whether you go to Limerick, as to goods, are you aware of that difference?—There is very little local traffic between Limerick and Waterford. The great bulk of the Limerick goods traffic for England goes under what is called the through-rate system, either by Waterford or by Dublin.

3458. I think it is stated that the rates are nearly the same, but not quite the same, from Tipperary to Waterford as from Tipperary to Limerick?—There has been some advantage lately in favour of Tipperary as between Tipperary and Waterford, but not very large; the difference is principally caused by terminal expenses. Take, for example, the line from Limerick to Tipperary, there is a terminal expense of 1s. 6d., we then put the mileage on afterwards. The same terminal expenses exist only at Waterford, and from that to Tipperary. You cannot expect that the rates will be co-equal with the mileage.

3459. We understand that you calculate your rates upon a uniform mileage; but the difference is caused by the terminal rate being the same for the longer as for the shorter distance?—Not always. Tipperary is competed with by several water routes to Waterford; and to Dublin there is also a certain amount of competition. The butter merchant will send his goods by the route which will enable the butter to reach England in the cheapest way, and with a certain amount of expedition.

3460. Are we to understand that from Tipperary you keep the rates somewhat lower in order that you may enter into competition, either with the direct route to Dublin, or the route to Cork for England?—The rate is a uniform rate from Tipperary to Liverpool, either by Waterford or by Dublin, and the shipper has his option.

3461. Do you exercise great influence over the board of that railway?—As chairman.

3462. Does it rest with you to propose changes in the rates to the board?—They are left very much in the hands of our traffic manager.

3463. Can you explain to the Commission how the impression has got abroad that you influence the rates in favour of Waterford?—No, I cannot.

3464. (*Mr. Hamilton.*) Have you any through booking rates with this country?—Yes.

3465. With what railway?—With the London and North-western Railway.

3466. Where does the London and North-western come into contact with you, is it at Waterford?—I alluded just now to the Tipperary traffic, and the price of a firkin of butter from Tipperary to Limerick, either by Dublin or by Waterford, and on to Manchester.

3467. By Waterford have you through rates?—With the South Wales Railway there is some through booking, but more for the convenience of the public paying the rate than for any reduction of the rate.

3468. Do you issue through tickets, if they are applied for?—Yes.

3469. To Milford?—Yes, or to London *via* Milford.

3470. (*Mr. Glyn.*) Is there much cattle traffic on the Waterford and Limerick Line?—At particular times it has been our best source of income.

3471. Has it been increasing of late years?—In the last year and a half it has been decreasing, owing to the scarcity of cattle in the country.

3472. Do you think that the present rate of charge affects very much the transmission of cattle over the the railways?—I do not.

3473. (*Sir R. Hill.*) Do you recollect what the rate is upon your line?—No, it is so much a truck.

3474. (*Mr. Glyn.*) Do you consider that the advantages of sending cattle by railway are so great that if the rate was high that mode would be preferred?—We carry nearly all the cattle in the country.

3475. (*Mr. Hamilton.*) Are there any slaughter houses at Waterford, where the cattle intended for the London market may be killed?—Yes, for pigs.

3476. And for oxen?—No, but we have been for the last two years bringing dead meat, mutton, which is killed in Limerick and Tipperary, and young pigs also from the same places, which we take through to Milford for London.

3477. Are you interested in the cattle trade?—Not at all.

*W. Malcomson,
Esq.*

24th May 1865.

W. Malcomson,
Esq.

4th May 1865.

3478. Have you heard complaints made that animals that are brought to London are damaged by being very much bruised?—No, I have not.

3479. Is there at the present time any great traffic in dead meat?—No, not like what the Scotch have from Aberdeen.

3480. Is there any reason why there should not be if you had proper slaughter houses?—I have asked some of our butchers to try it, but they seem to think that they cannot.

3481. Did you never hear of Irish cattle arriving in London so much bruised that they are worth less by so much per pound?—Yes. I have heard that they suffer considerably from the journey. We have not large quantities of fat cattle that go from Waterford to the London market. They are principally store cattle, which come through Waterford and go to be fattened in England.

3482. Are the steamboats suited for the carriage of the cattle?—They are built for them, and they are good boats.

3483. (*Mr. Horsfall.*) The cattle I suppose must be injured more or less by the passage, whether it be rough or smooth?—We find that the cattle men say they prefer the steamer to the railway in some cases. For instance, for the districts about Bristol the short route would be from Waterford to Milford, and from Milford by railway to Bristol, but the cattle men say that the cattle are less knocked about when they are taken direct from Waterford to Bristol.

3484. Then the damage must be incurred at the landing places, for certainly an animal is better stowed in a railway truck than on board ship?—On the contrary, the cattle are generally tied by their heads on board ship, and that is a great support to them.

3485. (*Mr. Gower.*) I understand you to say that you had changed your opinion as to the effect of a reduction in the rates. Was that in consequence of any experiments which you have made?—Perhaps they were not tried long enough, but the result of the experiments that we tried was not favourable. The population is so sparse, and their objects for travelling backwards and forwards are not the same as in other localities. A small farmer does not often want to visit the town.

3486. In what year were these experiments made?—The experiments that were made between Kilkenny and Waterford were made four years since.

3487. Was it during the time of the depression that existed?—Perhaps it was more in that time.

3488. Do you think that the failure was attributable to that state of depression?—I think it was more attributable to the habits of the population—that they did not want to travel as I see them travel in other countries. I cannot account for it, but I have seen the people travelling in Germany and I have been surprised at the numbers. I have seen them travelling in the low-priced carriages, but we do not find that the Irish people travel in the same way.

3489. An experiment tried at a period of depression would hardly be a fair trial?—No.

3490. (*Chairman.*) Can you state over how long a period the experiment was tried?—Only two years.

3491. (*Mr. Gower.*) Do you know what extension of railways has been applied for in the present session of Parliament?—I can give some very general information as to that. A line has been applied for from Thurles to Clonmel and from Clonmel to the coast—to Dungarvan.

3492. What is the distance?—Between 50 and 60 miles altogether. Another line has been asked for near Waterford running through the county, an agricultural line, which the gentlemen in the country are interested in, or should be interested in getting forwarded, which is under 30 miles in length. I do not know what the exact length is.

3493. Are the extensions applied for in this session of Parliament as large as have been on the average applied for in any other session?—Yes, and larger

than they have been for several years, and they are intended more to convenience the agricultural localities than what we should call the trading localities.

3494. (*Mr. Horsfall.*) What has been the inducement to apply for these additional lines, seeing that very few of those already in existence pay?—The object is to improve the value of agricultural produce.

3495. Are these new lines promoted by agriculturalists, or by the people generally?—They are promoted more by the landed gentry than they ever were before.

3496. (*Mr. Glyn.*) Do they find the capital?—Yes, to a certain extent. It is finding the capital by giving land and taking shares for it, it is really, in effect, taking so many shares.

3497. Are these lines of railway generally constructed by contractors in the first instance, do they take the risk?—Contractors have generally been the means by which the lines have been made, and these contractors have borrowed the money in England. The railway, of which I am chairman, from Kilkenny, intended to meet the Great Southern and Western, is being made by a contractor, and that contractor has to borrow his money in London, and it would facilitate such money being borrowed if there was a prospect, when the line was made, of traffic sufficient to warrant the Government in advancing money on its debentures.

3498. What does the contractor take as his security in the first instance?—There are two descriptions of bonds. There are what are called railway debentures and what are called Lloyd's bonds, and those are generally what he gets. The subscriptions are expected to be from 1,000*l.* to 1,500*l.* a mile, perhaps 2,000*l.* a mile, and if the contractor can succeed in getting so much subscribed he gets a large profit in the business.

3499. I suppose the subscriptions are given very much in the shape of land?—Yes, by those interested in the railway.

3500. Do the directors and some of the landowners sometimes give their personal security?—Never.

3501. Have they got much into the habit of issuing Lloyd's bonds in the Irish companies?—In some of them. Where they have the power they use it.

3502. Have they power to do so?—Yes. They have power to issue them under their Act.

3503. (*Capt. Galton.*) Have they borrowed much beyond the loans which they are authorized to borrow under their Acts?—Not beyond the powers of the Act under which the railway has been made, and which has allowed them to issue bonds to a certain amount.

3504. (*Chairman.*) Is the issue of Lloyd's bonds authorized by Act of Parliament?—They have been.

3505. (*Mr. Glyn.*) Is there power to do so under the original Act?—Under the Local Act, which enables the company to borrow money, there is a certain amount of power which the company has. These are ordinary bonds.

3506. Do you recollect any Act in which the issue of Lloyd's bonds is authorized?—I am not sufficiently conversant with the matter to say, but I have been connected with companies where we have issued them.

3507. (*Mr. Ayrton.*) A witness who has been examined has given this evidence. He was asked as to the rate charged for coal carried on the railway, and he says, in answer to Question 2532, "I will give you the rate of charge first to Tipperary. The rate to Tipperary is 4*s.* 9*d.* per ton from Waterford. I believe the distance is 55 miles. Then from Limerick to Tipperary I find they charge 3*s.* 3*d.* a ton, and the distance is 22½ miles, and that is a very great disadvantage as to Limerick in sending coals into the interior?"—The distance

between Tipperary and Cork and Tipperary and Waterford are about the same, and the rate between one point and the other I think rules the coal rate. The coal rates are not always at the same point as common goods rates; they are lower in order that we may secure the traffic wherever we can get it.

3508. What is the reason why so great a preference is given to Waterford over Limerick in carrying coals into the interior?—It is the longer mileage.

3509. Is there not a difference in favour of the port of Waterford independently of that longer mileage?—There would appear to be a little in that way; but it is more to secure the traffic than to give any advantage to Waterford over Limerick.

3510. Do you give through rates upon any part of the line between Waterford and Limerick from England?—From Limerick and Tipperary we make through rates.

3511. Do you make any through rates by Limerick?—Do you mean by long sea?

3512. Yes?—We do not.

3513. Is the effect of these through rates from Waterford to give a great preference to Waterford over Limerick as a place of import?—I do not think it.

3514. How is the traffic divided as to the through rates between the shipowner and the railway company, on what principle is that done?—It was at one time on the principle of a mileage, but latterly it has not been so; the railway has a much larger proportion than the steamer.

3515. Does the railway get the same mileage rate for the through traffic as for the local traffic from Waterford into the interior?—The point of competition is between Tipperary and England. The railway from Dublin to Tipperary and from Tipperary and Waterford are the different ends, still the rate is the same from Tipperary to England by whatever route the dealer chooses to send.

3516. What is the principle upon which you divide the income arising from the through transit?—The principle was at one time a mileage, a comparative mileage, but that is abandoned now, and a larger proportion is given of the mileage rate to the railway now, and the water does not get the same advantage that it did.

3517. Do you get for the railway the same mileage rate as you would if the goods started from Waterford, and were not carried through?—No.

3518. You made a reduction in favour of the through transit?—Yes.

3519. With regard to the steam boat, does the steam boat get the same charge for the through transit as it does for conveying goods to Waterford which are not carried beyond Waterford?—It does not; there is a reduction there also.

3520. Is the reduction made upon any principle of a percentage, and in both cases is it an equal percentage, or is it settled by mere arrangement between the two companies?—It is a matter of arrangement.

3521. Between the railway company and the steam boat company?—Yes.

3522. Is that the company in which you are interested?—Yes.

3523. Is that a public company like a railway company?—There is a smaller number of shareholders.

3524. (*Mr. Glyn.*) What are the terminals at Waterford?—We have a fixed terminal at Waterford as much as at Limerick, and it is generally about 1s. 6d. at Waterford. There is the transit between the railway and the steamer, and that makes it rather difficult to say what it is exactly.

3525. (*Chairman.*) Have remonstrances been made to your board from Limerick, and complaints that Waterford has advantages given to it by the railway company over Limerick?—There may have been, but I cannot remember that there has been any point made of anything that could be complained of.

3526. Has it not been considered as a great grievance by the people of Limerick that Waterford has advantages given to it?—Not at all.

3527. (*Mr. Hamilton.*) You say that a grievance has not been proved, but a complaint has been made?—I cannot remember any complaint coming before our board on the subject for a considerable time.

3528. (*Capt. Galton.*) There were other complaints made by some of the witnesses as to the third-class traffic, and it appeared that the railways which are colored green on the map are all worked together?—Yes, they are worked by the Waterford and Limerick Company.

3529. It was stated that a third-class passenger leaving Ennis in the morning could not get to Dublin in the same day, and that it would take him four days to get from Ennis to Dublin and back again; that he must leave Ennis in the afternoon to get to Limerick, where he would have to spend the night, and then proceed from Limerick to Dublin by train at seven in the morning; and then that there was no return train that day until very late from Dublin, or that there was a train that would take him to Limerick, but he could not get on to Ennis?—That is the case.

3530. Is not that a great inconvenience with regard to the traffic?—I do not imagine that any hardship arises from it, because those trains which meet at Limerick are for the local traffic very much, and the connexion between Ennis and Dublin for third-class passengers is such, that a traveller very seldom or ever requires to return. In those districts the people generally receive their supplies from wholesale dealers in the locality. Limerick supplies one district, Cork supplies another, and Waterford supplies another, and any person wanting to go from Ennis to Dublin would require to spend 24 hours there in order to transact his business.

3531. Another complaint was made as to the trains from Limerick to Dublin, that by some of the passenger trains they had to wait a long time at the Limerick junction?—Yes; and we have remonstrated with the Post Office as to that; but our representations have not yet been attended to. The mails used all to exchange at the Limerick junction; but the Cork people pressed for their train being started from Cork an hour and a half or an hour and three-quarters later in the morning, and that deranged the meeting of the trains. The Waterford and Limerick Company have applied to the Post Office for some remuneration, because they run another train at present, which all acknowledge to be a convenience to the local traffic, and therefore anything which the Post Office requires you to do beyond that, we reckon we have some claim for remuneration for.

3532. Do you carry the mails now?—Yes; the local trains all exchange except this one which is complained of, and which is caused by the Post Office interference.

3533. (*Chairman.*) The delay at the Limerick junction has been for a very short period has it not?—Only for two months; both the day and the night mails met before at the Limerick junction and exchanged the passengers and mails, and carried them without complaint.

3534. (*Capt. Galton.*) But now, in consequence of the later departure of the train from Cork, if you run a train to meet the mail train, you must also run a local train at the present hours?—Yes, we must run an extra train over all our system, and we have asked the Post Office for some compensation for doing so. We run, I think, four local trains both ways in a day over the whole system.

3535. (*Mr. Hamilton.*) What answer have you received from the Post Office?—The subject is at the present time before the officials.

3536. (*Chairman.*) Has there been any diminution in the traffic since this delay occurred at the Limerick junction?—I should hardly think so. I do not think there is any perceptible difference.

W. Malcomson,
Esq.

24th May 1865.

W. Malcomson,
Esq.

24th May 1865.

3537. (*Capt. Galton.*) The Waterford and Limerick Railway Company I think had a considerable diminution in their receipts in the year 1863, as compared with previous years?—Yes.

3538. The number of passengers carried fell down from 650,000 to 606,000?—Yes.

3539. Had the fares been raised?—I cannot now remember the cause of it, but I think there was some amount of local passenger traffic that made up a larger amount from some cause.

3540. (*Chairman.*) Have the fares subsequently been raised?—The fares were regulated by the local board, the members of which lived very much at the Foynes end of the line, and they kept the rates down rather lower than was usual over the rest of the Limerick and Waterford system; an advance has been made to equalize the rates over the Limerick and Foynes with what has been charged over the rest of our system rather than any excessive increase.

3541. How much were the fares lowered between Limerick and Foynes formerly compared with what they are now?—I am not able to speak to that.

3542. Has the result of raising the fares been satisfactory to the railway company, as far as their returns are concerned?—It has, or we should not have continued it.

3543. Can you make more money by the high fares than the low ones?—The general traffic of that district has fallen off very little, and there has been great emigration; but the line has not been so remunerative as it was.

3544. Does the Limerick and Foynes line pay a dividend?—No; it does not.

3545. (*Capt. Galton.*) In the year 1861 the total number of passengers on the Waterford and Limerick system was 668,000, and in the year 1863 the number of passengers was 606,000. The total gross receipts from passengers in the year 1861 were 55,000*l.*, and in the year 1863, they were 45,000*l.*; therefore the receipts from passengers had suffered a diminution of 10,000*l.*?—Yes.

3546. Can you say to what that has been attributable?—Largely, I think, to the trade of the country, which, about the time to which you allude, fell off very much. The receipts upon our system had been progressive up to that time and until the last year, since when we have been very much at a stand still.

3547. On the Waterford and Kilkenny line I observe that the number of passengers in 1861 was 69,000, and in 1863 the number was 72,000; and the receipts have increased from 7,000*l.* to 8,000*l.*, as between those two years; therefore both passengers and receipts on the Waterford and Kilkenny line have increased, whereas on all the other parts of the system they have decreased. Can you give any explanation of that?—The Waterford and Kilkenny line was in a very depressed state for some years; but since the Waterford and Limerick Company got a portion of it we have gradually improved the state of things; the receipts have gradually increased, both upon goods and passengers, since we had the working of it.

3548. Can you state how the improvement has taken place?—I do not know, any more than that we have inconvenienced the public by arranging our trains for them. I have a short return as to the third-class passengers, which perhaps may be interesting to the Commission. The per-centage of third-class passengers which we carry over the Waterford and Limerick line is 30 per cent.; on the Limerick and Foynes line, which has been inquired about, the per-centage is about 60·11 per cent.; on the Limerick and Ennis it is 42·14 per cent.; on the Limerick and Castleconnell, and Killaloe 54·52 per cent.; and on the Waterford and Kilkenny line only 27·47 per cent.

3549. (*Mr. Hamilton.*) To what year are you referring?—1864.

The following paper was handed in:—

WATERFORD AND LIMERICK RAILWAY SYSTEM.

Return showing the total passenger traffic for year 1864, and the proportion thereof under head of third-class passengers.

Passengers, all classes, No.	Name of Company.	3rd Class Passengers, including return.		Total passenger traffic.	Per-centage of 3rd Class.
		No.	Amt.		
219,003	Waterford and Limerick	112,817	7,669	25,587	30·
63,046	Limerick and Foynes -	46,263	2,372	3,946	60·11
48,830	Limerick and Ennis -	29,316	2,203	5,228	42·14
57,915	Limerick and C. Connell and Killaloe.	41,665	910	1,666	54·62
55,804	Waterford and Kilkenny	27,117	2,082	7,579	27·47
NIL.	Kilkenny Junction -	No traffic in 1864.			

3550. (*Capt. Galton.*) It seems to have fallen off in the per-centage very much in 1863?—Yes.

3551. In 1863 were you running the return trains which you have spoken of?—I think we discontinued them at the end of 1863.

3552. Do you think that the reduction in the third-class traffic, which seems to have taken place may be attributed to that in any way?—It may in some small degree.

3553. I observe that in the year 1863 the number of third-class passengers must have been at least 40 per cent., if not 45 per cent., of the whole number of passengers?—The Waterford and Kilkenny Railway is a railway which is owned by parties in England, and some of the railway directors were anxious to make the experiment of running third-class carriages with all the trains, and facilitating the exchange of third-class passengers over the line. It was tried for a time, but the monetary results were not favourable, and it was discontinued, for they considered it was not for their interest to run third-class carriages with all their trains.

3554. (*Chairman.*) There was a considerable increase in the number of persons that travelled, as I understand you, but the results were not satisfactory?—No.

3555. (*Mr. Gower.*) Was a majority of your shareholders English or Irish?—In the Waterford and Limerick line they are Irish, but in the Waterford and Kilkenny the shares are largely held in England.

3556. (*Mr. Hamilton.*) You have stated that you found it difficult to induce the Irish people to travel. It would appear, however, that when you reduced the fares they did avail themselves of the railway very much more?—I spoke only of short distances, from what we should call omnibus stations.

3557. Is it not really after all a question of price, and not that the people are indisposed to use the railways?—I think that the population of Ireland are not inclined to travel much. I mean that the agricultural population are not so inclined as town populations to travel, and they will not be tempted to travel by low rates so much as a town population may be.

3558. (*Mr. Glyn.*) Have they in fact any means of travelling?—They have not.

3559. (*Mr. Hamilton.*) They have not the means, even if they pay low fares?—I suppose that they have more means to pay the low fares than the higher ones.

3560. Does your board ever receive an offer of traffic, which, upon consideration, they feel themselves justified in declining, because they believe that it will not be profitable?—I do not recollect much of that, except perhaps occasionally in the timber trade. The owners of woods have once or twice made proposals to us that they would cut down the trees if we would carry the timber at very low rates of charge to a shipping port, but we have scarcely any traffic offered to us.

3561. Have you no mineral traffic?—Yes; we have mineral traffic from Birdhill which is on the Castleconnell line, and which we carry to Water-

ford at a favourable rate. We carry all that we can get of that.

3562. (*Sir R. Hill.*) Do Bianconi's cars run in competition with your lines in the same districts?—No, they do not.

3563. Do you know what Bianconi charges per mile?—No; I am not aware of that.

3564. (*Chairman.*) I believe it has been stated that cars run into Limerick from some place 10 or 12 miles from Limerick every day, loaded even beyond what they are licensed to carry, while your trains are running comparatively empty?—There are cars from the neighbourhood of Bruff which come into Limerick.

3565. (*Mr. Glyn.*) Have any propositions been made to your board by the owners of mines to convey a certain given large quantity of coals by your railway at reduced rates?—We carry, I believe, all the minerals that are produced in that district.

3566. Have any parties offered to send an increased quantity to your railway if you would reduce the rate?—We have had proposals made to us to bring coal back to them, I think more than to carry minerals in increased quantities—the object is to get coals for smelting purposes on their premises.

3567. (*Mr. Horsfall.*) Do you bring the coal back at comparatively low rates?—We did not agree with the parties at the time, and the subject was dropped, and it has not been renewed since.

3568. Do your trucks return empty?—No; we carry a large quantity of Indian corn and bread stuffs into the country on the trucks which bring the minerals down.

3569. Do you carry much coal on your railway?—Yes; a considerable quantity. I cannot say that it is an increasing one, but we do convenience the locality in supplying the coal for consumption; but you can scarcely increase the quantity consumed in agricultural districts, for the parties will buy just what quantity of coal they want, and you cannot, by reducing the rate 1s. or 2s. a ton, increase the quantity of coal consumed, for the farmer will not burn more coal than he just wants. There are no manufactories or scarcely any in the districts that we run through.

3570. (*Mr. Glyn.*) And is there no appearance or probability of manufactories being set up?—There are some small manufactories which are increasing. I am connected with manufactories which are extending, as manufacturers follow the population.

3571. Would not coal carried at a reduced rate be a great convenience to the consumers?—As far as the manufactures with which I am connected are concerned, water communication conveniences us quite as much as the railway, and it cannot be competed with.

3572. (*Chairman.*) Almost all the manufactures in the district are in your hands, are they not?—There are some small ones which I am glad to see increasing, but not to any great extent.

3573. Do you use water power or steam power in your manufactures?—We use both; our water power has gone partly now, for there is scarcely any in the summer, and we are therefore obliged to have recourse to steam power as well as water power.

3574. Which is the most inland town in which you have established any manufactories?—Clonmel.

3575. Is the manufacture flax or cotton?—Flax.

3576. (*Capt. Galton.*) The number of tons of coals carried on the Waterford and Limerick line over the whole system in 1861 was 33,000, whereas in 1863 it was only 21,000 tons; can you in any way account for that decrease?—We competed for some time in supplying Limerick with coal, and possibly it was at that time that we tried to bring the Welsh coal by the railway into Limerick.

3577. Your receipts were 5,000*l.* in 1861, and only 3,000*l.* in 1864?—Yes.

3578. Therefore you appear to have benefited by that traffic?—Yes, to some extent; but then the working expenses must have been larger.

3579. (*Mr. Ayrton.*) We have been informed that if all your rates were reduced 50 per cent. you would

have such an increase of traffic that in a few years you could make good any immediate loss consequent upon a reduction; is that your opinion?—If there were minerals or anything else in the country to be carried, I should feel sanguine that a reduction of rates would be beneficial; but I think the railways at the present time do the great bulk of the carrying of the country.

3580. Is it your opinion, taking the country as it is, that there would be no such increase ultimately as would make good any deficiency?—I do not see where it is to come from.

3581. Is it your opinion that any reduction of the rates would produce any such increase of traffic as would make good any deficiency in the income?—If I thought that such would be the case I should advocate it upon our own system.

3582. Is the contrary of that the opinion entertained by your directors?—I think so, and we are a very united board in our working.

3583. Who are the other directors of your company?—Mr. Bianconi is one of them; they are principally gentlemen connected with Waterford and the locality; one or two live up the line. Mr. Fennel lives up the line.

3584. Are those gentlemen well acquainted with the condition of the country and its requirements?—I believe there is no board in Ireland who know it better, or who have studied it more than we have.

3585. (*Mr. Glyn.*) These questions have been considered and discussed at your board from time to time?—Yes; Mr. Bianconi understands the traffic of the country as well as any man, I think, and we work very much in accord with him.

3586. (*Mr. Ayrton.*) Can you say whether you have had any applications made to you for special rates within the last two years; and, if so, in how many instances?—Our special rates will be for the traffic with the other side; with Glasgow perhaps, and the application will be from Limerick I expect, and Glasgow, as to sugar, which is a large article that comes from Glasgow—Glasgow is communicated with by three routes—one by sea, from Limerick to the Clyde, another from the Clyde to Dublin, and by canal or railway to Limerick, and another from the Clyde to Waterford and on to Limerick, and we may have had applications made to us to reduce the rate, but there would be a consequent reduction made for all the routes if we did it.

3587. Have you, except as to sugar, had any applications made to you to make special rates, in order to facilitate and develop traffic in particular articles during the last two years?—I do not remember that we have had any.

3588. (*Chairman.*) You are of opinion that the falling off which would be occasioned by any large reduction of the rates would be not temporary only, but permanent?—I am certain that it would be permanent.

3589. (*Capt. Galton.*) It appears that your cattle and sheep traffic has increased a good deal in the last three years. Does that go to Waterford and then to England?—Yes, and the pig traffic is large; they are slaughtered in the locality.

3590. I observe that the cattle traffic has increased from 31,000 in number to 39,000, and the sheep from 32,000 to 42,000. The pigs have decreased from 246,000 to 228,000?—The cattle traffic was progressively increasing until the last season but one, and I may say that there has been a falling off generally.

3591. This is a return for the last season but one, which shows an increase?—The last season I should have said.

3592. (*Mr. Hamilton.*) Has there been any alteration in the rates charged in the meanwhile for carrying cattle?—No; the rates have been the same. I think there was an advance made in the rates, perhaps two or three years ago—10 per cent.—generally over the system of the Waterford and Limerick and the Great Southern and Western lines, which are the two lines

W. Malcomson,
Esq.

W Malcomson,
Esq.

24th May 1865.

that we work, and we generally arrange to work as much in harmony with one another as we can.

3593. (*Capt. Galton.*) It is said that if the cattle were carried for lower rates a much larger proportion would be carried?—I do not think so.

3594. (*Mr. Hamilton.*) Have the cattle been leaving the country by any other routes since you raised your charges?—No. I believe that the local rates are sufficiently low to secure the bulk of the trade.

3595. (*Chairman.*) Do you believe that any considerable amount of saving in management could be effected by amalgamating the small lines with those with which you are connected, say, with the Waterford and Limerick?—No doubt there could be.

3596. To any considerable amount?—Not to any large per-centage; we are anxious for such an arrangement, but the local shareholders are not satisfied that it should take place yet.

3597. I believe there have been some negotiations for the amalgamation of the Waterford and Limerick Line with the Great Southern and Western Line?—Yes.

3598. (*Mr. Hamilton.*) You have stated that, in your opinion, it would be desirable to have a guarantee from the Government to reduce the rate of interest upon the debentures; supposing you obtained that guarantee, to what extent do you think you would benefit by it in figures?—In figures I should think that our system would benefit by some thousands a year.

3599. Do you know what the amount is that you now have to pay in interest?—Yes.

3600. In 1863 it appears that your debenture and other debts were 300,000*l.* and odd?—321,000*l.*

3601. It is stated in the document before me for 1863 that the amount was 301,000; what rate of interest were you paying upon that?—Between 4 and 5 per cent.

3602. Then what could you possibly expect to save if you obtained a Government guarantee, which including the sinking fund would amount to 4½ per cent.?—If the Government would choose to exchange our bond debt and preference debt for that, it would give us the advantage of 1 per cent. upon the original capital.

3603. I mean the debenture debt alone, not the preference stock. If it takes 1 per cent., that would be a saving of 3,000*l.* a year, but would that enable you to give the public the advantage of any appreciable reduction in the fares?—Not largely, but why I would press this more on the attention of the Commission is, that I think it would be attended with the advantage of inducing an extension of railways through the country, which would be a great thing. Legislation, I think, in that direction is one of the things most likely to be beneficial to the community generally in Ireland.

3604. Is it not wholly without precedent, or can you refer to any instance in which the Government has given a guarantee?—Not to railway companies. I may mention that I have applied within the last six months to the Government on behalf of our boards, and they have conceded to the extent I have named over the amount of loan which is still unpaid from our companies.

3605. That I suppose was with a view to help you out of a temporary difficulty?—It was to enable us to finance better.

3606. Did you never hear that a proposal that was made to guarantee the capital of a railway company in Canada was favourably entertained by the Government?—I did not.

3607. (*Mr. Ayrton.*) Did not the Government advance money to complete the Dublin and Kingston Railway?—They advanced a large sum of money to complete the Dublin and Galway Railway. They loaned it at 3½ per cent. to the company. They have had it continuously at that rate.

3608. Has not the Dublin and Kingston Railway paid 10 per cent. dividend until lately?—I cannot

speak to that. That line was made before I became connected with railways.

3609. With reference to one of your lines, a gentleman who has been examined has stated in answer to question 2786, "There are cars running at the present time to certain points upon that line, and there is an immense traffic that is not taken by rail; from the Bruree district there is a four-horse car, and there are others running from Bruff Kilmallock and Killynally to Limerick, and people living between Bruff and Bruree; even those living in Bruree walk a distance of seven miles to get upon that car because they only pay half fare. From Bruff to Limerick the charge is only 9*d.* for a distance of 12 miles." Has your attention been called to that state of things?—That district is inconvenienced by the line called the Cork and Limerick direct, and which we do not work.

3610. (*Mr. Gower.*) I understand you not to be of opinion that the boon granted by the Government should be unconditional?—No. I say that it should be conditional upon the railway company, showing that they had a traffic which, beyond their working expenses, would be a guarantee for it.

3611. Should they not require as a return for that boon any concession to the public?—I have been asked that question, and I expect that the railway companies would consider that question favourably, but how far they could meet the views of the Government if they obtained a loan from the Government I could not at the present moment express an opinion upon that would be of any value.

3612. (*Mr. Hamilton.*) I see that the total preferential stock and debenture debt of the Irish railways in 1863 was about ten millions sterling?—Yes.

3613. One per cent. upon that would give 100,000*l.*?—Yes.

3614. Would 100,000*l.* a year applied throughout the whole system of railways enable the companies to give any great advantages to the public in the way of a reduction of fares?—I expect that the railway companies would gladly sacrifice one half of that amount, which would be 50,000*l.* a year.

3615. (*Mr. Glyn.*) You could not deal with the preferential stock as you can with the debenture debt; there is nothing to induce the preferential stockholder to give up his preferential 5 per cent., which has been paid to him regularly?—A large portion of the preferential stock is terminable, and the railway companies have the power to pay it off every five years.

3616. Do you wish to pay it off?—We cannot pay it off.

3617. If you were to do so it would become due at a certain time?—Yes. If the Government would assist us I may mention that a large proportion of the capital invested in Irish railways is held in Ireland, and if that could be set free in one place I think it would be invested in another, at least a proportion of it.

3618. (*Chairman.*) Would not a large proportion of the Irish railways be paying well now if they had been originally paid for with ready money?—No doubt of it.

3619. Is it because they have been so much in the hands of contractors that they do not pay well?—Yes. The contractors have sold their securities at the best price they could get for them, that is the case now, and they sell them in the English market at a discount.

3620. (*Mr. Ayrton.*) The working expense of all the lines in Ireland appears to be 750,000*l.*, and if you receive 100,000*l.* by the assistance of the State, I presume you will be able to reduce your charges to the extent of one-seventh of that amount?—Yes.

3621. But you could not reduce your charges to the public to the same extent?—We should look for some little profit by the arrangement, but we should be glad to give a large proportion of it to the public.

3622. You would reduce your whole charges to the extent of 100,000*l.* on your gross earnings of 1,500,000*l.*?—It is not that so much as it would be

a large measure of general benefit to the public. As I have before stated, funds for making railways are often provided by parties locally interested, and it has been for the benefit of the localities that the money has been advanced.

3623. (*Chairman.*) It has been stated that if the Government were authorized and were willing to buy up all the railways in Ireland they would meet with no difficulty on the part of the shareholders in obtaining them for 50 per cent. of their nominal capital; do you agree with the opinion which has been so expressed?—As far as our companies are concerned with which I am connected I think we should be glad to sell at 50 per cent. of the original cost.

3624. (*Mr. Glyn.*) The Great Southern and Western Railway Company would not like to do that, I suppose?—I suppose not.

3625. (*Mr. Ayrton.*) Can you give the Commission any idea what would be the probable per-centage of increase in the working expenses, if your traffic were doubled in quantity. Do you think the working expenses would become double, or increase in a lesser ratio?—That depends upon whether you refer to goods or passenger traffic; the passenger traffic frees itself; we have no terminal charges upon that; it is not in the same proportion.

3626. Take the goods traffic, would the working expenses be double, or in a smaller proportion?—I do not think that the working expenses increase beyond a certain proportion.

3627. (*Chairman.*) Are your goods trains light or heavy generally?—The goods trains are not heavy, on account of our gradients not being very good, and the curves not being good.

3628. Could your engines draw a larger number of trucks in goods trains?—No, not generally.

3629. (*Mr. Ayrton.*) Do you send forward full trains, generally speaking?—Our goods trains are more gather-up trains, and they convenience every station along the line; they arrive, perhaps, full at the far end.

3630. (*Mr. Glyn.*) As to the passenger trains, you could carry, I suppose, a greatly increased number of passengers?—Yes.

3631. And without incurring any increased expense?—Yes.

3632. (*Mr. Hamilton.*) One of the witnesses examined stated that the railways could carry coals at a farthing per ton a mile. Do you believe that could be done with your gradients?—I do not think so. I am connected with a company on the continent, and we send a very large quantity of coals at a halfpenny a ton per mile.

The witness withdrew.

MR. JAMES C. COOPER examined.

3648. (*Chairman.*) Are you well acquainted with the cattle trade of Ireland?—I have done a great deal in it, but not in a very large way, not so much as the regular dealers in cattle.

3649. Have you paid attention to the transit of animals by railway in the south of Ireland?—I have.

3650. Are you of opinion that the transit is not as large as it might be if railway companies afforded greater facilities?—I am.

3651. Will you state to the Commission any facts upon which that opinion is founded?—I find in the Agricultural Return for the year 1863, that of cattle and horses that travel by railway in Ireland there were 528,473, of sheep 470,205, and of pigs 770,941. That I find in Thom's statistics, and I find also in the agricultural returns of cattle in Ireland that in the year 1863 there were of horses and cattle 3,717,454, of sheep 303,931, and of pigs 1,064,802; that is, out of the whole number in the agricultural returns only one-seventh of the cattle and horses went by train, and one-seventh of the sheep, and three-fourths of the pigs.

3652. Supposing the agricultural interests to be flourishing, have you ever calculated what proportion

3633. What is the worst gradient upon those lines?—The gradients generally in Germany, where the mines to which I allude are, are good; they can haul a 250-ton train.

3634. (*Chairman.*) What are the prevailing gradients on the Waterford and Limerick line, and what is the worst gradient?—I cannot give a correct statement upon that.

3635. Are there any gradients of 1 in 100, or worse than that?—There are a few worse.

3636. For any distance?—They are not very long; perhaps a mile and a half.

3637. (*Mr. Hamilton.*) Do you know what the lowest rate charged on the English lines for the coal traffic is?—I do not think it is more than a halfpenny.

3638. Finding the waggons?—I believe the parties find the waggons at a halfpenny; on the continent they do not do that.

3639. (*Chairman.*) Do you take an active part in the management of the foreign railway with which you are connected?—It is as the owner of minerals and coals that I speak of those railways.

3640. What railway do you refer to?—The railway on which the mines are; the railway runs through Westphalia, and it is called the Cologne and Minden line. The coal is brought largely into Holland from that district, and they carry the coals for a halfpenny a ton per mile, and find the waggons, and they do reckon to make a profit—in fact it is one of the sources of profit to the Dutch-Rhenish line, and it is an increasing one.

3641. (*Mr. Hamilton.*) At what rate do you carry coals upon your railway system in Ireland?—We charge generally more than a penny a ton per mile.

3642. (*Capt. Galton.*) I believe it is 4s. 9d. from Waterford to Tipperary?—Yes.

3643. (*Chairman.*) Which is a distance of 55 miles?—Yes.

3644. (*Chairman.*) For the coals which you use at your manufactory at Clonmel is the charge a penny a ton per mile from Waterford?—In Clonmel we use water power, because we have plenty of water power there.

3645. (*Mr. Ayrton.*) What is the rate from Waterford to Clonmel for coal?—I think they charge 2s. 3d. for 27 miles, which is a penny a ton per mile, but there we compete with the river, which carries at the same rate.

3647. Are special rates given to individuals on the line, or are the rates published?—No; we have no special rates.

3647*. (*Chairman.*) Have you anything further to state to the Commission?—Nothing else occurs to me.

W. Malcomson
Esq.

24th May 1865

Mr.
J. C. Cooper.

Mr.
J. C. Cooper.
24th May 1865.

3658. Do cows also migrate?—Yes, of all ages.

3659. Do you think the cows travel once a year by railway, or that they ought to travel once a year?—No, I do not think so. I think that the cows which have milk do not travel more than once every three years.

3660. Probably only once in their lives?—A great deal oftener than that; they travel into the dairy farms often, and when lean they travel out of the dairy farm into the grazing farm, and they are fattened there, and then they travel out of that to be sold, that is three travellings, and sometimes they are changed twice as stores.

3661. In those migrations would they not be generally at comparatively small distances from the farm to the market-town in the neighbourhood, and from thence perhaps to another farm in the same county?—No; the south of Ireland is largely dairy, and then these dry cows, as they call them, go into the grazing parts of Ireland, that is into the county of Meath, Westmeath, and Kildare, that is a great number of them, if they do not all go.

3662. Bearing in mind that there are many ports in Ireland from which cattle are exported, would you not have to deduct a considerable area around those ports from which the cattle would go to market without using a railway?—Yes, to some extent, but not a large area, as the fattening districts are generally distant from the shipping ports, and so are the principal store cattle pastures.

3663. (*Mr. Horsfall.*) Have you heard any complaints made in Ireland as to the rates charged on the railways being too high?—The usual complaints that I have heard as regards the prices are that they are a third too high; some people say a half. I should be inclined to say a half, but a third is the usual complaint. I have asked the question, and I have heard that.

3664. Do you think that a deduction of one third in the present rates charged would materially increase the traffic?—I think so.

3665. (*Mr. Glyn.*) Is the same rate charged by nearly all the railways?—There are some slight variations I know, but they are almost all equal.

3666. Which is the line of railway on which the lowest rate is charged?—I think it is the Waterford and Limerick, of those railways that I know.

3667. Do you recollect what the rate is per truck per mile?—Last year it came, I think, to about 6s. a head.

3668. We have been informed that there is a great deal of traffic on that line of railway at that rate?—Yes, there is.

3669. What is the rate charged on the Midland Line?—I do not know.

3670. It is higher, is it not?—I do not know.

3671. (*Chairman.*) All fat cattle that travel any distance at the present time go by railway, do they not?—Yes, almost all. There are some of them that go short distances by road.

3672. That would always be the case, would it not, whatever the charge was?—No, I think not.

3673. But for a distance of two or three miles?—Yes.

3674. Or for five or six miles?—Yes, I should say any distance under about seven or eight miles.

3675. Do you think that any deduction in the rate charged for cattle would induce farmers to fatten a greater number of beasts?—I do not exactly know, but I do not think it would have that effect.

3676. Do you think that the chief increase that is practicable is in store cattle?—Yes, I know that there are thousands of cattle bought in the county of Cork and in Kerry, and those cattle that ought to be put into a train are all walked.

3677. (*Capt. Galton.*) Where do they go, to Dublin or to Liverpool?—They go into the counties of Clare, Galway, and Mayo, and they also go into Kildare, Meath, Westmeath, and Dublin.

3678. To be fattened?—Yes, and some half fattened.

3679. (*Mr. Ayrton.*) Do you know whether calves are enumerated as horned cattle?—Yes.

3680. Is there not considerable delay in the movement of cattle in those large districts in Ireland where there are no railways, the breeding or growing counties, and do the statistics to which you have referred include those counties where there are no railways?—No, the breeding is the greatest in the dairy counties.

3681. In what way are they employed in the large counties where there are no railways?—They rear up the cattle there to have them fattened in the pasture counties.

3682. Therefore one of the journeys would be made in the district where there is no railway?—It would be partially, but there are railroads all through the places that I have gone into; they are not quite through the country yet, but they are through the main part of it.

3683. (*Chairman.*) Can you give the Commission any instances in which, to your knowledge, store cattle are now driven which might be put on the railways?—I should say that they are driven very often from 50 to 100 miles.

3684. Do you mean in the vicinity of any railways?—Yes, in a great many instances.

3685. (*Sir R. Hill.*) Can you name those places?—Yes; I can point them out on the map, if you wish it.

3686. Have the goodness to do so?—There are cattle bought in the western parts of the county of Cork and Kerry, and they go into Limerick in that direction (*describing the same*), and on to Nenagh and Roscrea, and Banagher, and a great number go to Mullingar; a number of them also go to Killaloe and Ennis, some to Tuam, and numbers to Athenry, to Ballinasloe, and Mullingar; 1 and 2-year olds also go from Limerick to Clare and Galway, and the dairy cows, not in calf, to the midland fattening pastures.

3687. (*Mr. Ayrton.*) I understand you to say that the store cattle are driven from the western part of Limerick to the county of Cork, to the markets at Athenry and at Ballinasloe?—The greater quantities of them go to Mullingar, and large droves of them go into Kildare.

3688. There is no direct railway route from one point to the other, is there?—There is the Great Southern and Western, and the railway from Killarney to Limerick, and from Limerick to Ennis, that would take them a large part of the way into the county of Clare.

3689. (*Capt. Galton.*) Do you think that if the rates were sufficiently low a larger number of cattle would be taken that way?—Yes.

3690. What rate do you think would be sufficiently low?—I would ask to have half off the present rate; but the dealers in cattle of whom I have inquired only ask for a third off.

3691. Have you compared the rates charged in Ireland with the English rates?—I have.

3692. How much higher are they than the rates for similar distances in England?—Those that I know from York to Liverpool are nearly equal; they are not a great deal lower. Then on the North-western line they will take cattle from Waterford to Liverpool, and down the North-western to London for 2s. a head. That is 9s. from Waterford to Liverpool, and 2s. more if sent from Waterford to London *via* North-western, total 11s. Waterford to London.

3693. (*Chairman.*) That is from Waterford to London?—Yes. From Chester cattle are booked through to Dublin for less than from Dublin to Tipperary, both routes having empty return trucks.

3694. (*Capt. Galton.*) Do you know the rates on the Great Eastern railway from Harwich to London?—No; I know the rate from Waterford to Bristol would be 11s., and from Bristol to London it would be 11s. 8d., making 22s. 8d.; more than double the rate *via* North-western.

3695. Is that per head or per truck?—Per head.

3696. (*Mr. Hamilton.*) What would be the rate from Waterford to Liverpool, and then from Liverpool to London, the total charge?—Only 11s., 11s. 8d. cheaper by North-western route than by the Great Western, which should be the route; from Waterford to London is the same sea distance and half the rail distance, *i.e.*, *viâ* Bristol.

3697. (*Mr. Ayrton.*) Will you explain how the cattle traffic would be conducted as you suppose from the western part of Limerick to Ballinasloe by railway; where would it go on to the railway?—They would train the cattle into Ennis, or they could train them to Parsonstown and Portumna, or they could train them all through the county of Kildare.

3698. That would be a very round-about way, would it not?—No.

3699. Would not the railway distance be nearly one-third longer, or half as long again?—No, I do not think so.

3700. (*Mr. Glyn.*) When you mentioned the rates on the London and North-western line for cattle, had they not some relation to the quantity sent?—No.

3701. There must be, I suppose, a train load?—I do not know that; I was not asked a question as to quantity.

3702. Did you never inquire into the fact?—No.

3703. (*Mr. Hamilton.*) Do you know the rate charged to London by way of Waterford and Milford?—I do not know the rate; it is higher than the rate by way of Liverpool and the North-western line.

3704. Although the sea-passage would be shorter?—Yes; I think that they take horses that way from Limerick for 2*l.* each, and they send over killed sheep also by that route. I think they charge for them 5*s.* 6*d.* a hundredweight, and then they go on quickly, that is, by Milford Haven.

3705. (*Chairman.*) It has been stated that there is one advantage in driving cattle along the road, which is, that it enables the driver to dispose of a portion of them on the way. Do you think that any weight is to be attributed to that?—I think that that only applies to a small portion of them; it only applies to the end of their journey. The great bulk of them go on far.

3706. (*Mr. Ayrton.*) Have you been able to ascertain the cost of driving cattle from the western part of the county of Limerick to Ballinasloe Fair as compared with the charge by railway?—An instance occurred the other day to myself. I bought 20 cattle at Killarney, and I wished to bring them to a station between Charleville and Limerick. I inquired the rate, and it would have come to 4*s.* a head. I drove them on the road for 1*s.*, when I would rather have paid 2*s.* to have sent them by a train.

3707. In that case you drove, I suppose, straight across the country?—No; but it is a great way across.

3708. (*Capt. Galton.*) About how many miles did they travel?—I should say the distance would be nearly 50 miles.

3709. (*Chairman.*) For that distance, unless the rate had been reduced to one half, you would still have preferred to drive them along the road?—Yes.

3710. (*Mr. Ayrton.*) Can you give us any other instances?—I have been told by a trader in cattle, in Waterford, that he walks them from Clonmel and Caher for less than half the charge by the train: and a dealer in them at Cork, who sends over here largely, has told me that if there was a third taken off, he would never send a cow along the road; and have also been told by an extensive grazier in Clare, that he would send at reasonable rates a thousand sheep to Dublin annually, which now he sends to Ballinasloe to sell; others in his locality do the same for identical reasons.

3711. Have you made any calculations that have satisfied you that the railway companies could afford to carry them at two-thirds of the present rate?—The only calculation that I have made has been by comparing the number that travelled in the year 1863 with the whole number in Ireland, and I have

found that the number that travelled was only one-seventh of the whole number, and I would suppose that that number would be increased to four or five-sevenths, and also that they would travel further by train.

3712. Your calculation is that the traffic would be increased four or five fold in the course of time?—Yes, I should think so, after a few years.

3713. Do you think that after that time, with increased working expenses, the traffic would return a larger profit to the railway companies than it does at present?—I do not quite understand that question.

3714. You have stated that the greater part of the pigs are now sent by railways?—Three-fourths of them.

3715. (*Capt. Galton.*) Why is that?—Because they are unable to walk. They cannot go along the roads, and therefore they do not travel as the stores often do. They only travel as fat when they are going to be killed.

3716. (*Chairman.*) Can you state to the Commissioners any other facts respecting the different rates charged either with respect to cattle or goods?—I have also a memorandum with regard to corn.

3717. Will you be so good as to state any facts within your knowledge upon that subject?—The charge on corn is 12*s.* a ton from Limerick to Dublin, and they take it by boat to Liverpool for 6*s.* The charge from Cork to Limerick is 7*s.* a ton for corn, and if it breaks the journey it costs 1*s.* 6*d.* more.

3718. (*Capt. Galton.*) If it breaks the journey you mean at some intermediate station?—Yes.

3719. You are not speaking of Indian corn?—Not specially, any corn that is ground.

3720. If it breaks the journey and is ground at a mill it is carried on as flour and pays a higher rate?—Yes. Then again the charge for hay from Limerick to Waterford is 11*s.*, and it is taken through to Glasgow for 20*s.*

3721. That is comparing the cost by the sea route and by the railways?—Yes. From Limerick to Glasgow it is 1*l.*

3722. From Limerick to Glasgow does it go by sea?—No, it goes through Waterford.

3723. (*Chairman.*) Is there any large amount of internal traffic in Ireland in the articles of corn and hay?—Not in hay. It is all outward, if it goes away.

3724. Is corn frequently carried from Cork to Limerick, or from Waterford to Limerick, or from Limerick to Waterford?—A good deal of it goes from Cork to Limerick.

3725. (*Capt. Galton.*) Is it imported corn that you speak of?—Yes, it is; and the complaint is that it goes round the coast a great deal cheaper.

3726. That it can go round a great deal cheaper?—Yes, and it does go round.

3727. Is not that always the case where there is a coasting trade, and goods can be carried more cheaply than by railway?—But they say that if it could be carried for 4*s.* instead of for 7*s.* per ton, it would all go by the train, all that corn.

3728. The distance from Cork to Limerick is nearly 61 miles, is it not?—Yes.

3729. And the charge is 7*s.* a ton?—Yes. Then the drovers also complain that a whole truck holds 30 sheep, and that they are only allowed to have 12 as a half truck instead of 15, and further that they are only allowed three horned cattle in place of four, eight being the number for a whole truck; they also complain that if they take four horned cattle they are charged for a whole truck; they also say that they are not allowed to have a van for the drovers to travel in, and that the drover must travel in the cattle truck and he is often injured and bruised; they charge them half a fare in a cattle truck and a full fare back, and then if they want to come back again in the evening there is no third-class train for them, they have to wait till the next day, and they are charged a full third-class fare back again; they complain greatly of that. In England I believe the drovers are not charged. Then the number of tolls on common roads in Ireland makes walking there more expensive.

Mr.
J. C. Cooper.
24th May 1865.

Mr.
J. C. Cooper.
24th May 1865.

In England sheep pens are placed over each other, but not in Ireland.

3730. (*Mr. Hamilton.*) Do you not consider that a loss in the condition and weight of the animals is sustained by sending them long journeys on foot?—Certainly, and I have given evidence to this effect, that where I could walk the cattle for 1s., I should be satisfied to pay 2s. to carry them by train.

3731. Would not the result be a great saving of loss in the weight and condition of the animals?—Yes.

3732. What number of miles can you safely drive beast in a day, say in the spring time of the year?—The thin ones ought not to be driven more than from 12 to 15 miles a day, and the fat ones not more than 8 to 10.

3733. If they were to be driven 60 miles, how long ought that to take?—Four days at least for stores.

3734. How many days for fat beasts?—Six days.

3735. Which would be attended with a material loss of condition, and a falling off of weight?—Yes.

3736. More than they would suffer going the same distance by railway?—Yes. In what I have stated I have included the drover's charge, and I have even included the hay when the cattle are driven in the winter. There is one more complaint that these drovers make, and that is that the cattle are not started for hours after they come into the platform, and that they are kept at junctions. They will seldom put a few waggons of cattle on a passenger train for a short distance to catch a goods train, and thus a market is often lost; when the said passenger train was not half a load.

3737. (*Capt. Galton.*) With respect to the loss of condition, supposing the cattle are going to Ballinasloe fair, could the cattle be driven there for sale for less than if they were taken by the railway, say from Killarney?—That would depend upon the weather and the condition they were in when they were bought, and a hundred other little things.

3738. Would extra expenses be incurred by keeping them for a day or two at the fair before they were sold, if they were driven to the fair instead of being sent by railway?—Yes.

3739. That would be so, would it?—Yes.

3740. (*Mr. Hamilton.*) The cattle, I believe, are almost always purchased at so much per stone?—The fat cattle are. The lean ones according to condition and freshness.

3741. The number of stones is calculated, consequently a loss in weight might lead to a serious reduction in price?—Yes; the salesmen calculate that for every day a beast is travelling it loses a stone, that is a stone of 8 lbs., that is the ordinary loss, either walking or by train.

3742. Then in six days travelling the animal would lose six stone, whereas if taken by railway the same distance in one day he would only lose one?—Yes.

3743. (*Chairman.*) If it is so much cheaper to drive store cattle by the road than to send them by railway, how do you account for any store cattle in Ireland being sent by the railway?—There are some of the larger buyers who do not walk with their own cattle themselves, and they do not like to trust those cattle for four or five days at a time in the hands of drovers, and they would therefore rather pay three or four times as much to have them go by the train, but they are often stopped at the junctions for three or four hours, and that is a great objection. Coming here, a gentleman with his family got into the carriage with me at Maryborough, on the Great Southern of Ireland, he was going to Roscommon; at Portarlinton, 10 miles on, he was detained 2 hours 20 minutes, again he must remain at Athlone 2 hours 35 minutes, in all 4 hours 55 minutes; whereas he was in motion only 2 hours 30 minutes from Maryboro' to Roscommon. Again the Limerick to Dublin passengers are, by a new arrangement, obliged to wait nearly two hours at the Limerick junction, or travel 1 hour 30 minutes

round by the Great Southern *viâ* Charleville. A special cattle train I had, of 20 waggons, on two occasions, went from Limerick to Kildare, 100 miles, in six hours; showing, that with larger trade, companies are willing to increase the speed.

3744. (*Mr. Hamilton.*) Do you know what the rates charged on the Scotch railways for cattle are?—No. Then as to turf, that is also charged for from Limerick to Croom 3s. 6d. a ton, that is only for about eight miles, and it is charged to Charleville 6s., and that is a country that it is greatly required in.

3745. Is much of that charge owing to terminal charges?—No, I think it is the railway charge only.

3746. Is not turf an article on which the expenses at the stations would be considerable?—Yes, there is a good deal of it.

3747. And the charge would therefore be proportionately high for the short distances compared with long ones?—Perhaps so. Then with respect to parcels, I constantly get parcels of exactly the same size and the charges are not the same.

3748. Do you mean by different lines of railway?—No; I mean on the same line. Since I received a summons to attend the Commission, I have had three boxes, and those boxes came from Dublin, and one of them was charged 1s. 7d., another was charged 2s. 1d., and the other was charged 1s. 1d., and yet they were exactly of the same size.

3749. (*Capt. Galton.*) Were they of the same weight?—I cannot say, but they held in them the same articles.

3750. (*Chairman.*) Have you made any inquiries as to the reason why these different charges have been made?—I inquired about it and they could not explain it.

3751. Do you imagine that the charges are pretty much in the discretion of the station master at each place?—I do not know, but he said that they had a scale of charges for parcels. I asked him if it was often changed, and he said it was. I then asked him to give me one of his scales, and he said that they only printed one for the use of the office.

3752. (*Capt. Galton.*) They do not publish lists of charges?—No.

3753. Do they not fix them up at the station?—On the Waterford line they do.

3754. Not on the Great Southern and Western?—I do not think they do.

3755. (*Chairman.*) These three different charges were made in the course of a very short time?—Yes, quite so, just after each other.

3756. In the course of a few days?—Yes, in the course of about eight days. I asked them about the charges, and they said that a parcel up to 7 lbs. was 1s. 1d., and that a parcel up to 14 lbs. was 1s. 7d. They will carry in their goods train a parcel if it weighs 56 lbs. for 1s. 6d., so that they will carry 56 lbs. as cheaply as 14 lbs.

3757. (*Capt. Galton.*) That is if it goes by a slower train?—Yes, but it is not a great deal slower.

3758. (*Chairman.*) If you desired it would they not send a small parcel by the slower train at a lower price?—No, unless I made it up to weigh 56 lbs., and some persons, by adding stones, do make up a parcel to weigh 56 lbs. With regard to horses, the charge to Dublin for three horses is 5l., that is from Limerick, and the traders in them say that the charge ought to be 3l. These horses are put in stalls, and those that go in trucks are charged 16s. 6d. each; seven horses in a wagon from Limerick to Waterford cost 11s. each, not including drover.

3759. (*Mr. Hamilton.*) Have you ever made any comparison between those rates and the rates charged on English railways?—No, I have not. A passenger second class return ticket, from Charleville to Limerick, costs 4s. 9d., two persons will drive this 20 miles, per road, for 10s., and a horse will carry four or five persons on the Irish cars.

The witness withdrew.

Adjourned till Friday next at 12 o'clock.

Friday, 26th May 1865.

PRESENT :

THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
 THE HON. E. F. LEVESON GOWER, M.P.
 SIR ROWLAND HILL, K.C.B., F.R.S.
 T. B. HORSFALL, Esq., M.P.
 ROBERT DALGLISH, Esq., M.P.

GEORGE CARR GLYN, Esq., M.P.
 CAPT. DOUGLAS GALTON, R.E., F.R.S.
 E. T. HAMILTON, Esq.
 J. R. M'CLEAN, Esq., Pres. Inst. C.E.
 WM. POLE, Esq., F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

GEORGE WILLOUGHBY HEMANS, Esq., examined.

3760. (*Chairman*.) You are a civil engineer?—Yes.

3761. You have been engaged in the construction of several railways in Ireland?—Yes; for about 25 years I have been so engaged.

3762. Will you be so good as to mention the lines that you have either constructed, or are at present constructing?—I have constructed almost the entire system of the Midland Great Western railway as shown by the blue lines on that map, all except the line to Castlebar, which was constructed by Mr. Fowler, but I had the superintendence of it on behalf of the Midland company. That comprises perhaps a fifth part of the railway system. I have constructed a great portion of the green system of railways, that is, the Limerick and Waterford, the Waterford and Kilkenny, the Kilkenny and Maryborough; and part of that is still under my hands and in course of construction. I have also constructed in the north of Ireland the railway from Newry to Armagh, as shown by the yellow line on the map, the railway from Portadown near to Belfast to Omagh; and upon the Londonderry railway I am now constructing a line from Enniskillen, as shown by the dotted lines, by Ballyshannon to Sligo. Then again in Clare the line from Athenry, as shown by the black dotted lines, to Ennis near Limerick; and another shorter line connected with the reclamation of land, as shown by the yellow colour, from Kilrush to Kilkee. These are the principal lines I have been connected with.

3763. Having constructed these railways, you will naturally have taken an interest in those lines which are at present working, and you are no doubt able to give the Commission your opinions as to their affairs generally, the traffic developed upon them, and the system under which they have been managed?—I can give general opinions from observation of the state of the traffic on those lines, but I am not able to give detailed information of the local affairs between one point and another. In a general point of view, I know what the fares are in Ireland, and what the result is upon the travelling of the country.

3764. Are you able to say whether the Irish lines of railway can be worked as economically as English lines with similar amounts of traffic?—I am sorry to say that I am afraid the Irish gauge is not, as has generally been supposed, a good invention. In my judgment, looking at the traffic of that country, it is a mistake; I think it is an impediment to the working of the lines economically. Had the traffic been as great or greater than it is in England, I think it would have been a great advantage to have had a larger stock, and more power for the locomotives; but the fact is, that in Ireland the trade is small, and their rolling stock is heavier, and when the carriages are empty the dead weight is increased to a very considerable extent, I believe by quite 20 per cent.

3765. (*Lord Stanley*.) By the difference which exists between a gauge of 5 feet 3 inches and one of 4 feet 8½?—Yes; the carriages require to have heavier axles and heavier wheels, and heavier iron work of all kinds; heavier frames for the carriages; and even if the carriages are full, they only with their gauge accommodate four passengers abreast, in the first-class carriages, which is done all over the continent, and on some of the English lines, with the narrow gauge. I am afraid that we

have imposed a burden upon ourselves by that gauge rather than obtained a benefit.

3766. (*Mr. Glyn*.) It is no great advantage with respect to haulage?—There is an advantage in getting a locomotive engine with less wear and tear. You get a larger fire box conveniently fixed in a larger locomotive, and it is an advantage in the construction of the locomotive itself. You may have rather higher wheels, and the cranks are better accommodated, and the machinery generally; but for the rolling stock I see no advantage.

3767. (*Sir R. Hill*.) Upon the whole is it advantageous or otherwise?—Upon the whole I should not adopt it for the Irish traffic, if it had to be done over again. I should adopt the narrow gauge.

3768. (*Capt. Galton*.) Should you prefer to have the narrow gauge of England, or a narrower gauge than that, for Ireland?—With my present experience, the narrow gauge of England would be the one I should choose, if it were done over again in Ireland; not narrower than that, because that gauge is about as narrow as you can make a locomotive conveniently in. If it was much narrower the difficulties as to the machinery would increase. I should adopt the English narrow gauge, because I believe that it answers very well, and I am afraid that the other is a mistake.

3769. (*Lord Stanley*.) But practically that question is settled, is it not, by the number of lines which are already made on the Irish gauge?—Yes. I think it is impossible now to alter the Irish gauge, and I only mentioned this incidentally as one explanation of the low dividends.

3770. (*Mr. Glyn*.) There is also the expense of working?—Yes.

3771. (*Mr. Horsfall*.) Which is also increased by the cost of the coal?—Yes; and by the dead weight. The dead weight is a very important element in eliminating the profits from the loss on railways.

3772. (*Chairman*.) Have you made any calculation as to the additional cost per mile which you think the Irish railway companies have to incur more than upon the railways constructed on the narrow gauge?—I do not think that that is very material. I do not think that consideration has very materially influenced the railway itself. The rolling stock is dearer.

3773. The cost of running a train per mile, I suppose, is dearer in Ireland than in England?—It is not quite so much; that is to say, the dead weight is greater, and the cost of running a train, per ton, I do not think is different, or not materially so. In the tons taken there is more empty weight.

3774. (*Mr. Glyn*.) The cost of the stock and the loss of dead weight are two principal points, are they not?—Yes.

3775. (*Mr. Horsfall*.) And also the cost of construction?—Not much. I do not think that the mere cost of making a railway is much increased by the 5 ft. 3 in. gauge, the bridges are a little wider, but not much.

3776. (*Sir R. Hill*.) Would the cost of carrying a given number of passengers, or a given weight of goods on an Irish railway be greater than on an English railway?—So long as a carriage which contains, say, 20 persons, is heavier on the Irish gauge than on the English gauge, it must be so much more costly per head to take them.

G W.
 Hemans, Esq.
 26th May 1865

G. W.
Hemans, Esq.
26th May 1865.

3777. You have spoken of the cost of haulage being less, but taking it altogether, is the cost of carrying a given number of passengers, or a given weight of goods, greater per mile upon an Irish railway than upon an English railway?—I think it is somewhat greater, but that is not what I think we have to complain of. I think it is the dead weight on the trains which are never filled; consequently the heavier the carriages are the more it tells.

3778. (*Mr. Glyn.*) The railways are made and the carriages are constructed, but are they not calculated for much more traffic than there is in Ireland to be carried?—That is so exactly.

3779. (*Capt. Galton.*) If the carriages were filled, you do not consider that there would be much difference in the working expenses?—There would be some difference if they were filled, because they would still be heavier carriages in proportion to the number of people conveyed.

3780. Do you consider that the increase of gauge is not sufficient to increase the number of passengers in the carriages, and therefore that you cannot carry more passengers in the carriages than you can on the narrow gauge?—Yes; that is my view exactly. If you take a first class carriage on the Irish gauge it is heavier than upon the English, and unless you can put five passengers abreast in the Irish carriage you lose; you can now only put four. It is not always done in England, but you can on many lines put four people abreast, and therefore in Ireland you lose by the extra weight.

3781. The addition of six inches to the width is not sufficient to increase the number of the passengers?—No.

3782. (*Mr. Horsfall.*) I believe there are very few night trains run in Ireland?—Very few. There are only the mail trains, and those are not upon all railways.

3783. That diminishes the cost of keeping up the line, does it not?—Yes.

3784. (*Chairman.*) Is the cost of maintaining the permanent way less in Ireland than it is in England?—The cost of maintenance is less.

3785. (*Mr. Glyn.*) They are not in the habit of running their goods trains at night, are they?—Yes; they do that on the main lines. The goods trains are run at night; they have latterly began to run them at night.

3786. Are there any respects in which the Irish lines of railway are more economical than the English lines?—There is probably one element of economy, which is this, that the cost of watching is less, the trains being fewer in number, and then not running trains at night, it makes the cost of watching and maintaining less; the wages paid to the workmen are less—otherwise I do not think there are any other elements of difference.

3787. (*Sir R. Hill.*) What is the difference in the amount of wages paid to the policemen and the porters?—There is very little difference in the wages paid to the engine drivers and the stokers, I think they are very nearly the same as those paid in England: to policemen and porters generally the difference is, I dare say, from 25 to 30 per cent. in Ireland.

3788. Will the same number of men suffice for the same amount of work?—A very much fewer number of men per mile will suffice per railway; but whether it is smaller in proportion to the number of tons conveyed I cannot say. I think perhaps not in proportion to the quantity of work done.

3789. (*Lord Stanley.*) Comparing the working expenses on English railways with those on Irish lines, is not the fair comparison to take, not the expenses upon English lines leading from one great town to another, but those upon branch lines made through thinly peopled rural districts?—Certainly; the comparison would be a very wide one to make it between any of the London railways and any of the Irish lines, the comparison will hardly hold.

3790. (*Mr. Horsfall.*) I believe there are very few lines in Ireland on which trains are run on a Sunday?

—Almost on all the lines they run one train on Sunday, generally one in the morning and one in the evening, and no more.

3791. Irrespective of the moral question, does it pay to run trains on a Sunday?—They were not found to pay, except on the Kingstown railway, where they pay very well. For suburban traffic it pays very well, but not upon long lines. I doubt whether it would pay to run more than one train a day.

3792. (*Chairman.*) The traffic on the Irish railways has not been progressing of late?—As far as I can observe on all the railways with which I am connected it is lamentably stationary, and it appears that for many consecutive years the traffic per week on many of the lines will vary only a few pounds. Comparing the receipts for a few years back on the same line of railway, they will present a difference only of a few pounds a week in their total receipts.

3793. Is that comparing the present time with only the last three or four years, or with five, six, or seven years back?—It is by comparing the present time with about five years back, there has been very little increase. I do not think that upon the whole there is a falling off in the receipts now, but there is no progress made.

3794. Was there at any time progress made after the first opening of the lines, and for a few years subsequently was there a gradual increase?—There were different circumstances, for instance, three or four bad harvests, and then one or two very good years; there had been I think better harvests than usual, and a great many troops had been in movement in Ireland. There was a large camp established on the Curragh at that time, and from several causes, which I do not accurately remember, there was certainly more prosperity visible in the state of the Irish lines and more hope—there was a great deal of hope entertained—and in that hope a great number of railways were started, some of which I am conducting myself, and in relation to which the contractors were paid in shares to a considerable extent, in the hope of that success which they expected to follow. That hope has been disappointed, and many works which ought to have been completed in about two years have been for five or six years struggling on very slowly.

3795. (*Mr. Glyn.*) I suppose there has been a very considerable addition to the total amount of capital expended in consequence of so many of the lines being made through the means of contractors?—No doubt, and an immense amount of debt has been thrown upon many of the lines in consequence of the contractors having been paid in shares.

3795. Can you give the Commission any idea of the amount of capital which may have been added to the original capital on account of that; was it as much as 20 per cent.?—Fortunately that plan has not been adopted on any of the great lines of railway to any extent; but a great number of small lines—the short connecting links—have been constructed a good deal by discount in shares to the contractors, and by obligations, and so forth. I dare say there may have been perhaps, although of course I can only guess at it, some two millions of money unnecessarily added to the cost of construction.

3797. Would that be 20 per cent. of the whole capital?—I think so.

3798. I presume you mean money unnecessarily expended?—Yes; I mean money raised under discount.

3799. At high rates of interest?—Yes; money which would have been saved.

3800. (*Sir R. Hill.*) Has there been much competition among the contractors?—Not at all; indeed of late in Ireland it has been found extremely difficult to find contractors to take up works upon any terms when they are paid in shares.

3801. That alone, I presume, would add largely to the cost of the works?—No doubt.

3802. Taking that into account, as well as the discounts allowed for cashing the bonds paid to the

contractors, do you think that the additional cost has not been more than 20 per cent?—I did not state that it was 20 per cent. I made a mere guess in saying that. I thought it probable that at least two millions of money had been wasted in that way unnecessarily; but I will not say that it was not double the amount taking all the lines of railway into account.

3803. And taking also into account the absence of competition?—Yes; considering all the lines which have been made, what may be called second and third class lines, in the last four or five years.

3804. (*Mr. Glyn.*) What rate per mile has it been, taking the average throughout all the lines?—I think that the average upon all the lines in Ireland paid for in cash, including the main lines, would not exceed 16,000*l.* or 17,000*l.* per mile.

3805. That is a low estimate?—Yes.

3806. As to those only where the capital has been raised in a forced manner, what has the price per mile been?—I do not think they have come to more, but they ought to have been made for half the money.

3807. A line of railway has cost 15,000*l.* a mile, when it ought to have been made for 10,000*l.*?—Yes.

3808. (*Sir R. Hill.*) Do you include in that estimate the rolling stock?—No.

3809. (*Chairman.*) Do you know anything about the Cork and Youghal line?—I have been on it.

3810. I mean as to the cost of it?—I know the character of the country, but I do not know what their capital has amounted to. I should have said that it ought to have been cheaply constructed, for much of it is through an easy country.

3811. You cannot state whether the nominal capital of that line is double what the line might have been well constructed for?—I know that it was constructed under financial difficulties, and I have very little doubt that it has cost much more than it would have cost if it had been paid for in cash.

3812. (*Mr. Gover.*) When you say that the traffic in Ireland has been stationary, does that apply equally to goods traffic as to passenger traffic, or not?—I think that in a great many cases the goods traffic, which in Ireland is to a very great extent in cattle, has diminished. My idea as to cattle is, that they have been sent out of the country too fast; they do not remain to be exported. It is entirely an export trade, and I think the great demand for meat in England of late has drawn the cattle out of Ireland faster than the country can supply them.

3813. Has the diminution in the goods traffic been made up by increasing the number of the passengers?—No; I think not.

3814. (*Chairman.*) Has not the diminution in the number of cattle carried been mainly owing to the great pressure put upon the farmers to pay their rents during the last three or four very bad seasons?—No doubt when the corn crops are low, they are obliged to sell their cattle to pay their rent.

3815. Now that the last season or two have been rather better, there is a prospect that the cattle will increase again in numbers?—We hope so.

3816. In the last agricultural return for Ireland, there appears to be a very large increase in the number of young cattle?—Yes, and that seems to show a prospect of an increase.

3817. Independently of any temporary causes occasioning a reduction in the number of cattle, do you think that the railway companies at the present time get all the cattle traffic that they might, if they lowered the fares?—I think not; decidedly not. I think that the railway companies are wrong in not lowering the charges for cattle more than they do. I know that cattle in Ireland walk great distances when they ought to go by railway, and they do so very often when the railway is close beside them. I believe that the railway companies are afraid to make the experiment, and one company does not like to do it without the co-operation of another. A general rate of somewhere about 6*d.* per truck per mile for cattle is kept up, when very often by lowering it they

would take all the cattle which at present go by the roads. Cattle are frequently walked in Ireland for a distance of 20 or 30 miles, which they ought not to do when railways are at hand.

3818. (*Lord Stanley.*) You do not mean I suppose fat cattle?—I do not mean stall fed cattle, but grass fed cattle are walked for great distances.

3819. (*Mr. Horsfall.*) Do you believe it would pay the railway companies if they charged much lower fares?—No. I think it would take some time before they could be paid. An extensive lowering of the fares now would be followed by a temporary loss. I have no doubt there would be a temporary loss, but probably an ultimate gain.

3820. How long in your opinion would it take to recoup the loss?—That is hard to say. I think that the country people in Ireland going short distances never think of using the railways at all; their money is very dear to them and they part with it with great reluctance; their time to them is of very little value, consequently they would rather use their farm horses and carts or walk than use the railway. Unless a very large reduction were made in the fares, and they were taken for a $\frac{1}{2}$ *d.* instead of a 1*d.* per mile they would not use the railway; but in the course of a series of years very low rate would probably induce them to travel. I am quite satisfied that for some years the railway companies would incur a loss, by lowering rates and that they must be strong enough to bear it for some time.

3821. (*Sir R. Hill.*) If their charges were reduced by one half can you give us any idea how long it would be before the same amount of net revenue was obtained as at present?—I do not think that such a change could occur in Ireland as that the people would be stirred up and induced to take to the railways under certainly five or six years.

3822. Do you think that at the end of five or six years the present net revenue would be realised?—I think that is probable, but no one could say that it would be so.

3823. In making that statement do you take into account the greater cost of working the lines?—The comparative cost of working would be less if you only filled the carriages; if you run a carriage empty the cost is all dead loss, if you fill it a proportional rate is of course an improvement for the company.

3824. Can you conceive a state of things that would lead to the carriages being always filled?—I think that the carriages might be filled to the extent of 50 per cent. more than they are at the present time. I do not think that they are half filled as they are now. I do not think that the country people use the railways when going to market. I believe that the people living within 10 miles of a market either walk or drive in their country carts.

3825. You are speaking of third-class passengers?—I am now speaking of third-class passengers; and if you could get them to use the railways they would fill the carriages. I do not think they do at present use them; there are no manufactures in the country, and the business of the country is transacted at the agricultural meetings in the markets, to which the people go to sell beasts, butter, and eggs, and so forth.

3826. (*Mr. Glyn.*) I believe that the dividends on the several lines of railway have rather fallen off?—Yes.

3827. You say that the traffic has been stationary. What do you think that has arisen from? has it been from the cost of maintaining the permanent way and the expenses of repairs falling more heavily upon the companies of late than before?—That is quite a different point. When I talk of the traffic being stationary I mean that the gross receipts are stationary. The reduction of the dividends, in some cases, is owing to increased expenses on the permanent way; but the gross receipts represent the moving business of the country, and that has been stationary. Because I think that that only goes upon railways which is obliged to travel by them, that is, where the distances are so great that it must take to

G. W.
Hemans, Esq.

the railways, and that traffic has not been, in my opinion, stimulated enough by a reduction of fares.

3828. You would say that the dividends have been reduced by there being brought against revenue certain items of charge which had previously been paid out of capital?—I think that much reduction has arisen from that. The Irish railways are just coming to that period of time when their first stock of rails and sleepers is worn out, and the renewal of them becomes a very heavy item.

3829. That is a charge that will go on not simply for one year but it will continue from year to year?—Yes, until all the renewals have taken place.

3830. (*Sir R. Hill.*) In addition to that is there not an actual falling off in the gross receipts, taking into account the increased amount of mileage?—It is not so much an actual falling off, although there is some absolute diminution, as its being stationary while the expenses are increasing. My opinion is that the steamboat traffic across the Irish channel is not in a satisfactory state, and it is a traffic that ought to be encouraged in every way to make the railway companies take the people across. At the present time it is not at all in a satisfactory state.

3831. (*Mr. Glyn.*) With regard to the question of charges, I suppose it would be possible to make a very considerable reduction in some of the fixed charges; for instance, we have been informed that the country is divided into a great many companies all with independent boards, with very large administrations, and with a certain degree of increased expense. Would not the amalgamation of those smaller boards with the larger companies have the effect of reducing the fixed charges?—Yes. There is no question of it that what you have referred to is a great evil; for, except the three or four large companies, the business of the country is in the hands of a great number of small boards, and on some points they act in a very obstructive manner to each other.

3832. In your opinion there might be a permanent reduction in the fixed charges in favour of the proprietors?—Yes.

3833. Have you ever considered how you would parcel out Ireland into districts under a scheme of amalgamation?—No; I have not given that subject such attention as would make my opinion very valuable. I have a strong impression that all those lines that tend to the different eastern ports ought to have their interests identified as much as possible; the business on the western ports is almost nothing, but on the eastern ports everyone aims at becoming the centre of export for the country, and at the present time they compete with each other as much as they can. I think it might be desirable that certain ports in Ireland should be taken to serve as the centres of export for all the lines of railway leading to them, and that those lines should be amalgamated so as to make the charges not obstructive.

3834. The lines of railway running to the eastern ports work at equal rates; they do not compete with each other as to rates, do they?—They compete by continually refusing to book through upon the competing lines.

3835. Take the lines coming to Dublin, they do not refuse to book through on those lines?—No; but they do at Newry. They would book through to Belfast.

3836. Would you suggest an amalgamation of those interests, or how would you propose to get over the difficulty?—Take, for instance, Grenore in Carlingford Bay, below Newry. A great effort is being made there to construct a deep water harbour, and there are two systems of railway converging upon it, the Irish North-western railway running to Enniskillen, Limerick, and Sligo, and the Grenore and Newry railway running to Armagh towards Dungannon and that country. Those two lines of railway are now in a state of hostility and opposition, but they both must run to the pier at Grenore in Carlingford Bay. I think that the amalgamation of such systems as those would be a desirable thing, so that the country

should derive the full benefit of those lines of railway without any obstruction.

3837. Do those two systems compete in rates at the present time?—No; I think that the competition is chiefly carried out by diverting the traffic away.

3838. As regards the public, they compete, in fact, for the through traffic from one point to the other?—Yes, but they do not lower the rates to the public; it is more competition by diversion that exists, which I think operates very injuriously. Also in the south of Ireland, goods that would naturally go—cattle, for instance,—from Waterford to the south of England, are controlled by the arrangements that exist, and are obliged to go to Dublin, and thence by Holyhead. All these things result from the competing interests of the different companies.

3839. Are the two northern lines of railways which you have mentioned paying dividends?—The Newry and Armagh railway has never paid a dividend yet; it has not long been opened.

3840. Does it pay the interest upon its borrowed capital?—Yes, I think it does; the other line does not pay a dividend.

3841. Neither the one nor the other?—No.

3842. (*Mr. Horsfall.*) Not the railway from Armagh to Belfast?—Yes, that pays a good dividend; but I have been speaking of the line called the Irish North-western, which is 125 miles in length, and that pays no dividend.

3843. (*Sir R. Hill.*) Are all the receipts absorbed by the expenses?—Yes; and the payments on borrowed money. The preference shareholders get something.

3844. They do pay the interest upon the loans?—Yes, and something on the preference shares.

3845. They pay interest to the preference shareholders?—They pay them something, but the ordinary shareholder gets nothing.

3846. (*Mr. Horsfall.*) What is the dividend upon the line from Armagh to Belfast?—That company not very long ago paid 6 per cent. I believe their dividend now is either $4\frac{1}{2}$ or 5 per cent.

3847. Has that been consequent upon any reduction of the fares?—No; I think it is from a pure excess of expenditure over the previous working expenses, and the non-improvement of the traffic of the country.

3848. (*Mr. Glyn.*) I suppose they have arrived at that point of time when the repairs and the maintenance of the permanent way are coming against them?—Yes; and they have not laid by any mileage rate, or made any provision for extensive repairs.

3849. (*Sir R. Hill.*) You have expressed an opinion that the union of the railways would lead to considerable savings; will you be so good as to point out what would be the sources of those savings?—I will take the line from Dublin to Belfast, that is only 100 miles; there are three boards, three sets of superintendents, repairing establishments, and engineers, secretaries, managers, &c.; there is a very clear case there of unnecessary superintendence and consequent expense for a very short distance.

3850. And a saving might be effected by reducing the three sets of directors, managers, superintendents, &c., to one?—Exactly.

3851. (*Mr. Glyn.*) Would you apply exactly the same observation to the other small lines of railway?—Yes; wherever separate boards, secretaries, managers, and engineers exist; they rather compete with each other than work together in many cases.

3852. (*Sir R. Hill.*) Would there not be in addition another, and perhaps a more important source of saving, inasmuch as the united companies would be able to employ officers of greater talent than they now do?—I think so, decidedly, for the salaries when split up are small and insignificant, and no sooner is a good man found in Ireland than he gets away directly to England, he is sure to be snapped up in England or the Colonies.

3853. You are of opinion, that if the different lines of railway were amalgamated, to use an ordinary expression, there would be a very large saving effected?

—I have no doubt whatever of it. I believe that great benefit might arise to the public under a system of proper control, but so as not to have any unfair monopoly.

3854. (*Mr. Glyn.*) Do you think that the same system might be carried out in the Midland districts?

—No doubt of it.

3855. And again in the southern districts?—Yes, certainly.

3856. (*Sir R. Hill.*) Would the whole system be too large for one company to manage with such officers as can be now obtained?—I forget exactly what it is, but I believe that the whole of the Irish railway system put together does not amount to much more in extent than the London and North Western system, taking into account all the lines that they have to deal with.

3857. (*Capt. Galton.*) Do you know, from your knowledge of the railway companies in Ireland, whether they are willing or not to be bought up or amalgamated?—I am afraid that it would be very difficult to obtain any unanimous expression from them upon that. I am afraid that many boards would be very unwilling to become defunct and to surrender their managements. There are a great many jealousies existing at the seaports. All the eastern ports are vieing with each other, and endeavouring to set up different systems of management, and I think it is very doubtful whether there would be any general favour shown to such a measure.

3858. (*Mr. Glyn.*) With regard to the holders of stock, I suppose if there was anything like a moderate chance of getting a dividend they would come into it with pleasure?—I think that they would be delighted to see any measure carried out that would ensure to them a modest dividend on the ordinary shares.

3859. (*Sir R. Hill.*) It has been stated in evidence that amalgamations promoted by the directors have been opposed by the shareholders. Can you at all explain that?—I think it is very probable that the influence of the directors was at work among the shareholders.

3860. (*Capt. Galton.*) Would it not be likely to be so again in case of any attempt being made to amalgamate them?—If the shareholders saw a prospect of a very positive and good result to themselves, I think that they would act more independently. It has been where things were a little doubtful and uncertain that the shareholders have supported the *status quo* of the company.

3861. (*Mr. Horsfall.*) What do you think would be the opinion of the public upon that point, I mean the shippers of goods, and cattle, and produce?—I think that all the shippers of goods, and cattle, and so forth, would feel very uneasy unless there was perfect protection afforded against monopoly; but if such an amalgamation were accompanied with a general large reduction of fares, I think it would be very popular.

3862. And if there was a maximum rate fixed?—Yes; a low one.

3863. (*Mr. Glyn.*) In case of an amalgamation, entertaining the views you do with regard to the stationary condition of the traffic in Ireland, how could you propose a very large reduction of fares with the hope of making it answer?—I should not expect that for many years, because I believe that it would be an experiment that must be made at a loss.

3864. Who is to bear the loss in the meantime?—There is great difficulty in answering that question. I do not think that the country would respond at once to any such measure; but I believe that at the end of 10 years, the experiment would have a very beneficial result over the whole country, at the same time I am satisfied that there would be loss in the meantime.

3865. The question is, who is to meet that loss in the meantime. Is it to be borne locally?—I cannot answer that question, I do not think that the country can do it. I know that a barony rate could not be put on for the purpose. In the west of Ireland a

barony rate was put on to enable a line to be constructed from Mullingar to Galway; in that case the barony had a rate put upon them to come in aid of the deficiencies of the railway, and they have had to pay, in consequence of that, altogether a sum of somewhere about 45,000*l.*, which was raised by presentment upon the baronies, and there were very great complaints made, although they got their railway by that means, which they would not have had to this day without it; but many great complaints have been made of it, and I do not think that the country could bear a general rate of that sort.

3866. (*Mr. Horsfall.*) Can you state what the annual rate was that was charged on the baronies in consequence of that railway being made?—It varied I think in very nearly every parish, according to its vicinity to the railway. $3\frac{1}{2}$ per cent. was guaranteed upon half a million, and there was $1\frac{3}{4}$ per cent. raised upon the country for some years; and, as well as I remember, it came to something like 4 per cent. upon the valuation of the district.

3867. (*Sir R. Hill.*) Or the rental?—Upon a valuation of the rental.

3868. It was an additional rate of about 4 per cent. upon the rental?—It was not so much as that, I think.

3869. But taking an average of the whole?—Yes.

3870. It has been stated in evidence that the landowners and agriculturists derive very considerable advantage from the construction of railways?—No doubt they do.

3871. Are you prepared to say whether the advantage derived by those parties from the construction of the railway which you have spoken of from Mullingar to Galway exceeded or fell short of the 4 per cent. additional rate?—Undoubtedly the advantage was infinitely greater than the loss, because the whole amount which they have paid up to this time for a railway which cost half a million of money has been under 45,000*l.*

3872. In how many years?—It opened in 1851, and it has been going on for about 15 years.

3873. You think then that the landowners and others who contributed to this rate have largely benefited by the arrangement?—Undoubtedly; they have benefited very considerably.

3874. Can you explain why they should think the arrangement disadvantageous to them; you stated that they complained of it?—There was a great deal of jealousy existing between them and the railway company. There was a general impression in the county that the line had cost too much, and that the accounts were not fairly treated, and many complaints were made which probably had no foundation, that the line was not worked with so many trains as they wished for, or so economically as it might be, and the levying of this rate made the company very unpopular.

3875. Seeing that the landowners and agriculturists have in your opinion benefited so largely by the construction of railways, might not any temporary loss be borne wholly or in part by those individuals?—I think it is impossible to obtain any unanimity of feeling on the subject. In an abstract point of view, I think there is no doubt that the country would benefit by even paying a rate in aid, if all the railway fares could be reduced one half; but I do not think it would ever be consented to.

3876. Do you think that it would be advantageous to the landowners and others, although there would be practical difficulties in it?—I am certain that if the public in every county of Ireland were assembled together to discuss the question, they would not pass resolutions in favour of it.

3877. Notwithstanding that it would be to their advantage?—Yes. I am certain that the feeling would be that the loss should be borne by the country at large.

3878. Meaning by that Ireland, or the United Kingdom?—The United Kingdom.

3879. (*Lord Stanley.*) Then it would practically be by contributions from England and Wales, the

G. W.
Hemans, Esq.
26th May 1865.

G. W.
Hemans, Esq.
26th May 1865.

taxes in Ireland being comparatively very small?—Yes.

3880. (*Mr. Horsfall.*) You are aware, I presume, that under such an arrangement, 9-10ths of the contribution would be raised by Great Britain?—Very probably.

3881. (*Mr. Glyn.*) I believe the Irish railways pay no tax upon passengers now?—There is no passenger duty.

3882. (*Sir R. Hill.*) It would appear, according to your view, that in the first place great expense might be saved in working the lines by uniting several railways under one general management?—Certainly.

3883. And next, that the temporary loss produced by a large general reduction of the fares and charges would so greatly benefit the landowners and agriculturists, and I suppose also the residents in towns, that if they took an enlightened view of their own interests they would be willing to guarantee the railway companies against that temporary loss?—That is my opinion.

3884. (*Mr. Glyn.*) Still you do not think that you could persuade the gentlemen and merchants in Ireland to agree to any such plan?—I am sure that they would not agree to it.

3885. Have you turned your attention to any other practicable mode by which a guarantee fund could be raised, if any could be?—The object seems to me to be to find some method of trying the experiment of lowering the fares without incurring a public burden, or, in other words, without sustaining a loss; and I have heard it suggested that if the incumbrances upon railways could be supplied by paying them off at more reasonable terms, the companies might be induced to avail themselves of such an offer, upon the condition that they should lower their fares. Many companies are a good deal encumbered with debt, for which they pay very often very high rates of interest.

3886. Have you ever considered the extent to which a saving might be carried, taking into account the large amount of debt that exists in Ireland?—I am afraid that it would not be large enough to cover the loss altogether, but still it might afford a very great relief to the companies if they could obtain money at a low rate of interest; and I have heard it suggested that it might be an inducement to them to accept the condition of reducing their fares so far. But I do not think it would be enough to stimulate the railway traffic over the whole country; much might be done, but I am afraid it would not be enough.

3887. (*Mr. Horsfall.*) Do you think that that would be more effectual than an amalgamation of the different lines?—I think that an amalgamation of the lines, coupled with a reduction of the fares, placing in their hands sufficient power to enable them to try the experiment and to bear the loss, would be a more practicable thing and much more beneficial.

3888. The power of amalgamating is practically in the hands of the railway directors themselves, is it not?—Supposing them to be all reasonably willing to give up their personal advantages, if there are any, in managing the companies, it would be no doubt in their power; but they are too much scattered in Ireland, and they have too many local interests. Gentlemen who live in commercial towns, like Dundalk, Drogheda and Newry, and who are often directors on these separate boards, derive some local importance from that circumstance, and they do not like the idea of giving up what they think the management of their own business to other people.

3889. Have there been in Ireland no amalgamations of railway interests at all?—Several attempts at amalgamation have been made, but they have been defeated.

3890. You are no doubt aware that instances of amalgamations in England are very numerous?—Very extensive indeed.

3891. How do you account for the willingness on the part of the English directors to amalgamate, and

the unwillingness on the part of Irish directors to do the same?—I believe that a great many of the amalgamations in England have been caused by pressure on the part of the commercial companies in many cases, and a strong guarantee being given to the weaker company associating with the larger and stronger one to give them fixed advantages. In Ireland such things have been offered; for instance the Great Southern and Western railway company, which is a most powerful company, were anxious to amalgamate with that system of green lines, the Waterford and Limerick, and they even offered them a dividend, which would have been handsome, a $2\frac{1}{2}$ per cent. guarantee, when they were paying nothing, but the jealousy was so great at Limerick and Waterford that the shareholders, either themselves, or stimulated by the directors, unanimously, or by a great majority, rejected that attempt at amalgamation, but I believe they are very sorry for it now. The Great Southern and Western company have absorbed a few weak branch lines, but nothing more has occurred in that way.

3892. (*Chairman.*) Was that amalgamation rejected in consequence of its being the general opinion at Waterford and Limerick that it would work injuriously to their interests as ports?—I think it was imagined, by the people of Limerick particularly, that everything would be worked up to Dublin, that was their idea; and I believe that that feeling was worked upon in order to induce them to reject the proposal.

3893. (*Mr. Glyn.*) Supposing your notion of dividing Ireland into three systems could be carried out by amalgamating these companies, would it be possible that the working of those systems of railways could be satisfactorily carried on by a few boards, unless there was some superintending power to get rid of all jealousies and conflict of feeling?—I think that at every eastern port they would feel dissatisfied unless there was some means of reference in cases where the traffic appeared to be torn away from them.

3894. Would it not be almost necessary to have some representative on the part of the Government upon each board?—I think it would be very desirable to have some referee.

3895. (*Sir R. Hill.*) Unless that referee exercised an authority superior to that of the board in general, would it be possible to carry the plan into effect?—I do not think that any measure of that kind could be carried out without ample power being given to do justice to every line of traffic.

3896. (*Mr. Horsfall.*) You think that there should be some court of appeal from the decision of the directors where there was a complaint made of unequal rates, or of too high rates?—I think it would be desirable.

3897. (*Capt. Galton.*) I think you stated that the whole system would not be too large to be vested in the hands of one company?—I think there should be one or possibly two. I think that Dublin, as hitherto, should be the centre of the principal railways; there are some interests that perhaps might be better managed by having another centre in the north.

3898. At Belfast, for instance?—Yes; I consider that the interests of Belfast and the trade connected with it are of a different character from those in Dublin. I look upon Belfast more as the trading port for Scotland, and it is likely to be so more and more as the ports below it improve, rather than for England. Therefore that system appears to have rather a different centre. I think that all the ports below will make great efforts to improve, and besides, they are much nearer to Holyhead than the Belfast navigation, which is quite out of the way for Holyhead and the south of England. I think that Dundalk, Newry, and Drogheda, are all working against it, and they ought to be better suited for trade to England. Belfast is the best port for the Scotch trade.

3899. (*Lord Stanley.*) Assuming that an amalgamation of Irish railways is possible, and assuming also that a large reduction of fares would produce a temporary loss, but yet would ultimately produce a

gain, do you see any manner by which that temporary loss could be borne by the railway companies without coming upon the Government for assistance?—I do not, unless it were by a rate in aid levied on the country.

3900. That would be in fact coming to the State for assistance?—Unless it was confined to Ireland.

3901. Even then you would require the direct intervention of the State?—Clearly, it would require a special act of Parliament.

3902. Additional taxation, although confined to Ireland, would require the intervention of the State?—Yes; it must come from additional taxation, and a rate in aid would be required.

3903. (*Mr. Hamilton.*) Have you made any estimate as to what the effect would be of reducing the rates 50 per cent?—No; I have not gone into that.

3904. You cannot give the Commission any opinion upon the subject?—Not just at this moment.

3905. (*Sir R. Hill.*) I suppose there is no doubt that there would be at once a large increase of traffic?—I think it would come gradually, not immediately.

3906. I am not speaking of an increase of traffic sufficient to make up the former receipts; but that there would be at once a large increase of traffic?—I am afraid not. I believe that even that would only come gradually.

3907. (*Mr. Hamilton.*) When you mentioned before 10 years, what did you mean would be effected in that time?—I meant that as the period at the end of which I think it is probable the whole loss would have recouped itself; but I only give you that from general impressions.

3908. (*Mr. Glyn.*) Upon how many branches of traffic do you think a reduction could be made to produce any effect; upon the cattle traffic?—No; but I think that reducing the fares of third-class passengers would, before long, although not immediately, induce the people to use the railways, and go to market as much as they could by railway, instead of walking, for instance, if they could travel for a halfpenny a mile, instead of a penny a mile, I think they would use the railways as a settled thing; but it would take some time before they did it.

3909. (*Mr. Horsfall.*) You have spoken of reducing the third-class fares, would there not be an advantage, and would not the traffic be increased, if the first and second-class fares were also reduced?—I think that if the second-class passengers, by a reduction of the fares, could be induced to travel first-class, it would be so; for the persons who now use the first-class carriages are, I think, all of that class to which a reduction of the fares would not be very material.

3910. But would it not be material to the railway companies?—Of course, if they reduced the fares, and they could get the second-class passengers to travel first-class as the same description of people do in England, it would be.

3911. (*Mr. Hamilton.*) Would it not also be beneficial to induce the people to travel in railway carriages who now walk?—As to the third-class passengers, decidedly.

3912. Do you see any objection to the railway companies reducing their fares to such a point as to induce persons to travel on the railways for distances up to within 20 miles?—I see this objection to it. I believe that a temporary loss would follow any reduction of fares that was worth making. I do not believe that the third-class passengers would use the railways generally unless the fares were reduced one half, and such a reduction would certainly begin with a loss. I believe that the railway companies would be afraid to try it.

3913. It would not increase the working expenditure, would it?—I think it would; they have now a certain number of third-class passengers who travel continually, and pay 1*d.* a mile, from which they derive a fixed income, and then if they were suddenly to reduce that 1*d.* a mile to a $\frac{1}{2}$ *d.* a mile, they would only have half the usual receipts. It is clear that

until you have got an ample number of passengers, sufficient to bring the receipts up again, there must be a corresponding loss.

3914. How?—There would be the loss of the money that they would otherwise have received.

3915. If they provided accommodation in a train for third-class passengers, there would be no increase in the working expenditure?—Not in that sense, but they have been paying a dividend derived from the receipt of fares at a 1*d.* a mile, and if that 1*d.* a mile is suddenly reduced to a $\frac{1}{2}$ *d.*, and no increase in the number of halfpennies received, their dividend must necessarily be reduced, and there must be a loss in that way.

3916. (*Sir R. Hill.*) The effect would be to reduce the gross receipts?—Yes.

3917. (*Chairman.*) Do you contemplate a gradual establishment of manufactories in Ireland as the result of the low charges?—I do, decidedly.

3918. Unless such was the result, do you believe that any great increase of traffic would take place as long as the country remained purely agricultural?—That is a very difficult question to answer. Whether the country has life enough in it to increase the income of the railways without manufactures it is hard to say; but I think that a very great reduction in the fares would have a tendency to bring manufactures into the country, and especially if coal could be carried into it at a cheaper rate. I am also inclined to think that, merely as an agricultural country, it might in the end pay, and possibly without manufactures. There is a large population, and if they all use the railways extensively it would certainly produce a very different state of things as to the receipts of the companies.

3919. (*Mr. Glyn.*) You are aware, I suppose, that in this country the use of railways in agricultural districts at low fares has led to a very large increase in the number of passengers?—Undoubtedly; and in other countries as well. I believe that Ireland is more backward than almost any other country in that respect, and I do not see why it should ultimately be different from any other place.

3920. (*Sir R. Hill.*) Do you not think that there is a slowness in Ireland in taking advantage of any change?—There is a want of money all over the country, and the consequence is that when people have but little of it they walk, and they use their hands and their limbs rather than pay any money at all to travel; it is only by the greatest indulgence with regard to the fares that they can be induced to come at all.

3921. (*Chairman.*) Do you believe that the consumption of coal in Ireland could be considerably increased if the charges were greatly reduced?—I think that the introduction of coal into the centre of the country is becoming more important every year. When I visit the country I observe continually that there is a tendency to discontinue the use of turf and to use coal when they can; and if coal was cheaper, and the trucks, which generally come to the ports with cattle and go back empty, were filled with coal, cheapening coal as much as possible, a great deal could be done. If they had coal depôts at the railway stations all over the country, I think that coal would become a very important article of trade.

3922. Are the cattle trucks adapted for carrying coal?—Yes; there is no reason that I know of against it. They could not shoot the coal out of them, as they do in England, but they could carry the coal very well in them.

3923. (*Mr. Glyn.*) Suppose the railway companies made a very large reduction in the rate charged for cattle, and they carried back coal from Dublin at a halfpenny a ton per mile in the same trucks, do you think that would answer very well?—Yes, I think it would answer in the end; but the difficulty is, that there is no money to begin these things with, and the railway companies are not proper speculators in the coal trade, and unless they could afford to carry it at a very low rate, they could not induce other people

G. W.
Hemans, Esq.
26th May 1865.

G. W.
Hemans, Esq.
26th May 1865.

to speculate in it. If the rates were low enough to induce people to speculate in it, such speculations might arise; but at the present time I think that the rates are not low enough for that sort of thing. But I do not blame the railway companies, for I do not believe that they have margin enough to enable them to make these experiments, and they have not made them; their dividends are too low at the present time to make experiments that would lower them for some years.

3924. (*Mr. Hamilton.*) Do you know the total amount of capital invested in Irish railways?—Not at this moment.

3925. Do you know what the net receipts are on the Irish railways?—I have not got the figures in my head just now.

3926. (*Chairman.*) Have you had any experience of the use of turf for steam engines?—I have had a good deal of experience.

3927. It has been stated that turf can be used more economically than coal for steam-engines?—That, in my opinion, is nonsense. It is not so, as regards locomotives, because I have tried it.

3928. (*Lord Stanley.*) Have not all the attempts to compress turf into a very small compass failed?—Yes, commercially speaking. They have produced very nice articles, but they have failed commercially.

3929. They were not found to pay?—No. In using turf I have found that it required three times the bulk of the best turf to be equal to the same quantity of coke or coal. Good turf in Ireland is not cheap, it is a very dear article. By the time it is dug, dried, and kept, and carried to market, it is not at all a cheap article.

3930. (*Capt. Galton.*) It is not burned on the railways for any locomotive?—No, except to light the fires; but not as a rule on any of the railways.

3931. (*Chairman.*) It has been stated that an engine of 12-horse power can be worked with two cribs of turf a day at a cost of 2s. 6d.?—It is quite possible if you get an engine established somewhere near a peat bog to drive it with turf at a very low rate.

3932. The neighbourhood of Castlebar was referred to?—I look at it in a broader sense. I have tried it, and if you were to require, in Dublin, for instance, a store of really good turf, such as you could depend upon to work the locomotives, it would be dearer than coal to use it. In some places near to a bog, no doubt, turf might be used cheaply enough.

3933. (*Mr. Gower.*) You have stated that, in your opinion, if the fares were reduced, manufactures would be established in Ireland. What manufactures should you expect to be established?—I see no reason why more flax mills should not be established in Ireland. Many of them that are there are doing very well. I see no reason why cloth or woollen manufactures should not be established in Ireland, as it is a country for wool.

3934. Is it the case that in England any manufactures have been established at any distance from where the fuel is produced?—I think not generally, but there is a great deal of water power, not sufficient, perhaps, for all the manufactures; that would come in aid of the manufactures in Ireland.

3935. Then the manufactures which you think would be established in Ireland would be worked by water power?—Not altogether so; but I think it would come in aid of the steam power. Everywhere in Ireland there is a great deal of water power running to waste.

3936. (*Lord Stanley.*) Has it not been tested by actual experiment that under the most favourable circumstances water cannot compete with steam power?—Yes, in England where coal is cheap; but if there is a very large water power, such as exists on many of the Irish rivers, with auxiliary steam it ought to compete.

3937. (*Sir R. Hill.*) Would not water power come into competition, so to speak, with the power obtained from cheap coal in England, that is to say,

that the manufacturers in Ireland would have to compete with similar manufacturers in England?—Yes; and if their chief power was water they ought to be able to compete satisfactorily.

3938. It has been stated that a train upon the Irish railways could convey nearly 1,000 tons of coal. Is that in accordance with your opinion?—A single train?

3939. Yes?—I should say decidedly not; it is much too large a quantity.

3940. The gradients on the Irish railways are not superior to those on the English railways, as a whole, are they?—I think that the gradients on the main lines, as a rule, are quite equal, perhaps a little superior, to many of the leading lines in England. One in 100 is perhaps the worst gradient on that whole system of blue lines. There is a portion of 1 in 80; they are not quite first-class gradients—not so good as those upon the Great Western, or the London and North-western lines.

3941. What would be the maximum load of a train upon the Irish lines generally?—That depends entirely upon the number of engines that you choose to work.

3942. Suppose you had a single engine?—If you take a single engine of the most powerful character, looking at that system of blue lines on the map, and supposing the trains to be worked from one end to the other, I do not think you could safely reckon on more than 35 waggons perhaps at the outside, and in each waggon you might take perhaps six tons of coal, that would be 210 tons, the net load.

3943. That you would consider the maximum?—Yes.

3944. (*Mr. Hamilton.*) The worst gradient on that system of blue lines being what?—1 in 80.

3945. (*Mr. Glyn.*) Generally speaking the gradients are a great deal better; are they not?—Generally speaking the gradients are better.

3946. How many miles are there of 1 in 80?—There is not more than a mile and a half in any part. I think you may assume that the working gradient of the Irish lines upon the average is 1 in 100; that is the gradient that limits the load.

3947. (*Sir R. Hill.*) Then the gradients must be inferior to those on the English main lines?—A great many of those in England are 1 in 70. The Caledonian is 1 in 70 for 10 miles consecutively. When I say that the gradient is 1 in 100 in Ireland, I mean the worst gradient, the one that limits the load, that is what engineers mean by the ruling gradient. A great number of the gradients may be level, and yet the worst gradient would be the ruling gradient, because it limits the load.

3948. (*Chairman.*) If there is a gradient only for a short distance, is it not usual to divide the goods trains?—Yes; if there is only one that is short, of course you may divide.

3949. Are there any other points to which you would like to call the attention of the Commissioners?—I was speaking about steam navigation, and I think that any measures that would encourage the putting on of powerful steamers by the railway companies in connection with the Irish ports would be most beneficial.

3950. To whom should you look to encourage the establishment of new steamers?—I think that all the great railway companies that trade to Ireland would be glad if they had the requisite power to put them on.

3951. (*Capt. Galton.*) What impediments are there in their way now?—They have no power to expend capital in that way, the London and North-western company is the only company who can do it.

3952. (*Mr. Hamilton.*) Would any other company, do you think, like to have the power to do so?—Yes. I am certain that the Great Western Railway company would be glad to put on better steamers than there are now.

3953. (*Mr. Glyn.*) Has power been granted by Parliament when it has been applied for?—I believe

that even the London and North-western Company had considerable difficulty in obtaining those powers.

3954. But eventually Parliament granted their application?—Yes.

3955. (*Chairman.*) I believe the steamboats between Fleetwood and Belfast, and between Morecambe and Belfast belong to railway companies in one way or another?—I believe that they participate in the property of them; but they are not of that class, nor are they so efficiently or so well managed as they might be if the companies were empowered to put on fleets of steamers. The London and North-western Company do it most effectually and beneficially to Ireland, and I think it would be most desirable if it could be more extensively done.

3956. (*Mr. Hamilton.*) I suppose you think that as between Waterford and Milford, if the Great Western Company had power to put on steamers, the service would be better?—Yes; for I consider that the service there is wretched now.

3957. Has the Great Western Company ever applied to Parliament for powers?—I am not sure that they have, but there is a general impression that it is very difficult to get such powers. I know that I gave evidence in favour of those powers being granted to the London and North-western Company, but I also know that the Bill was passed with considerable difficulty.

3958. Is it not the case that in the absence of special powers granted by Parliament, a railway company cannot embark their capital in such an undertaking?—Yes, they know that the shareholders may stop them.

3959. (*Mr. Horsfall.*) Would the adoption of that principle be fair, in your opinion, to independent steamship companies?—I am looking at it as a thing that would be beneficial to the railway interest. In the other point of view it would introduce a new element of competition. I should not object to it.

3960. Would it not rather do away with competition?—I think it would induce competition.

3961. In what way do you think any private steamboat company could compete with a railway company which could carry its railway down to the steamers?—The private company must either improve its accommodation or succumb.

3962. Even with the greatest improvements they could make, do you think it would be possible for any private company to compete with a railway company whose terminus was upon the pier where the steamers started from?—I think that such a company as the Waterford company, who have an enormous fleet of steamers, could hold their own against any railway company's boats. There happens to be no other steamboat company in Ireland of individuals. The City of Dublin company is another large company that I think would be able to hold its own against any railway.

3963. (*Mr. Hamilton.*) You say that the Waterford Company have already got a large fleet of steamers?—Yes.

3964. To what ports in England do they ply from Waterford?—Latterly, it is understood that they have made arrangements to go entirely to Holyhead and Liverpool.

3965. Do they not ply to the southern ports in Wales?—No. I think they go to Holyhead, and they send boats to Bristol, but none, I think, to Milford.

3966. (*Capt. Galton.*) Are there no boats to Milford?—Yes.

3967. (*Mr. Hamilton.*) Do you know who is the nominal owner of those boats?—I forget now who it is in whose name they run.

3968. If there is already a good sea service between Waterford and Bristol, what advantage would Ireland gain by authorizing such a company as the Great Western Company to embark their capital in steamboats?—I am assuming what is the case, that it is not a good service, that it is not sufficient.

3969. What benefit would Ireland derive from the establishment of an efficient service of the same kind

as now exists between Holyhead and Dublin?—I think it would have the effect of stimulating the export trade all over the country.

3970. (*Capt. Galton.*) You would make steamboats between the English and Irish ports, as it were a portion of the English railway?—Yes, or a combination between the English railway and the Irish railway, so as to work together.

3971. Would it be advantageous for the Irish railways to be leased in any form to English railway companies?—I think that in some cases it might be advantageous to them. I think that as much as possible Irish goods ought to be capable of being booked through in every direction to England, and that means of communication should exist for the same goods from one end to the other, from Galway to London, as an illustration.

3972. You would put the Midland Great Western Company into the hands of the London and North-western Company?—Not exclusively. The tendency of my evidence is, that as many English companies as would be disposed ought to be able to put on fleets of steamers in connexion with the Irish railways, so as not to give an exclusive monopoly to any one line.

3973. (*Chairman.*) Are there instances in which you think it would be profitable for a railway company to establish a line of steamers where it would not pay a private company?—I have no doubt that if they could establish through booking and regular daily services, it would be.

3974. (*Mr. Hamilton.*) Is there any difficulty in the way of through booking, as between Waterford and Wales, now?—I am not aware that there is.

3975. (*Mr. Horsfall.*) Can you mention any place where it would be advantageous to establish steamers in connexion with a railway company, where they do not now exist?—They do exist, but they are not carried out in a broad way. The service between Waterford and Milford is very poor, it is carried on with indifferent boats, it takes a very long time, and it is not a good service. Then the service between Dundalk and Drogheda, and Newry and those ports, is at present all a tidal service, and not at fixed hours, and arrangements such as would enable them to start at fixed hours every day and book through, would be most important to the Irish trade.

3976. (*Mr. Glyn.*) At Dundalk, I believe, the present unsatisfactory state of things is about to be remedied?—A company is about to carry a line to Grenore. The water will be deep enough to enable the boats to start at fixed hours; but all these things require capital and combination between the railway and steamboat companies.

3977. (*Mr. Hamilton.*) You have no doubt that it would be beneficial to that part of Ireland if there was a good and efficient service between Waterford and Milford?—No doubt at all.

3978. (*Mr. Glyn.*) Has not Parliament already granted powers for a railway company to run steamboats to Carlingford Bay?—The London and North-western Company obtained powers to extend their steamers to Carlingford Bay; but I believe that that is the only company who have obtained such powers.

3979. (*Sir R. Hill.*) Are there not very good steamers in the north, running between Glasgow and Belfast?—Yes, there is a fixed service there; but that is the only port at which there is a fixed service. All the remainder are tidal services.

3980. (*Mr. DalGLISH.*) And again from Ardrossan to Belfast?—Yes; they have lately at great expense made such improvements at Belfast that they are able to start boats at any fixed hour; but all the other ports are only tidal ports.

3981. (*Mr. Hamilton.*) Does the want of an efficient service between Waterford and Milford add to the cost of the traffic between the South of Ireland and London, particularly in cattle and meat traffic?—Yes; no doubt it adds to the cost, because it increases the time, and besides that it diminishes the traffic; the traffic flows in other ways.

G. W.
Hemans, Esq.

26th May 1865

G. W.
Hemans, Esq.
26th May 1865.

3982. (*Chairman.*) You would recommend general powers to be granted to railway companies to establish steamboats wherever they thought proper?—Yes; the object in Ireland being to stimulate the business of the Irish railways, every facility should be afforded for the export trade, which would tend in that direction.

3983. (*Mr. Horsfall.*) Do you think it would be fair to independent steamboat companies already established to grant a monopoly to railway companies to run steamers?—If there was only one railway to each port, and that railway were tied to a particular fleet of steamers to convey their goods, any other fleet would, of course, suffer, and it would then be restricted to the goods from the immediate neighbourhood of the port which did not come by the railway.

3984. It would be natural, would it not, for the railway company to book their passengers and goods through from a distance?—They would undoubtedly agree to do so; but I look upon that as very secondary to the interests of the country at large. If the traffic of the country at large is to be stimulated by these means, I think that the interests of a private steamboat company are very secondary.

3985. (*Mr. Hamilton.*) In the case under consideration between Waterford and Milford there is a steamboat service?—There is a communication. I forget in whose hands it is; but it is not a good one; it is an inefficient communication.

3986. The service is limited to three boats, is it not?—Yes, three poor boats; and I have found them to be perfectly inadequate, most inconvenient, and giving wretched accommodation.

3987. Would you allow the Irish railway companies to put on steamboats?—Yes, if they were prepared to do so.

3988. To run them to America?—Yes, if they had the means to undertake it. I believe that in future intercourse with America, direct from Ireland, will be a very important element in the prosperity of the railways.

3989. (*Mr. Dalglish.*) You say that the steamers between Waterford and Milford are very insufficient; must not that be injurious to the trade of the railway which runs to Milford?—Yes, no doubt of it.

3990. Then there would appear to be no objection, as far as the railway is concerned, to preventing the monopoly which exists in the hands of the steamboat proprietors, and to insist upon their running proper boats on the station, and you would give the railway companies power to put on better boats?—Certainly.

3991. (*Mr. Horsfall.*) But it does not follow that they would do so?—There is every expectation, I think, that they would.

3992. (*Mr. Dalglish.*) You would not give a monopoly to the steamboat proprietors to keep bad boats upon a station?—Certainly not.

3993. (*Chairman.*) Have not the railway companies, wherever they have thought it their interest to establish steamboat communication, taken means to do so indirectly, if they had not the power to do it directly?—I think that various difficulties have prevented them from doing it efficiently; for example, when they know that the shareholders can say, "You are doing an illegal thing," the directors cannot safely venture upon any large speculation of that sort, and if it is done, it is done poorly and feebly.

3994. (*Mr. Glyn.*) I suppose that in the case of Carlingford Bay, unless power had been granted to the London and North-western Company in conjunction with the Irish company, the thing would not have been done at all?—No, I doubt whether it would; in fact it is not done yet. It is to be done as soon as the pier is ready.

3995. (*Capt. Galton.*) The Midland Company have

a service of boats from Morecambe to Belfast?—I believe they are interested in that. It is not done in their own name.

3996. They have not power by Act of Parliament to run the boats?—I am not aware of it. It may be so, but what I have stated was more to show that, in my opinion, the stimulation of that cross-channel traffic is very important indeed for the Irish railways generally.

3997. (*Mr. Glyn.*) You would establish a system of booking through?—Certainly; from every port in Ireland to every port in England, if possible.

3998. (*Chairman.*) Is there any through booking, except through Dublin, at the present time?—I am not sure. There may be some through booking in the north, and I have no doubt there is.

3999. Not by Waterford?—Yes, I believe there is through booking by Waterford, but the service is not good enough to make it popular.

4000. There is a very short practicable passage in the south of Ireland from Wexford or Carnsore to Fishguard?—There might be, if a proper harbour was made, a short passage across there.

4001. Has not a railway been started to Carnsore?—It is not, I believe, made, and indeed I know nothing about its present state, whether they have got to work or whether a contractor has been found to undertake it; it must be a work of some years.

4002. (*Mr. Hamilton.*) Have you calculated the difference in point of time, supposing there was a good sea service between Waterford and Milford, comparing a journey from London to the south of Ireland with the route round by Holyhead and Dublin?—The distances from Waterford to London by Milford and from Dublin to London by Holyhead, are, within a few miles, the same; going round by Dublin would be just the distance from Dublin to Waterford, and the disadvantage would be by that distance. I think that the distance is about 100 miles.

4003. If the sea service was good between Waterford and Milford, would there not be a large passenger traffic by that route?—I have no doubt of it.

4004. (*Chairman.*) The steamboat passage must be, at all events, four or five hours longer from Waterford than going by Holyhead?—No, I think it need not be four or five hours longer; at the present time it is so; it is about nine hours now.

4005. The distance does not make that difference in time necessary?—Not so much as that; the other is from four and a half hours to five, and this is nine; if the time was reduced to seven the difference would be much less.

4006. (*Mr. Hamilton.*) Do you know what the difference is in the sea routes?—At present it is represented by nine hours against four and a half.

4007. (*Chairman.*) The fast boats running between Kingstown and Holyhead are only adapted for passenger traffic, are they?—There is no physical reason why they should not take goods; but it would not suit their arrangements to carry goods.

4008. (*Mr. Hamilton.*) Is not that a subsidized service?—Yes.

4009. Therefore there is no prospect of getting boats of the same calibre between Waterford and Milford?—One would hardly expect them to be able to get boats of equal power and speed to those running between Kingstown and Holyhead without assistance, but very much better boats than there are now between Waterford and Milford might be put on.

4010. (*Chairman.*) Is there any other point to which you would like to call the attention of the Commissioners?—No.

4010*. I believe we have to thank you for the cartoon map of the Irish railways, which has been very useful to the Commission?—It is quite at your service.

The witness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 30th May 1865.

PRESENT :

THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
 THE HON. E. F. LEVESON GOWER, M.P.
 THE RIGHT HON. ROBERT LOWE, M.P.
 SIR ROWLAND HILL, K.C.B., F.R.S.
 T. B. HORSFALL, Esq., M.P.
 ROBERT DALGLISH, Esq., M.P.

GEO. CARR GLYN, Esq., M.P.
 A. T. AYRTON, Esq., M.P.
 CAPT. DOUGLAS GALTON, R.E., F.R.S.
 E. T. HAMILTON, Esq.
 J. R. MCLEAN, Esq., Pres. Inst. C.E.
 WILLIAM POLE, Esq., F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

JOHN ENNIS, Esq., M.P., examined.

J. Ennis, Esq.

30th May 1865.

4011. (*Chairman*.) You are Chairman of the Midland Great Western railway of Ireland?—Yes.

4012. Have you been connected with that railway for many years?—I have been connected with it for 20 years, and I was the originator of it.

4013. Have you paid much attention to the affairs of the company since its establishment?—Yes, invariably, excepting for two or three years, when I was abroad.

4014. Has the question of the fares and charges on the Midland railway often been the subject of discussion at your board?—It has been so.

4015. Have you ever considered the policy of trying a lower scale of fares and charges than those which are now made?—That question has constantly been submitted to me by our late manager, Mr. Forbes, who suggested to us that it would be a wise thing to reduce our third-class fares; but I must say at the same time that for many years during his management of the Midland system he was very much opposed to anything like a reduction. He agreed with me in the view that traffic in Ireland is a limited quantity, and do as you might in the way of reduction, you would not be able to arrive at anything like a compensating receipt in money.

4016. Have any experiments of the kind upon any occasion been tried on the Great Midland railway?—Not as experiments, but our fares are particularly low; for instance, with regard to harvest labourers, of whom we carried 70,000 last year backwards and forwards to Dublin on their way to England, we have carried them for about a halfpenny a mile, and having done that we thought we had gone as far in the way of reduction as it was possible or profitable to go. I have always felt that there are two views to be taken of this question. If a board of management is prepared to make a great sacrifice for three, or four, or five years, it is possible, that they will arrive at a more satisfactory result than is now obtained; but the shareholders will not consent to go without their dividends during that time for a problematical advantage.

4017. Is it your opinion, that in the course of four or five years, if a large reduction of fares was tried, in all probability the railway receipts would recover themselves?—It is.

4018. Has the system of carrying the harvest labourers at the low fares which you have mentioned been tried for many years?—It has been tried for several years, and notwithstanding the very low rate which is charged, and which I am sure every member of the Commission will acknowledge to be a very low one, we do not carry anything like the number that are passing and repassing. I have often seen men walking past my demesne gates in clusters of 20 or 30. It used to be their practice to hire one of the cars of the country, and take it for 8 or 10 miles, 20* men being carried on the car, their places being taken in turn by 20* others. The party consisting, perhaps, of 40 who would probably share in turns the rest that would thus be afforded them.

4019. (*Capt. Galton*.) What would they have to pay for the car?—1s.†

4020. Only 1s. for so large a number for a distance

of 10 miles?—The charge is for the car, and they use that according to their own state of weariness; they would, as they call it in Ireland, ride in tye.

4021. (*Mr. Glyn*.) And the distance would be 10 miles?—Ten Irish miles. I think the owner would lead his horse.

4022. (*Capt. Galton*.) You mean 1s. for the car, and not 1s. per head?—No; probably it would be 2s.* for the venture.

4023. To take them 10 Irish miles?—Yes, I have known that done.

4024. At the present time do you believe it is possible to get a car so cheaply as that?—No, I do not speak of the present time; but I speak from my own observation of people whom I have seen passing my gate. I live in a lonesome part of the country; very few people live there, and I do not see the same state of things that I used to see. Notwithstanding the halfpenny fare that we charge—for instance, 5s. from Dublin to Galway, a distance of 126 miles—our manager tells me that we are not getting all that class of agricultural labourers to go by the railway.

4025. It would not be worth your while to charge such low fares as are charged on some of the lines for excursion trains in England, when people are carried for the same distance for half-a-crown?—No; I think not.

4026. (*Lord Stanley*.) The success of the excursion traffic depends, does it not, upon the density of the population?—Clearly so.

4027. (*Mr. Horsfall*.) Are you aware that low fares have been tried as an experiment on the Londonderry and Coleraine line?—No, I am not; I thought that our fares in Ireland were pretty nearly uniform; and, indeed, with regard not only to passenger fares, but to the carriage of goods, I think we generally agree at our clearing house upon a certain rate, and I think we adhere to that, except under special circumstances, as closely as we can.

4028. (*Mr. Glyn*.) That railway fell into the hands of the Exchequer Loan Commissioners; they have leased it, and probably that was the cause?—Yes; where a railway is subsidized, as in the case of the Belgian and Dutch Rhenish railways, low fares can be introduced and be persevered in, because the shareholders do not suffer by the system.

4029. (*Chairman*.) What are your third-class passenger fares at other times of the year, when the harvest men are not travelling?—I have been speaking of exceptional fares, the harvest men's fares; but I wish to speak of them in connection with the state of the country, which I think ought not to be lost sight of. The fare for a third-class passenger is a halfpenny and one-tenth per mile.

4030. (*Capt. Galton*.) Is not that in excess of the charge authorized by Act of Parliament?—I think not.

4031. Is it not a halfpenny a mile by the Act of Parliament?—I think not. I think that we could not very well charge more than the Act of Parliament authorizes. We run a Parliamentary train, which probably meets the requirements of the Act. The Parliamentary train is a penny, and that is the maximum.

4032. How many Parliamentary trains in a day do you run; one each way?—Yes; I think so.

4033. With respect to the harvest-men traffic, do you carry them in the ordinary trains?—Yes.

* These numbers were afterwards altered by the witness to "10."

† This sum was afterwards altered by the witness to "3s. or 4s."

* This sum was afterwards altered by the witness to "4s."

J. Ennis, Esq.

30th May 1865.

4034. It does not occasion you any extra expense to carry them beyond running a carriage?—When a very large number of these men arrive by boat in the morning at Dublin, they are not the most orderly people in the world, and they are very anxious to get home to their several residences, and in that case we frequently send them on special, if there are 500, or 600, or 700 of them. They would so interfere with the action of our ordinary trains, that we do in those cases send them on special.

4035. If you sent 500 or 600 of them, would it not be very remunerative to you to carry them for half-price, at which rate you would be charging 5s. as between Galway and Dublin?—Yes. If we had every day 500 of these men on their way to Dublin proceeding to England, or if we carried 70,000 both ways, which would be 35,000 each way, and we had 35,000 to carry every week or every day, it would make a very serious difference.

4036. (*Chairman.*) Are the third-class passengers at all times of the year very limited in number?—No. Our third-class passengers for the half year ending December 1864, were 161,953; the largest number of our first-class passengers, was 65,600; of second-class passengers, 140,300; by the Parliamentary train, 136,000; while the harvest men were about 60,000.

4037. (*Mr. Glyn.*) Does that show a decrease by comparison with the preceding years?—I cannot state, for I have not the figures here.

4038. Do you think it does show a decrease?—No. I have had occasion to remark of late years that our third-class passengers have been steadily increasing.

4039. To what circumstance do you attribute that?—That I think is to be attributed, to some extent at least, to the emigration that is going on, and which has been going on in Ireland, for the last three or four years.

4040. (*Mr. Horsfall.*) Has the cattle traffic increased?—No. It is at a stand still. The falling off in the last half year, as compared with the previous one may be, I think fairly imputed to the scarcity of cattle in the country, I think very fairly.

4041. You do not think that any reduction of fares would increase the traffic?—No, I do not. Take for an example the great fair at Ballinasloe, which attracts so much public attention, I believe that our rates and fares are considered so reasonable there, that everybody is pressing us to take away their cattle in priority; but really our rolling stock is not sufficient for the operation, and I do not think as a general principle, that our rates charged for cattle, ought to be complained of. We have lately made a small reduction which may tell. Among those who send cattle to the Dublin market extensively are some who have probably what are called resting farms between Dublin and their residences. I reside 66 miles from Dublin, and I have farms where I rest my cattle. I sometimes send them by rail, and sometimes drive them.

4042. (*Capt. Galton.*) If the rates were lower, would it not be worth your while to send them by railway?—No; my steward tells me that it is better they should rest on the road.

4043. (*Mr. Glyn.*) Do you speak of fat cattle?—Yes.

4044. (*Capt. Galton.*) In England the cattle are generally sent by railway; the farmers seem to prefer it?—Yes; they go from the farmer to the market, but if the farmer had places on the road where he could rest the cattle, I doubt whether he would find it to his interest to send them by railway.

4045. (*Mr. Glyn.*) How many miles a day do you drive your cattle?—From my farmyard, to the Dublin market, it would take five days; that is for a distance of about 66 miles. But when I send this way, my cattle go a little out of their way for accommodation sake.

4046. (*Mr. Horsfall.*) Seeing that these intermediate farms can be kept up only at a certain expense, might not a reduction of the fares induce

you to send the cattle by railway?—Not if the question means to suggest that I should relinquish my farms and let them to other people.

4047. I presume you do not keep farms for the purpose of resting the cattle?—Not for that specific purpose, but I am enabled to make use of them for that purpose.

4048. (*Mr. Glyn.*) But that practice could apply only to very few persons?—Very few.

4049. Do the fat cattle generally go by railway?—Yes; almost invariably.

4050. You would not say the same thing as to the store cattle?—No.

4051. Would not a reduction in the rates charged bring them on to the railway?—Yes; the natural result of low rates would, of course, be to superinduce trade. But would it pay? that is the question.

4052. That must depend upon the quantity. We have been informed that a large number of store cattle do travel by the roads that might be brought on to the railways if lower rates were charged?—I think there would be some addition, but I do not at the same time think that the addition would outweigh the disadvantages of a very serious reduction in the fares.

4053. (*Capt. Galton.*) How far is the nearest of your farms from Dublin?—18 miles.

4054. Are your fat cattle driven 18 miles into the Dublin market and then sold?—No; they are driven only for a distance of about seven miles to my Dublin agent's place.

4055. They remain there for a day or two, I suppose to rest?—They remain a night.

4056. (*Mr. Horsfall.*) Do you not find the fat cattle decrease in value by being driven that distance?—No. Many experienced graziers say that they are the better for being walked a little into the market rather than when they are turned out of a railway truck, in which they generally get bruised, and sustain all sorts of injuries. Nothing is more common than to see in the Dublin markets, cattle bruised when exposed for sale, after being brought in by railway.

4057. (*Lord Stanley.*) Do you say that the injuries which they sustain in a railway truck are comparable to the wear and tear consequent upon their being driven along the road?—No, I do not go that length.

4058. (*Chairman.*) At what time of the year do you send your fat cattle to market?—In the winter time.

4059. They could not, I suppose, be driven the same distance in the summer time?—No.

4060. (*Mr. Hamilton.*) Are there facilities all along the line for putting the cattle into trucks at every station?—Yes, at every station. We receive and deliver cattle at every station, with the exception of one or two.

4061. (*Chairman.*) Do you carry much store cattle by the rail?—A great quantity.

4062. But a large quantity also travels in the same direction by road?—Unquestionably.

4063. (*Capt. Galton.*) Is not the quantity of store cattle that you carry regulated by the number of trucks that you possess?—Yes, at Ballinasloe fair, where a larger number of store cattle present themselves. At any other fair, and there are many of them in Ireland, our appliances are very ample for the purpose. But I am very willing to admit that we do not get all the cattle to carry that are sold in those fairs; at least, that is what our manager informs us, and that is what I heard also from gentlemen who are in the habit of attending those places.

4064. (*Mr. Horsfall.*) Can you state what proportion of the cattle does travel by railway compared with those that travel by road?—I could not venture to give even an approximation to that.

4065. (*Chairman.*) Have you formed any opinion as to what proportion of the whole cattle in the country should travel in a year, either as fat cattle to market, or to be removed from one farm to another?—No.

4066. (*Mr. Hamilton.*) I thought you stated that the traffic was a limited quantity, and that there was

no prospect of increasing it by reducing the fares?—Quite so; I did say that the traffic, in my opinion, was a limited quantity, but I said so more with reference to any prospect of any large money increase by reason of very largely reduced fares. I think the traffic is a limited quantity; at the same time I am quite willing to admit that of that limited quantity we, on the Midland system, do not carry all that is to be carried.

4067. (*Lord Stanley.*) You would, I presume, expect to carry more if a reduction were made, but not so much as to compensate you for the pecuniary loss you would sustain?—Yes.

4068. (*Mr. Glyn.*) You would have to increase your plant in that case, and you think, upon the whole, that it would not pay you better than at the present time?—I think that we should make very great exertions to do the service of the country, as far as possible, but there are some people, who, if you offered them to carry their cattle at a minimum price would prefer to drive them along the road; men to whom time is of no moment. And the same remark may be made as to passengers; I have sometimes thought that if we were to carry a man from Galway to Dublin for nothing, what would he be doing in Dublin? He has no occasion to go there, no pleasure to seek, no business to transact, and, without seeking to jest, we should be almost obliged to give him his breakfast and dinner into the bargain.

4069. (*Mr. Hamilton.*) I do not understand from your evidence that your railway appliances are deficient, except at particular points of your system, and on particular occasions?—I have mentioned Ballinasloe as the only point where anything like a deficiency is felt; but it must be remembered, that that is an enormous fair, and it would require appliances on the largest possible scale to meet the demand.

4070. You could not carry a great deal more than you do?—Yes we could; our receipts vary from 7,000*l.* to 8,000*l.* at that fair in October.

4071. (*Chairman.*) Do you ever borrow rolling stock from other railway companies?—Yes.

4072. (*Mr. Ayrton.*) Has the number of labourers which you have carried at a halfpenny a mile increased in the last few years?—The harvest labourers have increased in numbers. These poor people from the west find their way to some market for their labour; they can hardly get a shilling in Ireland, and naturally they will go to places where they may get many shillings.

4073. Can you state how many you carried about 10 years ago, as compared with the number which you carry now?—I am afraid I cannot accurately do so; I have three half-yearly returns before me, and there is a very insensible difference, at least dealing with such large figures. I find that up to December 1863, we carried 85,200 harvest labourers; up to June 1864 we carried 83,000; and up to December 1864 we carried 88,000, so that the numbers are not very different.

4074. (*Chairman.*) Do the harvest labourers put off their return homewards to as late as December?—Yes, they put it off as long as there is any chance of money to be got in England.

4075. (*Sir R. Hill.*) Were the numbers you have given carried in the particular months you have mentioned?—No; in the half years.

4076. (*Capt. Galton.*) How do you accommodate these harvest men; do you carry them in the ordinary third-class carriages?—Yes.

4077. How many will an ordinary third-class carriage accommodate?—I should think 40 or 45.

4078. Then I suppose you simply add to any Parliamentary train two or three additional carriages?—No, we do not like doing that, because there is great detention caused by it. These men get out at the various stations; they will do it, and there is more or less noise and detention, and therefore we do not like carrying them, and never do, with a fast train.

4079. Why not?—For the reason I have just given you, that they will get out of the train, and then it is

very difficult to get them in again, and therefore the train is detained; but on some occasions, and they are not very few, we send them by a special train.

4080. If you got as much as 4*s.* a mile, I suppose it would pay you?—Yes.

4081. If you carried 170 of those men at a farthing a mile, it would be a paying rate, would it not?—That would be 2*s.* 6*d.* for 120 miles, and I doubt whether it would be a paying rate. At the same time I think it is only fair to say that it has been recommended to us, that we should carry people at that rate.

4082. (*Mr. Ayrton.*) Did you not formerly carry them cheaper than you do now?—No; at the recommendation of our manager, Mr. Forbes, we in the year 1860, advanced our passenger fares 10 per cent.

4083. (*Capt. Galton.*) On all classes of passengers?—Yes; and I think I have Mr. Forbes's note. He stated in a note, dated 17th July 1860, "I beg to suggest for the consideration of the directors, whether it is not desirable at once to revise our scale of passenger fares. The accommodation given on this line is at least equal to that afforded by the Great Southern and Western Railway company, whose fares are 10 per cent. higher than ours." On the receipt of that letter in July 1860, we raised our fares; the fares of the first and second-class passengers were to be raised 10 per cent. higher than the then present rates, and a full penny a mile, was to be charged for passengers going by Parliamentary trains.

4084. (*Mr. Glyn.*) What was the effect of that alteration?—The effect was to increase considerably our receipts.

4085. Was there any great diminution in the number of the passengers?—I am afraid that I have not any data of so anterior a date as July 1860 to enable me to answer that question.

4086. (*Mr. Ayrton.*) Have you received applications from any other class of working people to have the advantage of the harvest labourers train extended to them, or that they might have the benefit of the same rate?—No. We issued return tickets from market town to market town at very reasonable rates indeed. If the question refers to that fact I can say that applications were made to us from time to time and we met those applications by giving return tickets from town to town at a reduced rate.

4087. (*Chairman.*) Did any considerable number of passengers avail themselves of those return tickets on market days?—Yes.

4088. Which are the principal market towns on your line?—Mullingar, Boyle, Longford, Carrick, and Athlone.

4089. How do you distinguish the harvest passengers from the other passengers? At the time you are conveying the harvest passengers do not other labourers or other persons present themselves desiring to be carried at the same low rate?—We treat any persons who will travel by those fourth-class trains that we start in the same way; if a man in a blue coat chooses to come we will carry him.

4090. Do you also carry women and children by those trains?—No.

4091. Not if they present themselves asking to be carried at those low fares?—If they did come and ask us I do not think we could or should refuse them, but in fact and in practice they never do.

4092. (*Mr. Horsfall.*) I suppose they are all through passengers?—Yes.

4093. (*Mr. Glyn.*) You issue a particular description of ticket?—Yes; called the harvest ticket.

4094. (*Mr. Ayrton.*) Did Mr. Forbes change his opinion upon the subject of the rates after the period to which you have alluded?—No; he partook very much of my view; that we were getting practically all the traffic that we could get at a fair paying rate. I have read his evidence, and I am afraid I must state, as I have already stated, that it was upon his recommendation we advanced our fares; and so far from his being an advocate for lowering them, I have a copy of a letter of his, in which he presses upon me the expediency of advancing our fares; and that was

J. Ennis, Esq.

30th May 1865.

J. Ennis, Esq.

30th May 1865.

done after he had three or four years experience of the working of our line.

4095. (*Mr. Horsfall.*) What is the date of that letter?—19th July 1860.

4096. (*Sir R. Hill.*) You have stated that the immediate effect of advancing the fares was to increase your revenue?—Yes.

4097. Can you state what the ultimate effect, or what the more remote effect was?—If I am justified in attributing the then existing state of things to the fact of our having advanced our fares in 1860, I am sorry to be obliged to admit that within the last half year our revenue has fallen off; it has decreased considerably. I ascribe that to the impoverished state of the country, and particularly of the towns.

4098. Is the country more impoverished now than it was in 1860?—Unquestionably so.

4099. (*Lord Stanley.*) In consequence of the three bad years that followed?—Yes; and in consequence of the quantity of land that has been thrown out of cultivation, particularly in the west of Ireland.

4100. (*Mr. Horsfall.*) In your opinion, would the railway companies in Ireland be benefited by a general amalgamation?—Is what is meant an amalgamation under Government superintendence, or the simple amalgamation of one company with another?

4101. Would either of those systems confer a benefit on the country?—I should like to see it tried. It stands to reason that if you diminish the expenditure for management, railway staff, and those things, you will gain something. Whether it can be carried out with facility in Ireland is another part of the question. But I should like to see it tried there. I have had such instructive experience of the trouble and difficulty of managing a moderate concern like ours, extending only over 337 miles, that I should be very glad to see such an amalgamation carried out as is alluded to.

4102. (*Mr. Glyn.*) Is your system an entire system; or are there some small companies which do not belong to you?—I can answer the question critically. I should say that our system proper is 245 miles; that is, from Dublin to Galway, and from Dublin to Sligo.

4103. What independent companies are there?—There is a small independent line of 15 miles in length from Athenry to Tuam, which is worked by the Midland company; we rented it for a sum of 4,000*l.* a year, and I think our loss upon it has been about 2,000*l.* per annum.

4104. You have the regulation of the rates and fares charged upon it?—Yes; then the Great Northern system is 71 miles long, from Athlone to Castlebar; and it is now being carried down to Westport. We do the haulage of the line, and also regulate the fares; that is to say, by an understanding with the promoters.

4105. (*Mr. Horsfall.*) Have you an equal mileage rate over the whole of your line?—Yes.

4106. (*Mr. Ayrton.*) We have been informed that the inhabitants of Galway could give you a guarantee as to that part of the line between Athlone and Galway, and that they have repeatedly remonstrated with the directors against the excessive rates of charge, stating that they were anxious to have a reduction, and that they would accept any responsibility that would fall upon them for any loss that might ensue. Are you aware of those circumstances?—I apprehend that the Honourable Member is alluding to a statement that was made by Mr. Monsell in the House of Commons, and to which I replied at the time.

4107. No. What I have referred to was stated by a witness who was examined before the Commission?—The only application of that kind that I have ever heard of was made by Lord Clancarty, who was a director of the Midland railway. He was so full of the notion that low fares would bring largely increased business, that he proposed to his brother directors to try a reduction as between Galway and Athlone, and with a great deal of patriotism and belief in the truth of his system, he proposed to

guarantee us against any loss by reason of the trial. The proposal was considered, but the difficulty then arose what should we do with the rates over the rest of our system, because we could not have differential rates, and we were obliged to decline it. With that exception, there has never been any application made to me officially by any persons in Galway for reduced rates.

4108. (*Mr. Glyn.*) Could you not have tried the local rates as differential rates?—We could have tried them certainly, there is no doubt about that; but I was very much disinclined to meddle in the matter under an exceptional state of affairs as between the Company and Galway, where they found that it was very onerous upon them to make good the deficiencies every half year of 3,000*l.* or 4,000*l.*, under the Act of 1849, and I thought it would be hardly right under those circumstances, to make an exception with them, and at the same time expose ourselves to be attacked by people living upon every part of the line who would have asked us to do the same thing.

4109. It was therefore declined?—Yes.

4110. You have just referred to the Act of 1849; what was that Act?—That was the Loan Act. Sir Charles Wood concluded an arrangement with the Midland company, by which a sum of 500,000*l.* was to be advanced to be laid out in the western districts of Ireland, but it was more for the sake of giving employment to the people at a period of great distress, than benefiting the railway; so much so that I refused it at the time; I said the money was not worth having at the price, and unfortunately my words have come true.

4111. (*Mr. Horsfall.*) Did Lord Clancarty's proposal extend to goods as well as to passengers?—I do not say that that is what he said, but I suppose he intended that.

4112. (*Mr. Ayrton.*) Did the Grand Jury of Galway come to any resolution upon the subject?—Not to my knowledge. On the contrary, the Grand Jury have been very anxious to get rid of the operation of the Act of 1849, and to relieve themselves from the payment every half year of from 3,000*l.* to 4,000*l.*

4113. Was it not suggested that they might get rid of that responsibility by your company reducing the rates from Athlone to Galway?—I have never heard of that.

4114. (*Mr. Hamilton.*) What plea have the Grand Jury put forward as the ground for releasing themselves from that payment of from 3,000*l.* to 4,000*l.* a year?—The plea was, the arrangement entered into by them in the year 1857, I think, with the promoters of the Great Northern line from Athlone to Castlebar and Westport. The county gentlemen of Galway opposed the bill, because, they said, "It taps our traffic completely, and it renders our Athenry station useless, and as we are accountable for all deficiencies between the payment of the interest upon the Government loan and the net receipts of the line, we will require you to release us from our liability if you encourage a line which is otherwise an advantage to you, but which involves very serious consequences and losses to us." We entered into that arrangement limiting it to a certain period, and it was only the other day that an arrangement was finally entered into, by which the Midland company, in consequence of the part we have taken as shareholders in the Westport line, and in consequence of the large amount of traffic it brings to our system at Athlone, have consented after 1870 to release the baronies in the county of Galway from any liability under the Act of 1849.

4115. (*Mr. Hamilton.*) The plea which they put forward was not that they had not received the advantage which they expected owing to the high rates imposed by the directors of the railway?—Certainly; the plea was, that an interference with their traffic would be caused by reason of the construction of the Great Northern line.

4116. (*Mr. Ayrton.*) They considered that the construction of any competitive line released them from

the obligation to give a guarantee?—That was the effect of their plea.

4117. (*Capt. Galton.*) I observe in the Board of Trade returns of the traffic on your line that, while there has been an increase in most of the articles carried, there has been a great falling off in the receipts from coal and coke. In 1861 the number of trains of coal and coke was 19,000, and the number in 1863 was 11,000; the amount received in 1861 being 4,500*l.*, and in 1863 only 2,000*l.*; to what do you attribute that difference?—With regard to the question generally, I should say that where there has been a comparatively large increase in the money received for the carriage of coals it must have been from the season having been very wet and turf not to be had. Take my own case, I use turf in preference to coal; I like it better; and I can get coal delivered at my house for about 20*s.* or 21*s.* a ton.

4118. (*Mr. Ayrton.*) Do you live near Athlone?—Moate is my station; the coal is carried for three farthings a ton per mile.

4119. (*Capt. Galton.*) Was the year 1861 a very wet year?—I think that 1861, 1862, and 1863, were bad years; I am sure of it. By a bad year, in Ireland, we mean a very wet year.

4120. I observe that the receipts from coal and coke, which, in 1861, were 4,500*l.*, and in 1862, 4,800*l.*, fell, in 1863, to 2,000*l.*?—Yes.

4121. I understand that in a wet year you require coal for consumption?—Yes; because we cannot get turf.

4122. 1862 having been a wet year, one would have thought that the coal would have increased in 1863, but instead of that it appears to have diminished?—Yes; except that the return may have referred to a bygone period.

4123. In the evidence of Mr. Forbes he was asked, at question 1849, "Have you ever urged upon the directors of the railways with which you have been connected the policy of trying the effect of a reduction of the rates upon coal especially?—Yes; when I joined them I found that the rate was about 1½*d.* per ton per mile, and I recommended them to reduce it to ½*d.*, but I induced them eventually to reduce it to ¾*d.* What was the effect of reducing it from 1½*d.* to ¾*d.*?—That the traffic was increased, I think, about 25 per cent. That was attended with loss probably?—No, I think not; the reduction that was made was not sufficient to create any loss. I think that anything short of ½*d.* a ton per mile would not be of the least use. (*Mr. Ayrton.*) Upon what calculation is that opinion of yours based?—It is based upon this, that at a rate of ½*d.* a ton per mile you can deliver coals into all the principal towns in Ireland for about 16*s.* or 17*s.* a ton; and I believe that for mere domestic purposes it would entirely supersede the use of turf." Do you dissent from that opinion?—Yes; if Mr. Forbes means to say that by reducing the rate upon coal to a halfpenny a ton he could deliver that coal into all parts of Ireland for 16*s.* or 17*s.* a ton, what becomes of the fact that we pay 16*s.* and 17*s.* for our coal in Dublin?

4124. Is the coal delivered at Dublin at that price?—The coal is delivered at the quays opposite the Custom House in Dublin, and the price is 16*s.* a ton.

4125. Delivered from the ship?—Yes, including the carriage.

4126. (*Sir R. Hill.*) Can you say what the price would be at the quay?—I make a contract generally speaking with a man who supplies the Bank of Ireland, and I think that my contract in the last year was 16*s.* or 15*s.* 9*d.*, I do not know which.

4127. (*Mr. Glyn.*) Was it laid down at that price?—Yes.

4128. (*Sir R. Hill.*) At the quay do you mean?—No; at my house in Merrion Square.

4129. What is the price charged for the carriage?—I suppose it is 1*s.* 6*d.*

4130. Then the price at the quay would be about 14*s.* 6*d.* or 15*s.*?—Yes, or something less.

4131. (*Capt. Galton.*) Are there facilities for unloading the coal on the quays at Dublin? Any steam machinery?—There is no steam machinery.

4132. (*Mr. Glyn.*) Then there is the cartage also to be paid for from the ship to the railway station in Dublin?—Certainly; and I think that the cartage up to the Bank of Ireland, or to my house, is about the same. It is probably 1*s.* 6*d.* at the outside.

4133. (*Mr. Ayrton.*) Then you would have to pay cartage from the railway station in the country to where you live?—Yes, and that is a very serious thing. To say that coals can be delivered in the country at 17*s.* a ton by reason of our charging a halfpenny a ton per mile is a fallacy.

4134. It would also have to bear the charge of the local dealer who sold it at the railway station?—We have endeavoured to encourage local dealers in coal. We have done all that we could to do so, but we find that we cannot compete in an ordinarily good year with turf. It is suited to the habits of the people, and their appliances are in keeping with its use. I do not think that if the rate was reduced to a halfpenny a ton, it would encourage very much a proportionate increase of the consumption.

4135. (*Capt. Galton.*) Do you remember Mr. Forbes making that suggestion to you?—He may have done so, but I do not remember it. Three farthings a ton we have acted upon.

4136. (*Mr. Ayrton.*) Can you give us in coal the exact equivalent to a ton of turf?—I cannot; but I know that I should have my house and gardens supplied with fuel much cheaper if I used coal instead of turf.

4137. At what price should coal be to make it cheaper?—I pay a man 25*l.* a-year for cutting my own turf and saving it, and then I have to cart it, and that 25*l.* worth of turf does not last me from September till March.

4138. (*Lord Stanley.*) Does not the price depend very much upon the wetness or dryness of the season?—In a wet season you get no turf, it is not worth anything.

4139. (*Capt. Galton.*) Did you say that in Dublin you paid 15*s.* 6*d.* a ton for coal?—Not delivered. I think my contract was 16*s.*, certainly not higher.

4140. Of that 1*s.* 6*d.* would be for carting?—Yes, of the 16*s.*

4141. Which would make the price 14*s.* 6*d.* at the quay?—Yes, landed.

4142. Then it might be delivered, if carried at a halfpenny a ton, within 60 miles of Dublin for 17*s.*?—There would still be the cartage to pay for from the depot.

4143. I think Mr. Forbes stated that in order to enable it to be delivered at that price it would be necessary that the rails should run down to the side of the wharf where the coal was brought on shore?—Our Liffey branch is carried down to the quay, but not to the edge of the water, and if a vessel discharged the coal alongside the quay wall, necessarily there would be the cartage across the quay and loading into our trucks.

4144. Is it impossible to lay down rails on the quays?—They are thinking of doing that; and I believe the Ballast Board have had a bill before the House this session to enable them to lay tramways along the quays with sidings.

4145. Then the coal could be at once put into the trucks?—Yes; except I think that there will not be any coal wharves. I think it is mostly the place where the steamers lie, and it would be very inconvenient as regards the public.

4146. (*Mr. Hamilton.*) What price do you pay for coal at your own residence in the country, 60 miles from Dublin?—They are delivered at Broadstone for about 15*s.* 6*d.*, and I pay ¾*d.* a ton a mile, which for 68 miles is 4*s.* 3*d.*, making 19*s.* 6*d.*; then I have to pay for cartage for four and a half miles.

J. Ennis, Esq.

30th May 1866

Ennis, Esq. 4147. Making up altogether perhaps 11. 1s. a ton?—Putting what charge you please for a man's own carts.

4148. (*Sir R. Hill.*) Still I understood you to say that you would save by substituting coal for turf?—It would be cheaper for me; but then I take into consideration the enormous waste that there is; if I burned nothing but coal, it would be a saving to me, even at the present high rate.

4149. *A fortiori* you would save if the rate upon the coal was reduced to a halfpenny a ton?—Yes; if I allowed opinion and fancy to enter into my calculation, I should prefer coal at 40s. a ton to turf at 11., although, economically speaking, I am quite satisfied I should be wrong.

4150. Would not the economical view of the question be that which would influence the greater number of consumers?—I should say so.

4151. According to your view, if the consumers looked simply to the cost of the fuel, they would, even at the present rates charged for conveyance, use coal rather than turf?—True; but we must bestow a thought upon those who are the consumers, the masses. The masses have not the appliances; they have not the grates in which they could burn turf or coal respectively; their dwellings would have to be re-arranged. Persons of a certain class would find it more economical to do the one rather than the other; the great masses of the people would not know how to burn coal, and you could not convince them that they would effect any saving by it. Then there is an additional question to be considered; that they would not be in a position to buy any quantity, or to cart it home. We have to deal with people who are very poor, and who cannot take advantage of economical operations.

4152. (*Mr. Ayrton.*) Are the cottages provided with hearths rather than with grates to burn coals in?—Yes; in the cottages in the interior there are no such things as grates. Gentlemen who build cottages for their tenants put these things in very nicely, but the great masses of the people have no such things provided.

4153. (*Mr. Hamilton.*) Upon your line what number of tons do you consider a full train load?—We sometimes carry as a load 40 trucks and waggons; we have carried as many as 40 and 50 trucks. The weight of a truck loaded will be at least nine tons.

4154. (*Chairman.*) Including the weight of the truck itself?—Yes.

4155. (*Sir R. Hill.*) What is the weight of the contents of a truck?—The average weight I suppose is five tons.

4156. (*Mr. Hamilton.*) What is the maximum number of tons of goods that you would carry?—That is a question I cannot answer.

4157. What is the maximum quantity of coals that you could take along your line?—I should think, looking at our appliances, that we could take any quantity.

4158. With one locomotive, what is the maximum quantity of coals that you could take in one train?—We could take four tons of coal in a waggon; I suppose we ought to be able to draw at all events from 30 to 35 waggons, and that would be 120 tons. But trade in coal is a thing that does not exist.

4159. (*Mr. Glyn.*) Do you mean that the quantity required is so small?—Yes; and the use of it is so opposed to the habits of the people.

4160. (*Mr. Ayrton.*) Can you give the Committee a statement of the leading items of goods which are carried on your line?—I hardly know how to name them; there are all sorts of groceries, and all sorts of wines and spirits.

4161. Those are the leading articles of the goods traffic?—Those are the articles which would come under the class that would produce the largest amount of receipts.

4162. (*Chairman.*) Do you also carry corn?—Yes; a good deal of corn is carried; but in certain years

the corn trade is infinitely better than in others. Last year there was very little Indian corn carried into the country; the corn crop and the oat crop were so exceedingly good that Indian corn was found to be more expensive than oats, and the consequence was, that the import of that article diminished very considerably.

4163. (*Mr. Ayrton.*) Is turf carried upon your line?—Never; it could not be done; it is carried in boats upon the canal; and inasmuch as the Royal Canal, which is owned by the Midland Great Western company, runs almost parallel with our line from Dublin to Mullingar, and from Mullingar to Longford; there is of course an element of competition there.

4164. That railway company holds the canal under their own management, and they work it?—They bought it at the time they made the line; but they are not carriers on it, they merely charge tolls.

4165. They do not interfere with traffic on the canal; that is left to the option of the freighters?—Yes, and private enterprise may charge any rates it pleases. With regard to the Grand Canal, the system is different there, by an arrangement between the Great Southern and Western company and the Midland, the Grand Canal company are empowered to charge from 10 to 15 per cent. lower than the railway companies.

4166. (*Mr. Glyn.*) On the canal that your company hold, the freighters may charge what they please?—Yes.

4167. (*Mr. Ayrton.*) What commodities are chiefly carried on the canal?—Every description of commodity. I have often seen in our docks, under our windows, boats being loaded with soft goods, sugar and articles of that kind, and which one would suppose ought to go by railway.

4168. What charge is made on the canal?—We charge by the tonnage.

4169. The tonnage of the boat?—Yes.

4170. There is no discriminating charge on account of the character of the goods put into the boat?—No.

4171. (*Sir R. Hill.*) They are not carried at your risk?—No.

4172. (*Mr. Ayrton.*) What is the toll charge on the boat?—5s. 6d. from Dublin to the Shannon.

4173. What is it to Athlone?—The Royal canal does not go to Athlone; it goes to Longford.

4174. Can you state how many miles it is?—I think it is upwards of 90.

4175. Is it a mileage charge that is made?—No; it is 5s. 6d. a ton for the whole distance.

4176. Is it a mileage rate, or do you charge a sum in gross for the goods taken to Mullingar and other places?—It is a mileage rate based upon the 5s. 6d. for the entire journey per ton.

4177. Is it *pro rata* for the whole distance?—Yes.

4178. It is a charge per mile throughout the whole length?—No; we charge 5s. 6d. a ton. Then if the distance be to Mullingar, of course, it would be only half of that; it is so much per ton by the mileage.

4179. Do you know the principle upon which it is computed?—No; it was considerably higher, and when we got possession of the canal we reduced it; it was very considerably higher; I think the Parliamentary licence is much higher than that.

4180. (*Capt. Galton.*) Suppose a boat went for 6 or 8 miles, what would be the charge?—I suppose the tollage would be higher in proportion.

4181. (*Mr. Glyn.*) Did you reduce the rates the moment you became possessed of the canal?—Yes.

4182. Then you established a competition against the railway?—To a certain extent; because our object was to encourage the description of traffic that was peculiarly suited to the canal, such as lumber and coarse goods, for we found that from place to place they were in the habit of carting all those things, and the moment we reduced the rates on the canal we certainly got a very considerably increased amount of traffic; but then the rates were extravagantly high as fixed by Parliament. It was under

an old Irish Act of Parliament, and the rates were ridiculously high.

4183. Then you put the canal in competition with the roads?—Yes; we did that at a time when our railway was under construction; we were the owners of the canal, and it was of course our business to make it as profitable as possible, and to pay our shareholders the interest upon their money pending the making of the railway.

4184. (*Mr. Ayrton.*) Do you obtain an income now equal to the interest which you parted with in the price paid for the canal?—No; and I think I can best answer that question by referring to some facts. In December 1864 we received for rents and tolls and water supply (I should mention that we have a very considerable amount of house property in the neighbourhood of the canal in Dublin) 5,000*l.*, and I will suppose that in another half year it would be 6,000*l.* or 7,000*l.*, take it at 12,000*l.* together. I think that we gave 330,000*l.* for the canal, but then there is to be included in that, to the credit of the company, the facility that this gave them of making a considerable part of the line on the banks of the canal.

4185. Then you have all the expenses to bear of keeping the canal in repair?—Yes; but they are very small. I think it is 2,700*l.* for the half year.

4186. Does the road come into competition at all with the railway now?—No; I have not seen that.

4187. Is the charge you make very much under the charge for cartage by the road?—I think it is. The carting business was formerly a very flourishing one in Ireland, but I think it has disappeared. I do not now see the long strings of carts that, when I was a boy, I saw upon the high roads in Ireland.

4188. Has your company any agreement with any person in Dublin to cart goods from the stations?—Yes, with Mr. Wallace, who receives and delivers goods for us in Dublin; also in Galway, in Sligo, and in Athlone.

4189. Can you state what the relative rates of charge are for cartage and by railway conveyance?—No; I cannot.

4190. (*Mr. Horsfall.*) Although the traffic by the canal has increased, the net profit or the dividends on the canal have not increased?—The traffic by the canal, I think, has not increased. Indeed I know, that in 1863 of the half year ending December, the total traffic produced 6,099*l.*

4191. I was drawing a distinction between the traffic and the money receipts?—I did not intend to say that the traffic on the canal was either one thing or the other, for we have nothing to say to that; we have nothing to do but with our tollage. The quantity of goods carried we know nothing about. I can only say that from the tolls we receive so much, for water supply so much, and from our house rents so much; but as to the traffic on the canal, that is a term that can hardly be applied as to us, because we are not carriers on the canal.

4192. (*Mr. Hamilton.*) But you receive tonnage rates for the goods that are carried upon it?—Yes.

4193. Is not that very much the same as receipts from traffic?—Yes.

4194. (*Mr. Glyn.*) You charge a tonnage upon the boat?—Yes; and the tonnage upon the boat will depend of course upon the quantity carried.

4195. You know nothing about the receipts upon the goods taken by the freighters?—No; they are private undertakers, who, I believe, are not making anything of it.

4196. (*Mr. Horsfall.*) You have stated that the traffic has not materially increased consequent upon the rates being reduced; has the income from the canal been increased by a reduction of the rates?—When I made that statement I alluded to a period of nearly 18 or 19 years ago, when the Midland company obtained possession of the canal; at that time the tolls were very high, extravagantly so, and the first thing which the company did, was to reduce those tolls, and the consequence was immediately a very large increase in the traffic upon the canal.

4197. And an increase in the receipts?—Yes; the state of things continued up to a certain period; but we then found that it did not answer our purpose to be carriers upon the canal, and we thought that we would throw it open to public competition, and be content with our tolls, and our water and house rents.

4198. (*Chairman.*) Are any mines worked in the neighbourhood of your line of railway?—None. An application was made to me some time ago by a man who proposed to work some property belonging to a relative of mine in the county of Leitrim. I should mention that at the head of Lough Allen, there is a canal, and I believe it comes down into the neighbourhood of Carrick, and we offered, as an experiment to carry the minerals for next to nothing in the hope that something might come of it.

4199. (*Capt. Galton.*) What rate did you offer?—It was something extraordinarily low.

4200. (*Chairman.*) What were the minerals?—Ironstone.

4201. (*Capt. Galton.*) Did you offer to carry them at a halfpenny a ton per mile?—It was not so much as that; I cannot give you the precise figures, but the expression I used to the agent was, "I shall carry your stuff for anything you please to give me, as an experiment."

4202. What was the result?—They found so many difficulties in getting it to the railway, that it did not come.

4203. (*Mr. Ayrton.*) Have any other applications for special rates been made by persons for the purpose of developing some particular branch of industry?—I do not remember that there have been; but I should be only too glad, not only in the interests of the railway but in the interests of the country at large, to encourage, almost at any cost, the development of anything that might be beneficial to the country.

4204. (*Chairman.*) Is the fish traffic of any importance to your railway?—It is of course an advantage, and we give it all the facilities that we can. The valuable fish we carry by a night train, and the fish that is less valuable, such as hake, and other kinds of coarse fish, we carry at a very low figure; but the Galway fisheries, where one would expect to find plenty of fish, are totally neglected.

4205. (*Sir R. Hill.*) What is the reason of that?—I will endeavour to explain. I had occasion a few nights ago to speak to a gentleman in the House of Commons with regard to an application to the Fishery Board for 2,000*l.* to restore the pier at Buffin in Cleugh Bay, and I said, "Will you join me in the application? I am told it is a place that swarms with fish, and if we have a pier there, the fishermen will have some security, and they will go out." The answer that I received was, "They will not go out; they pay no attention whatever to the fisheries, they allow the fish to come and go without making any effort to catch them." Now it is very hard to say what is the reason of this, but if the fisheries on the west coast of Ireland were developed, the Midland Railway company being in connexion with it, would feel it to be their duty, and their shareholders interest, to afford every facility in the world, and, as in the case of carrying minerals, everything they could do, they would do to facilitate it.

4206. (*Mr. Ayrton.*) Do you regard the Irish people naturally as a seafaring people; or do they dislike going to sea?—No, I do not.

4207. (*Sir R. Hill.*) The unproductive state of the fisheries in the neighbourhood of Galway is not owing to any want of facilities afforded by the railway companies?—Unquestionably not. There is no doubt that railway companies may be sinners to a certain extent, but they are on the other hand very much sinned against.

4208. (*Mr. Ayrton.*) Do you think that if English fishermen went to the west coast of Ireland, they would be able to get on in harmony with the native fishermen?—We know the fact to be, that some years

J. Ennis, Esq.
30th May 1865.

J. Ennis, Esq. ago a company was established for the purpose of trawling in Galway Bay, and what was the consequence? The fishermen who inhabit a region in the neighbourhood of Galway called Claddagh, turned out against them, and would not allow them to trawl; and the Englishmen very properly went away with their lives.

30th May 1865.

4209. (*Sir R. Hill.*) They will neither fish themselves, nor allow any one else to fish?—It seems to be so.

4210. (*Chairman.*) You have spoken of an arrangement between the Great Southern and Western and the Midland companies as to some canal; where does that canal run from?—I spoke of the Grand Canal, which passes along here (*pointing to the map*), on to Tullamore and Banagher, and so on with a branch to Ballinasloe, that is the Grand Canal; the Great Southern and Western company with their systems to the west, and the Midland company, after a conflict of considerable duration, have entered into terms by which the Grand Canal company are allowed to carry goods at a differential rate of from 10 to 15 per cent. less than the railways.

4211. Have you any arrangement with the Great Southern and Western company by which steamers are prohibited from plying upon any navigation?—We have not any arrangement prohibiting them from doing anything with their steamers; but when we had a long conflict with the Great Southern and Western on the Shannon, between Athlone and Limerick, we

The witness withdrew.

GEORGE PARKER BIDDER, Esq., examined.

4213. (*Chairman.*) You are a civil engineer of long practice?—Yes.

4214. You are, I believe, chairman of the Great Eastern railway?—I am one of the ordinary directors.

4215. You have been often consulted by railway companies on general financial questions as well as questions relating to engineering?—Yes.

4216. You have paid some attention to the position of Irish railways generally?—Yes.

4217. Have you formed any opinion as to a reduction of the charges upon Irish railways, both for the transport of passengers and goods?—Yes, for passengers, and particular classes of goods, such as coals, cattle, &c. The main object appears to me to be, if possible, to improve in some way or other the management of railways in Ireland, so that the industry of that country might be stimulated by reduced charges; if that might be done without inflicting any pecuniary loss upon the present owners of the railways there, and also, if possible, without throwing any charge upon the imperial revenue. With that view, of course, I have considered that, in the acquisition of these railways, ample powers would be given for dealing with them as we do in this country as to the acquisition of land, (in this country or in other places,) for the formation of a railway in the first instance, when private rights have to give way for the public convenience. It is impossible in Ireland, or in any other country, to get the full benefit of railroads so long as they are cut up into a small number of divisions; you cannot have through rates, and you cannot have the power of adjusting the rates with that flexibility which my experience teaches me is necessary in order to give full convenience to the public, and to secure the largest revenue to the railway. What one ought to aim at in railways is very much the same as that which was done by the Post Office, that is, to have one rate, if possible, to all places. Of course that is practicable enough as to letters that pay a rate of 300*l.* a ton, a fixed charge, but the rate for carrying a ton of goods, even to the Land's End would be a very small per-centage upon that rate. Coal is an article which ought to be vended, in order to secure its extensive use, at a few shillings a ton; but that is a case that does not admit of that perfect equalization of rates which has been accomplished in

carried our competition so far as to take a man from Dublin, *via* Athlone, to Killarney as cheaply as the Great Southern and Western carried him by their line direct to Killarney. We carried passengers all round the river to Limerick, and with the assistance of cars took them to Killarney; but that is now at an end, and at this time there are steamers running between Limerick and Athlone, and I know a gentleman who would be very glad if the steamers called off Searriff, where he lives.

4212. Are there any other facts that you desire to state to the Commission with reference to your railway?—I have only to add that, in my judgment, if an experiment were to be made of low rates and fares, and which appears to be now the great desideratum, it might be tried; but inevitably it could only be tried at the expense of the existing shareholders,—whether the experiment should extend to one year, or to three or five years, it is impossible to say,—but, looking at the state of the country, and mixed up, as I am, with the people of the country, and taking an interest in most of its industrial pursuits as a director of the bank, besides being connected with railways, I am strongly disposed to assure the Commission that they will find that traffic in Ireland is what I have called it, a limited quantity; and that lower the fares and rates as you please, you will not be able to obtain anything like a countervailing increase in the receipts, as the result of the experiment.

the Post Office with regard to letters, and you can only approach it by consolidating the railway systems as much as possible. With that view it has occurred to me, looking at the Board of Trade returns, and the map of Ireland, and the extent of the railway traffic, that there is no practical difficulty, or no more, perhaps hardly so much, as in any other great system, in working all these railways under one management. There are some 1,100 or 1,200 miles of railway that the North Western company have under its present management. In the Great Eastern system we have about 700 miles. In Ireland, in 1863, there were 1,700 miles, probably there are now more; but the gross traffic in Ireland is only very nearly equivalent to that which we earn on the Great Eastern system, and running through a district which is an agricultural district merely. We have not more manufactures I think, upon the whole, than is comprised in the Irish system. There is Norwich and Ipswich, and then there are the fisheries at Yarmouth and Lowestoft. Then looking at the number of engines which I see are employed in Ireland, and also at the rolling stock, I am convinced that it is quite as easy to manage the whole of that system of railways under one system of management as it is to manage the North-western system, or the Great Northern system, or the Midland system. I assume that if you are to lower the rates in Ireland and to increase the accommodation, the basis of that is that the whole of the systems in Ireland should be consolidated, and worked under one management.

4218. Is it the result of your experience that the industry of a district cannot be much stimulated as long as the railways are in the hands of special companies?—It is so, and it is the fact that that disadvantage has been gradually met in this country by amalgamations. I am interested in a colliery in Staffordshire, in the North Staffordshire district, and their rate to us was a fair rate, that is, if I had been acting for the company I should certainly have charged that rate. We do not complain of it, nor do we complain of the rate charged by the North-western company; but having two rates combined, they almost prohibit us from establishing any coal trade in London.

4219. Have you considered any scheme by which an amalgamation could be effected of the Irish rail-

G. P. Bidder, Esq.

ways?—Yes, I have. In the first place I may mention an idea I have long entertained, and one that I believe to be applicable to this country; and that is, speaking from my own experience in the management of railways by boards of direction, I believe that they can be improved by being managed by individuals for their own interest, and in my opinion the most efficient management of the railways in Ireland would be obtained and carried out by what is called in these days a Limited Company, consisting of some 9 or 10 individuals. I mean that they should subscribe a capital of at least a million. That they should pay up one half, and one half of this to be invested to meet the security to be given to the Government. The other half would partly be required immediately for the purpose of increasing the rolling stock, and enlarging the stations, and for trade capital. Of course that company would have a contract let to them with all the conditions that might be imposed upon them, for affording every possible facility to the public, and subject to very low rates, certainly for coal, cattle, and passengers, and possibly for dairy produce, and to increase the traffic also in fish. That contract I should put out to tender, and I believe there would be no difficulty in obtaining tenders. Then you would have to guard against an obvious difficulty, by obtaining security that the rolling stock and permanent way should be adequately kept up, and that the covenants or conditions of the contract should be faithfully fulfilled; at the same time subject to this, that the fullest and freest action should be given to such a company. Now as regards the rolling stock, our experience at the present time is, I think, quite adequate to enable that to be fully secured, and also with regard to the permanent way. I let a contract, and I believe it was the only one that was worked out, for the rolling stock on the North Staffordshire railway when I was their engineer, and the precautions which I took there, and the additional experience which we have acquired since might be applied in this case, in order to fully secure to the Government that the estate they had leased should be fully and efficiently maintained; the plan that I adopted was that for every mile run by the trains, three half-pence was to be set aside out of the payment to the contractor and invested at interest, and out of that sum so invested he was allowed for any new engines that were bought and put upon the line for use; the effect of that was, that that three half-pence was rather in excess at that time of what was required for the renewals of engines, and it would be still more in excess with regard to modern engines; but it was to the contractor's interest, for rather than having that money lying comparatively idle, he could have new engines and have the use of them in working the railway. Now at the present time if a penny farthing is set aside per mile for the engine, and a similar amount is set aside for waggons and carriages, and that fund is kept solely applicable to provide new engines and carriages, and so on, you would, either in the shape of engines or carriages, or in the residue of that fund that might be left, have an estate, and part of that estate kept at its full value.

4220. You mean that a certain proportion should be set aside for every mile run by the trains?—Yes; so much for the engine and so much for the waggons, and so on.

4221. So much for every engine, every carriage, and every waggon?—Yes; or rather instead of complicating it with so much for every waggon and so much for every carriage, I should subdivide it into two sums per train mile, taking an average all round; so much for the engine, and so much for the rolling stock; and I would also adopt the same plan for permanent way. There are two elements in that, one of which is the sleepers, which decay, and which is irrespective of the wear and tear, or nearly so; then there is the rail, which decays according to the work done. That we find on the Great Eastern line comes to five-eighths of a penny, or a halfpenny and half a farthing per train mile. The

sleepers must be made good as they decay, and with reference to that, I have been looking through the working expenses of the Irish railways for 1863, and the only part that will be subject to increase I think is the renewals of the sleepers, for the fund set aside for expenditure for permanent way will certainly be inadequate when that permanent way increases in its age and the sleepers decay. Subject to that I have no doubt that a large reduction could be made in the working expenses which, probably, would fully meet the increased expenditure that must become necessary for the purpose of replacing the sleepers.

4222. Would the leasing company be authorized from time to time out of the fund produced by this mileage rate to purchase new engines?—Yes.

4223. Do you mean that at the expiration of the term the whole of that fund should be handed over to the Government?—Yes; it must go to the Government, unless the lessees had absorbed it by engines. That fund would be a little in excess, and the interest of the lessees would be to absorb that fund in placing new stock upon the line.

4224. Every time a new engine was bought it would be paid for out of that fund?—Yes.

4225. And in a similar way with regard to additional waggons and carriages?—Yes, the same. Then there would be this to be met. The increase of receipts in Ireland was about 70,000*l.* in 1863, over 1862, and therefore there must be a provision made for an increase in the rolling stock, that would be necessary in order to meet the growth of the traffic. It would probably increase more rapidly than might be expected if worked in this way, and that would be easily enough provided for; because the advance made to the contractors for the rolling stock which they should be authorized to put on the line should be always represented by the gross increase of the annual revenue; that is to say, if it increased at the rate of 100,000*l.* a year, you would authorize the lessees to put 100,000*l.* worth of rolling stock upon the line. It is now I think pretty well admitted on all hands that the gross annual revenue under ordinary circumstances represents the working value of the rolling stock.

4226. Do you mean that every year there ought to be an additional amount of rolling stock equivalent to the increase of the previous year upon the different kinds of traffic?—Practically that takes place on all railways in England; certainly on the Great Eastern line; that is worked out with extreme accuracy and minuteness. I do not mean to say that that would apply to a railway like the Metropolitan line, which takes 30,000*l.* a mile per annum, nor to any small local line, that is taking from 400*l.* to 500*l.* a mile per annum; but taking any great system, that is quite sufficiently near to meet all general considerations.

4227. You have stated that this leasing company should have a considerable amount of freedom, but still that they should be restricted in certain respects as to the charges they were authorized to make?—Yes.

4228. Will you be kind enough to explain to the Commission in what respects you would leave them free to act, and in what respects you would limit their discretion?—As far as my view goes in regard to restriction, I should certainly restrict them generally to the present charges in all cases in Ireland. I should fix a maximum, and nothing should exceed the present existing charges. Then as to certain articles of large amount, take coal, cattle, or fish; or passengers. I would carry coal at 3/8ths of a penny per ton per mile. I would carry passengers by one train a day at a farthing a mile. I would have a train which might be used as a pick-up train, so that if there was not a large number of passengers to carry, it might bring up its earnings by carrying a certain quantity of goods, but that train should run so as to cover 12 miles an hour. With regard to cattle, at this moment I can hardly state what rate I should propose, because cattle from Ireland are cattle which

G. P.
Bidder, Esq.
30th May 1865.

G. P.
Bidder, Esq.
30th May 1865.

are brought over to England to be fattened. Pigs, of course, would be brought over already fattened, but probably, it would be something like one half of the rate charged in this country for similar traffic that I should limit the charge upon cattle to. With regard to the fish, I should get our fish rates from Lowestoft and Yarmouth, which pay us very well; probably they might be reduced one half with the view of stimulating that branch of industry.

4229. I do not quite understand whether you would compel the leasing company not to exceed those rates?—Yes, I would limit them to those rates.

4230. Then those would be their maximum rates?—Yes, they would be the maximum rates, but they might charge as much less as they liked. I have said that they should be limited to the present rates charged for all descriptions of traffic, and that they should be in future the maximum; but upon those great items of traffic which I think would stimulate the industry of Ireland, I should limit them still further, and make the rates I have mentioned the maximum.

4231. Would you include manure?—Certainly.

4232. Do you know enough of Ireland to be able to form a decided opinion that a reduction of the rates and charges to the amounts you have mentioned would operate as a great stimulus to the industry of the country?—I have not that local knowledge of Ireland to enable me to say that it would particularly apply there, but I believe that it would apply anywhere, and that the rates I have mentioned would stimulate the industry of any country.

4233. Do you think that, with a population so poor as that of the greater part of Ireland, there would ever be a large passenger traffic?—I think so, because this company would have all Ireland in its own hands; and at a farthing rate I believe you would have a large passenger traffic; in fact, the gentleman who has just been examined, Mr. Ennis, said that they had very large trains when they reduced the price per waggon, I think he said from Dublin to Galway; I have no doubt that you would have an enormous number at a farthing rate, and that you would make that the earning up to the amount which I consider to be the normal earning of all railway trains, viz., 5s. a mile.

4234. Are you aware that Mr. Ennis stated it was only during harvest time that the low fares were charged?—No doubt; but I think that one of the objects which the Commission has in view as to Ireland is, that this rate should be applied continuously, and it will only be by applying it continuously, that you will really know the extent of the traffic that it excites.

4235. From your experience of the Eastern Counties railway, do you think that a large amount of traffic can be carried in a purely agricultural district?—We have a very large traffic there. We have carried this year, omitting coals, about 1,800,000 tons. Coal we are seeking very much to increase, but this is merely agricultural produce and fish.

4236. Do you look upon coal as one of the main articles of produce in the Irish traffic?—I think there is no doubt that there would be an increase if you charged at the rate that we are bringing coals into London now for; we had a contest last year as to bringing them in at a farthing a ton per mile, and then it was urged by nearly all the railway managers that it was absurd, but I believe they all now agree that it was not absurd, and in the cases of those who were the most opposed to us, they are prepared to quote the same rate with us. We are now bringing coals from Peterborough to London, a distance of 100 miles, for 124 farthings.

4237. Are you aware that a large proportion of the Irish population live in cottages in which there are no means of using coal?—Yes; but coal is such a blessing that if they could get it at a cheap rate I think they would consume it. Coal is incomparably

better than any peat or wood, and even in Norway, where they can get wood for next to nothing, I know families who, whenever they can get coal, use it.

4238. Do you look forward to a consumption of coal chiefly for household purposes, or that, if it were carried cheaply, manufactures would gradually be established in the country?—No doubt it would assist in the establishment of manufactures.

4239. Do you look to a large increase in the consumption of coal for household purposes?—Yes; one of the main objects of the railways ought to be the diffusion of coal.

4240. Can you state at what price you think it would be practicable for coal to be delivered at the stations in the central parts of Ireland?—Three-eighths of a penny a ton per mile. You must charge three-eighths of a penny and allow 5d. for terminals. You could not carry it for three-eighths of a penny for nine or 10 miles; you could not handle it for that, and therefore 5d. for terminals is what is allowed everywhere now.

4241. Take a distance of 100 miles from Dublin, what would the cost be at three-eighths of a penny a ton per mile?—It would be 3s. 1½d.; then, if you add to that 5d. for terminals, it would be 3s. 6½d.

4242. What is the price of coals delivered on the quays in Dublin?—I do not know, but I assume that it would not be above 8s. or 9s. a ton; I only judge from knowing where they come from, and what the freight ought to be.

4243. If, in Dublin, the price of coals is 15s. or 16s. a ton, and you must add 3s. 6½d. to that, that appears to be a very large amount?—I suppose that that is the price when delivered.

4244. I think it was stated that deducting 1s. 6d. for cartage, the price at the quay was 14s. 6d.?—If so, it is as dear as it is delivered in the Thames, so much farther from Newcastle.

4245. Unless the price of coal was reduced considerably below 20s. a ton, do you believe that any great consumption of it could take place in Ireland?—Not among the poorer population perhaps, but still one hardly knows. Referring to the agricultural population in Norfolk, where they burned wood before we went there, and where the population are very poor, 800,000 tons of coal a year have been imported there, and then we also carry coals to Lynn, Wisbeach, Yarmouth, Lowestoft, and Harwich. A ton of coal is equal to about seven or eight tons of wood, with regard to the heat that it gives out.

4246. The first step you would take, I suppose, would be to obtain an Act of Parliament authorizing the Government to take possession of all the Irish railways?—Yes.

4247. What sort of provisions would you have inserted in that Act?—In the first place you would have to deal with three descriptions of stock; you would have the debenture stock, the preference shares, and then the ordinary stock. Of course you would impress upon this stock the Government guarantee, and dealing first with the debentures, they might be converted into terminable annuities at 3½ per cent. interest, that is rather more than the funds now yield, but you must make them an advantage in respect of interest to get people to take them; or if you compel them to take them, at all events the scale must turn in their favour. If you added 1 per cent. to that, those annuities would all expire in 43 years, that is to say, 4½ per cent. all round, and then the present charge upon the railways from this item would terminate in 43 years. Then as to the preference stocks, they do not carry so many years' purchase as the debentures; probably some of them are not well secured, or not marketable, as we know in this country, and probably they will not range at more than 5 per cent.; 100l. of that stock would represent 5l. of current interest; then I should calculate that 100l., taking the value, and not the interest, also at 4½ per cent., and make it a terminable annuity.

4248. Would it, in your opinion, be just to deal with the holders of preference shares in that way,

G. P.
Bidder, Esq.

30th May 1865.

supposing them to be irredeemable?—Quite just, if I give them in exchange for their preference shares a security which bears a higher market value; it would be quite as just as taking possession of a house in the City of London. If you take a house, or you give a railway company authority to take it for the purpose of making a railway, you take care that the compensation to the owner shall be adequate, and if you take possession of these railways in Ireland for the sake of improving the condition of the country, you must do there the same thing as you do when you take possession of a banking house in the City, to make room for a railway. Then as to the holders of ordinary shares, I do not know the process in Irish railways, but you must take some period before the Act, whether you take one year or two years; but you will find that the rule holds there as it does in England, that they bear about 20 years' purchase; but there is also some little speculation in that, as the increase of receipts will increase, the current dividends and the price of the shares; but they would represent about 20 years' purchase. I find, by the Board of Trade returns, that the capital embarked in Irish railways may be taken to be, in round numbers, 24,000,000*l.*; that is, at the end of 1863, 12,000,000*l.* I should say in debenture and preference shares, and 12,000,000*l.* in ordinary shares. Then the revenue is 1,578,000*l.*, leaving about 768,000*l.* net. Then, assuming that the 12,000,000*l.* of debentures and preference shares rule at 5 per cent., there will be 600,000*l.* absorbed out of the 768,000*l.* in preference charges, which leaves only 168,000*l.* for the dividends on the ordinary shares, and that would hardly leave more than $1\frac{1}{2}$ per cent. If you took $1\frac{1}{2}$ per cent. and gave them that at once, that would be worth 30*l.* market value. If you gave to it the Government guarantee you would make it, at $1\frac{1}{2}$ per cent. worth from 42*l.* to 43*l.* If you so dealt with it (and that is one way of doing it) you would give them the advantage of 30 or 40 per cent. upon the value of the stock. But there is another way of dealing with it, and that is, to confirm them in the existing dividends, or convert the stock into capital, giving the holders certain contingent advantages to be derived from the future working of the railways, and the expansion of the traffic. The public do, somehow or other, always incline to put a liberal value upon anything that is a little speculative. These are two modes in which you might deal with that stock, and still give a decided advantage, in the present value of the stock, to the present owners of it.

4249. Upon a large number of ordinary shares in Irish railways, no dividend whatever is paid?—That is so.

4250. Would you compel the holders of them to make a present of them to the Government?—No; you must take the market value of them, and deal with them.

4251. Are there not some shares that are perfectly unsaleable, and that have no value in the market at present, but which, nevertheless, the shareholders would be unwilling to throw away?—I should think it would be found that they would exchange hands if you impressed a value upon them, but still you could deal with them; there is quite margin enough, I am convinced, even to give them a value, to make it worth while to exchange them.

4252. When the Government had dealt thus with the holders of the debentures and shares, you would then proceed to offer a lease of the railways to a company?—Yes.

4253. If no company was found willing to offer such terms as would enable the Government to meet their engagements, how should the deficiency be made up?—I assume the question to mean that an offer would not be made.

4254. That the Government would not obtain an offer upon terms that would enable them to meet their engagements?—I can hardly suppose that; I believe they would. But this must be borne in mind, that

the terminable annuities, which would amount to 540,000*l.* a year, supposing that the working of the railways went on for 43 years, would, at the expiration of that time, all fall in, and the whole would become the property of the State; and as they had been paid off by the revenue received in Ireland, I take it that then, to the extent of the annuities which would fall in, you would make further abatements in the charges made upon the railways. And if, in the meantime, there was any deficiency, you would carry that on after the charge against the railways had been satisfied, after the expiration of 43 years, and you would then have 120,000*l.* a year to meet any deficiencies arising out of the terms of the lease.

4255. Do you entertain a confident opinion that offers would be made to the Government by such a company as you have supposed?—Yes; and if I was a younger man I should be very glad to form one of the party, for I should feel certain that it would be a very profitable undertaking. But there is another question as to that that ought to be considered, whether there would not be some objection to any individuals taking a lease being bound for so long a period as 43 years. People do not like that generally, and therefore I would suggest that the terms of the lease should be re-considered in not less than every 10 years, and probably not more than 14 years; and so have the terms of the lease re-adjusted upon the net revenue of the railway at that period. Then of course there is this obvious objection, that it would not be for the interests of the lessees to stimulate traffic beyond a certain point; or if they did, the effect would be to raise the terms which they would have to pay after that period had elapsed; and I would propose to meet that in this way, so as to make their interests and those of the state identical. Suppose, for example, that they had an increase of traffic to the extent of £100,000 a year gross, of which one half, £50,000, would be net. I would then assign to them one fourth of that, either in the shape of interest, or in capital, as a bonus for the traffic of the previous ten years, and that would be a very large element of profit. Then you would go on either by reducing the rates charged upon the railways to the extent of the increase of traffic, or you would get large means to enable you to liquidate the debt that might have accrued upon the railways. In the natural course of things the traffic must increase, and if all the rates were in one hand, so that they could put an end to equal mileage rates, which are quite subversive of all railway traffic (and which is one of the first things that a limited company would do), they would establish through rates, so as to get any trade that could be got and leave a profit. Take the trade between Belfast and Galway, which now has to pass over the Westport line, and over three or four other railways, it is not worth while to cut up the whole of the profit upon three or four railways, but it would be worth while to carry the whole of the goods at any rate that would leave a profit.

4256. You have not stated how you would deal with any extensions of railways in Ireland?—There are two ways of dealing with them. In the first place, if the extensions were not projected by the limited company, or by the State, but by other parties, I would bind them to work them at 50 per cent. under covenants that they should work the traffic fairly. If, on the other hand, the limited company projected them, then they should be liable for the full interest, which they would have to pay in respect of the cost of any such extensions.

4257. You would put all future extensions of railways and the traffic upon them into the hands of this company?—Yes, they must be in their hands.

4258. There may be fresh Acts of Parliament obtained this session; what would you do with the railways authorized by those Acts?—I can hardly give a satisfactory answer to that. I should like to see those Acts first, and consider the circumstances connected with them; but I think you might provide for them by leaving an option to parties to make a

G. P.
Bidder, Esq.

30th May 1865.

line, compelling the new company to work it at 50 per cent.; they could not work it for less. There might be this difficulty to deal with, supposing it was a large company, they might abstract traffic unfairly from them, and carry it on their own line, and carry it round about, or divert it; and to meet that, I would suggest that wherever the new line formed the shortest route, it should be credited with the traffic, whether it went over that line or not.

4259. (*Lord Stanley.*) With regard to the purchase of lines of railways, in the first instance, by the Government, I suppose, as to the debentures, there would be no difficulty; they have a recognized market value, and you would have to purchase them at their value?—Yes.

4260. It would be merely the purchase of a debt having a limited term to run?—Yes.

4261. I do not understand the object of turning the debentures into terminable annuities; why not take them over as they stand, and raise money on lower terms, as the Government are able to do, for the purpose of paying off the debts so incurred?—I think the advantage of the plan would be this, that it would be a great thing to get rid of them in the space of 43 years, then they would merge and become the property of the State to deal with as they pleased. Whether you should issue them at $3\frac{1}{2}$ per cent. with the security of the State, or at $4\frac{1}{2}$ per cent. to terminate at the end of 43 years, is a matter of opinion. I should make them terminable annuities.

4262. You would prefer to turn them into terminable annuities as merely another form of providing a sinking fund for the extinction of the debt to be contracted?—Yes.

4263. Do you propose that the persons actually holding the debentures should be compelled to take these terminable annuities, whether they were a form of security as convenient for them to hold or not?—It would not be necessary as to the debentures, because they would expire in a certain time. You would have, perhaps, a little more interest to pay upon them; you would only take them, and re-issue the Government paper, and therefore there need be no extraordinary powers taken as to them, because a few years must put an end to them.

4264. Putting aside for a moment the question of creating a sinking fund, all you have to do as to the debentures is simply to take them over?—Yes.

4265. With regard to the preference shares and the ordinary shares, do you think it would be just to the holders of those shares to take them at their market value?—Yes. I should take them at their market value. Suppose you had 5 per cent. preference stock, and that is worth 100*l.*, perhaps a fair rate; you would give in lieu of that a terminable annuity of 4*l.* 10*s.*, and at the present price of the funds, that 100*l.* would be worth about 105*l.* Then you would inflict no hardship upon the holder, because he could purchase plenty of preference stock to give him 5 per cent., and he would get 4*s.* or 5*s.* per cent. more interest for his money.

4266. Take this case, which would apply equally to preference shares: supposing I purchase a certain quantity of stock in a railway, paying next to no dividend, and suppose that I then submit to receive only 1 or $1\frac{1}{2}$ per cent. for a certain number of years, in the confident expectation that the line will improve, and that the capital I have embarked will double itself in value; do you think it would be fair for the Government, or any one, to come and purchase compulsorily that which I have so invested, on a calculation of the actual return it has brought me, and not what I expect it will bring?—If it is regarded as preference stock, and the railway has not been paying its charges, but there is an expectation that it will, that preference stock must be represented by the market value. I cannot provide for a fancy value. With regard to ordinary stock we have had a very strong case in the Caledonian railway, where the stock once was at 15*l.* or 16*l.* to the 100*l.* I really do not know what premium it is at now, but it is at

a considerable premium, and that company was allowed by an Act of Parliament to cut down all their preference charges, so that you can hardly deal with the market value; you might, in this case, if you adopt my suggestion, of giving terminable annuities, assuming that the railway does meet its charges, including those terminable annuities, have an accumulating fund, out of which you could give contingent advantages to the ordinary stockholders, which would be more than equivalent for any hardship you put upon them.

4267. I am looking to the interest and to the just claims of a person upon whom you propose to call to sell his property; do you think it would be just to call upon a man to sell stock of comparatively small value at the present time, and which he is unwilling to sell, because he has a reasonable expectation that its value will become double in a few years?—If there is a reasonable expectation of that sort it must be based on the usual data, and they are as accessible to others as to himself, and will be represented by the market value.

4268. Do you think that the actual market value is the only thing that should guide you?—Yes; if there be cases where there is no market value, probably some mode of arbitration might be established to give a fair value to the stock.

4269. You have probably had a good deal of experience as to compulsory purchases and sales?—Yes.

4270. Did you ever know a case in which a railway company, purchasing land compulsorily, did not pay for what it bought more than the market value?—I cannot say that I have; they generally pay a great deal more.

4271. Then I may suppose that if the State bought up all the railway property in Ireland, it must give, not merely the market value, but something over and above it?—Yes.

4272. It would not be able to make a favourable bargain?—I think the result would be favourable to them; I think the charges, with the Government guarantee, would be so reduced that the result would be favourable to them. But if you mean that the Government would not acquire the stock at its fair value, I may say that I do not believe they would, and I think that you ought to give the turn of the scale to the other parties.

4273. Whatever might be the ultimate result, you must start with a bad bargain?—You must pay more for the railways than they are absolutely worth.

4274. Your proposal is to lease out the Irish railways to one large company for a short period?—I should lease them out for the whole period; but, as I have before stated, I think that the terms of the lease should be re-adjusted after every 10, and not more than 14 years.

4275. The very essence of your system is, as I understand it, that you would incur considerable temporary loss by a large reduction of the fares and charges?—I do not think there would be; I doubt it very much. I believe this, that the economy which would be introduced by sweeping away many boards of directors, the greater economy that would take place in the working from being in one set of hands, the greater use that would be made of the rolling stock, and the stimulus that would be given to traffic by a lowering of the rates, would be attended with great advantages. I believe that a company taking the Irish railways in hand upon the terms I have suggested, and beginning at once upon those terms would relieve the State from any possible loss. If my views are correct, and if their operations were carried on for 10 or 14 years, there would be no loss; there might be a loss in the first year or two; but I believe they would recover from that afterwards.

4276. They would make a bargain by which they would expect to sustain a loss for the first few years, but with the hope of recouping themselves by a gain towards the end of the period you have mentioned?—Yes; in the hope of relieving themselves from any

loss, they would look forward to being able to increase the traffic to such an extent that at the end of 10 or 14 years they would have a large bonus in respect to it.

4277. You would not tie their hands very tightly as to the amount of reductions they should make?—No; I would leave them to deal with the traffic as they thought fit, so that they might establish the greatest equality of rates as to mileage rates, and as to the actual charges.

4278. You feel confident that you could get, in the first instance, such terms offered to the State as would cover the interest of the debt that the state would incur in purchasing the railway property in Ireland?—I have no doubt of it; and if I were a younger man I should like to be one of the party.

4279. In the event of there being a loss, I presume it would fall upon the State?—There must be a loss of 120,000*l.* a year, or there will be no loss to the State.

4280. The sum which the Government would have to pay would be about 24,000,000*l.*, would it not?—No. If you take the debentures and preference stock as one item upon 12,000,000*l.*, it would be, at $4\frac{1}{2}$ per cent., 540,000*l.* a year. But unless I had all the half-yearly accounts I could not give you the exact figures. Then there would be 12,000,000*l.* of ordinary stock, which would certainly not have more than 170,000*l.* a year to divide amongst it. If you increase that at once to 200,000*l.* a year, then you have only 740,000*l.*, as against 770,000*l.* the existing net revenue. You have 540,000*l.* every year to pay, and there is an accumulated value to the State of 120,000*l.* out of that.

4281. You propose, with regard to the creation of any new lines of railway to be added to the proposed system, that they should be laid out upon the same plan as at present?—Yes; upon the same plan, and that the company should be compelled to work them at 50 per cent., and that those lines should have the traffic secured to them for which they were fairly designed; if they abstracted or diverted that traffic, they should account for it all the same.

4282. If you suppose from the first that the rent received from the company to which these lines of railway would be let, would cover the expense incurred by the State, I do not see the advantage of your plan of terminable annuities?—It is this, that at the end of 43 years, I suppose that all the charges will have been met, and the terminable annuities will be at an end, and gone. Then you will have an opportunity of applying that saving of 540,000*l.* either in renewing the lease to the other parties with so much less charges, and therefore so much less rates; or on the other hand, if there is a deficiency, you will have the 540,000*l.* a year to meet that, and I think that you would be more relieved from clamour by having the charge in that way.

4283. What is there in this plan that would not be equally well accomplished by these two methods: In the first place, allowing the existing companies to borrow money to pay off their debentures, borrowing upon the security of the State at a reduced rate of interest; and next, if Parliament thought it desirable, to have compulsory amalgamation between the leading railway companies?—I think it should extend over the whole system. I hold that you will not secure the full advantages in Ireland which I am contemplating unless all the railways are in one set of hands. If you divide them into two systems, you must have the rights of two parties to deal with, and what would satisfy one would not satisfy two, and there would always be disputes to settle, and jealousies between them, which there always are between adjoining railway companies. The scheme is very manageable as to capital, and as to working, and why should you give up the full advantages of it by complicating the matter and cutting up the railways into two or three systems. I think it would be more difficult to carry out.

4284. Do you think there would be any material loss sustained if, instead of a complete amalgamation of all the companies, they were divided, into two systems, taking a line drawn from Dublin westward; and giving the railways to the north of that line to one set of managers, and those to the south to another?—I do not think that would be so good a plan; no doubt it would be a great improvement upon the present system; but it would not be equivalent to converting them all into one system. There is no doubt great traffic arising from Belfast, and if it was properly cultivated, I believe that traffic would spring up that nobody knows anything about. When a company can quote a rate, without having to go to another party, it excites traffic which nobody has any notion of at all until the facilities are given.

4285. Can you explain to the Commission what there is peculiar in the state of Ireland which requires that the State should take upon itself a duty and a responsibility which it has never incurred before in this country?—That is not my affair.

4286. You would decline to discuss the general policy of such a step on the part of the State?—Certainly. If you can confer a great benefit upon Ireland, the same as you might confer upon any county in England, without laying any charge upon the State, I cannot help feeling that it is very desirable to do so. I should object to it if it were to be done by laying any charge upon the State.

4287. The State has at all times the command of capital at a lower rate of interest than individuals have?—Yes.

4288. And the State by borrowing at its own low rate of interest and accommodating companies with capital so obtained, can confer upon them a great benefit?—Yes, and it is a great benefit, and we see now what an opportunity the State had before if they had adopted my plan; if the State had supplied railway debentures at $4\frac{1}{2}$ per cent., in a few years a large amount of debentures would have become the property of the State, with positive advantage to the railways.

4289. That is quite a different proposal. You say that the Government might have lent to the existing companies at $4\frac{1}{2}$ per cent., and that they might have raised their money at $3\frac{1}{2}$ per cent., employing the other 1 per cent. as a sinking fund?—Yes.

4290. And that they might thereby have made, both for themselves and the public, a very considerable profit?—Certainly, and they might do that now.

4291. But that is an entirely different proposition from that of leasing all the railways in Ireland to a new company?—It is entirely a different one, and is much more comprehensive; but it is part of the general proposition, when it is said that railways are so unmanageable now in the United Kingdom.

4292. You say that you do not wish to discuss the general policy of your plan, and therefore I, perhaps, may not ask you whether you think that there would not be a perpetual pressure upon the Government to get this new company worked on such terms as should be hardly remunerative?—The answer to that is, that you would have made your contract with the company, and that would be an answer to all clamour, and the contract would last for 43 years.

4293. I think you spoke of the probability of Irish railways being ultimately considered a permanent source of profit to the public exchequer?—I did not say that exactly; but if the Irish railways, at the end of 43 years, shall have paid off all their charges, and shall have paid off these terminable annuities, I think that that capital in the terminable annuities would belong to Ireland and should be given to it, and if there should be any charge that was not met, that that should be carried on for the future. You might deal with that property, either by keeping the interest for State purposes, or you might renew the lease at still lower charges, calculated upon the reduction in the annual interest.

4294. Upon what do you found your calculation as to a company being found willing to take over the

G. P.
Bidder, Esq.
30th May 1865.

G. P.
Bidder, Esq.

30th May 1865.

railways at such a rate as would not cause loss to the State; have you gone into that question in detail?—I can see that in Ireland there are very much the same elements to be worked out in figures as there are in this country; the earnings per mile are the same; the expenses are the same; but the railways are worked now by a number of small companies, with a great many establishments, and you see the miscellaneous charges put down at something like 80,000*l.* a year. A large proportion of that amount would be saved; and then the rolling stock, the maintenance of it, and the use of it, would be made much more efficient, that is to say, the new company would then work but for one object, and they would make two waggons do the work of three. If they were worked by individuals working for their own benefit, it is well known in this country that they will be worked much more advantageously than when railways are worked by boards of directors.

4295. I do not question the advantage of having a few large companies instead of many small ones, but is it not your experience in this country that there is a tendency in small companies to consolidate themselves into a great system?—Yes; they are doing that now rapidly in this country.

4296. The Great Western company have done it, and the North-western too?—Yes; all the large companies have done it.

4297. And that has been done without State interference of any kind?—Yes.

4298. Simply by men of business and men of commercial experience seeing that it was profitable to do so?—Yes.

4299. Why should not that same rule be acted upon in Ireland?—I have no doubt that it would go on in Ireland, and that it would work in time; but many years, I think, must elapse before it would work. I think that this is really a case in which the State might step in and hasten all these operations, and by one piece of legislation secure very great advantages to the public in Ireland without throwing any charge upon the State. I feel assured that it can be done, and with regard to the capital it is on so moderate a scale that as a mere experiment only I really think it is worth trying. I am sure that the advantages I have pointed out will result from it.

4300. I suppose the advantage of concentrating all the railway companies into one would be felt in England as well as in Ireland?—Yes; we know that in England great advantage has resulted from consolidating many small companies into large ones; but if they are too large I do not think that much more advantage can be got.

4301. You think that some of the great English companies have reached the limit of size for convenience in working?—No, I do not think that amalgamation in England is complete yet. The Great Western company is one large company, and at the present time there are four companies that ought to be one, and will be one from John o'Groat's house to the Land's End. The North-western company I dare say will be some day one company to Aberdeen, I know that they are always trying for it. We, the Great Eastern company, want to go to Edinburgh, and to be one company all the way.

4302. Do you not think that everything you have said as to the Irish railways is equally applicable to the English railways?—Not equally applicable, but in some respects it is. I think that there is a great opening for the State to step in in the case of the English railways and take the debentures; I know that it would be felt as a great convenience to several railway companies. The State would have them to deal with as they came falling in as valuable property.

4303. Should you be prepared to see the State take over all the English railways?—No, not to take over all the railways at all.

4304. Do you look upon the scheme with regard to Ireland, as an experiment intended to test the possibility of doing the same thing in England, or as an exceptional case?—I look upon it as an exceptional

case; I doubt that in England you can go beyond dealing with the preference capital; you cannot interfere with the management.

4305. If Ireland is an exceptional case, will you be good enough to state the circumstances that make it exceptional?—First, of all you have got a system of railways in that country of a manageable extent and with a manageable capital, but from which the greatest possible inconveniences arise to the public from their being cut up into a number of small companies, but being so cut up, an opportunity does arise, and a case occurs in which the State can step in and deal with it, without incurring any liability; but at the same time conferring, without doubt great benefits upon the country.

4306. The Irish railways, according to your statement, are very much in the condition in which the English railways were, when the Manchester and Liverpool railway was a separate line, and the London and Birmingham also was a separate line?—Yes.

4307. In course of time, they have worked out of that state of things without any State assistance?—Yes.

4308. (*Mr. Gower.*) Do you consider that the market value of railway shares would be likely to be considerably raised, if there was any expectation of your scheme being adopted?—I think it is very likely.

4309. Would not that be an artificial value in view of its adoption?—No, you must take the value, but you must antedate the period at which you take the value.

4310. You would take the value at a certain period before?—Yes, I would take it at the announcement of the scheme.

4311. Supposing the traffic on the railways was to increase between the first proposal of the scheme and its adoption, would not great dissatisfaction be felt if the value of the shares at the time of the first proposal was adopted?—I have no doubt that if this were carried out there would be some dissatisfaction amongst the ordinary shareholders, but still I contemplate that any terms you might make must be in advance of the present value.

4312. Is it your proposal that the lease of the Irish railways should be offered to be competed for by any number of companies?—Yes; to those that were prepared with the requisite capital and security.

4313. Would you make it an absolute rule that whichever company offered the best terms should have it?—Yes, the best terms, taking all the circumstances into account; because there might be circumstances connected with one offer which, although of a less pecuniary amount, would make it the most eligible.

4314. Who should decide upon that question as to which company offered the best terms?—I suppose that you would put it in the hands of parties who were competent to deal with the matter. I think there ought to be a commission of some sort to receive and judge of the tenders.

4315. You would propose that there should be some commission or board appointed to judge of the tenders with a view to carrying out your scheme?—You must have somebody appointed to determine the conditions upon which the railways are to be let, and to report upon the tenders that may be offered; and that probably would be one of the greatest difficulties in the way of it, for it is very difficult to find in the State those who have had experience in dealing with these matters.

4316. Do you think that it ought to be an Irish board?—No, I think not.

4317. Should you approve of Irishmen being members of the board?—Certainly.

4318. We have been informed that one of the reasons why railways in Ireland are not amalgamated is, because local jealousies exist there more than in England; do you not think that the existence of those local jealousies would cause great dissatisfaction to be felt with any scheme of this sort?—I dare say

there would be many persons who would, by the carrying out of this scheme, be dispossessed of their influence, and they perhaps would feel very much dissatisfied; but when once the whole management was placed in the hands of a company of individuals, they would not pay much attention to local dissatisfaction.

4319. With regard to the extension of railways, I did not quite understand from you, who was to decide as to what extensions should be carried out?—There are two parties; first of all there is this limited company, and suppose the lessees desired to make an extension, it would go through the ordinary ordeal; they would go for their Act, and if they carried it out, they would have to pay all the charges upon it, and that would be a security to the State. If the State, or persons in a locality, thought fit to have a railway, they would have to find the money, and those parties would be compelled to work it on proper terms; or the parties might work it themselves, although they never could work it so well.

4320. Do you think that localities which are not now served by railways could obtain power to make them with much facility if they were opposed by so powerful a company as you propose to have in this case?—I do not think it would be very powerful as to influence. They would not have a large parliamentary influence, unless they consisted of Members of Parliament, which of course is not likely. The Great Eastern company are a large company, but they do not possess any influence in that way.

4321. Would you permit your proposed company to appear in opposition to any application that might be made by other parties?—The referees must of course judge of their *locus standi*. You could not oppose them if they had a legitimate *locus standi*.

4322. (Mr. Ayrton.) I presume that the purchase of any railways that yielded more than 4 per cent. would, according to the Act of Parliament, be at the rate of 100*l.* for every 4 per cent. of income?—Yes.

4323. Therefore all railways yielding as far as they did yield more than 4 per cent. must be purchased at that rate?—Yes, if purchased by the State.

4324. That would apply to all preference capital, would it not, whether the railway yielded 4 per cent. or not?—I suppose it would.

4325. You would proceed upon that basis?—No.

4326. How would you get rid of that basis as to Ireland unless you proposed to abandon it as to England?—I suppose that nobody in their senses would apply it to buying up railways at 25 years' purchase. I do not suppose that that was ever intended to be acted upon in that way.

4327. Will you explain what would be the difference in favour of a purchase, supposing a lease could only be made according to the present returns?—You see that you have this advantage upon the present returns, that all the charges and the preference charges will fall in within a limited period of years.

4328. I mean, what would represent the interest of the sum of money the Government would have to pay compared with the 768,000*l.*, or have you calculated what would be the charge for the interest upon the money the Government would pay for the railways as compared with what they would receive?—There would be 540,000*l.* a year on the preference stock, and that would leave 230,000*l.* a year to be appropriated to the ordinary shares, without any liability attaching to the State.

4329. What would be the interest upon the sum the Government must pay to purchase up the ordinary shares?—I do not know that; I do not know the present market value.

4330. Have you made any investigation as to the particular sources of increase of revenue that would result from a differential charge?—No, and I do not think that anyone can do so at present; but one thing is quite clear, you find that all the mineral traffic in Ireland is represented by 234,000 tons. I look upon that as a perfectly ridiculous amount, and I

think that it ought to be quadrupled at least. We find that whenever we establish low rates, and we give railway companies the means of quoting rates between certain places for certain traffic, a traffic arises which nobody knows anything about.

4331. What would be the increase of traffic that would be required to make the income equivalent to a corresponding decrease in the rates?—Seeing that the whole amount of the mineral traffic in Ireland is only 234,000 tons, the proceeds from that must be very small, and if you were to reduce the rate charged to one-half, I think you must double the quantity carried; but in what time it would recoup itself, no one, I think, can say. It is plain, however, that by putting the whole of the systems of railways in Ireland under one management, it would be the interest of the parties entrusted with that management to cultivate the traffic, and I believe that there would be traffic that nobody knows of.

4332. Would you not do something more than merely double the quantity of minerals carried, if you reduced the rate by one-half?—Yes, you would have more traffic to work.

4333. Have you considered the ratio of increase that would be necessary upon the working expenses?—That does not come out, but the fact is this; we find as a rule, that whatever the traffic is, whether at low or at high rates, it is made up by quantity, and it in fact comes to this, that the normal earnings of a railway are 5*s.* a train mile, and the normal expenses are 2*s.* 6*d.* a train mile. If you take the earnings in England, and the earnings in Ireland, upon any of the great systems, that is what they are; they all tend to that.

4334. What increase of traffic do you think would be required, speaking generally, would it be three times the amount of the existing traffic?—No. If you take coal which is now carried at three farthings a mile, and you carry it for three-eighths of a penny a mile, you must probably take three tons for one to get the same profit; but you get it back in this way, if you have small rates, you will get large train loads, which they do not get now. I suppose that at the present time there is not a single goods train loaded up to one-fourth of its capacity.

4335. Is not the increase on English railways, and also upon continental lines, mainly due to the fact that they have long leads?—Yes, a great deal of it is.

4336. Do you not think that, as a general rule, that would be much modified in a country where the heart of it, could only give you a lead of 60 miles?—Yes; but that would be met in this way; there would be a terminal charge which would be made, whether the articles were carried 50 miles or 60. On coals that terminal charge would be 5*d.* and then the three-eighths of a penny would attach also; but there is no doubt that the longer the lead the better.

4337. What do you consider to be the demurrage upon a waggon per day?—I have known it to be charged as high as 2*s.* 6*d.*, but that is intended to compel people not to keep them under demurrage; the real cost of demurrage is regulated by what you can haul a waggon per annum for, and you divide that by the number of days; you can haul a large 10-ton waggon for about 10*l.* a year, and if you divide that by 312 that gives you probably a shilling or more a day.

4338. But that becomes a very serious question, does it not, in loading and unloading, and keeping waggons for longer and shorter distances?—No; we do not get the mileage out of the waggons at very much less than you would imagine it is to be got out of them at; and that is one of the advantages which you derive when you consolidate systems, for you get rid of those demurrages.

4339. How shall you be able to give long through rates in a country which is so narrow between any two points of it?—You cannot have so long a through rate as you can where a country is extensive, but still

G. P.

Bidder, Esq.

30th May 1865.

pro tanto it would be an advantage to consolidate railways and to get as long a lead as you can.

4340. Where the lead is so short, does not a reduction of rates produce a very small total reduction in the charge for conveyance, say, from the interior to any port?—That depends upon the amount. If the distance were 50 miles, and upon coal you charged a penny a ton per mile, and you reduced the rate to five-eighths of a penny, you would effect a reduction of 2s. 6d. a ton.

4341. Do you believe that a reduction of 2s. 6d. a ton would stimulate the consumption of coal to the extent of three times the present quantity?—I have not information before me to enable me to answer that question.

4342. You propose, by your scheme, to reduce the charge upon passengers to a farthing a mile?—Yes; and to run one train a day.

4343. If you reduced the charge to a farthing per mile what would be the requisite increase in the number of the passengers to make up the net receipt?—It would be obtained upon the traffic altogether. At that farthing per mile people would travel who do not now travel at all. Of course it would require 240 passengers to earn 5s. a mile. I propose that the train should travel at the rate of 12 miles an hour, and should make up its earnings by taking goods from station to station on its way.

4344. Having regard to a comparison between the Great Eastern system and the Irish systems, do you think, considering that the length of the Great Eastern is 673 miles and that the Irish system is 1598 miles, and the income of the Great Eastern company is 1,497,000*l.*, and that of the Irish systems 1,518,000*l.*, that the working expenses of the Irish systems, which are 750,000*l.*, compare unfavourably with those of the Great Eastern company, which are 770,000*l.*?—I think I have already alluded to that; and I said that the existing earnings of the Great Eastern company are about 1,700,000*l.*, and that the working expenses are very nearly 50 per cent.; but with regard to the Irish railways there is one thing to be taken into account, which is, that the charge for the permanent way is not made up to its average amount, the sleepers have not yet begun to decay in such quantities as would give the fair average cost; excepting that, and assuming that the accounts have been honestly rendered, they speak for themselves, subject to what I have said as to the sleepers. They certainly get some advantage in their wages, but with that exception the working expenses appear to be very nearly the same per-centage.

4345. The chief difference would seem to be in the miscellaneous charges; those of the Great Eastern being 34,000*l.*, and in the Irish system 82,000*l.*?—Yes, and those charges on the Great Eastern would be much reduced if the system was worked by individuals.

4346. Do you see any objection to the amalgamation in Ireland being carried out upon the basis of the Great Western amalgamation?—I do not know what their basis is, but there is no doubt that you can establish a satisfactory basis for amalgamation.

4347. That has been arrived at after a conflict between a great variety of very hostile interests?—No doubt it has.

4348. Previously to that amalgamation was there not, especially in Wales, as great a division of railway interests as even in Ireland?—Yes, and so there is now.

4349. Those Welsh railways are being rapidly absorbed, are they not?—Yes; that is going on very well.

4350. The division of capital and the smallness of the lines in South Wales was as great as it is in Ireland?—Yes.

4351. They are all being combined upon a basis which is agreed upon?—A great many of them are.

4352. Is that basis this, taking the existing earnings as a certain proportion of 100*l.*, and dividing the future gains in that ratio?—It is often this (although

every one stands on its own basis) that if there are three railways, and one is paying 4 per cent., another 3 per cent., and another 2 per cent., they sometimes combine, so that in future their relative dividends should also be in the same ratio.

4353. Why should not the amalgamation be made upon the bases that have been arrived at by conflicting interests in England?—I think you would find that a much more difficult problem to deal with, especially taking into account those railways that pay no dividends; it would be more difficult to get them to amalgamate among themselves than to deal with them as a whole. I think you would find greater difficulty in dealing with local jealousies than in dealing with the whole question as one proposition.

4354. Have you considered the income of the different Irish railways in reference to the whole amount of revenue as compared with the value of the district which the Great Eastern system serves?—No.

4355. (*Capt. Galton.*) In England the principal railway companies are amalgamated together, but there has been no wholesale reduction of the fares, except in cheapening certain classes of traffic, as the interests of the companies have led them to do so?—I think there is no doubt that those amalgamations have greatly tended to a gradual reduction of the fares and rates.

4356. Your proposal, rather, is to avail yourself of Government aid in amalgamating the Irish railways, and to obtain a large reduction of the fares charged for third-class traffic and of the rates charged for the coal traffic at once?—Yes.

4357. Do you propose that the limited company should pay a sum equal to the present net receipts?—No; it is to be a subject of tender; they might offer more, I think, if put up to competition; you might get a larger offer than would be equal to the existing net receipts.

4358. How would you deal with the extensions made by this proposed company at the end of the lease?—The new company would make the extension.

4359. Out of the capital that it would raise?—Yes; out of the capital which they would raise, and it would become then a charge upon the revenue; a permanent charge; but they would be relieved by a part of that being converted into a terminable annuity and part into ordinary stock at the expiration of the lease.

4360. You mentioned that, in proportion to the extension of the traffic, for every 100,000*l.* produced by increase of traffic there should be put upon the railways new rolling stock to the extent of that amount?—Yes; I should limit them to that.

4361. The new company would put that on out of their own capital?—Yes; out of their own capital; but then at the expiration of the lease they would be paid that in the valuation of the stock which they gave up; they might be entitled, as against the estate, to 100,000*l.* for rolling stock, if they had put it on, but not more than that.

4362. All the rest beyond that must be charged against the fund?—Yes.

4363. You mentioned that in the case of a colliery in which you were interested in North Staffordshire the London and North-western company gave you rates for coal, that would not enable you to carry it to London; will you just explain that a little?—We travelled I believe for a distance of about 16 miles on the North Staffordshire line, and this company said, it is not worth our while to take your coal unless we have a terminal and charge a certain rate; the North-western Company charged us the same mileage as from Wigan, viz., a halfpenny a ton, and that halfpenny a ton would represent 36 miles as against our 16 on the North Staffordshire; but then the North-western company made their terminal charge, so that we had two terminal charges to pay, besides a higher mileage rate on the North Staffordshire, and the result is, that the Wigan coals, although much further distant from London, have a preference. But I make no

complaint of that, they are different and separate companies.

4364. You propose for the short traffic in coal on the Irish lines a terminal charge of 5*d.*?—Yes.

4365. You also propose a rate of three-eighths of a penny per ton a mile, whereas the rate between Peterborough and London, a distance of 100 miles, is a farthing a ton per mile?—We charge 124 farthings and 5*d.* for terminals; 2*s.* 7*d.* is the cost exclusive of 5*d.* for terminals.

4366. You referred to the circumstance of coal coming into use in Norway in preference to wood?—Yes; I have known families in Norway who, whenever they can get coal, use it in preference to wood.

4367. (*Mr. Hamilton.*) How do you propose to accomplish the purchase of this railway stock for the Government; what legislative form would it assume?—Very much the same as an Act of Parliament to make a railway. Power should be granted to buy up the whole of the existing lines upon certain terms to be found in the Act. The only thing open to discussion would be the ordinary stock, that is the only real difficulty, for there is a prospective value attached to that, and perhaps there ought to be some court of arbitration to adjust the claims arising out of that.

4368. Would you consider the directors entitled to compensation for the loss of their places?—I dare say they would get it; but I do not think that they would be entitled to it.

4369. Do you think that they would receive compensation under Parliamentary sanction?—I dare say the result would be that they would get something. In amalgamations which take place in this country, it is quite a usual thing to provide for officers of long standing, such as the secretary and others.

4370. Is it not the case that in amalgamations in this country the terms are agreed upon between the companies, and they go to Parliament to ratify the agreement?—Yes.

4371. That would not apply in the case under consideration?—No.

4372. Therefore there would be a great difference between the step which Parliament would have to take in this case and what is usually done in cases of amalgamation in this country?—This is quite abnormal.

4373. Have you made any calculation as to the actual amount of annual saving that would be effected by the proposed consolidation of the Irish railways?—It is impossible to make any, unless I went personally through the whole of the accounts of the Irish railways, and saw the stock, and examined everything in detail, I could not give you that information; but I know, in the nature of things, it must be very large.

4374. On reference to the returns of the Board of Trade, it does not appear that the per-centage of the working expenses on Irish railways is materially larger than that on English railways?—No; but I do not think that all their expenses in that respect are brought in yet; they have not come upon them; that is to say, the charges on the permanent way cannot have been ascertained and set down at their fair average.

4375. I observe in this return before me that the charges are much larger in Ireland than they are in England?—You must take it per mile; it is under 100*l.* a mile now; it does not matter what the traffic is, there will be charges upon the permanent way; the sleepers consist of timber, and they will decay, and whether you have a large traffic or a very small one, does not materially affect it.

4376. Then there is another allowance to be made, the per-centage is apparently the same, but the English railways are charged with a Government duty of nearly three per cent., from that the Irish railways are exempt?—Yes.

4377. If that were taken off, that would make the per-centage in the Irish system larger than it is in the English system?—By that amount, no doubt.

4378. Have you any reason, looking at the traffic, for saying that the rolling stock which the Irish rail-

way companies now possess is inadequate?—No; judging by the number of the engines, I should say it was adequate. They have rather more engines than we have; they have 390, and we have done the work with 330.

4379. On what grounds would you lay down, as a general rule, that you would carry coal at three-eighths of a penny a ton per mile?—I should do that for this reason, that at present it is the rate which the Great Northern company charge, and it is the rate, I believe, which the Great Western company are arranging with the coal owners of South Wales to bring coals up for, and it is the rate which applies to very large quantities of coal that are carried in this country. Undoubtedly it ought to be a higher rate in Ireland than in England, because the quantities will not be equal to those which are carried in England, but the object would be to stimulate the industry of the country, and I think there would be great moral advantages result from the diffusion of coal throughout that country.

4380. If you had to fix a rate on a railway, would you not rather be induced to look to the peculiar circumstances connected with that railway?—Yes.

4381. What would those circumstances be?—If you were to let to me these railways without any restriction, I think that, in all probability, I should charge a higher rate than three-eighths; but if, for the purpose of advancing the country and stimulating enterprise, the State thought it desirable that three-eighths of a penny should be the limit, then I say that you can enforce that rate, and I believe you can enforce it without any charge being brought upon the State, and still afford to the Irish public that advantage.

4382. How do you think you could induce the company you propose, to undertake to act upon such terms unless, upon investigating the circumstances of the railways, they found that that rate would be profitable?—*Quoad* the coal it might not be profitable; but when you see that the whole of the mineral traffic of Ireland is represented by 234,000 tons, it is a mere bagatelle, and the loss upon it could not be large; whereas the general increase would, in my opinion, be very large.

4383. I thought that one of the items upon which you particularly calculated was an increase in the coal traffic?—Yes, and minerals in general; but when you put it to me, whether the parties going to lease these railways would be satisfied with three-eighths of a penny per ton, I say that I do not think they would; but if it were forced upon them, it would have no great effect upon them, because the existing traffic to which it applies is so very minute.

4384. On the one hand, you say that the loss would be small because the traffic is small?—Yes; the existing traffic, and if it did not grow, the loss would not be much; whereas the probability is, that if everything were brought under one management, that traffic would swell greatly.

4385. There is no instance in this country of a lower rate than three-eighths of a penny per ton per mile for coal traffic, and only as low as three-eighths of a penny where there are full trains and favourable gradients?—From Peterborough we have to pay 124 farthings for 100 miles; we have full trains, and we have only one exceptional gradient between Peterborough and London.

4386. You quoted an instance in which some arrangement was likely to be made between the Great Western company and another railway company; do you know the gradients on that line?—The gradients are favourable, but not so favourable as we have on the Great Northern.

4387. You have not got such gradients as 1 in 400 in Ireland?—No; and that is the reason why I propose to fix it at three-eighths of a penny.

4388. And that is the rate which the Great Western company have assented to carry the coal for?—Yes.

4389. The gradient between Swindon and London

G. P.
Bidder, Esq.
30th May 1865.

G. P.
Bidaer, Esq.
30th May 1865.

is extremely favourable?—Yes; but there are some heavier gradients.

4390. There is a line upon which the most unfavourable gradient is 1 in 200?—Yes, that is the Great Northern gradient.

4391. It has been represented to the Commission by many of the Irish witnesses that the traffic of the country is a fixed quantity, and that there is really no prospect of any material increase even under the inducements held out by lowering the fares; that is not your opinion?—I do not believe in that; on the contrary, I am certain that if the whole of the Irish railways were under one management, traffic would grow up throughout the country that nobody has any notion at all of; and if you could quote a rate for the transport of materials and produce according to the fluctuations of the market, I am certain that freight would arise and other sources of traffic and income present themselves of which there is no appearance now.

4392. The same thing might have been said before the days of railways as to the traffic of this country?—Yes. In the Great Eastern district we have increased at the rate of about 80,000*l.* to 100,000*l.* a year in agricultural produce, but the increase was arrested for many years before additional facilities were given and the charges were lowered.

4393. (*Mr. Glyn.*) With regard to your limited company, you propose that they should raise a capital of 1,000,000*l.* and call up 500,000*l.*?—Yes; and of that 500,000*l.* 250,000*l.* should be invested as security, and the other 250,000*l.* I think the company should have for the purpose of improving the stations and as capital in trade. If they laid out 100,000*l.* in improving the stations and in increasing the rolling stock to be put on to the lines, that would become a security to the State.

4394. You would use the other 250,000*l.* to increase the working stock?—Yes.

4395. Would all that be repaid to them when everything was valued at the end of the lease?—Yes; subject to this, that they could not compel the State to take more rolling stock than they had when they took the lease, and that would be represented by the gross revenue.

4396. The quantity put upon the railway which they ought to be paid for, would be measured by the quantity of new traffic that they brought upon the railway?—Yes.

4397. With regard to the arrangement that you alluded to, and which was made with the Caledonian company, if I remember rightly the assent of all parties was obtained before any reduction was made, in the charge upon the preference stock?—Yes, but I think it was rather upon compulsion, although the consent was obtained.

4398. I understood you to say, that the annuity of $4\frac{1}{2}$ per cent. was to be an annuity for 43 years?—Yes.

4399. (*Mr. Lowe.*) Is it essential to the working of your scheme, that the State should be the purchaser of these railways?—I do not see who else is to do it.

4400. You follow the analogy of a Bill compelling sales of land, putting the State in the place of a company?—Yes.

4401. You do not think that it would be possible to get a company that would have the requisite capital?—I am not certain that you could not. It would be possible that a company might be formed to buy up the whole of the railways in Ireland upon certain terms being defined, but I do not think that by such a plan you could secure the eventual advantages to the country, that the plan which I suggest would secure; because my plan contemplates the absolute absorption and annihilation of all the permanent charges.

4402. You assume that a company could not borrow on as easy terms as the Government?—The Government would lend the money, or lend their credit.

4403. Would you rather have the Government directly, or the Government supported by a company?—I am sure that it would be better in the hands of the Government. The only question would be what Department should carry it out.

4404. You propose that the Government, when it had completed this purchase, should lease the line to a company to be established for that purpose?—Yes.

4405. What powers do you propose that the Government, as reversioners of this property, should retain in its own hands?—None, during the lease, except that having leased the line upon certain covenants, the Government should have the power to see that those covenants were fulfilled.

4406. What sort of covenants do you contemplate would be insisted upon by the Government?—In the first place there would be a covenant restricting the rates, providing that the existing rates should be the future maximum; that upon certain exceptional articles reductions that might be determined hereafter should take place; that there should be the daily train I have referred to; that the existing train facilities should be continued, or increased facilities substituted for them. It should be provided that the alterations should not be in reduction of the facilities but in multiplication of them. Then there would be the provision that I have mentioned with respect to the rolling stock, and the provision with regard to the permanent way.

4407. With regard to the maintenance of the permanent way, what arrangement do you contemplate?—With regard to the maintenance of the permanent way, a fund should be established by the company paying over to the Government weekly or quarterly a rate equal to five-eighths of a penny per train mile, so that when 10,000*l.*, or 15,000*l.*, was required to be expended in new rails, it should be taken out of that fund.

4408. The enforcing of the performance of those covenants would involve some legal questions, would it not?—Legal questions would no doubt arise.

4409. How would you propose that those should be decided?—My own notion about it is, (but the Commissioners are far better capable of forming an opinion upon it than myself,) that, looking at the delays involved in an ordinary arbitration, the legal questions that would arise, would have to be left to some high legal authority in Ireland, probably the Lord Chancellor or the Chief Justice.

4410. Do you mean such questions as whether people were receiving the accommodation which the Government had stipulated?—No, only legal questions.

4411. Suppose one covenant said that people should have such accommodation as they had before, and the Government insisted that the accommodation that the company were giving was not the same, while the company contended that, substantially, it was the same, would you call that a legal question?—That would be a matter of fact. There would be questions of law involved, and also questions of fact. There would be first the legal question as to the construction of the covenants which would have to be settled by high legal authority. Then there would be the mechanical questions, How is the permanent way kept up? Is the rolling stock properly kept up? The machinery for the determination of these would be the lessees appointing an engineer, and the Government appointing an engineer, who should settle it, or in the event of their not agreeing, an umpire to be appointed between them should settle it. The Government would appoint whom they liked, then the lessees would appoint whom they liked. Then comes the commercial question. I think that might be left to two commercial men, one to be appointed by the Government and one by the lessees.

4412. What do you call the commercial question?—Any question as to whether there had been a breach of the stipulations with regard to rates, or whether arrangements were being made with regard to traffic which might be contrary to any of the covenants in

the lease; such questions should be settled by commercial men.

4413. Appointed in the same way; one arbitrator being appointed by the Government, and the other by the lessees, an umpire being appointed in case of difference between them?—Yes.

4414. Those exhaust all the questions which you foresee would arise?—Yes. Then the question arises, who is to put all this in motion. There must be some department of the State to receive the rent, and to audit the accounts; because, of course one of the covenants would be that a statement of the receipts of the railway should be furnished to the Government annually.

4415. The Treasury would be the proper department to receive public money, would it not?—I am not able to speak to that.

4416. With regard to the accounts, they would have to be investigated, would they not?—Yes.

4417. Who would you propose should do that?—The department would order it to be done by some public accountant; some London accountant would probably be sent down.

4418. Do you contemplate that there would be any chance of competition for such a lease as this?—Yes.

4419. You propose that tenders should be invited for it?—Yes.

4420. Do you think that one board could manage 1,700 miles of railway?—Yes, very easily.

4421. Is there any instance of such a thing at present?—The London and North-western system is 1,200 miles, I think, but then their revenue is 100,000*l.* a week. It is a much more complicated system than the Irish, because the different companies are so much interlaced with each other, and constant contests arise.

4422. Do not you think that your proposal has this weak side, that it would operate unfavourably as to the creation of new railways in Ireland?—It might so operate; unless properly guarded it would have that effect.

4423. The State would be rather disposed to support its lessee?—It would.

4424. Taking the analogy of France, we know how difficult it is to get a new concession, the State and the present concessionaires uniting against any one applying for another concession?—Yes; I see that there would be that difficulty.

4425. How would you guard against such a difficulty in the case of Ireland?—In the first place I should propose that this company should be bound by covenants in the lease to work any new line that was really required, projected by any party, that they should not divert from that line the traffic for which it was designed, and that if they did they should be accountable. I think with those covenants, where lines were really required, the parties for their own interests would promote them.

4426. Would it be possible to put any covenant in the lease to the company, stipulating that they should work those new lines to the satisfaction of any independent body?—The covenants of the lease would embrace such a provision.

4427. Such a body as the Board of Trade?—They should be bound to work them efficiently, and if they did not work them efficiently, the arbitration clause which I have already mentioned, would come into play.

4428. You propose that the term of the lease should be renewed every ten or fourteen years?—Yes.

4429. Do not you think that there would be a very awkward pressure put upon the Government by Irish gentlemen, when that time came round?—No; they would have no power to interfere, the lease would be renewed, and the terms would be arranged according to the receipts of the last year.

4430. It would be according to something that worked itself; it would not be discretionary with the Government?—No; the reason why I propose a short time is, because many people would be willing to go into such a venture if it were terminable at the end

of ten years, who would not like to go into it for a long time, unless it could be revised.

4431. With regard to the maintenance of the permanent way, you would rely upon the covenants in the lease?—Yes. I would make it their interest to keep up the road, because the money that would accumulate as a renewal fund, would be more than would be necessary to renew it.

4432. The company would gain nothing by saving anything within that fund?—No, they would lose.

4433. So that practically it would be spent on the permanent way?—Yes.

4434. You think it possible to estimate what it would be?—Yes, to within a fraction of a farthing, it would be five-eighths of a penny, or at the most three-fourths.

4435. Have you ever known an instance where the figures you have put were practically worked out?—I know an instance where the calculation as to rolling stock worked out satisfactorily at the end of a ten years lease, the parties who had worked the line and the parties who had leased it being both satisfied at the end of the contract.

4436. (*Sir R. Hill.*) You propose no general reduction of rates?—No.

4437. You would leave it to the company to charge any rates not exceeding the present rates that they may think most profitable with certain exceptions?—Yes.

4438. You said that in the natural course of things the traffic must increase. You are aware of course that the population of Ireland has for several years been decreasing?—Yes.

4439. Do you think, supposing that decrease to continue, there would be an increase of traffic under the arrangement you propose?—Yes, I think so. Of course there would not be that increase which takes place with a growing population, but the traffic of the population that would exist would become developed and enterprise would be excited. They would travel a great deal more and produce more to be carried. The land would be cultivated to a greater extent, and so the traffic would be increased. The population in our agricultural districts is stationary, and in fact decreasing, though the traffic has increased.

4440. You have stated that coals are conveyed by the Great Eastern from Peterborough to London for about $\frac{1}{4}$ *d.* ton a mile, does that charge include the waggons?—No; that is carried in coalowners waggons, and to that the terminals have to be added. The $\frac{1}{2}$ *d.* for terminals is a fixed charge, whatever the mileage; it is to cover rent of land and the labour which is done in the station yard.

4441. What would be the additional charge if the company found the waggons?— $\frac{1}{8}$ *d.* per ton per mile; but this is purposely excessive, in order to induce the coal owners to provide their own waggons.

4442. When you spoke of doing away with all mileage rates, I presume you spoke of giving a lower rate in proportion for a greater distance, and not different rates, as between towns equidistant from a common centre?—Yes; I mean that in working a railway you must put mileage rates on one side altogether. Supposing you have a certain amount of traffic to carry between A. and B., if the net cost of carrying that is, say 3*s.*, and you cannot get above 4*s.*, you must be content to take the 4*s.* rate, whatever the distance is; you cannot cultivate traffic to any extent on any other principles.

4443. You would adopt unequal mileage rates in different parts of the country?—You must adopt them if you mean to develop traffic.

4444. (*Mr. Glyn.*) You set apart for permanent way $\frac{3}{8}$ *d.* or $\frac{1}{2}$ *d.*, $\frac{1}{4}$ *d.* for engine power, and $\frac{1}{4}$ *d.* for carriages and waggons?—Yes, amounting altogether to $\frac{3}{4}$ *d.* per train mile.

4445. I understand you to say, that as far as regards permanent way, that figure has actually been tested?—Yes. I went into it with Mr. Sinclair, and it is based upon this: we took up last year some

G. P.
Bidder, Esq.

30th May 1865.

G. P.
Bidder, Esq.
30th May 1865.

rails on the Colchester line that were put down when it was first made, 26 years ago. Some rails which I laid on the Cambridge line (which are rather lighter, being 16 lbs. to the yard), are still in existence; that is where our heaviest traffic is. Therefore on the average you may take the life of a rail at 25 years. With regard to sleepers you may take their duration on an average at 20 years.

4446. Is not 25 years a long average for rails?—No; not taking them all round. The rails at the Derby station wear out in a year. I do not mean to say that 20 years would be the life of a rail on the Great Northern, where a very large coal trade is carried at a high rate of speed; but on the Great Eastern, with which Irish railways may be taken to correspond, 25 years is the life of a rail.

4447. (*Capt. Galton.*) What is the life of a sleeper?—At this moment there are sleepers between London and Colchester that were laid down in 1839.

4448. (*Sir R. Hill.*) Were those sleepers prepared in any way?—They bear no appearance of having been prepared; they are made of large Scotch fir. Mr. Sinclair had them analysed, and they gave indications of having been prepared with a solution of copper.

4449. (*Mr. Hamilton.*) Are the rates you have given derived from the practical working of your own line only, or from the practical working of all the lines in the United Kingdom?—From the working of all lines. You may reduce the working almost of all railways to a few definite and simple figures. You may take the total value of the rolling stock (half of which is for engines) as represented by the gross annual income. You may reckon the proper performance of every engine as 20,000 miles per annum. The average earnings are about 5s. per train mile, therefore the earnings of the engine ought to be 5,000*l.* a year. The average expenses are about 2s. 6*d.*, made up as follows, in some cases a little more, and in others a little less. 1s. for maintenance of engines, rolling stock, and waggons; 6*d.* for maintenance of permanent way; 9*d.* for coaching expenses, guards, station masters, porters, and goods depôts, and 3*d.* for miscellaneous charges, including Government duty, rates, and taxes, and compensation for accidents. If you take the Board of Trade return, and take the half-yearly statements, you find with very slight variations they will come to those results.

4450. (*Chairman.*) You contemplate that the leasing company would pay over to the Government in the shape of rent an amount corresponding to that now divided amongst the shareholders and debenture holders?—I think it would be that amount at least.

4451. Having made an arrangement with the Government to pay over that amount, would they not be likely to consider themselves tolerably safe without making any considerable reduction in the fares, or exerting themselves to develop additional traffic?—Having once entered upon the lease, they would make no further reduction than they were compelled to make, unless with a view to their own advantage.

4452. Do you think under the plan you propose there would be a sufficient inducement to them to do all they could to increase the traffic of the country?—I have no doubt of it. It would be for their interest, for instance, to cultivate a traffic which does not now exist, viz., quoting rates between places where there is no existing traffic at all, which would have nothing to do with any existing traffic whatever.

4453. You think that no company would take the lease unless with the expectation of being able to develop a greatly increased traffic?—No, I should think not.

4454. Would the Irish gauge in your opinion offer any obstacle to the working of your proposal?—Not at all.

4455. Is not the expense of the permanent way rather heavier?—Not necessarily so at all.

4456. The sleepers must be rather larger, must they not?—A little larger, about 6 inches more; that would not be a material item.

4457. The dead weight is heavier, is it not?—A very little.

4458. You do not think that that would be found to be any impediment to the working of your scheme?—No; you could not put a value upon it.

4459. Do you anticipate that the lease might be taken by parties connected with English railways with a view to improve the traffic on their own railways?—Possibly English companies might be represented on the leasing company, which would enable them to quote a through rate, there being only one party to deal with. The London and North-western or the Great Western possibly might be represented in the company, and it would be very desirable that they should.

4460. Do you think it possible that one of the great English companies might get possession of the Irish railways, and work them to the detriment of all other companies in England?—I do not see how they could without the permission of Parliament.

4461. (*Mr. Glyn.*) Do not you think the English companies would view it as a mercantile speculation, in fact?—Yes; the great companies would, no doubt, for the sake of the advantages they would derive in this country, be represented in the leasing company; and that being so, very likely more rent would be obtained.

4462. (*Sir R. Hill.*) Do not you think that the arrangement should comprise some provision as to a reduction in the rates of charge?—They would be revised at the end of every 10 years.

4463. I mean during the first 10 years?—When once the lease is signed, except seeing that the lease is fulfilled, the State must not interfere. They must not nurse it or coerce it.

4464. (*Mr. Glyn.*) Do not you think the resources of Ireland would be likely to be better developed if the lease were in the hands of a mercantile company than if it were in the hands of the large English railway companies?—I do not know that they would. I am not at all certain, if it were in the hands of the London and North-western, that they would not develop traffic even to a greater extent.

4465. They would cultivate through traffic?—Yes, I mean through traffic.

4466. (*Capt. Galton.*) Could you give us any idea what the economy has been in the management of the Great Eastern company since its amalgamation?—With regard to working we were in fact amalgamated before the amalgamation took place.

4467. Could you inform us what the saving was when the amalgamation took place?—No; because I am sorry to say that until this amalgamation I never considered the lines as fairly and honestly kept up.

4468. (*Chairman.*) Do not you know of cases in which the traffic of particular districts is imperfectly developed in consequence of being part of a very large system?—I cannot say that there may not be such cases, but I do not know of any.

4469. Do not you think that if the railways were in the hands of parties connected with the district they would be likely to take a greater interest in the development of the resources of the district, than if the railways were in the hands of parties not locally connected with the district?—Possibly; but on the other hand it is much a sounder principle to rely on the interest of the parties working the line being identical with the general prosperity of the country. Local interests in the directorate might lead to the same evils as independent companies.

4470. (*Capt. Galton.*) The traffic of the Great Eastern has been very much developed, has it not, since its practical amalgamation?—Yes.

4471. To an extent which was not anticipated at all?—We did not anticipate such a large increase of local traffic. We anticipated a larger increase from another source, which at present we have not approached.

4472. The local traffic has been very largely developed, has it not?—Yes, very largely.

Friday, 2nd June 1865.

PRESENT :

THE RIGHT. HON. LORD STANLEY, M.P., F.R.S.
 THE HON. E. F. LEVESON GOWER, M.P.
 SIR ROWLAND HILL, K.C.B., F.R.S.
 T. B. HORSFALL, Esq., M.P.

GEO. CARR GLYN, Esq., M.P.
 CAPT. DOUGLAS GALTON, R.E., F.R.S.
 E. T. HAMILTON, Esq.
 WM. POLE, Esq., F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

WILLIAM HAUGHTON, Esq., examined, Mr. J. W. MURLAND being also present.

W. Haughton
Esq.

2nd June 1865.

4473. (*Chairman*.) You are chairman of the Great Southern and Western Railway of Ireland?—Yes.

4474. For how many years have you been chairman of that system?—Since 1860. I was deputy chairman for several years previously. I have been connected with its affairs from the commencement, and have taken an active part in them.

4475. You have been a member of the board since the railway was opened?—Yes.

4476. I presume the question has frequently come under the consideration of the directors whether measures could be adopted for rendering the railway more profitable to the shareholders?—Constantly, of course.

4477. Can you state whether the possibility of rendering the railway more profitable by reducing the fares has been one of the subjects which has been considered by your board?—He would be a very bold man, I think, that would make the experiment.

4478. Has your board had that question under their consideration?—No; it has not been taken into very serious consideration at any time.

4479. Are you decidedly of opinion that a reduction of the fares and charges on your railway would be too hazardous an experiment to undertake?—I have not the shadow of a doubt on the subject.

4480. May it be taken as a general axiom that if the fares were greatly reduced, the effect would be to increase the number of the passengers?—No doubt of it.

4481. Will you state upon what grounds you have come to the conclusion that that increase in the number of the passengers would not make up for the falling off in the receipts occasioned by lowering the fares?—The Great Southern and Western Railway runs almost entirely through an agricultural district, and I think it has been found, both in England and in Ireland, that people do not travel largely in agricultural districts, and I do not know of any internal traffic that there is between any towns in Ireland, that we could hope would bring any large increase of traffic to us, if we made a great reduction in the fares.

4482. Have you ascertained that low fares in agricultural districts do not produce any considerable increase in the number of the persons who travel?—I inquired of one of the principal traffic managers on the London and North-western Railway in the course of private conversation whether it was so in England, and he informed me that it was the same in England as in Ireland.

4483. Have the fares upon your railway remained substantially the same since it was opened?—There has been only one change that I can recollect, and that was an addition of 10 per cent. that was made to the first and second class passenger fares some few years ago.

4484. What was the result of that experiment?—At this moment I really cannot say.

4485. You are not able to say whether it was satisfactory to the shareholders?—It is almost impossible to arrive at an accurate conclusion on the subject, owing to the great number of branch lines, and the extension of the mileage of the railway since it was first opened. We first commenced with 56 miles, but now it is nearly 400 miles. We have had many branches made.

4486. When was the advance of 10 per cent. made?—Some eight or nine years ago.

4487. With that addition has the scale of fares remained the same ever since?—Yes.

4488. Did that apply only to the first and second class fares?—Yes.

4489. Have you a third-class traffic of any importance?—Yes, the third-class traffic is large; but it is very small in proportion to what it is in England or in the north of Ireland.

4490. Do you give special facilities to third-class passengers on market days, or to any of the towns on your line?—No, we have nothing of that kind.

4491. Do you run any excursion trains at low fares?—Frequently.

4492. Are they excursion trains for the poorer classes of people, or mainly for those who are expected to travel first and second class?—We always attach carriages for third-class passengers.

4493. Between what towns or places do you run the excursion trains?—We run them from Kilkenny to Dublin three or four times in a year, and very frequently also from Cork to Dublin. We run also special trains from the south of Ireland to Killarney. This time table will explain it (*handing in the same*). I have also brought with me to lay before the Commission a table, showing the times at which the different portions of the Great Southern and Western Railway were opened for traffic, and the receipts upon every description of traffic for every year from that time down to the present (*handing it in. See Appendix, A.H.*) It enters very fully into detail, showing everything connected with the traffic upon the Great Southern and Western Railway, and perhaps the most important feature in this return is this, that when we had only 90 miles of railway opened, we carried a good deal more than half as many passengers as we carry now, when we have 400 miles of railway opened. On goods and cattle it has been just the reverse, for we have had a steady increase in them at all times, until within the last two or three years.

4494. Between what places were the first 90 miles of your line opened?—The first division was to Carlow, a distance of 56 miles; then from Maryborough to a place called Ballybofey, which was only a field at the time. We made an addition to the 90 miles in the year 1847, by an extension of 34 miles; that was the Maryborough and Roscrea Junction.

4495. At that time you did not communicate with Cork?—No, and not for a long time after that.

4496. Was there any large increase in the traffic when you effected a communication through from Dublin to Cork?—I find by the return that of first-class passengers, when we had 90 miles of railway opened, there were 51,000, and that when we got to Cork the first-class passengers were only 49,000.

4497. (*Mr. Horsfall.*) Were the fares varied at that time?—Not at all. I am speaking of the first class only.

4498. (*Chairman.*) As to the second and third-class passengers, were there corresponding results?—The second-class passengers in number were 128,000 in 1847, and when our line was opened to Cork, their numbers increased to 153,000.

4499. Was that after the line to Cork had been opened for any considerable period?—No; this was only in the first year.

4500. Had the line been opened for a year?—I had better perhaps take the following year, and after it had been opened for a little more than a year (it had

W. Haughton,
Esq.

2nd June 1865.

been opened from October 1849 to December 1850), the number of first-class passengers then was 74,000.

4501. Compared with about 80,000 other passengers in 1847?—Yes, the two other classes together made, in 1847, 68,000; but I have been giving you the first-class passengers in 1850, after the line had been opened to Cork.

4502. Was there any considerable increase in the number of passengers after the opening of the line to Cork?—I will give you the numbers of the third-class passengers. In 1847 there were 289,135 third-class passengers, while in 1850 there were, of third-class passengers, 245,379; so that there was an actual decrease.

4503. (Capt. Galton.) Had you altered the fares between the two periods?—I think not.

4504. (Chairman.) To what do you attribute the falling off in the traffic after you had effected a communication with such an important town as Cork?—I cannot give you the reason, for I only have the facts here. The return to which I have referred was prepared for the directors, and it furnishes every possible information with respect to our traffic. It is headed, "1st Class," "2nd Class," "3rd Class," "1st Return," "2nd Return," and so on, showing the receipts per mile.

4505. (Capt. Galton.) Were the receipts smaller per mile for passengers?—The receipts for passengers per mile in 1847 were 746*l.*, and in 1850, 684*l.*

4506. What was the increase in the mileage in 1850?—The mileage then was 98 miles.

4507. What were the actual receipts for the passengers?—In 1847 the actual receipts were 62,227*l.*

4508. (Mr. Glyn.) Have you any objection to put in that return?—No; I have already done so.

4509. (Capt. Galton.) What were the receipts for passengers in 1850?—128,805*l.*

4510. A smaller number of passengers must have travelled over a longer distance?—Yes.

4511. The local traffic had not improved?—We have no local traffic; at least it is really so small that it is hardly worth speaking of, and that is the reason why we do not see the necessity for altering our trains between the different towns. The paper which I hold in my hand is not a very accurate account of what might be the result if other towns were taken in, but I found this in the copy-book, and I thought the Commissioners might wish to see it, as it will show how small the traffic is between the different towns. Between Hazlehead and Carlow the total amount of money received in 1856 was only 2*l.*

The following return was handed in:

GREAT SOUTHERN AND WESTERN RAILWAY.

GOODS TRAFFIC between the under-mentioned Stations for the Years 1856, 1857, and 1858.

1856.	1857.	1858.	Stations.		1856.	1857.	1858.

4512. (Mr. Glyn.) During what period of time?—For a whole year, in 1856, the sum received was only 2*l.*

4513. (Mr. Gower.) What was the distance between the two places?—I suppose it was about between 30 and 40 miles. In the next year, 1857, the amount received was 19*l.*, and in 1858 it was only 4*l.*

In fact there was no traffic between those towns to speak of, except those which have a communication with the Curragh Camp; there is a small traffic between those towns, but not otherwise.

4514. (Mr. Glyn.) What is the largest return between any two places mentioned on that paper?—From Athy to Newbridge in 1856 the amount was 64*l.*

4515. (Mr. Horsfall.) For goods only?—Yes.

4516. Is your traffic chiefly confined to what passes between Dublin and the more important towns in the interior?—Our traffic is almost entirely confined to what passes between the large towns of the country and the capital; but of course that rule varies. When you come to a large town like Cork, for instance, the traffic from Mallow, which is within a distance of 20 miles from Cork would be to Cork, or again from Fermoy to Cork; it is just like attraction, the larger town attracts the traffic from the smaller towns within the circle round it.

4517. The return you have handed in refers entirely to goods, can you speak as to passenger traffic between the different towns?—I cannot give you a return of those.

4518. Can you say whether there is much passenger traffic between the second-rate towns, and generally from one to the other?—I think there is none at all worth speaking of. I do not see what the business would be that people would have to go about from town to town.

4519. (Mr. Glyn.) Between Limerick and Dublin is there much traffic?—Yes, a very considerable traffic.

4520. (Mr. Horsfall.) Can you give a return of the passenger traffic between the two towns you first mentioned, Hazlehead and Carlow?—I have not got a return of the passengers, but I am sure it would be nil.

4521. Do trains run between those places?—Yes, they run several times a day. Hazlehead is a very poor place, and the towns are nearly all of the same character throughout. I may mention that at one time we ran a very vigorous opposition against the Grand Canal; that was continued for nearly two years, and I have got a return of the result of that very vigorous opposition, which was carried on at lower rates than any one had ever proposed to reduce the rates to, and I will state to you the results. I have brought every document that I could lay my hands upon which I thought would be useful to the Commission since I received a summons to attend.

4522. Between what towns did the Grand Canal Company compete with you?—The most important towns were Athy, Carlow, Milford, Bagenalstown, Tullamore, and Maryborough. I need not trouble the Commission by going through all the places mentioned in this document as I have handed it in. The town of Carlow is one of the best towns we have on the line; it has 10,000 inhabitants, and the rates were reduced from 7*s.* 6*d.* to 2*s.* on second class goods.

4523. What description of goods were they?—Principally grain and flour, and the result of it was that while prior to the opposition, we carried, 5,968 tons from Dublin to Carlow.

4524. (Chairman.) Do you mean in a year?—Yes, there has been a very strong opposition there, because the river Barrow and the Grand Canal compete very successfully, the water navigation runs close to the mills, and we cannot compete successfully with them. As I have stated we reduced the rate upon second-class goods from 7*s.* 6*d.* to 2*s.*, and the result as to tonnage was, that whereas before the opposition commenced we had 5,968 tons in 1856, in 1857 we had 9,531 tons. During the second year's opposition we had 13,408 tons. In money receipt the result was that while we received, before the opposition commenced, 3,164*l.*, in 1857 we received, with the increased tonnage, 1,692*l.*, and in 1858 we received 2,261*l.* The gross result of the opposition was a total increase in the tonnage upon the two years of 31,843 tons, that is, between the 12 stations and the total loss in money upon the two years was

W. Haughton,
Esq.

2nd June 1865.

12,490l.; the opposition extended over 102 miles of railway. I should also mention to the Commission that the increase arose in a great measure from traffic, extraneous to the district, being induced to come to that particular point for transmission on account of the very low rate of 2s. a ton being charged. It was not permanent traffic, and we should not have had that increase, if the same rate of 2s. a ton had been extended over a larger district.

4525. (*Capt. Galton.*) Did not the experience which you obtained on that occasion make it worth your while to make an experiment to see whether it was entirely owing to that, or whether it was not due to the lower rate that you charge?—I should explain that this traffic was abstracted from the Grand Canal.

4526. Can you state what the receipts on the Grand Canal were at the same time?—I cannot.

4527. (*Mr. Glyn.*) Did you raise your rates again at the end of that time?—Yes; but we came to terms with the Grand Canal Company, and we allowed them 15 per cent. differential rate; they were to take the risks and to carry the entire traffic along the line of their navigation.

4528. (*Capt. Galton.*) Has your traffic fallen off since that time?—Yes; along the line of the navigation; but it affects particular classes of goods more than others; what we call bale goods would not be so much affected as grain and flour would be. There is no hurry required in the transmission of the one kind of articles, and dispatch is required with the others; we generally get goods to convey which require very quick transmission, and the canal company get goods to carry which may be conveyed slowly, although it is of very little importance whether a man gets his goods from the canal or the railway, because the distances are so short.

4529. (*Mr. Horsfall.*) Did the revenue in those years pay the working expenses of the line?—Yes, we have paid a dividend ever since we opened; a very good one.

4530. What dividend have you paid?—It began, I think, at 3 or $3\frac{1}{4}$ per cent.; then it got up to the highest point, in 1856, when we paid 6 per cent.; but that was entirely owing to the enormous amount of traffic that we carried, particularly military stores, which was carried over our line during the last year of the Crimean war. The dividend became reduced afterwards to 5 per cent., and in the last two years, it has been $4\frac{1}{2}$ per cent.

4531. (*Mr. Glyn.*) Are you charging your maximum fares for first and second class passengers?—We charge 1d., $1\frac{1}{2}$ d., and 2d. for the three classes of passengers, with 10 per cent. added to the first and second classes.

4532. (*Capt. Galton.*) Do you charge your maximum on the third-class passengers?—That is the parliamentary rate.

4533. I observe by the return that your line was opened throughout for traffic in 1860?—Yes.

4534. It was then 320 miles long?—Yes.

4535. Your first and second class passengers were in that year respectively 85,000 and 52,000, and in 1864 they were only 80,000 and 48,000?—Yes.

4536. Your return tickets had increased about 5,000. Your third-class traffic was 400,000 in 1860, and 468,000 in 1864. Therefore the third-class traffic appears to have progressively increased every year, while the first and second class traffic remained very nearly stationary?—Yes.

4537. Does not that show that there is a source of traffic which, if appealed to, will respond to the call?—Yes; but I fear that that arose from increased emigration.

4538. It appears that there has been a very steady increase throughout the whole time?—Yes.

4539. I observe also, referring to the traffic in coals, that in the year 1859, when you had 249 miles of railway opened, your coal traffic was 29,000 tons, and the receipt in money 5,000l.?—Yes,

4540. In the next year you had opened 329 miles, and the quantity carried suddenly sprung up to 45,000 tons, and the receipts in money to 8,500l.?—Yes.

4541. Where was the fresh mileage opened which produced that increase in the coal traffic?—It brought the Killarney district on to the line; but I think that that had not so much effect as the very wet season of 1860, which caused the turf to be very badly saved.

4542. In 1864 I see that the coal traffic amounted to 49,000 tons, and the receipt in money 9,000l.?—The coal traffic has always been an increasing traffic; but at the same time it is a very small one.

4543. At what price per ton is the coal carried?—I have had that accurately taken out, and the gross amount that we received for every ton of coal carried last year was 3s. 9d.

4544. Can you state what the price per ton per mile was?—We charge a penny a ton per mile for coal, without terminals, and we provide the waggons.

4545. From what ports do you chiefly carry coals?—Upon that point I may mention that Judge Longfield was mistaken in saying that it was from Dublin we chiefly carried coals; we carry coals from Cork to a greater extent than from Dublin.

4546. Does that coal go to the districts of Mallow and Killarney?—The 3s. 9d. is 45 pence for an average distance of 45 miles.

4547. The length of the line is 387 miles?—Yes; but really the consumption of coal in the interior of Ireland is almost entirely confined to the gentry. It is not used for manufacturing purposes, to any extent, I am sorry to say. I believe that one reason for the increase which has taken place in the coal traffic has been that the price charged for saving turf has increased; labour has greatly increased in value, and the gentry of the country cannot get turf supplied to them so cheaply as they used to do. The poor people themselves do not place any value upon turf, because they have what is called "turbary" attached to their farms, and they are permitted to cut turf without paying anything for it. I think it is quite hopeless to expect a traffic in coals for the consumption of the poor. The only source from which we could expect an increase would be for manufacturing purposes, and, I am sorry to say, that at the present time there is a very large amount of mill power that is not availed of in the most favourable parts of Ireland—water power. This is owing to the stoppage of the flour mills; that trade, which was formerly the principal manufacturing trade in the south of Ireland, is now in a very bad state indeed.

4548. (*Chairman.*) Do you communicate direct with the shipping at Cork?—Yes.

4549. Can the vessels be unloaded and their cargoes be put into your trucks at once?—Not ordinary goods; coals are unloaded and put into the trucks.

4550. (*Mr. Horsfall.*) Have you any through booking arrangements with railway companies in England?—Yes, very extensive.

4551. With what railway companies?—The London and North-western, the Lancashire and Yorkshire, the Manchester, Sheffield, and Lincolnshire, and the Great Northern.

4552. You book the goods through?—Yes, over all those lines.

4553. (*Capt. Galton.*) Do you book through with the Great Western line?—We book through by Holyhead with them.

4554. Not by Wexford or Waterford, or Cork?—No.

4555. Have any attempts been made by the Great Western Company to induce you to book through?—They have asked us to book through passengers, and we did book through with them, although it has been stated that we did not, but that was a mistake.

4556. Have there not been some negotiations recently?—Simply on account of this, that they would not pay us the money that they received last year,

W. Haughton,
Esq.

2nd June 1865.

and we stopped the booking until they paid us; when they paid us we resumed the booking again. But the whole thing amounts only to 100l.

4557. (*Mr. Horsfall.*) Have you through traffic in goods as well as in passengers?—It is principally in goods.

4558. How do you arrange with regard to the terminals charged, do you allow the parties forwarding goods from your line to the London and North-western to pay their own terminal charges, or do you charge them a specific sum?—There is a through rate at first; the terminals are deducted from the gross rate, and the balance is divided according to the mileage.

4559. That is, as between the two railway companies?—Yes.

4560. But I mean as between the public and the railway companies?—We never charge the public terminals at all.

4561. You allow them to transact their own business?—Yes, the rate is a net rate that we charge.

4562. Supposing the shipper of goods was anxious to pay his own terminal charges, would you make a deduction from your through rate equal to what he would have to pay?—Such a case has never arisen.

4563. (*Mr. Glyn.*) Who does the cartage for you in Dublin?—Mr. Fishbourne.

4564. Does he settle with the parties who ship the goods?—Not at all, the railway company settles that.

4565. Is not that a terminal charge?—No, that is an additional charge. The cartage is across the town.

4566. (*Mr. Horsfall.*) Do the railway companies pay that additional charge across the town?—It is added to the gross charge. The through rate is 2s. a ton from the Great Southern Railway to the shipping place.

4567. Is that for local traffic?—No, our rates are from station to station rates. I think it only right to say here, that I have seen some evidence which was given before this Commission, impugning the character of Mr. Fishbourne, and I consider that the statements which have been made are very unfounded. The rates are fixed by the railway company as those which Mr. Fishbourne is to charge, and he cannot exceed them. The rate charged is 2s. a ton for a distance of fully two miles and rather more.

4568. (*Mr. Glyn.*) Does he collect the goods?—Yes; he acts in Dublin just like Messrs. Pickford do in London.

(*Mr. Murland.*) I think the Commission should understand that any person who chooses may bring his goods to the railway, and thereby save Mr. Fishbourne's charge, or he may take his goods away from the railway and in the same way save the charge. Our rates are station to station rates, except where we book through to England.

4569. (*Chairman, to Mr. Murland.*) When a person comes to the station for his own goods do you not charge him anything beyond a mileage rate?—We charge him nothing but the regular rate. In calculating those rates no doubt we consider the expense that we are at with regard to terminals; but nothing is added apparently for terminals.

(*Mr. Haughton.*) The rate from Cork to Dublin is 12s. 6d. per ton for second class goods.

(*Mr. Murland.*) In calculating that rate the railway company of course take into account the terminal expenses.

4570. (*Mr. Horsfall, to Mr. Murland.*) Are you confining your observations now to Ireland?—Yes; to the Great Southern Railway.

4571. Does the same principle apply to Liverpool? You have a through booking arrangement with the London and North-western Company, and do you allow parties in Liverpool to pay their own terminal charges?—I do not know. We book through to Liverpool, and of course we forward the goods by our carrier from the railway at Dublin to the steamer,

and the charge for that is added on, the person owning the goods could not interfere.

4572. (*Mr. Glyn.*) If a person in Dublin chose to do it he could send his own goods to the railway station, and free himself from the charge paid to Mr. Fishbourne?—Yes.

4573. (*Capt. Galton to Mr. Haughton.*) Do you give special rates to individuals?—We have frequently done so; but in every case in which we have made a contract of that kind, the party has failed to fulfil his contract as to the quantity which he promised in the first place to send.

4574. Could you state any instance of that kind?—I will take the town of Tralee—at that extreme point on the map. There is a large barley trade carried on there, and people have come to us and said, "I will undertake to send so many tons of barley to Dublin if you will charge me such and such a reduced rate." We have said, "Very well; if you will send us that quantity we will charge you so and so, and we will give you a drawback." I do not think there has been an instance in which the drawback has not been applied for, nor in which the full amount of the goods agreed for have been delivered.

4575. You have scarcely any special rates at present?—I do not think we have one at this time.

4576. Are your ordinary rates published, so that any person may see them?—Yes.

4577. (*Mr. Gower.*) Are your rates uniform throughout the system?—They vary according to the distances very much.

4578. And also according to direction?—No.

4579. Are the rates the same inwards or outwards?—Yes.

4580. I see, by the return, that the amount of goods sent from Tullamore to Cork is about 15 times as much as the goods sent from Cork to Tullamore. I suppose there is a great number of empty trucks sent from Cork inwards?—I think it must have been a very exceptional year.

4581. The larger quantity being from Tullamore to Cork?—I believe it consisted entirely of potatoes.

4582. Would it not answer to charge reduced rates for goods carried from Cork to Tullamore?—There is no natural traffic between Cork and Tullamore at all; it was quite an exceptional case that has been referred to, potatoes were very scarce in Cork, but they were plentiful in Tullamore.

4583. (*Capt. Galton.*) For all those three years, 1856, 1857, and 1858?—Yes. There was some grain traffic between Cork and Tullamore, but not between Tullamore and Cork. Cork is a great depôt for shipping; foreign grain vessels come there.

4584. If you had carried grain at a cheaper rate, would not more of it have been carried?—I think not. I am intimately acquainted with the grain trade of Ireland, and I do not see why there should be any more.

4585. (*Lord Stanley.*) Have you tried the experiment for a limited time over a limited portion of your railway of reducing the fares considerably to see whether there would be an increase of traffic?—No, except in the case of the opposition that I have already mentioned.

4586. Has there been any proposal for an amalgamation between your system and the Waterford and Limerick?—Yes, repeatedly.

4587. Have the negotiations come to nothing?—Yes. We made an offer to them at one time, which was assented to by several of the directors, who waited upon the Great Southern and Western Board, to give them in perpetuity a 3 per cent. dividend. We were anxious to have a uniform rate over the whole of the southern parts of Ireland, but the present chairman of the Waterford and Limerick Railway told the proprietors that if they would leave the matter to him, he would give them a far better dividend than that; but their dividend has gone down until I believe the last dividend was only a quarter per cent, for the half-year.

W. Haughton,
Esq.

2nd June 1865.

4588. Do you see any insuperable obstacles in the way of an amalgamation at some future time?—No. I have always felt that it was only a question of time, and that in time there must be an amalgamation between all the lines in the south of Ireland, for they are all in a state of bankruptcy at the present time.

4589. You do not see any reason why the smaller Irish companies should not, like the English railway companies, become merged in the larger systems?—No; and if you will look at the map you will see that we are gradually carrying that out. We have merged into one line from Carlow to Kilkenny; we have also merged into one line from Mallow to Killarney, and on to Tralee; and we are working now the Charleville and Limerick line.

4590. If any one were to assert, the multiplicity of Irish railway companies being admitted to be an evil, that that evil could not be got rid of without some compulsory interference on the part of the Government, you would not agree with that?—It would be difficult, I think, to get any parties whose line of railway is as bad as it can be, to give it for its value, unless the Government interfered. Of course you could not expect the Great Southern and Western Company to purchase a line, and to give a certain sum of money for it, if there was no profit to be obtained by the transaction. The lines that we have bought up we were subscribers to originally; they were constructed under the control, and in a great degree under the management, of the Great Southern and Western Company. I was a director of every one of those lines which I have named, and which have been amalgamated, and the consequence has been, that from the moment they were placed at the disposal of the Great Southern and Western Company, we have got our work done on the cheapest possible terms, and the result has been that the lines were well made and cheaply made; while the other lines, which are called contractors' lines, where there was not money enough to make them without borrowing, were made very badly. The result is, that where the traffic is so very small, they have nearly all gone to ruin.

4591. (*Chairman.*) Do you think that the public suffer much inconvenience from many of the smaller lines not being amalgamated with the larger ones?—Beyond all question, because they are not through lines. That was the great complaint that was made, that there was not traffic between Limerick and Dublin backwards and forwards the same day. We ran trains through as long as ever the Waterford Company would work with us, but I do not blame them for it at all; they did, of course, what they thought would be the best for their own interest; and it was no use working trains as far as Tipperary and to the junction there, if the passengers could not get on. There is no accommodation that has not been supplied by the Great Southern and Western Company to the third-class passengers; but the complaint is, that there are not more trains on the line, and that the third-class passengers cannot go and return on the same day conveniently.

4592. (*Capt. Galton.*) Do you issue third-class return tickets?—Never.

4593. Do you not think that that would be attended with advantage to the Company?—I am opposed to it, because I think it is a very bad system.

4594. (*Mr. Glyn.*) Have you ever tried it on market days?—No; we do not think it is of any use, or that there is any traffic of that kind.

4595. (*Mr. Horsfall.*) What are your objections to issuing return tickets?—My own feeling is that I would rather give a passenger the option of travelling at a cheap rate, paying for every journey separately. I believe that the practice of issuing return tickets leads to great frauds. I am aware that it has been complained of, that we do not give free tickets to drovers, and that we charge them for the tickets; but the reason why we do this is because when we give them free tickets, if a gentleman grazier sent many cattle to be forwarded, the drovers would sub-

divide, say, 20 or 30 head of cattle into 10 lots, and we should have to carry up 10 persons, and, more than that, the tickets would be sold publicly in the streets. That was the reason why we charged for the drovers; but I know that this is a subject of great complaint on the part of the graziers' men.

4596. (*Chairman.*) Is the traffic in cattle at the present time stationary?—It has been always increasing until within the last year or two.

4597. Does it chiefly consist of fat cattle?—No; by far the larger amount of the traffic is in store cattle.

4598. Do you suppose that any large quantity of store cattle are driven along the roads in the same direction as the railway runs?—It may be so within certain distances, say within 20 miles of the railway; but I should say not for long distances. Our principal cattle traffic is from the fairs, and I need not mention here that the cattle which are sold in fairs are all store cattle. It is a very expensive traffic to work, and all our trucks go back empty. To give the Commission an idea of the quantity of store cattle carried from the great fair at Ballinasloe, I may mention, in the first place, that the Midland Company carry by far the largest proportion of that traffic, and I asked our traffic manager, who was at that fair, to inquire into the matter, and let me know the result. He has informed me that the Midland Company carry as many as 1,300 trucks of cattle from that fair, and that the Great Southern and Western Company carry, I think, about 180 trucks.

4599. (*Capt. Galton.*) Your trucks go through Athlone, have you no branch to Ballinasloe?—No; but we did try one year cheap rates for cattle from Athlone, in opposition to the Midland Company, because we were so far from the fair that we found we did not get the cattle to carry; however it was a total failure, people did not send them.

4600. (*Chairman.*) Was the reduction made in your charges on that occasion a very large one?—I do not think it was very large; but we do not compete with the Midland Company at all now.

4601. (*Mr. Glyn.*) Are there any small railway companies within your district which are not amalgamated with you, and which you do not work over by agreement?—Yes, there are many.

4602. Are they a hindrance to your traffic?—No.

4603. Do they run their trains in concert with yours?—Yes, we work amicably with them, and have been doing so for the last seven years with the Waterford and Limerick Company. The proceeds of the through traffic of the whole of the district of the south of Ireland, taking Tipperary, Limerick, Cork, and Waterford, are put into a joint stock purse, and after deducting 40 per cent. for the company that carries the traffic for working expenses, the remainder is divided between the different railway companies according to the mileage.

4604. So far as working goes, your system is nearly complete?—Yes, it is very complete.

4605. Throughout all the districts?—Yes.

4606. (*Chairman.*) I understood you to say that if the Waterford and Limerick was in your own hands, the communication between Limerick and Dublin would be more conveniently worked than it is at the present time?—Of course it would; we should run through trains to Limerick.

4607. At the present time the public does suffer inconvenience either from the delays which are occasioned, or from some cause or other?—Yes, beyond all question they do suffer inconvenience; but at the same time, I do not think that a man going from Limerick to Dublin hardly ever wants to return on the same day, he almost always has some business to occupy him, and to detain him there for a day; that there is some inconvenience felt I have no doubt.

4608. Do you ever receive proposals from parties to put on to your line an additional quantity of goods which you feel unable to entertain, because you believe that they will not be remunerative to you?—

W. Haughton,
Esq.

2nd June 1865.

I have no recollection of any such proposals being made.

4609. With regard to mineral traffic, for instance?—Now I recollect that there was a small mine. I read some evidence that was sent to me by the secretary, and there was a small mine at a place called Shallie, and the directors of the company went to the place in order to inspect it, and we bought some land there, which we still hold, with the idea of erecting a station there; but when we came to investigate the matter, we found nothing to induce us to open a station there in the first place, and in the next place, we could place no reliance in the representation that the mine would be worked, and that we should get the traffic from it. And furthermore, we found that the traffic that was proposed to us would only give us a small return without terminals for our portion of the line, and that in fact it would not pay half the working expenses.

4610. (*Capt. Galton.*) What sum was offered to you?—The sum offered from the mine to Limerick was 2s. a ton.

4611. Should you have had to load the waggons?—No.

4612. What distance would the minerals have passed over your line?—I believe some five or six miles.

4613. If the whole distance over which the minerals would have passed had been in your hands, would such a price have paid you?—That of course would have depended upon the number of the trains, and whether the trains were continuous.

4614. Did the parties in that case promise you a fixed quantity?—No, we had no promise of anything.

4615. (*Mr. Glyn.*) It was too small a matter for you to entertain?—Yes, it was; a large prospective traffic of that kind cannot be carried cheaply unless it be continuously supplied in certain quantities. It would not answer to be asked to send at one time 100 trucks for goods to be loaded, and then to have to send those trucks away again to be idle for a month, because what would they be doing in the meantime?

4616. (*Capt. Galton.*) You mean that such traffic could not be worked in with your general system?—Yes; it would be quite impossible.

4617. (*Chairman.*) Is it your opinion that the traffic of the country, so far as it depends upon railway arrangements, is developed to as great a degree as it is possible for you to accomplish it?—I think it is in the south of Ireland, so far as the Great Southern and Western are concerned.

4618. You think, so far as your railway is concerned, that it is not in your power to take any steps that would increase the traffic on the Irish railways, or that would stimulate production in any respect?—Do you mean with regard to the quantity carried, or to the amount received?

4619. Do you think that there would be any increase in the traffic by lowering your charges?—Yes, I think there would be some increase, but I am not sanguine about any large increase in the principal products of the country; I do not see what it is to arise from. I have directed my attention to the evidence given by Judge Longfield, and I have made some observations upon the evidence that he gave.

4620. Are there any parts of his evidence to which you wish to make any addition or to explain?—I find that he was, from a want of knowledge of details, a little at a loss. A question was put to him by Capt. Galton, in these words, "Is it not the case that 'cattle are sent from one part of Ireland to another' to be fattened?—They are generally sent first to 'the fairs, and they are then bought by the graziers, 'who fatten them, from the people who breed them.'" My observation upon that is this: A considerable quantity of store cattle are carried from the counties of Tipperary and Limerick to Kildare and Meath. The average mileage is about 50 miles, and very few store cattle are walked beyond 20 miles. As a rule, all this traffic is carried on by special trains from fairs.

4621. (*Lord Stanley.*) If some of the minor lines in Ireland are in a state of bankruptcy, is that owing to their having charged too high fares, or to there not being sufficient traffic to support them?—Some of them have cost too much money, and others of them have so little traffic, that if they had been made for nothing they would not pay the expenses. There is the Wexford and Bagenalstown line, as to which proceedings are now going on the Bankruptcy Court in Ireland. The Great Southern and Western Company were anxious to develop the traffic upon that line, because we were original subscribers to it, and we worked it for the bare cost out of pocket, without charging interest upon the rolling stock; the weekly receipts did not pay anything like the working expenses, although the line runs within six miles of the town of New Ross, which is an important town.

4622. (*Capt. Galton.*) You did not perhaps think it worth your while to charge very low fares?—The line passed through a district where there is no population.

4623. What is the population of New Ross?—About 8,000 or 10,000; it is a long way from Wexford.

4624. (*Lord Stanley.*) I suppose the population of the south of Ireland is, upon the whole, decreasing, and that you do not look forward to any increase in the passenger traffic?—I think Ireland is in a poor condition, and I do not think we can expect any great increase in the passenger traffic.

4625. (*Capt. Galton.*) Where does the Wexford and Bagenalstown line run?—It was originally intended to go on to Enniscorthy, which is a very important town, and not far from Wexford. It got to a point where the dotted line on the map begins, and that point is in a field. The town of New Ross is not marked upon that map; it is on the River Barrow.

4626. Would New Ross be about there? (*pointing to the map.*)—A little to the left of that. An effort has been made this session to obtain powers to complete the line to Ross, but the parties had not the means to carry their Bill through, and it was withdrawn.

4627. (*Mr. Gower.*) Are there any new railway projects before Parliament this year in connexion with your line?—No, there are not any new projects of ours, there were some Bills that were passed; in one case there was a line from Thurles to Clonmel, that Bill was passed; and then there was another line proposed to join our line near Fermoy, that line goes from Lismore to Fermoy.

4628. Did you oppose those lines?—No, we merely asked for clauses. We have never opposed any lines, I think, for many years.

4629. Have you never opposed any?—I think not.

4630. (*Chairman.*) Can you state what interest you pay upon your debentures?—We have not any bonds at this time outstanding, except those that we got belonging to the companies with which we have become amalgamated, and which are not yet due.

4631. Have you no debentures?—We paid off the whole of our debentures on the Government loan, by raising money at four per cent. We have £1,300,000 of preference stock at four per cent.

4632. Is that redeemable or irredeemable?—That is irredeemable.

4633. (*Mr. Glyn.*) Is that at four per cent. only?—I should say that we have about half a million of debentures out now, and the interest upon them is exactly $4\frac{1}{2}$ per cent. We renewed all the bonds that fell due this year to the extent of 20,000.

4634. Had not some of the railway companies with whose lines you have become amalgamated some debenture debts?—I have stated that particularly. The principal bonded debts now outstanding are the bonds belonging to those lines of railway that we became amalgamated with.

4635. The yellow line to Cork belongs to you, does it not?—No, we rented it with the intention of purchasing it ultimately, if Parliament should sanction

W. Haughton,
Esq.

2nd June 1865.

it, and the proprietors should agree to it. There is a large passenger traffic on the line; but there is no goods traffic there; you cannot carry on the goods traffic.

4636. For what reason?—Because there are no stations, or they are very badly constructed in every way.

4637. Would there be a goods traffic if the stations were good and convenient?—Not to any extent. I think it would be cheaper for the vessels to send up their goods by lighters to the port of Cork than to send them by railway.

4638. Even although the goods might be going into the centre of Ireland?—Yes; but I will explain the course of things. The trade is carried on in this way. A merchant in Cork purchases a cargo of grain, and then he distributes that cargo in small lots to the millers in the interior of the country.

4639. Does it go by train into the interior?—Yes, or by sea. There is a large traffic between Dublin and Cork which goes principally by sea, for in fact we cannot compete with the sea traffic; the charge that way is only half the amount that we charge.

4640. What freight per ton is charged by sea?—The freight from Cork to Dublin is 6s. a ton.

4641. What is the distance from Cork to Dublin by your railway?—168 miles.

4642. And you think it would not be worth your while to attempt to compete with the sea route?—Certainly not. We would rather be without the traffic a great deal.

4643. (Chairman.) Did you not say that you had given up the second-class traffic between Dublin and Carlow, and that it was carried by the Grand Canal Company?—No; I said that the Grand Canal by their navigation came in contact with the great millers, and that they got the preference, and that they had 15 per cent. advantage over us.

4644. Did you not also say that in consequence of that, you had ceased to carry goods of the same kind?—Certainly not; we take all the goods we can get.

4645. (Mr. Horsfall.) You said so, I think, upon one particular line?—I think not. We never refuse any goods.

4646. But practically the goods all go by the canal?—No, along the line of the navigation, they practically go by the canal.

4647. (Capt. Galton.) With regard to those goods that you mentioned as going from Cork to Dublin, is their ultimate place of destination the interior of Ireland?—No, they go to Dublin for consumption in Dublin; in consequence of the great facility for getting foreign corn into Cork it is now sent on the cheapest terms, at the lowest freights, between Cork and Dublin. A great business is done by the millers in Cork for the supply of Dublin with flour.

4648. If you could get a large supply of the same article on to your railway, would it not be worth your while to carry it?—We could not get it, and large quantities could not come; it is impossible that they could come; they would not be required. Dublin itself is a large importing port for foreign grain, and there are large steam mills there. The cause of the great decline which has taken place in the milling interest in Ireland has been the importation of foreign grain. Formerly Dublin, and a great part of Lancashire, and South Wales, were supplied entirely from the interior of Ireland; but now, since the repeal of the Corn Laws, when foreign grain comes into Ireland, the tendency is to erect steam mills in the sea ports.

4649. As I understood you, you stated that the grain comes into Cork and is there distributed; and that it is sent by coasting vessels round to Dublin?—Yes, that is frequently done.

4650. The freight being 6s. a ton?—Yes.

4651. You stated, I think, that a very large quantity of grain is sent in that way to Dublin?—Yes; it is entirely a question of the relative prices between Dublin and Cork. Cork is a port of call for foreign

ships, and also Falmouth; they are the two great ports of call for ships laden with foreign grain, and sometimes there is an excess of grain in Cork, and sometimes an excess of grain in Dublin, and so the trade alternates according to the price; but there is no internal trade in grain between Cork and Dublin.

4652. Would it not be worth the while of the Great Southern and Western Company to get the trade if they could?—Not at 6s. a ton.

4653. (Mr. Gower.) What would it cost per ton to carry the grain from Cork to Dublin?—It would cost a very small sum if we had a large and continuous quantity to take. Every train mile costs about from 2s. 7d. to 2s. 8d.

4654. Then why should it not answer your purpose to carry the grain for less than 6s. a ton?—Because we could not get the quantity.

4655. If there is a considerable traffic in grain by sea, why should you not carry it by your railway?—There are many reasons, which I can explain if you wish. In the first place, when a foreign vessel arrives in Queenstown for orders, if a portion of the cargo is to be transhipped to go from Queenstown to Dublin, a small vessel will go alongside the ship and take it out, and then it will go straight to Dublin without any expense, except that of putting it on board. If it was taken by railway, it must be transhipped into lighters, taken up to the City of Cork, and then put into trucks on the railway, and so be taken to Dublin.

4656. (Capt. Galton.) Could it not be put into the trucks at Queenstown?—No; there are no means for doing that at the present time. The railway goes down close to the water; but there is the merest narrow slip of ground there, and the Admiralty would not give up an inch of that ground to enable us to extend the railway.

4657. Have attempts been made to build quays there?—There have been applications made for that purpose, and when the Great Southern and Western Company become the owners of that line, some effort will be made to connect the railway with the deep water there.

4658. If it were connected with the deep water would it then be worth while to tranship the goods at once to the railway and carry them to Dublin at a low rate?—I think that the traffic internally would be so limited that it would not be worth attention. In the case of a vessel going into Cork, it does not cost one farthing, or to take her to Dublin, the captain must go to any port in the British empire where he can lie afloat, according to his charter party.

4659. Then a great part of this trade is carried by the ships themselves after calling at Cork, and then proceeding to Dublin?—Yes. I received a telegraphic message the day before I left home from a gentleman in Cork, asking me if I could get a certain price for American wheat in Dublin. I telegraphed back to say that I could. He then sent immediately, took up a vessel, and sent the wheat from Cork to Dublin.

4660. Had he to tranship it?—No; he had it already in a warehouse.

4661. Then why could it not have been taken from his warehouse and put on to the railway?—We would not have taken it for him for the freight he would have had to pay.

4662. If you had been willing to do so, would it not have been worth your while, if the quantity to be carried was large?—If it was a trade that would pay us, we could not carry the quantity. It might be worth our while, but this must be borne in mind, supposing this gentleman sent us 1,000 barrels of wheat, it would take more trucks than we could command; where should we get the trucks from to convey it? Even as it is now, with our trade from Cork into the interior of the country, the entire of the trucks have to come back empty, and we should have to send special engines all over the line in order to get a sufficient number of trucks, so that it would

W. Haughlin,
Esq.

2nd June 1865.

be better to carry it in small quantities rather than in large quantities. If there was a very large and continuous trade of that kind, arrangements possibly might be made to deal with it.

4663. Does not your objection rather go to this, that you would not attempt to develop any class of traffic whatever?—I do not think I should like to risk a large sum of money in attempting to develop traffic that might never come to us.

4664. I think you rather show that the goods are at Cork, and they are required to be taken to Dublin?—No; the case I have referred to was a very exceptional case.

4665. (*Mr. Glyn.*) I understand you to say that if there was a considerable amount of traffic you would undertake it, but as it is so uncertain, it is not worth your while to make a rate for it?—Yes.

4666. (*Mr. Horsfall.*) Would it be worth your while to carry any large quantity at 6s. a ton?—I think it would pay with a large and continuous quantity; but the rate to Cork now is very low; for instance, if you take 60 miles upon our railway we charge 8s. a ton, and we only charge 12s. 6d. a ton for 160 miles.

4667. (*Capt. Galton.*) You charge 8s. a ton for 60 miles?—Yes, for second-class goods.

4668. And 12s. 6d. a ton for 160 miles to Cork?—Yes.

4669. (*Chairman.*) Does that include terminals?—Yes; we never charge terminals.

4670. (*Mr. Gower.*) Is that to enable you to compete with the water communication?—Exactly. We have had steam opposition for a long time between Cork and Dublin, and we reduced the rate to 12s. 6d. in order to meet that opposition. We carried third-class passengers on the days when the steamer sailed at very low rates. I think as low as 5s.

4671. (*Capt. Galton.*) In what year was that?—I cannot say exactly, but it was after opening the line to Cork.

4672. (*Chairman.*) Have you ever considered whether it would be practicable for the Legislature to pass any measure that would be of great public advantage to Ireland by stimulating, in connexion with railways, the industry of the country?—Not without admitting a principle which the Legislature has never yet admitted.

4673. Will you explain your meaning?—I mean advancing money without getting any benefit from it.

4674. Do you think that nothing can be done unless the Government is prepared to risk a large sum of money?—I think nothing whatever can be done. The public certainly in Ireland, so far as I am able to judge, seem at the present moment to be quite cock-a-hoop in the expectation that something will be done to plunder the railway companies by the Government, and without the smallest compunction would take away the property of the railway companies, if they could.

4675. (*Mr. Glyn.*) You have had many years' experience now as chairman of the Great Southern and Western Railway, and I suppose that you would not be prepared to recommend to your proprietors any large reduction in the fares, because you think it would operate detrimentally for a certain time upon their dividends?—Certainly; that is my opinion.

4676. You consider that, as chairman of that company, your first duty is to look to their interests?—Certainly; our dividends are very small. The great object of the directors of the Great Southern and Western Company originally was to benefit the country, and we thought that we were incurring a great risk when we put our names down as subscribers to the line.

4677. Supposing that a considerable reduction was made, have you considered whether, in the course of four, or five, or six years, you would make good to your proprietors the deficiency in their dividends which would naturally follow?—I cannot imagine any number of years in which that could be done; certainly not in my lifetime.

4678. You think that low fares would not enable you to restore the dividends to their former amount?—I have no doubt upon that point whatever.

4679. (*Capt. Galton.*) Have you never tried the effect of low fares?—No; they have never had a fair trial; but I am quite satisfied that if this Commission should be pleased to hint at such a thing, and name any particular places where it should be tried, we would give it a fair trial.

4680. Are there any parts of your line which you think would be favourable for making the experiment?—I think the difficulty is this, that persons would begin to book themselves for short distances at a low fare, and then book themselves on again so as to save money.

4681. Is it not constantly the case on English railways, that between certain places a very low fare is charged, and it is made impossible for persons to book themselves by the same train so as to be able to go on from one place to another, by refusing to issue tickets after that train has arrived at a station?—The same rule prevails in Ireland. There is a cheap rate between Kilkenny and London, cheaper than from Carlow to London; that is in consequence of the opposition existing between the Great Western of England and the London and North-western. It does not affect our line, but I know that people in Carlow send to Kilkenny, or they write to Kilkenny for a ticket when they want to go to London.

4682. Does any practical loss or inconvenience result from that? Do not many more persons go because they can travel at a lower rate?—I can only speak from my own experience, and I know that I never travel unless I have business to attend to, and I have a free pass, and can go wherever I like. The railway fares bear a very small proportion to your expenses. Between any two large towns, for instance between London and Brighton, you will have a very great traffic by reducing the fares; but what is there in Ireland, between town and town, to induce any man to go from one town to another, unless it is business that he has to transact? There is nothing to be seen.

4683. (*Sir Rowland Hill.*) Are there any new lines in progress in the south of Ireland?—Yes.

4684. And more lines being projected?—Yes.

4685. How can you account for that? What are the inducements to construct new lines of railway, when the old ones, which probably enjoy the great bulk of the traffic, are so unprofitable?—I entertain a very strong feeling on that subject, but I should not like to give expression to it, lest I might give an unfavourable opinion as to the motives which induce parties to promote these lines, and which I would rather not do. We do not oppose them.

4686. (*Mr. Horsfall.*) Is there not a great passenger traffic to Killarney in the summer time?—Sometimes there is; but it is not what one would expect, considering that there is a large hotel there belonging to the railway company, and which was built in connexion with the Killarney line by the Great Southern and Western Company. It is under most admirable management, and I do not believe there is an hotel in the kingdom where there is greater comfort to be had, or at more moderate rates, and yet it does not pay the expenses necessary to keep it in order.

4687. (*Capt. Galton.*) Is it not very full for one or two months in the season, or tolerably full, and then empty for the remainder of the season?—I have been informed that within the last few weeks, although the weather has been fine, there were only seven persons staying in the hotel.

4688. (*Mr. Glyn.*) It is a very short season, is it not?—Yes. I may state that there are no means that could possibly be taken, consistently with what we conceive to be the interests of our proprietors, that we do not adopt for the safety and advantage of the public on the Great Southern and Western line; that is my conscientious conviction.

4689. (*Capt. Galton.*) What is the fare from Cork to Killarney for third-class passengers?—Before I answer that question, I wish to say that I have read some evidence which was given here on the subject of parcels of butter sent between Cork and Dublin. I have inquired as to the quantity of butter carried in that way, and I understand that it is $1\frac{1}{2}$ cwt. in a day, and then look at the rates that we charge for it. You can have 14 lbs. weight carried for 1s. 6d., including collection and delivery within two miles from the Post Office. Then if you send 28 lbs., you get that carried for 2s., and so on, according as the quantity increases in weight. We carry that by the passenger trains in order that fresh butter may be obtained in Dublin. The butter in Cork is made without salt. Then with regard to the rates charged for excursion trains, on the Cork and Limerick direct, we run Sunday excursion trains and a third class passenger can get to Limerick for 3s. from Cork.

4690. What is the distance?—57 miles. I am speaking now of Sunday excursion trains.

4691. Then from Cork to Killarney?—I think it is a single fare for a return ticket, a halfpenny a mile.

4692. From Dublin to Killarney is the fare the same?—The fares vary. We issue family tickets from Dublin to Killarney. The first-class return ticket is 2l. 10s., and the second-class return ticket 2l.

4693. What is the distance?—180 miles. Then there are family tickets issued, which come very cheap indeed; for instance if five passengers go, the charge is 7l. 10s.

4694. Do you carry many passengers through to Killarney from the London and North-western system?—There are a good many occasionally in the season, but they are not large at any time, only what you would call very small in number here.

4695. (*Chairman.*) The Commission are to understand, I think, that you take rather a desponding view of the prospects of Irish railways?—I do take a very desponding view.

4696. You think that no new sources of traffic are likely to be developed?—I should be sorry to think we shall always be as bad as we have been the last two or three years, but I see no likelihood of any great extension. We have had experience of the Killarney line, which has been under our management for several years; and I have come to this conclusion, that a branch line worked by a main line at a moderate rate, to receive 10l. a mile a week, would pay a dividend of 5 per cent., where the line had been constructed cheaply. That line was made for about 6,000l. a mile, and we do not find on the Great Southern and Western railway, where we put up goods stations to work the line as it ought to be done, that we can do it in the cheapest manner, giving proper accommodation, under 7,000l. a mile. I have been asked a question with regard to amalgamations. If an amalgamation took place with lines not paying any dividend, and that further loss ensued from reducing the fares, what is to be done as to the preference shares and bonds? At the present time some of them are paid, and some are not. There are many lines that do not pay the preference shares anything, although there are some where they do pay. If an experiment was tried, and it was unsuccessful, the result would be that those parties who get some dividend now would get none then.

4697. (*Mr. Glyn.*) Are there not some companies who do not pay to the Commissioners the amount necessary for the sinking fund?—Yes.

4698. (*Chairman.*) Are there any other points to which you wish the attention of the Commission to be directed?—Judge Longfield made a mistake in saying that there was no line between Wexford and Waterford. There is a line for which parliamentary sanction has been obtained, but which is not yet constructed. The Wicklow and Wexford line is a coast line. The whole of the southern district of country

named by Judge Longfield can be taken up without interfering with the other districts of Ireland.

4699. The south-eastern part of Ireland?—Yes.

4700. Would there not be competition between Wexford and Dublin if a line were made between Waterford and Wexford?—I doubt that, for this reason, that the line goes to the wrong side of the river at Waterford. The traffic could not get across there. There is a wide estuary of the river at Waterford, where the line is proposed to be brought to. I do not think it would answer at all for goods traffic.

4701. Is it not intended that the line from Wexford to Waterford should communicate with the already existing line at Waterford?—That is not possible. As far as I understand the nature of that line at present I do not think it is possible to unite.

4702. (*Capt. Galton.*) I gather from your evidence that you do think it desirable that the railways in the south of Ireland should be connected together?—Beyond all question.

4703. You think that could be better done without government interference?—I do not think it could.

4704. (*Sir R. Hill.*) Do you think any material saving in working expenses would be effected by amalgamation?—I have no practical experience of that myself, therefore it would be very difficult for me to give more than an opinion upon that. Working expenses always increase in proportion to an increase of traffic.

4705. Supposing the traffic to remain the same, would the amalgamated lines be worked more cheaply than they now are?—I doubt that very much.

4706. Then what would be the advantage of an amalgamation?—Through booking to the public.

4707. Greater convenience to the public?—Yes.

4708. (*Mr. Glyn.*) You would get rid of a certain number of boards of directors and secretaries, and so there would be a saving in the fixed expenses?—I think you would have to pay officers quite as much as the public boards are paid. Upon those small lines they are paid very little indeed.

4709. (*Sir R. Hill.*) Would not a great reduction in the number of officers effect some diminution in the expenses?—The only officers who could be reduced in number I think would be the secretaries.

4710. Would you reduce the number of directors?—The directors, as I said before, are paid very little indeed.

4711. Would you not have concentrated management for your locomotive superintendence?—You would no doubt, but if you have a concentrated management you must appoint a man of very great ability indeed, and you must pay him in proportion.

4712. Where are your places of repair for engines and carriages?—Within two miles of our terminus in Dublin.

4713. Then you have a place of repair for engines in Dublin?—Yes; and we have a small one in Cork. We make and repair the whole of our engines and carriages.

4714. (*Chairman.*) Do you repair the engines and carriages of any other companies besides your own?—Never; we always refuse to do so.

4715. (*Sir R. Hill.*) But if the lines were united, would it not be possible to manage an increase of traffic without an increase in the rolling stock?—Within certain limits the passenger traffic might, but I think not the goods.

4716. Do you see no mode of escaping from the present difficulties?—If you will tell me what the difficulties are I will answer the question.

4717. The state of bankruptcy in which many of the lines are, as I understand?—I think they are irretrievably ruined as far as regards the public advantage. We must bear in mind that all these lines are only of comparatively recent construction. In the course of 10 or 15 years, and some of them in half that time, the rails and sleepers will be all gone, they are so badly constructed. I do not see how they are to keep them in repair. Of course that is only my own individual opinion.

W. Haughton,
Esq.
and June 1865.

4718. (*Mr. Glyn.*) Then you think, in fact, that with regard to many lines the original capital is positively sunk and lost?—There is not a single line in the south of Ireland, which runs into that of the southern company, with the exception of the Cork and Limerick direct, which has not at the present moment the whole of its original capital gone. The Waterford and Limerick Company have paid only a nominal dividend, namely, half per cent. per annum.

4719. That capital is irretrievably gone according to your view?—Unless the traffic of the country increases.

4720. Your theory is that it is not possible to increase it?—I do not see that there is any prospect of it in any reasonable time.

4721. (*Chairman.*) Is there any other point that you wish to call attention to?—There is one other point. Mr. Glyn asked this question, at No. 2930, "If you deal largely in the coal trade must you not 'carry the railway down to the water-side?'" The answer is, "I think that to have a large coal trade 'there should be such a connexion in Dublin, for 2s. 'a ton is a great impediment.'" Judge Longfield was wrong in that. In the first place, the railway connecting the Great Southern and Western, with the shipping, must get toll upon coals, and the least I have ever heard of is 6d. per ton.

4722. (*Sir R. Hill.*) What would be the saving then?—At the very outside the saving would be 1s. per ton. I may mention the fact with reference to this saving, assuming that coals were carried at half the present rate, the total rate would only be over the whole railway 1s. 10d. per ton. The rise in the price of coals alone last year was 3s. per ton at the pit's mouth. We are paying 3s. a ton more for coal now than we were two years ago.

J. W.
Twland, Esq.

J. W. MURLAND, Esq., examined.

4734. (*Chairman.*) Do you concur in the views which Mr. Haughton has expressed with regard to the Great Southern and Western Railway?—As to matters of fact of course I do, but as to matters of opinion I do not altogether concur with him.

4735. Will you be good enough to state the principal points in which you differ from him in opinion?—I do not quite take his gloomy view of the prospect of traffic increasing in Ireland. At the same time I am quite sure that it is not capable of anything like indefinite development. It is not at all capable of the development which the traffic is in this country.

4736. Where do you think would most likely be the principal source of improvement?—I think that the traffic in cattle and in third-class passengers will be increased somewhat by a reduction of rates, but, at the same time, I quite concur with Mr. Haughton in this, that the railway companies would, at all events, in the first instance, lose by the reduction. Of course it is our business to examine all kinds of traffic from time to time, and if we can see our way to making a reduction which will bring us more traffic and bring us more money, it is our duty to do it, and we do it very carefully. There may be some cases, but we are not at present aware of any case in which we could make a reduction without a loss.

4737. (*Sir R. Hill.*) You mean a temporary loss?—Yes.

4738. (*Mr. Glyn.*) You would not be prepared to advise such a course?—I would not.

4739. (*Chairman.*) Do you think there is no capability of a large coal traffic being developed in Ireland?—I think the coal traffic will naturally increase by slow degrees, but I cannot imagine that there is a case for any very rapid increase of the coal traffic. I do not think it is likely to increase rapidly for domestic purposes. I have no doubt that it will increase gradually as manufactures increase, and as the bogs are cut out persons will be more disposed to use coal instead of turf. I have not the slightest doubt that the traffic will gradually increase. I do not expect that there will be any large

Therefore, the whole of that saving is more than annihilated at once by the rise in the price of coal.

4723. You are referring to coals brought by sea?—Yes. The rise is in England, not in the transhipment.

4724. (*Mr. Gower.*) Do all your directors agree with you in the opinion that no lowering of rates could be made without ultimate loss?—I cannot answer that question further than this, that I am sure the majority of them do.

4725. Has there been no opinion expressed upon the subject?—None.

4726. Has there been any expression of opinion among the shareholders?—Our shareholders are always unanimous; we never have any trouble with them at all.

4727. Are the majority of the shareholders Irish?—Originally the majority were English, but now the preponderance is greatly on the side of Ireland, and it increases steadily every year. The stock is coming over every year from England to Ireland.

4728. Are your railway meetings in Dublin?—In Dublin always.

4729. (*Capt. Galton.*) Have you much fish traffic at present?—A very considerable fish traffic.

4730. At what price do you carry it to Dublin?—We give very great facilities for the fish traffic; we carry it in our goods vans, attached to the passenger trains.

4731. (*Chairman.*) Is that an increasing traffic?—I do not think there is much increase in it. It is carried up in boxes packed in ice.

4732. (*Capt. Galton.*) Does it go to Dublin chiefly or to England?—Principally to England.

4733. You give through rates to England per cwt.?—Yes.

or rapid increase of it. I do not believe in the idea that large manufactures will be established in the interior of Ireland; there may be one or two, but I do not think that such things are likely to occur to any extent.

4740. (*Mr. Horsfall.*) You do not think there will be any increased consumption if there is a reduction of 50 per cent. in the rates?—I have no doubt that a reduction of rates will increase the consumption, but, at the same time, if you will take the trouble of calculating what difference in price that will make at a mill, say, 100 miles from Dublin, you will find that a reduction from three farthings to one halfpenny per ton will only make a difference of 2s. per ton in an article which costs perhaps about 17. per ton. I do not conceive that that would very rapidly or materially increase the consumption.

4741. (*Chairman.*) Do you think there is room for a considerable increase in the cattle traffic?—I think there is room for some increase, but I would not say a considerable increase.

4742. Do you think that the reduction of rates will have any material effect on the cattle traffic, or do you look for a gradually increasing traffic even at the present rates?—I think there will be a gradual increase without a reduction. I think with a reduction there will be perhaps a somewhat greater increase. At the same time I wish to explain that the cattle traffic is carried on under conditions that render it expensive to work; and in my opinion we could not make the reduction which has been suggested without losing all profit by that traffic. I believe that if we carried our cattle at 3d. per truck per mile under the conditions upon which we are obliged to carry it, that we should not make a farthing profit by it.

4743. (*Capt. Galton.*) What are those conditions?—The conditions are these: With respect to fat cattle they come to the Dublin market once a week; we work the trains up to the market, sending three or four trains over different portions of our system; those trains have to travel about 100 miles each; they come into Dublin probably with an average load

of about 30 waggons, but sometimes they may have 40 or 50 waggons, and sometimes they have only 10 or 20. The consequence is that we must be prepared with our rolling stock, that is, with our waggons and engines, for a maximum load. We must have our trucks at the different stations provided for a maximum load, and we must have locomotive power provided also for a maximum load, because, in the case of cattle, if we happen to be late for the market, or if we make a slight mistake in any way, there is an action immediately brought against us, there being no class of people so litigious as these cattle dealers and drovers. Then, again, the cattle train starts, say from the Limerick junction, which is 107 miles from Dublin, with six waggons, and will collect its load at different stations, and will not have its full load until it approaches within 20 or 30 miles of Dublin. The result is, that if you charge the full expense of this train running 100 miles, and if you charge also double, because it has to work all those trucks back empty (it is an entirely one-sided trade), you will find that it is traffic worked under very disadvantageous conditions. These trains do not carry their average load of 30 waggons for probably more than about two-thirds of the whole distance. I have entered into a calculation of it, assuming the cost of the train would be 2s. 6d. per train mile, and assuming the same for empty trains going back, and also the conditions I have mentioned at 3d. per truck per mile, it would not leave one farthing profit.

4744. (*Sir R. Hill.*) I think you spoke of three or four trains a day, did you not?—Three or four trains a week.

4745. Did those three or four trains run in the same day, or at different days of the week?—The same day; one would start from Kilkenny and come up to Dublin; and another would start from Limerick Junction and come up to Dublin. Another would start from Nenagh and come up to Dublin, and a fourth would start from Clara.

4746. I understood you to say that these trains picked up their traffic as they approached Dublin?—Quite so.

4747. Is it necessary then to start with a full train from the extreme point; I mean to say a train composed of a full number of carriages?—No; you have to start your engine, but not your waggons. The waggons have to be collected at the different stations provided for them.

4748. Then you do not reckon the mileage of the waggons for the whole distance?—Not the whole distance.

4749. Only the engines?—Yes. Then again there is another class of traffic, which is the store cattle traffic from fairs. It is worked under conditions almost as disadvantageous. We never can anticipate with any degree of accuracy what the extent of that traffic may be. I asked our manager to give me an illustration of it, and he said that there were 150 waggons of cattle sent from the large fair of Kilkenny in 1853. That was the quantity usually provided for. The following year he had only 80 waggons. He had to work all the waggons there to be prepared for the larger quantity. He had to work them away empty. That occurred very frequently. It is considered a reproach not to have rolling stock to meet any demand that may be made upon us. The consequence is that we always endeavour to be prepared for the maximum traffic, which of course very much exceeds the average traffic.

4750. (*Chairman.*) Is the cattle traffic attended with circumstances which make it impossible for you to depend upon carrying the amount of traffic which is usually carried; is it more fluctuating in its amount than any other description of traffic?—It, in that respect, a good deal resembles the passenger traffic. It is worked under entirely different conditions to what the mineral traffic would be.

4751. Is there much fluctuation in the number of passengers from week to week or from day to day?—Considerable.

4752. (*Mr. Horsfall.*) Must you necessarily run these cattle trains all on the same day?—The markets take place in Dublin on certain days. The fat cattle generally come to Dublin market; even though a portion of them may be afterwards shipped.

4753. Can you not bring up the cattle for export on another day, so that the same extent of waggons would not be required?—We must bring them up on the day that they are presented to us, and it so happens that fat cattle generally come up once a week.

4754. (*Mr. Glyn.*) I suppose every now and then you have some compensation to pay?—Very often.

4755. So that there is no profit by the transaction? If only a slight mistake takes place they take advantages of it.

4756. (*Sir R. Hill.*) It is the varying amount of the traffic that seems to create the difficulty?—The varying amount of the traffic and the fact that we have not full loads for the whole distance.

4757. Are the circumstances of Ireland peculiar in that respect?—I do not know that they are, but the average distance for which we carry cattle in Ireland is about 50 miles. The cattle trade from Scotland to London would be carried in a train for a considerable distance, and hence they can afford to carry them at a considerably less rate. In the same way the cattle we send over from Ireland to London would come in trains going from Holyhead to some places like Huntingdon, so that they would have a long mileage, and of course they can afford to carry them profitably at a lower rate per truck. We book through store cattle on the Dublin and Drogheda with the North-western from Kells to Huntingdon. I believe the whole rate per mile on that long carriage, which is about 360 miles, is something like 1½d. per truck per mile.

4758. For the length run?—Yes.

4759. Your trucks hold a larger number of cattle than the trucks upon the small gauge?—Our trucks hold from seven to eight fat beasts, and 12 or 13 store cattle.

4760. (*Chairman.*) Is there any other source of traffic that you have considered as at all likely might be developed in Ireland?—It is exceedingly difficult to predict beforehand what would be the effect of lowering the rates. I think that lowering the rates would be very likely to give rise to some traffic which one cannot foresee or anticipate. I am not prepared to point out any special kind of traffic. I think the grain traffic would probably be increased by lowering the rates.

4761. Do you think the cultivation of flax and the manufacture of linen might be encouraged by the railway companies arranging to carry it at lower fares?—I do not think that the cultivation of flax is likely to be materially affected by it. Flax can scarcely be carried by railway in the straw, the bulk is so great in proportion to its value that it is never attempted even in the north of Ireland to carry flax in the straw. Upon the other hand, when the flax is dressed it becomes so valuable in proportion to its weight that a small reduction in the price per ton per mile is infinitesimal as regards the value of the flax.

4762. I believe you are chairman of a railway company in the north of Ireland?—I have been for nearly 17 years the chairman of the Dublin and Drogheda Railway Company.

4763. Are you connected with any railway in the north of Ireland besides the Dublin and Drogheda?—I was for some years a director of the Irish North-western. The Dublin and Drogheda had invested some money in that line to enable them to complete it, and in consequence of that I was for many years a director of that line.

4764. Where does that extend to?—That extends from Dundalk to Londonderry.

4765. Have you kept up your acquaintance with the lines in that part of the country?—I am tolerably acquainted with them, but not so well as I am with the Dublin and Drogheda and the Great Southern and Western.

J. W.
Murland, Esq.
—
2nd June 1865

J. W.
Murland, Esq.
and June 1865.

4766. Does your experience as a director of the Dublin and Drogheda line differ in any respect from your experience as a director of the Great Southern and Western?—In some respects. We have a much denser population on a portion of the Dublin and Drogheda line than there is on the Great Southern and Western, and we have more third-class traffic in proportion. We have found it to be our interest to give third-class return tickets on that line almost ever since I have been a director of the line.

4767. Is the third-class traffic chiefly between Dublin and Drogheda, or from intermediate stations?—The third-class traffic is chiefly for short distances to the markets. We find that the proportion of return tickets to single tickets, for short distances of about 10 miles or under, is as three to one; that is to say, there are three journeys performed on return tickets to one journey performed on single tickets. So that the bulk of our short traffic has the advantage of travelling for three farthings per mile. The remainder of the third-class traffic is divided in a different proportion, that is to say, that we have about as many travelling by return tickets as by single tickets, showing that the return tickets are much more availed of for short distances.

4768. Have you some important towns between Dublin and Drogheda?—No, Drogheda is the town for one district, and Dublin for the other. Our line extends to Oldcastle, in the county of Meath, and passes through one of the richest grazing districts in Ireland.

4769. (*Mr. Glyn.*) What is the mileage of the line?—75 miles.

4770. You book through with the northern lines, do you not?—We do.

4771. At the same scale of fares?—At the same scale of fares. The Belfast Junction Company gives return tickets to third-class passengers, but the Ulster Company does not.

4772. (*Chairman.*) Your line forms part of a communication between Dublin and Belfast?—Yes.

4773. Are there any complaints in Belfast that the communications are at a great disadvantage from being in the hands of three different companies?—Yes.

4774. Do you think those complaints are well founded?—I do not think there is much reason to complain.

4775. Is there any discord between the three companies?—None whatever.

4776. Are delays occasioned by their being in the hands of different boards?—I will describe precisely the state of the accommodation at present. We have four trains a day passing through from Dublin to Belfast. There has been one added lately. Four trains pass in each direction. Two of those trains make the journey in four hours in each direction; that is going at a speed, including stoppages, of 28½ miles, and excluding stoppages, 38 miles an hour.

4777. Is there a large amount of traffic between the two towns?—There is a considerable traffic.

4778. (*Mr. Glyn.*) Do the same carriages and the same rolling stock run through?—The same carriages go through.

4779. Do the same waggons go through?—The same waggons do, but the same engines do not.

4780. (*Mr. Horsfall.*) What class of passengers are there chiefly?—We always find that for long traffic they are chiefly first and second class; the third-class always bears a small proportion in the long traffic.

4781. What are the fares?—The first-class fare is 1*l.*; the second-class fare is 1*s.*; the third-class fare is 9*s.* 4*d.*

4782. (*Sir R. Hill.*) What is the distance?—113 miles.

4783. (*Chairman.*) Is the district between Drogheda and Oldcastle a richer district than any part of the line traversed by the Great Southern and Western?—I think there are portions of the district traversed by the Great Southern and Western in the

county of Kildare, and in the county of Limerick, which are equally rich; but it is a great deal richer than the average of the country which is passed through by the Great Southern and Western.

4784. Is there a more important cattle traffic on the Dublin and Drogheda line than upon the Great Southern and Western?—We do not carry nearly so much in proportion to our receipts. I think the cattle traffic on the Great Southern and Western is about one-fifteenth of the receipts, and that of the Dublin and Drogheda Railway about one twenty-fifth.

4785. I understood you to state that one advantage of your line was that it passed through such a rich district between Drogheda and Oldcastle?—Yes; but it is not by any means the most productive to us in the way of traffic. The traffic on the main line, which is a double line between Dublin and Drogheda, is very much larger per mile than the traffic of the other district. The other passes through a very rich grazing district, but by no means very productive of traffic to the railway.

4786. (*Mr. Horsfall.*) What dividend does the Dublin and Drogheda line pay?—It at present pays four per cent. We did pay five per cent., but a competing line was obtained between Dublin and Navan which took one per cent. from our dividend.

4787. (*Chairman.*) Is there still an active competition between the two lines?—We did actively compete for a short time, and we then agreed to charge the same rates. We are now charging precisely the same rates as we did when the line opened in 1862.

4788. (*Capt. Galton.*) You have never been able to replace the traffic?—No; there is very little intermediate traffic upon the Dublin and Meath line. Most of the traffic they have got they have abstracted from us. They have paid no dividend to any class of their shareholders.

4789. (*Chairman.*) Is there any increase of traffic now upon your line?—Our traffic increased up to 1861, but from 1861 it decreased considerably. It decreased in 1862 and 1863. It now seems to be slightly recovering, but very slightly indeed.

4790. Do you attribute that to the two bad harvests in those years?—Yes, the railway traffic in the whole of Ireland decreased from 1860 or 1861.

4791. Was the whole of Ireland affected by the bad harvests?—Yes, a great deal of the north was just as much affected as the south.

4792. (*Mr. Glyn.*) Did you find the diminution in your traffic principally in passengers or goods, or both?—The first effect of the bad harvests was to diminish our passenger traffic and slightly increase our goods traffic by reason of the demand for foreign corn and food in the country; but since that time the goods traffic has fallen off, and the passenger traffic has recovered a little.

4793. (*Chairman.*) Was the result of a bad harvest to stimulate to a certain extent the cattle traffic for a short time?—I think so.

4794. Farmers were obliged to sell everything they could possibly dispose of?—Precisely.

4795. Are there any manufactories in any town on your line?—Drogheda is to a certain extent a manufacturing place, and at Balbriggan there is some manufacture of linen and stockings.

4796. Is there a considerably larger traffic in the district so far as it is a manufacturing one, beyond what usually takes place in a purely agricultural district?—Certainly.

4797. Do you think that the manufactories such as they are at Balbriggan, add considerably to the traffic?—They add something to the traffic, certainly.

4798. Have you any coal traffic between Dublin and Drogheda?—Between Dublin and Drogheda we have not, but between Drogheda and Kells, and Oldcastle we have. We have done what we could to stimulate it. The railway company were obliged to carry it on themselves, because they could not get it properly done.

4799. Has the consumption of coal increased materially since the railway was completed?—It has to a

considerable extent ; but there are bogs not far from those towns, and the consumption is not likely to increase to any great extent.

4800. Has it in your opinion reached very nearly the consumption which you could expect ultimately to take place?—I do not say so. I expect that the coal traffic will for a great many years to come be a gradually increasing traffic in Ireland.

4801. Do you find that coals are consumed beyond the upper and well to do classes in Ireland?—Except in towns, I think not much.

4802. They are consumed by the shopkeepers in the towns?—Certainly.

4803. And by the tenant farmers?—Not by small farmers.

4804. Do they not in general use coal, then, in their houses?—In the country near the east coast I think they do ; but it will depend entirely on the distance which their houses happen to be from the bog on the one side, and the railway station on the other.

4805. Where they are near the railway station do you find that they prefer coals?—I think they are beginning to do so.

4806. Is Drogheda a port where coals can be brought to?—Yes ; Drogheda has a very good fleet of steamers, and a considerable fleet of small sailing vessels trading to it. There are five or six steamers which go from Drogheda to Liverpool weekly.

4807. Does your railway communicate with the water at Drogheda?—No, but it comes very near the water there and also at Dublin ; we are within a few hundred yards of the water at Dublin.

4808. (*Mr. Hamilton.*) What is your mileage charge on coal?—Our mileage charge is something like three farthings per ton, charging sixpence for the terminals ; but in specifying the rate to the public we do not distinguish terminals. Our rate, Drogheda to Navan, is 2s. per ton for 17 miles.

4809. Including the terminal that would be about three halfpence per mile?—Yes. Most companies have a minimum charge of 2s. or 2s. 6d.

4810. Do you know what coals are sold at in Drogheda itself?—We get coals at present at about 12s. 6d. per ton. It is an inferior kind of coal, and for the same kind of coal in Dublin the price is about the same. For our railway purposes we find it our interest to use the best coal ; and we are now making large contracts for Welsh coal, for which we pay 16s. 4d. per ton at the quay.

4811. In Drogheda?—In Dublin or Drogheda.

4812. (*Sir R. Hill.*) Is that anthracite coal?—No.

4813. Coal from South Wales?—Yes ; shipped at Cardiff.

4814. (*Chairman.*) Have you a larger traffic on the lines more immediately in the neighbourhood of Belfast?—Yes.

4815. There is a district round Belfast which may be called decidedly a manufacturing district?—Quite so.

4816. Is the traffic in that part of the country very much larger than the agricultural districts?—Very much larger.

4817. Amongst all classes of the community?—Amongst all classes. There used to be and there is still a great deal of industry connected with the weaving of linen, which led to the subdivision of farms, and a great deal of activity amongst the population.

4818. That class of the population move about?—That class of the population move about a great deal.

4819. There is a great deal of goods traffic arising from that circumstance?—A great deal ; and upon the Ulster railway, as far as Portadown, there is a very good traffic indeed.

4820. Are those railways generally in a more prosperous condition than the railways in the south of Ireland?—Not much more so than the two I have been speaking of, the Great Southern and Western, and the Dublin and Drogheda ; they are not more so at all.

4821. Are most of the lines which tend towards Belfast and the manufacturing districts dividend-paying lines?—The Ulster railway pays $4\frac{1}{2}$ per cent., the Northern Counties, I think, 4 per cent., and the County Down line, which is a small line running through the County Down, does not pay any dividend to its ordinary shareholders.

4822. Were most of them contractors' lines, or were they made by shareholders?—They were made by shareholders ; they were made with ready money. I think the line that goes into the County Down gets out of a manufacturing district, to a certain extent, and goes into an agricultural district ; it has no through traffic upon it ; its traffic is limited.

4823. Was the country favourable for the construction of a railway?—Ireland is generally favourable for the construction of railways.

4824. I am alluding to the neighbourhood of Belfast?—I can scarcely say so favourable as in the neighbourhood of Dublin.

4825. But they are not very expensive lines?—No.

4826. (*Sir R. Hill.*) You say the traffic is larger in the north than in the south?—The traffic within a certain radius of Belfast is large, but that is not at all the case elsewhere. The Irish North-western line, of which I was, as I stated, for some years a director, pays no dividend, either to the original shareholders or the preference shareholders.

4827. (*Mr. Horsfall.*) Does it pay its expenses?—Yes, and also the interest on its bonds.

4828. (*Chairman.*) Is that the line from Londonderry to Dundalk?—Yes, with one or two branches.

4829. (*Mr. Hamilton.*) Is the traffic at all increasing upon it?—The traffic fell off considerably in 1862 and 1863. It is, perhaps, slightly mending now, but very little.

4830. Do you see any prospect of amendment?—I do not think the amendment is likely to be very great, or very rapid ; I think it will probably mend a little as the country improves. I am a little more sanguine than the gentleman who preceded me. I hope the country will improve.

4831. Londonderry is a very improving town, is it not?—Yes, it is a very good town.

4832. Its trade is chiefly by sea?—The line of railway as between Londonderry and Omagh pays pretty well, but when it goes beyond Omagh, towards Enniskillen, there is very little traffic ; then again from Enniskillen to Dundalk it passes through a district which is comparatively poor, and therefore a country which affords little railway traffic.

4833. (*Mr. Glyn.*) Has that line of railway been costly?—No, it is not a contractor's line.

4834. (*Sir R. Hill.*) Has it been made with economy?—Yes, it has been made with reasonable economy. There is a portion of the Londonderry and Enniskillen line which may be called a contractor's line.

4835. Do the traffic and the trade of that district increase?—The trade of Belfast has increased wonderfully, but I do not know that the traffic on the railway has increased in proportion.

4836. Has it increased absolutely?—Yes.

4837. Is it generally the case in the northern districts that, where the trade is agricultural, the traffic increases?—As I have mentioned, in the year 1862 there was a falling off on all the railways in the north.

4838. But still it is increasing?—Probably it has been increasing a little of late.

4839. There was a fall in 1862, but dating from 1862, or after the fall, I think you say that the traffic has increased?—The increase since is very slight, but yet I think it has increased.

4840. There has been some increase?—Yes.

4841. Concurrently with that increase of traffic, has there not been a very rapid emigration?—There has been.

4842. The population, therefore, I presume, has decreased?—The population of Ireland has very much decreased.

J. W.
Murland, Esq.
2nd June 1865.

J. W.
Murland, Esq.
2nd June 1865.

4823. Then virtually there is a large increase of traffic, is there not ; that is to say, if we compare the present traffic with the present population, there must be a much larger traffic than there was a few years back ?—If you compare the traffic with the population, perhaps, as a matter of proportion, that would be so.

4844. Compared with the population, the traffic has increased with some degree of rapidity, has it not ?—I do not think the population has much to do with the matter. So far as the emigration is concerned, I may just mention that their going out of the country of itself affords some traffic. I think that probably some of those persons afford more traffic when they are leaving the country than when they are remaining in it.

4845. Then you think the traffic of the railways has not suffered much by emigration ?—I do not think it has. I do not think Ireland suffers much by emigration. Of course that is only my opinion.

4846. They are still constructing new lines in the north ?—They are constructing new lines in several instances.

4847. Although the lines already constructed are unprofitable ?—Although the lines already constructed are unprofitable to a great extent, they are still endeavouring to make new lines, but I must say they are almost all in great trouble at present ; the new lines are in difficulties generally.

4848. Can you account for the extension of unprofitable lines ?—I do not know whether I should not follow the prudent example set me by Mr. Haughton, and say nothing about them.

4849. You think it is to be accounted for, but you would rather not state the reasons ?—I think it is a matter of speculation. I think some of the people who took the bonds and securities under the impression that they could be sold, find now that they cannot sell them, and consequently they have come to a dead lock.

4850. But still other lines are being projected ?—Several have been projected.

4851. (*Mr. Glyn.*) You say the trade of Belfast has been increasing very considerably ?—Yes.

1852. But there has been no corresponding increase in the traffic upon the railways from Belfast ?—I think there has been some increase, but I do not think it is at all in proportion to the increase of the trade of Belfast. The trade of Belfast is very much a manufacturing trade. They import coals and other things by sea, and the manufactured goods for the most part go away by sea.

4853. Do not the manufactures come into Belfast very much from the surrounding districts ?—The linen trade has undergone a very great change within the last few years. I know something of it, because I am a native of the north of Ireland. They are now beginning to weave linen to a great extent by steam-power looms. Formerly linen was woven entirely by hand, and then the manufactures were diffused over five or six counties in Ulster. The hand-loom weavers are now vigorously competed with by these steam-power looms, and I fear that the first time there is a little dulness in the trade the hand-loom weavers will be squeezed out altogether.

4854. (*Capt. Galton.*) The power-loom mills are all in or near Belfast ?—Yes.

4855. Has the use of steam given great extension to the trade itself ?—Yes ; the quantity of linen manufactured now is very much greater than it was a few years ago.

4856. Do you carry large quantities of flax ?—Yes.

4857. Is that grown in Ireland ?—It is grown very much in the province of Ulster. There has been a very rapid increase in the growth of flax. The average growth was about 90,000 acres, but it came up last year to 300,000 acres. The flax hitherto has been almost entirely grown in the province of Ulster. I rather think that the high prices stimulated it a little too

much last year, and that we shall probably have a falling off.

4858. Are there other parts of Ireland equally well calculated for the growth of flax ?—As far as the soil and climate are concerned I dare say there are.

4859. Is there any particular reason why it is grown in Ulster ? Is it because it is near Belfast ?—I think it is an industry which requires considerable skill and practice, and the inhabitants of Ulster are familiar with it, whereas the inhabitants of other parts of Ireland are not.

4860. It requires knowledge ?—It requires considerable knowledge and skill.

4861. (*Chairman.*) In other parts of Ireland they find great difficulty, do they not, in disposing of the flax after they have grown it, because they do not know how to prepare it for the market ?—That is so. They can never do any good with it unless they have scutch mills. I believe the landed proprietors in the south of Ireland have been providing these scutch mills lately. It has not made much progress in the south.

4862. Is there much traffic that flows between the north and the south ?—But very little indeed.

4863. (*Mr. Glyn.*) Can you make a through rate from Cork to Belfast ?—Yes ; but we have to cart it through Dublin.

4864. But you would make a through rate ?—Yes, if we were asked for it. We should certainly do so.

4865. (*Capt. Galton.*) But that requires to be asked for ?—Yes. The impression on my mind is, that we have made through rates upon several occasions, but I am quite certain that we should make through rates if we were asked to do so.

4866. To any town in the south of Ireland, such as Limerick or Waterford ?—I have no doubt that the Great Southern and Western railway would make a through rate to any town between Dublin and Belfast if it were demanded.

4867. (*Mr. Hamilton.*) Would the granting of that through rate depend upon a special application ?—All our rates depend upon that.

4868. I understand that you publish certain rates, which the public are at liberty to avail themselves of ?—Quite so.

4869. Are the through rates published rates ?—No.

4870. (*Mr. Glyn.*) In England it is not always the case that through rates are published, because you have very often to go to the manager and inquire what the through rate is from a certain place to a certain place ?—Quite so.

4871. Is it the case in Ireland as in England that you have to make inquiry previously to having a through rate granted ?—Certainly ; if we would make a through rate the goods would have to be carted from one terminus to another terminus, which we have arrangements for doing. The goods are booked through. I am quite certain that those through rates have been made.

4872. There is no difficulty in any relations between the different companies, which would make it impossible to do it ?—None whatever.

4873. You all book through together ?—Yes ; all our managers meet most harmoniously in the clearing house, Dublin, and discuss the matter together.

4874. (*Capt. Galton.*) Is there any inconvenience in the railways in the northern part of Ireland being independent of each other ?—I have no doubt myself that the lines will be worked with more comfort to the public, and greater profit to the railway companies if three or four of the lines in the north of Ireland were amalgamated.

4875. Do you think that it would be an advantageous thing that they should be amalgamated ?—I do.

4876. Is there any difficulty in their amalgamating of their own accord ?—So far as the Irish North-western Company is concerned, from its financial position there is very considerable difficulty in their

amalgamation, but so far as the three lines are concerned, namely, the Drogheda company, the Belfast Junction, and the Ulster, I have tried to bring about an amalgamation between them, but I find that our northern friends did not care for it. They seemed to think that their connexion was not so much with Dublin as it was inland, and they declined.

4877. In fact there was no unanimous wish among the companies to amalgamate?—There was no unanimous wish amongst those three companies to amalgamate. I may state that in this year there was a move made by the Belfast Junction Company to amalgamate with the Dublin and Drogheda, but we could not agree upon terms. That was to amalgamate the company which goes between Portadown and Drogheda with the company between Drogheda and Dublin. On the part of the Dublin and Drogheda Company we were willing to amalgamate, but we did not see that any important advantage would be derived from amalgamating with that one line by itself.

4878. That would not have taken you into Belfast?—No.

4879. You had access to Enniskillen and Londonderry without it?—Quite so.

4880. If an amalgamation were to be really useful it ought to embrace the Coleraine as well as the Belfast line?—The Coleraine line is separated from the Ulster by Belfast, and is part of the northern counties system, and is to a certain extent independent. I do not know that it would be a necessary part of an amalgamated company, but I think the other four lines ought to be amalgamated, if we consult the convenience of the companies and the public.

4881. Is the line from Belfast to Downpatrick an independent line?—That is the County Down line.

4882. And the Ulster line goes from Belfast to Armagh?—The Ulster goes from Belfast to Portadown; and then one branch extends to Omagh, and the other branch extends to Clones, where it meets the Irish North-western.

4883. Through Monaghan to Clones?—Yes.

4884. In fact there are eight companies between Armagh, Londonderry, and Belfast?—I dare say you are right.

4885. (*Chairman.*) The Newry and Armagh is an independent line?—Yes.

4886. Is it not a line without any communication with the others?—I believe there are no arrangements for through booking.

4887. Are you on friendly terms with the Newry and Armagh?—The Dublin and Drogheda is, but I do not know whether the Ulster Company is or not.

4888. (*Capt. Galton.*) The Dublin and Drogheda does not touch it?—No.

4889. (*Mr. Hamilton.*) Has there been any expression on the part of the public in favour of any amalgamation of these lines?—I dare say individuals in speaking or writing have said so, but we have had no public meeting. A solicitor brought in a bill without asking the consent of either company last year to amalgamate forcibly the Dublin and Drogheda and the Belfast Junction Companies, and he called a meeting at which I believe very few persons attended. The matter was brought before our shareholders at the half-yearly meeting, and I think out of 600,000*l.* stock, which was represented at that meeting, there was only 3,000*l.* which was in favour of his proposition, so that it was almost unanimously rejected.

4890. That may have been rather more from the manner in which it was brought forward than upon the merits of the question?—Quite so. There is no objection to amalgamate if they can agree upon fair terms as between those two companies.

4891. As to that line which you stated just now does not pay any dividend upon any portion of its capital, is the working of that line well and sufficient?—I should be very sorry to say that it was

not, but at the same time I have no hesitation in giving this general opinion, that any line that is paying little or no dividend will not be worked as well as a line that is paying a dividend. I think the natural tendency is to postpone every expenditure that can be postponed.

4892. Do you think the wants of the public are as well supplied?—Certainly not.

4893. (*Mr. Gower.*) Do you consider that any proposal of an ultimate advantage would reconcile the shareholders of your company to a temporary loss of dividend?—I think not, unless they could be quite sure that it was going to be very temporary, and it was a very small one, but they would require to be well assured of that.

4894. If you were convinced that the loss would only be small and the ultimate advantage pretty certain, you would recommend it?—If the loss were sure to be counterbalanced by an ultimate gain, of course I should not hesitate to recommend it.

4895. (*Mr. Glyn.*) You would be obliged to show them some future gain?—I think so; I would not bring it forward unless I was satisfied myself that there would be some gain.

4896. (*Mr. Gower.*) With regard to return tickets, have you any reason to believe that there has been any fraud in connexion with them on your line?—I think there might be occasionally cases of fraud, but so seldom as not to be any objection to the granting of return tickets.

4897. You think that the occasional advantage which might be taken of it in the ticket being made use of by a different person than the person to whom it was issued, does not amount to an objection?—I do not care who uses it.

4898. (*Chairman.*) Is it your opinion that a reduction of the fares and charges would in a few years be attended by a great increase of traffic such as would ultimately leave the companies without loss?—I think if an extensive universal reduction, such as has been talked of, were made, that the companies would probably never be able to recoup themselves, and besides there would be a very large increase of working expenses in many departments which would be very heavy indeed; but I think that a judicious reduction might be made by which they might probably recover themselves in the course of a few years.

4899. (*Mr. Glyn.*) A judicious reduction on what class of traffic?—I should say on the third-class traffic, and perhaps also on other classes as well, perhaps on all classes of passenger traffic, but particularly on the third class. I have a strong feeling that the third class has not had the same advantage from railways that the first and second classes have had. The third-class passengers travel now at about the same cost per mile, namely, a penny per mile, as they did in cars before the introduction of railways.

4900. (*Mr. Horsfall.*) Do you entertain the same opinion with regard to a reduction of charges for goods?—I have no doubt if it were carefully and judiciously done, that is, not done at haphazard, but done by persons who have considered the trade of the country carefully, and who would only make reductions in those cases where the trade was capable of development, some reduction might be made, and after a time the loss would be made up by an increase of traffic.

4901. (*Sir R. Hill.*) To what extent do you think the third-class fares might be judiciously reduced?—There is no doubt that different parts of the country are differently circumstanced with regard to this third-class traffic; there are some parts of the country where the population is sparse, and no reduction would probably produce any great increase of traffic, but in other parts the reduction would produce an increase. I think it ought ultimately to get down as low as one halfpenny per mile, but I would, in the first instance, reduce it to three farthings per mile.

4902. You would reduce the fares gradually?—I would reduce them gradually, and wait to see what

J. W.
Murland, Esq.
2nd June 1865.

the effect would be upon each particular class of traffic.

4903. (*Capt. Galton.*) Do you think that by unsettling the fare, and reducing it to three farthings, you would get the same benefit as if you reduced it all at once to one halfpenny?—I think so; I think that the traffic must be to a certain extent created. Persons must be taught to travel. I do not think it will be found necessary to make that sudden jump in fares, because I am quite sure that it would be a good while before the line could be recouped.

4904. Then you think no disadvantage would accrue from reducing the fare by degrees?—I think not.

4905. (*Sir R. Hill.*) Has there been any increase in the rates for third-class passengers?—I have not known of any increase; there has been sometimes a decrease.

4906. (*Chairman.*) It appears by returns which have been prepared that, with reference to the total receipts of the Dublin and Drogheda Company, the third-class passengers' receipts bear a large proportion?—I believe that is the case.

4907. That is a circumstance rather in favour of a reduction of rates on third-class passengers running on your line?—I think that is so. That is my own impression; but at the same time we must not forget that we may be taking some passengers out of the second class.

4908. You are aware of the fact that the proportion is large?—I am quite aware of that fact.

4909. (*Capt. Galton.*) You say that there might be a loss from a reduction of fares in some parts of the country where the population is sparse, but would not the increase of traffic in other parts of the country where there are more people tend to the desirability of amalgamating railways, so that the increase of traffic in the populous parts might be set against the loss in the receipts arising from the sparse population?—I think it would. I think if the railways could be amalgamated and worked in that way, that an experiment of that kind might be tried, and probably tried successfully, but which we could not expect to get tried on individual lines.

4910. Where there are large numbers of individual lines it is very difficult to try an experiment in that way, because the loss would be too large in a poor district through which one particular railway passes to recoup it?—Certainly.

4911. (*Sir R. Hill.*) Do you think it would be safe to make a large reduction in the fares of the third-class passengers, without, at the same time, making a proportionate reduction in the first and second class fares?—I think it might probably be necessary to make some reduction in the first and second class fares when the reduction is made in the third class fares; but I would expect more to be recouped from the third class than I would from the first and second.

4912. Should you not think it judicious to maintain something like the present proportions?—I think so.

4913. (*Capt. Galton.*) Do you think that by reducing the third-class fares, and not reducing the first and second class fares, that you would induce fewer people to travel first and second class; if the third-class fare was very much decreased do you not think that the first and second class would at all events have a still greater disinclination to travel with the third class than they have at present, however low the fares might be?—There is something in that suggestion, undoubtedly. I have not the slightest doubt that if the fares of the first, second, and third classes generally were reduced to a considerable extent, that the effect would be that many persons who now go third class would go second, to avoid the company which they would get into by going third class.

4914. (*Chairman.*) Do you think that the whole of the Irish railways might be managed by a single company, and that the business would not be more than could be carried on by a single company?—I think not. I think in England they manage much

larger companies. I do not see why it could not be done.

4915. Do you think that considerable improvements might be introduced if it were in the hands of a single company?—I have no doubt that improvements would be introduced.

4916. Improvements that would lead to an increased development of traffic?—To a certain limited extent I think so. I think that those small poor lines never can be worked in such a way as to give perfectly fair play to the traffic.

4917. (*Mr. Glyn.*) With much economy of management?—A certain amount of economy. I do not think there will be as much economy as people think. The per-centage which the fees of directors and similar charges bear to the whole expenses of the railways is so very small, that but little saving in that respect would be effected; I think the great advantage would be in the efficiency of working.

4918. (*Capt. Galton.*) It would enable them to pay adequate salaries to their locomotive superintendents and general managers?—Yes.

4919. (*Sir R. Hill.*) And thus command a higher order of talent?—No doubt those lines, which are in a low financial state, cannot be as well managed as they should be; that is impossible.

4920. (*Chairman.*) Are any mines of any description worked in the north of Ireland, in that district with which you are connected as a railway director?—I think not. I think there are some collieries which were worked near Dungannon, but I rather think they were accommodated by a canal. The principal mines in Ireland are copper and sulphur mines, situated near the coast. There is a small mine in the neighbourhood of Shalee, which is a very trifling affair, and there is iron ore at Arigna, but I am greatly afraid that that cannot be made available.

4921. Is that a rare description of ore?—I am not at all acquainted with mining, but I have heard it stated that it is only worth 5s. a ton when put on board, and that would not pay the expenses of raising it, and conveying it 120 miles.

4922. Have any manufactories been built lately in the neighbourhood of Belfast, at Lurgan, Banbridge, and that neighbourhood?—In Belfast a great number.

4923. Not in Belfast itself, but the towns in the vicinity?—In that part of the country there are several manufactories, but the tendency latterly has been to erect manufactories in Belfast.

4924. Have no new ones been lately constructed in the vicinity of Belfast, that is to say, within 10, 12, or 20 miles of Belfast?—There are some large mills not far from Belfast.

4925. Lately built?—I do not think so.

4926. Has there been no increase in the number of mills?—Several establishments may have been extending themselves, but I do not think there have been any new establishments created outside Belfast. I cannot speak positively, but that is my impression.

4927. (*Mr. Gower.*) Do you know any manufactories anywhere that have been established in consequence of the construction of railways in Ireland?—I cannot recall any. The Ulster Railway has been a very long time in operation, and was one of the early railways in Ireland; there have been manufactories established at Lurgan and Portadown since that railway was made; but whether in consequence of that railway being made I do not know. For instance, Portadown, before the Ulster Railway was made, was a village containing 1,000 inhabitants, but the population has now increased to 10,000. I have no doubt that increase has arisen from the facilities afforded by the railway.

4928. Is that in connexion with the linen trade?—It is very much connected with the linen trade.

4929. (*Sir R. Hill.*) Are you of opinion that many of the railways that have been recently constructed have been made at an unnecessary cost?—If you mean by the cost, the sum which is put down to capital account at the time it is closed,

*J. W.
Murland, Esq.*

2nd June 1865.

I should say certainly; but if you mean that the money has actually been spent on the road I should say that they have been made at too little cost. The money has been raised under extraordinary disadvantages and thereby the commission, interest, and so on, that has been paid for it is added from time to time to the capital account until it mounts up to a very large sum indeed. I will give an illustration: the Cork and Youghal line has been recently purchased by the Great Southern and Western Company, who have agreed to give 310,000*l.* of their stock for that line. The line, according to the accounts of the company, seems to have cost upwards of 600,000*l.*, between 600,000*l.* and 700,000*l.*, but I believe it could be constructed for 300,000*l.*

4930. Do you mean 300,000*l.* in cash; because 300,000*l.* stock of the Great Southern and Western Company would not sell in the market for 300,000*l.*? I am merely speaking of what it could be constructed for.

4931. Do you think they have also been badly made?—I think so, in some cases.

4932. In what respects are they defective?—If a contractor has contracted to supply sleepers, the sleepers which he puts down do not last very long.

4933. They not being good timber?—Being very sappy timber.

4934. (*Mr. Glyn.*) Does that apply to the Portadown Railway?—Do you mean the railway from Portadown to Omagh?

4935. Yes?—The Ulster Company have taken that railway now. It has been only three or four years in use, and I understand that they have found it necessary to put down some new sleepers.

4936. That was a contractor's line?—Yes.

4937. (*Chairman.*) The Dublin and Drogheda line have no arrangements with the Armagh and Newry line?—No; we have no through booking with them except through the medium of other companies. It will be observed that the traffic to Armagh before that line was made, went by Portadown, from Newry. It is therefore to a certain extent, a competing line with the Belfast Junction.

4938. You do not give tickets through from Dublin to Armagh by the Newry and Armagh line?—No.

4939. You would be unable to do it unless the arrangements were approved of by the lines between Dublin and Armagh?—We could not do it ourselves, and my impression is that we do not do it for that reason.

4940. (*Mr. Hamilton.*) Is the average condition of the lines in Ireland equal to the average condition of the lines in this country?—We have no line in Ireland in the condition of the London and North-western, which is the line that I travelled on in coming up to London.

4941. I mean in point of repair and construction?—A few of the lines are very good. The rolling stock is as good as can be made; the lines are kept in excellent order, and are well constructed, but the rails are not fish-jointed. There is that disadvantage.

4942. Are the rails on the Irish lines not fish-jointed?—They are not fish-jointed generally. Some of the new lines have fish-jointed rails, but the old lines have not, and they have not yet had occasion to renew their rails. We have a different mode of laying the rails in Ireland to that which is adopted in this country.

4943. (*Chairman.*) Is there any other information which you could supply the Commission with, which you think might be of importance to their inquiry?—On the Dublin and Drogheda line we have been in the habit of giving return tickets on Sundays at single fares. We were induced to do that by the circumstance that there are upon our line one or two localities with very healthy suitable places for taking exercise at. We have issued return tickets at single fares all over our line.

4944. For all classes?—For all classes of passengers.

4945. (*Capt. Galton.*) Does that add much to the traffic?—In fine weather, in summer it does, but in winter not at all.

4946. Do you continue that all through the winter?—Yes, but we do not run the same trains in winter that we do in summer.

4947. (*Capt. Galton.*) Are there any facilities on your lines for the sort of traffic that takes place on Sundays upon the metropolitan railways, that is to say, the issue of return tickets at single fares from Sunday to Monday?—Our return tickets, as a general rule, for first and second class passengers, are available for a distance of 50 miles only for the same day; for the distance of 50 miles up to 100 miles for two days; over 100 miles for three days; and in addition to that tickets issued on a Friday are available till the following Monday.

4948. For long distances?—Yes, on the Great Southern and Western, and also on the Northern lines.

4949. And those issued on Sunday would be available for Monday?—Yes.

4950. (*Chairman.*) Is the pleasure traffic which you are talking of more especially confined to Sunday?—We find, particularly with the third class, unless they have a holiday, that they will not avail themselves much of any inducement that we could offer them. We have several times tried excursion trains on days which were not holidays, and we found them to be failures. On the other hand, when we ran them upon two or three of the great holidays of the year they were crowded.

4951. Has the result of this holiday traffic been satisfactory to the companies financially?—Yes, we get the trains quite full.

4952. Have you been able to accommodate that traffic with your regular rolling stock?—Yes; I would beg to observe that if an experiment could be tried without being tried at the expense of the shareholders, in the way of reducing the fares and charges in Ireland, I should be exceedingly glad to see it, and I am quite sure that the companies would give every facility to try it, provided they were saved from loss.

4953. Do you agree with Mr. Haughton, that the experiment could not be tried unless the Government were prepared to risk a considerable annual loss?—I am not come here prepared to make any well considered suggestion upon the subject. But it has occurred to my mind that if the Government were disposed to entertain the question of purchasing up the railways altogether, that the shareholders would undoubtedly be willing to take on Government security a smaller amount of dividend, than they have been getting, and in this way the Government would have some margin which they could apply to the reduction of fares. If that were done judiciously and carefully, I think that the loss probably need not be very large, and I think if it were done wisely that that loss would very likely be recouped in the course of a few years.

4954. (*Mr. Hamilton.*) Although the lines are not in first-rate repair, I presume they are in sufficiently good repair to bear a very much larger traffic?—Certainly.

4955. They are in practical repair?—I should not at all wish to give the impression that the principal lines of the country are not in very good repair. The question was asked as to whether they were in as good repair as the leading lines of England. I said that they had not such heavy rails, and that they are not fish-jointed, but I would say that they are in excellent repair.

4956. With reference to the question of the Government purchasing the lines, the state of repair is a very important question?—No doubt, and a considerable difference would be found between the lines. Of course some of them are much better than others.

4957. (*Chairman.*) You do not imagine that where lines pay no dividend the ordinary shareholders would be willing to make the Government a present of their capital?—I do not suppose they would, but I should

**J. W.
Murland, Esq.**
2nd June 1865.

think many of them would be content to sell it on very moderate terms.

1958. With regard to lines paying no dividend, are the ordinary shares when sold in the market worth anything?—There are some speculative people who will buy them at low prices.

1959. If it is wished to dispose of them have they generally found purchasers?—I should say that is so with some of them, but with regard to others I do not think purchasers can be found for them.

1960. (*Sir R. Hill.*) Are there lines the traffic of which would not cover the working expenses?—There is a line, the traffic of which does not cover its working expenses, from Bagenalstown to Wexford, a distance of 21 miles. It is a well-constructed line, but it is now lying idle.

1961. (*Mr. Glyn.*) Is 5 per cent. the usual rate

HIS GRACE THE DUKE OF DEVONSHIRE here retired, and MR. LEVESON GOWER TOOK THE CHAIR.

**Mr. B.
Fearnley.**

MR. BENJAMIN FEARNLEY called in and examined.

1964. (*Chairman.*) You are, I believe, the secretary of the Newry and Armagh Railway Company?—Yes.

1965. Have you any statement to make with reference to the traffic on your railway?—Our traffic is very seriously interfered with by the competitive measures of the companies with which we are connected. The Ulster Company which joins us on the north has possession of a line from Belfast to Monaghan and Clones; and then the Dublin and Belfast Junction Company, which is one of the lines between Dublin and Belfast, joins us at the southern end; and between those two companies a system has been pursued for the purpose of diverting the traffic from our line. The existing lines between Newry and Armagh may be described as a triangle, of which our line forms the hypotenuse, there being communication *via* Portadown by the other two sides. Of course we have the opportunity of carrying the traffic at much lower rates than the other companies, and if we were not interfered with we should, I may say, command the entire of it. We have applied to them for through rates over our system to the various stations with which we do business, but that has been refused, with the exception of to and from the town of Newry. They agreed upon through rates with us in reference to Newry, but upon the new section of our line, which is between Goragh Wood and Armagh, which was opened in August last, they have refused us.

1966. (*Mr. Glyn.*) They will take any traffic from you which you give them, which goes from Newry to Armagh, but they will not give you any traffic at Armagh to take to Newry?—No, except that which they cannot avoid. They will send it round by the old route, that is by Portadown. Our business communications and the trade of the port of Newry lie very much in the Monaghan and Clones districts, to which we have no independent access. The Ulster Company wish to draw the trade to Belfast, and they do that by giving low rates to merchants in that locality, and refusing the Newry and Armagh Company.

1967. What is the class of traffic that comes from Monaghan and Clones?—That is chiefly inwards traffic from Newry. There is not much export trade from that district to Newry. The trade consists chiefly of importations from Newry.

1968. Of what sort?—Coals, grain, timber, and iron.

1969. Is there much coal traffic?—It varies.

1970. Will not they give you through rates for that coal traffic to Monaghan and Clones?—They refuse through rates, and, of course, the coal traffic is included. There is a great deal of traffic in grain and bread stuffs in that district, and there are some extensive mills. There is also a traffic in slates, timber, and agricultural produce.

of interest on Irish debentures?—The average rate of interest which the Dublin and Drogheda pays is as nearly as possible $4\frac{1}{2}$ per cent., and the average rate of the Great Southern and Western is $4\frac{1}{2}$ per cent.

1962. Is the average throughout the country 5 per cent.?—There are several of those lines in difficulties which I suppose find it very hard to get their debentures renewed at all, and probably can only do so by giving personal security. Any line which is in good credit gets its debentures out at $4\frac{1}{2}$ per cent.

1963. Has the Dublin and Drogheda any preference capital?—Yes, it has about 100,000*l.* of preference capital at 4 per cent., and 150,000*l.* of preference capital at 5 per cent., which will be redeemable in the course of two or three years, so that in that case the Government if it purchased, would get the benefit of a reduction.

1971. Do they want to force you to amalgamate with them?—They do not want us to amalgamate, but they want us to agree to a proposition which they made, that the two routes, namely, the direct route between Newry and Armagh, which belongs to our company, and the route through Portadown, which belongs to the two companies I have spoken of, should be placed on terms of equality as regards fares and rates.

1972. That the charge should be equal for the long distance and the short distance?—Yes.

1973. And that you should divide the traffic?—Yes, practically.

1974. (*Mr. Glyn.*) How many miles do they carry their railway in competition with you?—29 miles, and the direct route is 21 miles, so that there is nearly a difference of one third in our favour. So far as passenger traffic is concerned, we should get it, but with regard to goods traffic, the distance does not tell materially in our favour.

1975. You do get passenger traffic?—So far as Armagh is concerned, but not as far as Monaghan and that district is concerned.

1976. Do you think, if you were amalgamated with the Ulster Company, that that district would be better provided for?—I am not sure of that, because it is not merely a question of railways, but it is a question of ports; Belfast has got the start very much, and the merchants and people in business consider that it would be to the interest of that district to bring the traffic to Belfast over the Ulster railway.

1977. Is your company a local company?—Yes.

1978. Was it formed by Newry merchants?—No, chiefly by English capital, I should say.

1979. Is your line in connexion with the Warrenpoint and Rostrevor line?—No, it is a separate company.

1980. (*Chairman.*) What do you propose as a remedy with reference to this matter?—Cardwell's Act does not give a remedy to meet this case, inasmuch as it does not make it compulsory upon either of those companies to give through tickets, or to allow us to book through backward and forward on their system. All that Cardwell's Act provides for is, that the traffic shall be sent onward without delay, but it does not give any company that requires it, the means of demanding that a rate shall be fixed in proportion to the distance.

1981. (*Mr. Glyn.*) They must make a rate for you under that Act?—Yes.

1982. But they can charge the maximum rate?—Yes; in fact, the merchant who desires to make Newry his place of business is prevented on account of not having through rates.

1983. The fact is, they give a rate for traffic which goes from Newry through Portadown, Armagh, and Monaghan, which would come to less than the two rates that you would charge between Newry and

Mr. B.
Fearnley.

2nd June 1865.

Armagh, and they would charge between Armagh and Monaghan?—Yes.

4984. So that practically they shut you out from all that traffic?—Yes; some of the merchants in the grain trade carry on a very extensive business, and would send a large quantity of traffic over our line if there was a through rate, and there are also minerals in large quantities to be carried.

4985. Where does that grain go to?—To the Monaghan district chiefly.

4986. What for?—To be ground and used up there.

4987. Is that ground in Ireland?—It is ground in Newry and Monaghan; sometimes they get it in a raw state to work into meal, but they make a difference in the rates on their system as between Newry and Monaghan, which enables the Belfast merchant to do business in that district at a shilling a ton less than the Newry merchant can, although the distance is much greater from Belfast to the points I have spoken of than from Newry.

4988. (Chairman.) I suppose when you made a railway of your own, you expected to be able to make arrangements with the other companies?—Certainly. Another point which has been a great disadvantage to us is, that we have been obliged to use the Ulster Company's station at Armagh, when we expected to have an independent station, and the result is that, the lines being unquestionably competitive, they have learnt all our rates and special arrangements, and it has been impossible for us to compete or hold our ground.

4989. (Mr. Glyn.) Why did you not form your own station there?—We applied for Parliamentary powers to do so, but we were strongly opposed by the Ulster Company, and they forced us into their station. We even went so far as to have an arbitration upon it, but we were defeated in our attempt to get an independent station.

4990. When did you open your line?—We opened the section from Gorah Wood on the 25th of August last. Since then we have been completely without through traffic, nothing but the local traffic of the district, which hardly pays working expenses. The southern portion of the line from Newry to Gorah Wood has been opened since 1854.

4991. (Capt. Galton.) What precise change would you suggest to meet this case?—That any company should be compelled, at the request of another company with which it had a junction, to agree to the through tickets and invoices issued by that company.

4992. At fixed rates?—No.

4993. How would you settle the rates?—I would leave the parties to arbitration. There should be some means of protecting the company which sends the traffic from having to pay the maximum rates.

4994. Would not the Court of Common Pleas give you that protection?—We have obtained some very good legal opinions upon that point, and they do not consider that remedy sufficiently satisfactory. We cannot compel them to book through.

4995. Might you not leave it to the Court of Common Pleas to decide what the rate shall be?—The machinery provided by Mr. Cardwell's Act is arbitration, and that I think sufficient.

4996. (Mr. Glyn.) Why have you not availed yourself of that?—We are about to do so now.

4997. Then, in point of fact, you have not tried it yet?—We are going to see what we can do.

4998. You have not tried the efficiency of the remedy provided by Mr. Cardwell's Act?—Not yet, but we are advised that we can oblige them to quote through rates; but what those rates will be, or whether they will bear a mileage proportion to what they charge on their own system is a point that we are not so sure about. The chief inconsistency in their conduct to us lies in their granting us through rates over part of their system, and refusing through rates to us over another part.

4999. You do not know what your grievance is, or what is your remedy until you obtain the decision of the Court?—We know what our grievance is, but we

do not know so well what our remedy will be. The population of the district lying between Gorah Wood and Newry is denser than any other part of the known world, except China.

5000. (Capt. Galton.) What fares do you charge for third-class traffic?—1s. 3d. is our charge for third-class passengers between Newry and Armagh, a distance of 21 miles.

5001. Does that produce a large traffic?—No, it does not.

5002. (Chairman.) I presume you get all the direct traffic from Armagh to Newry?—Passenger traffic we do.

5003. Do you not get all the goods traffic?—We do not, because they can carry round *via* Portadown and give more facilities than we can. Although the distance by their line is longer, that does not make any difference with regard to goods, as they carry as cheaply as we do.

5004. They charge the same for their long distance that you do for your short distance?—Yes.

5005. (Mr. Glyn.) When do you expect your trial will take place?—We hope that we shall have it on this term.

5006. (Capt. Galton.) Then you would wish them to charge a higher rate than you charge?—In proportion to the distance we would. We think that where they have a longer route they should not be able to force us down. We do not want any special protection for ourselves, but we believe we could carry a great deal more traffic if we were allowed access to the districts, from which we are now shut out.

5007. Do you not think that it would be a benefit to the public if these railways were amalgamated together and the traffic carried on in amity instead of their being at war with each other?—I do not think amalgamation would be exactly the cure for all the evils of the present system.

5008. If they were all amalgamated together, would it not be the joint interest of the companies to get as much traffic upon each railway as they possibly could?—Yes.

5009. And to develop all the ports?—Not all equally. A powerful port, such as Belfast, would very likely have a greater interest in bringing the traffic over a long route than a small port like Newry, and it would just lead to a recurrence of the same evils that we suffer from at present. If the Commission will allow me, I will read a letter which will illustrate it. This is from a merchant who would send goods over our line if there was a through rate:—

"Craigmore, Newry,
30th November 1864.
"Newry and Armagh Railway Company.

"GENTLEMEN,

"We have been written to by some of the Belfast merchants, saying that the Ulster Railway Company would not take our goods unless we permitted them to be forwarded to main line station. Please say how this is.

"Your obedient servants,
"ATKINSON & CRAWLEY."

Then there follows a memorandum from J. Linton Valley:—

"DEAR SIR, "Newry, December 2nd, 1864.

"I DIRECTED my manager at Belfast to address my goods *via* Gorah; he did so, and was told that they could not be booked further than Portadown."

That is the extreme limit of the Ulster line towards the Newry and Armagh railway, then he goes on,—

"But if he changed the direction to 'Main line' they would go on, which he did. I should be glad to know if goods delivered at the station in Belfast before a certain hour should be delivered the following day in Newry."

Then I have this from another merchant:—

"Domully Weaving Factory,
"DEAR SIR, "3rd December 1864.

"REFERRING to our conversation, you asked me to state my reasons for discontinuing sending goods by your line; simply this, that I am compelled to do so in consequence of the Ulster Company refusing to forward

Mr. B.
Fearnley.

2nd June 1865.

my goods by your line as heretofore (though I had a special agreement for a through rate, namely 13s. 4d. per ton), and to show you how the Ulster Company manage I now enclose you a letter from my Belfast correspondent, dated the 24th ultimo. The goods there referred to not having come up on the 25th I went to Belfast on this day and called at the railway office, and a young man in the traffic department showed me Ferguson & Co.'s forwarding note, and told me that goods had been sent on by the 1 p.m. on the 24th to Portadown, but that this Company would not forward them beyond their own line, not having a through rate with the Armagh Company. I stated that I had a through rate, and had no notice of any change of arrangement between the companies. His reply was, that the goods had been forwarded, and that was all he could do in the matter. I then asked to see the secretary, and was shown his office. I was told he was engaged. I asked to see the assistant secretary, and saw him. I told him the object of my visit, that this was the third occasion within the month that my goods were delayed (once sent to main line and once delayed at Portadown). He expressed his regret that I was inconvenienced, and again repeated that they had no through rate. My answer was, I had, and not having notice of any change between them and the other Company I would hold his Company responsible for the loss incurred by reason of the delay. He intimated to me that if my goods went by the other line there would be no delay. The goods referred to were not delivered until the 26th (Saturday) by your Company, incurring a loss of four days. For these reasons I must send my goods *viâ* "main line."

"Yours, &c.

"ALEX. MCNEALE."

I need not detain the Commission by reading any more of this correspondence; but, with their permission, I will hand it in.

The witness handed in the same, which is as follows:

"Memorandum.

"From Cantrell & Co.,
"25, Bank Street,
"Belfast.

"3rd December, 1864.

"To Mr. James Woods,
"Newry.

"DEAR SIR,

"YOUR favour of the 3rd instant to hand. In regard to hamper forwarded you 1st instant, our reasons for forwarding it by main line were simply these: The officials at the Ulster station refused to take charge of the hamper unless so addressed, and we were not aware of any other alternative. We hope you will not disoblige us by having the hamper returned, and if you can suggest to us any means whereby in future we may avoid the course taken we shall not fail to act upon them.

"Dear Sir,

"Yours truly,

"CANTRELL & Co."

"Newtownhamilton, Dec. 1st, 1864.

"To the Managers of the Railway Company,
Edward Street, Newry.

"SIR,

"I ENCLOSE the directions which were on a box for me, also the receipt for the payment; coming by main line has caused me a delay of three or four days in receiving them.

"Yours truly,

"THOMAS LINTON."*

"DEAR SIR,

"Newry, January 18th, 1865.

LATTERLY the goods which I order in Belfast are sent up to Main Line station instead of Edward Street station where I wish them all to come to. The Main Line station is very inconvenient for me, and I would be glad you would inform me if there are any means of putting a stop to them being sent in future to that station. I had several lots of bacon latterly from Belfast, which I ordered to be sent to

Edward Street station *viâ* Goragh, but they were sent to Main Line. I sent cards to the merchant to put on my goods, one of which I enclose, came to me and box of bacon delivered from Main Line, 22 Dec. last, and two boxes bacon which I believe were addressed same way, went to Main Line, but were all taken off when delivered to me.

"Yours truly,

"To B. L. Fearnley, Esq.

"JOSEPH MARTIN."

"Memorandum.

"1 Month 30, 1865.

"From Thomas Green & Co.,
"Grocers and Tea Dealers,
"Margaret Square, Newry. Newry & Armagh Railway.

"Having been in the habit of getting goods from Belfast *viâ* 'The Newry and Armagh Railway,' and being desirous of always doing so, we have in accordance with your directions had them addressed *viâ* Goragh, but have reason to know that even when so addressed they have come by the Main Line station, and in one instance, pointed out to the clerk of the Junction Company, a cask of sugar which came by their line and yet directed plainly *viâ* Goragh.

"We are, respectfully,

"THOMAS GREEN & Co."

"Wholesale Stationery Department,
"12, Water Street, Newry.

"31st January 1865.

"DEAR SIR,

"I WISH to know can you inform me can I have protection against the Dublin & Belfast Junction Railway Company insisting (in the face of the address in plain and legible writing 'Gorah Wood') to bring my goods on their carts from the Main Line, exposing them so long in open carts to the rain, and thus damaging my property? Your attention to this will oblige.

"Benj. L. Fearnley, Esq.

"Yours truly,

"JOHN WRIGHT."

"H. M. H. Morris, Esq.

"DEAR SIR,

"March 21st, 1865.

"ABOUT the 2nd instant you sent Mr. Murphy of this town a quantity of soap which he states was delivered to him *viâ* Main Line station (Dublin & Belfast Junction Company) but that you explained the reason verbally to him. As however, he wishes to put an end to his goods coming by that station and has spoken to our agent on the matter, may I ask you to give me the particulars of the exact date? Mr. Murphy states you instructed the soap to be forwarded by our line and that the Ulster Company refused; that you took it away, but that having no other remedy you had to return it, and allow the soap to be forwarded *viâ* Main Line station. An early reply will oblige,

"Yours respectfully,

"BENJ. L. FEARNLEY.

"Belfast, 23rd March 1865.

"Benjn. L. Fearnley, Esq.

"DEAR SIR,

"I AM in receipt of yours of the 21st inst., and in reply beg to say that the forwarding agent to the Ulster Railway Company here refuses to forward any goods to Newry, except *viâ* Newry Main Line station.

"I am, yours resp'tly.,

"H. M. H. MORRIS."

(*The Witness.*) We have complied with every request that was made to us for the exchange of through booking facilities upon every portion of our line, and we had several applications of that sort. For instance, at the opening of the Dublin Exhibition there was a proposal made for the issue of through tickets to Dublin at a cheap rate from Newry. That we agreed to. We followed that up by a request that they would extend the same facilities to the new section of our line; but that they have refused to do, so that parties from Armagh and the intermediate district were obliged to come to Goragh Wood and renew their ticket to Dublin, and in some cases they were left behind through missing the train.

Mr.
J. Delahunty.

Mr. JAMES DELAHUNTY called in and examined.

5010. (*Chairman.*) You are the managing director of the Waterford and Kilkenny Railway and the Kilkenny Junction Railway?—Yes.

5011. Have you any statement to make with reference to the railway traffic of the south of Ireland?—The statement that I wish to make is this, that as

* "The box referred to had the following address posted on it:

"By rail to Newry *viâ* Gorah,

"Mr. THOS. LINTON,

"Newtownhamilton,

and as appears by the Junction Company receipt for the carriage had arrived at the Newry Main Line station on 17th Dec. 1864. It was not actually delivered to the owner until the 21st (involving the delay complained of), the advice or freight note having been sent by post to Mr. Linton, at Newtownhamilton.

Mr. J.
Delahunty.

2nd June 1865.

far as Waterford is concerned, being the place I am connected with, there is a great difficulty in approaching the interior of Ireland from the want of railway communication, and there is even great difficulty in approaching Dublin, from the indisposition of the Great Southern and Western Railway Company to work in harmony with the Waterford and Kilkenny, so as to give trains that will conduce to the public convenience. I also wish to state that the public of the south of Ireland are, in my opinion, very much injured by the determination of the Great Southern and Western in connexion with the London and North-western to subsidize the local lines and steam packet companies to allow the traffic to be brought to England *viâ* Dublin. They pay 30 per cent. for that, and such diversion of traffic, in my opinion, not only is injurious to the southern cross channel communications, but very injurious to the public in the several localities.

5012. I understood you to say that there was an indisposition to give accommodation from the junction at Kilkenny up to Dublin; to what do you ascribe that indisposition to forward traffic?—They do not wish the traffic of the middle of the country should find its way to England by Waterford, they would rather it should go by Dublin, and they will not run trains so as to suit the convenience of the Waterford public either going up or down. For instance, if you want to go from Waterford to Dublin and back in one day, you cannot do so. They run their train from Kilkenny at so early an hour in the morning that it would be useless for the Waterford and Kilkenny Company to send trains to meet it, because no one would go. They run a train at 6.15 from Kilkenny to Dublin; the Waterford and Kilkenny Company would have to send a train at four o'clock, or a quarter past four o'clock, in order to catch that. In the same way the evening train coming down arrives at Kilkenny at such a late hour that no one would come by a train to Waterford if such was running.

5013. What remedy do you propose for that?—I think there should be some power which would compel railway companies to work harmoniously, so that the public interests might not be injured. Whether that power should be given to the Board of Trade, or some other party selected by Parliament, it will be for them to say; but there must be some power outside the railways. I know the Waterford and Kilkenny Company have always been disposed to run in such a way as will serve the Waterford public, but they have always been refused similar action by the other side.

5014. You say you have given more accommodation than you have received?—If the Great Southern and Western ran trains at convenient hours we should run trains in connexion with them. If they ran the trains at such hours as to suit the Waterford public, more passengers would go. In fact, they inconvenience the district altogether. Third-class passengers going from Waterford to Dublin lose a great deal of time either going up or coming down. They have to stop a night in Kilkenny, although the whole distance is but 112 miles.

5015. (*Capt. Galton.*) Do you say that passengers from Waterford to Dublin cannot go by way of Kilkenny and return the same day?—Not the third-class passengers, nor, in fact, any class passengers. Third-class passengers cannot go through the same day.

5016. Then they must take two days to get from Dublin?—To come to Dublin. If they go third class they must stop a night at Kilkenny.

5017. (*Mr. Hamilton.*) That is the only direct line from Dublin to Waterford?—It is, in fact, the direct line.

5018. Your complaint is, that the Great Southern and Western do not give any proper facilities at the junction at Kilkenny?—Yes; they will not run trains at an hour that will suit the public; they run the morning train from Kilkenny at 6.15, arriving in Dublin at 9.30.

5019. (*Mr. Glyn.*) That is the through train of the Great Southern and Western?—It is the through

train from Kilkenny; that is their Kilkenny line through train.

5020. It is their through train on the main line?—It is not a through train from Waterford.

5021. What train do you wish to join on the Great Southern and Western?—We want a train that will allow parties to leave Waterford at 6 o'clock in the morning and arrive at Dublin in proper time for business, and then enable the parties to leave at 4 or 5 o'clock p.m., so as to arrive in Waterford at 10 o'clock at night.

5022. Do you wish them to put on particular trains to accommodate you?—I wish to alter the hour of the trains which they do run.

5023. The trains, you say, that do run now are their trains to other parts of their system?—No; they are trains which no other part of their system is connected with; they run from Kilkenny to Dublin, and *vice versâ* without reference to any other train.

5024. (*Capt. Galton.*) Does the train which runs from Dublin to Kilkenny run as far as Kildare Junction with the train going to Cork?—No.

5025. (*Mr. Glyn.*) Then they start from Dublin a particular train for their service, which does not suit the public?—It does not, although we would make ours suit theirs if they started at an hour the public could travel at. If we ran trains now in connexion with theirs, parties would have to start from Waterford between 4 and 5 o'clock in the morning, and could not get back till 11 at night.

5026. (*Mr. Hamilton.*) Does that line belong to the same company as the line from Limerick to Waterford?—No.

5027. Is Mr. Malcolmson a director of your line?—He is; but it does not belong to the Limerick company. The Waterford and Limerick Company work the Waterford and Kilkenny, but it is only under working arrangements; they have no interest in it more than that. The Great Southern and Western have always set their faces against any sort of effort being made to the northern and midland districts of Ireland with Waterford. In 1846 a bill was obtained to make a line from Kilkenny to Maryborough, and I understand that the Great Southern and Western people at that time bought up the shares in order that the line might fall through. With much difficulty, in 1860, a similar bill was brought in, which the Great Southern and Western opposed most violently, but it was obtained in spite of their opposition. A portion of that line is now made; it has served the traffic of the district to this extent, that for eight weeks, ending 19th May 1865, the traffic of the line from Kilkenny to Waterford has increased over and above the traffic of last year 33 per cent.

5028. The traffic between what points?—Between Kilkenny and Waterford.

5029. (*Chairman.*) Is that railway in course of construction between Kilkenny and Maryborough?—There is part of it made.

5030. How far is it constructed?—To Abbeyleix.

5031. (*Mr. Hamilton.*) I understood you to say that the Great Southern and Western opposed the communication between Waterford and what you call the Midland district?—Yes.

5032. What object could they have in opposing that?—The object they had was this: there is not the slightest doubt that the whole of the towns in the midland districts of Ireland, such as Maryborough, Mountmellick, Phillipstown, Tullamore, Mullingar, and Parsonstown would be served if they were put into direct communication, *viâ* Waterford, with the south of England and South Wales. The agriculturists in those districts would find a ready market for their produce in the mining, iron, and coal districts, and, *vice versâ*, they would require coal and iron and other articles from the English and Welsh districts. Direct communication is at the present moment stopped altogether. It is so managed that the traffic must come round by Dublin, which is both tedious and expensive, and the consequence is, that the localities

Mr. J.
Delahunty.
—
2nd June 1865.

are all anxious for a direct communication ; but the Great Southern and Western has at all times opposed that in Parliament, and when a bill at one time was obtained, they bought up the shares and allowed the bill to drop through.

5033. (*Mr. Glyn.*) Is not Mr. Malcolmson a great steam-packet owner in Waterford ?—He is.

5034. He did not say anything about this in his evidence ?—I do not know what he has said in his evidence, but this I know, that the London and North-western Railway Company and the Great Southern and Western Railway Company have lately entered into an arrangement with him, by which the railway and steamboat interests are served to the prejudice of the locality. There has been an arrangement entered into, which was before the citizens of Waterford, and which was condemned by all parties, the effect of which is, that the traffic of the district will be brought to England by Dublin, *via* Liverpool and Holyhead, and that Mr. Malcolmson for the steamers and the Limerick Railway Company will get 30 per cent. of the traffic thus brought to Dublin to allow it to go by Dublin.

5035. (*Mr. Hamilton.*) When you say that “they” get, who do you mean gets the 30 per cent. ?—The Limerick Railway to Waterford and the Waterford Steam Packet Company.

5036. Who makes the arrangement ?—The North-western and the Great Southern and Western. I have the heads of arrangement which I can hand in if the Commission wish (*the witness handed in the same, vide Appendix AL*). One of the heads, which struck me very much as most injurious to the southern routes, is this :—

“Waterford and Limerick Railway Company, Cork and Limerick Direct Railway Company” (being another railway company that is subsidized) “undertake that all traffic consigned to them by other routes than *via* Liverpool and Holyhead between places in England and the places in Ireland, to which this agreement refers, shall not be booked through, and shall be charged the local rates.”

No through traffic from the districts to which the agreement applies can, under that arrangement at all, come by the Great Western or English Midland systems to England ; it must all go by the London and North-western. In that way the traffic of the country is interfered with, and interfered with so as to inflict an immense loss on the localities, and when the North-western and the Great Southern and Western are paying 30 per cent. on all goods for the purpose of making them go in a particular way, they are sure to repay themselves by putting on increased rates.

5037. (*Mr. Glyn.*) In what shape is that 30 per cent. paid. Is it by a reduction of rates or what ?—It is 30 per cent. of the monies received for traffic which is allowed to go by Dublin.

5038. Is it in the shape of rates, or tolls, or what ?—It is in the shape of money or direct payment ; it is in the shape of a direct subsidy. Suppose 100 tons of goods are to be sent from Limerick or Tipperary to Birmingham for which 100*l.* is paid for the transmission, although the Waterford and Limerick Company will not carry 1 lb. of it, and although the Waterford Steam Ship Company will not carry 1 lb. of it, they will get 30*l.* out of it in order to allow it to go by Dublin, so that the company who actually carry it will only get 70*l.*

5039. (*Capt. Galton.*) The company who carry it giving to the other companies a bonus of 30 per cent. ?—Yes, although they do nothing to earn it.

5040. (*Mr. Hamilton.*) You say that the Limerick and Waterford Railway Company and Mr. Malcolmson's steamers get 30 per cent. of the traffic ?—Yes, the Great Southern and Western and the London and North-western Railway Company give the 30 per cent. to the Waterford and Limerick Railway Company and the Steam Ship Company for anything that comes from certain districts.

5041. Then I understand your statement to be this, that the Great Southern and Western Railway Company, being interested in the traffic of Dublin, has made some arrangement with the North-western Company to secure all the traffic of that part of Ireland going by way of Holyhead ?—Yes.

5042. And in order to secure this they have made some arrangement with the Limerick and Waterford Company and with Mr. Malcolmson's steamers, so as to provide that no part of that traffic shall be diverted by way of Waterford into South Wales ?—They have made this arrangement, that upon all goods brought through Dublin to the North-western system in England at Liverpool or Holyhead, and consigned to Birmingham, and places north of Birmingham, that 30 per cent. off the receipts will be paid to the Waterford companies to allow it to go that way.

5043. That has the effect of diverting the traffic from Waterford to Dublin into South Wales ?—It has the effect of diverting the traffic of the district to England from Waterford to Dublin, and thence *via* Liverpool and Holyhead, and in fact injuring the communication between the southern parts of Ireland and England.

5044. How does it affect the southern parts of Ireland ?—Because the traffic that originally belonged to Waterford, and would come to Waterford, is diverted the other way.

5045. It goes north by Dublin ?—Yes. In Dublin they have communications two and three times a day with Liverpool and Holyhead, but between Waterford and Liverpool the steam ships only sail twice a week, therefore people who have produce to send will naturally, when they pay equal rates, send all their goods by Dublin, and none will come by way of Waterford. Therefore the diversion of traffic will injure communications between Waterford and England, as the number of steamers will be lessened when they must depend upon the local traffic alone.

5046. This arises from a sort of understanding between the London and North-western Railway Company, the Great Southern and Western of Ireland, the Limerick and Waterford, and Mr. Malcolmson, the owner of the Steam Company ?—And also the Cork Steam Shipping Company.

5047. What remedy do you propose for that ?—As I said before, there should be some tribunal, such as the Board of Trade, to prevent railways using what I may call a very illegitimate mode of dealing with a public matter, and to forbid them doing such things as would prevent the traffic from flowing in the channel through which it would naturally flow, and not to allow any large company to subsidize a small one to the prejudice of the public interests.

5048. Is Mr. Malcolmson a resident of Waterford ?—He is.

5049. Has he large property in Waterford ?—He has not large property in Waterford, but he has a large interest in Waterford in the shape of the railways and the steamers.

5050. Consequently he has no interest in injuring the town of Waterford ?—Certainly not. I take it that the London and North-western must have entered into arrangements with him not alone in connexion with the Waterford interests, but in connexion with their other interests besides, because Mr. Malcolmson is not only a proprietor in the Waterford Steam Ship Company, but is also a proprietor of steamers in almost every port in Ireland. I do not know how far the arrangement with the North-western affects his other interests.

5051. There is nothing illegal in this arrangement ?—No, I am not aware that there is anything illegal ; but although it may not be illegal, it is highly detrimental.

5052. (*Capt. Galton.*) You think, although not illegal, it is exceedingly injurious to the public interests that such an arrangement should be made ?—Yes, and the public have decided so. Here is a resolution which was adopted with reference to it: “That this committee, with all respect for the opinions of

"the directors, considers these arrangements to be well calculated to divert the traffic of the districts to England *via* Dublin, and vitally injure the trade and commerce of Waterford and the southern com-

"munications." That resolution was adopted at a meeting of a committee appointed by the merchant traders and citizens of Waterford, the mayor of Waterford being in the chair.

Mr. J.
Delahunty.
—
2nd June 1865

Adjourned till Friday next at 12 o'clock.

Friday, 9th June 1865.

PRESENT :

THE HON. E. F. LEVESON GOWER, M.P.
THE RIGHT HON. ROBERT LOWE, M.P.
SIR ROWLAND HILL, K.C.B., F.R.S.
T. B. HORSFALL, ESQ., M.P.
ROBERT DAUGLISH, ESQ., M.P.

GEORGE CARR GLYN, ESQ., M.P.
CAPT. DOUGLAS GALTON, R.E., F.R.S.
J. R. MCLEAN, ESQ., PRES. INST. C.E.
WM. POLE, ESQ. F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

WILLIAM CAWKWELL, ESQ., examined.

5053. (*Chairman*.) You are General Manager of the London and North-western Railway?—Yes.

5054. In your capacity of General Manager of that railway have you had occasion to make yourself acquainted with the Irish railways, or with any portion of them?—I have made myself acquainted with the Irish railways generally, but more especially with those in connexion with Dublin, and going through Dublin; we have also connexions through Fleetwood and Belfast with the northern railways of Ireland.

5055. Has there been any extensive system of through booking between the North-western Company and the Irish railway companies?—We have had for a considerable time through fares for passengers between the principal stations on the North-western lines and the principal stations on the Great Southern and Western line; we did try for many years to get through booking for goods also, but we could not succeed in getting that until about two years ago, and then only to a limited extent.

5056. At the present time is there a general system of through booking for goods?—Only to a limited extent.

5057. Have difficulties been experienced by the London and North-western company in bringing a system of through booking into operation?—Yes; I may say that we have had very considerable difficulty even with the Great Southern and Western Company, which is a line especially connected with the London and North-western system *via* Holyhead and Dublin; for instance, we have now got a system of through booking for goods between stations north of Birmingham, and including Birmingham, and the Great Southern and Western system down to the Limerick Junction. From Limerick Junction to Cork we have also through rates for goods to the same district; but there are 15 per cent. higher charges than by the steamers from the same district, the railway route being much shorter and in every way a much better route to the North-western system than the sea route is to Liverpool, and thence by railway. But, the steam-packet interest was so great that the Great Southern and Western company could only consent or rather could only succeed in making arrangements with us, by charging a differential rate of 15 per cent. in favour of the sea route from Cork, which commands a very large traffic. The differential rate against the railway route from the city of Cork is 20 per cent.; but the booking to the North-western system from a great portion of the best traffic district of the south-west of Ireland was limited to stations north of Birmingham, they would not make the through rates south of that place at all.

5058. Are the Great Southern and Western Railway Company of Ireland connected with any large shipping companies?—I believe that some of their directors are; and there are a number of lines in the district—cross lines—down to Waterford, and other ports, that appear to have some control over the Great Southern and Western board, either by com-

petition, or by some other means, so that we could only get an arrangement made, such as I have stated, by making a joint purse, in which the steam packets were interested as well as the railway companies; and in fact, we were compelled, in order to get an arrangement made, to sacrifice a portion of our railway distance, which we had to make over to the steam packets. Our mileage, in fact, does not really commence until we reach Holywell on the Holyhead railway; the distance between Holyhead and Holywell being given to the sea route.

5059. (*Mr. Glyn*.) How many miles is that?—About 70 miles; it is the difference in the distance between Dublin and Liverpool, and Dublin and Holyhead.

5060. Practically, is there very little through booking from Cork *via* Dublin on to your system?—There is scarcely any, in consequence of the differential rate of 20 per cent., which throws the traffic on to the water; and it was intended, as I believe, to do so.

5061. (*Mr. Horsfall*.) Have you any through booking from Greenore?—No; that is not a port at the present time.

5062. But you are making it into a port, are you not?—An Act of Parliament has been obtained for making a railway from Dundalk to Greenore, and for the construction of a port at Greenore; that is, they are to be joint works between the Irish North-western company and the Newry and Armagh company. I believe the Newry and Armagh company are constructing their line, and that they intend to construct works at Greenore; but nothing has been done in constructing a line between Dundalk and Greenore.

5063. Is not the London and North-western company proposing to expend a considerable sum of money at that place?—They have made traffic arrangements, and have given what amounts to a guarantee upon the expenditure that will be required to make the line between Dundalk and Greenore, so that out of the traffic passing between the Irish lines and the English lines, there will be an amount deducted to pay the working expenses, and also the interest on the money expended for the construction of that line.

5064. To a great extent the London and North-western company are responsible?—It is a joint proceeding between the Irish North-western Company and the English North-western Company with regard to the traffic passing over that piece of the railway.

5065. (*Chairman*.) Do I rightly understand you that there are rates charged over the Great Southern and Western line, between Dublin and Limerick junction, different from what are charged between Limerick junction and Cork, and that there are advantages in favour of the shipping companies as between Limerick junction and Dublin, but not as between Cork and Limerick junction?—Between Dublin and Limerick junction the rates are the same, either by the railway route, or by the sea route, but

W. Cawkwell,
Esq.

9th June 1865

W. Cawkwell,
Esq.

5th June 1865.

beyond Limerick junction there is a differential rate in favour of the sea route.

5066. Do you get a considerably larger amount of goods traffic on that part of the line between Limerick junction and Dublin than on the other portion of the Great Southern and Western Railway?—We get a larger proportion of traffic, but the traffic is not so heavy on that part of the railway as it is beyond; and in fact, the larger traffic arises in the neighbourhood of Limerick; between there and Waterford, and down to Cork in that district, there is a larger amount of traffic than upon that portion of the line where we have equal rates.

5067. You do not get the Limerick traffic?—No; not to London and other places south of Birmingham; at the other stations we have no rates at all. Upon the other system of railways, in connection with the Great Southern and Western line, they in point of fact, give us no rates at all, except fares for passengers to a few places on their railway.

5068. (*Mr. Glyn.*) Do you mean, not for goods?—Yes; not for goods.

5069. (*Chairman.*) Is it your opinion that there are materials for traffic in goods in Ireland which have not yet been developed, but which might be developed if a better system of through rates was introduced?—I am decidedly of opinion that the railway traffic of Ireland has never yet been half developed.

5070. In your opinion, what are the obstacles in the way of the development of both goods traffic and passenger traffic in Ireland?—I believe that the principal obstacle is the steam-packet interest; that is a very strong interest on the railway boards, and in connection with the railways; for instance, the system of railways that I spoke of from Limerick down to Waterford, and those lines of railway running down towards Cork, leaving out the Great Southern and Western line itself, are entirely in the hands of persons having a large steam-packet interest, and the traffic is therefore conveyed to Waterford and other ports, and thence carried by sea either to Liverpool, or to the coast of South Wales, and to Bristol and other places.

5071. Do those steam-packet companies do more than fairly compete with the railway companies?—In the instances that I have already given, there is a differential rate, that is owing to the Great Southern and Western company being so mixed up with the steam packet interest that they enforce this differential rate, which therefore entirely prevents the development of the traffic upon the railways.

5072. (*Mr. Horsfall.*) Have not those steam-packet companies developed the trade of Ireland a good deal?—I dare say they have, but I think they have not developed it so effectually as it could have been developed by resorting to the more expeditious mode of transit, that is, railway communication.

5073. Are not the steam boats principally owned by gentlemen in Ireland?—I believe they are, and I believe that that is the great difficulty that we have to contend with in many cases, that the Irish boards are so completely mixed up with the steam-packet interests, we do not get the advantages that railway companies ought to have: for instance, the Irish companies almost universally require to have their local rates in all the arrangements that we make with them, and they are not inclined to meet the requirements of the traffic by making through rates and sacrificing some portion of the local rates. In all divisions of traffic they require to have their local rates out first, and therefore the other companies have to sacrifice a portion of their receipts on the English side, which they ought to have on their own account.

5074. Are not their rates much lower than your rates?—I think not.

5075. (*Mr. Glyn.*) In point of fact, when you use the words "through booking rates" for goods, you do not use them in the same sense that we do in this country, because there is not a general rate from one point to another, but there is a rate charged by the English railway companies and by some of the Irish

railway companies; and, again, there is a higher rate charged by some of the other Irish railway companies?—Yes, I have used those words in this sense; if we make a charge through, say, between Birmingham and a station on the Great Southern and Western line, in the division of that rate, the Irish company would require to have their local rate out first, and then the remainder would be credited to the route between Birmingham and Dublin.

5076. The division of the money which is received into a common purse is not per mile, but it is a division made by the companies in which the larger portion is claimed by the Irish company?—Yes, and that very much cramps the through arrangements; the tax upon the English company is too great.

5077. (*Mr. Horsfall.*) Does your answer apply equally to goods as to passengers, or are your rates not higher on cattle in England than in Ireland?—I think not; I think in most cases they are lower. In cases of through rates of that kind we always endeavour to meet them by making such rates as will develop the traffic of the Irish railways, while, on the other hand, they adhere to their local rates in all cases, which of course prevents the traffic being brought.

5078. (*Chairman.*) Is it your opinion that some of the Irish railways are managed with a view to the profit of the steam packet companies rather than the profit of the railway companies?—Yes, I think so; there is also another difficulty which we have experienced, and that is, as to the question of the sea risk. Several of the Irish companies object to make through rates in consequence of the risk which they think is incurred by the railway companies in booking through. I believe, as the law stands now, a steam packet company is only liable for a comparatively small sum in case a vessel should be lost; whereas, if a railway company books a passenger through, they might be held liable, as a railway company under Lord Campbell's Act; and therefore some of the Irish railway companies refuse to incur that risk, and to join in through rates. That I believe is a very serious obstacle to the development of the through traffic between England and Ireland.

5079. (*Mr. Glyn.*) In point of fact then it comes to this, that for the sake of enabling some of the railway companies in the south of Ireland to charge their local rates, the London and North-western Company pays a penalty by not having any receipt whatever over a certain portion of its line between Holyhead and Holywell?—Yes. And in addition to that, they have in most cases been obliged to take upon themselves the sea risk.

5080. Does that apply to goods as well as to passengers?—It does. I believe the case has never been tried, but the apprehension is, that in the case of the loss of a vessel the railway companies would be just as liable as if the accident had happened on their railway; whereas, if it was the steam-packet company only plying between Dublin and Holyhead, or between Belfast and Fleetwood, they would be only liable to the extent of 30*l.* per passenger, and beyond that not at all; and therefore the Irish railway companies have objected to joining in through rates.

5081. You stated, I think, in the early part of your evidence, that booking through goods was only done to a limited extent; did you use the word "limited" as applicable to a system, or to the whole extent of the traffic in Ireland?—It referred to a system; that is, that the companies, which I mentioned, in the south of Ireland would not make through rates with us to places south of Birmingham; the arrangement was limited to Birmingham and places north of Birmingham, and then only from a limited number of stations.

5082. (*Chairman.*) What reason is given by the Irish railway companies for limiting the through booking to the district north of Birmingham?—I really cannot tell; we get no direct reason for it, except that they object.

W. C. Cuckwell,
Esq.
9th June 1865.

5083. If it be advantageous to them to book through to places north of Birmingham, why should it not be equally advantageous to book through to places south of Birmingham?—In the instance that I have referred to, it was the steam-packet interest that prevented it. To some extent we have through rates with the Great Southern and Western Company to London for goods, but it is not to a large extent, because on other parts of the line through rates to London, or south of Birmingham were entirely refused. We had been trying for so long a time to get a through arrangement made, that we were at last quite glad to accept the thing upon any terms, being in hopes that as things went on, the Irish railway companies would at last extend it.

5084. (*Capt. Galton.*) Do you think it is with a view to increasing the trade by means of the southern ports that they refuse to give you a through rate?—I believe it is, because they have steamers running from most of those ports to London.

5085. Do they give a through rate at the present time to the Great Western Company through Waterford?—I do not know. I think they have through fares for passengers to some extent, but I do not know that they have for goods.

5086. You stated I think that you thought the fact of there being a steam-packet interest on the Irish Railway Boards prevented the development of traffic on the railways, but why should that interest be adverse to the development of that traffic?—If a board is composed of persons who are partly interested in steam packets, they will endeavour to get the rates fixed, so as to take the traffic down to the port in which they are interested, and not to come through by railway to Dublin.

5087. They prefer giving differential rates, which shall carry the traffic towards the port in which they are interested, instead of encouraging traffic generally over the line?—If you take those lines of railway from Limerick and Tipperary to the coast, the rates down to Waterford would be so arranged as to take the traffic down to that port, and to be shipped and taken from thence by steamers, instead of being taken to Dublin, and sent on from thence.

5088. (*Mr. Horsfall.*) Has not the London and North-western Company expended a considerable sum of money in various ports in this country and in Ireland in order to facilitate railway communication?—We have spent a certain sum of money in Dublin in securing a position on the Liffey, where we can ship traffic, and carry it by our own steamers to Holyhead; but we have expended no other money in Dublin.

5089. Has not the London and North-western Company expended a considerable sum of money in Greenore?—No, we have expended none.

5090. Did you not promote a Bill in 1864, which was called a "Traffic Arrangement Bill," for making a harbour and railway at Greenore?—I think I have explained already that it was proposed to make a railway down to Greenore, and we made traffic arrangements with the Irish North-western Company that upon division of the receipts on the traffic passing between that railway and ours, a deduction should be made to defray the working expenses, and to provide a certain amount of interest on the capital expended upon it.

5091. Under the Act that was obtained the London and North-western Company was to construct a railway and a harbour at Greenore?—No; the Act that we obtained was for the purpose of sanctioning traffic arrangements between the Irish North-western Company and the London and North-western Company.

5092. Was it not, in point of fact, to facilitate the construction of a railway from Greenore to Dundalk?—To a certain extent,—I explained that before,—so far as the payment of working expenses went, and interest for the capital expended upon it.

5093. Was that Bill supported, or was it opposed by the inhabitants of Dundalk?—I do not think it was opposed by them.

5094. Were no representations made by the Commissioners of Dundalk against the Bill?—I do not remember that there were; I think that the Bill was passed almost without opposition of any moment, except that which proceeded from some of the English railway companies, who wanted to have the benefit of the line without paying their money, and they did obtain certain facilities by clauses; but I do not think there was any opposition, except theirs, of any moment.

5095. Was there no opposition on the part of the steam-packet companies?—I think the steam-packet companies did appear. There is a steam-packet association which opposes all the railway Bills, and they appear on all occasions where their interests are concerned.

5096. Do you know Mr. Stephen Brown?—No; I do not.

5097. Do you remember to have seen a letter which he addressed to the chairman of the London and North-western company with respect to the Dundalk and Greenore railway?—No. I have no recollection at all of it.

5098. Will you just look at that letter (*handing the same to witness*), and say whether you have seen it?—I have no recollection of this letter at all. I never saw it before.

The following letter was handed in.

"Traffic Arrangements Bill.

"Dundalk and Greenore Railway."

"To the Chairman of the London and North-western Railway Company.

"SIR,

"Being for many years connected with the trade of this port, its harbour, trusts, and steamboat interests, and besides having induced a family with which I am closely connected to invest all their means in your securities, and for part of which I am trustee, I think I am privileged to offer a few remarks on reported evidence before committee for Traffic Arrangements Bill, and to give my opinion on the soundness of the Dundalk and Greenore railway scheme, for which it is said the London and North-western railway are to provide funds or security. When this project was first mooted, a good deal of alarm was felt in Dundalk, and I confess I treated this matter very lightly. I said, 'This is another embryo produced by an inventive engineer, and enterprising attorney, one of a numerous progeny that is daily turning the minds of men from the honest and sober pursuits of business into the vortex of speculation. It will die a natural death, as the common sense of the London and North-western railway shareholders will preserve them from advancing money to make a railway in Ireland, with no other advantage but deep water.' I now think I was wrong. After reading the evidence reported before the Committee, it is plain that at any price or sacrifice to your shareholders, or to other existing interests, traffic must be brought to your line, cost what it may. If the objects of your directors were to promote a railway to Greenore without wanting to inquire into its merits, and to damage the character of this port, and the Dundalk steam-packet company, you selected witnesses to suit those purposes, I impugn the correctness of their evidence. As an importer of foreign grain, having frequently vessels coming to me, drawing from 13 to 16 feet water, and getting them up to the quays in safety, I am at issue with Mr. Barton as to the capability of this port. I further assert, that with 25 years' experience, I never knew an instance when a steamer could not cross the bar for want of water at time of tide, &c., and the cases are not frequent of detention in the river. The want of expansive ideas attributed to the directors by Mr. Byrne, is a disposition on their part to preserve the property intrusted to their charge from being sacrificed to railway interests, without adequate advantage to the traffic. They have always been willing and are now ready to enter into arrangements with both the London and Irish North-western railway on fair mileage rates, and such arrangements have been made, and are actually existing. They have five first-class steamers suited to the trade of Newry and Dundalk; and for upwards of 25 years they have developed and carried the traffic natural to this port with most perfect safety to life and property. I am sorry to have to say that it did not become Mr. Byrne to lift his hand against the port, for which he is solicitor, and a prosperous Irish undertaking, but more so to the general public than to the shareholders, who are not even getting fully 5 per cent. on uninsured property.

W. Cawkwell,
Esq.

9th June 1865.

And now, with all due respect to Lord Erne, I will give my version of the story of the daily sailings. In the month of September 1862, a steamer arrived here carrying a number of your directors, including yourself, to confer with the railway and steam-packet directors. The steamer's appearance was looked on as a threat, and seeing that it was the act of a powerful company to overawe a weak one, it was not deemed chivalrous. The conference ended in an arrangement for daily sailings from Dundalk to Liverpool; but after nearly 12 months' trial, the same directors that commenced them, and not the new ones, as stated in evidence, finding their boats sailing two days in the week without cargoes, and their capital wasted, had to return to the four sailings a week.

The present board have no objection to resume daily sailings providing they can get the cargoes to carry or a subsidy to compensate them for loss; but Donnelly's statistical returns show the vast diminution of stock in the country, and the Dundalk steam-packet company cannot carry what does not exist. The carriage of coals and maize inland having diminished, and the small shipments of oats and oatmeal from the interior have also contributed to counteract the traffic of the Irish North-western Railway and the want of daily sailings.

And, now, presuming that a railway will be made to Greenore, and a packet station to Holyhead, what are the advantages to be derived from an expenditure of at least 100,000*l.*? The district is perfectly barren for many miles around, and it possesses no advantage but that of deep water.

The trade of Dundalk will not bear to be divided, and you may do it some injury, and your company no good. The experiment is not worth the cost, and I venture to predict that it will not pay 2 per cent., in either direct or contingent advantage to your line. The Irish North-western railway may carry the goods, but shippers can control their destination; and your company may find after they have expended or guaranteed the money, that the bulk of the shipments will be sent to Liverpool, where they can remain on the steam-packet quay till required, instead of being carried on a long line of railway and thrown on the platform, where any business man knows they are so badly attended to, and railway travelling is not suited to live stock.

We are a poor country, but there is still some capital left in it for legitimate investment, and I think I may safely say, that not one shilling of Irish money, even by the nominal promoters, will be risked in this undertaking of the Dundalk and Greenore railway.

Therefore, I now appeal to your directors to pause before they rush on a project of such large expenditure and doubtful return, and so fraught with peril to your shareholders, and to other existing and tributary interests.

To your Company who have all the power that wealth and influence can command, it is said that the outlay is but as a drop of water to the ocean, but if you are strong, so should you be merciful, and I have lived long enough to know that companies or individuals never have been worse off by observing the golden rule of 'live and let live.'

The Port and Steam-packet company of Dundalk, with some trifling drawbacks, which unhappily are made the most of for other purposes, besides the promotion of traffic, are fully capable of developing all the resources of a natural trade, and that company is most desirous of cultivating the most friendly relations and terms with yours.

If you reject our overtures, give us fair play; to honest English opinion I appeal with some confidence. Promote the objects that you deem best for your company, but let it be done on disinterested evidence that will do us no injustice. We entered no appearance against your bill before committee, from a desire to keep on good terms with you, but statements have been made in evidence which cannot remain uncontradicted. Novelty may divert the traffic from this port for a time, but I have little doubt that it will return to where it has been so well served for many years.

I am not vain enough to suppose that my feeble pen will have any effect on the designs of your mighty company, but I found it hard to remain silent on a project that I consider will affect the interests I represent, and prove a wasteful and injurious expenditure of capital.

I am Sir, your obedient servant,
S. BROWN, Captain."

Dundalk, May 20, 1864.

5099. (*Capt. Galton.*) You have stated that you have through rates with the Great Southern and Western railway company. Have you not also through rates with the Midland Great Western?—We have through rates with them.

5100. Throughout the whole system?—From all the principal stations.

5101. Have you through rates with the Dublin and Drogheda company?—We have through rates with the Dublin and Drogheda company. There is a line made from the Midland Great Western railway, which I think is called the Dublin and Meath railway. The company owning that line made through rates with us, and then the Dublin and Drogheda company also made through rates with us; but we could not get any through rates with them until the Dublin and Meath company had made through rates with us.

5102. Have you any through rates with any other railway in the north of Ireland, for instance, with the Dublin and Belfast Junction company?—We have through rates with the Ulster company by way of Fleetwood, and those through rates are made with us on condition that we take the sea risk upon ourselves.

5103. Do the steamers which run belong to the London and North-western company?—No, they belong to the company running between Belfast and Fleetwood, but the railway companies have an interest in them.

5104. Have you through rates with any other railway companies; with the Londonderry and Coleraine company or the Dublin and Belfast Junction company?—No, I think we have no through rates with them, or if any, it is to a very limited extent.

5105. Or with the company whose line runs between Dundalk and Enniskillen?—That is called the Irish North Western, and there is the Belfast and Northern Counties.

5106. Have you through rates with those lines?—We have, that is, we have through rates with them to some extent, I think I can explain to the Commission shortly what our arrangements are with the different Irish companies. We have through booking of passengers to the principal stations with the Great Southern and Western company, and we have through booking of goods to some extent with that line.

5107. (*Mr. McClean.*) Do you mean for all classes of traffic?—With the Great Southern and Western company we have through booking arrangements to Limerick Junction for both passengers and goods.

5108. For all classes of goods and passengers?—Yes; but beyond that point there is 15 per cent. differential rate charged to Cork, and from Cork it is 20 per cent. in favour of the sea route.

5109. Minerals are not included?—We have not been asked for rates for minerals. Then by the Waterford and Limerick company's line we have a few rates for passengers, not many, and goods rates from Limerick and Tipperary only; but those are limited to Birmingham, and places north of Birmingham. For a few weeks we had goods rates with them to London, but they withdrew them, and we have never been able to get them to renew them since.

5110. (*Capt. Galton.*) What was their reason for withdrawing them?—That I do not know. I believe that line pays no dividend; it would appear to be worked entirely in the interest of the steam-packet proprietors. The Waterford and Limerick company work the Limerick and Ennis, and the Limerick and Foynes railways, and, I think, the Waterford and Kilkenny line. We have no through rates with any of those.

5111. And they are worked you say entirely in the interests of the steam packet companies?—Yes, and those railways run through a very productive district indeed.

5112. With respect to cattle?—Yes, and for poultry, provisions, butter, and eggs, and bacon, and all that kind of traffic. Then there is the Cork and Limerick direct railway, with which we have no through rates. I believe Mr. Pike is the chairman of that company, and he is a steam-packet owner at Cork. With the Cork, Blackrock, and Passage railway we have no through rates, nor have we any such arrangement

W. Cawkwell,
Esq.

9th June 1865.

with the Cork and Youghal company. We have through passenger fares with the Dublin, Wicklow, and Wexford Railway company, but we have to pay them 50 per cent. higher fares than they charge for their local traffic between Dublin and Kingstown out of the through fare.

5113. (*Capt. Galton.*) Speaking of passengers going from London to Dublin, do you mean that the fares you have to pay them between Kingstown and Dublin are higher than they actually charge the passengers travelling on that line?—Yes, in addition to which we pay rent for a station in Dublin, and keep our own clerks there.

5114. (*Mr. McClean.*) You have not equal mileage rates with them?—No, their traffic is a local traffic, with the exception of our through traffic. I may add, however, that some of these passengers are brought down by a special train, but there are many passengers to come by it, and we pay the additional sum which I have mentioned out of the through fare. We have through rates for goods also with the Dublin, Wicklow, and Wexford Company.

5115. (*Capt. Galton.*) Is the extra per-centage charged in consequence of their having to run a special train?—No, it is not on that account; they would not book through except on those terms; but they do run those special trains down, and they take out passengers by them.

5116. (*Mr. McClean.*) You have not equal mileage rates with them?—No, they receive their full local rates on goods. We had no sooner made an arrangement with them, than some of the parties interested in the steam packets interfered. The secretary gave us notice of their intention to withdraw from them; we remonstrated, and eventually they agreed to continue them, and they are continued now. I am referring to the Wicklow and Wexford company.

5117. (*Mr. Horsfall.*) Do you meet with any opposition on the part of the steam-packet companies between Dublin and Liverpool?—They are embraced in the joint purse arrangement at present, and by that arrangement we give them the Dublin and Liverpool traffic—in fact, they divide the traffic between Dublin and Holyhead as against Liverpool and Dublin, and it is to them that we pay the additional mileage up to Holywell, making our Holyhead sea route the same distance as the Liverpool sea route.

5118. (*Chairman.*) Is the London and North-western company authorized to hold and run steam boats between England and Ireland?—They are between Holyhead and Dublin and Kingstown.

5119. Are those the only steamers that they run?—Yes. We run our own boats to Dublin. The City of Dublin company carry the mails by their mail steamers between Holyhead and Kingstown. We run our own boats between Holyhead and Dublin, carrying goods and passengers, and also cattle.

5120. (*Mr. McClean.*) Can the London and North-western company put on boats to Greenore?—No, not their own boats, but they have power to make arrangements with the steam-packet companies under the Act of last year.

5121. (*Mr. Horsfall.*) Do you carry cattle from Dublin to Manchester by way of Holyhead?—We do.

5122. Is not the most natural channel to send them through Liverpool?—To Manchester?

5123. Yes?—No, I think not.

5124. Do you not get considerably more railway traffic going by Holyhead than going by Liverpool?—Yes, for the reason that there is *viâ* Liverpool the longer sea voyage for the cattle, and when you get them to Liverpool you have to drive them through the town of Liverpool from the docks to Edgehill. Whereas at Holyhead they are taken from the steamers to the rail, and in a very few months the wharf will be almost close down to the place where the cattle land, within a very short distance of it. From Holyhead the cattle are taken to Manchester by railway, and I do not see any reason why they should not go that way. We make rates

to Manchester by Liverpool, from Dublin with the steam-packet companies, and the rates are the same by both routes, therefore the North-western company do not attempt improperly to divert any traffic from Liverpool that can go that way, on the contrary they afford the greatest facilities for it.

5125. When you speak of the same rates by both routes, do you mean through mileage rates?—I mean the same through rate.

5126. There is a considerable difference in the distance, is there not?—In the one case the distance is greater by railway, and in the other shorter; that is, by way of Liverpool; by Holyhead the railway distance is the longer, and the distance by sea the shorter.

5127. Do you carry cattle from Holyhead to Manchester, which is the longer distance by railway, at the same rate that you would charge for carrying them from Liverpool to Manchester?—We carry them through from Dublin to Manchester at the same rates, whichever route is taken, and to charge any differential rate would mean shutting up the one route; that is, if we charged a higher rate by Holyhead the public would not have the advantage of the shorter sea passage.

5128. If I understand you correctly, you charge the same rate from Holyhead to Manchester by the railway as you do from Liverpool to Manchester?—No; we do not.

5129. (*Mr. Glyn.*) You charge a through rate from Dublin in both cases?—Yes; the local rate from Holyhead to Manchester is very different from the local rate from Liverpool to Manchester.

5130. If I put cattle on the railway at Holyhead, I should have to pay a higher gross rate per mile than I should have to pay between Liverpool and Manchester?—Yes.

5131. (*Mr. Horsfall.*) What rate do you charge on cattle from Holyhead to Manchester?—I cannot tell you at the moment.

5132. What do you charge for cattle from Liverpool to Manchester?—I cannot give you that from memory. I know that we carry the traffic both ways. We carry the traffic by our own boats from Dublin to Holyhead, and so to Manchester, and we carry the traffic in connexion with the City of Dublin steamers, and the screw steamers by way of Liverpool. I may add that we carry the traffic between Liverpool and Manchester to the entire satisfaction of the steam-packet companies.

5133. Is it also to the satisfaction of the public?—I believe so entirely. The cattle dealers select their own route, and the cattle sometimes go by the one and sometimes by the other.

5134. (*Capt. Galton.*) The same charge is made from Dublin to Manchester by whichever route they go?—Yes.

5135. By way of Holyhead the steamers and the railway belong to you?—Yes.

5136. By the other route you pay something to the steam-packet companies, and charge the difference on the railway?—Yes; but the throughout rate is the same by both routes. I may further state that we have through rates with the Midland Great Western company of Ireland to all their principal stations.

5137. (*Mr. McClean.*) Do you mean for all classes of traffic?—Yes, except for cattle. There was an understanding come to with them, I think, once when they were in Parliament, that they should make through rates with us, and they have carried that out; there was some opposition at that time on the part of some of the steam-packet companies; or, at all events, the steam-packet interest, when we had got the rates settled, wanted to alter the times of the trains; that is to say, the trains happened to run pretty well in connexion with our boats, and they wanted to alter the times of the trains to get them to run in connexion with their boats, but they did not succeed in their attempt, and things have gone on very comfortably with them; they have carried out the arrangement faithfully.

W. Cawkwell,
Esq.
9th June 1865.

5138. Do they make local charges, or do they charge equal mileage rates?—They have their local charges out of the through rates.

5139. (*Capt. Galton.*) Does that embrace the Castlebar and Sligo line?—No, it does not, but we have through rates and fares with Lord Lucan's line also. With the Dublin and Meath company we have through arrangements; with the Dublin and Drogheda company we have through rates; also with the Dublin and Belfast Junction, the Irish North-western, the Ulster, and the Belfast and Northern Counties. We have through rates with them, but we there take the sea risk.

5140. (*Mr. Glyn.*) In the last case you have mentioned they do not charge their local rate; it is a through rate, is it not?—I think in that case it is mileage, but they are generally local rates.

5141. That is the rule generally?—Yes; with some of the Irish railway companies, and, indeed, with most of them; we have also been obliged to settle accounts through the Irish clearing house, which is a very inconvenient thing for us, but just for the purpose of conciliating them, we have agreed to do so.

5142. (*Chairman.*) Is your traffic in goods from Ireland increasing?—It does not increase much.

5143. Of what articles does the traffic from Ireland principally consist?—The principal traffic consists of pigs, cattle, poultry, provisions, eggs, butter, and bacon, also Dublin porter and whiskey, and in some cases general merchandize, but not very much.

5144. You have stated that, in your opinion, the resources of Ireland have been very imperfectly developed; do you mean that the articles of which the traffic at present consists might be largely increased, or that new sources of traffic might be opened up if they were properly looked after?—Take the cattle traffic, for example. At the present time that is carried on entirely by local rates; each company charges its own local rates, and there is no reason why that traffic should not be carried on in the same way as it is from Scotland, from which country we have a very large traffic both in cattle and in dead meat. With proper arrangements I have no doubt that from Ireland there might be a very large traffic created in dead meat. I believe that this would increase the value of the cattle, because they would be killed upon the spot, and they would not become so deteriorated as they do by being driven along the roads such long journeys; it would also provide considerable employment for the people in Ireland in various ways, in tanning and different other branches of trade, of which there is at present nothing.

5145. (*Capt. Galton.*) Is not the transshipment which is necessary in bringing that traffic to England a great bar to it as compared with the traffic in cattle and dead meat from Scotland?—No, I think not; for instance, the Midland Great Western company have now got their line down to the north Wall at Dublin, from which our steamers start, and they can take the goods out of the waggons, and put them into the steamers which lie alongside the wharf. Again at Holyhead the goods or the cattle would be taken out of the steamers and put on to the railway, and carried on to London. I see no obstacle to it at all. There are other things which are carried in the same way by our English arrangements, for instance, we can now, and we do, send vegetables from Cornwall into Scotland in the early part of the year, and that is entirely owing to the through arrangements which exist amongst the Railway companies.

5146. (*Mr. Horsfall.*) In your opinion would any material reduction of the fares and charges for passengers and goods in Ireland have the effect of increasing the traffic?—I think it would in many cases, and more especially in the case of goods. I do not know as to passengers, but with regard to goods traffic, there is no doubt that a reduction in the charges in many cases would very much increase the traffic.

5147. Without entailing any loss to the railway companies?—They would not get so large a percentage of profit as they do now, but it would largely increase traffic.

5148. (*Mr. McClean.*) Have you any suggestion to make to the Commission as to any improvement that might be effected in the present state of the Irish railways by amalgamation, leasing, or otherwise?—I think there is no doubt that benefit would result from amalgamations in Ireland, if they could be carried out. At one time I took a good deal of trouble in trying to get some arrangement made with respect to a group of railways which lie about Dundalk and that district, the Irish North-western, and the Ulster company's line, and the lines running from Belfast down to Dublin. The railway from Belfast to Dublin is now in the hands of three companies, and whenever that is the case there are always great obstacles in the way of carrying on a through traffic, or in making arrangements, because each company's interest is separate, the chief difficulty that arose in that case was owing to the different values of the properties. I believe there was a disposition on the part of the companies themselves to carry some arrangement out.

5149. (*Capt. Galton.*) Did not the local interests of the different towns operate against it?—I do not think so. I believe the great difficulty was that the Irish North-western railway had no real value, they were paying no dividends, but the other companies were. I think there is no doubt that if that could have been carried out, it would have been a very good thing; the interests of the railways are so mixed up, for instance, the Ulster company uses the Irish North-western line to get to Londonderry; the Irish North-western system also going round by Dundalk, between Londonderry and Belfast. The Ulster company were at that time carting traffic in some cases, for 15 and 20 miles, and in other cases for 30 miles in opposition to the Irish North-western, the whole of the profit must have gone in cartage alone. There is a great deal of that kind of competition going on, which is no benefit to the public, and if anything could be done so as bring these conflicting interests together and have a more united action, I think great benefit would result.

5152. Can you suggest any means of carrying that out?—I am not prepared to suggest the means; but one difficulty is to put a value upon some of these lines, which are now paying no dividend. I do not know how that could be done, unless something was done in the way of assisting them by borrowed money: I mean with regard to their loans.

5151. How would that affect the question?—That would of itself give them some little dividend; it would give them some value, and enable them to be taken into other systems. At the present time the Irish railway boards do not appear to act together at all; the Irish railway boards never do, you cannot get them to do so.

5152. (*Mr. Glyn.*) Are the Irish railway boards governed by local jealousies?—I believe they are. The Irish North-western board is composed almost entirely of Dublin interests at the present time, and not of local interests, and the other boards in the same way. I do not know why it is; but it is not in Ireland as it is in England, for here the railway companies can always work together, and make their through arrangements; in Ireland they cannot do that.

5153. (*Mr. Gower.*) I understood you to say that the present system of through rating is beneficial to the steam-packet companies?—I would rather say the absence of through arrangements.

5154. The limited extent to which they are carried out?—Yes.

5155. Have you considered whether the loss that would accrue to the steam-packet companies in consequence of a more extended system of through booking, would be balanced by a gain to the railway companies?—If the traffic was fairly dealt with be-

W. Carshawell,
Esq.
9th June 1865.

tween both the steam-packet interest and the railway interest, I do not think that either of them would be damaged. I could not recommend any system that should have the effect of depriving the steamboat companies of any advantage they were justly entitled to, for wherever we meet the steam-packet companies we always treat them in the same way as we do railway companies, and we make through rates with them. I think that that is the proper system upon which to deal with them, but not that they should have the traffic exclusively in their hands any more than that the railway companies should have the traffic exclusively in their hands.

5156. What I understood you to say was that the interests of the railway companies are sacrificed to the interests of the steam-packet companies?—I think in many cases they are.

5157. Is there any dissatisfaction felt because the interests are not identical, or have the shareholders in the railway company, who have no interest in the steam-packet company, expressed no dissatisfaction with a system which sacrifices their interests for the benefit of those who are interested in the steam packets?—I have no doubt they have, but I have not come in contact with them much. No doubt their interests must be affected if the traffic is diverted from the railway.

5158. Are you of opinion that if the steamers belonged to an English railway company, a different system would be adopted?—I have no doubt of it. In that case the railway company would throw the railway open to railway traffic as well as to steam-boat traffic.

5159. Are there any Irish railway companies that run any steamers to England?—I think not.

5160. (*Chairman.*) Are these arrangements between the railway companies and the steam-packet companies peculiar to Ireland; and are there no cases of the same kind in England, where traffic is encouraged in some particular direction by offering advantages to persons so to send it?—I am not aware of any case in England where traffic is treated as it is in Ireland.

5161. There is nothing illegal in the arrangements which are made between the railway companies and the steam-packet companies?—I think not. The railway companies have a right to make their own rates, and to develop the traffic in their own way. I mean legally.

5162. You would not suggest that Parliament should interfere in compelling railway companies to give equal rates for goods, whether they were carried by railway or by steamboat?—It would be very difficult, I think, to deal with that. I do not see how Parliament could interfere in that way, except they gave a guarantee to the railway companies of some reasonable dividend; then they would have a right, no doubt, to make their own terms for the conveyance of the traffic by any route.

5163. If the whole system of Irish railways was amalgamated under one Company, do you not think it would be too large to be properly managed?—I do not think it could be properly managed; but I do not think it would be necessary to amalgamate all the Irish railways into one system. They might be amalgamated into three or four systems, which I think would work very well; for instance, all the Railways between Dublin and Cork up to the Midland Great Western forms one system in itself. Then the Midland Great Western and other lines up as far as Sligo and Cavan forms another, and then the group of lines lying beyond would form either one or two others; that is to say, the railways lying South of Belfast, leaving out the Belfast and Northern Counties with the line from Coleraine to Londonderry, to form a separate system; or they might be joined with the others into one. Then these three or four systems could be worked quite independent of each other, or in connection so far as desired.

5164. (*Mr. McClean.*) You would suggest that the whole of the railways in Ireland should be reduced into three or four distinct systems?—Yes.

5165. (*Sir R. Hill.*) Do you know how the total mileage of the Irish railways compares with the total mileage of the London and North-western system?—The London and North-western system consists of about 1,200 miles, and the Irish system I believe is about 1,500 miles.

5166. How would the traffic on the two systems compare?—That I do not know.

5167. The gross receipts upon the traffic carried over the Irish system of railways appear to be about 1,500,000*l.*?—On the London and North-western system the receipts are about 5,000,000*l.*, per annum.

5168. Taking into account the mileage and the traffic do you think that the management of the Irish system of railways would be more difficult than the management of the London and North-western system?—The Irish system of railways is not continuous like that of the London and North-western system. The Irish system is composed of a number of short branches; while on the North-western system, to begin with, from London to Carlisle, and from London to Holyhead there is a distance each way of 300 miles, and you would not find any length of line in Ireland at all like that.

5169. Taking into account the comparatively small excess of mileage in Ireland, and the great excess of traffic upon the London and North-western system, do you not think that the management of the Irish system of railways could be as readily concentrated under one authority or board of directors as the management of the London and North-western system?—It would not be so easy to manage as the London and North-western, for the reason I have already given you, that the Irish railways are composed of a number of small systems, or much more so than the London and North-western is.

5170. (*Mr. Glyn.*) If there was a connecting link in Dublin between all the railways that come into Dublin, would not that materially facilitate the general management?—Very much so, and that is very much wanted. An Act has already been obtained for connecting them together, but I believe the parties concerned have not yet raised the capital necessary for carrying it out.

5171. The scheme languishes for want of capital?—Yes, it is a very expensive undertaking and viewed as a separate system, probably it may not be very profitable. I think it should have been undertaken by the railway companies themselves, who are centred in Dublin, and it would have paid as portions of a large system; whereas it may not pay as a separate system in itself. We have had some negotiations with the parties, and we have expressed our willingness to make arrangements with them, and to pay them out of the through rate, upon the traffic between England and Ireland, a liberal sum in the shape of toll, more than a mere mileage rate.

5172. You are of opinion, even as regards the interest of the London and North-western Company, small as that interest is, compared with the interest of the Irish railway companies in Dublin, that it will answer their purpose to contribute something in order to have that link supplied?—Yes.

5173. (*Sir R. Hill.*) Supposing that to be done, do you think that the management of the Irish railways, as a whole, would then be more difficult than the management of the London and North-western system?—I do not say that it could not be done as one system; it could be done no doubt.

5174. Supposing the management were concentrated under one authority, and the railways were managed with the same energy and intelligence which characterize the management of other large systems of railways in England, what, in your opinion, would be the result as regards the interests of the shareholders?—I have no doubt that the shareholders would be very much benefited.

5175. What would be the result as regards the interests of the public?—They would no doubt be also benefited.

5176. Would they be much better served?—Yes.

W. Cawkwell,
Esq.

9th June 1865.

5177. By disregarding all attempts at interference by parties locally interested?—Yes.

5178. Without any further expenditure of capital, except what might be necessary for the construction of the connecting link in Dublin, you think that if the directors and shareholders would consent to a union of the different lines of railway under one managing authority, and their affairs were managed with the same energy and intelligence as is exercised in England, there would be a great gain to the shareholders, and great benefit to the public?—I am sure there would; but you must make a very material alteration in the boards of the Irish companies which had to take the management.

5179. I am supposing the management to be concentrated in one board?—In that way then, I say it would be a great improvement, a great advantage to the railway system and to the public also.

5180. (*Mr. McClean.*) If the Government were to purchase the Irish railways, do you think that English railway companies would be found inclined to lease them and to work them?—I have not a doubt of it; if the Government thought proper to take the Irish railways in hand in any way, either by purchasing them, or by making such arrangements as would give them a control over them, they would find English railway companies ready and willing to assist them in working those lines on the same principle that the English railways are worked. I have no doubt at all that arrangements could be made for that purpose.

5181. (*Capt. Galton.*) It has been suggested that the Government should purchase the Irish lines and lease them out to one limited liability company to be worked. Does it appear to you to be feasible that such a company could work the whole of those lines satisfactorily as one system?—I doubt whether it would be to the interests of the public that the Irish lines of railway should be put into the hands of one limited liability company. I should not think it advisable.

5182. For the purposes of working?—Would they have a control over the traffic?

5183. Yes?—That would be putting into the hands of a company the traffic of Ireland, to sell it to anybody who would offer the highest price, irrespective of public accommodation.

5184. Why would it be less their interest to develop the traffic of Ireland than it is the interest of the London and North-western Company to develop it?—It might be their interest to develop it, but it would also be their interest to carry it by any route that gave them the largest amount of money.

5185. (*Mr. McClean.*) To any particular port for instance?—Yes.

5186. (*Sir R. Hill.*) I suppose if such a union as is contemplated took place, it would be to the interest of the owners of Irish railways to reduce their charges?—I believe that they would reduce their charges on the through traffic, and that they would develop a trade which they have never had there yet.

5187. Might it not be to their interest to reduce the charges on the traffic generally?—I have no doubt that they would in many cases make reduced charges, that is to say, the population of Ireland cannot afford to pay high fares in many cases, and if that state of things was met by making arrangements for market purposes, and for attending fairs, I have no doubt that the traffic might be very largely increased.

5188. Without doing any injury, but on the contrary, securing a gain to the companies?—Yes.

5189. (*Mr. Glyn.*) With regard to the working of a limited liability company, they would, in the first place, lease the line from the Government?—Yes.

5190. At a certain fixed rental?—Yes.

5191. Of course their object would be by lowering the rates to encourage traffic upon the lines in any way that they could get it?—Yes.

5192. I did not quite understand what you meant when you said that they would work so as to divert the traffic down to a particular port. Why should

they do that?—If one port gave them a longer mileage than another, their interest would be to take it that way; but I think that if an arrangement of that kind is made, and the lines are to be worked by a limited liability company, the Government should keep such a control over the lines and over the traffic that they could prevent that being done, so that the lines should be kept open to everybody, and the traffic carried by the shortest route.

5193. (*Mr. Horsfall.*) Is not the system to which you have objected the system which is pursued by the London and North-western company in diverting traffic to a line or in a direction that would give them the greatest amount of income?—No, decidedly not.

5194. (*Chairman.*) In your opinion would it be difficult for a single company to treat all parts of Ireland with equal impartiality?—I do not think it would work well if you placed in the hands of a joint stock company the entire control of all the traffic of Ireland. I think it would be found to work very prejudicially.

5195. (*Capt. Galton.*) You would prefer to entrust the management to two or three companies?—Yes.

5196. Assuming that all the southern railways were amalgamated into one company, the Great Southern and Western and the other subsidiary lines, would not their interest be to carry all the traffic to Dublin so as to have the longest mileage?—No, I do not think so. I do not think it is the interest of any company to divert traffic to any particular place. I think it is wrong of them to close any route, and that they should all be kept open.

5197. Is it their interest to keep open every route?—Yes.

5198. Why do you think a joint stock company would be disposed to divert the traffic to one particular port?—As I understand it, you propose to give all Ireland into their hands, and in that case you would have no competition, they would have the entire control. Whereas, if these railways were amalgamated into groups there would always be competition.

5199. What competition would there be if, for example, in the south of Ireland the Great Southern and Western Railway, the Waterford and Limerick, and other lines, were amalgamated into one?—There would not be so great an interest to divert the traffic from any part of the Great Southern and Western lines to any other ports as there would be if they were at Belfast. If you take the centre of the Great Southern and Western Railway and any of the ports on the coast, you will find that the distance between those ports and Dublin is not so very great.

5200. Take Cork, or Tipperary?—Yes, from Tipperary there is no great difference between sending traffic from Tipperary to Cork or from Tipperary to Dublin, in point of distance; but if the same company had a line to Belfast, there would be great temptation to send it so as to get a much longer mileage.

5201. From the south of Ireland do you mean?—Yes, and which they could do for a great portion of England; the same as to Dublin.

5202. That would be injurious to the interests of the London and North-western Company, would it not?—No, I do not think so; we happen to be in the position of being both north and south of Ireland; and I am speaking of the general interests, not of the North-western company's interests alone.

5203. (*Mr. Glyn.*) You like a little gentle competition?—We never object to it.

5204. (*Mr. Horsfall.*) You do not object to agreeing with other railway companies as to what rates shall be charged?—No, so long as they are fair and suitable to the traffic.

5205. (*Capt. Galton.*) Do you happen to know how the traffic from the south of Ireland to Scotland is carried on; does it go through Liverpool, or by way of Holyhead, or is it taken entirely by sea?—I

think it is nearly or entirely taken by sea; we see very little of it on the railways. There are very good steamers running between Scotland and Ireland.

5206. Then there would always remain the steam-boat competition?—Yes, always; you could not stop that. I think it is very possible that some arrangement might be made by which the Government should have power to take up the matter if they could satisfy the smaller railway companies that they should be amalgamated into some larger system. I think there might be a system of amalgamation into two or three groups, which could be worked either by limited liability companies, or in connexion with the English lines, and such arrangements made that perhaps no loss would result from it; but probably a gain in the end. I am sure that the traffic would be better treated and better developed than it is now.

5207. Do you mean that the Irish lines should be leased to the English railway companies?—I do not say that exactly; but what I say is this, that if the Government would take up the matter, and make arrangements with the English railway companies, or with limited liability companies, to work them, benefit would result. I do not think it would be advisable to hand the Irish railways over to one company.

5208. (*Mr. McClean.*) Do you know that in all the agricultural countries of the Continent of Europe the Governments have assisted both in the execution and in the development of the railway systems, and have borne the loss until the traffic was fully developed: and I believe very beneficial results have followed from that system?—Yes.

5209. Do you see any objection to the Government proposing a reduction in the rates on the Irish railways, and bearing the loss, if any, until the increase of the traffic became sufficient to balance it?—No. I do not see any objection to that, because I do not think that there would eventually be any loss. I believe that the traffic would work itself round, and that there would in the end be no loss.

5210. You think the result would be the same as in the case of the other railway systems of Europe, all of which eventually pay, although at first there is a loss on account of the reductions made in the rates charged?—Yes.

5211. (*Chairman.*) Do you think that the mere transference or amalgamation of the smaller railways in Ireland with two or three larger ones, would be attended with any very great advantage, or do the large railway companies in Ireland manage their affairs in such a way as leads you to repose confidence in their management of a much larger system if the smaller railways were transferred to them?—I have not found from experience that the Irish system of management is at all satisfactory.

5212. You think then that the mere conversion of the Irish railway systems into two or three systems, leaving the management in the hands of the principal railway companies would not be attended with any important benefit?—Not unless there was some alteration made in the boards, or some control was obtained by the Government, or some means were adopted, such as by the appointment of directors, which would give a control over the system.

5213. You think that the introduction of some new element is requisite in the composition of Irish boards?—Decidedly so.

5214. You incline to the opinion that in some way or other Government control and influence should be exercised upon the Irish boards?—Yes; but I do not see how that could be done, unless the Government gave assistance. Then, I think, they would expect to have some control. I do not see what other control could be introduced.

5215. (*Capt. Galton.*) Do you think Government control would be of any advantage in working the traffic?—If the Government made judicious appointments, I think it would. I am sure that anything that would alter the present system would be a benefit.

5216. (*Mr. Dalglish.*) You would not advise the Government to have anything to do with the matter unless they had a certain power in or over the boards?—No.

5217. In your own experience, have you found it very difficult to make arrangements?—Yes, in Ireland.

5218. Both with large railway companies and with small ones?—Yes; for example, when boards of directors have consented to through rates they have always adhered to the narrow-minded system of exacting their local charges and their cartages, and everything of that kind, and their adherence to those things has trammelled every arrangement very much.

5219. Have you not been able to effect traffic arrangements with Irish railway boards so easily as with English and Scotch railway boards?—No; in England, when we make a through rate, that includes cartage at both ends; you tell the public what it costs for the conveyance of their goods from the warehouse until they are delivered; wherever they may go to, they go through; but in Ireland they always want to have either the cartage separate, or to have some separate charge of their own, beyond the through rate, over which you have no control, and in addition to their local charges upon their own railway. They have strictly adhered to the maintenance of those small things, which are a great obstruction; and so much has this been felt in England that it has long since induced railway companies there to abandon these things altogether and to take a liberal view of the matter, allowing the one charge to include everything.

5220. (*Capt. Galton.*) The Irish railway companies do not take a commercial view of the matter?—No.

5221. Would matters be improved do you think, by putting Government directors on the Irish boards?—Yes, if the Government appointed good commercial men, they would; but it would depend upon the appointments.

5222. (*Mr. Horsfall.*) In the shipment of goods, say, from Dundalk to Manchester, by way of Liverpool, does the company pay the terminal charge in Liverpool, or do the shippers pay that?—For the through rate from Dundalk to Manchester, the company perform all the services throughout.

5223. They would not allow the shippers to pay the terminal charges in Liverpool?—There are none to pay.

5224. Is there not something to pay for the transshipment from the vessel to the station?—That is done by the steam-packet company and the railway company together.

5225. You would not allow the shipper of the goods to do that?—The steam-packet company can make their own arrangements with respect to that. It takes the goods from Dundalk, and it would deliver them at our stations in Liverpool; the system there is I think invariably to engage town carters to cart the goods across the town.

5226. By whom are these carters engaged?—In that case they would be engaged by the steam-packet company, and on the reverse journey they would be engaged by the railway company, and we should deliver the goods to the steamer.

5227. You would not allow any shipper of goods to see to the transfer of the goods from the steamer to the railway?—The shipper has nothing to do with it; the goods are sent by the consignor to the consignee.

5228. Supposing a party has a ship laden with grain in Dundalk, and he wishes to forward that cargo to Manchester by way of Liverpool, and he prefers to see to the transference of the cargo from the steamer to the railway himself, would you make any difference in your charge from Dundalk to Manchester as compared with what the charge would be if by your agents, the goods were taken from the ship to the railway?—I cannot see the object of doing what you suggest, unless it be to incur a charge in Liverpool; we should make no charge for it, we make no charge now.

*W. Cawkwell,
Esq.*

9th June 1865.

W Cawkwell,
Esq.

9th June 1865.

5229. (*Mr. Glyn.*) It would be a shipment of goods in the first place from Dundalk to Liverpool, to be dealt with in Liverpool by the party himself, and he would make his own arrangements for forwarding the goods on to Manchester, unless they were booked through?—Yes, but now it is a through transaction, no intermediate person is required.

5230. (*Mr. Horsfall.*) If a shipper chuses to say, I will send my grain to A.B. in Liverpool, and A.B. will send it forward to Manchester by railway, would the charge for the shipment from Dundalk to Liverpool, and then from Liverpool to Manchester be the same, the shipper having paid his own charges in Liverpool, as if the grain had been shipped under under your care at Dundalk, and so forwarded?—It would be the same because we should pay the same to the steam-packet company, that company would make no allowance for it, they have their own staff to do it, if anybody else intervenes in Liverpool and does it, there is no expense saved; it is merely employing a broker in Liverpool to pay a sum of money when he is not required.

5231. (*Mr. Glyn.*) If the consignment was from Dundalk to Manchester it would be impossible for any intermediate person in Liverpool to break into that arrangement?—As carriers we could not allow it.

5232. (*Mr. Dalglish.*) Are we to understand that your through rate from Dundalk to Manchester is a lower rate than a party would have to pay, if he sent his goods by steamer from Dundalk to Liverpool, and then paid an agent there to cart the goods to your station, having then to pay the railway charge from Liverpool to Manchester?—I cannot tell whether it would be so or not, but we should do this; we should make the same through rate with the Dundalk and Liverpool steam-packet company for carriage to Manchester by Liverpool (allowing them their sea freight between Dundalk and Liverpool), that we should take it ourselves for, *via* Holyhead.

5233. Is that sea freight that you allow to the steam-packet company the same as would be charged from Dundalk to Liverpool?—In some cases it would be, in some it would not; that would depend upon the rates of freight, but generally speaking is would be. I may state that we have through rates with the Dundalk and Liverpool steam-packet company to England, and we have agreed upon a division; a certain portion as sea freight, and a certain portion as railway freight.

5234. By that agreement is your sea freight the same as it would be if a man came with 100 quarters of oats to the steamboat to be taken over to your station?—Generally speaking, it would; but not in all cases, because the steam-packet freights vary very much; they are local freights.

5235. Is your impression that a man consigning goods from Dundalk to Manchester can do it cheaper by paying your all through rate, than he could if he went with the consignment himself, and attended himself to forwarding it through Liverpool?—I dare say he would save some local charges that would be incurred, if it was a double transaction; that is to say, if the goods were consigned first from Dundalk to Liverpool to some agent there, and then he employed a broker to send the man again to Manchester; there would be his own expenses in Liverpool in addition.

5236. It would cost more in that way than if the party paid your all through rate?—Yes; his local charges are not included in the through rate.

5237. (*Chairman.*) Have you any arrangements with any Irish railway companies with regard to the coal traffic in Ireland?—At the present time there is no through arrangement with respect to coal; we are about to establish a trade, if we can, by joining some of the Lancashire coal owners in making low rates to Liverpool, for the purpose of shipping coal from there to Ireland. The intention is, to establish a line of screw steamers to take the coals from Liverpool to Ireland, and I believe that with proper arrangements there may be a very large coal trade established

between Liverpool and Ireland, which we cannot get at all with the present arrangements.

5238. (*Mr. Glyn.*) Has this been started upon the application of the coal owners in Lancashire?—Yes. They have no shipping trade from Liverpool; the coal trade is principally done from the northern ports, and these coal owners want to have the means of shipping coal at Liverpool. We are now getting powers to make a line, the Bill has already passed the House of Commons, from Wigan to St. Helens, to join the St. Helens railway, which will give an access to Widnes and to Garston, which are considerable places for shipping purposes. The Wigan coal proprietors propose (in addition to the foreign trade) to put on steamers to Ireland; I think they are building some now, to run between Garston and Dublin and other parts, for the conveyance of coal.

5239. (*Mr. Glyn.*) In Dublin, I believe, at the present time there is no communication between the railways and the wharves?—Not at present, but if the Dublin connecting railway is made that will come down to the quays. A Bill has also passed the House of Commons this year to make tramways along the quays in Dublin, and those tramways will communicate with the Midland Great Western railway, and I think also with the Dublin and Drogheda railway.

5240. Have you any idea what the price of coals will be, delivered in Dublin, if this new arrangement be carried out?—No, but very much less, I think, than it is at present.

5241. (*Chairman.*) Do you think it is possible that coal might be delivered in the interior of Ireland at a much lower rate than at present, still leaving a profit to all concerned in the carriage of it?—I think so. The Lancashire coal proprietors calculate upon getting a very large trade indeed to Ireland and if they can carry the coal to Dublin, and put it direct from the steamers into the waggons on the quays, and send it away by railway, they will be able to do it, I think. Again, when that line is made down to Greenore for the Irish North-western line, if they can do the same as in Dublin, they will get a very large traffic indeed in coals to the north-west of Ireland from the Lancashire coal fields.

5242. (*Mr. Glyn.*) It has been stated that the present price of coal delivered on the quays in Dublin is 14s. 6d. per ton. I presume it will be considerably less than that when the arrangements you have mentioned are carried out?—Yes; first of all the railway charge will be reduced to the port in the Mersey, and then something will be necessary to be done in Dublin to prevent the great cost of cartage in Dublin, and that can only be done by the tramways being brought down on to the quays.

5243. (*Mr. Horsfall.*) What is the freight upon coal from Liverpool to Dublin?—I do not know.

5244. It has been stated by one witness that good household coal can be delivered in the Mersey at 8s. 6d. per ton?—I have no doubt it can be.

5245. Then the statement that the price of coals in Dublin is 14s. 6d. a ton must be preposterous?—That is adding 6s. for sea freight, and I have no doubt that it would be taken cheaper than that if they had good screw steamers that would carry large cargoes. The coal from Wigan could be loaded at Garston direct into the steamers, and if they could take it on of the steamers again in Dublin and put it direct into the railway waggons there is no doubt that a very large trade could be done. At the present time there is no coal trade with Ireland by railway.

5246. (*Capt. Galton.*) You stated that if the government could make arrangements for amalgamating or for purchasing certain of the Irish railways and forming them into two or three separate systems, you thought it possible that English companies might be found to work them?—Yes.

5247. Do you think it would be fair that in such a case they should work them upon a per-centage of the gross receipts?—Yes. I think you could not base it upon anything else.

5248. Would you say about 50 per cent. ?—50 per cent. is the general thing.

5249. You think that would give the working company a sufficiently strong interest in developing the traffic ?—No doubt ; their interest would always be in developing the traffic consistently with that of their own lines ; it would give them a sufficient interest in developing the local traffic.

5250. (*Chairman.*) Are there any other matters connected with the Irish railways upon which you could furnish the Commission with any information ?—There is one very important matter which I mentioned some time ago ; the question of the sea risk ; which I think is a great obstacle to the development of the through traffic with railway companies, where they are concerned in through bookings. It appears to be a very unfair thing, that if a steam packet belongs to a steam-packet company, they should only be liable in case of accident to a small loss, while if the steam packet belongs to a railway company, they should be responsible for a very heavy loss.

5251. (*Mr. Glyn.*) The question I believe has never been tried ?—No ; but it is a matter of such uncertainty that many of the Irish companies object to making through arrangements ; the fear of it is sufficient to deter them from running the risk.

5252. Would it not be possible to guard them in some degree on the ticket itself ?—I very much doubt if you could. I do not see why railway companies owning packets themselves should not be treated in the same way as steam-packet companies. I think it would be only a fair thing.

5253. (*Capt. Galton.*) Is it the fact that they are treated in a different manner. Has any accident happened on board one of their steamers for which they have had to pay heavy compensation ?—No. The question has never been tried ; but the Irish railway companies are so convinced of the state of things that it prevents them from making through arrangements, and we have to take upon ourselves all the risk.

5254. Supposing a man booked himself from Chester to Ireland, and he sustained an injury by the blowing up of the steam-boat, or by the wreck of it, if there was any compensation to be paid, it would be paid by the London and North-western Company ?—Yes. The steam-boat company would be only liable for 30*l.*, and the railway company would be the

The witness withdrew.

JAMES ALLPORT, ESQ., called in and examined.

5261. (*Chairman.*) You are general manager of the Midland Railway Company ?—I am.

5262. Have you had occasion to make any arrangements with any of the Irish lines with respect to through booking ?—We have with one company, the Ulster Company, but to a very limited extent. We have found that agreements with other companies have interfered very materially with the through booking of the Irish railways.

5263. Do you mean arrangements between Irish companies and other English companies ?—Yes.

5264. Have your through booking arrangements with the Ulster company extended to goods as well as to passengers ?—To goods only. We have not booked through unless in the case of tourists, those we have booked through, but not ordinary passengers, and only tourists to a very limited extent.

5265. Do your arrangements with the Ulster Company embrace traffic of any considerable importance ?—The through booking for goods extends to the Ulster Railway, and to a considerable extent to Londonderry.

5266. It might be convenient if you stated what the Ulster Company's district comprehends ?—We have booked through from Belfast to Londonderry, Newry, and one or two other places ; but our arrangements have been chiefly confined to traffic coming from the Ulster Company's own line proper.

5267. Have the Ulster Company similar arrange-

parties to be sued, because they had booked him, and the claim might result in a verdict that the accident had happened on the railway, and a large amount might have to be paid.

5255. (*Mr. Dalglisch.*) That enters into the arrangement made between the steam-packet company and your company ?—Yes ; but it is a great obstacle to any arrangements being made.

5256. (*Mr. Glyn.*) The steam-packet companies will not take the risk upon themselves ?—No ; it is a question whether they would be liable.

5257. As a sub-arrangement with the railway company they will not take any risk upon themselves ?—No, they will not take upon themselves any additional risk.

5258. (*Sir R. Hill.*) They would be taking no greater risk upon themselves than if they carried a passenger independently of the railway company, would they ?—Yes. As it is, if a passenger is going from Cork to Chester, he books locally from Cork to Dublin, and then proceeds from Dublin to Holyhead by the steamer for the purpose of booking himself again from Holyhead by railway to Chester. If an accident occurred between Dublin and Holyhead, the steam-packet company would only be liable, under the Merchant Shipping Act, for a sum limited to 30*l.*, but if the passenger was booked by the railway company at Cork through to Chester, and an accident occurred in the same way on the steamer between Dublin and Holyhead, the claim would, in the first instance, be upon the railway company at Cork, where a verdict might be obtained for a large amount under Lord Campbell's Act, and the railway company who had paid that amount, could probably only recover from the steam-packet company the sum which they would be liable for under the Merchant Shipping Act. This state of things very much checks through booking.

5259. (*Mr. Glyn.*) Upon that view of the law the Irish railway companies are acting ?—Yes, and we have in many cases been obliged to take all the responsibility upon ourselves to get any through arrangements made at all.

5260. (*Mr. Dalglisch.*) If you gave two tickets, one for the steamer, and another for the railway, would not that obviate the necessity of through booking ?—The legal gentlemen say it is very doubtful whether it would.

ments with other English companies ?—Yes, they have.

5268. Have you attempted to make arrangements with any other large Irish companies, such as the Great Southern and Western and the Great Midland of Ireland ?—We have. I have frequently requested them to make through booking arrangements, but we have hitherto failed. They have given us the general reply, that their arrangements were already made by agreements with other companies, and when those agreements expired they would consider the question of making arrangements with the Midland.

5269. Have those arrangements of the Ulster Company been of long standing ?—We have no agreement whatever ; it is merely a temporary arrangement from day to day. I believe the Ulster Company has an agreement, which I have never seen, by which a considerable portion of the traffic is diverted by the Dublin route ; we have never pressed it upon them, waiting till they themselves were in a position to arrange with us.

5270. Do you think it is possible that if more complete arrangements could be carried out between the English companies and the Irish companies any large amount of, or any traffic at all could be developed which does not at present exist ?—I have no doubt of it ; I think the Irish railways ought to be thrown open to every English company who can book through, if it is a reasonable route. I may state that

W. Cawkwell,
Esq.

9th June 1865.

J. Allport, Esq.

J. Allport, Esq. from Belfast to some of the very largest and most important manufacturing districts of England the Midland route is the nearest and best. We have met with great difficulty, and we have persevered with the communication between Morecambe and Belfast for many years at a very great loss; but we have now turned the corner, and the boats are paying better than they did.

9th June 1865.

5271. Do you think that any additional traffic could be created in Ireland, or merely that it would be better for your company that the existing traffic should be turned in that direction?—My impression is, that the greater facilities you give the more traffic you create. That is my experience upon the English railways, with which I have been most intimately connected; in other words, the free-trade principle, which has been adopted upon the Midland Railway is, I am certain, the best for the companies themselves and for the public.

5272. What steps would you take to bring about a state of things that you think it desirable to enforce on the Irish railway companies,—impartiality, so to speak, between the English companies?—That is a very difficult question. I am not in favour, generally, of compulsory powers for booking through. Companies, to a certain extent, should be left to consult their own interests; but I think, looking at the peculiar position of Ireland, and the complaints which have generally proceeded from the Irish companies of their non-paying qualities, either through want of traffic or want of arrangement, that something should be done by which all the companies in England using, by means of a reasonable route, any part of the Irish railways by means of through rates and fares should be placed upon equal terms with respect to the Irish railways. It would be very easy to make that arrangement. That, I think, would put the whole of the English companies on an equality, and enable us all to develop the resources of the country to the fullest possible extent. I am quite sure that the greater the facilities that are offered for a free interchange of traffic between all the English companies the better position will the Irish railway companies be placed in.

5273. Do you think the circumstances of Ireland would justify Parliament in imposing greater restrictions on all the railway companies in that country than would be advisable in the case of England?—Perhaps they would. I am disposed to think that the Irish railway system is altogether different from the English. There is such a large amount of traffic, and the resources of this country are so much superior to those of Ireland, that I think there ought to be some restriction placed upon arrangements which are made with Irish railways to the exclusion of other companies. It is a very large and important question, and generally speaking, as I stated before, the companies should be allowed to consult their own interests. But of course there will always be exceptional cases; and looking at the universal complaint in Ireland, the only remedy that I can see is to throw the Irish railways open to the whole railway system of England.

5274. (*Mr. Glyn.*) Have you ever proposed that question of through rates to any other company in Ireland besides the Ulster Company?—We attempted some years since to book through to Belfast and the south of Ireland; but we found difficulties in the way and the result was that we gave it up.

5275. Difficulties raised by the boards?—Difficulties raised by the boards themselves in consequence of the agreements which they had with other companies.

5276. (*Sir R. Hill.*) Are you aware that the Irish railway companies have received considerable assistance from the Government in respect to lines, at low rates of interest?—My attention has not been called to that at all.

5277. You are probably aware that they are now applying for further assistance?—Yes, I am aware of that.

5278. Do you think there would be any unfairness on the part of the Government if they were to make these arrangements which you recommend between the Irish railways and the English railways a condition of the further assistance which they are asking for?—If the Government are called upon to assist them by loans I think they should make it a condition that the whole of the Irish railways should be thrown open to the English system.

5279. There would be no compulsion, in the proper meaning of the term, in such an arrangement; it would be a matter of bargain, would it not?—Perhaps I may be allowed to explain what I mean by throwing the system open. I will take the Great Southern and Western Railway, which at present sends its traffic by Dublin. Suppose it should be required to book through, we will say, from Galway to Belfast, and take another route by an English railway; if that route was longer by any considerable distance I think the mileage proportion due to the Great Southern and Western should not be reduced in consequence of lengthening the route by way of Belfast, but that the loss should be borne by the company choosing to avail themselves of the power to book through by way of Belfast. I will take an extreme case. Suppose we choose to book through from London to Galway by way of Belfast, I think the Great Southern and Western should be compelled to take the traffic through, but if the rate per mile were reduced by that, the Great Southern and Western should have the same rate per mile as though they took it from Dublin.

5280. (*Mr. Glyn.*) That is, that they should have the full rate, although the traffic was only carried a shorter distance?—That is a system well known upon English railways. That is a practice commonly prevailing with English railways. We have that arrangement with the North Eastern Company, the Great Eastern Company, and the Great Western Company. If our route is longer than another route with any other company we bear the loss; and it is the same with the Lancashire and Yorkshire Company.

5281. You know the Irish railways?—Yes.

5282. Do you not think that great inconvenience arises from the fact of the country being split up into such small divisions, the different railway companies having different divisions?—I do; I think amalgamation would be exceedingly advantageous to the Irish railway system, and just as advantageous as it has been to the English railway system.

5283. Suppose such a system were advisable, would you have it under one management, or two, or three?—That depends upon circumstances. Of course, if it were under Government management it would be necessary to have one. I think there is sufficient scope in Ireland for two or three systems of railways, but all those systems should be compelled to work in harmony with each other. I think if you attempt to put the entire of the Irish railways under one management, it would become so large, that in time, as the railways extended in Ireland, it would be difficult to manage; but if it were divided into three systems, with compulsory power to make their arrangements *inter se* with each other, I think that probably would be the best arrangement that could be made.

5284. Then you would not think it necessary to have Government supervision in that case?—I am not in favour of Government supervision.

5285. Not even in the particular case of Ireland?—No, I am not. I do not think Government supervision or Government management is in any case equal to private management; I do not think they give the necessary time.

5286. But for the prevention of unfair competition between the respective companies in the respective districts, would it not be necessary to have some supervising power?—I think that might be left to arbitration. Those are details which could be very easily arranged or left to some standing arbitrator. There are several cases now in England where a standing arbitrator is appointed to settle disputes

between one or more companies. I can mention the case of the London and North-western Railway Company and the Manchester, Sheffield, and Lincolnshire Railway Company; a standing arbitrator is appointed in a certain district. By Act of Parliament a standing arbitrator is appointed between the Great Western and the Midland, and also between the Great Western and the North-western for certain purposes. That might be extended to the general arrangements of a company. If there was any complaint of unfair dealing upon the part of another company, they might appeal to the standing arbitrator.

5287. Do you think, in point of fact, with a certain number of general rules laid down, that that would be a proper way to regulate companies amongst themselves, with an arbitration clause added, and that upon the whole it would work well?—I think so.

5288. (*Mr. Horsfall.*) Do you think it would be an advantage if that arbitration clause extended to the public?—Certainly; I would extend it to the public. If the Irish railways call upon the Government to assist them, the Government has a right to put in certain conditions, and I think that it would be a very fair condition, in the interests of the public, to say that a standing arbitrator should be called in to remedy any grievance which the public might have.

5289. Would not that be a good principle to extend to the English railways?—If they called upon the Government to assist them.

5290. But not otherwise?—I think not.

5291. (*Sir R. Hill.*) You are probably aware that it has been recommended that Government should purchase the Irish railways?—Yes.

5292. You appear to object to such an arrangement, upon the ground that Government management is inferior to that of the railway companies generally?—Yes.

5293. Does it necessarily follow that because the Government become the owners of railways that the Government should manage the railways?—I think that would follow.

5294. Could not the Government grant leases of the railways either as a whole, or by dividing the system into two or more?—No doubt they could, but in granting those leases they would be coupled with such conditions that, practically, they would be under Government supervision.

5295. But if a lease could be so framed as not unnecessarily to tie up the hands of the lessees, then your objection would be removed?—If the management of the railways could remain as independent of Government control as they are now, my objections of course would vanish. But it would be a very difficult thing to say that the Government should be the owners of the railways, and that they should not have the power of controlling the management. I fear you would fall into the further difficulty, that if the Government still retained the control, there would be a laxity of management, because nobody would care whether the railways paid or not. If they were leased to individuals then you fall into this difficulty, that the individual or company consisting of half a dozen or a dozen individuals leasing a line would not have exactly the public interests in view, but their own private interests, to such an extent that I do not think you would establish that thorough management which our present system of railway management enforces. At present you have not only the public opinion to deal with, but you have a large number of shareholders; and any one who is practically acquainted with railway management knows that it does not follow that the interests of the shareholders are looked to at the expense of the public. There are a variety of reasons which compel railway companies now to be liberal in their dealings with the public; but I do not see how you could enforce that if you leased the railways to a few individuals.

5296. Might not the conditions in the lease be such as to secure the public interests?—My opinion is that it would be a difficult thing to draw up a con-

dition of that kind. If the lease were drawn, and I was asked to give my opinion upon it, I would do so.

5297. Suppose for a moment the difficulty to be overcome, and the lease to be granted to a small number of individuals, who worked the railway with a view to their own advantage, would not the management of a railway so leased be superior to the management of a railway now worked by a body of directors?—No, I think not.

5298. Why do you think the management of the Government is inferior to that of a body of directors?—It is so in all cases. It must be patent to any one who has had any experience of these public companies and Government that there is not that same supervision, and the same care and economy. And, if I may be allowed to take my own case, if I were a Government officer, I think it is in human nature that I should become somewhat lax in my duties. I should not have that constant controlling power over me, not only on the part of the directors and on the part of the shareholders, but on the part of the public. I always find it so in Government offices; there is not the same energy and attention to the details of business which is found either in private life or in public companies.

5299. Supposing that to be the case, does not that arise from causes which operate, perhaps in a less degree, but which still do operate in a railway board?—No, for this reason; directors are appointed by the shareholders with twofold qualifications; first, they must be shareholders to a considerable extent in almost all the large companies; next they are responsible to the shareholders; if they do not manage the property properly they are subject to be removed by the body of shareholders; but I do not think any governmental body would take so keen an interest in the supervision of a railway as a body of shareholders would.

5300. Do you find, in point of fact, that directors are dismissed by their shareholders for want of energy and intelligence in the management?—I think it is the fact that the shareholders have that power which keeps the directors up to the mark. In most of these large companies we find that the directors are kept up to the mark by the shareholders themselves.

5301. Of course I cannot ask you any questions which involve the consideration of the efficiency of directors under whom you act. But suppose for a moment—take the North-western Railway, for instance—that the secretary, the manager, and the principal officers of that railway were working solely with a view to their own interest, do you not think that the management would be even more energetic than it is?—I think not. I believe, knowing what I do of the North-western and most other companies (I will not speak of my own company), but I will take the North-western—that the directors and officers of that company are as energetic in the management and control of the business of that company as if it were their own. I have no doubt that that is the case.

5302. Supposing it to be an advantage to have a large body of shareholders or proprietors to control the directors of a company, and a body of directors to control the officers of the company,—supposing for a moment that these are advantages, may not those advantages be secured by the Government, when it grants the lease? May it not grant a lease to a company of proprietors who shall appoint their directors, and those directors appoint the manager?—If they were leased to a company, I can see no possible utility in the Government having possession of the railways. It would be merely transferring the railways over to the Government for the Government to transfer them back again to a company. It appears to me that the whole object to be attained is done away with. It is a cumbrous proceeding to get back to the present state of things.

5303. Would it not be a mode by which the objections to Government management would be avoided?—I think not. I for one would not be a party to lease any railway from Government unless

Allport, Esq.

9th June 1865.

I had as much power as I have now in managing that railway without consulting the Government. I do not mean for a moment to say anything against any Government officers; but my own experience of the slight supervision which the Government has now over railways is decidedly against Government interference. There is not that experience which practical men have. The Government officials take a certain view of things. Everything must be done on a Government scale, and we find that that is in many cases exceedingly opposed, in my judgment, to the interests both of the company and the public. Perhaps this is not the time to go into a question of that kind; but I can, if necessary give instances in which I have been personally very much opposed to Government officers, and have refused in many cases to carry out their views. One of the members of this Commission is aware that we have resisted the views of Government officers even to the last, when the Government have been obliged to give way, and, as we contend as practical men, for the benefit not only of the company itself but of the public. I must confess from what experience I have had of Government supervision I should be very much opposed to Government having the control of any part of our railway system. I believe the resources of the country would not be developed in anything like the same degree as they are under the present management. I may add that private individuals manage their business perhaps better than companies; but certainly companies manage their business much better than the Government.

5304. Suppose the Government to lease a railway to private individuals, then would not the management be even better than it now is?—If the management were as unfettered as it is now, it would be as good as it is now, but not better.

5305. (*Chairman.*) You do not think that a company leasing a railway from the Government would be influenced by any other motives than those which influence the present boards of directors?—I think that if you leased it to a few individuals, and if Government had the control, then you fall into the difficulties I have pointed out. If they have no control, then they have no supervision of the shareholders or the public, and they will get out of the railway the utmost possible farthing they can. That would be the natural tendency of giving a lease of a railway to private individuals.

5306. Do you know enough of the management of the railways in Ireland at present to be able to state whether in your opinion it is satisfactory to the public?—I think it is, generally speaking. I think the Irish railways are tolerably well managed. I think, perhaps, in some cases, they have mistaken views. As regards rates, I have sometimes thought they have been too high in their charges. I am convinced, in a country like Ireland, to develop the resources of the country to the utmost extent requires low charges.

5307. Do you think that they have done all that can be reasonably expected from them towards developing the resources of the country?—I think they have. I believe, as they gain the same amount of experience which we have in England, that the resources of that country will be developed in the same manner as they have been in England.

5308. Are you of opinion that any of the railway companies in Ireland have been managed with a view rather to the interest of steam-ship companies than to the interest of the shareholders of the companies themselves?—I am not aware of that. I think there has been a tendency to make exclusive arrangements with one or two English companies, which of course I have a strong objection to; but beyond that I do not think there has been any favoritism shown to any steam-ship companies; I am not aware of any case of that sort.

5309. Has the Midland system any connexion with the south of Ireland either by means of railway companies or steam-boat companies?—Yes, by way of Bristol we have.

5310. With what companies in Ireland?—We have had no through booking arrangements whatever. They have invariably refused. The Midland Railway runs to Bristol. We have exchanged traffic with the steam-boat companies trading to that port; but we have had no through booking arrangements with any Irish railway company through Bristol.

5311. Have you any arrangements about coal traffic with any Irish railway company?—No, we have not.

5312. Have you any opinion as to whether much could be done with a view to develop coal traffic in Ireland?—I think it could be very much developed. If the Irish railway companies were to adopt the same free-trade policy which has guided the Midland affairs for some years past as regards coal, there would be a very large increase of the coal traffic in Ireland. I may state that the Midland has now the largest undeveloped coal field in England. Our system has been to make through rates with all neighbouring companies without reference to the traffic passing the longest distance over the Midland Railway. I would give as an instance that although we have a line of our own to within 30 miles of London, and shall shortly have one all the way to London, we exchange a very large coal traffic with the Great Northern Company at Nottingham. Our mileage proportion to Nottingham being very small as compared with our own route to London, the Great Northern charged the same rates from every colliery to London by their route as we do by our own. Although at first sight it might appear to have injured the Midland, inasmuch as, instead of taking from 16 to 25 or 30 miles the longest distance, we should have it on our own line upwards of 100 miles; but the Midland policy with this and other companies has so developed the coal traffic on the Midland that I believe the Midland Company have been more than compensated by the large increase of traffic which has taken place.

5313. (*Capt. Galton.*) You are referring to the coal traffic generally?—I am now confining my remarks to the coal traffic. I may state that probably the largest instance of the development of the resources of a district that I can name in any part of England is this; 17 years ago the entire coal traffic upon the Midland system did not exceed 250,000 tons a year; our coal traffic at the present time is at the rate of 6½ millions of tons. I believe that a very large proportion of that increase is due to the free-trade policy which we have adopted with surrounding companies. We have adopted the same arrangement with the North-western, with the Great Western, with the Great Eastern, and all companies who choose to throw open their lines to us at mileage rates. If we could send our coals to Ireland upon the mileage principle I believe that it would very largely increase the coal traffic of Ireland.

5314. Do you send any coals to Ireland?—I do not think we send a single ton.

5315. (*Mr. Horsfall.*) What is your mileage rate to London for coal?—It varies according to distance and according to circumstances. Our object has always been to give such a rate to a colliery as would enable the coal owner to develop his traffic. The *modus operandi* is simply this: A coal owner comes to me and says, I want to get into the Bristol market or the Birmingham market, or the Southampton market; coals are being sold there at such a rate, they come from such a district; if you will give me such a rate, I think I can develop the trade there. It is my business to inquire into the whole of the facts before I give him an answer, and I do give him such a rate as in my opinion will develop the traffic. That is the mode we have adopted. We adopt no universal scale upon any part of our Midland Railway.

5316. (*Mr. Glyn.*) You have a flexible rate?—Yes.

5317. Determined by the wants of the particular district to which you are asked to send a supply?—Quite so.

5318. (*Capt. Galton.*) What is the highest rate?—The highest rate we have may be for some very short distance. I do not think we have any rate exceeding $1\frac{1}{2}d.$ per ton per mile for coals.

5319. What is the lowest rate?—The lowest rate is about $\frac{3}{8}$ ths of a penny.

5320. (*Sir R. Hill.*) Do those rates include the use of waggons?—No, they do not.

5321. Do they include terminal charges?—No, they do not. On coals we charge a low terminal; to the great bulk of our stations in the country we charge $2d.$ per ton terminals.

5322. For each terminus, or for both?—The coals do not come on at a station generally, they come on at a colliery.

5323. You have a constant charge of $2d.$ in addition to the mileage?—Yes, if we find the sidings at the colliery we charge two terminals, but if we only find the station, then we charge but one terminal, $2d.$ in the country, and $6d.$ in London. The most expensive place except London we charge $3d.$ per ton. I may state also that we never charge to coal owners in the same immediate locality different rates, we always put them upon the same footing.

5324. (*Capt. Galton.*) Do you charge at the same rate for less quantities?—We never make any difference on account of quantity; we think that would be unfair to the smaller traders. We have collieries on the Midland Railway, the capabilities of which are so large that if we adopted that principle they would ultimately absorb nearly the entire coal traffic of our line. We think it is not fair to the small coal owners, and that in fact the man who sinks 10,000*l.* in a colliery ought to have the same rate as a man who sinks 200,000*l.*

5325. (*Mr. Glyn.*) To go back to Ireland. Have you ever made any calculation at what rate per ton coals could be delivered from your district in Belfast provided a fair mileage rate was established?—I believe we could deliver coals in Dublin, including the sea freight, for something like $12s. 6d.$ or $13s.$ per ton.

5326. Are you aware that the present price of delivery at the quay side is $14s. 6d.$, and to the houses in Dublin $16s.$ per ton?—That depends upon the quality. I am speaking now of Yorkshire household coal, which is very superior. If there was a proper system for conveying coals across the channel to Ireland by screw steamers, which I have frequently urged many people to put on, the same that there is between the north and London, and having the same scale of charges that we have for long distances upon our line, and the Irish railways were to do the same, I see no reason why the whole of Ireland should not be supplied very freely with English coal.

5327. Are you aware that at present there is no communication in Dublin between the railways and the wharves?—I am quite aware of that.

5328. Of course the cartage makes a very considerable charge in addition?—Yes, but there are other ports where coals could be brought. I should not confine it to Dublin.

5329. (*Capt. Galton.*) They might be delivered at Belfast, might they not?—I was referring to Belfast; I was not speaking of Dublin. But I see no reason why Dublin should not be supplied also. It would not be from our Derbyshire coalfields. I do not know why coals should not be sent from one of our northern ports to Dublin as well as to Belfast. I should state that the coalfield to which I have alluded extends about five or six miles north of Derby to Leeds, and even beyond, so that the collieries are now opened the entire length of the line. The distance of the route is not very great, but we never attempted to develop it in consequence of the difficulty of getting across and making arrangements with the Irish railways. To show how the coal traffic is enlarging, I may state this fact: any one who travels in the south of England may at any time see the Midland Company's coal waggons from Clay Cross and various other collieries in the Midland district down

almost as far as Exeter. You see them at Southampton and Brighton. I have myself seen them at Dorchester and even at Portsmouth. I mention that to show that coal delivered at that price will go the longest distance you can send it on our English railways.

5330. Do you happen to know at what price it is delivered at Portsmouth and Southampton?—I do not. We do not at all interfere with the selling price at any place, either upon other railways, or upon our own; we are merely carriers; we leave the coal owner and the merchant to fix their own price, we merely giving rates of carriage.

5331. Have you at all considered at what price it should be delivered in Ireland, so that a trade in coals might arise?—Assuming that we charge a halfpenny per ton per mile, the route it would have to be shipped being a distance of probably about 60 to 70 miles, that would be $3s.$ The cost at the pit's mouth at the present time would be, say, about $6s.$ per ton; it is sometimes higher and sometimes lower, but that would be the average at $6s.$ per ton; that would be $9s.$ per ton. There is no reason why the freight across the Channel, if they had screw steamers, should exceed $2s. 6d.$ per ton. I may state with regard to the screw steamers from Newcastle to London, in which at one time I was largely interested, that we were perfectly willing to take a contract for a year at $4s. 6d.$ per ton from Newcastle to London; $5s.$ per ton we considered a very fair price, and out of that $5s.$ we had to pay the city dues, so that, I think, I put a fair sum at $2s. 6d.$ for the communication across the Channel. Then if they adopted the same scale in Ireland for long distances, there is no reason why coal should not be sold on the extreme west coast of Ireland at something like $16s.$ or $17s.$ per ton at the outside.

5332. (*Sir R. Hill.*) At stations?—At stations, of course.

5333. (*Chairman.*) What are the obstacles which prevent such an attempt being made at present?—I think Irish railway boards and managers have not had sufficient experience in coal traffic to justify their adoption of these low rates. I may state that I could mention two or three large companies in England whose boards and managers think that no company can carry at a halfpenny per ton per mile. I think I may appeal to the honourable member on my left, whether it is not the fact, that for many years the North-western considered that anything below one penny per ton per mile was a loss to the company.

5334. (*Mr. Glyn.*) That was some years ago?—That was some years ago. That opinion still prevails, to a certain extent, even in England. The North-western now are thoroughly convinced that low rates tend to a development of the traffic, and they are satisfied to take a mileage rate with the Midland. That opinion does not prevail to a great extent in Ireland, which has had the effect of keeping down the development of the traffic.

5335. (*Mr. Gower.*) Do you think there can be any reduction of rates in Ireland without a temporary loss?—No reduction can take place without a temporary loss. I have never yet, in the whole of my experience, which now extends over nearly 25 years, as a railway manager, made a reduction without a temporary loss, but in many cases that loss has been very temporary; others have extended over a longer period. I have generally found out that in the end it has been a gain, although in some few cases it has been the reverse.

5336. (*Mr. Horsfall.*) Do you recollect what the rate was on the Midland line at the period when there were only 250,000 tons of coals carried?—No, but the were very high. The Midland directors and the manager at that time shared the opinion that low rates for coal were unremunerative. I think the lowest rate we had on the Midland then was a penny per ton per mile.

J. Allport, Esq

9th June 1865

J. Allport, Esq.
9th June 1865.

5337. Now upon the average that has been reduced one half?—I do not think the average rate on the Midland exceeds $\frac{1}{4}$ ths of a penny.

5338. Was there a considerable loss in the first instance when the reduction took place, or was the increase of traffic so great as to compensate for the reduction?—Reductions have been made from time to time. It was not one reduction, or two or three. Those reductions have extended over a series of years up to the present time. In fact we occasionally reduce even the very low rates per mile we have now. Our present rate to London is 6s. 6d. per ton. It might happen that, owing to a change in circumstances, the trade may change. The northern coal owners would be compelled to reduce their prices very much. The sailing colliers would reduce their freight, and we should have to reduce our rate 3d. or 6d. per ton, which is scarcely appreciable as a mileage reduction; because it would be in the gross sum that we should reduce the rate.

5339. (*Mr. Glyn.*) Do you think there is anything particular about Ireland which would render it more difficult or be attended with greater risk to make those experiments in the reduction of rates there than in this country?—Certainly not in the article of coal, because they have had very little of it.

5340. Generally speaking, both passengers and goods?—I think it should be done with care. Any reduction in Ireland would be at first attended with loss; but the increase of traffic would ultimately make it up. I have always found that in agricultural districts it has taken a very much longer time to make up the loss from the reduction of fares than it has in manufacturing districts.

5341. Do you not think the state of Ireland is such that it would require a longer time, even in those agricultural districts, to recover a great reduction in the fares?—I think it would. The population is comparatively poor, and therefore it would take a longer time.

5342. (*Capt. Galton.*) Can such a reduction be made in one district, and not in another, of Ireland?—Yes, that is frequently done. I may be allowed to mention three instances which have occurred upon the Midland Railway. For some years an opinion prevailed at the Midland board that our passenger fares could not be reduced, and they were rather high. I was constantly urging upon the directors a reduction. We first abolished the express fares upon the entire line between Bristol and Birmingham; and after about five or six months we found that we recovered that loss. We then established it upon the whole line. Again, some twelve months ago, we reduced our fares between Derby and London and the whole of our southern system, by which, on paper, we appeared to lose about 20,000*l.* a year upon that single reduction. That loss recovered itself in about four or five months, or six months at the outside. Of course there is a limit to that. The reduction we made then was from 2½*d.* per mile, first class, to 2*d.* To a certain limit, I believe, low fares are very beneficial both to the companies and the public.

5343. It has been urged in evidence that in Ireland especially the third-class fares should be very much reduced, in fact, to a halfpenny per mile instead of a penny per mile; have you had any experience of low third-class fares?—Yes, I have. It much depends on the district. I have tried the experiment on the manufacturing parts of our line and the agricultural parts. We have fares as low as a halfpenny per mile on some parts of our line, and the returns are very satisfactory. Upon other parts of the line they would not be. In certain districts we have attempted to put third-class carriages upon all our trains. It is a long time before you recover the loss sustained through diverting the second-class passengers to the third class, and that would be the case in Ireland. I should not advocate so large a reduction as from 1*d.* to ½*d.* I think if a reduction were made that it should be made judiciously, say, first of all, to $\frac{1}{4}$ ths of a penny, and then ½*d.*, and so on, until you feel certain to

what extent you may reduce it, and still leave a fair and reasonable profit to the companies. I think it would entail a very serious loss indeed upon the Irish railway companies if they were to reduce it at once from a penny to a halfpenny.

5344. It has been stated that upon some of the Irish railways in particular localities a third-class passenger cannot go and return the same day to some of the stations. Have you any instances where that is the case?—Not except in very long distances, where it is probable that we may have. I do not remember any case of the kind; but it is just possible that from Bristol to Lancaster, which is the extreme length of our railway, a third-class passenger would not have the opportunity of going and returning the same day. In fact, it is almost certain he would not; but in 100 miles I do not think we have any case of the kind on the Midland.

5345. The case which was mentioned, I think, was that a third-class passenger upon any part of the Southern and Western Railway could not go to and from Ennis the same day; but he would have to sleep at Limerick, and then go on the next day from Limerick?—That is a mistake. I do not think such a state of things should exist.

5346. That does tend to check third-class traffic, does it not?—No doubt. I may state that we do issue what are termed "return tickets" at low fares.

5347. Return third-class tickets?—Yes; that is, third-class day tickets.

5348. We have been informed that the only railway which does that in Ireland is the Dublin and Drogheda Railway?—I believe they would find it very beneficial to extend that over the whole system.

5349. (*Sir R. Hill.*) What is the mileage rate of the return ticket?—We take off 25 per cent. from the double fare.

5350. What is the single fare?—One penny per mile.

5351. (*Capt. Galton.*) Upon six miles how much would that be?—10½*d.*; in that case we should not make it 10½*d.*, we should make it 10*d.* We go upon the give-and-take principle. Perhaps in another case if it came to 8½*d.*, we should make it 9*d.*

5352. Do you find that those tickets are very much taken?—They are very much taken, particularly between country places and market towns.

5353. (*Sir R. Hill.*) Do you think it would be to the interest of the railway companies in Ireland if they would do the same?—I think it would.

5354. Are you aware that they do not?—I am quite aware of that.

5355. Then, are the Irish directors an exception to the rule you have laid down, viz., that directors generally are men of great intelligence, promoting the interests of the railway to the best of their ability?—I have been for some years trying to get the same system adopted from all places in England to all places in Scotland, but I have not yet succeeded; the Scotch companies are not so advanced.

5356. Then even railway directors make mistakes occasionally?—I am afraid that is a failing we are all subject to, whether it is a board of directors or a board sitting at Westminster or anywhere else, mistakes will be made.

5357. (*Chairman.*) Have you ever tried to establish a low scale of third-class fares in purely agricultural districts?—I have.

5358. At what rate per mile?—I once made an experiment upon a branch in a purely agricultural district in abolishing second-class carriages altogether and making them first and third class. For a long time it was unsuccessful, although ultimately it became successful; but it was so long in recovering that I think that is an experiment which a board of directors would not carry out to the fullest extent under similar circumstances.

5359. (*Capt. Galton.*) You did not have any second class passenger trains?—We abolished second-class altogether.

5360. Then all those who would have gone second class went third class?—Yes. It was for the purpose of trying the experiment.

5361. (*Mr. Glyn.*) Where was it?—Between Lincoln and Hull.

5362. (*Mr. Dalglish.*) Was the ultimate result that a good many of the passengers who would have gone by the second class changed to the first class?—We reduced the third-class fares; I think some would go by the first class, but an increased number by the third class. It had not that effect for some time, but it did ultimately.

5363. A great many went by the first class?—Yes.

5364. (*Sir R. Hill.*) Would not such an arrangement lead to economy as regards the necessary number of carriages in a train?—Yes. The great bulk of the Irish people will travel in the lowest class, and if they had two classes at a moderate first-class fare with all their trains, and a third-class fare for 1*d.* per mile, and below 1*d.* with return tickets with 25 per cent. off, I think it would have a very beneficial effect upon Irish travelling.

5365. (*Capt. Galton.*) You said it took a long time to recover, in the case you mention how long did it take?—I forget; it is several years ago.

5366. Was it one year or two years?—It has taken more than two years recovering itself.

5367. Then you think two years would be a long time for the traffic to recover itself?—That was in the fine agricultural district between Lincoln and Hull, but it is a very difficult thing to get an agricultural population to travel much; you cannot move them from home, they are not like a manufacturing population.

5368. Do they travel now largely upon that line? *J. Allport, Esq.*
—I cannot speak to that; it is on the Manchester, Sheffield, and Lincolnshire line.
9th June 1865.

5369. (*Sir R. Hill.*) Do you know whether the experiment is considered to be successful on the whole?—I do not know whether it is still adhered to.

5370. (*Chairman.*) To revert to a former part of your evidence, supposing Irish railways were to be purchased by the Government, who leased them out to a company, would not a company of that description be willing to wait in all probability with greater patience for the result of an experiment of that kind than could be expected from the present board of directors?—No doubt that would be so.

5371. I mean a company which leased a railway from the Government?—It would depend upon the terms of the lease.

5372. (*Sir R. Hill.*) The lease might require a rising rent, might it not?—No doubt.

5373. The rent beginning low and gradually increasing during the time the lease had to run?—You may put terms in a lease which would make it valueless to a company to take an Irish railway at once at $\frac{1}{2}$ *d.* per mile. It all depends on how far the Government would be disposed to risk an annual loss of a large sum.

5374. (*Chairman.*) Are there any other matters connected with Irish railways about which you wish to make any remarks?—If you will allow me, when I come to consider the evidence I have given, if I find that I wish to add anything, I will communicate with the secretary.

Wednesday, 14th June 1865.

PRESENT :

THE RIGHT HON. THE EARL OF DONOUGHMORE.
THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
THE HON. E. F. LEVESON GOWER, M.P.
SIR ROWLAND HILL, K.C.B., F.R.S.

T. B. HORSFALL, Esq., M.P.
GEO. CARR GLYN, Esq., M.P.
CAPT. DOUGLAS GALTON, R.E., F.R.S.
WILLIAM POLE, Esq., F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

WILLIAM DARGAN, Esq., examined.

5453. (*Chairman*.) You are a contractor?—Yes.

5454. You are at the present time chairman of the Dublin and Wicklow Railway Company?—Yes.

5455. Have you been for some years chairman of that company?—I have been for about a year chairman, but I have been a director of that railway for some years.

5456. Have you paid much attention to Irish railways generally?—Yes, a great deal.

5457. Will you be kind enough to state any opinion that you may have formed with respect to the present fares and charges upon Irish railways?—With regard to the fares I do not think that they will admit of much reduction, unless the railway companies are aided in some way to enable them to make the reductions. Most of the Irish railways are in debt, and they are unable to make reductions which probably they would be disposed to make if they were not in debt.

5458. Do you think that a reduction of the fares would be attended with a heavy loss to the railway companies?—I think so; indeed I am quite satisfied that a reduction of the fares would be attended with loss.

5459. Do you mean a permanent loss or a temporary loss?—I should scarcely like to say, but I should feel afraid that there would be a permanent loss, although I know that many persons differ from me in that opinion. I am afraid that numbers and quantity will not compensate for rates with us.

5460. Will you state to the Commission what are the fares charged upon the railway with which you are connected?—For first-class goods we charge $1\frac{1}{2}d.$ a mile; for second-class goods, $1\frac{3}{4}d.$; for third-class goods, $2\frac{1}{2}d.$; and for fourth-class goods, $3\frac{1}{2}d.$; but the fourth class consists scarcely of anything; they are composed chiefly of insurable articles of a valuable character. I suppose our fourth-class goods do not yield us 100*l.* per annum.

5461. (*Capt. Galton*.) Does the first class consist of minerals?—No, they are charged less; we carry minerals at something under $1d.$ a ton per mile; but I am aware, at least I believe it was stated, that we charge much more. I may mention that there is a great deal of work to do for the mining companies besides the haulage. We take the minerals from them near to the pit's mouth and carry them down a private railway, having to load and reload them into the trucks and ship them at Kingstown. We do everything for the mining companies from the pit's mouth down to the vessel.

5462. Do you find the trucks?—Yes, we do.

5463. Why do the minerals require to be unloaded and reloaded at the junction with the private railway?—They are brought by a small truck down the inclines, and then they are taken out of that small truck; that is, we take them out, and we there reload the minerals into large trucks; but we also carry them upon the private railway for about two miles. I calculate that the expenses that we are put to, outside the haulage, costs about $1s. 3d.$ a ton; and we do all this for them in order to make the traffic somewhat regular and large, and also to avoid accident, for the private tramway runs down our main line.

5464. (*Chairman*.) Is the private tramway worked by locomotives?—It is not; at least that part to which I allude is not; part of it is worked by a very small locomotive.

5465. (*Capt. Galton*.) Of what gauge?—Three feet gauge.

5466. Probably that causes the necessity for re-loading?—Yes; altogether the loading and reloading and bringing down to the platform to be loaded into the railway truck, and then shipping the minerals, costs about $1s. 3d.$ a ton, and we charge about $\frac{3}{4}d.$ a ton per mile for the haulage and waggons. It may appear to be large, but I must mention that the first eight miles from the platform is an incline of 1 in 80, and the whole distance is only 40 miles.

5467. (*Chairman*.) Will you now be good enough to finish your answer as to the fares and charges made upon your railway generally?—I will, but I should wish first to mention that the haulage of the minerals must be necessarily very expensive, because our inclines are bad. Then to go to the passenger fares:—We carry first-class passengers for $2d.$ a mile; second-class passengers for $1\frac{1}{2}d.$, and third-class passengers for $1d.$. To the third-class passengers we issue return tickets, and we run third-class carriages by every train.

5468. (*Capt. Galton*.) What is your charge for a return ticket?—A fare and a half, and it is done to enable persons to get in and out to Kingstown and Bray. In the afternoon, going to and from their labour, we carry them at $\frac{1}{2}d.$ a mile to Kingstown and Bray, without giving them return tickets.

5469. Are they carried over the rest of your line at $1d.$ a mile, and do you issue return tickets?—Yes, but it is only from half-past seven in the morning that we carry them at $\frac{1}{2}d.$ a mile. Again, in the evening we commence at 6.30, when the men leave off work.

5470. Are they what you term workmen's trains?—Not exactly so. We have third-class carriages attached to all our trains, and we issue no return tickets in the mornings or evenings.

5471. (*Sir R. Hill*.) Do you carry all persons who present themselves, whether labourers or otherwise?—Yes, within the times that I have mentioned.

5472. At $\frac{1}{2}d.$ a mile?—Yes.

5473. Why should it answer to carry passengers upon those terms on that portion of your line, and not on the remainder of it?—Because the numbers are very much greater.

5474. Is not that rather at variance with the statement you made in the beginning of your evidence that numbers would not compensate for rates; I meant generally throughout the country; in this case they do.

5475. (*Chairman*.) I understand you to mean passengers to Dublin and Kingstown?—Yes, passengers to Dublin, Kingstown, and Bray are all taken, as I have described, within those hours.

5476. How long have these low fares been in operation?—For two months.

5477. Will you state what has been the result of that low scale of fares?—I do not think they have increased our gross receipts, but the numbers carried have increased very much.

5478. (*Capt. Galton*.) Have these low fares had the effect of diminishing the gross receipts?—I think not. I think they are about equal. I am now speaking of a particular part of the country, where a great number of persons go out and return each day. We carry

W. Dargan,
Esq.

14th June 1865.

W. Dargan,
Esq.
14th June 1865.

two millions of people on that railway in the course of a year.

5479. (*Mr. Gower.*) Has the expenditure on the railway increased in consequence?—Very slightly.

5480. (*Chairman.*) Has the number of the third-class passengers travelling by these trains very largely increased?—Yes.

5481. They are chiefly to accommodate artizans, I presume?—Almost entirely; or labourers, or people in some occupation or other.

5482. Are there any other places of importance on your line besides Kingstown and Bray?—There is Wicklow and the Vale of Avoca; then there is Arklow, Goree, and Enniscorthy; but we do not make any difference to those places.

5483. (*Lord Stanley.*) I understood you to say that a general reduction of the rates would not, in your opinion, be practicable without a considerable permanent loss?—I think not.

5484. Do you found that opinion upon the comparative scarcity of population in the country and the absence of great towns, or upon what is it founded?—I found it exactly upon what your Lordship states, the absence of population.

5485. In other words, in a thinly-peopled agricultural country the rate of profitable carrying upon a railway is necessarily higher than it is in a thickly-peopled country with many great towns in it?—Yes.

5486. That is, in your belief, at the root of the difficulty of making Irish railways pay?—Yes, I think so; I am quite sure of it.

5487. In fact, if anything, providing railway accommodation in Ireland has been rather overdone with reference to the actual wants of the country?—I had been considering, before I came into this room, that if the railways now in course of construction, or for which Parliament have already granted powers, were completed, no further lines would be required in Ireland beyond the few projects under the consideration of the Legislature in the present session at this time. In my opinion it would be better to develop and utilize the existing railways, than to waste capital and energy on constructing new ones for some time to come.

5488. That is, you do not know of any place where, if there is no railway made now, it would pay to make one?—No, where there is no railway already made, or powers obtained to make it: for instance, we have obtained powers to make a line from Enniscorthy to Wexford, and when we obtained powers to make that line, we provided ourselves with preference stock, but when the depression came upon Irish railways so heavily as it did, we could not get our preference stock out, although it was of a good character, and we were therefore unable to go on with the work. But I declare that I think, if all the railways that are not finished were finished, and the two or three exceptions that I have mentioned were made, I think Ireland would be supplied with enough railways.

5489. Have you considered the question of the great subdivision of management in the Irish railways, and do you think that any considerable saving would arise from amalgamating several small companies into one?—I have no doubt whatever about it. I believe that the Irish railways might be worked for a little over 40 per cent. of the gross receipts at their present rates.

5490. What is the present average cost of working the railways in England?—That is 50 per cent. I think that if the Irish railways were amalgamated and thrown into large systems, either one system, or two or three systems, they would be worked very much cheaper; but I do not think that the English system would do for us, I mean the expenses at which railways are worked in this country. Railways are made and completed in this country with all the appliances possible, with the easiest and most direct manner of loading and unloading goods and of conveying people, that can be introduced, and yet in the great systems their working expenses are 50 per cent. of their gross earnings.

5491. Can you explain to the Commission how that saving would arise, which you seem to think is possible, between 40 per cent. and 50 per cent. upon the gross earnings?—In the first place there are a great many boards in Ireland, and of course there are officers connected with them. By the Board of Trade returns, it appears that they cost 82,000*l.* a year, or 84,000*l.* I am supposing that two-thirds of that expense would be swept away, and then I believe that, with a properly defined system of railways, with the power of using the rolling stock, when they were too busy upon one railway or part of a railway, upon some other; to transfer the working stock, for instance, to such a place as Ballinasloe, where it would seem they are never able to carry all the cattle from; with this power of disposing of this rolling stock, so as to work it most economically, I think great advantage would come out of it.

5492. You think that if they could make their rolling stock available for every part of the country there would be greater economy in the working expenses?—Clearly.

5493. Do you think that there is any insuperable difficulty in the way of such an amalgamation being carried out without Government or parliamentary interference, similar to the amalgamations which have been made in England; *i.e.*, by railway companies seeing that it was the wisest course to adopt?—I have no doubt that it will come to that by and by in Ireland, but they are not prepared for it yet. A great many of our railways are incomplete, and until they get the whole of them completed they will not know what value to put upon any of them. I expect that many of the southern lines will join in, ultimately with the Great Southern and Western line, and probably the lines in the midland part of the country, if they are better provided with capital, will become united with the Midland Company. Then the railway companies in the north are generally pretty well able to take care of themselves.

5494. Do you think that there is any difficulty in the whole of the Irish systems ultimately reducing themselves either to two or to three systems, one to include all the country south of a line drawn between Dublin and Galway, another to include all the central part of Ireland, and a third to include all the northern railways?—I think there will be no difficulty whatever, except what might be the legal difficulty and the opinion of people as to the value.

5495. I suppose the members of the different boards whose salaries were to be economised would object?—They would not like it, certainly not. I do not think that the directors of any line would object, but I think that the officers naturally would object unless they received compensation, as I think they ought.

5496. It is found, is it not, in England, that the directors do consent to amalgamations, and there have been some very large amalgamations of late years?—Yes, and so there would be with us. The directors would consent to sell or to do anything else that would put that property into a better condition.

5497. I suppose that a single company, or two or three great ones, would be able to borrow money upon better terms than the great number of small isolated companies which now exist?—Some of them cannot borrow money at all. I should see no difficulty whatever in working the whole of the Irish system by one company.

5498. Admitting that, do you think there would be any considerable gain in uniting the railways in the north and south of Ireland, or is not each half of Ireland large enough to have its own railway system?—I think so. I think there are about 1,800 miles of railway, and 900 would be very good systems to work.

5499. Do you think it improbable that the railway companies will voluntarily come into an arrangement of this kind?—I should hope that they would do so by and by, but not just immediately.

5500. Why should that be unlikely to be done in Ireland which has been done, and which is being

done every year in England?—I think that we are not sufficiently advanced with our system; there is a great proportion of the small companies which have not completed their lines yet.

5501. Do you mean that they have not money to complete them, and that they cannot raise it?—Yes.

5502. Those railway companies are practically insolvent?—Precisely so.

5503. I presume the shareholders in the lines which are in that condition would be more willing than any others to come into any arrangement whatever that gave them a promise of some return?—Unfortunately I do not see any railway company that is able to undertake the duty that would have to be performed; we have no great companies that would be able to absorb them. Suppose a railway is paying nothing, of course they have a hope, and if they have no money they will not give up that hope without something; but there is no great railway company that is able to give them anything, because they have not got it to give them, and then the shareholders would not allow them.

5504. Have you at all considered the proposition which has been often suggested as to the Irish railways being purchased by the Government?—Yes, I have.

5505. Will you be good enough to express your opinion upon that proposition?—I think that if the Government purchased them, and brought to their aid their better credit, and obtained money at a lower rate of interest they might do a very great amount of good. When I say obtain money at a lower rate of interest, I do not think that the advancement of railways ought to press upon the State at all further than this, to lend them their credit and to let them have money at the same rate at which they can borrow it; that in my opinion would enable us to do a very great deal.

5506. Practically speaking, from 1 to 1½ per cent. would be the difference between the interest which the Government would pay and the interest which the railway companies would have to pay?—Yes.

5507. It would be in effect a Government subsidy?—Yes: At the same time as the promotion of such a plan would so much serve that country, I think it might be worth the while of the Government, provided they sustained no loss by it. There ought not to be any loss by borrowing money on cheaper terms, and giving the railway companies the money upon the terms the Government would get it at. I can see a very great deal of advantage that would result from it if it is a thing that could be entertained; for instance, we are pressed for money upon our railway, and we should not have any objection, but quite the contrary, if we were aided in such a way as to be enabled to complete our entire system; it would not require very much with money at the interest for which Government could obtain it; we should not object to make considerable reductions in the charges for the carriage of coals, pit wood, &c., the fares for third-class passengers, and the rates for cattle, and all cheap goods.

5508. (*Mr. Horsfall.*) To what extent should you be prepared to make a reduction in the rates for goods and passengers?—The extent of the reduction would be in proportion to the amount of the assistance given to us. We should be willing, if what we require was given to us, to make a reduction to the extent of 30 per cent. I do not say this without having consulted the board beforehand, therefore I say it authoritatively.

5509. (*Sir R. Hill.*) Do you mean 30 per cent. upon all your charges?—No; 30 per cent. upon cattle, coals, and third-class passengers, and all cheap goods which are now reckoned as our first-class.

5510. (*Capt. Galton.*) What amount of aid did you say you would require from the Government?—A million and a half. Our railway is peculiar. At the commencement of it probably the only capital in it was what I had myself, and then, as we made portions of the line we got our credit up better; then we went

for another division, and we borrowed money upon that, and we made it out of borrowed money; for instance, we made the railway out of our original capital to Wicklow, and from Wicklow we went to the mines, from the mines to Gorey, and from Gorey to Enniscorthy. Each of those divisions we made out of the credit that we obtained by the extension of the line, and it is for that reason that we are encumbered with so much borrowed money, and therefore so much is required by us. We could make a reduction to a smaller extent if we were aided with a smaller sum.

5511. (*Sir R. Hill.*) You have expressed the opinion that any extensive reduction would be attended not only with temporary loss, but with a permanent loss?—I do not think I expressed myself so decidedly as to a permanent loss. I think I said I should be afraid of it.

5512. What is your opinion as to the permanent effect of an extensive reduction in the rates of charge?—If a very extensive reduction was made there must be a permanent loss.

5513. Would a reduction of one-third upon certain charges be attended with a temporary loss?—It would be only temporary. Our line is a peculiar line. We go through a country inhabited by a great number of people, and I should expect that our increase upon the reduced rates to that extent, added to the benefit we should get by having our debts placed at a lower rate of interest, would enable us to do all I have said without risking the solvency of anything.

5514. What would be the effect of reducing your rates to that extent without receiving any assistance from the Government?—That we should have no money wherewith to pay our interest at the present time.

5515. It would lead at least to a temporary loss?—It would lead us to bankruptcy.

5516. Then do you think that that being the state of things, the Government could advance a million and a half of money to assist your company without incurring a very considerable risk?—I think they could. I believe we could prove that the Government would run no risk whatever, and unless we did prove it I think we ought not to get it.

5517. (*Mr. Horsfall.*) You apply that remark only to the line with which you are connected, and not to the general railway system in Ireland?—Only to the line with which I am connected; but part of our line is not completed, and we should employ the money to complete the line. We should use it also to reduce the interest upon the money already borrowed.

5518. What dividend is your railway at the present time paying?—We have paid 5 per cent. in the last two years. We have a small original capital, only 600,000*l.*; our borrowed capital is 900,000*l.*

5519. (*Capt. Galton.*) Do you include in your borrowed money the preference capital?—Yes.

5520. You regard that as borrowed money?—Yes.

5521. How could the Government, by guaranteeing new preference capital, relieve you from any amount of interest?—That has been the difficulty. I cannot answer that.

5522. Is the preference capital a capital which can be repaid at any time?—No; we have not that power, it is a permanent charge.

5523. I see that you have a preference stock at 6 per cent., 200,000*l.* at 5 per cent., and 300,000*l.* at 5 per cent.?—Yes, but the remainder of the preference stock that you see there is not yet issued.

5524. (*Sir R. Hill.*) Is the interest upon the preference capital always regularly paid?—Yes, it is punctually paid.

5525. (*Capt. Galton.*) You have borrowed money by loan under subsequent Acts without having raised preference capital?—No, we have not touched the loan.

5526. (*Mr. Horsfall.*) How would you deal with those railways that pay no dividend at all?—I can scarcely say; although they do not pay a dividend they have a hope, and they would be compensated

W. Dargan,
Esq.

14th June 1865

W. Dargan,
Esq.
14th June 1865.

for that hope. I do not think that they have any chance of ever getting much; but if those railways are dealt with, I certainly would deal with them not compulsorily, but upon a voluntary principle. I believe that if there was a moderately fair price put upon any of those lines of railway they would all come in and take it; but I think it would be wise to let it be done under the powers of a Wharnccliffe meeting, where the majority would carry the remainder with them. I do not think it could be done if it were left to individual dealing, because perhaps a person holding to the extent of 10,000*l.* or 20,000*l.* would stand out for more, and would probably double his claim, but I would coerce them by the powers of the shareholders; for instance, if I was a shareholder I should not like to see another man prevent me from making a bargain that I approved of. I think you would get a majority to agree, and I think it would be a very fair principle to act upon in all cases.

5527. Do you think that the purchase of all the Irish lines might be effected by such means without any great sacrifice on the part of the Government?—I believe that the capital already laid out upon the Irish lines of railway up to this time is probably about 26 millions; in 1863 it amounted to 24 millions, and I imagine that a couple of millions have been expended since that time. I believe that the whole of the Irish railways could be purchased for about 22 millions.

5528. Without resorting to any compulsion beyond that which the shareholders would exercise over each other?—Yes, as they do now.

5529. Are the Commission to understand that you anticipate a great saving in the working expenses if all the Irish railways were amalgamated?—Yes.

5530. Would a saving of one-fifth in the working expenses be effected?—Yes.

5531. Could that great saving be made if certain companies were to refuse to sell their property?—No; I think that the saving would be effected on the lines that would be taken by the Government.

5532. Whether the Government purchased them all or not?—I cannot imagine for a moment any company in Ireland holding out if a fair offer were made, or the Government having only a portion of them, and not the whole.

5533. Do you not think there would be any danger of a company holding out in the expectation of being bought up at a high price?—I think the shareholders would not stand out, individuals might; but I do not think that would happen in the companies.

5534. Dealing with the shareholders as a body, you think that a scheme, including the whole of the Irish railways, might be successfully carried out?—Yes, on the voluntary principle.

5535. (*Mr. Gower.*) What do you think would be the effect of a general amalgamation of the Irish railways upon the further extension of railways; would it put a difficulty in the way of further extensions in Ireland?—I wish it would. I do not know a single yard of railway that ought to be made, except those which I have already alluded to.

5536. Do you think that they would be carried on?—I cannot say; there might be conditions or arrangements made that would admit of their being carried on. I do not think that there would be an insuperable difficulty.

5537. Supposing that a general amalgamation did put difficulties in the way of further extensions, would not that be rather hard upon those districts which are at present unaccommodated by railways?—That is what I have not been able to see, where those districts are.

5538. I believe there are districts in Ireland that have not yet been accommodated by any railways, and new lines are being proposed every year?—I know the whole of the country well, and I do not know where there is any district that would justify the making of a railway, except the three I have named.

5539. (*Sir R. Hill.*) Are there Bills for the construction of new railways now before Parliament?—Yes, and I wish they were to be the last, for they are doing harm every day.

5540. Do you think it would be fortunate if those Bills were thrown out?—No; there is one that I am concerned in myself. I think, referring to those lines of railway in the county of Waterford, that there is justification for applying for them.

5541. Referring to those insolvent companies of which you have spoken, have their shares any price in the market?—They have.

5542. They are transferred; are they?—Yes, they are; they have a nominal price, probably some of them as low as 15 per cent.

5543. Still they are sold at a price?—Yes, they are, and money is paid for them; but there is one thing that I should much like to mention, and that is the injury that is done to us by railway legislation. I think it is a great pity that the rule that was laid down was ever abandoned, in consequence of which parties are enabled to come and obtain powers for the construction of a railway when they have no money to make it with. I think it would be the greatest improvement to our railway system if, when parties come to ask Parliament for powers to make a railway, they were compelled to show that they were able to do what they were seeking powers to do. Let me suppose a case. There is an idle engineer in a neighbourhood, and there are plenty of them, and there is a speculative lawyer; those two men put their heads together, and they go for a railway, and they get parties with legitimate business to transact, and fair-dealing intentions who desire to carry out all their undertakings correctly, and they give them all the trouble in the world. In our own case one of the things that made us unable to issue our preference stock was a railway of the character I have just mentioned having been laid out this year; the parties came to Parliament for a Bill, and people said, "if power to make this railway is obtained it will damage these other people immeasurably," and therefore our credit was knocked down. These schemes interfere very much with legitimate proceedings, and are most mischievous; the lawyers get all our money, and if there is not a penny wherewith to pay a dividend, the lawyer must be paid.

5544. (*Lord Stanley.*) Was not an attempt made and continued for many years by Parliament to ensure the solvency of the promoters of railway schemes, and did it not break down because it was found to be so easy to evade the rule that was laid down?—No, it did not break down; it made things safe all the time, it was in existence, but it was given up. The standing order, I think, was in both Houses that the parties applying for a bill should prove their capability of making the line, and a most legitimate order it was; but now it is only necessary to go to a banker and borrow a sum of money and deposit it, and trifle and play with it, and torment other people.

5545. Formerly parties were required to come with a capital in their hand to obtain the sanction of Parliament, but now they obtain the sanction first, and then trust to that to get the capital afterwards?—Precisely.

5546. (*Sir R. Hill.*) What has been the effect of the competition of the new lines upon the old lines?—Wherever they have come into competition, of course they have damaged each other.

5547. Do you consider that much of the difficulty by which the old lines are now embarrassed is owing to the competition of the new lines?—Yes, a good deal of it.

5548. (*Mr. Horsfall.*) How would you propose to give security to Parliament that parties who apply for bills are able to carry out what they propose?—I would go back to the subscription contract. I think that three-fourths of the capital should be subscribed for beforehand by solvent people.

5549. How are you to prove the solvency of

people?—It did not fail before; that was always easily done.

5550. (*Chairman.*) Do you think it is possible to prove the solvency of persons who put down their names as subscribers?—I do. I think it is possible to prove that sufficiently to the satisfaction of a Committee of either House.

5551. (*Sir R. Hill.*) You estimate the cost of all the Irish lines at about 22 millions?—I think that sum would purchase them.

5552. Can you state the data upon which that estimate has been formed?—The data that I went upon was taking the market price of the shares and adding 10 per cent. for the compulsory purchase. The market price of the present shares is about 20 millions.

5553. (*Capt. Galton.*) Do you think the shareholders will be satisfied with a purchase upon that basis?—Yes, I think they would be delighted.

5554. That is if you took the market price and added 10 per cent. for compulsory purchase?—Yes, I am sure of it.

5555. (*Sir R. Hill.*) You would take, I apprehend, the market price of the preference stock and debentures?—Yes, if a whole purchase was made.

5556. (*Capt. Galton.*) Did you do so in the estimate you have made?—Yes.

5557. (*Sir R. Hill.*) Does your estimate of 22 millions include everything?—Yes.

5558. (*Capt. Galton.*) Having purchased the Irish railways, what would you do with them?—There are so many opinions upon that point that I have never had it clear in my mind what you are to do with them. I think the Board of Works in Dublin might work them all, or some board that was specially formed, and which probably would be better.

5559. You would not lease them to any private company to work?—I do not think that would be an improvement as regards the country.

5560. Do you think you could effect an improvement by establishing a board like the Board of Works in Dublin to work them, which would be subject to political influence?—I think they would be improved by a board. The effect of political influence I do not of course understand.

5561. You do not understand how such a board would be subject to political influence?—No.

5562. How would you constitute such a board?—In the same way as any other board that was appointed by the Government. I think that three commissioners would be quite enough for them, or five at the very outside. I think that three would be better.

5563. (*Sir R. Hill.*) Would you intrust that board with the details of management?—Yes.

5564. Do not you think that you would be likely to have more efficient and active management if the lines were leased to private individuals?—I have not been able to see my way to a lease that could protect all the interests concerned. For instance, I have known a line to be leased as the Midland Great Western was, but when they took it up from the contractor it half broke them to renew it. The condition of their permanent way was very bad, and the rolling stock was eaten out.

5565. Do not you think that conditions might be inserted in a lease that would furnish security against the wearing out of the permanent way and the rolling stock?—I am not sufficiently conversant with that matter to say. I have not thought of the safeguards that would be essential in a provision of that kind.

5566. (*Capt. Galton.*) If safeguards could be devised, would you then prefer to place the Irish railways under a board rather than under private management?—If safeguards could be provided that would protect the public, and protect the property and interests concerned, I would rather place them under private management.

5567. As far as the public are concerned, could not they be protected either by an arbitration clause or by conditions inserted in the lease?—I should say by conditions put in the lease. I do not know what the

public would have to do with an arbitration clause. I should think that the leasing parties possibly might frame specifications and conditions in a lease that would compel the lessees to do their proper duty.

5568. (*Chairman.*) Do you think that if the Irish railways became the property of the Government, and it was thought advisable to lease them, that parties could be found to tender for and to accept a lease of that kind?—I have no doubt of it; I have heard of joint stock companies, new companies, being formed for such a purpose; but I think the parties you would find who would be ready to lease them, would be some of the great English companies, who, for the advantage of getting the Irish traffic over their own lines, would become competitors, and be willing to meet a little loss with us; or if they did not do anything more than just save themselves they would recoup themselves on this side.

5569. Do you think that Ireland would derive any benefit supposing that such a leasing company was to consist merely of persons interested in the English railways?—That would depend upon the conditions under which the lease was made.

5570. (*Sir R. Hill.*) Suppose the Government purchased the Irish railways at the sum you have named, 22 millions, the interest upon that sum might readily be calculated. Then suppose the Government were to make it known that they were ready to grant a lease of those lines to responsible persons for a rent equal to the interest upon the purchase money, but to throw the competition upon the rates at which the parties tendering would engage to work the lines; for example, suppose the Government were to set forth in their advertisement certain maximum rates, say, for instance, the present rates, and then invited parties tendering for the lease to say at what rate per cent. they would work under those rates, and that they gave the lease finally to the party offering to work the lines at the lowest rates of charge. Do you think that would work?—I think it would work well if the Government properly defined what the rates were to be; but I think with reference to the country, it would be better if the reductions were made, not generally, but upon the special traffic; for instance, coals, and those articles which I named before.

5571. (*Mr. Horsfall.*) When speaking just now of one of the great English companies leasing the railways in Ireland, you said that any loss which might accrue on the Irish lines would be recouped on the English lines?—I should expect that they would look forward to that.

5572. Do you think that that would be fair to the English public?—I think it would be fair to the English public, but I do not mean to say that the English public would in this instance be interfered with if the arrangement increased the trade that they would get upon their lines from Ireland; that is the way in which I should expect they would be recouped.

5573. Of how many miles of railway in Ireland are you a director?—Ours is a short line, only 120 miles.

5574. Have you an equal mileage rate over the whole of that line?—Yes, except in those special cases that I have mentioned to you; that is, taking in and out the working people.

5575. I mean both for goods and passengers?—Yes.

5576. (*Sir R. Hill.*) If the security to the Government, under such an arrangement as we have been considering, should appear to be insufficient, do you see any means by which that security could be augmented?—I have been alluding to the great railway companies in England, but in answer to the question I must say that I do not see any means; all that would have to be looked to would be the solvency of the companies tendering for the lease.

5577. The Commission has been informed that there have been instances of landowners and agriculturalists making considerable advances by way of promoting the construction of railways in different parts of Ireland. Do you confirm that?—To a very limited amount. I know that Lord Erne made large advances

W. Dargan,
Esq.

14th June 1865.

W. Dargan,
Esq.

14th June 1865.

upon the Irish North-western line, and I believe that Lord Lucan and Lord Crofton also made advances; but I do not know of any other instances in which large sums have been so advanced.

5578. Would not the landowners and agriculturalists be largely benefited by an extensive and general reduction of the rates of charge?—No doubt they would.

5579. In consideration of that benefit, do you think they would be willing to give personal security, or security upon their property, in order to carry out the scheme suggested?—The landowners would not give one penny; they will not give any security whatever.

5580. Not with a view to obtaining so important a benefit to themselves?—I think not. That matter has been tried before, and it turned out most unsatisfactorily. The counties of Galway and Roscommon guaranteed a fixed rate of interest of $3\frac{1}{2}$ per cent. to the Government to make up any deficiency that might arise in the receipts of the railway, but nothing could have turned out more unsatisfactory than the whole of that transaction.

5581. In what way was it unsatisfactory?—The railway company and the gentlemen of the counties got to quarrelling with each other, and they involved themselves in legal difficulties.

5582. Would there be the same likelihood of their quarrelling and getting into legal disputes if the railways belonged to the Government?—I think so. I think that they would be very unwilling to do anything. I know that a feeling exists against giving any guarantee either from the baronies or the counties; a guarantee is looked upon as very unpalatable, and I do not think that a guarantee could be obtained from the holders of property, but of course this Commission are better judges upon that than I am.

5583. If it were found that the railway companies themselves could not provide that security, which would justify the Government in applying the funds, which belong to the whole United Kingdom, for the advantage of the Irish railways, can you suggest any means by which assistance could be afforded by the Irish people themselves?—No; I cannot.

5584. (*Lord Stanley.*) Do you not think that some objection might be made and some difficulty felt if a Government subsidy to a large amount were granted to the Irish railroads while no similar assistance was given to railroads or other industrial undertakings in any part of the United Kingdom?—I think there would be, and very naturally, but still we are a country in great distress, and I think that anything that could be done without loss ought to be done to help us.

5585. You would look upon it as a kind of out-door relief to the Irish community at large?—I suppose it would be; but, still, if it were a transaction that could be entered into with safety and security, without touching upon the property of England or of the State in any way, I think it ought to be done.

5586. You say without touching upon the property of the State, because you mean that it would be only lending the credit of the State?—Yes.

5587. It is clear, however, that an equally good case might be made for lending the credit of the State to any other solvent industrial undertaking, and that any other undertaking would be equally benefited by it?—Yes; no doubt of it.

5588. It is also a fact that the credit of the State, however large, is limited in amount, and that similar assistance could not be given to all undertakings that required it?—Yes.

5589. (*Capt. Galton.*) Why should an exception be made in favour of Irish railways?—Because I do not see how they can very well be carried on without it.

5590. You think it is essential with a view to the development of the country?—Yes; I do.

5591. (*Chairman.*) Do you believe that the industry of the country would be very greatly developed if a scheme of this kind were carried out?—I do.

5592. And that Ireland would derive great advantages?—There is no doubt about it.

5593. (*Capt. Galton.*) Would the carriage of coals into the interior of the country, in your opinion, promote manufactures?—There are some manufactures for which the country is suitable, and which would be promoted by it.

5594. What class of manufactures do you refer to?—I think the manufacture that we are now entering upon is that which is most suitable for the country—flax is done—and it does not require cheap railway carriage, that is a valuable article; but there is the woollen manufacture.

5595. In what part of the country would that manufacture be established?—I think in the south of Ireland; it is creeping in there a little. Mr. Malcolmson, who has been examined before the Commission, is carrying out that manufacture very fast.

5596. He lives at Clonmel?—No; at Mayfield near Carrick-on-Suir.

5597. He stated that coal was not required, because he manufactured with water power?—Yes; I am satisfied that very little coal is wanted for manufactures in Ireland, except in the north, for there is unused water power sufficient in almost every part of Ireland to keep going all the machinery that would be required there for a century, no matter how rapidly they worked, and without the aid of coal. A little coal might be required in very dry seasons, just to keep up the regularity of the working.

5598. In what manner would railways promote manufactures if not by the transport of coal?—They would do so in a small degree by the transport of coal; but they would afford facilities for the transport of manufactured goods and of wool.

5599. Is not wool a high-priced article that would not be much affected by the rates for which it was conveyed by the railways?—It is.

5600. In the same way that flax is?—Precisely the same. It would not be much influenced by the rate charged; but it is a legitimate manufacture for the country, and I do not know of many others that are.

5601. Whether the rates charged upon railways are diminished or not, it does not appear that the manufacture of wool would be much affected?—I think not.

5602. Are there any other manufactures that you think would be affected by them that Ireland is adapted for?—I do not know of any.

5603. (*Sir R. Hill.*) Are the peasantry at all likely to do any injury to the railways?—No.

5604. You know of no instance of that kind?—No.

5605. Do you think there would be no risk of that kind if all the railways were to become the property of the Government?—Not the remotest. I think they would be safer in the hands of the Government than in the hands of individuals.

5606. (*Chairman.*) Has any progress been made lately towards an amalgamation of any of the small Irish railways?—I think not.

5607. Do you think that if matters are left as they are the progress of amalgamation will be very slow?—I think so. I do not know why it is, but railway companies with us are often very jealous of each other, one company very often endeavouring, whether legitimately or otherwise, to get hold of the traffic of another.

5608. (*Mr. Gower.*) Do not the public benefit by that?—They benefit when the fares are reduced, of course; but the railway company suffers.

5609. (*Chairman.*) I do not clearly understand why you think the Irish railways could be worked at 40 per cent., while in England the working expenses amount to 50 per cent.?—That is my own experience.

5610. What are the items with respect to which Irish railways can be worked cheaper than English railways?—In the first place, labour is cheaper, and that is a very important item. Coal is a little dearer, and our taxation is heavier, and indeed it surprises me that it should be so. Our taxation is something heavier than the taxation upon English railways.

Coal is cheaper in England, and then we are not subject to the duty on carriers.

5611. But that is trifling in amount, is it not?—Yes.

5612. (*Sir R. Hill.*) In England five per cent. is charged upon the passenger traffic, except passengers carried by the parliamentary train?—Yes.

5613. (*Capt. Galton.*) In what respects is the taxation heavier upon Irish railways? Do you allude to the poor rates, or what do you include in those taxes?—The local rates, and the county rates, and the grand jury rates, and all local taxes. Strange to say, they are heavier with us than they are in England. I obtained my information from the Board of Trade Report, and it astonished me.

5614. (*Mr. Glyn.*) In the 40 per cent. for working expenses do you include the keeping up of the permanent way?—Yes.

5615. (*Sir R. Hill.*) You say that labour is cheaper in Ireland; do you find that when a given piece of work has to be executed—for instance, excavating a large number of cubic yards of earth—it can be done at a smaller cost than in England?—Yes, it can. It requires some little time, until the men are trained to the work, and you must give them better wages than the wages of the country, but they need not have as high wages as labourers in England; but they will do very nearly as much work. That is a question that I can answer with great confidence.

5616. (*Mr. Glyn.*) Have you ever made any calculation of the cost per mile per annum of keeping up the permanent way?—Our cost is about 80*l.* a mile.

5617. That I think very much corresponds with the cost in England?—The cost in England I think is more.

5618. (*Chairman.*) Does that sum include renewals?—Yes, it does.

5619. (*Capt. Galton.*) Does not the cost vary with the amount of the traffic?—Of course it does; but our permanent way costs upon the average about 80*l.* a mile.

5620. Does that include the Dublin and Kingstown and Wicklow section of the line?—I have been speaking of railways generally in Ireland. The Dublin and Wicklow line of course costs a great deal more, because the amount of traffic upon it is heavier. Although some people think it is not so, I know that that has a very great effect upon the wear and tear. You can keep a line up much cheaper with light traffic, which of course stands to reason, than you can with heavy traffic; but the general opinion is that it makes no difference.

5621. (*Mr. Horsfall.*) If the expense upon English railways is only 80*l.* per mile, the cost on the Irish lines ought to be much less, looking at the difference in the quantity of traffic, ought it not?—I think the cost upon our lines is about 85*l.*, but we know nothing yet about the effect upon the rails; we have no line that has been sufficiently long in existence to be giving way yet, except the Kingstown line, but that higher expenditure will come upon us some day or other.

5622. (*Capt. Galton.*) In the evidence given by Professor Sullivan, with reference to the charges made for the conveyance of minerals from the Vale of Avoca to Kingstown, he stated that you charged 25 per cent. upon the total value, and he complained that the railway company did not afford those facilities for the development of that traffic which he considered ought to be afforded?—I know Professor Sullivan well, and I do not think that he is a man that would misstate a fact that he was clear upon, but whoever gave him that information did not tell him all. I have already stated, with regard to that mineral traffic, that we take it from near the pit's mouth, and carry it down by a separate railway, and load and unload it, and ship it for the mining company. We give them their invoice and do everything that is necessary at Kingstown, and the expense connected with those operations, entirely outside the haulage or the waggons, which are our own, is very great. I should

add also that the material is an extremely heavy one, heavier than ironstone. It is sulphur ore, and the wear and tear of the waggons is very heavy, from throwing those masses into and out of them. Our charge to the company is $\frac{3}{4}$ d. a ton per mile for the use of the waggon and the haulage. I should also say that our first incline from the mine is 8 miles of 1 in 80, and almost our best load is 120 tons. We are not charging one penny more than what barely repays us; if anything, we charge them less than what pays us, in order to encourage their traffic.

5623. Do they supply you with a large traffic?—They are now getting into it more; it is a valuable ore; and I think we carry for them from all the mines about 120,000 tons a year. Before we put the railway down and provided accommodations for them, I do not think they averaged 60,000 tons a year; but now hope we shall increase the quantity to 300,000 tons a year.

5624. The rate you charge is not a prohibitory one?—No.

5625. The product of the mines is of some value?—Yes; we have never had any difference with them about the rate; but we have had a difference about the irregularity with which they supplied us with the ores.

5626. You say it is not a very remunerative traffic to the railway company now?—It is only fairly so.

5627. (*Capt. Galton.*) Does the mining company pay very high dividends?—Yes; they are paying, I believe, 25 per cent.

5628. Then substantially you think they have no great grievance to complain of?—None at all. We have put them into this condition, that they can make 5*s.* a ton upon 400,000 tons a year, whereas they endeavour to make six out of one. All they have got to do is to increase their works, and they ought to be a very prosperous company.

5629. (*Sir R. Hill.*) Is it a fair mode of testing the rates of charge to say that they amount to so much per cent. upon the value of the goods carried?—Not at all. I do not consider it any test whatever.

5630. Five per cent. upon the value of the goods might be a high charge, and 25 per cent. might be very low?—No doubt of it, when they are rated upon a per-centage of the article; it is no test whatever as to whether we do the work cheaply or dearly for them.

5631. (*Capt. Galton.*) You stated that you had four or five classes of goods; are those classes uniform all over Ireland?—Yes, they are.

5632. Do all the Irish companies adopt the same classification of their goods?—I believe so; we charge the same mileage rate to all places.

5633. But do all the railway companies in Ireland put the same articles into the same classes that you do?—Yes, they are all taken from the clearing house; they are arranged there.

5634. Then the classes are uniform on all the Irish railways?—Upon every one of them.

5635. As well for the local traffic as for the through traffic?—Yes; I believe there is some difference made upon the through traffic, but the extent of that I do not know. I cannot tell you what the classification is, but the rates are not uniform.

5636. Do all the railway companies in Ireland adopt the same classification for their goods?—Precisely.

5637. (*Mr. Gower.*) You think that no partial reduction might be made that would be unaccompanied with a loss?—Yes, there might be. We should be very much better pleased to receive less assistance, that is, only sufficient to enable us to complete our system and to make a reduction of 10 or 15 per cent. We should be much better pleased to get assistance to the extent of one-third of what I have mentioned, and to make a reduction of 15 per cent., than to get assistance to the full extent and make a reduction of 30 per cent.

5638. (*Sir R. Hill.*) You are speaking now only of your own line?—Yes, but I think that we stand

W. Dargun,
Esq.

14th June 1865

W. Dargan,
Esq.

14th June 1865.

in a very peculiar position for testing the principle of the thing, and I think therefore that it might be worth while to make the experiment because if it proved successful it would draw others after it.

5639. (*Lord Stanley.*) In what way is your line in a peculiar position?—The peculiarity consists in the nature of our traffic. We have a large suburban traffic, and the experiment would tell well upon numbers there. I think that a reduction of the rates would be likely to be better made upon our line on account of the numbers that travel by it than upon any other. We have made some reductions lately, but we have not found that we derived any benefit from them.

5640. (*Capt. Galton.*) Those reductions have only been in operation for a year, I think?—Yes, but the reduction that I particularly allude to has been made within two months. We made a reduction of about 10 per cent. under the Great Southern and Western Company, a uniform reduction, but we have not found, in the course of two months, (although this has been an exceptional year in Ireland owing to the Exhibition), more people coming, so as to be able to recoup ourselves, nor have we made the same progress that we have in other years.

5641. Is not a period of two months rather a short time to make an estimate upon?—Yes; I am only stating a fact; we did try it, and I suppose we never can go back again. I hope it will recoup us after a while.

5642. Are your rates for parcels low?—Yes, and a very large proportion of our parcels is carried for nothing. Our subscribers get their parcels carried for nothing.

5643. To whom do you refer as subscribers?—I mean the season ticket holders. We have about 10,000. a year that comes in from season tickets, and all the holders of these season tickets get their parcels carried free.

5644. Do you consider that that is a good system?—No, but we cannot alter it; complaints come in upon us so heavily. When we tried to alter it we thought we had better let it be as it was.

5645. Do you not think that it would be better to reduce the price of the season ticket and charge for the parcels?—No; the passengers would not be content with that, do what we will; they have been accustomed to it for twenty years and they would not like it altered.

5646. (*Sir R. Hill.*) Is it not a privilege that is open to great abuse; for instance, does not a subscriber sometimes get the parcels of a non-subscribing friend carried for nothing?—I am afraid too many of them; a man sends for himself what belongs to another.

5647. (*Mr. Glyn.*) Is the parcel limited to weight?—It is limited to 56 lbs. in one day.

5648. (*Chairman.*) Do you charge the same mileage rates for long as for short distances upon your line?—Yes, with the exception of those evening rates for the labouring poor which I have already mentioned.

5649. Both for passengers and goods you charge the same mileage rates?—Yes.

5650. (*Sir R. Hill.*) Are those parcels carried for nothing and also delivered?—No, the servants of the subscribers take them from the stations, but I should mention that our subscriptions do not extend beyond thirteen miles from Dublin. With reference to what was mentioned a short time ago, I wish to say that if we could make a less extensive reduction upon receiving less assistance we should prefer it.

5651. (*Chairman.*) You think that it would pay your shareholders better to receive a small amount of assistance and to make a small reduction, than to receive a large amount of assistance and make a greater reduction?—Yes, it would.

5652. (*Capt. Galton.*) Do you mean because under those circumstances you would be more free from Government interference?—No; it is because I think it would pay us better. We have no objection

to Government interference whatever. I should mention to the Commission with respect to the parcels, that one of the inspectors from the Board of Trade made a special report upon our charges, and he stated that our charge for parcels was cheaper than on any line in the United Kingdom.

5653. What rates do you charge for parcels which are not conveyed for subscribers?—I really cannot tell you at the moment.

5654. (*Sir R. Hill.*) Is the number of the parcels so carried for subscribers very large?—Yes, particularly so for subscribers, those who have nothing to pay for them; but the other parcels are not so very great in number.

5655. (*Capt. Galton.*) You stated that as chairman of the Dublin and Wicklow Railway Company you would be prepared to accept a certain amount of assistance from the Government, and that you would then reduce your fares in a certain proportion?—Yes; we should reduce our fares in a certain proportion, but in addition we would undertake that the security should be perfect, because we should have this to fall back upon; we pay a dividend on our original shares now, but if there was any deficiency we could apply it to the payment of what would be naturally chargeable to it.

5656. Do you consider that your company would be prepared to give up their shares in the line upon the conditions you have mentioned at 10 per cent. advance upon the market price?—We would give up the whole line. These are questions that I thought the Commission would very possibly put to me, and I therefore spoke to the board upon the subject and discussed the matter with them, and I am able to say that we should be quite prepared to do what I have stated. We possess a peculiar power. The shareholders think pretty well of us, and they never refuse to abide by our advice. We would either part with the whole or we would take a subsidy which would enable us to complete our line and reduce our rates proportionately. A reduction in the rate charged I think would be most beneficial to the poor. A man who travels in a first-class carriage does not care about it, the fare that is charged is low enough at present; to the man who travels second-class a reduction might be of some little use; but it is the third-class passengers, looking at their numbers, who want to be served in Ireland, and if we could make the railway fares so cheap as to take away the inducement to a man to walk we should then carry them; but I doubt whether we could do that.

5657. The time of a man is not so valuable in Ireland?—No.

5658. (*Sir R. Hill.*) Is it the practice among the Irish labourers to go considerable distances daily in search of work?—No.

5659. Then they do not want to travel much?—No; they have no occasion to travel, they live at home on their little farms or at their place of labour, and they have no money to spend.

5660. (*Chairman.*) Do the small shopkeepers travel to any extent in Ireland?—Yes, they do.

5661. Would not the small shopkeepers generally travel third class?—I think they would.

5662. (*Sir R. Hill.*) If the labourers have no occasion to travel much, would there be any great advantage in making a large reduction in the third-class fares?—I think there would. I think that it would induce travelling among that class of persons. When we reduced one-half upon the Kingstown line, I do not think we lost any money by it, but still it was peculiar, because the line runs through a thickly peopled district.

5663. (*Chairman.*) Do you think that any purchase of the Irish railways by the Government ought to be an entirely voluntary transaction on the part of the companies?—Yes, I do, and I think that it would be adopted by all of them.

5664. Would there not be a fear, as there is so large a number of companies in Ireland, that a few would stand out and obstruct the completion of the scheme;

for instance, in the north of Ireland there are many small companies, and might not one or two of those stand out?—Yes; and if they did I would leave them there.

5665. You would not ask for compulsory powers to compel them after a certain time to come in?—They would very soon come in if there was a limit as to time. I think you would have them all.

5666. (*Sir R. Hill.*) You would say this is an offer made to the whole of the Irish railway companies, and if it be accepted by all the Government will take the railways, but if not accepted by all they will not take any?—I should be much afraid of that offer, because I think it would drive the small companies into the view of holding out, but I would leave those who were unwilling out of the system, and if there was any probability of their being left out of the system I think that they would all come in.

5667. You think that the traffic might be so worked as to force them into the system?—Yes.

5668. (*Mr. Glyn.*) You would want some precautions so as to prevent any impediments being thrown in the way of the traffic to be worked over their lines?—Yes, I think that ought to be done. You can do that now under the present law.

5669. (*Capt. Galton.*) Would you leave that to the existing law?—I think it ought to be done; where a party chooses to stand out of a great system or scheme of that kind there ought to be running powers over their line.

5670. (*Mr. Gower.*) If the Government made large reductions in the charges as part of the plan, and certain of the railway companies attempted to work by themselves, should they be obliged to make similar reductions?—Yes, and they should be forced to come into the system.

5671. (*Capt. Galton.*) Suppose, for example, that the Ulster Railway Company held out?—They must do as others would do. The Ulster Railway Company would be very glad to come into an arrangement of that kind.

5672. I am assuming the case of one railway, which forms an important link in the line between Dublin and Belfast; because unless that company came into the arrangement there would be no communication possible over its line, unless it were part of the system?—Then there should be the power which has been just mentioned; there should be power to run over their line.

5673. But that is a power which is scarcely ever conceded to a private company, to run over the line of another company solely because it is a link in a system, except for very short distances, or under very special circumstances?—In this case I think it ought to be so. I think the advantage of the thing would be so great and more important than interfering with any precedent.

5674. Then it would be a voluntary arrangement, but if they did not accede to it it would remain a matter of compulsion?—Yes.

5675. (*Mr. Glyn.*) In carrying out a large arrangement of this sort, you would not allow any of the parties to throw any impediment in the way?—Certainly not.

5676. (*Chairman.*) I think you stated that you had had some experience of railway companies leasing a railway?—Yes. The Midland Railway Company leased their line at one time, that is, the working of it, or the haulage, and I have heard them very often complain that they got their rolling stock and their permanent way into such a bad condition, that it proved a very unfortunate transaction for them, having let the line go out of their power altogether.

5677. Do you know how the public was served during the time when the line was leased?—The public was served properly, for the leasing parties were bound to run the trains under the direction of the company; they had a mileage rate, and the company fixed the number of trains to be run and the hours.

5678. Then the leasing company were not left very much to their own discretion?—No, they only had an interest in the work.

5679. (*Sir R. Hill.*) Were there any clauses in the lease the object of which was to secure the rolling stock on the line against deterioration?—I think there were some clauses, but they were found to be defective.

5680. (*Capt. Galton.*) Was it done in the shape of a reserve fund?—No.

5681. (*Chairman.*) Do you think that a company leasing a line would work the line on different principles in any respect from those on which they are usually worked by boards of directors; in other words, would they look more to the ultimate profit than to the immediate profit?—I think that they would look to both; but I think the probability is that, if anything, they would look more to the immediate profit.

5682. (*Sir R. Hill.*) It would depend upon the terms of the lease, would it not?—Yes, it would; but I think that people are very fond of immediate profit.

5683. Is there any practical difficulty in a landowner granting a lease of a farm and securing himself against the deterioration of the buildings or the land?—I should think not.

5684. Do you not think that similar means might be employed for securing the owners of a railway against injury?—I suppose there could be means devised for that purpose; but I have simply mentioned as a fact the single case that has come within my own knowledge.

5685. In that particular case, perhaps, sufficient care was not taken in framing the lease?—I do not think there was.

5686. (*Mr. Glyn.*) From your experience you think that there would be no difficulty in forming such a depreciation fund as to meet all those points?—None at all.

5687. You think that so much practical experience has been gained as to the working of railways in all their branches that there would be no difficulty upon that point?—I think none.

5688. (*Sir R. Hill.*) Have you seen Mr. Bidder's evidence?—No, I have not; but I understand that Mr. Bidder had some lines in this country leased, and that they got through it very well; but the question comes in there, had they entire control of the rates, and of the working, and everything; did they step into the company's place and work the line?

5689. (*Mr. Glyn.*) The leasing company had full power to reduce or to raise the rates, and to make what arrangements they liked for working the traffic?—That is the very thing they object to in Ireland; they say that our rates are too high. I think that the leasing company might have their rates prescribed to them, and that they should be bound to carry those rates out. I would let them reduce them as much as they liked.

5690. But you would fix a maximum in the lease?—Yes.

5691. And that maximum would be a reduction upon the present maximum?—Of course.

5692. (*Chairman.*) Would you allow them to reduce the rates in some instances and not in others on the same description of traffic; for instance, to have a different rate from Dublin to Cork than from Dublin to Belfast?—I think that would be objectionable. I have not thought of that, but what I have thought of was this, that upon the same railway I would not allow them to make different charges.

5693. (*Capt. Galton.*) That is to say, not to charge a lower rate per mile for a long distance than they did for a short distance?—I think not.

5694. You do not think that that is reasonable?—No.

5695. Why not; does it not cost proportionally less to a railway company per mile to carry goods a long distance than it does for a short one?—There is no doubt that it does.

W. Dargan,
Esq.

14th June 1865.

W Dargan,
Esq.

4th June 1865.

5696. (*Sir R. Hill.*) Do you see any objection to terminal charges?—I was going to say that I would regulate the matter by a terminal charge.

5697. Then the total charge would vary per mile, would it not, and it would be less for a long distance than for a short one?—I would make the charge uniform per mile on a line, but I would allow a terminal charge to be made, and that would regulate it.

5698. If the total charge were divided by the distance, it would give a higher rate per mile for a short distance than for a long one?—Yes.

5699. You see no objection to that?—No.

5700. (*Mr. Horsfall.*) Would you allow a railway company to vary the terminal charge?—I think not.

5701. (*Mr. Glyn.*) You would have a fixed terminal charge at a particular place, to be governed either by the rules of the place as to cartage, or the labour, or by particular circumstances at each place?—Yes. I think that the cartage and labour would be separate from the terminals; if you go to delivery, I think that that involves some difficulty.

5702. What do you include in the term "terminals"?—Simply the loading and unloading of goods.

5703. In the railway station?—Yes.

5704. (*Mr. Horsfall.*) Is it not desirable, inasmuch as there is a maximum charge for carriage, to have also a maximum rate for terminals?—Yes, I think so.

5705. (*Chairman.*) If traffic to some particular place could be obtained by charging a very low rate, such as would leave a smaller profit to the company than in ordinary cases, would you make them reject that traffic because they would be carrying it at a lower rate in that particular instance?—No. I do not think I should restrict them as to the lower rate at all.

5706. You would allow them to carry any particular description of traffic at any rate they pleased, however much it might be below their ordinary rate?—Precisely.

5707. (*Sir R. Hill.*) Would you allow them to carry the traffic between the same places at a lower rate for A than for B?—No, certainly not; nor do I think it would be just or fair to carry at a less mileage rate into one district than you carried over the line generally, except so far as the terminal charge was concerned. I do not think it would give a fair chance to the traders. I believe we have two railways upon which there are differential rates. I do not know them exactly, but I have heard it complained of, that these differential rates give an advantage to parties, where the railway company carries cheap, over other parties.

5708. (*Capt. Galton.*) If all the Irish railways were placed in the hands of one company you would desire, I suppose, to have some means of settling the differences between the public and the railway company, by arbitration, or some arrangement of that kind, so that one district should not feel itself aggrieved at the expense of another?—I should leave that power with the Government; or with the Board of Trade it would be better.

5709. So that they should prescribe the rates?—Yes, to prescribe and equalize the rates.

5710. (*Sir R. Hill.*) You would make the Board of Trade a court of appeal?—Yes.

5711. (*Capt. Galton.*) You would prohibit any special rates between certain parties and the railway

company?—I do not know; there are special rates made upon every railway, and I do not think that those could be prohibited.

5712. If special rates are not to be prohibited, how can you do more, in providing for the traffic, than fix a maximum rate subject to any reduction which the company carrying chooses to make?—I would not seek for anything further. I think that that is quite sufficient. I would allow them to make lower rates; but for the same article they should make the same rate to every party.

5713. Without reference to the quantity the party sent?—No; I think that quantity has something to do with it, and I think that seems to work well.

5714. Would you allow a discount for quantity?—Yes.

5715. (*Sir R. Hill.*) But still extending that rule to all?—Yes.

5716. (*Capt. Galton.*) Would you have the rates published?—Yes, I would.

5717. So that anybody could go and ascertain what they were?—Yes.

5718. It is the practice on continental railways?—I do not know, but I think it ought to be so on every railway.

5719. (*Chairman.*) Suppose the Irish system of railways to be in the hands of one company, and they found that upon one part of their system, say, from Dublin towards Cork, they could get traffic of a particular kind at 1d. a mile, but that between Dublin and Galway they could not obtain it if they charged more than $\frac{1}{2}$ d. a mile, would you allow them to charge 1d. a mile on the line going towards Cork, but only $\frac{1}{2}$ d. a mile on the line going towards Galway?—I would leave them free to act, so that they did not exceed the maximum charge.

5720. (*Sir R. Hill.*) And that they treated all alike?—Yes.

5721. (*Mr. Horsfall.*) In carrying out a system of discounts, do you not place the small trader at a great disadvantage as compared with the large trader?—There is no doubt that you do; but at the same time it appears to work so well that it is difficult, although people object to it, to alter it; and we have latterly reduced it to this, that we allow a differential rate upon a full wagon—a single wagon—so that it does not affect the poor man so much as where it was allowed only upon large quantities.

5722. (*Mr. Glyn.*) You carry a quantity as small as one full wagon at a differential rate.—Yes.

5723. (*Mr. Horsfall.*) It has been stated in evidence, by a gentleman connected with the Midland Railway Company, that they adopted a system of differential rates in the first instance; but, finding that it worked very much to the disadvantage of the small traders, they put them upon the same footing as the large traders; and do you not think that that is very desirable?—Ours is very small; we have reduced it to a single wagon; any man can get the advantage of it, or get his neighbour to join with him; and they only employ one wagon. It might be better, perhaps, the other way, than the system we adopt.

5724. (*Chairman.*) Are there any other points connected with the Irish railways upon which you wish to give any further information?—I do not think there are.

The witness withdrew.

Mr. P. Roe.

Mr. PETER ROE called in and examined.

5725. (*Chairman.*) You have been the manager of different railway companies in Ireland?—I have.

5726. Will you mention the railway companies with which you have been connected?—I have been manager of the Midland Great Western from its formation in 1847 up to 1855, when Mr. Forbes took charge of it.

5727. You have also been manager of the Derry and Coleraine Railway Company?—I then became

manager of the Derry and Coleraine Railway Company.

5728. Were you manager of the latter railway under the directors or under the Loan Commissioners?—I commenced the management under the board of directors, who then resided in London, and I very rarely had an opportunity of seeing them.

5729. Did you subsequently continue as general manager when the railway was taken into the hands

Mr. P. Roe.
14th June 1865.

of the Loan Commissioners?—I did, and I then became lessee of it under the Loan Commissioners.

5730. Will you explain under what circumstances the railway fell into the hands of the Loan Commissioners?—When I took the line it was scarcely able to work itself; in fact, the receipts were short of the expenses. I adopted a system of fares which gave us some little increase.

5731. Under the board?—That was while I was working under the board.

5732. You were employed by the board in 1855?—Yes.

5733. How long did you continue to act as manager under the Board?—I think about two years.

5734. Some little improvement was effected during that period?—I increased the receipts about 2,000*l.* a year during that time. I found them under 14,000*l.*, and I think I made them 15,500*l.* during that time.

5735. At that period the railway was taken by the Loan Commissioners?—At that period it was seized by the high sheriff for various debts, and the Loan Commissioners stepped in and interfered, having the first claim upon it, and then a proposition was made to lease the line by the Loan Commissioners.

5736. Did you make a tender to the Loan Commissioners to lease the line from them?—Mr. McCormack, who had a large stake in it, undertook to lease the line, with the undertaking and consent of the Loan Commissioners that I was to take it off his hands; in fact, he made terms of which I took a transfer with the consent of the Loan Commissioners.

5737. How long did you continue to work as lessee?—I continued until May 1861 to work it at a rent of 10,000*l.* a year.

5738. Was it a lease from year to year?—It was an annual lease; it was for a term of seven years, but with a condition in the lease to terminate it at any time if certain things were not carried out.

5739. You gave it up before the termination of the seven years?—I sold my interest with the approbation of the Loan Commissioners and of Mr. McCormack. As soon as the junction was formed with the Coleraine and Northern Counties Company, they seemed anxious to get possession of the line, and I transferred my lease, with the consent of the Loan Commissioners, to the Northern Counties Company, and they gave me a consideration for my interest in the lease.

5740. During the time you were lessee did you reduce the fares which had been previously charged on that line?—Very considerably.

5741. Will you state the fares that you found in operation, and the scale which you adopted?—I found the fares were up to the parliamentary rate, 1*d.*, 1½*d.* and 2*d.* uniformly all through, and I reduced them ultimately to an average of about ½*d.*, ¾*d.* and 1*d.* after I had been working some short time on my own account.

5742. What was the result of that experiment?—The result showed itself very rapidly indeed, in giving me a considerable increase in the receipts.

5743. In the net receipts?—In the net receipts; I found instead of running my carriages half empty that I had actually filled them, and on many occasions had not carriage room. I had a very limited accommodation in the way of plant and stock.

5744. Did you make any similar reductions in the charges for goods?—Yes, I did. I reduced the rate considerably upon coal. I reduced the rate upon coal to about ¾*d.* per ton per mile. I increased the tonnage from 1,500 tons to 5,000 tons in the year by the reduction.

5745. What had been previously the rate per ton per mile?—It was about 1½*d.* per ton per mile; I reduced it nearly one-half.

5746. What is the population of Londonderry?—At present about 30,000.

5747. Is it larger than it was during the period that you are referring to?—It was about 25,000; then it is rapidly increasing.

5748. What is the population of Coleraine?—About 8,000. There is a very good intermediate town called Newtown Limavaddy, which contains a very industrious population. Part of it is on the Marquis of Waterford's property. I obtained a good deal of traffic by encouraging it at this station. I reduced the rates upon the third-class, and upon all classes of goods, and I think I doubled the receipts of that station by the reduction.

5749. Was there an increase equally in all descriptions of passenger traffic, first, second, and third class?—There was a remarkable increase in the third-class by the reduction. I have always been in favour of cheap fares. While I was the manager of the Midland I introduced the experiment of carrying the harvest men at a very low figure. It was put off for two years by the directors, who did not approve of such a low fare as I proposed. However, they consented to allow me to try it. I think in the year 1849 (it was a very miserable year in the west of Ireland). The first year I succeeded in getting 4,000 of them to travel; the next year I got 10,000 to travel, and when I left the Midland I think the number had increased to 25,000; and now I see by the chairman's statement they carry 78,000, which is an evidence that the people of that district will travel if you give them an accommodation which comes within their means, they are very poor.

5750. That will only be at one particular period of the year?—Up and down. I carried them during the time I was manager whenever they offered themselves during the year.

5751. You described them as harvest men?—We then called them harvest men; they are now fourth-class passengers. Fourth-class passengers is the proper term to give them.

5752. (Capt. Galton.) Did you carry them by any train?—Any train that they offered to go by.

5753. Did you find any difficulty in their being more or less amenable to discipline?—When I had a sufficient number, say, four or five hundred of them, I gave them a special train. I found it paid to run them specially, without encumbering the regular trains with them. I found them a very easy traffic to manage; they loaded themselves very rapidly, and as rapidly discharged themselves when they got to their journey's end. They were well conducted, and I never found any difficulty in dealing with them.

5754. (Mr. Glyn.) Did you ever try a reduction of the rates on the Midland while you were there?—In some cases the directors were induced to lower their rates a little, and I always found it to be beneficial to the traffic.

5755. Did you ever try a market train on certain market days for the third-class?—I never did on the Midland.

5756. But you have tried them on your own system in the north?—When I became my own master, having a lease of that line, and no one to exercise any control over me, I tried those experiments, and I am giving now the result of them, that I really got a very considerable increase by adopting them.

5757. (Mr. Horsfall.) Have the directors continued the low fares that you tried the experiment with?—I think not. I travelled over the Coleraine line last week, and I regret to say that they have gone back to the old fares, the trains appearing half empty. This led me to ask a gentleman, whom I knew very well, what was the cause of it, and how he could account for it, and he replied he could not tell what was the cause of it, but his opinion was that it was owing to their having raised the fares at every station.

5758. Have they raised them upon all classes?—Every class, I believe.

5759. And upon goods?—Except upon coal. I do not think they have raised the rate upon coal, but I believe upon local goods they have raised the rates, but through goods they carry at much less rates. They carry goods from Londonderry across to Fleetwood by Belfast at about half the rate in proportion to the

Mr. P. Roe.

14th June 1865.

distance, at which they carry goods from Londonderry to Coleraine.

5760. (*Sir R. Hill.*) Do you know how long it is since they raised the rates again?—I believe within the past year. The lease of that line expired on the 10th of April last, and the company then came under a new working arrangement with the old board of directors, and they are now working the traffic at so much per mile instead of at so much per year.

5761. (*Mr. Gower.*) How do you account for their raising the rates again, they having been so successful when they have been lowered before?—I cannot account for it beyond this, that it is not now their interest one way or the other. They get so much for hauling the trains, and they get that whether the trains are full or empty.

5762. (*Chairman.*) What company works the line now?—The Belfast and Northern Counties. It was originally called the Ballymena and Belfast line.

5763. That was the company to which you disposed of your interest in the line?—Yes.

5764. (*Mr. Gower.*) Am I correct in supposing you to say that they raised all the local rates, but that with regard to through rates to Fleetwood they carried lower even than when you were there?—That is quite correct, the local rates are much higher now than the through rates in proportion to distance.

5765. (*Chairman.*) Have they assimilated the rates which are charged between Londonderry and Coleraine to the charges on their own line between Belfast and Coleraine?—They have, I understand.

5766. (*Mr. Gower.*) Is there much competition from Londonderry and Belfast between the two lines?—There is a new line, which is the green line on the map, called the Dungannon and Omagh, which gives another route to Belfast; that has taken a portion of the through traffic away between Liverpool, Belfast, Glasgow, and Londonderry. There are two ways of getting to Belfast now from Londonderry. That green line has only been opened two years.

5767. When you reduced the rates on your line, was a similar reduction made on the line from Coleraine to Belfast?—I believe not. I got a very liberal through arrangement over the line in booking through to Belfast. I had no control whatever in asking them to reduce their local rates. They met me very liberally by a through arrangement which contributed a good deal to the increase of the traffic.

5768. (*Sir R. Hill.*) Up to the time that you became lessee of the line, I think you stated that the gross income was about 15,500*l.* a year?—About that.

5769. How long did you continue lessee after making the large reductions in the rates that you have spoken of?—I continued lessee up to May 1861; I left the receipts then about 18,300*l.* a year.

5770. Then the consequence of the large reduction which you made in the charges was an increase of traffic to the extent of nearly 3,000*l.*, was it not?—Yes; that was by encouraging the local traffic as well as the through traffic. I worked the receipts during my lease from 15,000*l.* a year to upwards of 18,000*l.*

5771. And you paid the Government 10,000*l.* a year?—10,000*l.* a year. Yes.

5772. Had you any other expenses?—I had all the maintenance of the line, such as taxes, repairs of the permanent way, wages, keeping the rolling stock in order, station masters, and everything.

5773. I should like to know, if you have no objection to state it, whether it left you a profit?—I have no objection at all to state it. The last year that I worked it I had a profit of 1,000*l.* after rent and everything was paid.

5774. Then the result of the last year was to afford an actual profit, that is to say that the gross receipts exceeded the working expenses by about 11,000*l.* a year?—Exactly so.

5775. Whereas, before you reduced the rates, the gross receipts did not cover the working expenses, I understood you to say?—When I took the line up in

1855 I found a most extravagant staff upon the line which was one cause of the heavy expenditure. I found a number of people who did not know very well their duty; I dismissed many of them, keeping only such as were suitable for the working of the traffic, and I effected a saving thereby of more than 1,000*l.* a year, and I increased the receipts by very nearly 2,000*l.*

5776. You were not a lessee in the first instance?—I was not.

5777. I understood you to say when you first became connected with the line that the gross receipts were not quite equal to the working expenses?—Scarcely.

5778. Of course under the head of working expenses you would not include any payment to the Government or to other parties for the loans made to the line?—I think I may be in error here, because when I say not being able to pay working expenses, the Government interest had to be first paid, and after deducting this, Mr. McCormack, who had a large interest in it, had occasionally to put his hand into his pocket to help pay the working expenses.

5779. Of course the gross receipts were not equal to the working expenses plus the Government interest?—Exactly.

5780. What was the amount of the Government interest?—Four and a half per cent. on 80,000*l.*

5781. Something less than 4,000*l.*?—Yes.

5782. What claim had the Government to the rental of 10,000*l.* a year?—The surplus, after the Government debt, was distributed amongst the bond holders. The bond holders came in after them; it was paid to them, they having a prior claim, and the balance was handed to the company to distribute as they pleased.

5783. Was there sufficient after the Government had paid themselves out of the revenue to pay all the bond holders?—I believe there was, for the bonds rose rapidly; from being a drug in the market at five shillings in the pound they rose to par.

5784. Was there sufficient to pay any dividend to the original shareholders?—Not to the original shareholders; the line was so extravagantly made that the original shareholders never expect anything. They are hopelessly gone.

5785. Have you any printed reports connected with this particular line which give these statistics and the gross receipts from year to year?—I can supply them.

5786. Beginning at the period when you first became connected with the line?—I will supply them; the books are all now in the hands of the Northern Counties Company, and for their satisfaction when I transferred my lease I said they might have the use of them.

5787. You can extract the statistics in question?—Yes.

5788. At the time you were lessee, did you print reports showing the traffic from year to year?—I did not publish the traffic. It then became a private affair.

5789. But you have the records?—I have books regularly kept.

5790. Will you favour the Commission with a statement from year to year of the gross receipts, and of the total expenditure, and so forth?—Certainly. I was bound regularly to supply the Board of Trade with a return every year, showing the number of goods, passengers, coal, and so forth, carried over the line and the rates charged upon each, that I can get a copy of. (*See statement at end of evidence.*)

5791. What securities were taken when the lease was granted to you by Government, were there any securities taken against the deterioration of the rolling stock and of the road?—Mr. McCormack, who had a large stake in it, stood in the position of security for me with the Government. I think the line owed him 80,000*l.*, and he having such a stake stood in the position of a security, and he bound me to maintain the line, which I did under his own special inspection,

and in the event of my failing to do so I was liable to have my lease cancelled by getting a week's notice.

5792. Were those conditions recited in the lease?—They were recited in the lease. I was bound to pay the rent every Monday. I paid my proportion every Monday to his credit in the bank, and failing to do that I was liable to have my lease cancelled the following week.

5793. You were bound yourself to keep up the road and the rolling stock?—I was.

5794. Who was the judge as to whether you performed your contract?—Mr. Peter Barlow, the engineer; his duty was to come at any time he chose and as often as he liked to inspect the plant, bridges, and rolling stock, and report on them.

5795. I presume he occasionally came to make an inspection?—He came, and closely inspected the whole property.

5796. In point of fact when the line was given up was it in a state which was satisfactory to the owners?—It was very satisfactory, so much so that the rolling stock when valued from me amounted to a higher sum than when it was valued to me.

5797. But perhaps you had increased it?—I had put some new stock on, but I do not include that in the value, because I got paid for that separately, but I kept the old stock in that condition that its value was not rendered less. I kept them painted, put in new trimmings, new wheels, and so on.

5798. Then speaking from the experience you have had in the matter do you see any practical difficulty in granting leases of the other lines in Ireland?—The only difficulty I apprehend is that directors are not very much disposed to lease lines.

5799. But supposing they should be disposed?—I believe it would be of great advantage to the shareholders.

5800. Do you think they would be worked with greater efficiency by one or more individuals than by the companies?—Two or three practical men would be able to give a result upon any of the Irish lines exceedingly far beyond what they are now doing. I can say that from my own experience.

5801. Are you aware that at the present time many of the Irish lines are not paying their expenses?—I am quite aware of that.

5802. Suppose the lines were amalgamated, to use an ordinary term, and placed under one general management, and then leased to a few intelligent and energetic men, do you think that they might be worked so as to be remunerative to the shareholders to some extent?—I believe that the result would agreeably astonish the shareholders. The expenses could be reduced enormously; I am sure their receipts could be very much increased. I know one instance of a northern line, where I proposed myself, and two others, to take the line on lease, and give the preference shareholders $2\frac{1}{2}$ per cent., to be increased to 4 per cent.; but as it is worked now, I do not think they will ever get a single farthing per cent.

5803. That offer was not accepted?—The offer was not accepted. A section of the board were favourable, but a majority were against it, and it fell to the ground.

5804. If you were one of several lessees of all the lines, would you recommend, as regards all the lines, a reduction similar to those which you made between Londonderry and Coleraine?—Certainly. I think the position of Ireland compared with England is totally different. The population are not so wealthy. The labouring classes do not get such high wages as in England. There is not so much manufacture in the country; and I think, in order to meet the requirements of the people, a reduction of fares should be made, and I think that would give decidedly an increase of traffic. I know some instances where trade has been prevented by the high rates.

5805. When you reduced the fares between Londonderry and Coleraine, did you make a sudden reduction to the full extent, or did you proceed gradually?—I tried it gradually. I tried it upon one or

two sections, and I found the result so satisfactory, that I decided on making it general.

5806. Was the preparatory trial long. Did it occupy much time?—About half a year, or a little more.

5807. Then in about half a year the whole reduction was effected, was it?—The whole reduction.

5808. What was the immediate effect upon the revenue?—I think that year it showed an increase on the gross traffic of 1,500*l*.

5809. Then the immediate effect was an increase in the total receipts?—Without any increased expenditure. I did not run an extra mile.

5810. Then, of course, there would be an increase in the profits?—Certainly.

5811. Then probably you would not apprehend that a similar reduction applied to the whole system of the Irish lines would lead to a temporary loss?—I do not think it would. My own opinion is that it would not.

5812. Have you any apprehension at all as to its leading to a permanent loss?—I am quite sure it would not lead to a permanent loss.

5813. (*Chairman.*) Londonderry and Coleraine are very thriving towns, I believe?—They are, particularly Londonderry, which is rapidly increasing in point of population.

5814. Are there manufactories in both towns?—There are.

5815. Londonderry has become an important seaport, has it not?—It has. They have built a new line of quays, which are perhaps the finest in any port in Ireland, and the town itself is increasing amazingly fast.

5816. Do you think that results derived from experience of such a line as that between Londonderry and Coleraine would be applicable to the general condition of Ireland?—I think it would. A liberal mode of communication at a cheap rate for goods and passengers between any two towns in any part of Ireland would be a great benefit.

5817. I suppose that the working population in Londonderry and Coleraine are much better off than the population of the greater part of Ireland?—I dare say they are a little better off; but they get pretty much the same wages.

5818. Are not wages considerably higher in that district than the midland and southern counties?—Not for the agricultural labourers. I think they are not at all higher.

5819. Do you find a considerable number of agricultural labourers travel between Londonderry and Coleraine?—Yes, a great number. The rates were so low that men going any distance to work would use the railway. The rates were 1*d*. or 2*d*. from station to station. They would get a third-class return ticket from one station to another. I recollect giving a return ticket for 1½*d*. per day from one particular station to another, and the labourers did use the railway very much.

5820. (*Capt. Galton.*) For how long?—For about 2½ miles. They used the railway to go to their work and return. It was no additional expense. The trains were running, and they might as well have passengers in them as run half empty.

5821. (*Chairman.*) Do you think that the labouring population on the Midland Railway would travel in the same way from place to place?—I believe they would if the rates were moderate; but they cannot afford to pay high fares with small wages.

5822. (*Capt. Galton.*) Did you carry third-class passengers by every train?—By every train except one.

5823. If low rates were given to the third-class passengers it would be part of the system to give them frequent trains?—Certainly; three trains a day; one train in the morning, one at noonday, and one in the afternoon, but especially morning and afternoon, each way.

5824. (*Sir R. Hill.*) That is, about the time when work begins, and about the time it ends?—Exactly; and then there should be a midday train for people

Mr. P. Roe.

14th June 1862

Mr. P. Roe.

th June 1865.

who wish to travel, either going on pleasure or to their places of business.

5825. I gather from what you say, that you had four passenger trains in each direction every day?—I had.

5826. Were they generally pretty well filled?—They were indeed. I managed to fill them very well.

5827. (*Mr. Glyn.*) Supposing this leasing system to be carried out, how would you divide Ireland; into what districts would you divide it; into three or four districts, or one large district?—I think it might be very properly divided into three districts. Take the northern district, there are many systems and different properties there, commencing at Dublin. Take the north as one district; the Midland Great Western for the west and north-west, and the Great Southern and Western with the other small branches for the south.

5828. Would you prefer having it in three districts, or having it managed by one large company?—I think I should prefer having it in three. It would be a very large and extensive job for even three boards to manage it, or three parties to undertake it. By dividing it into three districts you can give your special attention to one quarter. The requirements of the north are sometimes very different to those of the south.

5829. As the lines are at present laid out, can there be any difficulty in booking through from north to south, or from south to north?—Yes. If you are going from the west of Ireland to the north you are stopped at Cavan, and have to re-book there, and wait three or four hours. They have altered the trains on the northern route recently so that they will not now work in with the trains on the western route.

5830. Would not a communication between all the railways in Dublin be a very great advantage?—I think it would be very desirable to have a central station.

5831. There is an Act for that, is there not?—There is.

5832. But there is no money to carry it out?—I am not aware of that. The shares are selling at a large premium in the market.

5833. (*Mr. Horsfall.*) Do you think there will be any difficulty in getting people to lease these lines on terms that would be remunerative to them and beneficial to the shareholders?—I think not. I consider the only difficulty would be in the board-room of each company. Certainly, the shareholders would be pleased with the change, I think.

5834. Do you think it would be met by opposition on the part of the directors of some of these lines, or many of them?—I think some of the directors would be desirous of leasing the lines. Of course it would require proper security that their immense property should be taken care of, and kept in a proper condition.

5835. (*Chairman.*) You are not able to state the reasons which have influenced the Londonderry and Coleraine Company in reversing a policy which, according to your statement, would appear to be very advantageous?—I cannot account for it except their working it under a new management.

5836. (*Mr. Glyn.*) Do you happen to know what the diminution of the receipts has been the last year?—The manager told me some time ago that the falling off has been more than 2,000*l.* a year upon 10,000*l.*

5837. (*Sir R. Hill.*) Perhaps you can favour the Commission with a general statement as to that?—I will. Mr. Dargan, one of the directors of the line, told me that he believes the receipts are reduced more than 2,000*l.* a year.

5838. The Government does not now possess the line, I presume?—No, they do not. The Loan Commissioners have been paid their debt. It is now entirely the property of the bondholders, amounting to about 200,000.

5839. (*Mr. Horsfall.*) Are you aware whether any other companies have tried the principle of lowering the rates materially?—It has never been tried in Ireland to my knowledge. I know nobody who has attempted it but myself.

5840. (*Capt. Galton.*) We have been told that on the Waterford and Kilkenny line they have tried the cheap trains, and they have not been successful. If you reduce the fares in the north of Ireland, your experience seems to show that the loss is very soon recouped. In the agricultural districts, that is, in the south, if it is not so easily recouped, would it not be one means of meeting the loss in the south to amalgamate the whole of the railways into one, so that it might be the interest perhaps of the working company to carry on the traffic at lower fares, because although in one part of the country they would get very little profit, they would get a very high profit in the more densely populated part?—But then in amalgamating the whole you attach the more prosperous end of Ireland to the poorest end, and if you are to take an equal division at all you would be depriving the northern people in the province of Ulster of a certain portion of the dividend which they should get, and you would be distributing it among the poor lines in the south of Ireland.

5841. Are you of opinion that amalgamation would be the means of improving the present value of the property as far as the shareholders are concerned?—Yes.

5842. You could not amalgamate two lines if one line was paying 1 per cent. and another line 5 per cent., for the shares could not be taken at an equal value for the purpose of amalgamation; it is only with reference to the purpose of eventually working the traffic?—Both for the purpose of working the traffic and the general benefit of the community. Working the entire system under one management would be a very great advantage indeed. There would be uniform rates, and there would be continuous communication kept up, giving an advantage to the whole country.

5843. (*Sir R. Hill.*) If the whole system belonged to one party would you lease the whole or divide the system into portions and lease them separately?—If the whole system was divided into three districts, with a proper understanding for uniform rates and through communications, the lines to be kept up and worked under one management, it would answer all the purposes as well, and would in my opinion be better worked, because if you take the whole it becomes a vast undertaking.

5844. Did you continue to work the line until your lease ran out?—No, I sold my interest in it. My lease would not have expired until the 10th of April last.

5845. We have been told that the Midland line was once leased, and that the receipts were very unsatisfactory. Can you throw any light upon the cause of that?—I am quite aware of that. I was manager of the line at the time. They leased the locomotive department to a contractor for the haulage of the trains, and I think a more unsatisfactory lease no board ever made.

5846. (*Mr. Glyn.*) It was not a lease of the line?—No, not at all; it was merely a lease for providing the haulage power, which was a most unfortunate contract for the company.

5847. (*Sir R. Hill.*) There was no similar lease to that which was granted to you in respect of the Londonderry and Coleraine line?—Not at all.

5848. (*Mr. Glyn.*) The lease was merely with regard to locomotive power?—Yes; it was in the interest of the lessee to run as many miles as he could without any regard to the quantity of traffic, as the more miles he ran the more money he would receive.

5849. (*Chairman.*) Does the greater part of the traffic from the north and south of Ireland pass through Dublin?—At present I should say that seven-eighths of the whole passes through Dublin.

5850. Is there any important intercourse between the north and the south such as that if there were conveniences for carrying it, it would pass direct without going through Dublin?—Yes; I think there is, and that communication is getting more and more necessary every day, for we are now getting all through the south and west a large flax crop raised, and for some years at all events, it will have to find its way to the north, and just now, according to the present arrangement of the trains, it is very difficult to get it to the north. It deters the growers from encouraging this particular crop.

5851. Is flax the principal article of traffic between the north and south of Ireland?—There is a good deal of passenger traffic as well.

5852. Are any of the manufactures of the north of Ireland distributed all through the south?—I think there are. I know Mr. Malcolmson has recently built a large factory in the north, at Belfast; he has also factories in the south.

5853. You have been engaged in mercantile pursuits since you ceased to lease the Londonderry and Coleraine line?—I have.

5854. You have had occasion to make arrangements with the railway companies in the pursuit of your business as a merchant?—I have; by becoming a merchant, I have got to the other side of the question. I have got to know the value of the various goods which are carried over the line. I certainly have found very great cause for complaint as a merchant, of the rates, especially to the west and north-west.

5855. Will you state where your business as a merchant is carried on?—Stafford Street, Dublin. I am partner in a large wholesale oil and drug establishment. We send goods to all parts of Ireland, but our chief markets are the west, the north-west, and greater portion of the south.

5856. Have you had reason to complain of the conduct of the railway companies?—Very frequently.

5857. In what respects?—The high and excessive charges in some instances being quite a prohibition to the sale of our goods.

5858. Did you show the railway companies that in your opinion the traffic could have been carried at lower rates so as to remunerate them?—I have frequently shown that to the managers of the different lines, particularly Mr. Forbes, my successor. I even revised a book of rates for him to get his board to adopt, for I found in some cases that the charge to Galway was 50 per cent. on the first cost value of the article.

5859. Was that an article not of much cost originally?—Take, for instance, washing soda, of which a great quantity is used in the west, rough sulphur, copperas, or any of those articles, the charge for carriage was about 50 per cent on their value.

5860. (*Sir R. Hill.*) What was the rate per mile?—I think about $2\frac{1}{2}d.$ per ton per mile, or something like that.

5861. (*Chairman.*) Did the railway companies inform you that they could not afford to carry it at a less rate?—They could not deviate from the rate. I have one case especially that is a fair sample of the rates and the way they treat merchants about those rates. Within the past two months we sent a small quantity of American oil, a few casks, to a customer in Sligo; it went down without our making any specific inquiry as to the rates. When it reached Sligo our customer complained that the charge was at the rate of $4\frac{1}{2}d.$ per gallon upon an article the intrinsic cost of which refined was $2s. 2d.$; the charge was actually $4\frac{1}{2}d.$ per gallon to Sligo. I wrote to the manager and told him I felt certain it was an error. He wrote me back saying that it was in accordance with the company's rates. I followed it up by going to a director whom I knew. He said they heard it was explosive, and they could not carry it unless they got an extraordinarily high rate. Since that it has been sent by steamer to Liverpool, and from Liverpool to Sligo, and

we find that we can get it carried at $1d.$ per gallon the whole way by this route as against $4\frac{1}{2}d.$ by railway.

5862. It has to undergo transhipment at Liverpool from one vessel to another?—Yes; when we are sending heavy goods to the west coast of Ireland we have often waited for a coal vessel to take in 8 or 10 tons of goods for Galway, and we save immensely by doing so.

5863. (*Mr. Glyn.*) Is there a great deal of internal traffic affected in the same way by these high rates?—A great deal. I am speaking now exactly of what everybody in our trade would say if you had them before you, that the rates are really in some cases quite a prohibition to trade. There is also a grievance which we have to complain of, that goods from Manchester and Wigan, and other places in that district are booked through to Limerick, Ballinasloe, Kilkenny and all other towns at the same rate as to Dublin.

5864. In point of fact the through rate is a very much better rate than the local rate?—It places the Dublin merchant at a great disadvantage.

5865. As regards the local rates on these articles in Dublin, have you ever represented the facts to the directors?—Repeatedly.

5866. You alluded to one case, and that was the case of oil; but they stated it was an inflammable article, and therefore they made you pay a higher rate for it; but have you ever made a representation with reference to other articles to which that did not apply?—In answer to my repeated applications, calling their attention to the excessive rates, I invariably got the answer that it was in accordance with the company's regulations and fixed rates.

5867. I suppose you then told them that in point of fact the rate is of no use, because they will get no traffic?—I have gone myself, personally, and pointed out to them that they were not getting half of the traffic.

5868. (*Sir R. Hill.*) Some of the gentlemen from Ireland have expressed an opinion to the effect that there is a limited quantity of traffic, and that the railway companies got the whole or nearly the whole of it, and that consequently any reduction in the rates of charge would be so much loss; your experience does confirm that view?—Certainly not. From Dublin to Mullingar only last week we sent from our works by road about 30 cwt.

5869. What description of goods?—Sundry goods; oils and goods of that kind.

5870. Then it is frequently cheaper to use the ordinary road than the railway?—Frequently. A great many cars are still earning a livelihood upon the road, carrying the goods which ought to go upon the railway.

5871. You stated that you transferred the lease of the Londonderry and Coleraine line before the term had expired. Can you say whether your successor carried it on upon your plan?—To some extent he did; not entirely. But he gradually dropped back.

5872. That is, he raised the charges?—He has recently raised them to the full extent I have been informed.

5873. And that with reduction in the total receipts?—A considerable reduction.

5874. (*Chairman.*) You carried some coals between Londonderry and Coleraine?—I increased the tonnage in coals about 4,000 tons.

5875. Do you think that the consumption of coals in Ireland could be considerably increased by the reduction of charges on the railways?—I am quite of opinion that it could. I think it will be found that if coals can be brought into Dublin at $11s.$ or $12s.$ per ton, and sent into the interior of the country at a moderate rate of $\frac{1}{2}d.$ a ton per mile, every comfortable farmer will discover it to be cheaper considerably to burn coals than to save turf and draw it home from any distance. I found it so in the north, many people who formerly used turf, particularly some who lived

Mr. P. Roc.

14th June 1865.

Mr. P. Roe.
14th June 1865.

on the Marquis of Waterford's property, were induced to try coal, and they have told me that they have continued since to use it, finding it cheapest.

5876. Did you carry coal at your own risk and form depôts at the railway stations?—I imported coal.

5877. You were a coal dealer?—I imported the coal and gave a commission to the station master to dispose of it. I charged the regular reduced rate over the line, and gave the line credit for it in the receipts.

5878. (*Mr. Horsfall.*) I suppose a considerable reduction in the price of coal would have the effect of encouraging manufactures in Ireland?—No doubt of it; coal is most essential to any manufacture.

5879. (*Sir R. Hill.*) You have stated that in consequence of the reduced charges and the other facilities that you afforded, the number of passengers largely increased between Londonderry and Coleraine, and especially third-class passengers?—Yes.

5880. Can you say whether the increase consisted chiefly of artisans or of agricultural labourers?—My opinion is that there was a proportional increase in all classes, and people who used the train in the second class I have very frequently found in the first class when the rates were reduced.

5881. I am speaking more especially of the third class passengers, the increase was not confined by any means to artisans?—Oh dear, no.

5882. But it extended to agricultural labourers?—Agricultural labourers travelled at a reduced rate.

5883. To go to their work and back again?—To go to their work from station to station. I have carried 25 or 30 labourers, and sometimes as many as 50 in lots from the various stations at these low fares. They take the ordinary morning train, and return in the afternoon. It cost me nothing additional to carry them, and those people would have walked if they had been charged a high rate.

5884. (*Chairman.*) You mentioned one instance in which a large quantity of goods has been recently sent from Dublin to Mullingar by the road?—Yes.

5885. That is not a solitary instance?—Not at all.

5886. Have you reason to believe that it is the general practice to send goods by the road instead of by railway?—It is a general practice; there are one or two shopkeepers in Mullingar who have never, I believe, used the railway, but cart the goods by the road still.

5887. Do you think those facts are known to the board of directors?—They must be, because they must see the waggons go along the road.

5888. (*Mr. Glyn.*) Did you ever calculate what rate would induce that traffic to change from the road to the rail?—I tried it. At Londonderry I had to contend with a very difficult question of this kind. The line from Londonderry to Newtownlimavady is 18 miles, and by road it is 11 miles. Nearly all the goods went by carriers. I immediately cut the rate down to a price which made the carriers cease to exist in about half a year. I found it paid me well to do so. I reduced the rate on most of the goods from 4s. a ton to 2s. 6d. a ton. I found the carriers gradually died off every month, until at last they all disappeared.

5889. Though you had to contend with the disadvantage of 18 miles against 11?—Yes; the line runs through slob land and twists about for a distance of 18 miles, against 11 miles by the road.

5890. From your experience as a man acquainted with railways, are you of opinion that if the same principle were applied to the railways generally in Ireland that it would be equally successful?—I have no doubt of it.

5891. Of course it would vary according to the particular wants of the district?—If the principle

were carried out it would have the same results upon any line.

5892. (*Chairman.*) Are there regular carriers between Dublin and other towns, such as Carlow and Tullamore, as between Dublin and Mullingar?—We have not regular carriers to every town, but we have a cheap mode of communication by canal to Carlow. In the west of Ireland the Midland Company have ceased to work the canal, and having the monopoly of the traffic they have practically shut up the traffic of the canal. They say that the people must go over their line; they have no other alternative.

5893. (*Mr. Glyn.*) They allow boats upon the canal?—They allow boats, but the traders do not seem to work them with energy. They charge a high toll I believe to the traders.

5894. (*Chairman.*) Is there not an arrangement between the railway company and the canal company as to the traffic towards Carlow and that district?—There is an understanding as to the rates. The canal company now do their work so well and so punctually, and in so very short a time, that a large portion of the goods go over the canal to those towns, and hence the prosperity of the canal. It gives very much better accommodation now than some years ago.

5895. (*Capt. Galton.*) The canal had a differential rate given to it by the railway company, had it not?—Yes.

5896. Was it not 15 per cent.?—I believe so.

5897. So that the carriage is cheaper by the canal than by the railway?—And they have this advantage, that they are doing the work very much better and quicker. The goods go very nearly as fast to Tullamore and Carlow by canal as they would by railway; the difference is so trifling that the parties do not care about it.

5898. (*Sir R. Hill.*) Are the boats drawn by horses or propelled by steam?—Propelled by steam. They have an arrangement the moment the goods arrive of advising the parties of the arrival of their goods or despatching them with their own carts to the various shopkeepers.

5899. (*Capt. Galton.*) Do you know Carlow itself as a town?—Yes, I do.

5900. Do you believe that low rates to and from Carlow would produce a quantity of traffic?—I believe they would. I think a great deal of the agricultural produce of that rich district would come up to Dublin that does not now come, if there was a lower rate. There is often a considerable difference in the price of butter and potatoes at Carlow and Dublin.

5901. Is there such a difference as would make it worth while to send them up by railway if the rate was low?—Certainly, if the rates were at all moderate; but now, if you get them upon the railway, you find the difference is nearly absorbed in the carriage, and therefore the goods do not come; the farmers will not send them.

5902. From your experience of Carlow, if you had the working of that line, would you feel disposed to carry at low passenger rates as well as at low goods rates?—Certainly. I am quite in favour of that in any district in Ireland.

5903. (*Mr. Horsfall.*) And I suppose in England too?—They have such a monstrous traffic in England that there is not the same necessity. I believe generally rates in England are lower than they are in Ireland, for passengers especially; but we have a very poor population in Ireland, thinly scattered over the country. They require to have every accommodation at the lowest possible figure to encourage them to send their produce and to travel themselves.

5904. (*Chairman.*) Is there any other information which you can furnish the Committee with in connexion with railways?—I am not aware that there is anything else at present.

The witness subsequently sent in the following statement :

LONDONDERRY AND COLERAINE RAILWAY CO.

Number of Passengers, Rate per Mile at which each Class was carried, with total Receipts of Londonderry and Coleraine Railway for following years as under :—

Year.	Passengers.			Rate per Mile for each Class.			Total Number for all Classes.	Total Receipts for Goods and Passengers.	Remarks.
	First Class.	Second Class.	Third Class.	First Class.	Second Class.	Third Class.			
1855	11,880	21,041	70,713	$d. \frac{5}{18}$	$d. \frac{1}{2}$	$d. 1$	103,634	£ 13,865	Return Tickets were counted as one Passenger for 1859 and 1860, but as two Passengers for 1855 and 1857.

1859	12,986	30,288	70,466	$1\frac{3}{4}$	$1\frac{1}{4}$	$\frac{3}{4}$	113,740	16,896	
1860	13,250	32,380	74,640	$1\frac{1}{2}$	1	$\frac{1}{2}$ & fraction.	120,270	18,250	

Working Expenses in the year 1855 about 85 per cent.

Do. do. 1860 „ 34½ „

Goods increased in proportion with a similar reduction of rates.

Adjourned till Friday next at 12 o'clock.

Friday, 16th June 1865.

PRESENT :

THE RIGHT HON. THE EARL OF DONOUGHMORE.
THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
SIR ROWLAND HILL, K.C.B., F.R.S.
T. B. HORSFALL, Esq., M.P.
GEO. CARR GLYN, Esq., M.P.

CAPT. DOUGLAS GALTON, R.E., F.R.S.
E. T. HAMILTON, Esq.
J. R. M'CLEAN, Esq., Pres. Inst. C.E.
WILLIAM POLE, Esq., F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

JAMES GRIERSON, Esq., examined.

J. Grierson,
Esq.

16th June 1865.

5905. (*Chairman*.) You are the general manager of the Great Western Railway?—I am.

5906. Have you been general manager of the Great Western Railway for several years?—I have been general manager for two years, since the amalgamation of the South Wales Railway and the West Midland Railway; before that time I was goods manager of the line.

5907. Has the Great Western Company made any arrangements with any of the Irish railway companies with regard to through traffic or through booking?—Yes, they have made arrangements with the Waterford and Limerick Company, and with the Waterford and Kilkenny Company.

5908. Will you be so good as to state to the Commission the nature of the arrangement that has been made?—It is simply a through booking arrangement with the Waterford and Limerick; Company with regard to passengers, they getting their local fares, and as regards goods taking a mileage proportion with the clearing house terminals. It is the same with the Waterford and Kilkenny Company. We have also a right to book through with the Great Southern and Western Company under an agreement which was sanctioned by Parliament about two years ago, when we got our amalgamation, and also under a clause which was afterwards introduced into the bill in the Committee in the House of Lords, by which it was arranged that whatever through booking was given to the London and North-western Company should also be given to the Great Western Company; that applies *via* Holyhead; it is not put in full force, and at the present time it only applies to the Great Southern and Western; as that is the only company which at present books through with the London and North-western Company.

5909. (*Capt. Galton*.) How would you get on to the Great Southern and Western line? by way of Holyhead?—Over the London and North-western Railway. Our amalgamation agreement gives us the fullest facilities over the London and North-western line, the passengers leaving our line either at Wolverhampton, at Crewe, or at Chester, the Great Western Company having junctions at those three places, and

the London and North-western Company being compelled to take our traffic, as if it were their own traffic, on to Dublin.

5910. (*Mr. Glyn*.) Have you advertised that route?—Generally, as far as Dublin is concerned, that arrangement is in full force.

5911. (*Chairman*.) Is there any important traffic passing over your system, derived from the Irish railways, with which you have through booking arrangements?—A most important traffic from Waterford and Limerick.

5912. Is that traffic carried on between Waterford and Bristol?—There is traffic between Waterford and Bristol; but we have no through booking arrangements *via* Bristol to Waterford; we have from London *via* Bristol to Cork.

5913. Where does the Waterford traffic come to?—It comes to Milford Haven.

5914. Have the arrangements which now exist between you and the Waterford and Limerick Company been satisfactory to the Great Western Company, or do they wish to carry them further because they think the traffic could be further augmented?—So far as the Waterford and Limerick Company are concerned, the arrangements have been satisfactory; but as to the other parts of Ireland in the south they do not go far enough. If through booking is to be carried on *via* Dublin, we think that it ought also to be carried on *via* Waterford, and to all parts of the south of Ireland.

5915. That is to say, you think that from the Great Southern and Western line they should book through to Waterford?—Yes; or to any place to which it would form a reasonable route. The directors of the Waterford and Limerick Company, I believe, have been very anxious for it to be done.

5916. (*Mr. Hamilton*.) Do the directors of the Great Southern and Western Company refuse to give you through booking arrangements?—I have not personally asked for through booking arrangements until a few weeks ago, and then they refused them; but I have understood from other parties in the south of Ireland that they have been always anxious to

J. Grierson,
Esq.

16th June 1865.

obtain through booking; however, I cannot speak of that from my own knowledge.

5917. Who do you mean by the word "they"?—The Waterford and Kilkenny Company. I have understood from parties that they have been always anxious it should be done; but, as I have before said, I do not know this of my own knowledge.

5918. (*Mr. Glyn.*) Do the Irish railway companies with which you are connected charge, as part of the through booking rate, a local rate?—Not in the case of the Waterford and Limerick Company; they have booked through with the Great Western Company on fair and liberal terms, and I am bound to say that for an Irish company, having a limited amount of traffic, I should consider it a reasonable thing in some cases for them to expect something more than a mileage proportion, because their traffic is not so extensive as it is on English railways, with respect to which the rule is to divide by mileage, with clearing house terminals.

5919. (*Chairman.*) Are they satisfied with their mileage proportion?—Within the last few months they have been negotiating with the Great Western Company in order to obtain some better arrangement. They have deposited a bill in Parliament this session with the view of bringing about a closer connexion between the Great Western Company and their line, and it was in consequence of that bill coming on that they came to the Great Western directors to know what course they would adopt as to it; they were very desirous that we should give them some rebate, or else that we should undertake to work their line.

5920. (*Capt. Galton.*) Was a working arrangement provided for in the bill which they were promoting;—Yes; it was for a lease to or working arrangement by the Great Western Company.

5921. Was the Great Western Company anxious to take it?—The directors of the Great Western Company have decided not to take any steps in the matter at present. I should mention that the directors of the Great Western Company did not take the initiative in depositing that bill; it was done alone by the Irish Railway Company, and without consulting the Great Western Company.

5922. (*Chairman.*) Have you traffic both in passengers and in goods on the Waterford and Limerick Railway?—Yes, but our steam packets are principally suitable for the carriage of goods; they are not first-class boats for passenger traffic, and therefore the traffic in passengers is not large.

5923. (*Mr. Hamilton.*) You said, I think, "our packets;" the Great Western Company does not own any, does it?—No; what I meant was, the packets on that route, but we support those packets indirectly.

5924. (*Mr. Horsfall.*) The bill that you have referred to was merely an enabling bill?—Yes.

5925. (*Capt. Galton.*) Have you considered the question of the advantage that might result from leasing an Irish line in that way; do you think it would be advantageous to the Great Western Company?—No doubt of it. As far as they are concerned, it would be advantageous to them to get a control over the Irish railway, and so get all the through traffic over their own system. But if you asked me whether, in the public interest, an Irish railway should be leased to an English railway company, I should consider that there would be a great question about it.

5926. Do you think it would be worked as well with respect to local fares and rates as it is at present worked by the Irish company?—If a line of railway were placed under my control in Ireland for the benefit of the Great Western Company, I should of course consider the interests of the Great Western Company first, and as the local traffic upon a railway is generally far more important, at least as it bears a large proportion to the through traffic, I do not think, unless under special circumstances, it would be desirable to hand over an Irish railway to any particular company.

5927. But still, if the Great Western Company had a lease of the line, it would be to its interest, I presume, to develop the traffic to the utmost?—Yes, if they were the possessors of the line itself, certainly. If they were the owners of the line of course they would do the same, in order to develop traffic upon it, as they would do with their own line. I have been speaking merely of working the line under a working arrangement, and I draw a distinction between the owners being in actual possession of the railway and a company who are simply the workers of the railway.

5928. In the case of being the lessees of the line, you would pay a rent for it, and you would develop the traffic to the utmost?—No doubt.

5929. Have you considered whether it is probable that the railways in Ireland would be better worked if they were leased to English companies?—I have heard that suggested, but I should consider, looking at the amount of local traffic in Ireland compared with the through traffic, and considering that the Irish railways are not very large in extent compared with the English railways, they could be worked very efficiently as one line of railway if they were amalgamated.

5930. If the whole of the Irish railways were converted into one?—Yes; and I should think that it would be a very great benefit to Ireland.

5931. (*Mr. Horsfall.*) Supposing the London and North-western Company to have leased those lines, does anything suggest itself to you that would enable you to increase the traffic?—If we were to lease the lines, we should give further facilities for the through traffic towards England.

5932. Would you lower the rates of charge?—The through rates from Waterford and Limerick to London are very low, and they are perhaps the lowest rates that are charged anywhere. I cannot say that we should lower the rates upon that traffic.

5933. Would you lower the rates upon the Irish part of the traffic?—That would depend upon the expansiveness of the traffic. Wherever by lowering the rates you have a reasonable prospect of increasing the traffic, it is no doubt most desirable to lower the rates, but without knowing the nature of the traffic, and between what places it was to be carried, I am scarcely able to say. It would no doubt be desirable to lower the rates in the public interest.

5934. On the particular lines to which we have been referring?—I do not know sufficient of their local requirements to be able to answer that question; but, undoubtedly, in the public interest, lowering the rates would be beneficial. I cannot, however, say that it would be beneficial to the Company, unless there was a large increase of traffic to compensate for the reduction.

5935. (*Lord Donoughmore.*) As between Milford Haven and Waterford, have you not given a guarantee to the Waterford Company?—We have guaranteed them a minimum income.

5936. Is that a joint guarantee that is given to the Waterford and Limerick Company?—No; it is solely by the Great Western Company.

5937. With regard to the minimum income, can you state roughly what profit is insured to them?—No, I cannot state that; but I think we give them a rebate out of the receipts on our line amounting to something above 20,000*l.* a year.

5938. Is that in addition to their charges for freight?—It is in addition to their own proportion of the mileage rate as between Waterford and Milford Haven.

5939. (*Capt. Galton.*) There is a very large traffic, is there not?—Yes; there is a large traffic in bacon and butter, and that description of goods; there is also a traffic in cattle, horses, and pigs; but there is not a large passenger traffic.

5940. Do you think the passenger traffic could be more largely developed if better boats were put on?—Yes, I do.

J. Grierson,
Esq.

16th June 1865.

5941. (*Lord Stanley.*) Would that line, in your opinion, ever compete with the Holyhead line?—Yes, to a certain extent; but it would require very expensive boats to compete very successfully with the route *viâ* Holyhead. The average passage to Milford is now above nine hours, and the passage to Holyhead is only four and a half hours; and of course the first-class passengers are more likely to take the Holyhead route. It would be possible to put on a much better class of boats, which would make the passage on an average in seven hours.

5942. Was there not a project entertained some years ago by the Great Western Company to establish a rival port to Holyhead at a place called Porthdynllaen?—Yes, that is in North Wales.

5943. Was that project entirely abandoned?—The Great Western Company do not move in it, but the Aberystwith and Welsh Coast Company obtained powers to make a railway to that place, and there also have been parties in North Wales who have been very anxious to complete the communication from Bala by way of Festiniog, and to open a route in that direction.

5944. You probably look upon that rather as a local question than as affecting the Great Western Company?—It is a matter that the Great Western Company have not moved in for many years.

5945. (*Lord Donoughmore.*) Did not the Great Western directors at one time obtain an Act empowering them to make a line to Fishguard?—Yes, that was the original South Wales line, which has been resuscitated this year, and has been passed.

5946. Is it the intention of the Great Western Company to make a harbour there?—It is not promoted by the Great Western Company, but it is promoted by independent parties, and they say that they will make a harbour there.

5947. The passage across the channel from that point to Wexford is a very short one?—Yes, it is, and they say that they can compete successfully with the route by Holyhead. I think it is about the same mileage, or less, or within a mile or two of the route by Holyhead.

5948. (*Chairman.*) Was not an Act obtained last year for a railway on the Irish side of the channel, to a place called Roslea Harbour?—Yes.

5949. Is that the point you mean?—Yes.

5950. If all the Irish railways were amalgamated to be worked as one company, do you think it would be necessary to take any precautions against that company endeavouring to concentrate all the traffic at any one port to the injury of the other Irish ports. I think there is no doubt that that would be so. At the present time the local companies seem to direct their attention mainly to their own particular port, and that is the reason why there are complaints made that the traffic is not allowed to take its own course. If all the Irish railways were amalgamated, it would, of course, depend upon the directory as to which port they would favour, so that probably some stipulations would be necessary in order to protect the interests of the various ports.

5951. Would it be the interest of one company, or do you think they could work the traffic cheaply if they endeavoured to concentrate it all at one of the ports, rather than to distribute it in the proportions in which it would naturally go to the different ports?—Certainly they might do so. The Waterford and Limerick Company, who are working in friendly connexion with us now, as they have done with the Great Southern and Western Company, and with the London and North-western Company, have entered into an arrangement by which the traffic should go from Limerick to Waterford, and that they are to obtain the same payment upon it, although it leaves their line at the Limerick Junction.

5952. What sort of stipulations do you think would be necessary to give all the ports a fair chance?—I think it would require some very strong clauses to be framed, giving an appeal to some tribunal in case the traffic was improperly diverted.

5953. Ought traffic, in your opinion, always to be allowed to take the shortest course?—I do not say that under all circumstances, because there is no doubt that when there is a superior route it cannot be expected that traffic should be sent by the shortest route, and in that case the longest route might be the best. Take, for example, the traffic arising close to Waterford; it might be the interest of the Company to take that traffic to Dublin, although the parties might be willing to send it to Waterford, and we have had complaints made to us by parties who use the Waterford route that when they want to get trucks to take the traffic to Waterford they cannot obtain them.

5954. (*Mr. Hamilton.*) From what Company do you mean?—I think from the Great Southern and Western Company; but I do not say this from my own knowledge. This has been stated to us by parties trading on our own line. I do not make use of that as a complaint against the Great Southern and Western Company at all.

5955. (*Lord Donoughmore.*) Have you a list of the places in England to which you have through booking arrangements with the Waterford and Limerick Company?—I think I have a list of some of them.

5956. Is Crewe among those places?—Yes; Crewe is a London and North-western station.

5957. I thought your line ran to Crewe?—It will run to that place. Crewe is, in fact, one of our junctions with the London and North-western line; but the connecting link between our main line and the line which runs to Crewe is not yet opened.

5958. Is Wolverhampton one of the places?—Yes.

5959. Which do you consider is the natural route for goods passing from any place in the south of Ireland to Wolverhampton, is it by Waterford and Milford, or by Dublin and Holyhead?—I think, for goods going to Wolverhampton, the most convenient route would be by Holyhead.

5960. Which would be the route for goods sent to Birmingham?—The same route.

5961. And yet you compete with the Great Southern and Western Company and the London and North-western Company by making through rates by the other route?—Yes, we make through rates; but I say, notwithstanding that, I believe the other route is the best of the two from those places.

5962. Are your charges lower than theirs are, or are they the same?—I can scarcely answer that question. We have only just received from the London and North-western Company their scale of rates, and they have not yet been compared. We have a right to book through by the London and North-western line, but it is not fully put into force yet. We applied to them for their list of rates, and they have now sent them to us, and they are under consideration.

5963. Is Manchester one of the places to which you have through booking?—No; we have not through booking arrangements to any place so far north.

5964. (*Capt. Galton.*) Is Shrewsbury too far north?—I believe they can send, *viâ* Holyhead, the Wolverhampton and Birmingham traffic. We send by the north also.

5965. (*Lord Donoughmore.*) Do you think it would be possible to make an equitable arrangement as between Dublin and Waterford by running a line across England, and saying that all places to the north of that line should be considered as entitled to the Dublin route, or rather that the Dublin route should be entitled to the traffic from those places, and that the Waterford route should be entitled to traffic from places south of that line?—I think it is possible, as between the different companies, that such an arrangement might be made.

5966. Are you aware that such an arrangement was made between the Great Southern and Western

J. Grierson,
Esq.

16th June 1865.

Company and the Midland Company?—I am generally aware that there was such an arrangement.

5967. (*Capt. Galton.*) Do you think it would be an advantageous arrangement for the public?—I think that it would be equivalent to closing up one route in each direction.

5968. For the benefit of a particular port?—Yes, and for the benefit of the two companies.

5969. (*Lord Donoughmore.*) Supposing that division was coupled with stringent powers to oblige the companies to carry at certain reasonable maximum fares, do you think the arrangement would work well in the interests of the public?—I have no doubt that it would work well in the interests of the public; but, as I said before, I think it would be equivalent to shutting up one of the routes, because if parties wished to send traffic between a place in England and a place in Ireland in a way contrary to that arrangement, they could not so send it.

5970. As matters stand now, all traffic which is brought to any local station of a railway company at which that company are the masters, and there is no competition, goes by the route which is favoured by that company?—That is so.

5971. For instance the traffic brought to the station at Tipperary, which is on the Waterford and Limerick line, is naturally sent by the Waterford and Limerick line by the Waterford route; but if it is brought to the station at Dundrum, close by, which is on the Great Southern and Western line, it is sent by Dublin?—Yes, but so far as the Great Western Company are concerned they are desirous that the traffic should take its own natural route, and there are four points with which they interchange traffic with Ireland now: one is Bristol, another Milford Haven, another Chester and Holyhead, and the other Birkenhead, and they are disposed to keep those four routes open.

5972. (*Mr. Horsfall.*) Would not such a division of the traffic, as has been suggested, be so far disadvantageous that it would enable the railway companies to charge high rates and up to the maximum fares?—No doubt, in combination with the Irish companies, it would be so, if the traffic would bear them.

5973. (*Capt. Galton.*) You say that it is the wish of the Great Western Company to keep open the four routes you have named?—Yes.

5974. What arrangements do you make for keeping them open; do you allow people to say by what route their traffic shall go?—Yes.

5975. I suppose there is a different rate of charge according to the length of the route?—If we booked through *viâ* Holyhead or Milford to the same places, it would be the same rate.

5976. I suppose the majority of persons would say they did not care which way the traffic went?—At the present time we only book to Cork *viâ* Bristol, and in that case the rate charged by the steam-packet companies, being less, it is the cheaper route, and parties select that route when they are not particular in point of time to a day, but those packets do not run every day.

5977. (*Mr. Hamilton.*) Is there anything to prevent your booking through between Bristol and Waterford?—Nothing; at one time we did book through *viâ* Bristol and Waterford, but when the Milford packets were put on, the South Wales Company being then an independent line, the through booking was withdrawn. We have stated, even lately, to the parties that we are willing to book through from London to Waterford *viâ* Bristol, and that the Great Western Company are willing to keep those routes open.

5978. I understood you to refer to some arrangement with regard to the Limerick junction, which operated as an impediment to the free interchange of traffic; will you be good enough to explain that?—An agreement has been entered into by the Great Southern and Western Company, the Waterford and Limerick Company, the London and North-western Company, and some of the packet companies, the

City of Dublin Packet Company, and also Messrs. Malcolmson's Company, by which it is agreed that certain portions of the traffic shall be considered as going *viâ* Waterford, and certain portions *viâ* Dublin, but the traffic really takes the Dublin route; the Waterford and Limerick Company being paid by a certain per-centage upon the traffic just as if it passed over their line, and Messrs. Malcolmson being paid in the same manner.

5979. (*Lord Donoughmore.*) Can you give me the date of that agreement?—I am speaking from a circular that was issued on the 10th January 1865, and the note upon that states that this arrangement came into operation in September, 1864.

5980. (*Mr. Glyn.*) That is an arrangement, is it not, very much between the Great Southern and Western and the other Companies?—It has reference to the routes which the Great Southern and Western line feeds.

5981. (*Lord Donoughmore.*) Is it in the nature of a common purse agreement?—Yes.

5982. A certain portion of the traffic is credited to Waterford; no matter how the traffic is carried?—Yes; the traffic arising at Limerick, if there was no agreement, the Waterford and Limerick Company would take to Waterford if the public would permit them, and hand it over to the Great Southern and Western Company at Limerick Junction, and although they take it over only about one-third of their line, they are paid just as if the traffic passed over the whole of it.

5983. (*Sir R. Hill.*) Is that done with or without the consent of the persons despatching the goods?—It is done in the cases to which I have referred without the parties being asked anything about it; of course the consigned traffic would be taken by the route *viâ* Limerick Junction, if the public required it.

5984. It is not done then in defiance of the wish of the consignees?—No; I have no doubt that if the traffic was consigned *viâ* Waterford they would so take it.

5985. (*Mr. Hamilton.*) Is there any doubt as to the genuineness of the document you have referred to?—None.

5986. I suppose it is a very ordinary case of arrangement between different companies?—I do not know of any such arrangement being in existence at the present time.

5987. Do you know the amount of the rebate or allowance that is made to Mr. Malcolmson as between Waterford and Dublin, for I understand that he gets a rebate whether he carries the goods or not?—Yes, he does.

5988. Do you know what that amounts to?—He is paid as if one half of the traffic took that route.

5989. Who pays that rebate to Mr. Malcolmson?—It is out of the freight upon the gross traffic. Suppose that all the traffic which is obtained from Limerick and sent, say, to Birmingham, is carried *viâ* Dublin, then the great Southern and Western Company and the London and North-western Company obtain all the receipts in the settlement in the Irish clearing house; but Messrs. Malcolmson and the Waterford and Limerick Company have their proportion from them.

5990. And of course that prejudices the trades of the port of Waterford?—Undoubtedly.

5991. (*Mr. Glyn.*) It benefits the railway company having a long run, the Great Southern and Western?—Yes, it does.

5992. (*Mr. Hamilton.*) Has any representation been made upon this subject by the Great Western Company, because, I presume, this arrangement prejudices their interests also?—We have made representations to the London and North-western Company upon it.

5993. (*Chairman.*) Do you receive any Irish traffic at Birkenhead or at Chester?—We receive Irish traffic at the present time at Liverpool. There are no steamers which now run into the Birkenhead

J. Grierson,
Esq.

16th June 1865.

docks, but we are in expectation that traffic will be done through Birkenhead in about 18 months.

5994. Do you expect traffic from the north of Ireland?—Yes.

5995. (*Capt. Galton.*) Will the steamers be your own?—It is not in contemplation by the Great Western Company to put steamers on. We have frequently discussed the matter about running lines of steamers to Birkenhead, and the trade which naturally comes from the north of Ireland to Liverpool will always be large, therefore these packets will bring the through traffic for the railways at the same time, and as Birkenhead is so convenient a place, we expect that a line of steamers will be run to that place from Dublin; that is a matter which has been latterly discussed, but no arrangement is yet made; nothing tangible has yet been arrived at. With regard to running a line of boats to Greenore, that only is in contemplation.

5996. (*Capt. Galton.*) Will you be good enough to state the reasons why you consider it is desirable, for the public interests, that all the railways in Ireland should be amalgamated into one?—Because, I think, where the traffic in the country is so small as it is, and the local companies are all endeavouring to carry that traffic to a particular port, which they consider in their own interest entirely, the traffic, not having the free flow which it would have if all the lines were in the hands of one company, is not so large as it would be, and the public do not get all the conveniences and accommodation which I think should be provided for them. I can speak from some experience with regard to amalgamations, and as to their effect in opening routes, because, before the Great Western Company became amalgamated with the West Midland Company, we had junctions at four or five places, and yet we did not interchange traffic, or only as little as each company could give; but as soon as the amalgamation took place we made through rates, and we did not then care which route the traffic took, whether by the one or the other of the lines, or partly over their line and partly over ours; and the consequence has been that a very large amount of additional traffic has sprung up between the two lines. Of course it cannot be expected that this will happen in anything like the same proportion in Ireland, because there are in that country no collieries nor iron works, nor any large manufactures, as there are in England; but still I believe that traffic would arise to a very great extent.

5997. And the gain that would be made upon one railway would compensate for the loss sustained upon another?—Yes, exactly so. I may state that the West Midland Company and the Great Western Company before the amalgamation were both anxious to obtain the largest amount of profit for their own line, but the moment the amalgamation took place, and there was no longer any difference of interest, the traffic took its own free course, and although we reduced many of the rates considerably, the traffic became so largely developed that we were more than compensated for the reductions we had made, and the public were greatly benefited.

5998. (*Mr. Glyn.*) And I suppose there was a considerable reduction in the working expenses?—There was some reduction in the working expenses also, but that has not been felt upon the Great Western line to the extent that might be expected, because the directors of the Great Western line have been expending considerable sums of money upon the line, and they have also very much improved their service.

5999. If the new system works as you say, there would in Ireland also be a saving of working expenses?—Yes, there would be a great advantage in having the rolling stock, the engines and carriages, available to go over all parts of the country wherever they were required.

6000. There would be great economy in material?—Yes, very great economy; and there would also be a saving in the general charges, but that does not really amount to a very large sum, nothing to com-

pare with the advantages that would be otherwise gained.

6001. (*Mr. Hamilton.*) The experience you have obtained in the working of the two systems, the West Midland and the Great Western, leads you to entertain a favourable opinion as to the effect that would be produced in Ireland by an amalgamation of all the railways there?—That is so. We have also entered into an arrangement with the Vale of Neath Railway Company, where, in the same manner, the traffic arising upon that railway might take either the route *viâ* Neath or *viâ* Aberdare, we having junctions at both places. They struggled to get the longest mileage on their line, and they had the power to charge certain local rates upon it, so that the effect was that we were compelled to give up the right to get a fair mileage proportion out of it. But when we entered into an arrangement with them in December last, we reduced all the coal rates to London to about 1s. 5d. a ton.

6002. (*Sir R. Hill.*) What was the effect of that reduction?—I believe that the coal traffic at the present time is 20 per cent. higher than it was; but I should say that it does not entirely arise from that cause; for we expected, under any circumstances, to get a large coal trade into London; but that is another instance to prove that where you do away with the separate pocket interests of companies, the companies derive great advantages from it.

6003. Has there not been a very large increase of traffic upon the Great Western line within the last two or three years?—Yes, I dare say that in the first year after the amalgamation took place, our traffic increased probably to the extent of 8 or 9 per cent.

6004. Do you consider that that was owing mainly to the arrangements which you have been describing?—Yes, to a large extent.

6005. You believe that the Great Western Company have derived great benefit themselves, and that at the same time the public have been benefited?—Yes, it has benefited the public to a very large extent. The Great Western shareholders have not yet obtained the benefit resulting from it, which they might otherwise have done, if it had not been for the extended service which they have given both with respect to goods and passenger trains, and other expenses which they have incurred, and which have not yet been fully recouped by an increase of traffic, but which will be recouped.

6006. I was speaking rather of the benefit to the public from the reduced charges?—That is undoubted. In the same manner, not only as between the West Midland Company, the South Wales Company and the Great Western Company, had the amalgamation the effect which I have just stated, but in dealing with such companies as the London and North-western and the Midland Company, those companies have not, and neither has the Great Western Company, looked at small matters in the same way that we did before.

6007. Do you believe that the adoption of a similar arrangement in Ireland would lead to similar results?—Yes, but of course there would be a difference in degree in consequence of the difference between the two countries.

6008. (*Capt. Galton.*) The fewer separate railways there were in Ireland the better it would be for the country?—Yes.

6009. It would be better to have one system rather than two or three systems?—I do not say that two or three systems might not obtain the whole, or nearly the whole, of the benefit that I have referred to; but I do not see anything in Ireland which would make it necessary to put the Irish railways into three systems, if no reason could be urged against their being put into one.

6010. (*Sir R. Hill.*) You think that they are not too large to be put into one system?—No.

6011. The total mileage of the Irish railways is, I believe, less than the total mileage of some of the large systems of railways in France?—It is about the

*J. Grierson,
Esq.*
16th June 1865.

same, I think. I believe that the total mileage in Ireland is about 1,700 miles, and the mileage of the London and North-western and the Great Western lines is about 1,300 miles each.

6012. (*Sir R. Hill.*) The mileage of some of the railway systems in France, I believe, is very much more?—From 1,700 to 1,900 miles.

6013. (*Mr. Glyn.*) There would be no more difficulty in working the Irish railways as you propose from north to south in one system than in working from Birkenhead to the Land's End?—I see none.

6014. (*Mr. Hamilton.*) The train mileage would be very materially less would it not?—I do not know that. I think that if all the railways in Ireland were put under one company, the larger the company the more service the public would expect from them.

6015. Would not the train mileage of the whole Irish system be considerably less than the train mileage on such a line as the London and North-western?—Yes.

6016. (*Mr. Glyn.*) Are you of opinion that one Board could develop the local traffic in Ireland satisfactorily?—Yes, I am.

6017. (*Mr. Hamilton.*) Have there not been instances of complaints being made that the local traffic is apt to be neglected by the existence of the system to which you have already referred?—There have been frequent complaints, but I have never known a case authenticated. All the railway companies in this country have to pass through the ordeal of coming before Parliamentary Committees every year, and I think the traders have never once complained that they could not then obtain redress for any complaints they had to make; since the year 1849 there has not been a year in which we have not had our tolls attacked, and I believe that we have passed successfully through every committee.

6018. (*Mr. Glyn.*) As far as practicable the members of the different railway boards in England are selected in order to represent the different local interests?—Yes, to a great extent.

6019. (*Sir R. Hill.*) It is highly advantageous to the companies as well as to the public to cultivate the local traffic, is it not?—I think that the local traffic of every railway is a most important matter.

6020. Therefore if the directors of the amalgamated Irish railways were to look to their own interests, they would cultivate the local traffic?—Most undoubtedly they would.

6021. (*Mr. Horsfall.*) The amalgamated company would, of course, have its agents to look after the local traffic?—It would subdivide the lines into such lengths as would be most convenient for efficient working, and probably it would divide the attention of its board by appointing different committees to look after the various districts.

6022. Beyond this, would it not be desirable that they should have agents employed in the different parts of the country, in the place of, perhaps, eight or ten directors to look after the traffic in the same locality?—No doubt in the same way that the London and North-western Company would have a manager in Manchester, another in Liverpool, and another in Leeds, for the purpose of looking after the traffic.

6023. (*Sir R. Hill.*) Other things being equal, an extensive system, you think, can be better managed than a small one?—It can be better managed than a number of small systems, undoubtedly.

6024. (*Mr. Hamilton.*) Were you not in Ireland a few months ago?—Yes.

6025. Had you any opportunity then of seeing the working of the railway system in Ireland?—Yes; I was in the north of Ireland; I went there with a gentleman, and we were very much struck indeed by the smallness of the lines of railway there, and with what we thought was a very undesirable mode of working them, and in consequence of this we thought that it would be a great advantage if the lines were amalgamated. I had no notion then of any investigation such as the present taking place, but we expressed that opinion at the time.

6026. What do you mean by an undesirable way of working the lines?—For instance, you will see some parties in the north who are all for getting everything for Belfast, others for Londonderry, and others for Dublin, and so on, instead of working the lines as one company and letting the traffic take its natural route to either of those three places.

6027. Then you think the traffic was placed under compulsion?—Yes, no doubt.

6028. (*Capt. Galton.*) From the local interests of individual directors?—I should imagine so.

6029. (*Lord Stanley.*) Do you feel certain that if all the Irish railways were in the hands of a single company they would not fall into the same error?—It would require, I think, some strong clauses to make sure that one company directed by a particular board and selected in a particular manner did not fall into the same course.

6030. You think that they should be tied up so as to avoid all local connexions and influence as far as possible?—I certainly would not go so far as that, for I believe that a local director is very often, from his knowledge, of very great value to a company.

6031. (*Sir R. Hill.*) But you think that the directors should look to the general interests of the Company rather than to separate and individual interests?—Yes.

6032. (*Mr. Hamilton.*) Have you had any opportunity of forming an opinion as to the condition of the railways in Ireland?—From what I saw of them I thought that the lines were in very good condition.

6033. Was the rolling stock in good condition?—It was in fair condition, but not in such good condition as on our best lines.

6034. Was the permanent way in good order?—Yes, with the exception of one line which I should prefer not to mention, which we thought was not in good order.

6035. (*Mr. Glyn.*) Do you consider that they work the lines satisfactorily in Ireland?—They appear to do so; the trains appear to be punctual.

6036. Not at a low speed, generally?—Yes, and therefore that is a reason for their being punctual.

6037. (*Chairman.*) Do you think that a project for amalgamating the Irish lines would be looked upon with jealousy by any of the great English railway companies?—That would depend upon how the company was constituted, but I should think that any railway company that was merely desirous of having its fair share of traffic would have no objection to see all the Irish railways amalgamated if they saw that the managing company was fairly constituted.

6038. (*Capt. Galton.*) Such an amalgamated company should be either entirely independent of the existing English railway companies or should have directors in it who would represent them?—Either of those courses is what I think would be the best to be adopted.

6039. With regard to working the Irish railways, are there any items of expenditure which you think would be cheaper in Ireland than in England?—Perhaps wages might be cheaper for a certain class of men.

6040. Not for the skilled workmen?—No, I should not think so.

6041. For artificers?—Not as far as I have understood from mechanics in Ireland; I do not think there is much difference in the wages of skilled mechanics in Ireland as compared with those paid in England. Porters and that class of persons would be paid less than we pay them in England.

6042. Would that make any material difference?—I do not think there would be much difference. There are, however, many circumstances which have to be taken into account; for example, in England we run much quicker trains, and therefore both our rolling stock and the permanent way suffer deterioration more rapidly. In Ireland they travel slower, but then they have not such heavy loads to draw. When you come to take these other circumstances into account, the per-centage of expenses upon receipts will not be

found to be very different. In Ireland they will send goods trucks with much less than a full truck load. In England, where we carry a much larger quantity of merchandise, we are more frequently able to send full truck loads, which tends to economy.

6043. (*Mr. Glyn.*) That applies also does it not to passenger trains?—Yes, and therefore although there might be some items that are cheaper in Ireland, there are certain circumstances which seem to tell against their working cheaper.

6044. (*Mr. Hamilton.*) What has your experience been of amalgamation or the absorption of small lines into large ones; has it the effect of raising the rates of wages or not?—As far as the Great Western Company is concerned it has always had that effect.

6045. Do you mean to say that porters and the ordinary servants of railways receive higher wages when serving an amalgamated company than when they are employed by a small local company?—Yes, undoubtedly; in the case where the London and North-western Company and the Great Western Company took the Shrewsbury and Hereford railway into their hands, there I believe we raised the wages of nearly the whole of the staff upon the line, and we put them on a similar scale to that of the London and North-western and our Companies, and I think in the case of every other small line that we have taken we have paid a little more.

6046. Should you anticipate the same result if the Irish railways were amalgamated?—I cannot say that, because there would be the same scale as is in force now; but if the Great Southern and Western Company are paying higher wages than the Waterford and Limerick Company, I think it quite possible that they would have to pay more.

6047. If the large lines absorbed the small lines, then the average rate of wages would be the rate of the Great Southern and Western Company?—Yes.

6048. (*Sir R. Hill.*) Would that result necessarily follow?—When you employ a large staff of people you have to bid pretty high to get a good class of men.

The witness withdrew.

CHARLES LANTON, Esq., examined.

6057. (*Chairman.*) You are a civil engineer?—Yes.

6058. You are, I believe, connected with some of the Irish railways?—Yes.

6059. Of what railways have you been engineer?—The Belfast and Northern Counties, which comprehends the line from Belfast to Ballymena, and from Ballymena to Coleraine, the Portrush, and the branch from it to Cookstown, and also the branch from Carrickfergus to Larne. I am also engineer to the railway from Belfast to Bangor.

6060. Are all those railways in operation at the present time?—They are.

6061. Have you kept up your connexion with the railways besides having originally laid them out?—Yes; I am at present consulting engineer to the Belfast and Northern Counties system.

6062. Are you consulted by the directors upon any points connected with the traffic on those railways?—I generally attend the board, but the more special duties of the traffic are of course attended to by the manager.

6063. You are acquainted with the system pursued by the directors?—Yes.

6064. How long has the railway been opened from Belfast to Coleraine?—The line from Belfast to Ballymena I think was opened in 1847 or in 1848, and the other about five years afterwards, from Ballymena to Coleraine.

6065. Has the traffic upon those lines been satisfactory?—On the line from Belfast to Ballymena it has been very satisfactory indeed, and the parent line there would have made a very good return. We made a branch, which is unmarked upon the map on

6049. By giving higher wages you probably get a better class of men?—Yes, and that is what we strive for, but on the small lines of railway they have not got so good a class of men because they do not offer the same inducements.

6050. You pay a larger amount of wages after an amalgamation has taken place, and you find that you are better served?—That is the very object for which we give a better scale of wages.

6051. It does not necessarily follow therefore that the total expenditure of the company is increased?—On the contrary, I consider that having a good class of servants is the best economy.

6052. (*Chairman.*) Are the large railway companies obliged to pay higher wages to porters and that class of servants than the smaller railway companies?—As a rule they do so with the view of getting good men.

6053. At the smaller stations where a superior class of porters can hardly be required, do they pay higher wages than the small companies?—As a rule the same scale applies to all the country stations, but there are some cases in which a youth is put in the place of a man, and in that case a saving is made.

6054. (*Mr. Hamilton.*) In the large railway systems are there two rates, a town rate and a country rate?—Yes, and in Lancashire, for instance, I have no doubt that the London and North-western Company pay higher wages than quite in a country place. The Great Western Company do in Staffordshire, where living is more expensive.

6055. Under similar conditions it would not answer to have two rates of wages?—No; in the country we pay the same rates of wages all over the country.

6056. (*Sir R. Hill.*) Are the men promoted from the less important towns to large towns?—London is our most important station, but as a rule I think the men would rather not come to London, but would prefer to live in the country where living is less expensive. We promote the porters to the post of goods guards and pointsmen as we find them to be competent.

the wall, from Antrim to Cookstown, which had the effect of very materially reducing our dividends.

6066. Will you have the goodness to state the fares charged upon your system?—The fares which are generally charged are 2d., 1½d., and 1d. per mile, but we have been for a time in the habit of giving third-class return tickets, which, I believe, is a practice not generally adopted on the lines in Ireland, but we have adopted it.

6067. Do you issue third-class return tickets by all the trains?—Yes, by all the trains, except the express trains.

6068. And between all the stations?—Yes. We also run market trains from all the stations to the different market towns, such as Ballymena, Coleraine, and Derry, where the large markets are.

6069. At what rates?—At the single fare for a return ticket, which would average about a halfpenny per mile for third-class passengers.

6070. (*Capt. Galton.*) How many trains do you run in a day which have third-class carriages attached to them?—We run four trains a day from Belfast to Londonderry.

6071. Do you carry third-class passengers by all those trains?—Yes. We have an express train that runs to Portrush by which we do not carry third-class passengers; we have eight or nine trains which run to Carrickfergus, by all of which we carry third-class passengers.

6072. Are the third-class trains the same as they were when the Londonderry and Coleraine lines were separate?—I think they are.

6073. Are all the trains full of passengers?—We have a very fair passenger trade.

J. Grierson
Esq.

16th June 1865.

C. Lanyon,
Esq.

C. Lanyon,
Esq.

16th June 1865.

6074. (*Chairman.*) Has there been any variation in the fares since the railway was originally opened?—I think not, except as to giving third-class return tickets for third-class passengers. That has been introduced, I think, only since 1860. When introduced it had the effect of materially increasing the third-class traffic, but it also had the effect of making a considerable depreciation in the second-class traffic, but not to so great an extent as the increase which took place in the third-class traffic.

6075. Was the result, upon the whole, profitable to the company?—Yes, it was satisfactory.

6076. But in way of profit to the railway shareholders was it satisfactory?—Yes.

6077. The line between Coleraine and Londonderry does not belong to your company?—No; it is worked by our company. We had a lease of it for four years, and at the termination of that lease, which occurred in April last, the sum that we paid was 10,000*l.* a year. We found that we had lost so much by it that we would not renew the lease; but we entered into working arrangements, and therefore we have still the management and control of the Londonderry and Coleraine line, and we work into Londonderry with our engines and plant.

6078. (*Lord Donoughmore.*) Is that for so much per cent. upon the receipts, or so much per train mile?—So much per train mile. I think it is 1*s.* 10*d.*, that is, guaranteeing a certain number of miles to be run.

6079. (*Chairman.*) When you worked the line, paying a rent of 10,000*l.* a year, you found there was an annual loss to the company?—Yes, there was.

6080. The line had previously been worked by Mr. Roe, had it not?—Yes, it had.

6081. Is it within your knowledge that Mr. Roe stated the result had been very profitable to him while he held it?—I am not aware of his having stated that, but I should say this, that there has been rather a change in the traffic since Mr. Roe left it, and a second line has now been opened from Larne to Belfast, the green line upon the map from Omagh, and we entered into an arrangement with the Ulster Company, who are the principal proprietors of that line, to divide the traffic between Londonderry and Belfast between the two companies.

6082. When your company took the line from Mr. Roe, did you make any alteration in the fares that you found had been established by Mr. Roe?—I am not aware of any alteration being made.

6083. Do you believe that the rate is the same as it was then?—I think so, but I will not speak positively upon that point, because these are matters of detail, which are more in the hands of the manager than in my department.

6084. (*Sir R. Hill.*) Who is the manager of your railway?—Mr. Cotton.

6085. He will be able to speak to those points?—Yes, and he could give very valuable evidence indeed upon the subject of the fares.

6086. (*Mr. Horsfall.*) You are probably aware that when Mr. Roe leased the line he reduced the fares very materially?—No, I am not aware of that.

6087. You are perhaps able to speak to the receipts during the time that Mr. Roe held the line, as compared with the receipts before he took the line?—No, I cannot speak to the rates comparatively.

6088. (*Mr. Glyn.*) How many years did you work the line before you altered the agreement?—Four years; it only expired in April last.

6089. You took it for the remainder of Mr. Roe's lease?—Yes.

6090. At the expiration of that lease you found it so onerous that you altered the agreement?—Yes, we entered then into working arrangements.

6091. (*Chairman.*) When was the competing line by Omagh and Dungannon opened?—I think it has been opened for about three years.

6092. Did your line become much less profitable after that competing line was opened than it had been

before?—Yes, it reduced the income from 1,500*l.* to 2,000*l.* a year.

6093. (*Mr. Glyn.*) Was that line opened during the time of Mr. Roe's lease?—No, I think not.

6094. Not until the expiration of the lease?—It was during the time that we had the lease.

6095. It was opened during the time that you had the lease?—Yes.

6096. (*Sir R. Hill.*) Was the lease granted by the Government?—It was partly from the Government; the Exchequer Loan Commissioners had a mortgage upon the line. We were obliged to get their sanction to a transfer of the lease.

6097. (*Mr. Glyn.*) The new line was a competing line?—The line from Omagh and Portadown is opened, and a second line has been opened from Londonderry to Belfast.

6098. For how many miles does that compete with you?—95 miles is the whole distance.

6099. (*Sir R. Hill.*) Which is the shortest line?—The Coleraine line is the shorter of the two, but very little.

6100. (*Mr. Horsfall.*) Do both the companies charge the same rates?—Yes.

6101. (*Chairman.*) There is only competition between the two extremities?—That is all.

6102. Do you charge the same rates on the whole of the line between Londonderry and Belfast as on the part between Belfast and Coleraine?—I think so. I think the fares are generally the same.

6103. Is your traffic chiefly in passengers?—No; the traffic of goods is about the same as the traffic in passengers. We have a very large goods traffic.

6104. Have you any traffic in coals?—Yes, inland, from Belfast to Ballymena; and from Portrush to Ballymena there is very considerable coal traffic.

6105. Is the coal carried for manufacturing purposes or for household purposes?—For both.

6106. Is it used to any considerable extent for manufactures?—Yes, it is, in the neighbourhood of Ballymena; that is a manufacturing town, and a considerable quantity of coals is carried to that place.

6107. At what rate do you carry coals?—I believe that Mr. Cotton made a return of the rate at which the coal was carried; it is about a penny a ton per mile for distances beyond 50 miles, and a penny farthing a ton per mile under 50 miles.

6108. (*Sir R. Hill.*) Do those charges include terminal charges?—Yes, they do.

6109. Do you consider it an advantageous arrangement to make a certain charge up to 50 miles, and then a smaller charge for over 50 miles?—Yes.

6110. Does not that lead to this result, that the charge for 50 miles is more than for, say, 52 miles?—Yes, of course it does in those cases.

6111. (*Mr. Horsfall.*) Have you found that the traffic in cattle has at all increased?—No, I do not think it has increased. I think that the traffic generally in cattle has decreased, but that has been consequent upon there not being the same number of cattle in the country.

6112. That is during the past year?—Yes; previously to that we had a great deal of traffic in cattle; there was a considerable amount of cattle exported from Belfast, and at the same time we had a boat running from Larne, and there was a considerable amount of traffic from Larne to Stranrea.

6113. Do you think that any considerable reduction in the rates would increase the traffic in cattle?—With regard to the question of rates and so forth, I am scarcely competent to answer, for I have not considered the matter so much as the manager has done, and I am not so competent to speak upon that point as he would be.

6114. (*Mr. Hamilton.*) If the rate charged upon coal was reduced, do you think that the demand for coal inland would materially increase?—No; in Ireland there is always a difficulty to contend with in the matter of coals with reference to the quantity of peat in the country; when there is any large quantity of turf the demand for coal diminishes; it depends very much

C. Lanyon,
Esq.

16th June 1865.

upon the season, or rather upon the previous season, whether there has been a good season for making turf: the demand for coal would be decreased in the ensuing season.

6115. (*Sir R. Hill.*) A good season I suppose is a dry season?—Yes.

6116. (*Mr. Hamilton.*) Do you think that if the rate upon coals was reduced there would be a larger consumption of coals?—Yes; the demand for coal is gradually increasing, and there is no doubt that the inland consumption of coal in Ireland is becoming gradually more and more.

6117. (*Capt. Galton.*) Is coal preferred to peat?—I think, generally speaking, in those towns which are convenient to railway stations the consumption of coal has been very much increased.

6118. (*Mr. Hamilton.*) Do you know what the rates charged upon coals are upon the English railways?—No.

6119. You are not aware that 1*d.* a ton per mile is a heavy rate?—No; but then I suppose it is very likely that 1*d.* a ton per mile, where they have such a very long haulage as in England, makes a very considerable difference. I suppose that the hauling from the coal fields in the Midland counties to the London districts would make it a more profitable speculation at $\frac{3}{4}$ *d.* a ton than 1*d.* a ton upon a shorter distance.

6120. Are the gradients favourable on the lines with which you are connected?—The steepest gradient on the Northern Counties is 1 in 100.

6121. What is the maximum coal load that one engine can draw?—We can go up the steepest incline with 32 waggons with one engine, each waggon carrying about five tons.

6122. (*Sir R. Hill.*) 160 tons in all?—Yes.

6123. (*Mr. Hamilton.*) On the English railways the maximum train load is much greater?—Yes, it is because the gradients are generally better, at least on all the leading lines.

6124. (*Sir R. Hill.*) Do you work the engines expansively?—Yes.

6125. What coal is consumed in the north of Ireland?—They use Scotch coal principally, for manufacturing purposes, and a very large quantity of Scotch coal is brought over to Ireland; that is almost entirely used for manufacturing purposes.

6126. At what price per ton is it sold in Belfast?—I believe the price varies from 9*s.* to 11*s.* per ton.

6127. Delivered to the consumer?—No; house coal is very much more expensive; it varies from 15*s.* to 17*s.* a ton for English coals. I have been speaking of Scotch coal, and that is sometimes obtained for as low as 8*s.* a ton.

6128. For what purposes is the Scotch coal used?—For manufacturing purposes, for engines.

6129. (*Mr. Hamilton.*) Do you consider that the condition of the Irish railways with which you are connected is satisfactory?—In what way do you mean?

6130. I mean the condition of the permanent way, and the quality of the rolling stock?—Yes; with reference to the Northern Counties line I should say it is so decidedly, but the line from Coleraine to Londonderry is in a very bad state.

6131. (*Sir R. Hill.*) Has it been in that condition long?—Yes, it has been so for some time, and we have been obliged to give the parties notice to make some very efficient repairs upon it.

6132. (*Mr. Hamilton.*) This is the condition of the line owing to the want of resources?—Yes, it is in a very bad condition indeed; they have no money.

6133. (*Sir R. Hill.*) In what state was the railway when Mr. Roe transferred his lease to you?—It was in a very bad state indeed; and we did as much as we could to keep it in a safe condition.

6134. In what state was the rolling stock?—That was pretty fair, we bought the whole of it from them.

6135. In what state was the road; was that in a bad state?—Yes, there was a want of ballast, and the

sleepers were bad; there was a want of draining and a want of fencing. The bridges are all made of timber, and they are in a very decayed state, and require a very large sum to be expended to put them into order.

6136. You have mentioned a want of drainage?—Yes.

6137. Was the line badly constructed in the first instance?—I do not know, but the drainage is not so important as the other points; the condition of the bridges is the worst point.

6138. In fact the works have suffered from age?—Yes, all the bridges were built with timber.

6139. (*Mr. Hamilton.*) Are you acquainted with the railways in other parts of Ireland?—Not so intimately, but I have been a good deal upon other railways.

6140. Do you consider that the state of repair on the other lines of railway is satisfactory or not?—By merely travelling over a railway you cannot judge, but I believe that some of the leading lines in Ireland are very admirably attended to, such as the Great Southern and Western Line. I believe that that is very well attended to.

6141. There are some lines, I suppose, which earn but little money, and where the state of repair is not satisfactory?—I cannot speak personally upon that point.

6142. (*Chairman.*) Has the question of lowering the fares ever been considered by your board?—No; the question has come before them of course several times, but they are under the impression that the fares are now at a very reasonable rate.

6143. Your fares are lower than the average of those charged in Ireland;—Yes, to the third-class passengers, I think they are; by the return tickets which are issued, and by the market tickets which are always issued at single fares to the third-class passengers on market days.

6144. Do you carry a large number of third-class passengers?—Yes, we do.

6145. Do you think the number would be materially increased by lowering the fares?—I think that lowering the fares would increase the number of third-class passengers, but I do not know whether that would increase the receipts.

6146. You do not think that it would be profitable to the company to lower the fares any more?—I do not know.

6147. (*Sir R. Hill.*) You have expressed an opinion, I think, to the effect that lowering the fares to $\frac{1}{2}$ *d.* a mile for market passengers was advantageous to the railway company?—No; what I meant to say was giving return tickets to third-class passengers.

6148. That you think was advantageous?—Yes; it increased the number of the third-class passengers and diminished the number of the second; but the total increase in the receipts was greater than the diminution which took place upon the second-class passengers.

6149. Upon the whole it was advantageous?—It was.

6150. (*Capt. Galton.*) Do you think the market tickets were not advantageous?—I do not say that; it only happens once a week.

6151. Do you know whether a very large number of persons avail themselves of them?—Yes.

6152. Persons who would otherwise not have travelled?—Perhaps not.

6153. Did you issue market tickets when the railway was first opened?—No, they were introduced by Mr. Cotton.

6154. Since the practice has been introduced have a larger number of persons travelled than before?—Yes, I should say so.

6155. To that extent then it has been beneficial?—Yes.

6156. So far as lowering the fares has hitherto been carried it has been advantageous?—Yes, to the third-class passengers.

C. Lanyon,
Esq.

16th June 1865.

6157. But I mean advantageous to the company?—Yes; but there is very great difficulty in dealing with the question of lowering the third-class fares below a certain point, because it has the effect of abstracting passengers from the second-class, and you cannot lower the third-class fares without lowering them on the whole system.

6158. But you have done it by giving them return tickets?—Yes, but we have not lowered the rates per mile.

6159. Have you issued market tickets to second-class passengers?—I think we have issued them for all classes.

6160. (*Sir R. Hill.*) What do you think would be the effect of lowering the rates charged generally throughout Ireland?—I think the rates are low enough for the purpose of remunerating the shareholders in the railway companies.

6161. Do you think that a general reduction of the rates would be injurious to the shareholders?—I do not know what the rates are upon other lines, but I think that upon our own line, that is the Northern Counties system of railways, the rates are quite low enough.

6162. Do you mean that if they were lower the company would suffer?—Yes, certainly.

6163. Permanently as well as temporarily?—Yes, I think so.

6164. (*Mr. Hamilton.*) Do you not think that many persons walk now who would ride if the fares were reduced?—It might be so for very short distances, but I do not think there is very much walking where the lines are with which I am concerned.

6165. (*Chairman.*) Are many of your third-class passengers ordinary labourers?—Yes, and farmers.

6166. Are many of them common labourers?—I think not.

6167. Do you think that common labourers would not travel much by railways?—No, except the emigrants and people going to England for harvest purposes. Great numbers of those travel by railway during the English harvest time.

6168. (*Lord Stanley.*) Do you think it would be possible for you, with the limited population and the limited traffic of the country, to carry as cheaply as it might be done in the populous parts of England, where the amount of traffic upon the same extent of line is so much greater?—Certainly not. There is always the greatest difficulty as to the Irish railway fares; there is a great difference between the two countries, not only with respect to the numbers of the population, but also as to the manner in which the population are scattered. The population in England is gathered into towns, which are very closely placed with respect to each other, whereas in Ireland the population is scattered over a very considerable district of country; the towns are at great distances apart, and not very largely populated, and there is a very great difference between the population of England and that of Ireland, or at least with respect to fares in the probable results in England and in Ireland on that account.

6169. (*Chairman.*) The district around Belfast is very populous, is it not?—Yes, and very prosperous also.

6170. (*Sir R. Hill.*) You think that the traffic between Belfast and Londonderry upon the Northern Counties line was injured by the construction of the competing line?—Yes, the traffic has been damaged by that line.

6171. Looking at the small proportion of the population in Ireland that are carried by railway, do you not think that there are too many railways already in Ireland to be worked with profit to the shareholders?—No; I do not think so. I do not see how those districts would have been well accommodated without them.

6172. I am speaking of the profits to the shareholders. You have given one instance in which the traffic on the line between Belfast and Londonderry

was injured by the construction of a competing line?—That only referred to the two termini.

6173. Still the traffic was injured?—Yes.

6174. May not that have occurred elsewhere, so that the construction of new lines may have reduced the traffic below a profitable point?—I think there are very few competing lines in Ireland, but I have always held the opinion, and I have stated it, that I do not think competing lines through the same district should be permitted in Ireland, because the country is not rich enough to afford it.

6175. We have been informed that several of the Irish railways are in a state of bankruptcy?—I believe that some of them are.

6176. And yet that more lines are in progress?—I do not know whether, in that district in which these bankrupt lines are, there are any more in progress; there are lines at present in progress, but very few.

6177. We have been assured that there are many railways in Ireland which not only pay no dividend to the original shareholders, but which cannot altogether keep their engagements with the preference shareholders and the debenture holders?—I cannot speak from personal knowledge of any with the exception of the Irish North-western line. I do not know as to any of the others.

6178. That being the state of things, can you account for applications being made to Parliament for powers to construct new lines of railway?—That is a very difficult question to answer; it is difficult to assign a reason for the making of railways. The spirit of speculation is so great that you cannot, I think, assign any particular reason.

6179. (*Capt. Galton.*) You think that railways are made more as a matter of speculation than to supply the actual wants of a district?—No, there must be a corresponding want before the speculation is entered into.

6180. (*Lord Stanley.*) Perhaps you mean this, that some lines are made to sell, and some others are made to be worked?—I am not prepared to answer that question.

6181. (*Mr. Hamilton.*) I suppose, with the exception of the neighbourhood of Belfast, the people in Ireland are less able to pay high rates than the people are in England?—I should say so certainly.

6182. How do you get out of this difficulty. You say, on the one hand, that you must have higher rates, because the population is not so dense, and on the other hand, the people are so poor that they cannot pay high rates?—Yes, that is the case, and I think that the two things are quite compatible as facts.

6183. (*Capt. Galton.*) If a railway is to be of real use to the population, ought not low rates to be charged?—I think that low rates ought to be charged, certainly, and I consider that the rates which are charged upon the Northern Counties line, that is, the rates with which I am intimate, are as low as they reasonably can be made.

6184. Is the single fare that is charged at the present time the same as used to be charged to passengers travelling by Bianconi's cars?—I do not know what his fares were.

6185. A penny a mile.

6186. (*Mr. Hamilton.*) Do you not see that if you impose a rate in the interests of the shareholders which is too high for the people, you practically make the railway of no use to the people?—Of course you could impose such a rate of fare as would make a railway useless to the great majority of the people.

6187. The rates in Ireland are apparently higher than the rates in England, particularly for the third-class passengers, although they are less able to pay high rates than the people in England; and the conclusion seems to be that the people in Ireland do not derive the benefit from the railway system which it is desirable they should derive?—The answer to that I think is that you have five or six passengers in England for one in Ireland, and that the great number carried in England will pay at the smaller rate.

6188. (*Capt. Galton.*) I thought you stated that you did not consider that the labouring classes travelled at all by railway because the fares were too high?—No; I think that there is very little travelling among the labouring classes, except at those periods of the year when those classes of people are emigrating to England for the harvest work. But when you talk of the labouring class in Ireland, it should be remembered that the farming class in Ireland are what the labouring class are in England; they have small farms, and the small farmers in Ireland are really not better off than the labouring class in England.

6189. There is a class below that class again, is there not, who would travel by railway if the rates were very low?—Yes; but the labouring class in Ireland are not in the same proportion as the same class in England. Take, for example, an agricultural district; you will find a farmer in this country farming 2,000 acres, and he will have a great number of labourers employed upon that farm. But that number of acres in Ireland, instead of being held by one farmer, will be held by a number of small farmers holding from 10 to 20 acres apiece, and these men are virtually labourers; they do not pay for the labour of others.

6190. (*Mr. Hamilton.*) In which case would there be the greater amount of population upon 1,000 acres, in England or in Ireland?—I believe that the agricultural population of Ireland may perhaps be very nearly equal to that of England; but a large proportion of the labouring population in England consists of manufacturing labourers, while in Ireland there are no labourers connected with manufactures, except in the districts, perhaps, round Belfast and Dublin. There are very few manufactures, except in those localities, and you can scarcely compare the two countries with reference to the labouring classes, or the numbers among them who travel.

6191. (*Chairman.*) Do the population who are employed in manufactures, travel a good deal?—Yes; by excursion trains and pleasure traffic. On occasion of holidays there is a good deal of excursion and pleasure traffic from Belfast among the labouring class connected with manufactures.

6192. Do you think that an amalgamation of any of the lines in the north of Ireland would be desirable?—Yes; most desirable. I think that an amalgamation of the railways going from Belfast to Dublin is a matter of very great importance indeed. I think it is desirable to amalgamate the line from Belfast to Londonderry; that line of railway used to be worked by three different companies. There was first of all the company from Belfast to Ballymena, then the company from Ballymena to Coleraine, and then the company from Coleraine to Londonderry. That state of things caused the greatest possible amount of dissatisfaction; but now we have purchased the Ballymena and Coleraine line, and we work the line from Coleraine to Londonderry, and the difference in the degree of comfort with which that line is now worked is very great indeed. And if the same system was carried out between Belfast and Dublin, it would be a matter of the greatest importance and value to the public.

6193. Do you consider it important, in the interests of the shareholders, and also to the public?—Yes; I have no doubt that the interests of the two are identical. I know of no more glaring case of want of amalgamation than the want of amalgamation between those three lines from Belfast to Dublin, nothing can be worse.

6194. What are the obstacles that prevent amalgamations being carried out to as great an extent in Ireland as in England?—I cannot account for the reason of it; but in these lines especially I think the great objection has been the difference in the value of the capital upon each line; there has always been the difficulty of one line attaching too great a value to its property, and that is rather an obstacle.

6195. (*Mr. Glyn.*) Has not some negotiation taken

place with that object in view?—There was a step made in that direction in the last year.

6196. Upon what ground did the negotiation go off?—Some of the shareholders on the junction line and on the Drogheda line combined for the purpose of forcing the directors into an amalgamation, but they opposed it, stating that they themselves were endeavouring to take steps for bringing about an amalgamation.

6197. Has nothing been done since?—I believe not.

6198. (*Chairman.*) Would the advantage which the public would derive from amalgamation be confined to greater regularity and better arrangements, or would the fares be lowered?—I think that all those objects would be accomplished by an amalgamation; that the public would be benefited and the shareholders too.

6199. (*Mr. Glyn.*) Are passengers booked through now upon that line?—Yes, they are; but there are great delays arising from the different interests; for example, the Belfast Junction, having an intermediate line between Portadown and Drogheda, their interest is to consult the local traffic, and not so much the through traffic from Belfast to Dublin, so that each party has a different interest to look after.

6200. Are all the three lines dividend-paying lines?—Yes, the Ulster line has been paying from $5\frac{1}{2}$ to 6 per cent.; the Belfast Junction has been paying from 3 to 4 per cent. I am not sure about the Drogheda line, but I think it pays 4 per cent.

6201. (*Chairman.*) To what extent should you like to see amalgamation carried in Ireland?—I think that the country might be divided into districts, and that there might be a system of district amalgamation of different lines of railway.

6202. So as to have only two or three. Would you venture to extend your suggestion as far as that?—I do not know whether it should be limited to two or three only, or whether it would require more numerous districts than that. I think that is a matter which would require a great deal of consideration as to the number of districts. I should like very much to see a district system of amalgamation carried out.

6203. Have you ever considered the possibility of all the lines being amalgamated into one system?—No, I have not.

6204. Do you think there would be objections to such an extensive amalgamation as that?—I think there would.

6205. What evils do you think would result from such an amalgamation?—There are such varieties of interests and such varieties of advice, that I should require to know in what way the amalgamation would be proposed to be carried out before giving a definite answer to that question.

6206. (*Capt. Galton.*) What objections would there be to the lines being all under one management?—I should not think that one management of the whole system would be desirable, certainly.

6207. Can you state any specific objections to such a course being adopted?—I think it would be very difficult indeed for one management to have sufficient information upon all the different local causes which should govern the fares, and so forth, of the country.

6208. Are the various causes differing more in Ireland than they would be upon the points of the North-western system?—No; but there is a difference in this respect. The London and North-western is a system, taking London as its commencement, having a certain district over which it has to travel. When you take districts like the districts of Ireland, I think the system will be completely different, because there are so many different centres. It is not one great trunk line like the North-western, with all its tributaries and branches.

6209. Suppose we take the English Midland; that, you would scarcely say, was consisting of one centre. Does not that occupy a district which runs to a variety of places very much like the Irish districts?

C. Lanyon,
Esq.

16th June 1865.

—No, I think not; the Midland is very much in the same way as the North-western.

6210. It starts from Derby?—Yes.

6211. And runs to Leicester, Hitchin, Leeds, Bristol, and Birmingham?—Yes; but then you must take into consideration the circumstances under which all that amalgamation has arisen. It has arisen a great deal from the necessity for self-protection and the necessity for purchasing up lines, and a vast number of causes which certainly do not exist in Ireland.

6212. Is there any more reason why a central board in Ireland should not be capable of developing the local traffic of the different towns to which the lines run, than there is in the case of some of the large English companies which run to a great number of towns in different parts of England which differ very essentially one from the other?—I should rather like time to consider that question in all its bearings. My impression is that at present one general system of management for Ireland would be rather different to any of the systems that you have mentioned.

6213. (Mr. Glynn.) At any rate you would wish to have all the smaller railways merged into the larger ones?—Certainly.

6214. (Mr. Hamilton.) It is only a question of degree in your mind?—Yes.

6215. You are quite in favour of amalgamation as a principle?—Certainly.

6216. (Chairman.) Do you know whether any considerable amount of traffic in goods is still carried on over the common roads in Ireland, and not by the railways?—I believe in several districts there is traffic still carried on by carts.

6217. Do you think that in any instance it would be unprofitable for a railway company to lower its charges so as to get that traffic?—I believe it is absolutely necessary to do so in many cases. We find it quite necessary with reference to goods upon the Northern Counties line, in order to do away with the cart traffic, to lower the fares. At present there is very little communication between any of the towns with which we are connected and Belfast by road.

6218. Cannot a railway always afford to carry much cheaper than it is possible to carry by horses and carts?—Where the distance is great it certainly is, but not for some distances, where labour is so cheap as it is in Ireland.

6219. For what distance do you think it would be possible to carry cheaper by the road than by the railway?—In the first instance when the Northern Counties was opened, people used to come from Ballymena to Belfast by cart, a distance of 36 miles, and even from Ballymurragh, a distance of 70 miles, until the rates were lowered.

6220. (Capt. Galton.) Passengers or goods?—Goods.

6221. (Chairman.) Has the railway company lowered its fares sufficiently to absorb all that traffic?—That traffic has been completely absorbed now.

6222. With a profitable result to the railway company?—Yes.

6223. (Capt. Galton.) What district were you alluding to, when you said you thought there was some traffic still carried by the road?—I say for short distances, for instance, for some of those towns in the neighbourhood of Belfast where the distances are not very great, where the line of railway is longer than the road, there is some cart traffic still in existence, but only for short distances.

6224. Would it be always worth the while of the railway to have a train running to carry that sort of traffic very cheaply?—Yes; goods traffic cannot be carried for a short distance so very cheap, because the terminal expenses are the same. There is a good deal of terminal expense with goods; and whatever the distance is the terminal expenses are the same.

6225. (Sir R. Hill.) The goods would have to be carted to the station, and again from the station?—Exactly.

6226. (Capt. Galton.) Are passenger cars much used still for travelling in Ireland between any of the places supplied with railways?—I am not aware of there being any great traffic with cars in any of the districts with which I am concerned now where there are railway stations.

6227. (Chairman.) Do you think in any instance where traffic comes along the roads for a distance of 30 or 40 miles through a district in which there is a railway communication, that there must be something wrong in the system of management of that railway if it did not take the means to secure that traffic for itself?—I do. I think every railway ought to be in a condition to put down the cartage upon the roads where the distance exceeds 25 or 30 miles.

6228. You think that no traffic ought to go upon roads more than from 25 to 30 miles?—I think the railways ought to take the traffic, decidedly.

6229. (Mr. Hamilton.) Do you suppose that there is still a great deal of traffic for distances in excess of that which the railways have not already got?—I cannot speak to any other district than the one with which I am myself connected. In that district the cartage has been almost altogether absorbed by the railways.

6230. (Mr. McClean.) Do you think there is any necessity for Government interference in Ireland?—I should like to know what the nature of the interference would be before answering the question.

6231. Do you think they are sufficiently advanced now to be able to protect their interests the same as in England; or do they require any assistance from Government, and what?—I do not know of any assistance they would require, unless it be in the way of loans at a lower rate of interest than they are able to obtain them at present.

6232. Do you think that could be justified in any way?—I have always thought that it would be a very fair system to adopt to give loans to railways in Ireland at a less rate of interest than what they could generally get money at in the market.

6233. (Mr. Horsfall.) Do you think that that would be just to the English railways, some of which immensely require assistance?—I think the railways in Ireland have not the same advantages as the railways in England, consequent upon the population not being so great; and at the same time I think it a matter of the utmost importance for the development and improvement of Ireland, that these railways should exist and should be worked.

6234. (Mr. Hamilton.) Will you point out in what way it would be any assistance to those railways that pay no interest at all, either to their preference shareholders or their debenture shareholders? How would they be benefited?—I do not suppose there is any case in which the debenture shareholders are not paid. The preference stock in some cases is not paid; but I believe in all cases the debenture shareholders receive their interest. It is in that respect I should conceive the benefit would result, inasmuch as, if the debenture holders could be paid off, and that debt taken by the Government, it would to that extent relieve the railway companies. I think that if the railway companies could obtain loans at the Government rate of interest it would then be very reasonable to ask them to reduce their fares to the extent of the saving that would be effected by the saving of the difference in the rate of interest. I think that would be a very reasonable and beneficial arrangement.

6235. (Mr. McClean.) Would that reduction apply to passengers as well as cattle and minerals?—Yes.

6236. I think you carry large quantities on the Ballymena railway?—Yes.

6237. Do you consider that that is owing to the great facilities you have in connexion with Belfast harbour?—We are very fortunately circumstanced with reference to Belfast harbour, because we have a tramway which runs down to the quays, on which the coal can be shipped from the vessels into our trucks and carried inland upon the railway.

C. Lanyon,
Esq.
16th June 1865.

6238. The Ulster railway has no communication with the harbour?—No.

6239. I suppose that only a very small quantity of coal is carried upon that line?—Not only that, but the canal runs parallel with the Ulster railway, by means of which a great coal traffic is carried on into the interior of the country.

6240. And upon that canal I believe low rates are charged?—Very low.

6241. (Mr. Hamilton.) Do you know what they are?—I do not.

6242. (Mr. Glyn.) You have advocated the absorption of these small railways into the larger ones; would you do that by compulsion, or do you think that should be a matter of negotiation?—I do not think it can ever be done except by compulsion.

6243. In what way would you compel it to be done?—By Parliamentary power.

6244. Upon what footing or what basis would you propose that that compulsory power should be formed?—I am not prepared to state exactly how that could be done; but I should think there would be no difficulty in arranging the matter by arbitration.

6245. You would insist upon arbitration at the average rate of a certain number of previous years' rates?—Exactly; and taking certain data for the valuation of the stock and so forth of the railway, I cannot conceive any difficulty in effecting the amalgamation.

6246. Would not the company be entitled to be shown any prospective advantages which might arise from it?—I think any company would be fairly entitled to that.

6247. (Sir R. Hill.) Is not the price of the shares generally an indication of all advantages, present and future also?—Certainly it is a very fair indication of the market value of the property; and I think it would to a great extent influence a decision in attaching value to the property.

6248. (Mr. McClean.) In similar cases in England, where very low dividends are paid, do you think Government should interfere and lend money upon low terms?—What similar cases do you mean?

6249. Where very low dividends are paid, such as the Great Eastern, and some of those large agricultural district lines?—I suppose in point of fairness if it were done in one country it would have to be done in another. I have not considered that point in all its bearings; but I am merely speaking with reference to the effect upon Irish railways.

6250. (Mr. Hamilton.) I understand your object to be, not that Government shall benefit the shareholders, but that it shall benefit the public without damaging the shareholders?—I speak more of a system that would be mutually beneficial, because the interests of the shareholders cannot be sacrificed to the interests of the public, nor can the public be sacrificed to the interests of the shareholders.

6251. Surely it is beyond the province of the Government to inquire what is for the benefit of the shareholders. They have entered into a speculation, good or bad, and they must stand by it; but if the Government can show that it is for the benefit of the public without damaging the shareholders, there might be some case for considering the subject?—Yes, there might.

6252. (Mr. McClean.) As an engineer, you have several railways on hand in Ireland, have you not?—I have just finished most of the lines with which I am connected. I allude to the Bangor line, and the Larne and Carrickfergus line.

6253. Was the capital found by the shareholders?—In the case of the Larne and Carrickfergus it was altogether found by the shareholders.

6254. Is not that an indication that capital will still flow freely into Ireland, and that they are not considered such very bad securities even at the present time?—Yes. The capital of the Belfast and Bangor line, which is only just opened, was found principally by capitalists in this country.

6255. (Capt. Galton.) By the contractor, was it not?—Yes.

6256. (Mr. McClean.) Was the line much more expensively constructed in consequence?—The capital was larger consequently.

6257. (Capt. Galton.) To what extent was it larger? Was it half as much again?—No.

6258. Was it 20 per cent. more?—Well, perhaps 20 per cent. would be nearer the mark.

6259. (Mr. McClean.) The only security the contractor has is in shares?—In shares. There was about 20,000*l.* subscribed by local parties, but that was all.

6260. (Mr. Glyn.) What did that line cost per mile?—It is one of the most expensive lines that have been made in Ireland. It goes through very valuable land, and the cuttings upon it are very deep, and there is also a long viaduct upon it. It has cost 14,000*l.* or 15,000*l.* per mile.

6261. (Sir R. Hill.) What is its length?—The new part of it, from Hollywood to Bangor, is about eight miles. From Bangor to Belfast it is about five miles—13 miles altogether.

6262. What would be the total cost?—The total cost of the eight miles I think will be about 150,000*l.* The cost of the original line from Hollywood to Belfast I think is something like 70,000*l.*

6263. Was the whole paid-up subscribed capital, the 20,000*l.*, on only the latter portion?—Only the latter portion. The first portion was made entirely by subscribed capital.

6264. Then an expenditure of 150,000*l.*, I think you said, upon eight miles, has been made upon a capital of 20,000*l.*?—Yes.

6265. Can you describe the process by which the funds were raised? I think you said they were chiefly obtained from England?—From English capitalists.

6266. By what means? Were the original subscribers English?—Yes.

6267. What was the inducement to subscribe?—It is a line which has every prospect of being a very remunerative line.

6268. Was the contract for making the line put up for competition?—No.

6269. (Mr. Hamilton.) I understood you to say that the line cost about 14,000*l.* a mile; how much of that was due to the depreciation of the stock? If it had been a cash contract, what would have been the cost per mile?—I do not think that the cost per mile would have been very much less, because a great deal of the cost arose from the great sum which was paid for the land. The land alone cost 40,000*l.* for the line between Hollywood and Bangor. Upon the 40,000*l.* there would be no depreciation; that was an actual cash payment.

6270. That would make the depreciation on the contractor's bill still greater, would it not?—No.

6271. If the contractor had to pay 40,000*l.* in cash, and has been able to recoup himself with the market price of the shares, he would lay it on still heavier for his own contract work?—No; the whole thing was contracted for at a certain rate, including the purchasing of the land. The purchase of the land came to a great deal more than was anticipated; and I believe that the contractor has had but a very small margin between the amount of his contract and the actual cost of the line.

6272. (Mr. Glyn.) Then in fact it has been a losing contract to the contractor?—I think it has been.

6273. (Sir R. Hill.) Is it a single line or a double line?—It is a single line.

6274. I think you said that the total cost of the eight miles was 150,000*l.*?—Yes.

6275. Of which about 40,000*l.* was paid for land?—Yes.

6276. That would leave about 110,000*l.* for the works?—Yes.

6277. Is not that a high price to pay for eight miles of single line?—It is not a high price with such works as there are upon that line. The cuttings are tre-

C. Lanyon,
Esq.

16th June 1865.

mendously heavy, and there is a very long viaduct 80 or 90 feet in height, which is a very expensive work.

6278. What class of traffic do you have upon it?—Entirely pleasure traffic, sea-bathing traffic. Great numbers of people occupy Bangor as a place of residence all the year round.

6279. Is it a marine suburb of Belfast?—Yes, the same as Kingstown is to Dublin.

6280. (Mr. McClean.) Have you any suggestion

to make as regards the improvement of the railway system of Ireland?—No, I think not; with the exception of the desirability of amalgamation, upon which I have already given evidence. I think that is a very important point for consideration.

6281. (Chairman.) You think the shareholders generally would not offer very much opposition to amalgamation?—I think not.

6282. (Mr. Hamilton.) Have you known any instance in which Parliament has been asked to pass a measure for compulsory amalgamation?—No.

Adjourned till Wednesday next, at 12 o'clock.

Wednesday, 21st June 1865.

PRESENT:

THE RIGHT HON. THE EARL OF DONOUGHMORE.
THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
SIR ROWLAND HILL, K.C.B., F.R.S.
T. B. HORSFALL, ESQ., M.P.
ROBERT DALGLISH, ESQ. M.P.
GEO. CARR GLYN, ESQ., M.P.

A. S. AYRTON, ESQ., M.P.
CAPTAIN DOUGLAS GALTON, R.E., F.R.S.
E. T. HAMILTON, ESQ.
J. R. MCLEAN, ESQ., Pres. Inst. C.E.
WILLIAM POLE, ESQ., F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

The EARL OF CLANCARTY examined.

6283. (Chairman.) Your lordship is a director of the Midland Great Western Railway of Ireland?—I have been a director of the Midland Great Western for seven years.

6284. Have you taken an active part on the board of directors?—I have attended the meetings of the board regularly, and I have taken great interest in all their proceedings.

6285. Have you ever made any proposal to your colleagues with regard to a general lowering of the fares and charges?—I have moved resolutions for the purpose of reducing the fares to what they were at the time when I joined the board of directors. In the year 1861 they raised them 10 per cent., and up to that period there had been a steady increase of traffic, in passengers, and in every way, and a growing popularity of the railway system. In the year 1861, very much at variance with my views, the board decided upon raising the fares 10 per cent. I told them at the time that I thought such a step would be injurious to the revenue of the company, and would render the railway company extremely unpopular. The passenger fares were raised 10 per cent..

6286. Upon all classes of passengers?—Yes.

6287. What were the fares per mile before that increase was made?—I cannot say exactly what they were per mile, but that can easily be ascertained by a comparison with the mileage rates of the present day.

6288. What are the fares at the present time?—The present fares are $2\frac{1}{2}d.$ a mile for the first-class passengers.

6289. What are they for the third-class passengers?—They are generally $1d.$ a mile, but sometimes they are higher. For first-class passengers also the fare is sometimes higher than $2\frac{1}{2}d.$ a mile.

6290. What has been the result of the additional 10 per cent., has it been profitable to the company or otherwise?—There has been a decided loss. I had a table prepared showing the figures, with the view of placing it before the directors of the company, and have brought a copy of it here in case the Commission should wish to see it. The result of the change is most apparent in the annual returns of the passenger traffic on the extension line from Athlone to Galway, which, commencing at 8,905*l.* in 1852, steadily rose until they reached 16,395*l.* in 1861, when the fares were raised and the revenue fell off in the first year about 2,000*l.*, and more in subsequent years. The effect was also apparent upon the other parts of the line. The yearly returns of passenger traffic on the remainder of the line were for the first year 79,497*l.*;

for the second year, 77,236*l.*; for the third year, 77,708*l.*; for the fourth year, 80,945*l.*; and for the fifth year, the year ending in June 1861 (about the close of which the fares were raised), 83,058*l.* In the following year the revenue fell to 79,127*l.*, and has not improved since.

6291. (Capt. Galton.) In 1861 the amount was 83,958*l.*?—Yes, that was up to June, 1861. In the month of May of that year the fares were raised, and from that time downwards there was a visible falling off in the traffic.

6292. (Chairman.) Have you been giving the receipts upon the different classes of passengers?—Yes.

6293. Has there been a falling off since that time in the number of the passengers, or in the receipts from the passengers?—There has been a falling off since that time in the number of the first-class passengers; but perhaps an increase in some other classes.

6294. The inference being that the passengers travelled by the second and third class instead of by the first-class?—Yes, the passengers deserted the first-class very much, and in part deserted the second; but the third-class became most productive, although the third-class carriages performed but half the number of journeys in a day that the first and second class carriages do.

6295. Does the return to which you have referred show what the falling off in the second-class passengers was?—Yes, it does.

6296. (Mr. Horsfall.) You have given us the falling off in 1862 as compared with 1861; did this continue in 1863 and 1864?—Yes, but the return should be looked at, coupled with the note at the bottom, which indicates that a branch was opened to Sligo in 1863, which of course swelled the traffic returns.

6297. (Capt. Galton.) Was there an actual loss in the receipts from the first-class passengers?—Yes, a decided loss.

6298. Does the return show what that loss was in money?—Yes, I will take the first-class passengers from Athlone to Galway in 1861. There were in the half year ending in June of that year 9,474 first-class passengers, and that number fell, in the corresponding period of the following year, to 6,468.

6299. (Chairman.) The number has rather increased since that time, has it not?—No, the number of passengers has not increased. It will be observed that these are half-yearly returns, and one half-year is

The Earl of
Clancarty.

21st June 1865.

more productive than another; taking them together you will find that there was a falling off.

6300. (*Capt. Galton.*) Was the 9,474 the number of the passengers, or the money received?—The number of the passengers.

6301. Can you give us the receipts in money for the half-year ending June, 1861?—Yes. In June, 1861 the receipts amounted to 2,055*l.* 5*s.* 1*d.* In the corresponding period of the following year it was 1,691*l.* 5*s.* 10*d.* In the corresponding period of the following year it was 1,792*l.* 12*s.* 3*d.*, showing a slight increase.

6302. Then it has barely recouped itself yet?—No, it has not done that yet; in fact, it has rather a downward tendency than otherwise.

6303. (*Chairman.*) Was there not a general falling off in the receipts on most of the Irish railways at about the same time; that is after 1861?—There was a depression in the country, no doubt.

6304. (*Capt. Galton.*) Has the total receipt from passengers fallen off?—It has also fallen off. In 1861 it was 16,395*l.*; in 1862, 14,400*l.*; in 1863, 12,314 (that might be partly owing to the depression of the time); and in 1864 it was 12,915*l.*

6305. Do you believe that that falling off between 1861 and 1862 was owing partly to the depression of the times?—No, certainly not; the times had not arrived at that state of depression, and I was not able to adduce that as an argument against reducing the fares. There was no threatening deficiency of produce at the time, and therefore I was only able to take the general principle. If I had had a notion that the country would have become so poor as it afterwards did, of course that would have been a very strong argument against raising the fares.

6306. (*Chairman.*) Will you be good enough to state what steps you took in consequence of this state of things?—I several times moved that a change should be made in the fares, but I was always met with the difficulty, which must necessarily exist while the country is divided into a number of separate companies, that they could not lower their fares without interfering with their neighbours, or without their concurrence. There was besides a general feeling on the part of my co-directors that it would be impolitic, that there would be a loss of revenue by so doing. Having thus failed in obtaining any general reduction of fares, I obtained a committee of my board, who consented to recommend that on a portion of the line, the extension from Athlone to Galway (upon which the Baronies guarantee a sufficiency of revenue to meet the interest of the Government loan), the experiment should be made of reducing the passenger fares 10 per cent., I undertaking to guarantee the Company, or rather the Baronies, in which I am a considerable cess payer, against any loss on their passenger revenue for six months from the commencement of January last to the termination of the present month. The offer was recommended to the board as a safe means of making an experiment, which if unsuccessful would be easily abandoned at the end of the six months during which the guarantee was to subsist. However it was refused, and the consequence will be to the Baronies a loss probably not much under 1,000*l.* on that part of the line for the current half year.

6307. So that the Baronies have had to pay 1,000*l.* this year more than they had last year?—Yes. Had my offer been accepted, my belief is that the reduction of 10 per cent. on the passenger fares would have led to a decided improvement in the revenue of the line.

6308. Has there been a great falling off this year as compared with the first six months of last year?—There has been a falling off; I have here a return of the receipts for each week from the commencement of the present year on account of passenger fares, and a corresponding one for the past year, and it is remarkable how very great the falling off has been.

6309. There has been no alteration in the fares between this year and last year?—No.

6310. (*Capt. Galton.*) But there has been a falling off in the traffic?—Yes. The railway system, under existing circumstances, is extremely unpopular, and there is as little done, and as little co-operation on the part of the public with the interests of the railway companies, as it is possible to conceive.

6311. (*Mr. Glyn.*) What was the reason assigned for the rejection of your Lordship's offer of a guarantee?—The only reason that I ever heard assigned was, that there was to be an International Exhibition in Dublin this year, and therefore that it would not be a fair test; that the higher rates of fares might be more productive.

6312. (*Mr. Horsfall.*) Would any further reduction, up to 30, 40, or 50 per cent., do you think, recoup itself in a few years?—I cannot venture to speak beyond what experience fully warrants me in saying. I observed that the rates which we were charging when I first joined the Board of Directors were comparatively moderate, and there was a growing traffic upon the line in every department, but I observed that the reverse was the case when they began to tamper with the fares in the direction of raising them.

6313. (*Lord Stanley.*) Have you already stated how long ago that was?—Yes, in 1861, the change was made in the month of May.

6314. Can you trace the falling off distinctly to that change?—No, not altogether, for I believe that the depression in the country had a very considerable influence upon all the railways. I think at the same time that the very circumstance of the depression existing in the country should have been an argument for lowering the fares then instead of raising them; the depression implied a want of means on the part of the public to avail themselves of railway accommodation.

6315. (*Capt. Galton.*) I thought you stated that in the first year after the reduction the depression in the country had not commenced?—Yes.

6316. And therefore you attributed the falling off in that year directly to the raising of the rates?—Exactly.

6317. (*Mr. Ayrton.*) Is not the west of Ireland that part of it which has been chiefly depopulated by emigration?—I should not say chiefly so. I think it is not more so than other parts of Ireland, but there has been very considerable emigration from the west of Ireland certainly.

6318. (*Mr. Horsfall.*) Although you proposed to reduce the fares by 10 per cent. upon the rate charged in 1861, was your proposal to reduce them by 10 per cent. upon the rate charged in 1862, because, in the one instance it would have been a reduction to the extent of 20 per cent., and in the other of only 10 per cent.?—My proposition was merely to return to the old rate, but I should not have been disinclined to go a little further, because I observed that our rates were even at that time higher than they were on most of the English railways.

6319. (*Sir R. Hill.*) Have the expectations of the directors as to the increase of traffic from the opening of the Exhibition in Dublin been realized?—Decidedly not. The receipts from passenger traffic exhibit a falling off as compared with last year. *A table containing "Abstracts from the half-yearly reports of the Midland Great Western Railway from July 1851 to June 1864," &c., was handed in (vide Appendix AG).*

6320. (*Chairman.*) As I collect from the return there appears to have been a falling off of about 14 per cent. in the first five months of this year in the receipts from passengers?—Yes.

6321. Do you attribute that to the unpopularity of the railway amongst the people in the country?—I think that is one element in it; but it is no doubt an important one.

6322. (*Mr. Horsfall.*) When was the Exhibition opened?—It was opened in the month of May, and May and June were to have been the two months in

*The Earl of
Clancarty.*

21st June 1865.

which the receipts were to have been so largely affected, but I do not find that much has resulted.

6323. (*Sir R. Hill.*) But for the Exhibition the loss would have been probably still greater?—I do not think the Exhibition seems to have influenced it very much; there has not been above 100*l.* difference.

6324. (*Mr. Hamilton.*) I think you attributed the difficulty you found in lowering the fares to a want of concert with the neighbouring companies?—It was stated to me that the directors could not without appearing to run in rivalry with the Great Southern and Western Company, which runs nearly parallel to us, do such a thing on the East of Athlone.

6325. Has there been any attempt made to amalgamate the different systems of railways in Ireland?—There has been none to amalgamate those two railways.

6326. Has the proposition never been discussed?—Not as a board question. I have discussed it with many of the directors, and I certainly think that the whole principle of amalgamation would be most desirable, but none so desirable as to have them under the control of the Government, none that could possibly have the same beneficial results.

6327. (*Mr. Ayrton.*) Do you think that putting the Irish railways under the control of the Government would promote and encourage private enterprise in Ireland?—I think that private enterprise is very nearly extinct in Ireland with reference to the railway system. Such ruinous consequences have resulted from railway investments, that people are very cautious indeed in going forward now; some railways in course of construction have been stopped altogether.

6328. Is there no private enterprise in Ireland connected with railway undertakings?—I do not think there is to any great extent. It would very much depend upon the facilities which the railway companies give for the transmission of manufactured goods; but I am not aware of any special manufacturing or other establishments of any kind which have been got up in consequence of the introduction of railways.

6329. Are there no manufactories in Ireland for making and repairing rolling stock?—There was one got up in Dublin, but I am not aware that it led to much.

6330. (*Lord Stanley.*) Will you kindly explain to the Commission a little more fully what the peculiar advantage is which you expect the railway system would derive from being taken into the hands of the Government?—It is a large question, but it is one to which I have given some consideration. I think it unfortunate that the Government did not, in the outset, undertake the control of the whole railway system in Ireland. If that had been done, the construction of ill laid out lines and injudicious extensions would have been prevented, and those alone executed which would have been of public benefit. The Galway line itself would not have been laid out in its present direction; it was adopted by its promoters with a view to a great Transatlantic traffic. Instead of running direct to Galway through a wild and little inhabited country, it ought to have followed the course suggested by the old posting and mail coach communication, as the most convenient to the public, and such a town as Loughrea would not have been left out, as it now is. Lines of railway would probably have been, in general, well laid out, with suitable junctions, forming a complete network over the whole country. But even now the Government might exercise a wholesome control over the further development of the railway system.

6331. To whom should you look to prevent the multiplication of lines which from want of traffic cannot pay?—The object would be to prevent the formation of injudicious lines or any lines of railway that would not pay; my belief is that the network of railways would be very extensive, and that a well regulated system would pay well and cause an enormous amount of traffic to be developed. The next benefit would be a considerable saving of expenditure. The present system of railway management by sepa-

rate boards is insecure, and has in some cases been disastrous in its consequences. The Commission may be aware that the Irish North-western Railway is in a state of utter insolvency, even with respect to its preference shares, and some other lines are altogether stopped. This state of things arises partly from the want of a properly responsible body to regulate the accounts, for the object of the railway directors has commonly been to raise a dividend at almost any sacrifice, little considering ulterior consequences. The auditors as at present established are of no use in controlling the expenditure or in certifying the correct state of the accounts. The Acts of Parliament limit their investigations to the papers which are submitted to them by the railway directors themselves.

6332. (*Capt. Galton.*) Are you speaking of the auditors appointed on behalf of the Baronies?—I mean the auditors who are appointed by the shareholders; they are no security whatever to the shareholders.

6333. But the shareholders have it in their power to require an efficient audit to be made?—Yes; but the shareholders are very well pleased if at the half-yearly meetings a good dividend is announced, and they are not at all curious to ascertain whether the auditors have exercised a sufficient control. The auditors cannot do that because they have not the power to call for all the papers that they may want, and it is no part of their duty to determine what is for capital and what is for revenue. The result is that a great deal of expenditure is charged to capital which ought to be charged to revenue.

6334. (*Lord Stanley.*) You put it in this way, that many of the Irish railway boards are incompetent or are unwilling to conduct the affairs of their company in a business-like manner?—I think, from the circumstance of their constitution, they are almost compelled to study how to create a dividend, in order to raise the price of the shares in the market.

6335. (*Lord Donoughmore.*) To keep the shareholders in good humour?—Yes.

6336. (*Mr. Ayrton.*) May we infer from this that they conduct the business in the most profitable manner?—I do not wish to impugn the conduct of the directors. I believe that they have been appointed to perform a certain duty, and they have to consult what they think are the interests of their constituents.

6337. Do you think that they are deficient in intelligence in arriving at the proper mode of doing it?—I think that they are not under due control, and not under the control they ought to be to make these establishments permanently beneficial; there is a continual increase of charges upon capital which there ought not to be.

6338. (*Lord Donoughmore.*) Is there not also this to be taken into consideration, that a board of directors which is not very prosperous in the way of earning revenue is very much tempted to starve a line, and to postpone necessary repairs and expenditure of that sort, which ought to be current expenditure, to be carried on every year in order to increase the revenue?—I believe that to be so. The company that I am connected with has suffered severely, whether rightly or wrongly, from the imputation that such was the case; a melancholy accident occurred, involving loss of life, owing, it was said, to the line having been, in some degree, starved; undoubtedly the line did require more repairs than it had received, and those repairs now occasion a very heavy expenditure.

6339. (*Mr. Ayrton.*) It is your belief that an advantage from the change would result from the superior intelligence that would be shown by the Government managers as compared with those who now manage the line?—Not alone from that, but I think there should be responsible management, that is a responsibility to the public.

6340. If the present managers are responsible to the shareholders for a dividend, how would the responsibility of the Government directors be greater than that?—The directors are responsible to the shareholders, but the shareholders, I think, make

*The Earl of
Clancarty.*

21st June 1865.

them more responsible for the amount of the dividend than anything else.

6341. Do you mean that the Government directors are to be put under the control of the shareholders?—No, but if a transfer of the Irish railways was made to the Government, undoubtedly the management must be upon a different principle. There are two ways in which it has been proposed that Government should aid Irish railways. It was only yesterday that I formed one of a deputation to the Chancellor of the Exchequer, in consequence of some words which fell from him in the early part of the session as to his willingness to assist these railway companies. We proposed that about a million of money should be advanced at $3\frac{1}{2}$ per cent., which, replacing our present debentures, which bear interest at 5 per cent., would yield 20,000*l.*, and that, we proposed, should go entirely towards a reduction of the fares, and not to increase the dividend; just as an experiment for the purpose of reducing the fares. The Chancellor of the Exchequer declined to comply with the proposal, but he manifested great interest in the whole subject. I thought that our proposal was not the way in which the Government could best assist the railway systems in Ireland. It would be far better to leave the debentures as they are, and acting on the principle of the Act of 1844, for the share capital to be taken up by the Government. By that means the present shareholders would be stockholders and become creditors of the nation.

6342. And the Government would become the absolute owners of the railways?—Yes; I do not see any other solution of the matter. I do not see how, by possibility, the railway companies could be brought to administer the business of the railways otherwise than they do as long as the present principle of railway management continues; for a desire for high dividends will always operate with the directors; they will thus endeavour to keep themselves in office.

6343. (*Lord Stanley.*) Are you not rather proving too much; does not that motive operate in the case of every railway, whether it be in England, Ireland, or Scotland?—I am not much acquainted with the English or Scotch railways, but I believe that they are better managed than ours are, but it might be much for their advantage if the experiment of Government management were tried in Ireland, where it could easily be introduced. I am satisfied that it would not only be beneficial as an experiment, but that it would be of the utmost value in developing the resources of Ireland, which are becoming more and more necessary for the growing wants of this country. A Government Railway Board could do much that existing boards of directors cannot do, and if a great deal of what directors now do was left undone, it would be perhaps better. Such a board, presided over by a member of the administration, but otherwise permanent in its constitution, with two subordinate boards of inspectors, one for the north and the other for the south, would be an organization which, in my opinion, would be perfect for the purpose of carrying out all that the present directors are required to do, and all that would be necessary.

6344. Would you give to the inspectors the same power which the directors now have of administering the affairs of the railways?—I would give to those two boards of inspectors the same powers, subject to the orders of the central board.

6345. The boards collectively and distributively would possess and exercise all the powers which the directors now exercise as to the railways?—Yes; they should have all the necessary powers to carry on the business of the railways, but they should do nothing that was not sanctioned by the central board.

6346. (*Lord Donoughmore.*) Should they have the appointment and dismissal of the officers?—These are minor details which I think might be very easily regulated,—the higher officers being selected perhaps by the central railway board, and the more subordinate officers being selected by the boards of inspectors. In

point of fact there is a distribution of patronage now among the superior officers of the railways; the clerks are generally appointed by the heads of the departments to which they are to belong.

6347. Do you see no objection to giving so large an amount of patronage into the hands of a governing board, which patronage would be exercised to carry out political objects?—I think there would be less danger of any abuse if such patronage were placed in the hands of a board of the kind I have mentioned, presided over by a member of the administration.

6348. What is your Lordship's experience of the distribution of patronage in Ireland now in the hands of the Government. Is it not uniformly distributed for political objects?—Political objects have their weight no doubt, but I do not think that the higher objects of public duty are altogether overlooked.

6349. (*Mr. Ayrton.*) Does not your Lordship's scheme come back to this, that it would be the substitution of a board supposed to possess greater intelligence than the boards of directors which now exist?—It would be a board necessarily more intelligent for its purposes; it would be permanent, it would be selected from the whole country, and constituted for every purpose of a few members instead of a large number.

6350. That is really the benefit which you think Ireland would derive from the change, that it would have superior instead of inferior intelligence in the management?—That would be a benefit, but the great benefit would be that they would be able to harmonize the whole system and network of railways over Ireland so as to enable people to travel from one part of the country to another without perpetual interruptions arising from having to cross the lines and invade the boundaries of discordant companies.

6351. Have you not had in Ireland boards which have undertaken other great industrial works, such as improving the drainage of the river Shannon, and has not that excited universal discontent on the part of all those for whom it was intended to be a benefit?—That was a work that was very expensively carried out. I am a member of a committee of the House of Lords which is inquiring into that subject. The inquiry, I hope, may result in the recommendation of works that may be remedial of what was ill done, and may provide for the drainage and reclamation of about 100,000 acres that ought to be turned to profitable account. To that end I consider, and I wish now to impress this upon the Commission, that a proper regulation of the railway system in Ireland would be largely conducive.

6352. Still that work was originally undertaken on the precise basis which you have proposed for the railway companies, a board which was to possess very superior intelligence, to have very superior officers, and to conduct everything in the best possible way?—The parties who were charged with carrying the work out were engineers of eminence; but they found that the work was partly impracticable under the plans which they had laid out, and I believe that a great deal of money was squandered.

6353. It was a great failure, was it not?—It was.

6354. (*Lord Donoughmore.*) Half of the money that was expended upon the Shannon drainage was extracted from the landholders, was it not?—Yes; a moiety was charged upon the adjacent counties.

6355. (*Mr. Horsfall.*) Looking to the fact that many of the Irish railways pay no dividend, and that some of them are not likely to do so, do you think that this scheme of the Government taking over the Irish railways could ever be sanctioned by the legislature?—I can hardly conceive, if the subject is properly looked into by the legislature, that it would not be. So important a work as perfecting the communications of the country could not be regarded with indifference by Parliament. If the experiment can now be made in Ireland, it would be, I conceive, for the interest of England as well as Ireland that it should be. The opportunity appears favourable for putting

*The Earl of
Clancarty.*
21st June 1865.

the whole railway system of Ireland into good order, and I venture to hope it will not be overlooked.

6356. (*Lord Stanley.*) In the event of the Government assuming the conduct of the Irish railways as you propose, involving a temporary loss, should you see any objection to the deficit, be it small or great, being made up by a special rate levied over the whole of Ireland?—That question has never occurred to me, but it does appear to me to be a solution of the difficulty as to any jealousy that might exist with regard to extending any assistance to the sister country. I think it would be better that Ireland should be alone taxed for it than to be left alone.

6357. This being a matter purely of Irish improvement, with which England or Scotland has nothing to do, you think it would be worth while to meet the cost out of Irish funds rather than not have it done at all?—Decidedly.

6358. (*Mr. Ayrton.*) Speaking of purchasing the Irish railways, have you considered the basis or the principle upon which the purchase should be made?—That, I think, is laid down in the Act of 1844, according to which, upon an estimate of the average value of railway shares for the previous three years, 25 years' purchase is to be offered, with the option to the shareholders, if dissatisfied, of referring the matter to arbitration. I think the proposition equitable, and that a reference in some cases to arbitration would secure to the shareholders of any railway under a temporary depression such higher price for their shares as the circumstances might justify. It is of the utmost importance that the large investments that have been made in railway share property in Ireland, amounting to about 20,000,000*l.*, should be better secured than at present. In one railway company with which I am connected, the Irish North-western, the entire of the preference shares, for some years regarded as offering a security equal to the public funds of England, sufficient to justify the investment of charity funds, became of a sudden, through mismanagement and want of a proper system of audit, perfectly insolvent, and ceased altogether to pay any dividend.

6359. (*Sir R. Hill.*) The Act of 1844 provides that in the event of the Government purchasing the railways, it should pay 25 years' purchase on an average of the dividends for the three previous years?—Yes.

6360. Seeing that the dividends have been falling, and that a further fall is anticipated, would not the Government, in purchasing the railways upon those terms, pay too high a price for them?—I think that an equitable arrangement might be made. I cannot conceive that what is equitable should injuriously affect any party. Undoubtedly 25 per cent. upon the present rates, in some instances, would be very low, but it might be ascertained by arbitration whether there was any claim to have anything more.

6361. Your Lordship has said that that rate of payment would be low; would it not rather be high, the dividends are now falling, they have fallen, and they are expected to fall still further?—I do not know what the grounds are for expecting them to fall further. I rather think that, even under the present unfavourable circumstances and the present management, railway property will rise, because it has pleased God to restore something like plenty to the land, and there is the promise now of a very fine harvest, and it is commonly observable that after a series of bad harvests there is a cycle of good years with corresponding prosperity. I do not think that there is any ground for supposing that shares will fall lower than they are now.

6362. I believe that the essential part of your Lordship's plan is, that the Government shall become the owners of the Irish railways, but there are other points which probably you consider matters of detail, as to the mode of managing the railways, and so on?—Just so. One matter for consideration, of great importance to the public, would be the lowering of railway charges, so as to develop the resources of the country,

which is not done under the existing system. For example, cattle rates are so high that for the most part cattle are driven along the high roads. Railway boards being afraid of lowering their charges, lest they should by so doing incur a loss, and might be unable to return to the high rates, no single company will venture to make the experiment.

6363. These arrangements might be left to the owners of the railways, but do you propose that the Government should purchase the railways subject to conditions as to lowering the rates?—Certainly not. But I believe that the Government becoming sole owner, and acquiring an entire control over the railways, would see its way to what might be done. I am satisfied that the experiment of lowered fares might be safely made, and as the effect of it would be to open up the resources of the country, the Government would no doubt, in the public interest, exercise the powers it would acquire in that direction.

6364. Supposing the Government to purchase the railways, you would leave those arrangements in the hands of the Government?—Yes. I would observe that, under better regulations, very considerable reductions might be made in almost every branch of railway traffic. Take, for instance, the carriage of parcels. If a person travels, he is charged with no end of commissions, in the way of carrying parcels for his neighbours, for the rates are too high to send them in the regular way. If these rates were lowered, and if that department of traffic were brought in some degree under the regulations of the post-office, the parcels would be sent direct, and delivered at cheap rates. I believe, too, that the post office would derive very considerable profit from the Government having the entire control of the Irish railways. At present the Government pays for special trains for the carriage of mails, whereas, if they had the railways all in their own hands, they would regulate the trains so as to suit themselves, and avoid having, as they have now, recourse to cars and foot messengers.

6365. (*Mr. Ayrton.*) Would you put the money to be laid out in the purchase of the Irish railways on the same footing as other public money which is advanced for other public undertakings, making it a *sine qua non* that the first charge upon the income of the railways should be a return of 4 per cent. for the money so advanced?—I should rather think that a national guarantee would undoubtedly be accepted in lieu of the less certain guarantee which those railways now present.

6366. What I mean is this: if the nation purchased all those railways it would of course advance the money in the same way as it advanced money for drainage and other purposes, and would you put that on precisely the same footing, namely, that the first charge upon the income of the railways should be 4 per cent. to the Government for the interest of the money so advanced, as in the case of money advanced by the Government upon land or upon docks?—I think it would not be strictly the Government borrowing the money for the purpose, it would be merely a conversion of the railway shares into Government stock.

6367. The Government, upon certain terms, varying according to the value of the railway in which a shareholder had his stock, would have to pay an annual charge to the persons with whom they dealt?—The annual charge would be upon the nation.

6368. Do you mean that there is to be no return for the money, but that the nation is to pay the whole charge for the capital to be employed, and then work the railways without regard to any return?—I think that the nation would be much more than recouped by the returns made from the railways.

6369. Is it not to be a part of the scheme that what the National Exchequer would pay to the owners of the stock should be a first charge upon railways, to be paid out of the annual income derived from them?—It would not make much difference, I think; the railway resources would become public revenue at once.

6370. But would those resources be made equal to the charge upon the public on account of the railways having been purchased?—Those resources or the railway returns might be cultivated for the advantage of obtaining a certain revenue, or they might be sacrificed for the greater convenience of the public; that would rest in the minds of the Government.

6371. What is the principle which you think ought to be acted upon in this matter; is the proposed board to administer the Irish railways without making any profitable return to the Exchequer, or without any view to a profitable return to meet the annual charge that the public would incur?—It would be the duty of the railway board to take care that the expenditure involved in the railway system was not in excess of their receipts, taking care at the same time to maintain those receipts.

6372. Apart from the annual charge for the interest upon the capital advanced?—That would be necessarily considered as one of the ingredients in the charge upon the railways.

6373. Then you would have an arrangement by which the annual charge as to the capital should be a charge upon the railway receipts?—Undoubtedly it should be considered that there was an investment made by the Government to the extent of whatever the sum of money was.

6374. (*Sir R. Hill.*) Your plan is that the Government should become possessed of the railways by some means or other, but that the conditions should be such that the Government should not lose by the arrangement?—Undoubtedly.

6375. You think that this might be done with benefit to the present shareholders, and with benefit to the public, and you anticipate that it would lead to a reduction in the rates and charges?—I do, decidedly.

6376. Whether the Government worked the railways by boards which it might appoint, or whether the Government granted leases of the lines to companies or to individuals, is a matter regarding which you have probably not formed any opinion?—No. I beg, with reference to the evidence I have given regarding the falling off in the passenger traffic between Athlone and Galway in the present year compared with the corresponding period of 1864, to hand in this memorandum, also a like comparative return of the weekly receipts for the carriage of cattle upon the whole line. (*The same were handed in as follows*):

Comparative Statement of Weekly Receipts from Passenger Traffic on the Midland Great Western Railway Company's line, west of Athlone, from the periods commencing January 1864 and January 1865.

I have handed in the foregoing paper because there was a small reduction made this year in the charge for the carriage of cattle, and the effect of that small reduction was to produce a steady improvement in the amount of the cattle traffic.

6377. (*Mr. Glyn.*) What was the amount of the reduction made?—The difference was this, that the charge was 6d. a box containing, I think, eight head of cattle, per mile; a reduction to the extent of a $\frac{1}{2}$ d. a mile, if the distance was more than 50 miles, and another $\frac{1}{2}$ d. if it was more than 75 miles was made at the end of January of this year, the effect of which was to produce an increase in the receipts for cattle, showing the elasticity of that branch of railway traffic.

6378. (*Mr. Ayrton.*) Do you mean that it was $\frac{1}{2}$ d. less for any additional miles between 50 and 75?—For the first 50 miles it was 6d. a mile as before, for the next 25 miles it was 5 $\frac{1}{2}$ d., and so on after 75 miles. We found that there was a decided improvement.

6379. Has the rate of wages increased in the west of Ireland during the last five years?—It has, but chiefly in consequence of the emigration that has taken place, a circumstance not, I think, to be regretted, inasmuch as now scarcely any person able to work need ever be unemployed. At certain times wages rise considerably; they are still low, but they are higher in comparison with what they used to be.

6380. During the last five years has there been any increase in the rate of wages?—They have been rather on the increase than otherwise.

6381. Has there been no perceptible increase in the rate of wages during the last five years?—I should say that there has been; not very much but still there has been an increase of from 1d. to 2d. a day.

A table headed “Abstracts from the half-yearly reports of the Midland Great Western Railway,” &c. was handed in (*vide Appendix AG.*)

The Earl of
Clancarty.
21st June 1865.

W. Shaw, Esq.

W. Shaw, Esq. Cork and Bandon railway has been managed?—Yes, for years.

21st June 1865.

6385. Will you state your opinion to the Commission as to whether that railway has been managed in a manner either most profitable to the shareholders, or most advantageous to the public?—My opinion is that it has not been so managed, which has been very much owing to the great original cost of the railway. The shareholders have no direct interest, and they feel that they have none in the line. It has consequently got into the hands, I believe, of the preference shareholders, who cannot increase their profits from it beyond a certain point. I believe that that is the cause very much of the inefficient manner in which the railway is worked.

6386. Do you think that the directors have no interest whatever in endeavouring to increase the traffic beyond its present amount?—No, I think that they have no interest and no hope of getting more on their original shares, which are a 5 per cent. security, and they have no object in working it up beyond that very much.

6387. Is it your opinion that there are sources of traffic which are undeveloped and which traffic might be brought into that railway?—I think so.

6388. Of what character is it?—General agricultural produce. The town of Bandon is within 20 miles of Cork, and it is a very common practice for the farmers there to send their farm produce by their own conveyances to Cork, and I feel certain that if there was a better system of management a great deal of that produce could be brought on to the railway.

6389. Are complaints made that the charges for the carriage of agricultural produce on the Cork and Bandon line are so high as to prevent the farmers from sending their produce to market?—Certainly. They want a system in Cork for the purpose of conveying agricultural produce to the markets, and there should be an organized system for bringing the produce to the markets from the railway station. The railway company have not a good system at work; they have for the butter, but I do not think they have for the corn; and even with the butter it is a general complaint that it is rather late in the market.

6390. Have you ever considered whether, if that railway were in the hands of parties who leased it, they could work it with advantage and profit, and whether there are means by which the traffic upon the line could be largely increased?—I have not the slightest doubt of it.

6391. (Lord Donoughmore.) There are some extension lines, I believe, in the course of construction from the Cork and Bandon line towards the western counties?—Yes.

6392. Can you give any evidence as to the effect which the condition of the Cork and Bandon Company has had upon those extensions, or is it the fact that the condition of the Cork and Bandon Company has had the effect of impeding the construction of further extensions towards the western counties?—I have no doubt of it; they have not entered heartily into those extensions as they would do if their interest was directly in the line.

6393. Are the shareholders quite content to leave the management of the line in the hands of those representing only the preference shares?—I suppose that they have no hope of getting anything for their shares, as they are unsaleable in the market, and there is very little hope of their getting anything like a dividend on the original shares, and they therefore take no interest in the thing.

6394. (Mr. Hamilton.) Do you think that the directors derive their qualification from the preference shares only?—No, I do not think that; I suppose that they are qualified by being holders of original shares, although they are so worked that a gentleman holding 1,000*l.* worth of them can qualify any person he pleases.

6395. You are aware that the preference shareholders have no power of voting?—I suppose not,

but I suppose they hold original shares quite sufficient to enable them to vote.

6396. They have no *locus standi* as owners of preference stock?—No.

6397. (Mr. Horsfall.) You have spoken of the original cost of the line as being very heavy, can you state what it was per mile?—I cannot say, but I believe it was between 17,000*l.* and 20,000*l.* a mile for a single line, and carried through a country giving hardly any business, as between Cork and Bandon.

6398. (Lord Stanley.) Is it not the fact that this is a line of railway that never ought to have been made, and for which there was not sufficient traffic to maintain it?—I can hardly say that, but if it were made now, I believe that it could be made for 6,000*l.* or 8,000*l.* a mile.

6399. (Lord Donoughmore.) If the line had been taken down the river, and up the — valley, could it not have been made cheaper even then?—It is not much of a level through the country. It is a very difficult question to answer whether it would have been a more profitable line to work or not, for it is a great way round that way, and would bring in no town of any consequence except Monkstown.

6400. Would it not have brought in all the villa property along the river?—If you went round by that town you would have the business of Bandon, going in by coaches and cars.

6401. (Sir R. Hill.) What was the cause of the excessive expenditure upon the line?—It is taken over a mountain, and they had an immense deal of cutting and viaducts, and all sorts of tunnels, and it was a very expensive line to make.

6402. Was there any waste of money beyond that which arose from taking an improper route?—There were two or three competing lines, and there was much money wasted in engineering and law expenses.

6403. (Lord Donoughmore.) Was not the engineer a very incompetent man?—I believe so. He had had no experience in railway work.

6404. (Sir R. Hill.) What is the interest paid to the preference shareholders?—I believe it is $5\frac{1}{2}$ per cent.

6405. That is according to the bargain made between the parties?—Yes.

6406. Is that interest always paid in full?—On some of the shares I believe it is; but they have number one and number two preference shares. I believe on one class of those shares it is paid regularly, and on the other it is generally a year due, or something of that kind.

6407. Then there appears to be some motive for managing the railway better, although it is in the hands of the preference shareholders?—Yes; there is in some degree.

6408. From what you have stated, I suppose the ordinary shareholders have abandoned all effort to put the railway on a better footing?—They have no hope of getting much out of the line.

6409. Could the ordinary shares be purchased at a low price?—Yes.

6410. Would it not be a good speculation to buy up a large number of the ordinary shares, turn out the directors, and get an efficient set of men to manage the railway profitably?—We have not quite the speculative spirit in our country that is necessary to do that, and we might find it difficult perhaps to do it.

6411. (Mr. Ayrton.) There appears to have been a large spirit of speculation when several parties were competing for a line that it was not profitable to make?—Yes, a great deal; but that was speculation on the part of the solicitors and the engineers, and a few others; that is not healthy business speculation.

6412. (Mr. Horsfall.) Do you think that the rates might be considerably reduced with advantage to the company?—I think so, but not to a very great extent, I consider that they are not extravagantly high, but I think that there might be a better system of return tickets, and excursion trains, and matters of that sort, that would develop business upon the line.

6413. Do you think that a reduction might be made to the extent of 20 per cent. ?—I think it would be a great experiment. I think that the business of the country is not so great as that it would bring any very great addition of traffic on to the line. There is a great difference in this country where you have large towns and a large population, so that when you reduce the fares the business increases very largely ; that is not so in Ireland, we have there no great travelling public.

6414. (*Chairman.*) You would look for an increase of traffic more to a better system of looking after the sources of traffic than to any actual reduction in the charges ?—Yes ; it is a kind of business that you must push and cultivate, which the railway directors have not done, they have a monopoly, and they rest upon the monopoly.

6415. (*Lord Donoughmore.*) Is there not a very rich agricultural district lying to the West of Bandon ?—It is a very good country, and very well cultivated.

6416. The natural port of export for all the produce of that district is Cork ?—Yes, for butter and corn.

6417. There is next to none exported from Kinsale and Clonakilty ?—Very little. Cork is the great market.

6418. If the charges were reasonable would not a great deal of that produce go into Cork by the Cork and Bandon Railway ?—Yes.

6419. (*Mr. Hamilton.*) Where does it go to now ?—A great deal of it is carried by small vessels round the coast, and a good deal of it is carried by carts into Cork. I used to live on the main road from Cork to Skibbereen, and there was a ceaseless traffic carried on by carts.

6420. Do you think that the railway loses a great deal, in consequence of the excessive charges made by the company ?—I think they lose more than half through their rather high charges, and not pushing the business.

6421. (*Mr. Horsfall.*) Are you aware that an experiment for making a great reduction in the charges has been successfully tried on the Coleraine and Londonderry line ?—I did not know that ; but that is a different country from ours. I have no doubt that a moderate reduction would tell both in goods and passengers.

6422. (*Sir R. Hill.*) What is the length of the line ?—About 18 or 20 miles.

6423. There is a body of directors to manage it ?—The are three directors in Cork, and several in Dublin. There is a divided directory, and they have divided powers. There is not that concentration of power that I think is necessary in working up a business like that.

6424. Is there a secretary ?—Yes, in Dublin.

6425. And a manager ?—Yes, in Cork.

6426. Are there any other officers ?—There are the general superintendents of the stations.

6427. All these for the management of a line of 20 miles ?—Yes ; and there is no end of correspondence and circumlocation between Dublin and Cork if you want anything done.

6428. (*Lord Donoughmore.*) The Bandon Railway Company I believe work a little branch line to Kinsale ?—Yes.

6429. Upon what terms do they work it ?—I believe they get 30 per cent. of the gross receipts for three years.

6430. (*Sir R. Hill.*) Has the question of amalgamating the Cork and Bandon railway with some larger railway in the neighbourhood ever been considered ?—There is hardly any railway west of Cork. As to amalgamating it with any other railway, there might be advantages in amalgamating it with the Great Southern and Western line, for probably we should then have the trains arranged in a proper manner for the conveyance of the goods traffic.

6431. Has that matter ever been considered by the directors of this company ?—I do not know.

6432. Do you think there would be any economy in such an amalgamation ?—Yes, economy in the management.

6433. (*Chairman.*) They have different stations, have they not, at Cork ?—Yes. They could not have one station, because the river runs between them. I may mention that I sent a considerable quantity of flax at one time from Bandon to Belfast, and I had invariably to send it by Liverpool, and then to re-ship it to Belfast ; the fares were high, and the difficulties were so great in having to write to Dublin to ascertain the different charges, and the delays in Dublin were so great, that it was cheaper to send it by steamer to Liverpool and re-ship it there for Belfast.

6434. (*Chairman.*) Do you believe that traffic is lost upon other lines of railway from the want of a proper system ?—Yes.

6435. On the Great Southern and Western Railway, for instance ?—I have no doubt of it.

6436. (*Mr. Hamilton.*) What freight did you pay from the south of Ireland to Belfast ?—I think I paid at that time 30s. a ton from Cork, the through freight to Belfast.

6437. What would be the direct distance by railway ?—164 miles to Dublin and about 100 to Belfast.

6438. (*Capt. Galton.*) Is there a large quantity of flax sent from that part of Ireland to Belfast ?—Ten years ago there was rather a large supply, and there will be again I expect. We are erecting a large spinning mill in Cork, and if we do not send the flax it will be sent as yarn or as linens.

6439. Do you think that that would be a remunerative traffic for the railway company ?—Yes.

6440. Would it be sent in sufficiently large quantities to make it remunerative ?—It will be, I think, in time ; it has not been hitherto.

6441. When you say that large quantities were sent some time ago, have you any idea of the actual quantities ? Can you give in tons the quantity sent per annum ?—No, I cannot ; but I sent myself the produce of about 500 or 600 acres.

6442. To what would that amount in tons ?—I suppose over 100 tons. It was the Scotch flax. I cannot say exactly. I was merely one. There were several other mills working at the same time.

6443. Do you think that flax will continue to be grown to a large extent in the south of Ireland ?—I hope so.

6444. It is a remunerative trade ?—Yes, a great number of persons grew it last year. Some were disappointed who did not understand it, but a great number were satisfied.

6445. Does the rain affect it ?—Yes, it does. It cannot get too much rain in the growing time from May to June ; and in that way we have great advantages, for we have plenty of rain.

6446. (*Lord Donoughmore.*) In what part of the county of Cork is the flax grown ?—Generally in the west part of the county of Cork.

6447. (*Mr. Hamilton.*) If you could send the flax to Belfast by railway at the same rate as round by sea, would it not be a great convenience to you ?—Yes, decidedly.

6448. It is only the excessive charge that prevents you ?—Yes ; when I was doing it, there was great inconvenience in corresponding with parties in Dublin and Belfast.

6449. Do you know what the mileage rate is in that part of Ireland for goods of that description ?—Not now ; but I think the present rate by water is only 25s. ; that is from Liverpool, for flax from Cork.

6450. Do you know the present mileage rate upon the railways for goods of that description ?—I cannot say exactly.

6451. (*Mr. Ayrton.*) Do vessels ever go from Cork to Belfast ?—Never direct.

6452. Do you suppose that there is not enough traffic in that way to load them ?—Not wholly.

6453. (*Mr. McClean.*) Is there a continuous rail-

W. Shaw, Esq. way communication between Cork and Belfast?—
Yes; except the break at Dublin.

21st June 1865. 6454. (Capt. Galton.) There is no through communication at Dublin?—No.

6455. You do not know whether they send goods by way of Tullamore and Mullingar?—I do not think they do; that would be a very intricate way.

6456. You have no through communication from Bandon to Dublin by that route?—We have a transshipment and carriage across the city.

6457. That would, of course, add to the expense?—Yes; but the railways should regulate that; they should have one charge including that carriage.

6458. (Lord Donoughmore.) Would it not be possible,

as the stations are nearly exactly opposite each other, to establish a ferry of some sort by which the goods could be transhipped?—I think so. It is done in other places, in America very extensively. The river is narrow there; but there is a very large shipping traffic up and down the river. I see no insuperable obstacle in the way of doing it.

6459. It would be cheaper to do it in that way, would it not, than to cart the goods round?—You would have to put them on a cart to bring them to the ferry.

6460. Could not the rails be brought down to the ferry?—The Commissioners of Cork have not allowed them to do that yet; but I am sure they would do so if any well-considered plan was proposed.

The witness withdrew.

Adjourned to Friday next at 12 o'clock.

Friday, 23rd June 1865.

PRESENT:

THE RIGHT HON. ROBERT LOWE, M.P.
SIR ROWLAND HILL, K.C.B., F.R.S.
T. B. HORSEFALL, Esq., M.P.

GEO. CARR GLYN, Esq., M.P.
CAPT. DOUGLAS GALTON, R.E., F.R.S.
WM. POLE, Esq., F.R.S., *Secretary*.

THE RIGHT HON. THE EARL OF DONOUGHMORE IN THE CHAIR.

WILLIAM BENCE JONES, Esq., examined.

W. B. Jones,
Esq.

23rd June 1865.

6461. (Chairman.) You are a landed proprietor in the county of Cork?—Yes.

6462. You have resided there for more than 20 years?—Yes.

6463. Can you give the Commission any information as to the railways running into the south-west part of the county, or the Cork and Bandon Railway?—Yes. The whole of the traffic of the West Riding of the county of Cork, with a small exception in the northern part, depends upon one line of communication. We are so shut in between the sea and the mountainous country which separates Cork from Kerry, that there is but one line of communication for the whole West Riding of the county of Cork, and the whole of the trade of the West Riding exclusively depends upon Cork; everything that is brought into the country, manufactured goods of all kinds, are landed at Cork, and brought along that line of communication; every kind of export, whether it be butter, cattle, or anything else, has to go the same way. Except coals and corn, and those things which come by small vessels into the little ports, we are exclusively dependent upon the communication with Cork.

6464. The main line of communication, I think, is from Cork to Bandon?—Yes.

6465. How long has that line been made?—Part of has been opened for 16 years, and the whole of it has been opened for 14 years.

6466. What was the original cost of the line?—The whole cost of the line was about 325,000*l.* for 20 miles of railway, and that was about 18,000*l.* a mile.

6467. For a single line?—Yes; that was the amount of share capital that was made away with. But it was in endless difficulties before it was opened. It was for many years almost an insolvent concern. The chairman committed suicide, and the shareholders gave it up, and it was at last taken up by the preference shareholders only, who obtained some exclusive powers enabling them to appoint directors, and they contrived to get the line opened.

6468. The railway is at present managed by persons who are preference shareholders?—By the first preference shareholders, who hold 48,000*l.* of capital. They have the entire management of the whole thing.

6469. Where do the directors reside?—They reside in Dublin chiefly. Mr. Valentine O'Connor, one of the directors of the Great Southern and Western

Railway, is the chairman, and Mr. Greere, I think, is vice chairman; but none of them are local people. I believe there are one or two local directors in Cork, but it is only as directors appointed by the preference shareholders that they manage things as they are managed.

6470. I suppose these directors must have a qualification by holding original shares?—I do not think that they are necessarily required to hold any original shares, but I am not certain upon that point.

6471. Do the preference shareholders receive their dividends?—The first preference shareholders have always received their dividends at the rate of 5½ per cent., and the second preference shareholders, who hold less than 30,000*l.*, have sometimes got their dividends; but there is a considerable amount of bonded debt, as well as mortgage loans, as they are called, 71,000*l.* of which consists partly, I believe, of money which was advanced by the Exchequer Loan Commissioners, and the interest upon that is paid.

6472. The interest upon the loan of 71,000*l.* is paid?—Yes. The loan capital is 71,663*l.*; the first preference stock 48,000*l.*, and there is a small sum that they got out, somehow or other, 8,310*l.*, which they call perpetual 4 per cent. debentures, to be added also. I believe interest is paid upon that.

6473. What is the amount represented by the second preference shares?—The second preference shares are 29,667*l.*

6474. What do you say is the total loan share capital of the company?—The whole comes to about 160,000*l.*; that interest has occasionally been paid upon. The original shares represent 175,241*l.*

6475. Upon which no dividend has been paid?—No, except in the first year before the line was opened, when they paid it out of capital; they had power to do so then. Since the line has been opened, they have not received a penny upon the 175,000*l.*

6476. I suppose those shares representing 175,000*l.* of original capital have no price in the market?—Only about 10*l.* for a 50*l.* share, the want of any extensions very much influencing the value of them. I believe that the greater part of them are now held by persons who have bought them at the rate of from 10*l.* to 12*l.* for a 50*l.* share, and very few original shareholders remain in the company at all.

6477. Is the district which this line serves, the Bandon district, capable of producing a considerable

amount of traffic?—It is; in fact, the traffic upon these 20 miles of railway produces 20,000*l.* a year, which is over 20*l.* per mile per week; that is a very good traffic, and the whole of it is derived from that district.

6478. If the fares and charges were lowered, and further facilities were given to the public, do you think it is capable of greater development?—I cannot very well say that; we are necessarily so dependent upon Cork that everything we get must pass over that line, whatever the fares may be. I have no doubt that lower fares would be a great advantage to the country, but at the present time, the distance being so short—only 20 miles—a small increase in the amount of the fares, or on the charge for goods, would not come to any very large sum upon the 20 miles alone.

6479. You think that a reduction of the fares might be beneficial to the public; but you doubt whether it would be profitable to the shareholders and the company?—I do not know enough of the matter to be able to express an opinion upon that point, so far as the company is concerned.

6480. Your complaint, I understand, is this; that the present managers of this railway, from the fact of being interested only in 48,000*l.* of preference capital, upon which they receive a dividend, have no interest in developing the traffic?—That is the real source of our difficulty in the western parts of the county. If there was a solvent company, having the management in its hands, inasmuch as the whole of the traffic from additional extensions must pass over the line, they would promote extensions to a much greater extent for that purpose.

6481. Has the policy of the present managers been to prevent, or stand in the way of, extensions?—Not at all; it is only because they are in a dead lock; they say, "we have no money;" that is the regular answer that is given.

6482. Attempts have been made, I believe, to extend that line further westward?—There is an extension which is partially finished now, and which is called the West Cork Railway.

6483. Can you give the Commission any particulars as to that railway?—Yes; I have the details of that also. It was originally intended to go 32 miles, to Skibbereen, and the capital that they took for that, and which was believed to be far in excess of what was required, was 266,600*l.* It is the most level line, probably, in the world, and it gets into one of those great geological troughs which cuts that country from the south-west to the north-east; there is hardly a hillock to be gone through, except near to Bandon, and in order to avoid going through the ornamental ground of Lord Bandon's park they went a little out of their way, at a cost of some 3,000*l.* or 4,000*l.* We have had several proposals made for extensions in that district, and the highest estimate that was made was 6,000*l.* a mile.

6484. Was that for a single line?—Yes; they have partially completed 18 miles of it; that is to say, they have completed 18 miles of it, except the last half mile, to form a junction with the Cork and Bandon Railway; and they have stuck at that last half mile with a manager's staff, and engines actually standing in the middle of the fields, from inability to raise the money to make that last half mile into Bandon, where they come across a quantity of small property for which ready money is required, having already spent no smaller a sum than 266,600*l.* upon the other 17½ miles. They have applied to Parliament now for fresh powers to raise 160,000*l.* more; the Bill has not actually passed the House of Commons yet, but I believe it is nearly through.

6485. The line will cost how much per mile?—Considerably over 20,000*l.* a mile. I have had an opportunity of knowing what the *bonâ fide* estimate of the working engineer in cash was, and it appeared from that that it could be done for under 4,000*l.* a mile, the line was so extraordinarily level.

6486. How is it supposed that this enormous increase of cost has been occasioned?—Because there has been

no *bonâ fide* money embarked in it, except 10,000*l.* or 12,000*l.* that was raised by the gentlemen about Skibbereen. The whole thing has been done by taking the shares into the market, and getting rid of them for whatever money could be raised upon them. Everybody except the labourers has been paid in shares. To the engineer and people connected with it they have issued shares; shares have been given to them in exchange for their work instead of money to an extent that has been something frightful.

6487. (*Mr. Horsfall.*) Were the shares given at the original cost price or at a reduced price?—The Act was originally obtained by a few gentlemen living about Skibbereen; they tried for two years to get a *bonâ fide* contractor to undertake the work, but they could not; then they got into the hands of a set of people who carried on lines upon credit through Ireland. I do not like to mention their names, but they had to do with the Cork and Youghal line, and the Kinsale Junction. They handed the whole thing over to them with what little ready money was left after paying the parliamentary expenses; they took the shares, and did what they pleased with them.

6488. In any distribution of the shares in payment to the engineer, were the shares allotted to them at the original price?—I cannot tell you, but we know that they were put into their hands. The shares have been made away with, and this sum of 266,000*l.* is gone, and here is this half mile of line, for the purpose of which they could not get 5,000*l.* to pay for the land. Some of it was in the Court of Chancery, and the money had to be lodged in cash. The whole thing has been done in a most superficial way, for instance, they have wooden viaducts, little slight wire fences, and everything as trumpery as it could be.

6489. (*Mr. Glyn.*) Have the preference shareholders always received their dividends?—The first preference shareholders on the Cork and Brandon have. Their amount is only 48,000*l.*

6490. I perceive in an account rendered from the Exchequer Loan Commissioners that the company is in arrear to them, both with regard to principal and interest. Do they not take care to have the first charge paid?—I have watched the accounts for many years, and I have never observed that the first preference shareholders have not got their dividends. The second preference shareholders have been many times without them.

6491. (*Mr. Horsfall.*) Do not the Exchequer Loan Commissioners take precedence of the preference shareholders?—I think the Exchequer Loan Commissioners have got their interest.

6492. (*Mr. Glyn.*) According to the return I have before me, they certainly appear to be in arrear. The total advance made by the Exchequer Loan Commissioners to the Cork and Bandon Company amounts to 35,000*l.*; the company have repaid part of that amount, but there is a balance outstanding, and there is an arrear upon the principal and also upon the interest. I therefore cannot understand how the preference shareholders could have received their dividends?—I can state as a fact that I have watched the accounts very closely, and that there has never been for years past any statement that the first preference shareholders did not receive their interest somehow; the second, or number two, preference shareholders have continually gone without their interest. In the account that I obtained, it did not distinguish between the amount owing to the Exchequer Loan Commissioners and what they called mortgage loans, they were all put together, and they amounted to 71,000*l.*

6493. Has the interest upon the mortgage loans been regularly paid?—That has been certainly the case, because that would be a first charge before the preference shares; the preference at 5½ per cent. on 48,000*l.*, would only be 2,640*l.*, and they received 20,000*l.* per annum on the traffic.

6494. Who elects the directors?—I believe the preference shareholders exclusively.

W.B. Jones,
Esq.

23rd June 1865.

W. B. Jones,
Esq.

23rd June 1865.

6495. (*Lord Donoughmore.*) Do you think that if the West Cork Railway, the extension of the Cork and Bandon line, had been made for the amount per mile that was estimated by the engineer, it would have offered a reasonable chance of paying a fair dividend?—The 18 miles that are partially completed certainly would, for that distance it is like a trunk line, as the Cork and Bandon does the first 18 miles; the remaining 14 stand on a different ground, that is, or the greater part of it, on a branch; that would pay something, but what amount I am not able to state clearly.

6496. These 18 miles having cost over 20,000*l.* a mile, there is very little probability of the shareholders receiving any dividend?—I think not. I have a copy of the Bill, which is now before the House, in my pocket, and it is pretty clear, from the arrangements which they are making as to the shares, that they never expect to get any dividend upon the ordinary shares, and it must come to the same state of things as in the case of the Cork and Bandon, that the preference shareholders will get some dividend, and the others none.

6497. Such a system is of course very discouraging to the local parties, who wish *bonâ fide* to get railways constructed for the benefit of the country?—Just so, but in the district with which I am connected, the Clonakilty Union, which is one of the best districts about the country, we cannot get any help whatever from these people, and that naturally discourages people, and renders it improbable that any *bonâ fide* persons will be found to engage in it.

6498. How far are you from the station at Bandon?—Cork is 13 miles from Bandon, and all the produce has to be carted that distance to Cork. The bulk of my property is nearer in fact than my house is, and I am less vitally interested than most people, except in the general prosperity of the district. I have some property near Cork that would be benefited by a railway being opened.

6499. Do you think that branch lines from those trunk lines you have spoken of to Cork and to Bandon would be a benefit to the country?—An immense benefit to the country. There is nothing that seems so to civilize us and to bring things forward as the opening of railways; and bad as this Bandon line has been, it has nevertheless been of the most incalculable benefit to the district.

6500. Do you know whether any agricultural produce is carried into Cork by road?—There is a little carried by what we call carmen; those people who come in from Skibbereen and distant places; they do not think it worth while to put their loads on to the railway for a distance of 20 miles, and they still continue to carry on the road, but I think that practice is decreasing.

6501. If there was a moderate reduction of the rates charged on the Cork and Bandon line, do you think that that would induce parties to take the traffic off the road and put it on the railway?—I have no doubt of it; the most accurate calculation is made by the people as to what it will cost to do a certain thing; that is to say, whether it is carried by cart or by railway. Formerly they often took their butter to Cork in their own carts, and now from my district they commonly start at night.

6502. In order to be present in the market when the butter is sold?—Yes; but I think, if the railway would carry them and their goods cheaply, they would go by it; but any man with four, or five, or six firkins of butter may now take it down in his own cart.

The witness withdrew.

HENRY JAMES MACFARLANE, Esq., examined.

H. J.
MacFarlane,
Esq.

6515. (*Chairman.*) I believe you are a magistrate of the county of Dublin?—Yes.

6516. And a member of the Council of the Royal Agricultural Society?—Yes.

6517. Have you had any experience in the management of Irish railways?—I have been brought very

6503. (*Capt. Galton.*) For what distance would I carry it?—The railway is 20 miles long, and the country it comes from is about 30 miles distant.

6504. I am alluding to the farmers who you said started overnight; how far do they travel?—The travel 30 miles from their own homes; they would save 20 miles by the railway, but they must take the butter 10 miles to the railway, and leave their cart and horse there, and go on by the train; but not valuing their own time nor their horse's labour, they travel the whole distance of 20 miles, and sell their butter and come back again. I would submit to the Commission that the existing traffic on the Cork and Bandon Railway is a perfect gauge of what the traffic from the whole district would be. The existing traffic almost conclusively proves what the traffic on these extensions would be, because the whole of it is to be derived from this very district, the west riding of the county, and making allowance for the difference in distance of the extensions, we can almost certainly guess at what the traffic would be upon any of the extension lines.

6505. Are you now speaking of the class of traffic or of the quantity?—Of the quantity. I have already stated that the whole traffic from the West Riding of the county comes into this one neck between Cork and Bandon, and being shut in by the sea on one side and by the Kerry mountains on the other, there is no other communication whatever.

6506. I thought you stated that a certain quantity of traffic still went by the road?—Yes, the road is parallel to the railway.

6507. If the railway is extended, you think it is likely that more traffic will go by the railway?—Yes, it would increase. The 20,000*l.* received on the Cork and Bandon line I think represents the minimum traffic of the district. It is the non-paying condition of the Cork and Bandon that causes the whole difficulty through our district.

6508. (*Mr. Glyn.*) What have you to suggest, in order to cure this state of things?—The only suggestion I could make, would be an extension of the power of the Exchequer Loan Commissioners to advance money wherever there was *bonâ fide* traffic available.

6509. You would deal with the preference shareholders?—Yes, exclusively. If it was a landed proprietor's estate which had had a first mortgage upon it for 15 years, it would be wound up.

6510. You mean, that you must buy them up?—No doubt.

6511. You must pay them off or deal with them at the price at which they will sell?—Yes; but I imagine that they have never been well pleased with their bargain, and I do not think that it has been looked upon as a very valuable security.

6512. And you would improve the security by the fact of paying them off?—Yes.

6513. (*Chairman.*) What price do the preference shares fetch in the market?—I do not know; they are so seldom sold, being in so few hands, and representing so small an amount, 48,000*l.*

6514. (*Mr. Glyn.*) Are the directors selected exclusively from the preference shareholders?—I believe so. I wish to add that the present actual traffic on the Cork and Bandon of 20,000*l.* per annum proves clearly that the traffic of the West Riding would be sufficient to pay a fair interest on all extensions that are required to give full railway accommodation to the whole district; if such extensions were made at a moderate cost, say 6,000*l.* per mile, and if the incubus of the extravagant cost of the existing lines could be arranged.

much in contact with the authorities on various railway boards in Ireland, from being one of the managing committee of that Council.

6518. Principally in connexion with the annuities, shows, and the conveyance of stock and agricultural implements of all kinds?—Yes; we have tried to

induce the implement makers in all parts of the United Kingdom to send their most improved machinery to our annual shows, and we vary the places at which these annual shows are held, so that they are held in all parts of the country. I have assisted to arrange for exhibitions held in Cork, Derry, Dublin, Galway, Killarney, Dundalk, Athlone, Carlow, Belfast, Waterford, Armagh, Kilkenny, and Sligo.

6519. They are held in each province alternately, are they not?—Yes.

6520. Have you had any difficulty in making arrangements with the managers of the Irish railways in obtaining facilities for these purposes?—We have not experienced so much difficulty latterly as we used to do. Formerly they did not at all see that it was for their interest to encourage both the bringing of stock from the various parts of the United Kingdom to the distant parts of Ireland, and the bringing of passengers to see the shows; but a few years ago Sir Edward Macdonald, who was Chairman of the Great Southern and Western Railway, happened to be on our committee, when he took the subject up with his own board, and inaugurated a state of things that has had a very advantageous effect upon other boards since.

6521. Will you describe to the Commission the nature of the facilities that were afforded to you?—Arrangements were made for the taking of stock and implements from Dublin or from the port where they may happen to be landed from England, or from any of the manufacturing towns in Ireland, Belfast or Cork, to the place of exhibition, free, and for taking back those which were unsold also free.

6522. Has that arrangement been continued since that time?—Yes; it has, as a rule, been continued, but in some instances it has been very much departed from. We have had a difficulty sometimes with the chairman of a board, who did not see his way in it; at other times the directors individually have stated that they were willing and anxious that such an arrangement should be made, but that they could not prevail upon the traffic manager; and then, again, they have stated that their shareholders would not be pleased. But the facilities which have been afforded have enabled us to hold shows in places at which otherwise we should not have held them; for instance, we held a show once at Killarney, which was not a very good place, but it was supposed that it would give encouragement for taking a line of railway there, for there was no railway then to that place, and there was an undertaking given that if we held our show in Killarney the railway would be completed at a given time by Mr. Dargan.

6523. I suppose as to these annual shows that there is a very great desire on the part of many people to go and see them?—Yes.

6524. Do you think that a liberal reduction of the fares on those occasions would have the effect of increasing largely the passenger traffic?—Very much so, and also, I think, it would encourage towns where shows have not yet been held to hold them. They complain that they are not told what the railway arrangements will be, and therefore the funds they would collect depending very much upon the number of persons who would flock into the towns, they are afraid to run the risk; for instance, we have never had a show at Enniskillen, and that is one of the reasons given, not knowing what facilities would be afforded by the railway companies to bring passengers to the show.

6525. The place you have mentioned is on the line of the Irish North-western?—Yes.

6526. I suppose you consider that these annual shows are of great use to the country?—We think it is a matter of great importance that the newest inventions in machinery from all parts of the United Kingdom should be carried into the most remote parts of Ireland. We held our show last year in Sligo, and there were threshing machines and steam engines brought there that perhaps for an age would not reach the place were it not for our annual show.

6527. Very likely the farmers had never seen machines of the same kind before?—A great number of them had not, and some of them had never heard of them before. As chairman of the North Dublin Union, I am brought very much in contact with persons representing the commercial interests in the city. Dublin, as the Commission are aware, is the point where nearly all the systems of railway concentrate, and there is a general complaint (I speak from hearsay) of the arrangements made and the difficulties they find in sending their goods to different country towns in Ireland. They state that the people in England can send their goods from any port; for instance, from Liverpool, there is greater facility for sending goods from Liverpool to one of the country towns in Ireland than there is from Dublin. The through traffic is so arranged that the cost from Dublin to Sligo, or Galway, or Mullingar, or Athlone, is less from Liverpool than it is from Dublin; and they do not understand, that if it pays them to take things at a small cost from Dublin to Galway for those goods or persons coming from Liverpool to Dublin, why they should not have the same facilities.

6528. With regard to goods, taking them separately, is it not the fact that there is steam navigation between Liverpool and Sligo?—Yes.

6529. Would not the competition by steam navigation, as against the railway route, have some effect in lowering the charges, as between Liverpool and Sligo, which would not apply to the charges between Dublin and Sligo?—Quite so; but Sligo is not the only case. There is not the same steam navigation to Galway, nor to Enniskillen, nor to Athlone. I can give an illustration with regard to the passenger traffic. I was coming over to this country last week. I am connected by property with the north-western part of Ireland, and I could have gone and seen my property in the north of Ireland, and have gone from thence to London, and from London back again, and have spent a week there, and again have come back to my house in Dublin for less than it would have cost me to go from Dublin direct and back again, and this in consequence of the facilities which are given for through traffic from, say, all places north of Dundalk; I could have taken a ticket from Omagh, which is about eight miles from my place—I have a house in that part of the country—to London and back again first-class for three guineas, and I could get a return ticket to go to Omagh by the Giant's Causeway, for a month, and back to Dublin, for two guineas, making together five guineas. I could have gone back again to that place, and then have come on with the rest of my ticket to Dublin. This shows the great facilities which are given by the North-western Company to go direct to England, and the impediments on the other hand which are thrown in the way of travelling from Dublin to the northern districts, and the heavy cost of the journey.

6530. Is the fare that you pay for a return ticket from Omagh to London, three guineas, the ordinary fare, or only the fare paid for a summer excursion?—It is the ordinary fare. I believe you can get it at any time of the year. I was lately in the county of Derry, and I was talking of coming to London, and my friend said, "You had better get your ticket here, go to Strabane, come back again, and pay us another visit, instead of going to Dublin, and you will save a few pounds."

6531. (*Capt. Galton.*) But that would have been by a longer sea passage than the other way?—Yes.

6532. In consequence of the longer sea passage, passengers might be induced to go that way by charging them smaller fares?—I suppose that is an element in the matter.

6533. Is not this an analogous case. A passenger may go from London to Paris by two routes; if he goes by Newhaven and Dieppe he will pay 30s.; but if he wishes to go by the shorter sea passage, he will have to pay twice as much?—There is something in that, no doubt; but I think the case I have put is a

H. J.
Macfarlane,
Esq.

23rd June 1865.

H. J.
Macfarlane,
Esq.

23rd June 1865.

stronger one, although I admit the principle is somewhat the same:—

6534. (*Chairman.*) To go back to the question of goods, a merchant at Liverpool who received an order to send goods to Omagh would bring them to Omagh on cheaper terms than a merchant in Dublin?—Yes.

6535. Which no doubt the Dublin merchants consider very unfair?—Yes, they think so. The facilities afforded to travellers from the north-west parts of Ireland to Dublin are very bad. I reached Omagh some time ago about half-past three o'clock in the day, and unless I should sleep a night on my way to Dublin, I could not get to Dublin until five o'clock in the afternoon on the following day.

6536. Will you be good enough to explain that?—There is no train from Omagh after about half-past three o'clock in the day. I reached Omagh after the train had departed that would have taken me to Dublin, but then no other train would reach Dublin before about half-past five o'clock on the following day.

6537. Is there not a night mail train?—No, nothing goes through. You must sleep on the road.

6538. Is that by the Portadown route or by the Enniskillen route?—By either route.

6539. Although there is competition?—Yes. You cannot go from Omagh to Dublin and spend a day in Dublin without being three days absent from Omagh. One of the directors on the Irish North-western line told me that if there was a facility for going from Omagh to Dublin, which is only a distance of 86 Irish miles north of Dublin, there would be six times the traffic in passengers, he thought upon that line, for people would continually go up to Dublin; but having to spend two nights in Dublin is so expensive that they are obliged to consider how they shall avoid that expense, and they will wait for a fortnight or even three weeks in order to do their business on one trip instead of going up more frequently.

6540. Did that director tell you the reason why the railway company did not grant proper facilities to the public?—Although a director, he told me that he could not understand it. He stated that he had advocated it, but that he was outvoted in the direction; and more than that, he stated that he was a director on the line *viâ* Enniskillen to Omagh from Dundalk, and he said that a train ran into Dunganon in the after part of the day which might go on to Omagh, and come back again the next morning; and he also said that if that train came on he would continually go by it, although he had a free passage on the other line. He has been anxious about that, seeing that the advantage from it would be so great.

6541. I am afraid that the Irish North-western line is the great difficulty just now?—It is the general impression that the directors are attending more to financial questions than to the development of the traffic. I may mention what I think is rather a curious illustration showing how they do not develop the traffic. I have been asked whether I could not get on at night to London. I was in company with a noble lord who wished to get on, and I said to him: "I suppose your lordship will not do what I shall do; I shall take a post car to Monaghan, and I shall get on the steam engine, and so get on to Portadown." They would not take me in a carriage, and I cannot find out what the reason is. I got on to the steam engine; it was important to me to get to Dublin that night, and there was no other mode; I therefore got on to the engine which took me to Portadown. I then got into the mail train from Belfast, and so on to Dublin. It appears strange that they should employ an engine to carry the mails and not to carry the passengers; this has been going on for some time; it is not an accidental thing.

6542. Is that engine despatched at such an hour that if there were a train it is not likely passengers would go by it?—When there was a mail coach on that line it was used very much; but when the rail-

way was opened it had the effect of doing away with the mail coach. They try to induce all the passengers to travel by the day mail, in order that they may have a greater number going in the day time instead of dividing them between the day and the night.

6543. Then since the opening of the railway the amount of accommodation given to the public has been diminished?—It is very much less, because before they had coaches both in the day time and at night, and now they have only conveyances in the day, which would not reach Dublin at a sufficiently early hour to enable them to transact the ordinary business that arises. The earliest train from that country to Dublin does not reach the city until about half-past five.

6544. Have you some property in the neighbourhood of Omagh?—About six or seven miles from it.

6545. Do you think that if a considerable reduction in the rates and fares were made, and if the railway companies afforded more general facilities to the public, there would be any considerable increase of traffic in your district?—I am sure that there would be a very great increase both of passenger traffic and also of goods traffic. I may mention, that I wished to get up some seed potatoes to Dublin, and I got my steward in the country to send up a ton; this occurred about two months ago. I did not know what they would cost; he sent me up a ton, and the cost of carrying them, the value there being about 2*l.*, was 1*l.* 9*s.*

6546. A price which was prohibitory of any profit?—Yes, my steward was going to send up some more, but he wrote to me to say that he thought I could buy the potatoes in my own neighbourhood cheaper. In that way the metropolis suffers, from not being able to get agricultural produce brought in cheaper. These potatoes in the market at Omagh would only have sold for about 2*s.* a cwt., while the people in Dublin paid double that amount.

6547. What fuel is used in the neighbourhood of Omagh?—Both coal and turf; the humbler classes use turf. They generally get coal from Londonderry by railway.

6548. Are the rates charged for the carriage of coal high or low?—I believe they are rather satisfactory.

6549. Do you think that if coal could be brought into the interior of Ireland at very low rates it would supersede the use of turf to any considerable extent?—Not very much. Turf is the fuel of the poor; they can light a turf fire, and reduce it at once. Fires are not used for warming purposes, they are used more for cooking purposes. I am speaking now of a district where they have great facilities for getting coal. Upon the whole they think it more economical to use turf as general fuel.

6550. Probably because it is produced by their own labour?—That is an item in the matter, but also because with that fuel they can more readily light their fires when they come home from work for the purpose of cooking, and when they have done with them they go out without consumption.

6551. Are there any other facts which you wish to state to the Commission?—It has occurred to me that there is not that supervision over the railways which I think there ought to be. I felt this very much lately in consequence of an accident that occurred on the Midland Railway, when the late Mr. Senior was killed; when it was proposed that the Navan line should have running powers over the Midland. I stated before a Committee of this House that I feared very much that accidents would occur from their obtaining running powers over that line, on account of the level crossings there were immediately upon leaving Dublin, and I am very sorry to say that at each level crossing that I named there has been a fatal accident; there have been two or three at Blanchard's Town.

6552. Does not that rather point to the imprudence of Parliament in having granted those powers than the want of proper supervision?—That is one reason why I think that Parliament now are rather concerned

in seeing that there should be some safeguard introduced, and that some surveillance should be exercised over them.

6553. Do you not think that Lord Campbell's Act which imposes unlimited pecuniary liability upon the shareholders in railway companies in case of fatal accidents is a sufficient safeguard or inducement for the directors to take great care to protect the lives of the public?—Yes, to a great extent it is. But I attended at the inquest that was held on the unfortunate gentleman whom I have referred to, and it struck me then that the public were not represented. The personal friends of the deceased gentleman did not wish to appear by counsel at the inquest, but the railway company appeared, and were represented by very eminent counsel; but the public were unrepresented, and the result, as it occurred to me as a magistrate sitting at that inquest, was, that the examination and the cross-examination of the witnesses was altogether in favour of the railway company.

6554. You think, probably, that the facts of the case were not properly brought out?—Yes. I can quite understand the circumstances. I believe that the death of that gentleman resulted from mistakes. First of all he understood that the train that should have passed half an hour before he crossed, had passed, and that train killed him. There was a train going out which indicated the hour that the train generally went out after the other train had gone. It happened that that train was just going out and that the other was just passing in. There is a great curve there, and Mr. Senior did not see the other train coming in. It snowed at the time, and I believe he did not receive any warning. A man crossed the line immediately before him, and the man on guard stated that he did not see that man crossing the line. The man that crossed the line met Mr. Senior at the gate, and he stated to the jury that he saw one train coming up, and he heard the whistle and the other coming down. The gate-keeper stated, on the other hand, that he did not see that man coming or crossing the line at all.

6555. How would you propose to remedy that inconvenience?—At that particular point the company have to pay the wages of two keepers. It was a most awkward crossing, and two or three years ago this same gentleman, Mr. Senior, assisted in making the crossing better at an expense of 300*l.* or 400*l.* If a tunnel could have been put under the line there, which the present engineer of the line stated would only have cost 1,500*l.*, the 1,500*l.* capitalized at 5 per cent. would not come to so much as the cost of the two keepers; it would only be about 75*l.* a year, which I believe would hardly pay the two gatekeepers. Again, at Blanchard's Town, they might have an over crossing at about the same cost.

6556. You are of opinion that either the Board of Trade or some Government authority should have a general power to oblige railway companies to make alterations in their works if they were considered necessary for the safety of the public?—I am. I believe that at the present time their financial difficulties stand very much in the way of what they themselves see ought to be done. There is hardly a railway now that has not fallen into a state of financial difficulty, the Midland line particularly. I was on the line myself about a fortnight ago, going from Mullingar towards Cavan, and there was a gentleman in the train, a friend of mine, going to the North-western, and he said, "It is too bad; this train will be just too late for the Cavan train, so that I may be detained, and not get to my destination to-night." I said, "How can you remedy this?" He said, "If I can get the engine driver to put on the steam, I shall be in time for the Cavan train," that is, the train going to the North-western.

6557. Did he get the engine driver to put on the steam, and did he reach the Cavan train?—Yes, he was in time; but I do not think that these things ought to be done.

6558. Do you know that the little line from Cavan to Clones belongs to the Irish North-western Company?—I think it is the Ulster Company. I think that the Ulster line meets the Irish North-western line at Clones. In this morning's paper I observed a letter which alludes to the very thing which occurred to myself about three weeks ago, and which is quite illustrative of the arrangements in the part of the country to which it refers, and which I will, with the permission of the Commission, read:—

"Through traffic between the West and North of Ireland. Sir, I arrived at Cavan on Monday last from Westmeath *via* Midland Great Western Railway at 4.50 P.M., fully expecting to be taken, as heretofore, by the Irish North-western line to Dundalk. This company had, however, without any public notice that I could discover, (except some placards hastily posted at northern stations,) a few days previously altered their train to start from Cavan 15 minutes before the arrival of the Midland Great Western train, and (as one of the latter company's officials stated to me) without giving them more than a day's notice or so of the intended change. I was obliged to remain in Cavan until 11.15 A.M. next day. Was brought to Clones junction 20 minutes behind time, and five minutes late for the train to Dundalk, which they profess to meet, and was obliged to remain there two hours. Such treatment of the public is disgraceful.

"I remain your obedient servant,

"THOMAS W. WEST.

"Rath, 16th June 1865."

The witness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 27th June 1865.

PRESENT:

THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
SIR ROWLAND HILL, K.C.B., F.R.S.
T. B. HORSFALL, ESQ., M.P.
ROBERT DALGLISH, ESQ., M.P.
GEO. CARR GLYN, ESQ., M.P.

A. S. AYRTON, ESQ., M.P.
CAPTAIN DOUGLAS GALTON, R.E., F.R.S.
J. R. M'CLEAN, ESQ., Pres. Inst. C.E.
W. POLE, ESQ., F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

EDWARD FOX, ESQ., examined.

6559. (*Chairman*.) You are a stockbroker in Dublin?—Yes.

6560. And you have been engaged in that capacity for many years?—For 20 years.

6561. Have you had many opportunities of becoming acquainted with the value of Irish railway property?—Yes, I have had extensive opportunities.

6562. A large number of the Irish railways pay no dividend on their ordinary shares?—There are 26 railways in Ireland; there are 14 of them which pay an average dividend of about 3¼ per cent., and there are 12 railways in Ireland which pay no dividend.

6563. (*Lord Stanley*.) Do you mean upon the ordinary stock or upon the preference shares also?—

H. J.
Macfarlane,
Esq.

23rd June 1865.

E. Fox, Esq.

27th June 1865.

E. Fox, Esq. Upon the original shares. The dividend of $3\frac{1}{4}$ per cent., if spread over the whole of the railways, would be equal to a dividend of $1\frac{3}{4}$ per cent.

27th June 1865. 6564. (*Chairman.*) Upon the whole of the ordinary stock of all the Irish railways?—Yes, it comes out at that average.

6565. (*Lord Stanley.*) You have given us certain figures; can you extend the calculation a little further including all the debentures and preference shares, and tell us what return the total capital which is invested in Irish railways yields?—I think I can. According to the Board of Trade return for 1863, the net receipts of the railways in Ireland amounted to 770,000*l.*

6566. That was upon a total of something like 24,000,000*l.*?—On about 26,000,000*l.*

6567. According to the figures you have given, the total return upon the capital invested in Irish railways, making no distinction between preference and ordinary stock, is about 3 per cent.?—About that on ordinary stock only.

6568. (*Chairman.*) Is that including debentures?—No.

6569. (*Mr. Glyn.*) Does it include the Government loan and all charges as well?—No; it is irrespective of the Government loan, which is a prior charge.

6570. That would reduce the average considerably, would it not?—This is the surplus after paying dividends on debenture and preference stock.

6571. (*Chairman.*) Do you know the extent of the Government loans?—I am not prepared to state the precise amount, but it is about 6,000,000*l.* including advances by Government and the public.

6572. Are you able to form an opinion in regard to the wish of shareholders in Irish railways to dispose of them to the Government in the event of the Government being inclined to purchase them?—I think there is a strong desire for that.

6573. On the part of the shareholders?—Yes, I think so; and I should say also on the part of the public generally, weighing the advantages which are likely to spring out of it to the country.

6574. Have you formed any opinion as to the best means of settling the terms of purchase, supposing the Government were inclined to purchase the railways?—I should say that it would be proper and perhaps necessary to appoint Commissioners to negotiate with the governing bodies or directors of the railways.

6575. How would you deal with the railways from which the shareholders receive no dividend?—I think that that would require to be a matter of negotiation.

6576. Do you think that the negotiation should take place with individual shareholders, or that a certain number of the shareholders should have the power to bind the rest?—I think that a negotiation should be opened with the board of directors; as a matter of course the board would not have power unless they received it from the proprietors to carry out any negotiation which they might enter into. If a majority of the shareholders should approve the proposal of Government, I would make that binding on the minority.

6577. Would the boards of directors in general be willing to dispose of the railways?—I think so, certainly.

6578. (*Capt. Galton.*) Do you feel certain that they would be willing?—Yes, I do, on equitable terms.

6579. (*Lord Stanley.*) You say that you think that the boards would be willing to negotiate?—Yes, on equitable terms every desire would be manifested.

6580. I suppose that those companies who would be most willing to sell would be exactly those which the Government would derive the least advantage from purchasing?—Of course, as to the non-dividend paying companies, I dare say you would receive the warmest support from them.

6581. Do you think it would be easy to estimate the value of the property that is yielding no return whatever, and is it not a matter upon which the seller and the intending purchaser would be likely to entertain extremely different opinions?—There is a market value for most railway shares, however reduced the value may be, and that would form some index to the price, and I think upon that you might lay the foundation of a value.

6582. Taking what are called unsaleable shares, for which there is no demand whatever in the market, which lie upon people's hands, and which, when they are sold, are sold at a merely nominal value?—Yes, quite so, it was upon that nominal value that my previous answer was based.

6583. Is there not a very large number of persons who hold on to property of that class, thinking that although they may get nothing for it now it may improve hereafter?—Yes.

6584. Do not you think that anything in the nature of a compulsory sale would be much objected to by holders of that kind of stock?—I do not think that a compulsory sale could be carried out at all. I think that that would be an unfair infringement upon the rights of property. I feel strongly that an equitable proposal might be made to those non-paying companies, that something like from 25 to 50 per cent. of the original capital invested in them, or terms analogous to those, might be offered.

6585. From 25 to 50 per cent. of the original capital invested in those lines which have been spoken of as yielding no return?—Yes, from 25 to 50 per cent.

6586. Taking such companies as you have spoken of, do you think that their shares are likely in any reasonable time to rise to that value in the market?—I do not think so under the present system, or without a large revival of commerce in Ireland.

6587. Or under any system that the shareholders would have it in their power to see enforced?—I think not.

6588. The offer of such a sum as you would propose would be infinitely better than the shareholders could possibly obtain in any other manner?—I think so. By a system of very low charges the industrial resources of Ireland would undergo large development.

6589. And under those circumstances you think they would be willing to sell?—Yes.

6590. (*Mr. McClean.*) Do the public complain of the bad working of the railways in Ireland?—Very much indeed.

6591. With regard to passengers or goods?—There is a general feeling of dissatisfaction over the entire country as to the management of the railways.

6592. (*Sir R. Hill.*) Are the sales of shares sufficiently frequent to enable you to say that the market price of any of the shares is so and so?—As a rule I would say so; there are a few of them as to which the intervals are long between the transactions taking place, those especially which yield no dividends.

6593. With regard to those lines which pay no dividend, could you say that the average price of the shares, say, in the year 1864, was so and so, or have you the means of determining what the average price has been?—Yes.

6594. Could you give also the average price of the debentures?—I can, but in some cases the quotation would be nominal, from, perhaps, the fact of there being a very long interval without a dealing.

6595. In most cases could you give the average price of debentures for a particular year?—I think so.

6596. If you could not do that, there would probably be no great difficulty in estimating the value from the interest actually paid upon them?—I think not.

6597. (*Mr. Horsfall.*) Can you give the value of the shares in the particular lines which do not pay a

dividend at the present moment; the Cork and Kinsale line for instance?—They never had a market value; the shares were never dealt in to my knowledge.

6598. Take the Limerick and Waterford Railway, is there a dividend paid in that case?—The Limerick and Waterford is paying no more than half per cent. upon its original capital.

6599. What is the present price of the shares of that company?—The present price is about 16*l*; that was the last transaction.

6600. (*Capt. Galton.*) Upon a 100*l*. share?—No; upon a 50*l*. share.

6601. (*Sir R. Hill.*) Do they produce only half per cent.?—Yes.

6602. That is 10*s*. a share?—Yes, 10*s*. a share per annum.

6603. Does the chance of obtaining 10*s*. a share per annum enable them to be sold for 16*l*. in the market?—That is exactly the present state of things.

6604. Then it is 5*s*. a share that they produce?—No; it is 10*s*. a year for each 50*l*.

6605. That is one per cent.?—Yes.

6606. Is the annual dividend one per cent. or half per cent.?—The last half-yearly dividend was at the rate of half per cent. per annum only. The last dividend was only 2*s*. 6*d*. I find.

6607. Five shillings a year was the rate of the dividend?—Yes.

6608. That is half per cent.?—Yes.

6609. Is the right or the expectation of receiving 5*s*. per annum saleable for 16*l*.?—That is so, but there are contingencies supposed to arise, for instance, as to that company, I was engaged in negotiations for the sale of it about four years ago, and there was an offer equal to about 2½ per cent. for it from the Great Southern and Western Company of Ireland, which I took an active part to have carried out, but a preponderance of the votes of Limerick and Waterford shareholders defeated my object.

6610. What you have given is the present price?—Yes.

6611. (*Mr. Glyn.*) In fact they hope for amalgamation with the Great Southern and Western line?—Yes, they anticipate that a sale or amalgamation of the property is probable.

6612. (*Chairman.*) Can you give the Commission any other instances of the selling price of shares, either paying a very low dividend or paying none at all. Are the Cork and Bandon original shares saleable?—Yes. The Cork and Bandon original shares are 50*l*. shares, and the last price was 14*l*.

6613. They have never paid any dividend, have they?—Never; the original shares have never paid a dividend.

6614. (*Capt. Galton.*) Your suggestion is that if the Government purchased the shares they should pay 25 to 50 per cent. of the original money paid up upon them?—Yes, I deem this a reasonable basis of value to negotiate upon.

6615. Are they 50*l*. shares or 100*l*. shares that sell for 14*l*.?—50*l*. shares.

6616. In that case then the Government would pay for those shares 25*l*. a share?—Yes, it would be analogous to that if purchased at 50 per cent.

6617. That would be an increase of about 80 per cent. upon the quoted price?—Yes, it would.

6618. You would apply the same rule to companies like the Great Southern and Western Company, which pays 4 per cent., and whose shares are nearly at par, and give them an increase of 80 per cent. upon the quoted value of the shares?—There is only one railway in Ireland at a premium, viz., the "Dublin and Kingstown," and with two or three exceptions all the others could be purchased considerably under first cost.

6619. Would not those companies be very much dissatisfied with receiving comparatively so little

advance upon their shares, if so very large a premium was given upon shares which were of much inferior value?—There might be some feelings of jealousy, but I think if a Great Southern and Western shareholder got par for his shares, selling at 80*l*. in the market, I do not think it would constitute a reasonable ground for objection because a shareholder in another company got 25 or 50 per cent. of his original capital.

6620. (*Mr. Glyn.*) Must not the buying and selling value depend upon whether it is a dividend paying company, or a non-dividend paying company?—It should be so, but speculative considerations influence value.

6621. You would appear to apply a different system to a non-dividend paying line from that which you would apply to a dividend paying line?—Dealings in non-dividend paying lines are purely speculative; people anticipate that some improvement will take place in the country, and there is speculation about them. Other lines are based more upon the interest on money which they yield.

6622. Would they not have in selling the same right to a prospective value as the non-paying line?—I think not; the paying lines yield a moderate return for investment, whilst the non-paying lines, although of small present value, may much improve hereafter.

6623. (*Chairman.*) Are there large transactions in the shares of the non-paying lines?—Latterly the transactions have dwindled down to small proportions.

6624. (*Lord Stanley.*) Would not great objection be made on the part of those controlling the national expenditure to the purchase of this unsaleable stock at a value which by your statement must greatly exceed its market value?—I think that the proposition could be worked out without any risk to the public revenue at all by a large development of the resources of Ireland.

6625. Waiving that question, if I can go into the market and purchase this unsaleable stock for 10 per cent. of its original value, why should I be expected on the part of the Government to give 25 or 50 per cent.?—I think that the price at which you might go into the market and buy 10 or 20 shares would scarcely constitute a fair standard of value for the entire property of a company. These low prices arise from a disinclination on the part of the public to invest in railways in Ireland. You cannot purchase any quantity at these low prices, neither can you sell.

6626. Are you not starting a little from a theory that in some way or other the State is responsible for the bad condition of the railways in Ireland, and that it is bound to give the holders of this property an opportunity of improving it?—I am of opinion that some schemes of a perfectly worthless character have received the sanction of Parliament, and in that way I do believe it.

6627. (*Capt. Galton.*) You say that there is a great disinclination to invest money in Irish railways?—I think there is a growing disinclination to do so.

6628. Then how is it that both last session and in this session of Parliament so many schemes for new railways in Ireland have been brought forward and been sanctioned by the legislature?—The only explanation that I can give is this; the disinclination to invest in railway property in Ireland I put forward as indicating the taste of the masses of the country. The fact of railways receiving the sanction of Parliament in most cases only indicates enterprize and speculation on the part of solicitors, engineers, and perhaps some few others.

6629. But how is the money obtained?—Latterly I believe that all efforts have failed to induce the public in Ireland to absorb the capital of these companies. I think that in later years they have had a very sickly existence indeed, and they have been entirely worked out through the instrumentality of railway contractors, who, tempted by very remunerative prices for the works to be executed, entered into financial operations.

E. Fox, Esq.

27th June 1865.

6630. Where did they sell the shares which they received in payment for the work they performed?—I believe that these schemes are for the most part financed in the City of London, and that they have failed to sell them. I think they have not found a market for them with the public.

6631. (*Sir R. Hill.*) Have they not parted with the bonds at a great discount?—Yes, sales of bonds have taken place at very large discounts.

6632. I think you said that they have paid high prices to the contractors?—I think they have paid much higher prices than if they had been placed in possession of a capital and the company had been free agents to enter into contracts on open public competition.

6633. (*Capt. Galton.*) Have the contractors been paid in shares and bonds?—Yes, in both I believe.

6634. Not in money?—No. They were not able to work out an operation of that sort in the same beneficial way as if they had got the public to take up the capital and had advertised for contracts.

6635. (*Sir R. Hill.*) Then the joint operation of these two causes must have been greatly to enhance the cost of the railway?—Yes, greatly, in my opinion.

6636. Can you give us any instance of injudicious expenditure of that kind?—I think that that applies to several of the railways of recent origin.

6637. Has it not happened that in some instances the apparent cost of the railway has been two or three times as great as the real cost would have been if the parties had been paid in the first instance in cash, and contractors had competed for the work?—I am not prepared to declare to the amount of the extravagance that has been committed, but I believe it has been very considerable.

6638. Still you would appear to recommend that the nominal cost of each railway should be made the groundwork for determining the price which the Government should pay for the railways?—Not for all the railways. I draw a wide distinction between dividend-paying railways where the current market price gives a fair criterion of the value, and that class of railways paying no dividends, where the quotations are in many cases nominal, where prospective value is merely speculative, and can only be dealt with by giving a certain per-centage on original cost.

6639. In some cases the Government would pay very extravagantly indeed, would it not?—I do not propose that in any case of these non-dividend paying railways; in fact, I propose that there should be a purchase at less than half the capital paid in, and in some cases not more than the quarter, according to the special circumstances of each company.

6640. Evidence has been given before this Commission showing that some lines of railway have cost more than double the fair cost, or the cost which would have been incurred if the directors had invited competition, and had been prepared to pay the contractors in cash?—I have no doubt that that has been the case to a large extent. I cannot say double, because I think every succeeding railway derives some increased advantage by the progress of science and increased familiarity with the prosecution of railways, and that they are made cheaper.

6641. (*Mr. McClean.*) Have not the railways been beneficial to Ireland?—I should be sorry to think they had not, but lower charges would confer larger benefits on Ireland.

6642. Each new railway?—I think, as a rule, that railways must produce beneficial results.

6643. (*Chairman.*) Have many of the railway companies in Ireland had recourse to what are called Lloyd's bonds?—I think so.

6644. How does the money that has been obtained upon Lloyd's bonds appear in the railway accounts; is it entered as shares paid up, or in what way do they appear in the half-yearly accounts and reports of the railway companies?—They are specially declared as Lloyd's bonds.

6645. Do you reckon them amongst the debentures?—Yes, I think so. Bonds and debentures.

6646. (*Mr. Glyn.*) Are they not rather described as money borrowed, and kept quite distinct from the debenture debt?—Certainly; the debenture debt is under an Act of Parliament.

6647. These new securities are issued and kept by themselves, but I think in the accounts they are called money borrowed on Lloyd's bonds?—I think so; they are principally given to the contractors.

6648. (*Mr. Horsfall.*) You have spoken of the purchase of the Irish railways by the Government. Are you prepared to suggest any other way by which relief could be given to the depressed state of the railway system in Ireland?—The Government could give relief, of course, by assisting in financing upon the higher credit of the Government, and there would be an advantage in that way.

6649. Have you considered the principle of the Government leasing the lines?—I have thought over the matter, and what has occurred to me is this—there are about 26,000,000*l.* of money invested in Irish railways, and I think that 19,000,000*l.* would place the Government in possession of the whole of the railway interests of the country, giving that as a rough calculation; and I believe that the money could be borrowed by the Government at 3½ per cent.; that would place the Government under an obligation in the way of interest upon money to the extent of 665,000*l.* per annum, and according to the Board of Trade returns of 1863 the net receipts were 770,000*l.*; that would leave the Government a profit of 105,000*l.* per annum.

6650. You are referring now to the purchase of the railways. I asked you, with special reference to leasing the railways, whether you had considered any plan by which the Government could lease the railways?—I am coming to that question now. My idea is that the railways should be leased out to a public company.

6651. Do you think it would be desirable to have one company or more?—I am of opinion that one company would be sufficient, because I do not think it would be too large an operation for one company, and might be deemed too small to command attention from two companies. There are companies in this country which have nearly as much mileage to look after as the whole Irish line.

6652. Which should you consider the more desirable principle to act upon, that the railways should be leased or purchased by the Government?—I look upon the leasing as a necessary consequence of the purchase, because I do not suppose for a moment that the Government would buy up the railways in Ireland and manage them. I mean that they should have perfect control in dictating such arrangements to a company from time to time as would be conducive to the public service and to the general interests and growth of trade in Ireland.

6653. (*Mr. Glyn.*) Your plan is not an advance of money by the Government for the reduction of the rate of interest upon the debentures, but it goes to the extent of buying up all the railways as well?—I stated, in reply to a question, that short of purchasing them up, of course some assistance could be given by the introduction of the credit of the Government, and so assisting in the way of finance.

6654. That would be by a reduction of the rate of interest upon the bonds?—Yes.

6655. Do you make any provision in your plan for the purchase of the railways by the Government out of the present receipts?—Certainly. There appears on the figures I submit to be a profit of 105,000*l.*, besides other advantages that would spring out of it, concentration of management for instance.

6656. After you had paid off the original capital?—Yes; the difference of Government credit would give that profit if they were purchased on the terms I have stated, and the receipts and working expenses still continued the same; but in addition there would be a large saving on the working expenses.

6657. (*Capt. Galton.*) How do you make up the 19,000,000*l.*; what does that amount consist of?—There are about 12,000,000*l.* of preference and debenture stock, I think, in Ireland.

6658. Have you taken it at par?—Yes; I think you must take it at par. Then there are about 12,000,000*l.* of original stock, which, I think, will about make up the money.

6659. Making together 24,000,000*l.*?—Yes.

6660. That would be the value?—That would be the value at par.

6661. Would the Government pay that amount for the stock?—No. I am of opinion that about 19,000,000*l.* would be sufficient to purchase the whole, that is 11,000,000*l.* for the debenture and preference stock, which would be par, and 8,000,000*l.* for the 15,000,000*l.* of original stock, which would I believe be ample.

6662. (*Mr. Horsfall.*) Do you believe that the shareholders and the companies would be prepared to accept that offer, if made to them by the Government?—I do. I consider it a liberal offer, and they would be willing to close with it.

6663. (*Chairman.*) Do you propose to give 50 per cent. to the non-dividend paying lines?—No, I would take that as a *maximum*.

6664. Would you be able in that case to purchase both those that paid dividends and those that did not pay dividends for 50 per cent. of the original value of the shares?—No; I take 11,000,000*l.* in the first instance, for the preference and debenture stock, which are yielding interest. I deal with them at par, and then I provide 8,000,000*l.* for the original share capital, which amounts to 15,000,000*l.* at par, and this sum would nearly average 50 per cent.

6665. A considerable part of the stock represented by that amount of 11,000,000*l.* is dividend paying?—Yes, it represents preference stock and debentures.

6666. Even if any one of the lines included in those 15,000,000*l.* is paying no interest, you would propose to give at least 50 per cent., and therefore if none of them paid a dividend you would propose to give 8,000,000*l.* for the purchase of them?—Not exactly so. I have already stated that to some lines I would only give 25 per cent. on their cost. I propose to give to the holders of the original stock to the amount of 15,000,000*l.* at par. I would propose, as a general average, to deal with them by giving them 8,000,000*l.*, or about 50 per cent.

6667. On the average?—Yes, on the average.

6668. (*Sir R. Hill.*) If you paid some more than the average you must pay others less?—Yes, as the particular merits of each case required.

6669. (*Chairman.*) You must buy a considerable portion of the 15,000,000*l.* representing the ordinary shares for less than 50 per cent.?—Yes, but the average would be about 10*s.* in the pound.

6670. In some cases you would hope to purchase them for much less; but I think that upon the average you would pay 1½ per cent.?—Yes; thereabouts.

6671. I understood you to say that 11,000,000*l.* represented the preference and debenture stock, and the 15,000,000*l.* represented the original shares, of which a considerable part was dividend paying?—Yes; the 11,000,000*l.* are for preference and debenture stock, which I consider to be dividend paying.

6672. Does that include any ordinary stock?—None. Then there remains 15,000,000*l.*, representing the original stock, and paying dividend in part.

6673. Where is the ordinary stock that does pay a dividend?—The ordinary stock that pays a dividend is included in the 15,000,000*l.*

6674. (*Lord Stanley.*) Taking the 15,000,000*l.* of which you speak, as paying partly no dividend at all, by what process can you show that it is worth 50 per cent. Would not 20 per cent be nearer its market value than 50 per cent.?—I thought that it would not be quite equitable to take as a standard of value the market quotation of the shares at the time when, the railway interests of Ireland were more depressed

than they had been before. I think that that would be looked upon as a harsh measure, and that is why I started upon 50 per cent. average for purchase of all the lines.

6675. (*Mr. Glyn.*) How do you proceed in your calculations as to the actual capital of the railways, for instance, do you include the Great Southern and Western, which represents 5,500,000*l.*, their shares being at par?—They are at 86*l.*

6676. Do you include the Great Southern and Western?—Yes, in the first 11,000,000*l.* which I propose to give par for I include debentures and preference stock only.

6677. As if it was entirely preference stock?—I include debentures, and and preference stock in the first 11,000,000*l.*

6678. Do you also include the common stock of the Great Southern and Western?—No, that is included in the 15,000,000*l.*

6679. They have preference stock?—Yes.

6680. Then it is not preference stock, but it is ordinary capital?—Yes.

6681. You have included that in the first 11,000,000*l.*?—Yes.

6682. (*Chairman.*) Is the preference stock generally redeemable?—It is usually perpetual; the largest preference stock in Ireland belongs to the Great Southern and Western, and that is 4 per cent perpetual, amounting to 1,329,000*l.*

6683. What is that selling at now?—94*l.*

6684. (*Capt. Galton.*) You do not think that 10 per cent. offered upon the price as quoted would be a sufficient inducement to the different railway companies to sell their lines?—I do not think you would work out the problem upon that. In the case of the Limerick and Waterford shares, which stand at 16*l.*, you would add 32*s.* to that, and that would make 17*l.* 12*s.*, but I am sure you could not work out the proposition upon that basis of calculation.

6685. You stated that you thought it would be an unfair interference with the rights of property to purchase the Irish railways compulsorily?—Yes, I think so. I think it would require the free action of the owners of the property.

6686. You do not think that the purchase of shares bears any analogy to the purchase of a house which is bought compulsorily in order to make a railway?—Looking at it in that point of view, you could no doubt have an Act of Parliament passed, if the public interests required it, to make it compulsory. I would be in favour of it.

6687. (*Sir R. Hill.*) I understand you to say that it is the wish of the railway proprietors that the Government should purchase the railways?—Quite so. I think that every desire exists.

6688. I presume, in order to give effect to that wish, that the owners of the railways would be willing to sell the railways upon terms somewhat about their real value; have they a right to expect anything more?—It is just upon that question of the real value that difficulty might arise. I think Government should treat the question in a spirit of liberality.

6689. (*Lord Stanley.*) You contend that the present value is not the real value but a value which is exceptionally and temporarily low?—I think that it would not be a liberal thing to actually take that as the fair price to offer.

6690. (*Sir R. Hill.*) And yet in a particular instance you give as the market value of the shares 16*l.*, which shares produce a dividend of 5*s.* each per annum. Should you say that the 16*l.* in that particular case was below the real value of the share?—I think that, looking at the price of the share, and the dividend it pays, it perhaps seems an excessive price, but then there are contingent advantages, and speculative features entitled to consideration.

6691. The shareholders in the railways in Ireland have no privileges in travelling, have they?—None whatever, and very little in any way.

6692. The only advantage which they obtain, or

E. Fox, Esq.

27th June 1868.

- E. Fox, Esq.* which they expect to obtain, is the dividend?—Quite so.
- 27 June 1865. 6693. And yet a share to which a dividend of 5s. per annum is attached is selling for 16l.?—Yes, that is so.
6694. Do you think that shareholders would consent to an arrangement of this kind. Suppose care to be taken to ascertain what had been the average for a certain time of the dividends paid to the ordinary shareholders; the interest paid to the preference shareholders, and the interest paid to the debenture holders; and then that the Government said to the companies generally, we will relieve you from all these obligations, we will take your place, and pay to each of the three parties of stockholders in future an income somewhat in excess of that which they have hitherto received. Would that, in your opinion be an acceptable offer?—I think that the shareholders in the railways would be exceedingly glad to part with their right to an uncertain and fluctuating dividend for a fixed Government rate of interest, even lower than what they might have been receiving.
6695. Then as the data upon which to determine these average dividends must, I presume, be accessible, and it would be easier to determine the average payments in past years than to determine the market value of the shares?—There would be no difficulty in ascertaining the payment in past years at all; there are statistical records which are available. The difficult question is the railways which pay no dividend, and receive little recognition in the market in latter years as public securities.
6696. They would not be satisfied, I presume, with an engagement which gave them no dividend?—You could not apply the question of dividend there, for there is none to form a basis upon.
6697. Putting those aside, to be dealt with by some exceptional means, what do you think of that mode of determining the price to be paid by the Government if they should become the purchasers of the Irish railways, viz., that they should continue to pay to the several classes of shareholders an income about equal to that which they had previously received?—The dividends hitherto paid would form the groundwork of an arrangement between Government and proprietors of this class of railway property. Lines not paying dividend should be matters of arrangement.
6698. Would they not be satisfied with some very small annual payment?—I think they would and that proposals from the Government would be met in spirit of liberality.
6699. (*Lord Stanley.*) Do you think they would consent to take an average of what they have received for the last five or ten years upon that capital, and then if the purchase were compulsory, to add from 5 to 10 per cent. upon that value?—Yes.
6700. I asked you whether you thought they would consent to take as a basis for the valuation of their property the average receipts upon it during the last five or ten years?—The prostration of Ireland in latter years admitted of no dividend on 12 railways. So that the capital invested in them should be taken as forming a guide to purchase.
6701. Does it not in short come to this, that here are persons holding property which is utterly worthless, and who want to sell it to the Government upon terms better than they can get from any one else. Does not your proposition come to that?—I do not exactly go that length, because if the Government turn the railways to such valuable use for the country that would so work up its large resources as to amply make up for any possible pecuniary loss.
6702. (*Chairman.*) In what class do you include the lines that are paying small dividends; the Waterford and Limerick, for instance, are paying half per cent., do you include that in the first 11,000,000l. or in the 15,000,000l.?—I include that in the 15,000,000l. of original stock.
6703. (*Sir R. Hill.*) Have not the dividends been gradually diminishing for several years past?—Yes, tending downwards.
6704. If you took the receipts for an average term of years, and the Government engaged to pay an amount equivalent to that hereafter, they would be paying to the shareholders a much larger dividend than they are now receiving, would they not?—Yes. The Great Southern and Western line paid 6 per cent. for a certain period of time; they have gone down 25 per cent. in their dividends, and they are only now paying $4\frac{1}{2}$ per cent. The Midland Great Western of Ireland paid 5 per cent., and they have gone down I think to 4 per cent., and other lines reduced in dividends.
6705. But those are not the only railways that pay dividends, are they?—No; the Belfast Junction is also paying a dividend, as also the Dublin, Wicklow, and Enniscorthy, Belfast and Northern Counties, Ulster, Dublin and Drogheda, Dublin and Kingstown, and Cork and Passage.
6706. Is it not the case, generally speaking, that the dividends have been decreasing year by year?—Yes, latterly.
6707. If so, does it not follow that if the Government engaged to pay a sum equal to the average receipts for any term of past years, they would be paying a larger dividend than that which the shareholders now receive?—I think so.
6708. Would not that of itself be a sufficient, and perhaps, more than a sufficient bonus?—I think it would be an equitable thing on the dividend paying lines.
6709. (*Chairman.*) If the Irish railways were purchased by the Government and leased out, do you think that the Company that leased them should be put under any restrictions as to the fares and charges for passengers and goods?—I think there should be very stringent conditions laid down with a view to a full measure of public benefit.
6710. Will you state what restrictions you think would be desirable?—I think, in the first place, that the railways should be placed under the control of the Government, that they should be worked with greater regard to the public requirements, and with reference to postal arrangements, than they are at present. I also think that there should be a fixed rate both for merchandise and for passengers, as between the Government and the company.
6711. At the present time all companies are authorized to charge certain maximum fares; would you reduce those?—Certainly; I should reduce them most considerably. I should propose to make a reduction of 50 per cent.
6712. Upon charges of all kinds?—Yes.
6713. What do you think would be the effect of that reduction?—I think that the question assumes very much this form; whether arbitrary charges should be made for carrying a few, or a considerable reduction, say 50 per cent., should be made upon the present charges for carrying the masses. I think that that would work out a better financial result.
6714. (*Sir R. Hill.*) You think that there would be a greater traffic from carrying at half fares than at whole fares?—I think there would; that the country would be immensely benefited, and I also think that the Government would be amply guaranteed as to any possible risk arising from diminished traffic, looking at the figures which I bring out in the finances, and which I have given you.
6715. Is there anything to prevent the present directors adopting such an arrangement if it would be more profitable to them?—There is nothing to prevent them; but the directors of the railway companies will not enter upon such sweeping reforms unless they are aided by the Government.
6716. (*Capt. Galton.*) Would not the receipts in the first place be diminished by 50 per cent. by such an arrangement?—Certainly not, because traffic would largely increase.
6717. And do you think that the company would be able to recoup themselves again?—I think they

would ultimately, and that great public benefits would result from such a change in the railway system.

6718. How long do you think it would take?—That is a difficult question to answer; but I should think that three to five years would produce a very marked improvement in the country.

6719. (*Sir R. Hill.*) Are you confining your attention to the profits upon the railway, or do you include the advantages which would indirectly result?—I am including the advantages which, I think, would indirectly grow out of it, and the large benefit certain to accrue to Ireland.

6720. Which portion of the inhabitants of Ireland do you think would be indirectly benefited?—I think that such a change would give an impetus to trade and to manufactures, which the country badly wants, and that every interest in the country would feel its beneficial results.

6721. In your opinion all parties would be benefited?—Yes, the people and the Government too.

6722. An advantage would be derived in addition to that which is obtained from carrying passengers and forwarding goods at half the rate which is usually charged?—Yes, I think so. New life and vigour would be given to the whole face of the country.

6723. Would there be anything unreasonable in calling upon the Irish public to guarantee the Government against any loss, should that loss unexpectedly arise?—I do not think there would. I think it would be a fair thing to ask the Irish public for an indemnity by some indirect taxation in the event of the experiment not working out as beneficially as might be expected; for instance a penny income tax would guarantee 100,000*l.* a year.

6724. (*Chairman.*) For what time do you think a company ought to lease the lines, supposing a plan of the kind which has been suggested was carried into effect?—That would, of course, be a matter for negotiation between the Government and the company. I should say that probably a term of 21 years would be required by the company. If a shorter term could be agreed on I would prefer it.

6725. (*Sir R. Hill.*) But that is a matter which would be left to the Government?—It should be

matter of negotiation between the Government and the company. I do not think that in any one year during the lease the Government should surrender its right of supervision in seeing that the public requirements were fully attended to.

6726. (*Chairman.*) Do you think that any good could be done, without resorting to a scheme so extensive as that proposed, by the amalgamation of any of the small companies with larger ones?—I think not. No important benefit would grow out of that.

6727. Are there any other points upon which you can furnish the Commission with any information?—I am not at this moment aware of any.

6728. (*Sir R. Hill.*) You appear to be of opinion that in the event of the Irish public having to make good any loss, it might be done by increasing the income tax?—I think that that would be a fair way to meet it. I think that, in consideration of the Government making so large an experiment, it would be but a fair thing to ask for an indemnity, by making an addition to the income tax, from the country. The Government, on the one hand, undertaking a great responsibility, I think the country that is to be benefited on the other should take upon itself a responsibility also; but I strongly incline to the opinion that the risk is imaginary, that no loss would arise, that large public benefits are certain to follow.

6729. Do you not anticipate that there would be a loss for the first few years?—No; I would expect immediate advantages.

6730. Do you think that the traffic would *more* than double itself, for of course there would be some increase of expense?—Yes, I think so; but there would be a large indemnity fund to start with. You would have an indemnity fund of 105,000*l.* per annum to start with. There is also another element of profit which I have not before touched upon, namely, that in carrying out such an arrangement you will dissolve from 30 to 40 boards of directors in Ireland, and in that way a large expenditure will be got rid of.

6731. There would be that saving of expenditure which generally results from the amalgamation of lines?—Yes, from a concentration of management.

The witness withdrew.

JAMES DILLON MELDON, ESQ., examined.

6732. (*Chairman.*) You are a solicitor in Dublin?—I am.

6733. And in Galway also?—Yes; my property is there but I practise in Dublin.

6734. You are a landowner in Galway?—Yes, a large one.

6735. Have you considered the question of the system of management adopted on the Irish railways?—Yes, I have. I am solicitor to two of them myself, and I have had a good deal of experience in forwarding cattle and matters of that kind in connexion with the railways. I am a very warm advocate for Government taking all the railways and working them by a board of commissioners, and thus amalgamating them. I find that there are 56 lines of railways authorized by Act of Parliament in Ireland, most of them working; their average length is about 48 miles, for although the Great Southern and Western is 387 miles long, and the Midland Great Western 242 miles long, yet very many of the others do not exceed 10 miles. Most of these 56 lines have a separate board of directors, separate solicitors, engineers and secretaries; thus there are 430 directors, 56 solicitors, 56 secretaries, and upwards of 70 engineers, who absorb a large portion of the receipts of the lines. Each line has a separate directory, and, as I have stated, separate solicitors and separate secretaries. It strikes me most forcibly that a board sitting in Dublin, consisting of three intelligent business-like men, selected of course for their ability and their capacity, would be able to do the entire business which the 430 directors do, and do it very much better than such a large number of gentlemen who

only go occasionally to attend their boards. I am satisfied that if those 56 lines were under one management, a vast saving of expense would be the result, and harmonic action would ensure a thorough through connexion when established, which is much required, and the traffic would be fairly developed. Then there is the expense of 56 staffs. In some instances the same solicitor will act for two railway companies, as for instance, I am solicitor for two lines, and perhaps if I said 50 solicitors for 56 lines of railway I should be nearer the mark.

6736. (*Capt. Galton.*) But the solicitor who acts for two railways I presume gets double profits?—He does, no doubt, and therefore it strikes me that one or two solicitors, paid liberally, who should give their whole time to the work, under a commission similar to one that I would suggest, and which I hope eventually to see, would do all the work of the 56, and do it better, as they would have their whole minds devoted to it. As I have before said, there are 56 secretaries, and upwards of a 70 engineers. Some of them have but one, but some have three. There is the engineer in chief and the managing engineer, and of course, if the Government worked them under a commission, they would require a staff of engineers, but only as many as were essential to keeping up the lines. I cannot give you the amounts received by directors, engineers, and secretaries, but they could easily be ascertained, and I think the Commission would find that an enormously large sum of money is disposed of; of course it is taken out of the receipts of the railways before the proprietors come to be paid any dividend. It follows, as a matter

E. Fox, Esq.

27th June 1865.

J. D. Meldon,
Esq.

J. D. Meldon,
Esq.
27th June 1865.

of course, that these people must all be paid, and I believe you will find that a very large amount of the receipts go in that way, and that is one reason for saying that I am satisfied, if the 56 railways were under the management of one board, a vast saving of expense would be the result, and harmonious action would ensue. The railway companies do not pull very agreeably together; for instance, between Galway in the west and Belfast there are three distinct lines of railways, and last season I grew a large quantity of flax, and got my tenants to grow a good deal, and I found it almost impossible to get it forwarded direct to Belfast. I could find no market for it in Galway, and I applied to the Midland Company to know what rate they would charge me per ton to Belfast, and although the lines are united, as far as having junctions with each other, from some misunderstanding the Midland Company could only book the flax as far as Cavan, where their line stopped, and to Cavan I had to send my steward to get it booked from Clones on to Belfast. There are two or three lines between Cavan and Belfast, and I am told it often happens that the train leaves Cavan for Clones on the Belfast line a few minutes before the arrival of the Midland train, and the passengers have to stop at Cavan for the night, and this arises from the want of unity of action between the companies.

6737. (*Lord Stanley.*) Does that arise from any proceedings on the part of persons locally interested in the town?—It is a misunderstanding between the two companies; they do not afford accommodation to each other. The lines are, however, united, and they might, if they pleased, very easily work in unison. The result of this state of things is that the Galway people actually go to Dublin, and then out of their way to Belfast from Dublin, a distance of upwards of 50 miles, although they have a direct communication. There is a want of thorough through traffic arrangements between the companies. Between Belfast and Dublin there is a very large traffic indeed, and yet there are three companies separate and distinct upon that part of the line. All this would be avoided if the whole of the lines were worked under one management. Then with regard to agricultural produce: I am a farmer, and I can speak to that. I believe that if proper arrangements were made between the companies, so as to reduce the price charged for the carriage of farm produce, it would greatly benefit the railway interests, and no doubt increase the traffic upon the railways, I would say, at the very least, treble it. I farm about 1,500 acres of my own land in Galway, and I am unable to send any of its produce to the Dublin markets owing to the high rates. Potatoes are, I am told, sent to the London market from Cornwall, owing to the arrangements which the railway companies make to bring them at moderate charges. From Galway I could send a very large amount, say, from 3,000 to 4,000 tons of farm produce in a year, if we had moderate rates, but the rates are exclusive. I grow potatoes on a very large scale, turnips, mangolds, and carrots. I grow these as a matter of necessity in preparing the land for laying down, but I cannot send one of them to Dublin market, and therefore I turn them into meat. I buy cattle and turn them in and let them eat them. I sell the potatoes, if I can, in the country, and I give the turnips to the stall-fed cattle; but if there was a moderate rate only charged I could send the whole to Dublin. I think I could send 3,000 tons a year to Dublin, and the farmers in the west of Ireland would soon follow the example. We could take manure back by the return trucks.

6738. (*Mr. Glyn.*) What reduction in the rates charged would answer your purpose?—One half from their present rates would, or even less than half, would just open the market for us. I use a good deal of hay in Dublin, where I live, and I have a small portion of land. I have endeavoured to get the hay up from Galway, but the rates are too high, although I purchased machinery for the purpose of

compressing it into a small compass; but the rates were so high that I had to give it up, and the pressing machinery is unused.

6739. (*Chairman.*) You would not expect, however low the charges were, to send turnips and mangolds wholesale to Dublin?—Indeed, I would.

6740. What necessity would there be to send large quantities of turnips and mangolds to Dublin?—We could dispose of very large quantities in Dublin to cow-feeders and that class of persons; if we could get them from where they grow they would buy them. They pay as high as 1*l.* a ton in Dublin for turnips, and I am very well satisfied if my steward realizes by stallfeeding, 6*s.* 8*d.* per ton. If the rates were moderate, say, 5*s.*, or even 6*s.* a ton, I could send them to Dublin and dispose of them. I would propose, in connexion with that, to take manure back by the return trucks from Dublin; that is selling at from 3*s.* a ton to 3*s.* 6*d.* there; the cow-keepers dispose of it, but we cannot get a particle of it west of the Shannon. The waggons bringing up farm-produce could bring back manures, and a large revenue would thereby be created. The railway companies fix a rate at 14*s.* 6*d.* a ton to my station, but they make no difference between manure worth 3*s.* 6*d.* a ton in Dublin, and guano which is worth 12*l.* a ton; their charges are equal for the one and for the other. I have pressed this upon the railway traffic managers, and I have said “you bring your trucks up full;” but instead of bringing them back “empty, do bring them down filled with manure, and charge a low and moderate rate.” I would give them 5*s.* or 6*s.* a ton. But this is not done. Then, with regard to fairs, we have in the west of Ireland, as no doubt the members of this Commission have all heard, the fair of Ballinasloe, which is probably the largest fair in Europe. At the last fair held at Ballinasloe I do not suppose that one-twentieth part of the cattle was brought to the fair by railways, because the rates charged are so high; and there is another difficulty in the way. The rolling stock, particularly the cattle waggons, is insufficient for large fairs, and the result is that they sent their trucks empty to Ballinasloe fair to be in readiness to carry away the cattle when purchased by the Leinster men, and very many of the buyers do not send their cattle by rail, owing to the high rates charged. Whereas if they had a moderate tariff they could carry the cattle to Ballinasloe fair, and carry them away when sold. I believe that the true reason why railway companies will not reduce the rates is that if they did they would be obliged to find fresh rolling stock, and this, in my opinion, is another reason why the railways should be placed under one management, because the surplus rolling stock of one company could be used for other lines; for instance, at the fair of Ballinasloe the rolling stock of the Great Southern and Western Railway could be all used there and at the Limerick fair, and the Munster fair, which is a very large one, on the Great Southern and Western line, the rolling stock of the Midland Company could be used. At present at Ballinasloe fair we want rolling stock, and there are hundreds of trucks lying idle in the neighbouring county, because the lines belong to different companies. If they were all worked under one management great convenience would result, and a great saving would be effected.

6741. (*Capt. Galton.*) Might not one railway company borrow rolling stock from another?—I am sorry to say that they do not do so; there is not that feeling existing between them that there ought to be and they do not borrow from each other. The Great Southern and Western line is connected at Athlone with the Midland, and they could if they pleased supply to Ballinasloe a superabundance of trucks, and if they did that, and carried the cattle a shade cheaper, all the cattle bought and sold at Ballinasloe would be brought to and taken from Ballinasloe by railway.

6742. Do you send your cattle by railway to that fair?—No; I am 25 miles from it, and they will not carry the cattle without charging what I consider an enormous rate.

6743. What rate would induce you to send your cattle to Ballinasloe fair?—About half the rate which they at present charge. If they reduced it one-half they would have all the cattle of the country to carry, but they will not do it; they send their trucks up empty sooner than take their cattle to the fair at a reasonable rate.

6744. (*Mr. Glyn.*) Are yours lean cattle?—Yes; they seldom send fat cattle to Ballinasloe.

6745. (*Capt. Galton.*) Lean cattle are sent to Ballinasloe fair, and they are then taken elsewhere to be fattened?—Yes, they are taken to Leinster and to England.

6746. Would you not always prefer to drive lean cattle a distance of 25 miles?—No, and for many reasons; for instance, at fair times it is difficult to get standing room for them; it is not easy to get a place for them, and then it takes up two or three days, and a number of drovers are required; whereas we could send them the evening before by railway if the rate charged was a moderate one.

6747. (*Mr. Horsfall.*) You have spoken of there being 430 directors in Ireland, are all those directors paid?—Yes, they are all paid; each company allows a certain amount of money yearly to their directors, and they divide it amongst themselves according to a scale that they have amongst themselves, and whoever attends most frequently, gets the larger proportion of the per-centage. Each of the two small railway companies that I am concerned for allow 300*l.* a year among six directors.

6748. And the larger railway companies I suppose in proportion?—Yes, the larger railway companies allow 2,000*l.* or 3,000*l.* a year.

6749. (*Sir R. Hill.*) Do the directors take their shares of the allowance when the company pays no dividend?—I believe they do; I rather think they do if there be funds.

6750. (*Chairman.*) Among how many directors do you divide the 300*l.* a year which you have mentioned?—We have six directors on each board.

6751. Each board is allowed by the company 300*l.* a year?—Yes, but that is very moderate; it is unusually low, the lines are short ones, and not very good paying ones.

6752. (*Lord Stanley.*) Fully admitting and entirely agreeing in the objections that exist to these railway companies, what is the objection in the way of their doing what many small companies that formerly existed in England have done, viz., amalgamating with others?—It has been tried over and over again, and has proved entirely unsuccessful. I cannot tell you the reason why, but I think one cause arises from the fact that if two companies meet together, having 12 directors, and they are amalgamated, they will have but six; and six of them should retire, but recollect that the six who are to retire, have to give their vote whether they will amalgamate or not, I do not say that that is the cause, but I think it is an element in the matter that would suggest a cause.

6753. There is a corrupt interest operating against it, or there is an amount of patronage that would be destroyed by it?—I do not say corrupt, but if we are to do it voluntarily, there is no doubt that self interest will sometimes operate upon men's minds.

6754. Do you look upon it as a thing entirely hopeless if it is to be done voluntarily?—There is not the slightest chance, in my opinion, of getting the companies all to unite. Between Dublin and Belfast, for instance, the most serious inconvenience arises from their not amalgamating; great efforts have been made to bring it about by proprietors outside the directory; they have been for years trying to get it done, and they have not done it yet. I remember travelling on that line some years ago at night time, and we were suddenly left in darkness, and upon making inquiries as to the reason, it was said, "we are coming upon the territories of a new company; the companies cannot agree about the lamps, although they do about the carriages." The train

was kept waiting whilst the lamps were taken out by one to be supplied by new lamps by the other.

6755. (*Sir R. Hill.*) Would not those same interests be opposed to any proposition for selling the railways to the Government?—No; that is a matter more in the hands of the proprietors; and although the directors would, no doubt, some of them, have an interest in not having the lines disposed of, the proprietors would prevent the possibility of such an intention being carried out.

6756. (*Lord Stanley.*) With regard to the large number of companies that exist in Ireland whose preference stock is yielding no return, and whose ordinary stock yields none; do you think that the proprietors of that ordinary stock would be willing to sell it at prices which fairly represent its depreciative value?—I have no doubt they would be delighted to do so; some of the original proprietors would be delighted to sell it under its value, and I think that it could be done by the Government without costing them a single farthing; for instance, if they created a railway stock and gave, say, 3½ per cent. instead of 3 per cent., I think the entire of it would be taken up by the present proprietors. I believe that they would take payment for their shares in railway stock that would carry 3½ per cent., and that the whole operation could be worked out without disarranging the finances at all, or asking the Chancellor of the Exchequer to increase his budget.

6757. If I understand you rightly, you intend that the new railway stock should be given in exchange for the existing stock. But take the case of the stock of a company which is yielding no return, and which is therefore worth perhaps only 5*l.*, or at the most 10*l.*, for every 100*l.* of original stock, do you think that the proprietors would be willing to sell it at its present market value, which would be 5*l.* or 10*l.* for every 100*l.*?—I am a proprietor in one small railway which passes near my property. I took a few thousand pounds worth of stock in it, and I have no doubt that with the view of getting 3½ per cent. for their money the proprietors would sell their entire shares at one half the price of their 10*l.* shares, that is, that they would be satisfied to take 5*l.* a share and take the railway stock, as I call it, that is a Government security paying them 3½ per cent. for their money; it would be marketable to them. I do not say that the Government should give them what their shares cost them, but what they are now valued at, or I think a shade beyond their market value. People holding stock of that kind still hope against hope that things will mend.

6758. Supposing that there is nothing compulsory in the process of purchasing, but leaving it to be a matter of bargain between the Government and the individuals, would not the effect of the transaction be very much to run up the value of that stock as against the Government, as the shareholders would hold on, knowing that sooner or later the Government must purchase it from them on whatever terms they might ask?—It would never do if it required the assent of all the shareholders. I think it might be necessary to pass a short Act to say that a majority of the shareholders convened at a public meeting under the provisions of the Companies' Clauses Act, the meeting being called in a regular way, giving every shareholder notice of the object of the meeting, the majority should bind the minority. I think that that would be a fair provision, and one that would be acceptable.

6759. You would deal with the proprietors as a single body in each case?—Yes.

6760. Do you think that the proprietors as a single body should negotiate with the Government as to the price they should obtain?—I would send the proprietors notice that they should receive a proposition from the Government upon a meeting being called for the purpose; unless that proposition was accepted nearly unanimously, then a meeting could be called under this Act, and if a resolution was passed adopting the proposition by a majority of the

*J. D. Meldon,
Esq.*

27th June 1865.

*J. D. Medon,
Esq.*

27th June 1865.

shareholders present, then the minority would be bound by that resolution.

6761. Supposing that the majority were agreed as to the selling, who, then, should fix the price?—The proposition would come from the Government before the meeting was called. The Government, having looked into what the shareholders had been receiving or likely to receive, might then say, "We will give you 5l. a share for your shares; call a meeting under the Act, and if this offer is assented to it shall be carried out; if not, the Government will not interfere in the matter at all."

6762. Do you think that under that system there would be a good deal of jealousy between different companies, one company thinking that another company had got a higher value for their shares than they had?—The dividends payable for, say a period of the last five years (taking the last five years as the average), would be the criterion by which the Government would be guided; but I expect that Government would, if they adopted such a course, be rather liberal, for instance, I would give 25 years' purchase instead of 20. The 20 years' purchase gives them 5 per cent., but I would give them 25 years' purchase upon the abated amount. I think you would not find any difficulty in coming to a reasonable understanding, for the proprietors are not satisfied with the management of railway property at all.

6763. Suppose of these 40 working companies 35 have assented, but there are five who have not come in, and those five are scattered up and down throughout the country, will not those who stand out to the last find that their opposition gives them a great advantage in dealing with the Government, because the Government having bought so many must make a purchase of the whole?—They may think so, but it would not follow by any means that the Government would be bound to do any such thing. The lines only that they purchased would come in under their management; they are by no means bound to purchase the whole. The other lines would soon find that their dividend would go very low, in fact, their refusal of the Government proposition would very much reduce the value of their shares in the market. Perhaps half-a-dozen of the small companies would be foolish enough in the first instance to do it, but if the Government were firm and steady in their proposition the result would be that all would come in to it, provided it were liberal and reasonably fair.

6764. You think they would not argue in this way: Government began with the option of purchasing, but they will have to end with compulsory purchase?—I do not think they would. A good deal would depend on the nature of the proposition that was made. I say that it should be taken on a liberal scale, and I think that the receipts of the railways under one united management would create a fund more than sufficient to pay the $3\frac{1}{2}$ per cent. that I have proposed to pay on railway stock. Having regard to the enormous saving which would be effected in getting rid of this vast number of directors and professionals, I think the Chancellor of the Exchequer would have a surplus, and a very large and considerable one, at the end of the year, even out of the present receipts, but I should expect under the new management the receipts would be doubled.

6765. You would save something in the first place by the lower rate of interest which you would have to pay for money?—Certainly.

6766. And you would save something for dispensing with the service of those 390 gentlemen who are receiving salaries and not doing much work?—Yes; but the directors' salaries are very little compared with the official and *attachés* to each company.

6767. (*Mr. Glyn.*) How would you propose to deal with a company, say, for instance, between Dublin and Belfast, who refused to come into the Government proposal, and threw impediments in the way of the traffic?—I have not considered that, but it would be a serious difficulty, and one which would require

to be carefully considered. A compulsory clause could be put into the Act of Parliament, but it is not wise to legislate compulsorily against parties. There would be a difficulty there, I admit.

6768. Would not that give that company a great advantage in its objection if it stood out?—I think it would. I think there would be a serious difficulty in that case. You are aware that there is an Act of Parliament that compels every railway company to forward the traffic brought to them by another company. The Government would not be so totally dependent upon the company owning the centre line, and could be done very little injury to. Mr. Cardwell's Act compels them to forward the traffic.

6769. They are obliged to forward the traffic, but they may charge the extreme rates for it?—They have the power of charging the rates appointed by their special Act. No doubt they might refuse to come into the arrangement for reducing their rates.

6770. Would it not in point of fact require special legislation to meet this difficulty?—It would. If the Government announced that they would pass this Act of Parliament, and allow the railways to call their meetings, and if they were unanimous or nearly so in accepting the proposal of the Government that they would carry it out, but if they were not unanimous or nearly so, that they would decline, I think that might be done.

6771. (*Sir R. Hill.*) You propose to leave the acceptance or rejection of the Government proposal as regards each company to the votes of the proprietors?—Yes.

6772. But are there not three classes of proprietors, that is to say, three different interests connected with each company; namely, the ordinary shareholders, the preference shareholders, and the debenture holders?—As regard the debenture holders they are a class which could not well be asked or required to agree to the proposal, because they have a special lien upon the line, and they would have to be recouped in a very different mode, namely, out of the specific money of the shareholders generally.

6773. Does that include ordinary and preference shareholders?—The preference shareholders would require to be paid on a larger scale, and of course that would have to be at the expense of the ordinary shareholders.

6774. But would you bring them together to vote or allow them to vote separately?—I have not considered that sufficiently to venture to express an opinion. That is a suggestion that would require some little consideration.

6775. (*Mr. Glyn.*) Is not the power of voting now in the ordinary shareholders?—I am speaking now of the ordinary shareholders. That is my impression, because the preference shareholders have the priority over them.

6776. The preference shareholders have no power of voting at all?—No.

6777. (*Sir R. Hill.*) If a proposition were made to sell the line, I presume the consent of the preference shareholders must be obtained?—I think the consent of the preference shareholders and the bondholders should be obtained, and that they should have special payment; but that special payment would come out of the pockets of the ordinary shareholders.

6778. You do not propose to hand over their interests to the ordinary shareholders?—That would be most unjust; that could not be done.

6779. (*Mr. Glyn.*) But would not the power of accepting the offer of Government be entirely with the ordinary shareholders, because they are the voting power in every company; the preference shareholders have no voting power?—If they vote and say "we will sell to the Government," there should be some arrangement as to what proportion of the purchase money the debenture holders should receive. The residue only would be divisible among the ordinary shareholders.

6780. I am merely now referring to the question of the power of accepting the offer of Government or

not, that is with the ordinary shareholders and not the preference shareholders; the division of the money is a different thing?—The Act should provide for that, because there are some companies whose funds are insufficient to pay the preference shareholders.

6781. (*Sir R. Hill.*) That is the difficulty I have in view. If the Government were willing to pay the preference shareholders as well as the bondholders in full, then the decision might, I presume, be safely left with the ordinary shareholders; but seeing that there are some companies who are unable to pay the interest of their preference shareholders, Government would probably refuse to enter into engagements to pay the preference shareholders in full; and if so, then the consent of the preference shareholders would be required, would it not?—Certainly. If you ask the preference shareholder to take less than 20s. for his pound, you must have his consent, assuming there is no compulsory legislation. I think very few companies are not able to pay their preference shareholders. That is a matter that I have not given full consideration to; but that is a question, and a very important one, which Government will have to look at in all its bearings.

6782. (*Lord Stanley.*) Have you at all considered, assuming the system to be complete, and the whole of Ireland to be in the hands of one company, what be the position of the projectors of any new lines seeking for extensions?—At present it is next to impossible to get a new line successfully floated, because the old lines having monopolised the larger portion of the traffic, there is no encouragement to project new ones. There would be some little difficulty as to new companies.

6783. I am putting the difficulty in this way, supposing that you have got all the Irish railways into the hands of a single company, it would, of course, not be desirable to allow their work to be undone again. It would therefore follow that any new lines which were made would require to be made by that company, or after being made to be connected with them?—Of course no line of railway can be made without the sanction of Parliament. The Board of Trade are always consulted, and the plans of new railways submitted to them; and if they think a proposed line of railway an injudicious one, that line would not pass. But if a new company started and proposed to make a new line of railway from one point to another, and Parliament assented to that, I see no reason why that company should not be permitted to go on, if they please, as a separate and distinct company; and when their dividends amounted to 3 or 4 per cent., they should be at liberty to apply to Government to buy them up, the Government not being bound to do so if they did not think proper. I think some little provision of that kind might be introduced, but no doubt it would be a little complex.

6784. With regard to those lines which are at present in a bad way, but which hold out hopes for the future, do you think that the market value of the ordinary stock should be taken as the basis of valuation for the purpose of purchase by the State?—I said I thought not. The ordinary market value of anything at present in Ireland is, say, 5 per cent.; that would be 20 years' purchase. I premised by saying, that I thought that seeing that this is a compulsory purchase, and that there is no chance of its ever increasing in value to the shareholders, that the Government might go so far as to make it as high as 25 years' purchase.

6785. If I understood you rightly, you said it was not intended to be compulsory purchase?—It must necessarily be compulsory upon the minority. It would not be compulsory, no doubt, in one sense, but in another it would: for instance, if a dozen men meet and nine out of that dozen say "we ought to accept the Government proposal," the minority of three are bound, it is in some respects compulsory upon them, and it is in that sense I use the expression.

6786. (*Capt. Galton.*) In the case of the lines which pay no dividend at all, how would you fix the value?—We would throw ourselves on the mercy of the Government and ask them to consider what its real value should be. It would be the easier to purchase; and I would say to the Government that they ought to give us something for that line, because, although it has not paid the particular company, I have no doubt it would pay as soon as the Government took it into its own hands.

6787. A line like the Cork and Bandon, for instance?—I have no doubt that if the Cork and Bandon was united with all the other railways in the south of Ireland, and worked without the expenses of management, it would pay.

6788. (*Mr. Glyn.*) You would allow something for prospective value, in fact?—I would. I am sure when the Government came to look at it they would act fairly and liberally with the shareholders. I have no doubt shareholders so circumstanced would be delighted to get anything that was offered them.

6789. (*Chairman.*) Have you formed any opinion as to the terms upon which shareholders would be willing to dispose of their shares?—A great deal would depend upon the prospective value of a line of that kind. If they have tried it fairly and it has no prospective value, and in fact that it is barely able to pay its own working expenses, I should say then that the shareholders would be delighted to get one-fourth of their original purchase-money. I have very little doubt it would then make a return to the Government.

6790. (*Sir R. Hill.*) Would not that be a very high price for a line which had gained no dividend?—It would have gained a Government dividend because the earnings have been eaten away by the salaries which have been paid to the officials and directors, which would be done away with the moment it was united with the other railways.

6791. Can you explain how it is that shareholders do not force such arrangements upon the directors if they think that would be profitable?—They have not the power of forcing them upon the directors. There is a certain amount of traffic in the locality, and expenses absorb the earnings, but the shareholders cannot expect directors to give their time and attention to managing even an unfortunate company without payment. No men will give their time without remuneration.

6792. Where there are two contiguous companies, both very small, a great advantage would arise to the shareholders by their being united under one management, how is it that the shareholders do not meet and force such an arrangement upon the directors?—I do not think they have the power. I do not think there is any Act of Parliament in force in this country which enables them to do so. But a very simple act might be introduced to invest shareholders with the power of enforcing amalgamation in spite of their directors.

6793. (*Chairman.*) Could they not, if they pleased, turn out the present directors and elect new directors, who might be willing to amalgamate those companies?—They might do that if they pleased, and they have tried to do so in one or two instances.

6794. (*Mr. Glyn.*) The proprietors have never stopped the directors' money?—No.

6795. Such things are found in England, but not in Ireland?—The shareholders have not exercised that power, and I will state why. Every year two directors only go out, so that it would take four or five years, or at all events three years, to turn the whole of the directors out. The shareholders might at once pass a vote of censure, and if the directors are honourable enough to withdraw upon a vote of censure being passed they would do so.

6796. (*Mr. Horsfall.*) Would it not be tantamount to dismissing the directors if their salaries were stopped?—I think it would very soon cause them to retire.

J. D. Meldon,
Esq.

27th June 1865.

J. D. Meldon,
Esq.
27th June 1865.

6797. (*Mr. Glyn.*) But it has never entered the minds of the proprietors to do such a thing?—I do not recollect a case in which it has been tried.

6798. (*Sir R. Hill.*) I presume the shareholders hold their usually half-yearly meeting, do they not?—They do; but somehow or other the directors always manage to get a sufficient number of proxies to control almost any meeting of the kind. It has not been found that there is any unity of feeling among the proprietors.

6799. (*Mr. Glyn.*) Is much of the Irish railway stock held by English capitalists?—A great deal of the Great Southern and Western, and also a great deal of the Midland.

The witness withdrew.

Mr.
J. G. Boileau.

Mr. JOHN GEORGE BOILEAU called in and examined.

6802. (*Chairman.*) You are a wholesale merchant of Dublin?—I am.

6803. Has your attention been directed to the system pursued upon the Irish railways, with respect to rates and charges?—It has for a considerable time.

6804. Have you formed any opinion with regard to the possible improvement of that system?—The opinion I have formed for a considerable time has been, that the proper development of the commerce of the country can only be effected by cheap rates, both for passengers and goods traffic. Railways, as the great highways of the country, are necessarily the great monopolists of passenger and goods traffic; and as such should in every possible way give every facility for cheap, safe, and expeditious travelling, whereby the trade of the country would be extended, and the resources developed. In this country the very opposite is the policy pursued, and the interests of the poor are not considered; and the rich, although heavily taxed, and even willing to pay, are seriously inconvenienced when travelling from any distant part. The very germ of success to commerce is facility, and if facilities are not afforded, it then amounts to an obstacle which is exceedingly disheartening when the very opposite should be afforded. In illustration, one of the articles of commerce we largely deal in and manufacture is white paint. This article is most extensively used; but our trade is seriously curtailed by the high rate of carriage by the Great Southern and Western line charging 20s. per ton to Cork, whereas the same article can be brought by steamer from Liverpool and Bristol at the rate of 10s. per ton. It is perfectly plain that we must either forfeit 10s. per ton in our price or get the trader to pay us 10s. per ton more, which is not at all likely he will do. The present through rate system organized by the London and North-western line, and co-operated with by our railways, has proved most detrimental to the traders of Dublin doing a trade throughout the country; for instance, a firm in Liverpool of large extent, carrying on an immense trade in oil and linseed cake and other articles fit for feeding cattle, are anxious to introduce these articles into Ireland, and consequently looks out for a respectable agent, a man of means and position. The transactions being likely to be large they would not appoint any other. Mr. Boyd is appointed their agent, and a gentleman from Bagenalstown orders a ton of linseed cake, but he finds that Mr. Boyd has charged him 12s. 6d. at least too much. Mr. Boyd merely added the freight from Liverpool to Dublin, whereas under the through freight the whole quantity would have gone from Liverpool to Bagenalstown for 12s. 8d. per ton. This clearly shows that the person who bought it saved the railway fare from Dublin to Bagenalstown, and the cartage from the steamer here to the railway station. It is unnecessary to state that Mr. Boyd's agency is of little profit to him. The northern railways exhibit a strange system. Leaving Dublin for Belfast, before you arrive at your destination you will have travelled over three if not four different lines, each conducted under three different boards of directors, whose interests

6800. But is any of the stock of the smaller lines held in England?—I do not think the English people will invest in the small lines at all. Of the two main lines in Ireland, a very great proportion of the stock is held in England.

6801. (*Mr. Horsfall.*) You spoke of a hundred engineers being employed on these various lines, do you know their salaries?—I do not. That would require a return of the incomes of the directors, engineers, and other paid officers derived from railways. It would be a most important element for the Government to take into their serious consideration in taking the railways. A return of that kind could be easily obtained.

ought to be identical, but whose operations are antagonistic, and consequently traffic in very way suffers. The express train leaves Dublin at 5 o'clock p.m., you arrive in Belfast at 9 o'clock just one hour too late to catch the steamer which each evening sails for Scotland. This is the route for all Scotch letters, so this will show how letters take nearly two days to go from Dublin to Scotland. If you want to obviate this delay you must post your letter for Scotland at 11 o'clock a.m. or 12 o'clock a.m. in the General Post Office, in order to catch the 1 o'clock p.m. train from Dublin; the same example applies to letters coming to Dublin from Scotland. Another difficulty the Dublin trader has to contend with is, that in such towns as Armagh, Enniskillen, &c., the carriage from Dublin is so high the shop-keeper cannot afford to deal in Dublin, but is confined to his selection to Belfast. This does not exhibit with the railway companies unity of action. Also the freight on the railways to Belfast, Derry, &c. completely precludes any Dublin manufacturer sending his produce to the northern towns. The steamers afford such facilities from Scotch and English ports. The Midland and Great Western Company, which runs from Dublin to Galway, and travels through the poorest district in the country, and from which part hundreds of reapers travel to England for the purpose of reaping the corn, this line in particular ought to afford cheap transit, and also to traders who would wish to come up to the metropolis to make their purchases. Yet this is the line most complained of by passengers and goods traffic. It is of frequent occurrence that the large farmers and those deeply interested in all farming operations are obliged to walk their cattle to Dublin market, owing to the high rate charged on the railway. This in itself is exceedingly deteriorating to the cattle, and must reduce them in value. Then those who do not so sell their stock in local markets are deprived of the metropolitan market where a better price can be obtained. I am credibly informed, and also know it of myself, that Dublin merchants in sending goods to the West of Ireland very frequently ship their goods by steamer to Liverpool and thence by steamer to Sligo and Westport. By so doing they save considerably to what they would have to pay by railway. As another instance of the want of liberality of a great company, the Dublin and Kingstown Railway Company have been compelled to reduce their fares owing to the opposition caused by the river steamers, and by the omnibus which leaves Dublin every hour and runs to Kingstown alongside the railway. The company were frequently solicited to extend their liberality, and did not do so until the opposition was firmly established. The frequent changing of the time-table on the Dublin and Wicklow line has been loudly complained of, inasmuch as people who have taken property along the line have done so on the good faith of every facility being afforded, and if a morning or evening train is taken off it must prove a serious inconvenience to many whose arrangements may have been formed. We have in our large business to very frequently make a rateable deduction off the carriage

paid by our correspondent, otherwise he would transfer his dealings to where he could get them at less expense in transit, and this at the end of the year presents a serious amount. We have had frequent assurance that if traders could get their goods as cheap from Dublin as from English outports, they would send much of their business to Dublin. In illustration of the difficulties the Dublin trader has to contend with, we introduce a letter from Mr. Alcock, of Cork.

" 75, Patrick Street, Cork,
" June 27, 1865.

" MESSRS. BOILEAU & BOYD.

" Gentlemen,

" Please say are the railway charges on the enclosed bill correct.

" I may remark, I could bring similar goods from London at considerably less money."

" Your's obediently,

" BERNARD ALCOCK."

It is perfectly clear to me that the present most expensive mode of conducting railways in this country, the number of directors who have to be paid, and the great difficulty the directors have in paying a dividend to the shareholders, puts it completely out of their power to venture such an experiment as the reduction of passenger or goods traffic, and it could only be effected under the care of Government aid. I have prepared a short tabular statement showing the charges on articles in large daily consumption, and which in my opinion are excessive.

TABULAR statement of sundry freights to four principal towns in the south of Ireland.—June 24, 1865.

This tabular statement is merely intended to show that the charges for conveying many articles of commerce is excessive, and in most cases considerably in excess of freights from any English port, in some cases double, thereby precluding the possibility of trading, owing to the high rates. I now give the evidence I obtained from the firm of Alexanders and Co., wholesale druggists, Great Strand Street, Dublin, they say:—"We are obliged to allow half carriage on goods to towns in the county Cork, in

" order to compete with English and Scotch houses. " Owing to the high rates on goods to towns in the north of Ireland, such as Enniskillen, Armagh, Banbridge, &c., we have been obliged to give up calling, " being unable to do business to a profit. The high " rates charged on small parcels of about 28 lbs. also " interferes with business. Such are carried on the " English lines much more moderately. The charges " also on returned empty packages we think ought " also to be modified." On the Midland and Great Western line only one goods train leaves daily in three divisions, 1st, to Galway at 12.30 a.m., 2nd, to Sligo at 6 a.m., and 3rd, northern route at 10 o'clock a.m. All goods must be delivered before 6 o'clock the previous day, in one case 12 hours before the train starts, in another four hours. The lowest weight carried is $\frac{1}{4}$ lb. Parcels exceeding 56 lbs. in weight are forwarded by passenger train at 25 per cent. over goods rate. When directed "van parcel," and delivered 30 minutes before the train starts, 1s. is the least charge for any parcel to Cork, and large packages are charged 5s. per cwt., and 6d. for every 14 lbs. exceeding 1 lb. This want of accommodation we complain of.

6805. Can you state anything as to the reduction of fares on the Midland and Great Western Railway?—I cannot; the only thing I can say is that in going down to Galway the fares are very excessive, and are continually complained of.

6806. (*Lord Stanley.*) The question is whether a reduction of fares to the extent of one-third or one-half would bring such an increased traffic as to cover the loss which would be created in the first instance. Taking any of the principal lines of Ireland with which you are acquainted, have you formed and opinion on that point?—I have been of that opinion for some years.

6807. You do not entertain that opinion indiscriminately with regard to all the lines?—I do not. I principally allude to the Midland line, upon which a great number of poor people come; facilities are not afforded them, the charge is too high, and they cannot afford to pay it.

6808. (*Capt. Galton.*) You mean the poorer classes do not travel by the railway?—I do. I mean to say they prefer walking on account of the high rate of charge.

6809. (*Mr. Horsfall.*) What reduction do you think will induce them to travel by railway?—If the fares were reduced to one-third of their present rate. The third-class fare is 11s. 8d., the poor people cannot afford to pay that; but they can afford to pay one-third of that.

6810. Do you think that such a reduction as that would pay the railway companies?—I am perfectly satisfied that it would, because at present they do not derive any benefit at all, for they do not carry the traffic.

6811. (*Mr. Glyn.*) How many miles is that?—It is 126 English miles.

6812. (*Chairman.*) Are there not low fares on that line for what they call the harvest men?—Very seldom; they gave them only when they were compelled to do so.

6813. Do you say that from your own knowledge?—I do; for many years the harvest men used to walk to Dublin.

6814. But not lately in any great numbers?—Not in any great numbers, because the Midland Company have been more liberal since this movement has been set on foot.

6815. They have made a special rate for the harvest men?—Yes.

6816. (*Sir R. Hill.*) What is the distance for which the third-class passengers pay 11s. 8d.?—It is from Dublin to Galway, which is 126 English miles. I find that the fourth-class fare is 10s. 6d.

The witness withdrew.

Mr.
H. R. Perry.

27th June 1865.

Mr. HENRY ROBERT PERRY called in and examined.

6817. (*Chairman.*) You are a grain merchant in Dublin?—Yes.

6818. Have you considered the effect of the present system pursued upon the Irish railways with respect to fares and charges?—I have very fully.

6819. Are you prepared to make any statements upon the subject?—I am intimately acquainted with the corn and flour trade of Ireland. As the means of transport is essential to the carrying on of this branch of trade profitably, I have given the railway system of Ireland, its rates, charges, and facilities of transit, my especial consideration. I have found each and every company I came in contact with disposed to exact the extreme rate of remuneration for the services they perform, and it was only by having the means of transit by the Grand Canal kept open that they were prevented from advancing their rates of freight still further, and thus materially interfering with the trade and commerce of the interior. That was with reference to a Bill that was promoted by the two principal companies, the Midland Great Western and the Great Southern and Western, in the year 1860, for the purchase of the Grand Canal, with the view of buying it up as a competitive means of communication. They ultimately failed, and the canal reverted to its original owners, and is now worked by them with great advantage to the districts that it serves. The result of a combination between the Great Southern and Western and Midland Great Western entered into some years since, by which the rates and fares are fixed and healthy competition is precluded, is, in my opinion, prejudicial to the development of the natural traffic and trade of the country, and calculated to retard materially commercial enterprise. The further extension of the railway system into districts unaccommodated already is postponed inevitably; and it is a part of the agreement entered into that no encouragement, even so far as the haulage of traffic by either of these two companies, be given to branch lines in a certain territory understood to be the property or right of the other company. That agreement was confirmed by an award.

6820. (*Mr. Glyn.*) How did the award arise?—There were two arbitrators chosen and an umpire. There had been a great deal of competition going on between them for some years.

6821. Then the conditions of that agreement were settled by an arbitration?—Yes; they both work the traffic under that agreement, and are bound to observe the conditions of it. The rates being fixed is obviously detrimental to the interests of the districts. That award is signed by "Edward Watkin" and "Mark Huish."

6822. (*Chairman.*) Will you call attention to the material points of that award?—It recites the circumstances of the case under which the arbitrators were chosen, the differences which had arisen, and that they had been chosen to settle the matters at issue.

6823. (*Mr. Glyn.*) What were the matters at issue?—Competition of rates at points at which they touched. What set it going more particularly was this, the Grand Canal had been leased by the Midland Great Western, one of the lines, for a series of years, whereby the Great Southern and Western felt themselves aggrieved. A considerable degree of competition was carried on by means of the Grand Canal, which was the bone of contention between them, therefore it was a matter of serious consideration by the arbitrators. This is their award upon the subject, "And we further award and adjudge that in anticipation of and until the authority of Parliament shall be obtained for such purchase, and with a view to the objects thereof, and in order that the benefits to the public and the said companies expected to be derived therefrom may at once be obtained, so far as an harmonious system of working and arrangement of the undertaking of the said canal and railways can effect the same, an interim agreement

"for the joint working and management of the said canal by the said two railway companies shall be entered into between them and the said Grand Canal Company; and that the said canal shall, as far as practicable, be conducted and managed as part of the undertaking of the said two railway companies by the joint committee herein-after mentioned, as and from the 2nd day of July, 1860."

6824. Did you not say that the Grand Canal is quite independent now?—That was the result of the opposition on the part of the public. So far as regards the canal the bill was before Parliament, and it was passed with such a rate of toll as the railway companies did not deem it their interest to accept, therefore they objected to the bill. So far as the canal is concerned it comes out of the arrangement altogether, and the remainder of it only stands good. Perhaps it will be as well not to refer to that part of it any further. Then they go on "And we further award and adjudge that after an Act of Parliament shall have been obtained containing the necessary powers to the said two railway companies respectively, they shall enter into such agreement or agreements as may be necessary to carry out and render legally binding the provisions of this award, or any of them; and the form of such agreement or agreements shall, in case of difference, be settled by arbitration, under the provisions of the said Act; and that such agreement shall be made to take effect in perpetuity, if so authorized by the said recited Act; and in order to settle and define the district of country within which the system of railways and canals belonging or attached to or worked for the benefit of the said companies respectively shall be considered as between themselves, and having regard to the permanent advantage of the public, and the objects of the said submission and this award to belong, we have laid down upon a map or plan of Ireland attached to this our award, and signed by us and our umpire, the said George Leeman, such a division line of the country traversed by or to which the said railways respectively and the canal or water communications contiguous thereto, either directly or remotely, afforded accommodation, as, in our judgment, to represent the district served, or which ought to be hereafter served, by means of each of the said two railway companies, or parties in connexion with them, or promoting branches to or from their respective lines, or to or from the said canal. And we further award and adjudge that neither company shall make, promote, assist, or encourage, any lines of railway to any point beyond the boundary line now awarded or intended to join a portion of a line in contravention of such boundary; nor in the event of any lines being made by other parties shall either of the railway companies, directly or indirectly, enter into any alliance or arrangement with such parties to or from any point which can fairly be considered and declared by an arbitrator, if disputed, as within the scope and intention of this our award." It was to that particular point that I wish to direct attention in order to show that they have parcelled out the country, as I may say, between them, and allowed of no interference on the part of any branch lines, or any traffic coming from them. Of course they had the country completely under their control, each in their own territory.

6825. (*Chairman.*) Without going through the whole of that award is not the result this, that in consequence of an agreement between the two parties they agreed not to compete with each other, but to divide the traffic in certain proportions?—Yes.

6826. (*Mr. Horsfall.*) Was the object of the two railway companies to do away with the opposition of the canal?—Yes, that was the principal object.

6827. In which they failed?—Yes, they had the object of dividing the rates at the two places at which they came into competition, namely Clara and Athlone.

At those two places they put the receipts into one common purse and divided them.

6828. But still they have the competition of the canal against the two railways?—They have. The principal point that I wish to draw attention to is that according to that agreement no branch lines were to be promoted in a district which each considered as their own. The rates for freight are unequal, and in my opinion considerably higher than the trade can afford; and I am satisfied that a moderate reduction would speedily induce an increased traffic over the lines of the greater part of Ireland. I am acquainted with the system of low rates and fares in operation on the continent, more particularly in Westphalia, where a large trade in coal has been developed of late years, principally owing to the rates conceded for the carriage, which enable it to be sent immense distances. Such rates as are in existence would be deemed by our authorities here on railways to be ruinously unremunerative. Yet there they have proved the contrary, and have developed a considerable source of national wealth and largely increased the profits of the railways, which are paying from 8 to 10 per cent. I know that from my own knowledge, from being connected with a colliery there, which is worked altogether by English capital.

6829. (*Mr. McClean.*) What is the low rate you refer to?—The rate is about $\frac{1}{2}d.$ per ton per mile. The rates for passengers and facilities afforded are by no means such as to induce travelling to an extent remunerative to the companies; the poorer classes rarely use the railway for this reason to attend markets, fairs, or for other necessary locomotion. On this point the Midland have set a good example by issuing market tickets to third-class passengers to go and return at a single fare on market days, and the experiment so far has been attended with good results. This may be taken as an instance of what would be effected by a general reduction of fares and increased facilities. I may also mention that there is hardly any point to which a third-class passenger can go and return in the day; at some points he cannot make even the direct distance in one day. Facilities are not granted; branch lines worked by small companies prove a serious obstruction to traffic by want of unity of management and antagonistic interests conflicting. They are consequently frequently used as block lines and to impede the traffic, as, for instance, the Clones and Cavan line, which was passed by Parliament with the view of carrying the through central traffic between Belfast and the south, and, in consequence, now it is very rarely used for that purpose, because the trains are so timed that the passengers cannot use them at all. When they get to Cavan they find that the train from Cavan has just left. I am of opinion that any arrangement which could be effected whereby the railways of Ireland could be worked as one general comprehensive system, and the rates and fares lowered to a point analogous to those of Belgium and the continent, would more speedily develop the resources of the country, and induce the investment of capital in trade and manufactures than any other measure that has yet been put forward, and that it would speedily result in increasing the receipts derived from the Irish system of railways, making 20,000,000*l.* of capital at present invested yield a fair and reasonable return instead of the miserable dividend at present paid upon the average of Irish railways. I am strongly of opinion that, in order to make railways fully remunerative, you must fix the rates they receive in proportion exactly to what the circumstances of the country are in which they are situate. This has never been done in Ireland yet on any extended scale, and yet the railway authorities complain that there is no traffic, and their receipts gradually dwindle down and the rates are kept up to fully, if not beyond, the English maximum. The existing traffic is thus literally passed by and not fostered, while trains run comparatively empty, and as a consequence shareholders receive no dividend. Railway companies must be satisfied to take for their

remuneration the amount that is forthcoming, and not demand what cannot be complied with.

6830. (*Chairman.*) Are you able to state that your own trade in grain could be materially increased if the charges were lowered?—Decidedly.

6831. (*Mr. Glyn.*) It would move more up and down the country with a reduction of charge?—Yes; we should cover a greater district of country; for instance, the rates in our particular case have been advanced since the canal competition has actively ceased. I should have mentioned that one result of the canal reverting to its original proprietors has been that they have now made an arrangement by which they compete at certain rates without conflicting, and the rates of the railways have been raised nearly 25 per cent. in many particular instances since that occurred.

6832. (*Chairman.*) The rates upon the canal have been raised?—Yes; both the canal and the railways have advanced their rates nearly 25 per cent. Three or four years after the canal had reverted to the canal proprietors, they worked in fair competition only.

6833. (*Mr. Horsfall.*) Then the directors of the railways and the canal have arrived at a right understanding?—Yes.

6834. (*Mr. Glyn.*) Do you think that the high rate upon grain prevents speculation in that article, that is to say, where a party buys grain at one port at a low price he cannot forward it to another part where the price is higher, on account of the high rate of carriage?—I do not think it has that effect; it does not stop speculation.

6835. It does not stop bargaining, in fact?—No, but it prevents an equalization of price to the fullest extent which there might be. It is high in some districts and low in others.

6836. (*Mr. Horsfall.*) What per-centage of reduction of the rates upon grain would you consider necessary to confer any appreciable benefit upon the trade?—I think from one half to one third would be a very fair reduction.

6837. Do you think that that would pay the railways equally well through the increased traffic that there would be?—Not for some time certainly not; for perhaps two years, or a sufficient time to allow of the development of the traffic that would be created by the lower rates. There must be sufficient time to put the new system upon its trial, not immediately, certainly.

6838. Do you think it would after a lapse of two or three years?—I should say so.

6839. (*Mr. Glyn.*) You say a reduction of one third; what would be the actual figures?—The present rate of grain is about $1\frac{1}{2}d.$ per ton per mile. That is the lowest rate on any quantity.

6840. You wish it to be fixed at that?—I think one penny per ton per mile would be a very fair rate.

6841. (*Mr. Ayrton.*) Where is the increase of traffic to come from; from what source?—I do not know that in grain there would be so much increase created by the lower rates, but in other articles there certainly would, such as manures and many other goods, and in grain to a certain extent, but not to the same extent as other articles.

6842. The diminution of the charge would be at the rate of $\frac{1}{2}d.$ per ton per mile, you say; that would be, on the average of 50 miles, 2*s.* 1*d.* on the ton?—Yes.

6843. That would be about 6*d.* on the quarter?—5*d.*

6844. Do you think that the economy of 5*d.* on the quarter would lead to any increased growth of grain in Ireland?—I am certain that it would; to what extent I cannot say, but I am certain that it would lead to some. I know many mills which are at this moment idle by reason of the rates of freight rendering them not able to be worked profitably.

6845. You think that the difference of 5*d.* per quarter would set them into activity?—5*d.* a quarter would be a very great consideration to men of business.

Mr.
H. R. Perry.

27th June 1865

Mr.
H. R. Perry.
27th June 1865

6846. Do you think that an additional charge of 5*d.* per quarter is the cause of their inactivity?—In some instances decidedly so.

6847. Can you mention one?—There is a mill at Athlone, and another at Clara, to which that remark applies.

6848. Take the Athlone mill; in what way does the additional charge of 5*d.* per quarter prevent that mill from working?—A miller situated at Athlone must buy his grain either at Galway or Dublin. Home-grown wheat is almost out of cultivation, at least in the district about Athlone, and in all districts with the exception of Cork, Kilkenny, Carlow, and the south. As regards Athlone, home-grown wheat is hardly known. Therefore, a miller must buy his wheat in either of those ports and bring it down to Athlone, and grind it there, and supply the markets in the immediate vicinity. Therefore, it must be patent that any saving whatever is of material assistance to him.

6849. If he must bring his grain, how does the 5*d.* per quarter prevent his bringing it, if there is grain in the country to compete with him?—But the country is supplied with mills which are on the sea-board; for instance, Galway and Dublin supply the market, and they have an advantage in supplying the markets because they are able to send more directly. They only send the exact quantity of flour that is required. Whereas the miller at Athlone might bring the whole of the wheat down, and perhaps be able to sell one portion to an advantage and another portion not to an advantage; and therefore there is that against him.

6850. Do you not think that the injury to the Athlone miller results from the fact that he comes in competition with the miller of Dublin, which is the place of import?—No doubt; but then he would be much better able to compete with a moderate rate of freight than with this rate of freight. The rates I have given have been increased materially.

6851. The only result would be that the trade would be transferred from one part of the country to another?—That would be one result, and I would say that a larger trade would be done to some extent.

6852. If the corn went the flour would not go?—No.

6853. Therefore the railway company would not have any more traffic?—The railway company would not have any more traffic than what would be created by the increased business that would be induced by the moderate rates of freight. There might be some points at which the rates of freight would prevent business, and another point at which rates of transit would induce business.

6854. There would be no increase of traffic to the present railway companies?—Not if only the same quantity were carried; but I think a larger quantity would be carried to some extent; to what extent I am not prepared to say.

6855. You think 5*d.* per quarter would seriously increase the consumption?—I think 5*d.* per quarter on oats would, for instance, allow an increased profit to the grower. I wish to allude to the rates charged by the railways generally; they are very unequal; they are not governed by any equal system at all. I have made out a table of the rates on grain, and I find that the governing point is the contiguity of the sea-board in nearly all cases. As between Dublin and Cork, which is a distance of 166 miles, they have a rate of 12*s.* 6*d.* per ton, because the steam competition interferes and reduces it; while to many stations short of Cork they charge a higher rate. The same principle holds good with the northern rates; for instance, the rates to Belfast, Londonderry, Galway, and Sligo; and it will be found that the intermediate rates are considerably higher than the through rates. The whole principle which regulates the making of those rates by those companies is, what they can get, not what is a fair and regular rate.

6856. (Mr. Horsfall.) What is the extent of the difference in the mileage rates between the two ex-

tremes?—The fare from Dublin to Belfast is 10*s.*, the distance being 113 miles; and the fare from Dublin to Banbridge is 15*s.*, the distance being 87 miles. That is only two-thirds of the distance, and yet the rate is one half more.

6857. (Mr. Glyn.) On the same line?—On the same line, but for a portion of the way.

6858. Not the whole way?—No.

6859. Do you know the respective fares charged by each company?—I do not. This is the table I refer to:—

DUBLIN to	s.	d.	Miles.
Balbriggan	4	2	22
Ballybay	15	0	98
Banbridge	15	0	87
Belfast	10	0	113

„ „ Fermoy „	5 6 6	—
„ „ Galway „	6 16 0	—

* Competition.

6860. (Chairman.) Can you give any comparison of rates of the Great Southern and Western?—I have none of the Great Southern and Western; they are increased, I know, for some of the shorter distances in considerably higher proportions, but none in which the increase is so very great as that. There is Lisburn, 13*s.* 4*d.*; that is on some lines 10*s.*, as between Belfast and Dublin; Lisburn is a shorter distance than Belfast by eight or 10 miles. Passenger fares have also been advanced 10 per cent, during the past 10 years on both the Midland and the Great Southern and Western railways.

6861. (Mr. Glyn.) On all classes of passengers?—Yes.

6862. In the same proportion?—Yes.

6863. (*Chairman.*) Have you any other suggestions to offer?—Many of the present existing smaller companies are burdened with capital by reason of the difficulties which they had to contend with in their construction; consequently, a large portion of their capital is lost, and the original shareholders receive no dividend whatever. The Streamstown and Clara line originally passed by Parliament as a central through north and south link; it is not now used by reason of the want of arrangement as to times and communication between the Great Southern and Western Railway and the Midland Railway; the traffic is consequently turned back and driven round through Dublin, and the outlay on the part of the

Midland Company remains unproductive. The award by division of traffic between the two companies at Clara and Athlone has completely taken away the inducement to either company to develop or induce the traffic at either of these points, as it is manifest when the receipts are thrown into a common purse neither company has the inducement there would be if such were not the case. Steamboat navigation on the Shannon between Athlone and Killaloe had been previously carried on by the Midland Great Western Railway, but has since for the same reasons been abandoned, and the traffic diverted. The Great Southern Company bought the steamers for the purpose of keeping them idle.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

Wednesday, 28th June 1865.

PRESENT:

THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
SIR ROWLAND HILL, K.C.B., F.R.S.
J. A. ROEBUCK, Esq., M.P.
T. B. HORSEFALL, Esq., M.P.
ROBERT DALGLISH, Esq., M.P.

GEO. CARR GLYN, Esq., M.P.
A. S. AYRTON, Esq., M.P.
CAPTAIN DOUGLAS GALTON, R.E., F.R.S.
J. R. MCLEAN, Esq., Pres. Inst. C. E.
WILLIAM POLE, Esq., F.R.S., *Secretary.*

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

Mr. ALEXANDER PARKER examined.

6864. (*Chairman.*) You are a merchant in Dublin?—Yes.

6865. You are, I believe, prepared to make a statement as to some grievances which you and other merchants in Dublin experience from the system pursued by the railway companies of Ireland?—Yes; for the sake of not wearying the Commission with a repetition of the same facts a deputation from the Chamber of Commerce thought it well to come to a little private arrangement as to what each one of us should particularly speak to, and these grievances and discrepancies that we complain of will be spoken to more particularly by two of those gentlemen who are to follow me. I will trouble the Commission with some opinions which I am prepared to support by such reasons as may satisfy the Commission, growing out of such collateral questions as you may see fit to put to me. As a whole, the railways of Ireland are in a very unsatisfactory position as regards their shareholders; they have been for the most part very unprofitable speculations; the directors, therefore, are unable to venture upon any experiment, such as a bold reduction of the fares and charges. It is our hope that the Commission may be satisfied that this bold reduction might be ventured upon by the Government without much peril to the exchequer. We think that the masses of the people have never yet been induced to move about by strong temptations in the way of low fares; we think that the revenue to be derived from the moving of the masses has never been properly considered yet by the railway boards of the country. We think that persons engaged in trade in a humble way have never had strong inducements to travel and make their own purchases, or sell their own produce, and enter into their own transactions, but that they have been too much in the habit of staying at home, and doing their business by correspondence only. We believe that a bold reduction of fares would induce, first, the great masses of the people to travel, the labouring classes especially; such as have their little produce to bring to market. If they have a market town at a distance from them there is a difficulty in the way of their travelling otherwise than by railway, from which they are at present practically excluded, unless the articles they have for sale be of sufficient value to pay the heavy

per-centage that the railway fare inflicts. We think that over and over again it has been demonstrated, from the days of Mr. Bianconi up to the present time, what a little encouragement did to set the people of the country in motion, and one of our misfortunes in Ireland is, that state of stagnation and indifference into which so very many of our people have fallen, and from which we would fain rouse them by some such mode as this; we think that no mode could be much more effectual than this. A parliamentary train conveys the people at the same rate as in England, but there is but one parliamentary train a day upon our Irish railways, and we think that almost all our Irish railway companies give too little encouragement to third-class passengers. The first-class passenger, for instance, and the second-class passenger have the advantage of a return ticket, and the first-class passenger travels for about 2d. a mile. The second-class passengers travel generally for about 1½d. a mile; and the third-class passengers for something over the charge by the parliamentary train on the railways generally. The Midland Great Western Railway, which runs to Galway, has a fourth class, but the charge is still the Parliamentary rate. A considerable time since, when Lord Dunsandle was chairman of the Midland Great Western Railway, the reapers, and those persons who come over to England to cut your hay and your corn in the summer and the autumn, were in the habit of tramping up to Dublin, carrying their sickles and walking up. His Lordship, with another of the directors, went amongst them and said, "Boys it is hard work this walking up to Dublin and wearying yourselves out; what would you be content to pay, supposing we brought you up by railway?" And they said that they would be very glad indeed to be saved the journey; that it was very fatiguing in hot weather. And then his Lordship proposed to put on fourth-class waggons to bring them up, and they were so brought up to Dublin. From that time those poor men have always been brought up in that way; they have paid the price charged very cheerfully, and especially at the time when they are going home with English gold in their pockets. Although that portion of the population has been very much thinned down by emigration, yet the receipts upon that railway from that source have increased instead of diminished, which seems to prove the proposition

Mr.
H. R. Perry.
27th June 1865.

Mr. A. Parker
28th June 1865

Mr. A. Parker.
28th June 1865.

that if these poor people only get encouragement they can be set in motion. Now that emigration itself is going on at a very great rate, it is also illustrating what lowness of price will do in that direction, for the extremely low price at which steam companies have found it to their advantage to transport people across the Atlantic is really one of the causes why so many persons leave. It is the facility that is presented to them by extremely low fares. The remittances they receive from America enable them to take their passage out, and it is something so small, that it is quite wonderful how the companies can make anything by it. A trifling reduction in the railway fares would do nothing; it might a little increase the number of the travellers, and a little even increase the travelling of the labouring classes, but a large and telling reduction would, in my opinion, bring out such numbers as travellers that there would be in two years at most, I believe, no diminution of the present revenue. It is my opinion that a large reduction in the fares would be compensated for in a couple of years by the greatly increased number of the travellers. The shopkeeper at present, from a distance of under 100 miles, gets only one day for his return ticket, that is to say, he comes up one day, and he must return the next, but even that is denied to the third-class passenger; there is no return ticket for him, so that the third-class and the second-class passengers are brought much nearer to one another than the table of rates would seem to indicate. I do not lay so very much stress upon a very large reduction in the price charged for the carriage of merchandise; but when the Commission reflect that travellers load themselves and unload themselves, and that there is no expense but that for mere transportation connected with passenger traffic, the disproportion of a ton of men to a ton of goods is very striking; and for all these reasons I would join in pleading for Government interference, in order materially to reduce the present passenger fares, and considerably to reduce the present charges for merchandise. There are a number of discrepancies and inconsistencies, to which my friends who will follow me will speak more particularly, as they have undertaken that department of the evidence. I do not know that there is any other material point which I would desire to throw out. It would be an extremely popular measure, and I think it would be a political advantage, a social advantage, and certainly a great commercial advantage. The directors of the railways at present appear to think that there is just a certain amount of traffic in the country, and they say, "We have possession of it; let us 'make the most of it';" and they have not seen this way of making the most of it; nor can I wonder, because, after all, it would be a bold experiment for any set of men to make, intrusted, as they are, with the property of others, to pay as large a percentage as they can by their management; and whilst I know that there are individual members of the boards who entertain something like the opinions which I have given expression to, yet they are in a very small minority.

6866. (*Lord Stanley.*) Do I rightly understand your proposition to be that the Government should buy up the Irish railways?—I should not like to express an opinion upon that. My own personal opinion is, that it would be a great blessing to the country if they did. But that is only an individual opinion; and as I am sent here by a public body I should not like to commit them to that opinion.

6867. You wish simply to express your opinion of the benefit that would arise from a considerable reduction of the fares?—Yes, a very considerable reduction in the passenger fares, and a considerable reduction of the charges upon merchandise.

6868. (*Mr. Roebuck.*) I think you stated that although you believe a benefit would result, it could not be carried out by the present railway directors, but must be done by somebody else?—It could be done very well by the present railway directors if

they could bring themselves to run a risk for 12 months; but undoubtedly the whole benefit arising from the change could not exhibit itself in many cases until after, perhaps, a year's trial. In other words there would be a loss at first.

6869. And you think that the railway directors would not run the risk of that loss?—They do not feel at liberty to do so.

6870. If that be so, what suggestion have you to make for the purpose of bringing about the result that you think so desirable?—I think that the Government might be induced perhaps, if the case were made plain, to interpose the public money in order to protect the railway proprietors from loss, and that the experiment might be made greatly to the benefit of the country.

6871. That is to say, that the Government should guarantee the railway companies against any loss?—Yes; any loss below the loss that they may at present be incurring. The fact is, that some of our railways pay no dividend at all, and the Government guarantee would in that case prevent their growing worse than they are. There are others paying 2 per cent., others paying 3 per cent., one or two of them paying 4 per cent., and one or two also paying $4\frac{1}{2}$ per cent. It would be simply the Government guaranteeing that the proprietors should receive not less than they have received for the last three years.

6872. It comes then I think to what I said; you think it advisable that the Government should guarantee the companies from any loss?—Yes.

6873. (*Chairman.*) In the transaction of your business as a merchant, do instances frequently occur in which those with whom you deal would come to you personally if the fares were lower, who now carry on their business by correspondence?—Yes.

6874. You are able to speak to that confidently?—Yes; that is a matter of perfect certainty, and is shown by the eagerness with which they avail themselves of every cheap trip that is occasionally offered to the public. I have frequently said to a person, "You 'were here not very long ago. I am glad to see that 'your business is prospering.' Then the answer has been, 'You must not judge of that by seeing me up 'here so soon again, for the fact is, that I have had 'an opportunity of getting up on a cheap trip.'"

6875. (*Mr. Ayrton.*) Can you explain to the Commission why the shareholders in the railways who have the keenest interest in adopting your views, do not agree to them and carry them out?—I think it is from a feeling that railway directors have always, as a body, represented these notions to be somewhat utopian, and they have set their faces against them.

6876. Do you think that the shareholders believe the directors rather than the opinion entertained in the Dublin Chamber of Commerce?—If you were at a meeting of an Irish railway company you would find that there was very little union amongst the shareholders themselves, and very little cordiality between the directors and the shareholders with very few exceptions. The meetings are, generally speaking, meetings of dissatisfaction and disappointment. I am not a director in any railway, but I have the misfortune to hold some railway stock, and very unprofitable indeed it has been. This brings me to railway meetings occasionally, but they are never meetings for deliberation.

6877. Is not that the frame of mind which is exactly suitable to the adoption of any new plan that would improve their affairs?—Certainly not. It is also, generally speaking, an occasion when there is a clamour for a reduction of freight, or a clamour for a reduction of the passage money, or that greater facilities shall be given to travellers; but the suggestion always comes with a local bearing only. I have never heard at a railway meeting a general suggestion of that kind upon broad grounds. I have heard a grazier, for instance, representing the hardships as to the cattle trade, and wanting a particular kind of cattle that he fed conveyed at very low rates; but I never heard

any one deal with the question on the broad ground of the country's good and general measures.

6878. (*Mr. Horsfall.*) You stated just now that you did not lay so much stress upon a reduction of the rates on goods as on passengers. Why did you draw that distinction?—Because I do not think that the amount of goods could be very largely increased by a reduction in the rates. No doubt trade would be relieved of some of its necessary burdens, but I think that a reduction of the fares for passengers would increase their numbers to an enormous extent. The country must have what it consumes, whether it pays a high price or a low price, and it would be undoubtedly a great advantage somewhat to diminish the rates, and to equalize them. I may mention that there is an extremely mischievous system which affects the city, and that is, the through rate system, the whole of which arrangement operates to the disadvantage of the local merchants; a buyer in Dublin can have his goods sent cheaper from Liverpool to Cork, or from Liverpool to Limerick or Athlone, or to any of the inland towns, which is more than 100 miles distant, than from Dublin, and the through rate tells to the disadvantage of Dublin, both with regard to goods and passenger traffic. A Belfast merchant leaves for London on his business, and he obtains a return ticket for 50s. A Dublin merchant coming to London on business pays 5*l.* 3*s.* for his return ticket. The consequence is, that the balance is thrown very decidedly against the City of Dublin, and that is felt to be a very great grievance.

6879. You were complaining of the inequality of the rates?—Yes; there is very great inequality caused by reason of the through rates. Belfast is as far from London as Dublin is, and farther; but travellers can get first-class return tickets for 50s. from Belfast to London, while from Dublin it is 5*l.* 3*s.*

6880. (*Mr. Ayrton.*) Do they travel by the same route?—No.

6881. (*Mr. Roebuck.*) Why does the Dublin merchant not write to Belfast for a ticket, and have it sent to him by post?—It is not the same route to England; but the railway journey is as long in each case. We have certainly a superior class of packet from Dublin; but what you suggest could not be done.

6882. Did you not say that an increased amount was charged to Dublin, and a decreased amount was charged to Athlone *viâ* Dublin?—Yes; it is so for merchandise, not for passengers.

6883. Why do you not do it with regard to passengers?—We could not do it; it is not by a ticket that merchandise is sent; we have to send the merchandise to the railway from our stores. The hardship arising out of the through-rate system will be better illustrated by taking the same route.

6884. (*Mr. Ayrton.*) You stated that it was cheaper to send merchandise from Liverpool to Athlone than from Liverpool to Dublin?—No; cheaper than from Dublin to Athlone; that is to say, you can get goods cheaper from Liverpool to Athlone *viâ* Dublin than from Dublin to Athlone, by reason of that through rate.

6885. (*Capt. Galton.*) What is the fare between Athlone and Dublin as compared with the fare between Liverpool and Athlone?—I am not prepared to say; but nothing like the difference of mileage.

6886. (*Mr. Ayrton.*) Do you mean that it is absolutely cheaper, or that it is cheaper per mile?—I mean that it is absolutely cheaper.

6887. So that a passenger is conveyed absolutely for less money from Liverpool to Athlone than from Dublin to Athlone?—I do not mean to say that. I will give you, as an illustration, the first-class passenger rate from Cork. You pay from Cork to London *viâ* Dublin 5*l.* 6*s.* 6*d.* for a return ticket, Cork being 165 miles from Dublin. That will take a passenger from Cork to London through Dublin;

but we residing in Dublin have to pay 5*l.* 3*s.*, which is only 3*s.* 6*d.* less than the Cork man pays who is conveyed 330 miles more by railway than we are.

6888. (*Mr. Roebuck.*) Do you pay 5*l.* 3*s.* for a return ticket between Dublin and London?—Yes.

6889. (*Capt. Galton.*) Is not that because there is a competing route by Waterford?—No. I am speaking of the route *viâ* Dublin, and to make the hardship more palpable, I would show the Commissioners that for 330 miles of additional travelling, there is only the small difference that I have mentioned, which is to the disadvantage of the Dublin trader.

6890. (*Mr. Horsfall.*) Reverting to my former question as to the charges upon goods, do you not think that a reduced rate would have a most material effect, for example, upon the consumption of coal?—Certainly, and which would be a great blessing to the country. Now that our people are thinning down, the manufacture of turf is much more costly than it used to be when the poor man got 6*d.* a day for his labour. Turf has never been a very cheap fuel for the poor, and it has been always very uncertain fuel, a wet season making it both scarce and dear. Coal is one of the things that the railways carry at a very reasonable rate, I should say. I think it is a penny a ton per mile, and the consumption of coal in Ireland has doubled within the last 10 or 12 years. They are consuming coal very much more in the country by reason of the facility afforded for its conveyance.

6891. (*Mr. Glyn.*) Is that, in your opinion, a reasonable rate, a penny a ton per mile?—Yes, as compared with other merchandise.

6892. As compared with the rate charged in England it is high?—Yes, it is; but it was a rate that was quite new to us in Ireland.

6893. (*Mr. Horsfall.*) Are you aware that the London and North-western Company carry coals at a halfpenny a ton per mile?—I was not aware that it was so low as that. Such a reduction as that would be a great blessing. The perils to fuel are next to the perils to the potato. A dearth of good turf is nearly as bad a misfortune as a dearth of potatoes.

6894. (*Chairman.*) Can you state whether the through goods rates, of which you complain as injurious to the Dublin merchants, are the result of arrangements between the English railway companies and the Irish railway companies, or between the Irish railway companies and the steamboat companies?—Generally speaking, the English railway companies, the steamboat companies, and the Irish railway companies are parties to those through rates, and they must be to complete the communication; it is the rivalry of the English railway companies and the excessive competition that exists between them which have produced these through rates.

6895. The through goods rates, of which you complain, are chiefly from Liverpool, are they not?—Yes; and from Manchester and Yorkshire.

6896. (*Mr. Horsfall.*) For goods shipped at Liverpool?—Yes.

6897. (*Capt. Galton.*) Do the goods you have spoken of, that go to Athlone, go by the railway or by the canal?—By the railway. I make no complaint whatever of any water facilities. The canal competes with the railway at something like 10 per cent. under in every case; but the time occupied amounts to quite the difference.

6898. Of what class of goods are you speaking particularly?—Of sugars and teas; colonial produce; and almost everything you can name; drapery goods.

6899. (*Mr. Ayrton.*) Are the goods that you speak of, which are conveyed to the centre of Ireland, carried through Dublin?—They are.

6900. Can you furnish the Commission with a statement of some of the principal rates charged?—Mr. Bewlay, who will appear before the Commission, will furnish those particulars.

The witness withdrew.

Mr. A. Parker.
—
28th June 1865.

Mr. T. Bewlay.

28th June 1865.

Mr. THOMAS BEWLAY examined.

6901. (*Chairman.*) You are a merchant in Dublin?
—I am.

6902. You are able to speak as to the discrepancies between the through rates *viâ* Dublin and the inland rates from Dublin?—The arrangements made by the English companies for the transmission of goods by the Irish railways are such as to be exceedingly detrimental to the mercantile interests of Dublin, and they are invariably made, so far as I am aware, for the interests of the English lines, but not with regard to the Irish traffic. I will give the Commission two or three illustrations of this state of things. I hold in my hand bills which have been forwarded to me from Castlebar, in the west of Ireland, of the carriage of sugar from Liverpool to Castlebar. These bills are at the rate of 20s. per ton from Liverpool to Castlebar *viâ* Dublin. The Dublin merchant is charged for his sugar, sent to Castlebar, at the rate of 27s. 6d. In another case my firm sold to a merchant in Limerick, some short time since, a large parcel of tea. My business is entirely in the East and West India and China trade. The merchant in Limerick, in paying for it deducted 6d. per chest, stating that the freight by railway from Dublin to Limerick was 6d. more than from Limerick to Liverpool *viâ* Dublin, although passing over the same railway. These instances might be multiplied *ad infinitum*.

6903. (*Lord Stanley.*) Can you give the Commission any explanation of this?—I am unable to do so, except that it in part arises, I believe, from the rivalry of the competing lines, between the Great Western Company and the London and North-western Company, consequently they make arrangements for carrying goods at very low rates.

6904. (*Mr. Glyn.*) But how does that affect you in Ireland?—They carry at very low rates from Liverpool and Manchester in order to induce the Irish trader to purchase his goods in those ports instead of in other places, and going over the southern line of the Great Western Company.

6905. You mean going by Bristol?—Yes.

6906. (*Capt. Galton.*) I can understand that with regard to the conveyance of goods from England to Limerick, but when you speak of the town of Castlebar, which is entirely on the Midland Great Western, how is that affected by it?—I do not think it applies in that case. I cannot explain the cause of the arrangement, except in this way, that there is steam communication with the West of Ireland direct from Liverpool, and it is done to compete with that.

6907. Do the steamers go to Westport?—Yes; and the same remark applies also to Sligo, to which place they carry goods.

6908. (*Chairman.*) Are there regular steamers running between Liverpool and Westport and Liverpool and Sligo?—Yes, there are.

6909. (*Capt. Galton.*) That, you think, would account for the reduction made?—Yes; but the effect upon the Dublin merchant is ruinous.

6910. (*Mr. Ayrton.*) Then the Midland Railway Company must be carrying at very low rates to enable them to deliver goods at Castlebar so cheaply?—They carry at very low rates when they pass through Dublin from Liverpool, and we say that they should carry at proportionately low rates from Dublin, that is to say, if they can afford to carry at low rates through Dublin, they ought to carry at low rates from Dublin direct, in order to give the Dublin merchant the natural advantages of his position, whereas they charge additional rates.

6911. (*Mr. Horsfall.*) Do you know what the freight is from Liverpool to Westport?—No.

6912. (*Mr. Ayrton.*) They must allow the steamboat companies something out of their rate to induce them to take the goods?—Certainly.

6913. What injury does that do to the people at Castlebar?—None whatever.

6914. It must be rather a benefit to them?—Yes.

6915. Why should not the people in Castlebar be as much considered as the people in Dublin?—They are quite entitled to that consideration; but the argument that I use is this, if you can afford to carry from Liverpool and over the railway from Dublin at such a rate, you should carry at a proportionately reduced rate for the shorter distance from Dublin only, whereas they add to it. I may give the Commission another instance. Refined sugar is manufactured to a great extent in Glasgow, that is the great emporium of the manufacture, and that sugar is delivered in Limerick and in Cork, *viâ* Dublin, at the same rate as is charged from Dublin to Cork and to Limerick.

6916. Would not the only effect of the Midland Railway Company raising its rates to a higher standard be to send the traffic all round by sea to Castlebar instead of taking it through Dublin?—Precisely.

6917. Then, in point of fact, Dublin would not be benefited by raising the rate charged?—No. I want a reduction.

6918. Supposing that they think they cannot afford to make a reduction, but, on the contrary, that they must raise the rate, then nobody would be benefited?—No; but I argue that they prove, and they admit, that they can afford to make a reduction, because they carry goods from Liverpool through Dublin at a very low rate, which they would not do, I suppose, except at a profit.

6919. (*Mr. Glyn.*) Are you aware that in many cases the Irish railway companies charge the Great Western and the London and North-western companies what they call local rates upon the Irish portion of the line?—I am not aware of the arrangement that exists between them.

6920. (*Mr. Horsfall.*) Can you state what is the mileage rate on goods from Dublin to any other point?—I will give the Commission one striking instance of that. There is a prosperous mining company in Ireland, of which I am a director, and which raises large quantities of lead and copper ore, and in addition to that we have extensive smelting works for lead in the neighbourhood of Dublin.

6921. (*Capt. Galton.*) Obtained from the Wicklow Mountains?—Yes; and besides this, we are large purchasers of ores in the English market, which is brought to Ireland and smelted at our works. We often have to send considerable quantities of manufactured lead and pig lead to various parts of Ireland, and we send this from Dublin to Belfast for 12s. per ton, a distance of 104 miles, which is a penny and three-eighths a ton per mile; but to Newry the charge is 15s. per ton, which is but a distance of 69 miles; and it is at that rate, 2d. and six-tenths of a penny per ton per mile, which is nearly double the amount charged in the other case, and the reason is that there is steam communication to Belfast, so that they carry to the more distant place at by far a lower rate, nearly at one half.

6922. Is there not also steam communication with Newry?—No; the effect of this is that our company can ship lead to Liverpool and return it by steamer from Liverpool to Newry at a lower rate than the direct carriage by the railway to Newry.

6923. That you cite as an instance of the want of foresight on the part of the railway company in allowing that traffic to escape them?—Yes.

6924. (*Mr. Horsfall.*) While this competition may operate injuriously to you, to other parties it proves beneficial?—Yes; and what I want to advocate is the importance to the commerce of Ireland of a considerable reduction in the rates charged for carriage. A poor country cannot afford to pay the same rates that a wealthier country can; and I do not believe that it would be possible to confer a greater boon upon the people of Ireland than by making a reduction in the rates charged for carriage, and especially for passengers.

6925. Would a reduced rate, in your opinion, materially increase the production of these ores?—No, I do not think it would have much effect in that way.

6926. (*Capt. Galton.*) From your works, is it more convenient for you to put the ores upon the railway than upon a steamboat when you are sending them to Newry?—They are pretty much alike in that respect.

6927. Do you carry the ores to the railway and carry them to the steamboat in your own carts?—We send the ores either to the steamboat or to the railway station, as the case may be, in our own carts.

6928. What quantities do you send?—From one to three and five or seven or ten tons, according to the order received. Sometimes pig lead is sent in very considerable quantities, from 10 to 30 tons.

6929. Do you send it in larger quantities to Belfast than you do to Newry?—I cannot answer that question from memory.

6930. (*Mr. Horsfall.*) Your complaint is, not only that the rates are too high, but that they are unequal?—Precisely so. There is another point that I wish to bring before the notice of the Commission, and that is the importance of a reduction in the rates charged for the carriage of coals into the interior of the country. The greater amount of the fuel consumed in the interior of the country is turf; that in past times was not a costly fuel when the labour of the peasant was only worth 2d. or 3d. a day; but now that labour has become worth a great deal more, from 1s. to 1s. 6d. a day, turf has become a very costly article of fuel, so that in wet seasons the peasantry suffer very considerably from the want of fuel, and I believe that no greater boon could be conferred upon the peasantry of Ireland than to carry coals from Dublin and other ports into the interior at very low fares; for I know that the consumption of coals in the interior of Ireland has greatly increased. I have acquaintances and friends living in the central parts of Ireland, and I know that 20 years ago the ordinary fuel that was used was the turf of the country; but now, to a great extent, they use coals, and if they could be carried at a farthing a ton per mile instead of a penny a ton per mile, there would be, I am sure, a very great increase in the consumption of coals.

6931. (*Capt. Galton.*) At what price is coal delivered at your works near Dublin?—To the smelting works we cart it entirely from Kingstown.

6932. At what price do you obtain it at Kingstown?—At about 12s. a ton.

6933. What distance are your works from Kingstown?—The works are five miles from Kingstown, and it costs us about 3s. 6d. a ton to cart it from Kingstown to the works.

6934. Then when brought to the works it costs you about 15s. 6d. a ton?—Yes.

6935. At what price would it be delivered at any railway station, from which it might be conveyed into the interior of the country?—I do not quite understand the question.

6936. Is not one of the material requirements as to the coal trade this, that the means of unloading it and placing it on the railways should be much cheapened?—Yes, and that is a matter of great importance.

6937. Would not that have as great an effect in reducing the price for a distance of 50 or 60 miles as reducing the tolls one half?—I think it would. Our mining company possess in the county of Tipperary extensive collieries, which produce anthracite coal, and we have an agreement with the Great Southern and Western Company that they shall carry the coal for a penny a ton per mile for every distance exceeding 30 miles and upwards.

6938. At what price do you get that coal delivered at your smelting works?—It is not used at our works, it is principally used in the interior of the country for lime burning, mostly culm.

6939. At what price is it sold at the pit's mouth? *Mr. T. Bewley.*
—From 5s. to 6s. a ton.

6940. Then that could be delivered for a distance of 30 or 40 miles for 9s. or 10s. a ton?—Yes.

6941. Are these coal mines on a line of railway?—No, they are some miles from it, and the coal has to be carted first to the nearest station of the railway.

6942. What does that cost?—I think that costs about 2s. a ton.

6943. How many miles is it to the station?—12 or 13.

6944. It has not been worth your while I presume to make a branch railway?—No, I fear that there is not sufficient traffic to warrant it; the consumption is not very large, and if it were to go any considerable distance we should come into competition with the Welch anthracite coal, which is landed at the ports of Waterford to Cork.

6945. Do you know at what price?—Yes, 6s. or 7s. a ton.

6946. At a lower rate than you can put your own coal on to the railway, for instance, at Thurles?—No, probably our area of consumption would cover a radius of from 30 to 40 miles round Thurles.

6947. At what price can you put it on to the railway there?—At about 7s.

6948. (*Chairman.*) But this coal is not suited for domestic consumption?—No, it is mostly used for the purpose of burning lime, to manure the land. In illustration of the value of railways for conveying coal into the interior of the country, I may mention that I got only a short time since, from the custom house at Dublin, an account of the imports of coal into Dublin for the three years 1850, 1851, and 1852, and the average amounted to 395,000 tons. For the years 1860, 1861, and 1862, they amounted to an average of 617,000 tons, showing an increase in the course of 10 years of 56 per cent., and this chiefly owing to the facilities afforded for transmission into the interior.

6949. Are you able to state that a large portion of that coal goes into the interior of the country?—I am quite certain of it, speaking from my own knowledge of its consumption there.

6950. (*Mr. Horsfall.*) At what rate is that coal carried per ton?—A penny a ton per mile.

6951. Do you think that if that rate was reduced to a halfpenny a ton the quantity carried would be doubled?—I believe that it would be enormously increased. It is a very heavy item for distant carriage, a penny a ton per mile on a cheap article like coal.

6952. (*Mr. Ayrton.*) Can you give the Commission any instances to show that the present charges on merchandise repress or prevent traffic being carried on, comparing the value or the market price of goods at one place and another?—No, not within my own knowledge, but I have heard a good deal of it.

6293. (*Chairman.*) Are there any other points connected with Irish railways to which you wish to call the attention of the Commission?—I wish particularly to mention the importance, in a political, in a social, and in a commercial point of view, of a general reduction being made in the fares charged for passengers. I believe that if a very large reduction took place, within a very few years the increase of the traffic would be so great as to bring up the income to an amount greater than the present amount, for, as I have said, a poor country cannot afford to pay rates that a wealthy country can afford to pay, and yet our rates per mile for the first, second, and third class passengers are very similar to those charged in England.

6954. (*Lord Stanley.*) Have you come to any conclusion as to the prospect of such a reduction being remunerative to the railway companies in the long run?—If the reduction made was sufficiently great, I believe that in a very short time the income would exceed the present amount.

6955. What amount of reduction, speaking roughly do you consider would be sufficiently great for that

Mr. T. Bewlay.
28th June 1865.

purpose?—I would carry third-class passengers for two-tenths of a penny per mile, second-class passengers for four-tenths of a penny per mile, and first-class passengers for seven-tenths. I would carry third-class passengers five miles for one penny, and second class two and a half miles.

6956. What per-centage of reduction would that be from the present charges?—I think it would be between a fourth and a fifth of the present rates.

6957. That would be a reduction of 75 per cent.?—Yes, from 75 to 80 per cent., and I believe that that would be more successful than if you took off 25 per cent.

6958. Would there not be an interval of time during which it would not be remunerative?—I think it would recoup itself in three years, and probably in half of that time.

6959. But during those three years who do you propose should make up the deficiency?—I should like to see it made up by the legislature, guaranteeing something like the present income, and if that was done I do not think that a few hundred thousand pounds could be spent in a better way.

6960. Do you consider that it might be made up by a special tax to be levied upon Ireland only, either in the way of income tax or some other mode?—I should prefer that it should come out of the general funds of the United Kingdom, but I should be willing to have it in the shape of a special tax upon Ireland.

6961. You do not contemplate that England and Scotland should contribute out of their taxes for any loss that might arise from a reduction in the Irish railway fares?—I believe that England and Scotland would be benefited in a far greater proportion ultimately than they would be taxed.

6962. If they were willing to be taxed for the purpose, why not try the experiment there?—Ireland is a much poorer country, and therefore the effect would be more striking. England can afford to pay while I do not think the poor people of Ireland can pay. I am persuaded that the true source of profit in Irish railways is to be found among the third-class passengers; but the directors of Irish railways throw every difficulty they can in the way of conveying third-class passengers. On the Great Southern and Western line there are five trains which leave Dublin daily, carrying first and second class passengers, and the result is, that by those five trains they carried in half a year 148,000 passengers, and the income was 60,900*l.* in round numbers. They run but two trains daily by which they carry third-class passengers, and yet by those two trains, running at most inconvenient hours, they carried 243,000, and the income was nearly 35,000*l.* as against 60,900*l.* derived from the carriage of first and second class passengers in five trains.

6963. I will put this to you:—Suppose the experiment to be tried as you have suggested, and suppose that it answered, in so far as it was a benefit to the country, which it no doubt would be, and that it produced a considerable increase of traffic; but suppose that that increase of traffic was still not sufficient to make up, or nearly so, the deficiency produced by the reduction that had been made, do you not think that, in that case, there would be a very heavy pressure put upon the State still to continue those low rates, although the railways would be thereby worked at a permanent loss?—I think that such a pressure, if I can imagine such a contingency occurring, would be put upon the legislature; but I cannot imagine the possibility of such a contingency in the long run. I should like to mention to the Commission a circumstance which occurred about three years ago, and which I think illustrates this matter. I was travelling with some members of my family from Glengariff in Bantry Bay. I was posting to Cork in the afternoon of a summer's day, and we stopped at Macroom, which is a miserable little town about 24 miles from Cork, to change horses. After leaving the town we met with one of the long cars which are common in the south of Ireland, and this was crowded with passengers. I

was astonished to see such a crowd standing round the driver, and I asked our driver the cause of it, and he said that there was an opposition started, and that we should meet in a few minutes another car just as much crowded as the other, and so in fact we did. There were no fewer than 72 passengers coming out from Cork on that summer's evening to Macroom, which of itself was a miserable place, all of them having gone into Cork in the morning, and the driver informed me that before the opposition had been started there had not been a sufficient number of passengers to give profitable employment to one car.

6964. (*Capt. Galton.*) At what rate were they carried?—For 1*s.* for 24 Irish miles, or 30 English miles. Our driver said if any old woman wanted to buy a petticoat, or a man wanted to buy a pair of brogues, they would go into Cork to buy them, as they would have a wider range for selection.

6965. (*Mr. Dalglish.*) Did you make any inquiries as to whether the opposition proved profitable to the car owners?—I only spoke to our driver.

6966. Did you learn from him whether it was successful?—Yes. Every day it was the same.

6967. Was it profitable to the proprietors?—Yes; indeed they could not carry all the persons who applied to be carried. They were carrying the passengers at the rate of about one-third of a penny per mile.

6968. (*Capt. Galton.*) And that was remunerative to the car proprietors?—Yes.

6969. (*Mr. Glyn.*) Does the same system of running cars prevail in other parts of Ireland?—Yes; they are very general over the south and western parts of Ireland.

6970. And also in other parts of Ireland?—Yes, as far north as Sligo. Mr. Bianconi used to run them, but he was obliged to discontinue them.

6971. He was driven off by the railways, was he not?—Yes.

6972. (*Mr. Ayrton.*) Is the railway opened yet from Macroom?—I think not.

6973. (*Lord Stanley.*) In your opinion is not the greater cost of travelling upon some of the Irish railways due to the lines having been made in districts where there is not sufficient traffic to make them remunerative?—Yes, I think that is the case; that they pass through districts in which the people cannot afford to use the railways, and I want to have them made cheaper to enable Irishmen to ride rather than to walk; then I am sure they would use them. I have no doubt that very low rates would induce them to do so.

6974. Is there not a considerable decrease of population still going on throughout the southern and western counties of Ireland?—Yes; but still we have a very large population. Although wages are only from 1*s.* to 1*s.* 6*d.* a day, we cannot say that we are deficient in population, and I think that any person visiting Ireland could not fail to be struck in Dublin and in other places by the numerous noble structures which have been erected in the last few years. I mean Roman Catholic places of worship; and a Roman Catholic gentleman of high authority, and a most intelligent man, informed me that it was not from legacies or donations that these were built, but that the money necessary for their erection had been produced by the penny a week of the poor, and I think that that furnishes an analogy to what you might expect to have on the railways.

6975. (*Mr. Ayrton.*) Do not a great number of people travel third class in Ireland who, in this country, would travel second class?—There may be some who do so; but, so far as I have observed, I think the people like generally to associate with about their own class. It is rare that you will see, on the other hand, a second-class passenger go into a first-class carriage, and I do not think, as a rule, except in cases where the circumstances of the parties demand it from them, that you see a person travelling in a class below that to which their natural position would take them.

6976. (*Capt. Galton.*) Why do you think it would be necessary to reduce the first-class fares?—Because I should like to promote intercourse between the various classes of the people. I believe that that would be socially and politically a great benefit. In various parts of Ireland the populations in small towns are grouped together, and they have little or no intercourse with other places; whereas I should like to induce and encourage extensive travelling among the upper classes through the most distant parts of the country. If you take Clew Bay, or round about Sligo, there is some of the most beautiful scenery to be found there, and if persons who wished to go to watering places in the summer time could be carried at low fares, I have no doubt that you would find hotels and houses springing up there in abundance.

6977. (*Mr. Ayrton.*) Is there no pleasure traffic in Ireland?—Very little. The same remark applies to Kinnaree and to Bantry Bay; no one goes to those places.

6978. Is it not the custom of the railway companies in Ireland to run excursion trains as they do in England?—They do occasionally; but I contend that we should have them every day in the year, and then you would have a much larger traffic.

6979. (*Capt. Galton.*) Do you know of any instances in which people travel by car, even where there are railways, because they can go at a cheaper rate?—I might give a very striking instance. Between Dublin and Kingstown, on one side of the railway, there are omnibuses running every day profitably, I believe, from Dublin to Kingstown in competition with the railway; by the omnibus the fares are 4d. and 6d.; by the railway the fares are 6d. and 8d.; that is, for second and third class; inside the omnibus it is 6d., and outside the omnibus the fare is 4d. from Dublin to Kingstown. Then on the other side of the railway there are two steamers plying backwards and forwards at the same rates as those charged by the omnibus, 4d. and 6d.

6980. May not that be attributed to the fact of the omnibuses running farther into the town, the distance being very short to Kingstown?—Yes, part of it may be attributable to that.

6981. Do you know of any other instance besides that where there is so large a population all along the road?—No, I do not.

6982. (*Chairman.*) Do you know of any instance in which goods are sent by car along the road in preference to sending them by railway?—No, I do not; but I know of instances of cattle being driven along the road. I heard a gentleman in Dublin, who goes down to visit his farm, which lies in the centre of Ireland, in the County of Westmeath, say that he drives backwards and forwards himself in his own gig instead of taking his gig and horse by the railway.

6983. (*Mr. Horsfall.*) What distance does he drive?—I think it is about 65 miles.

6984. (*Lord Stanley.*) But is not that a matter of pleasure as much as of economy?—No; it was the rate charged that prevented him. He stated that the charge was about 5l. backwards and forwards.

6385. (*Mr. Ayrton.*) That would be the charge for his horse and his gig and himself if carried by

railway?—Yes; and he preferred, instead of paying 5l., to drive down. But he said that he would be quite willing to pay 2l. or 3l.

6386. Would you have the rates such that it would be more economical for a man to have his horse and his gig and himself carried by railway than to travel by his own horse and gig?—I think it would be a very great advantage.

6987. (*Chairman.*) Have you anything to add to what you have already stated?—Yes. A curious circumstance occurred last year, showing the disadvantage under which the peasantry in some parts of the country labour from not being able to bring their produce to market. I am a member of the port of Dublin Corporation, which performs similar duties to those which are performed by the brethren of the Trinity House in England, having the care of the lighthouses and buoys round the coast; and in going last year round Ireland inspecting the different lighthouses, we put into the little harbour of Killyhegs in Donegal; the coast-guard officer was invited to dine with us, and it was most amusing to witness the gratification which he showed upon seeing a piece of roast beef. He stated that he had been ringing the changes upon chickens and bacon, and bacon and chickens, for some months past because he could get nothing else.

6988. (*Lord Stanley.*) That is the most out of the way district in Ireland, is it not?—It is. It is beyond that projecting headland, which is to be seen on the map; there is a little port inside it, and it is about 30 miles from the nearest railway station, which is to be reached by Ballyshannon over the mountains. This coast-guard officer stated that such was the difficulty in finding a market for the produce of the place, that fowls and chickens of good size were procurable at Killyhegs for 1½d. each. We took on board a considerable quantity, and really they were such that with a few days' judicious feeding no gentleman would be ashamed to see them on his table.

6999. (*Mr. Ayrton.*) Would it be an advantage, do you think, to have cheap lines of railway carried to those places?—I believe it would be a very great advantage; I wish very strongly to impress upon the Commission the importance of this matter, that if a reduction of the rates and fares be recommended, it should be a very large one, for I believe that the greater the reduction the greater will be the success. I think that that may be illustrated by the penny newspaper, and the penny postage stamp. I think we may also look to the consumption of tobacco, from which we derive nearly 6,000,000l. a year. Any person who may look at the entries at the custom house may see entries of cigars; but it is the hogs-heads of tobacco that bring in the greater part of the 6,000,000l., and this is chiefly consumed by the lower classes.

6990. (*Lord Stanley.*) I believe the tobacco duty is the heaviest in our whole tariff?—Yes. I wish to show that income is derivable from the millions, and that they are the true source of income.

6991. (*Mr. Horsfall.*) Do you mean to say that if the tobacco duty was reduced one-half, the revenue would be the same as it is now?—I should be afraid to give an opinion upon that.

The witness withdrew.

Mr. JOHN BAGOT examined.

6992. (*Chairman.*) You are a merchant in Dublin?—Yes.

6993. Are you prepared to make a statement to the Commission as to the inequalities of the rates and charges on the Irish railways both for goods and passengers?—Yes.

6994. Will you proceed to do so?—One thing that we complain very much of as merchants is the great inequality in the charges, and also that the through rates are most injurious to our trade in Dublin; in fact, the parties can get *via* Dublin or through Dublin goods delivered in the inland towns of Ireland as

cheap or cheaper than they can get them delivered from Dublin to those towns. We consider that that is most injurious to us, and that it saps and undermines our trade, in fact, we frequently are obliged to send our goods to other ports in England and have them stored there and reshipped in order that they may be delivered to the western parts of Ireland cheaper than we can have them delivered from Dublin. Our direct import trade or foreign trade is undermined. We have to complain of the very high rates that are charged on the railways in connexion with our travellers, they are a great bar to more frequent visits being paid to various towns

Mr. T. Bewlay.

28th June 1865.

Mr. J. Bagot.

Mr. J. Bagot.
28th June 1865.

in Ireland; many towns they would visit three, four, and five times more than they do if the railway charges were more moderate than they are. We also have a very serious drawback in not being able to have our customers more frequently up from the country towns to visit us for the purpose of selecting their own goods, to judge for themselves, and to be able to come and return quickly. At the present time, in some cases they are not able to come and return on the same day. A case came under my own notice only the other day; a gentleman engaged in business in Dublin wanted to send a number of men down to Tralee in order to set up a brewery, but they found, when he got as far as Mallow, his men could not get on any further, and they were obliged to lodge in the town, and get on the next day, although there were first-class and second-class trains running from Dublin to Tralee on the same day, yet there were no means for the third-class men to go on, and it was a great loss to the men in consequence.

6995. (*Capt. Galton.*) Could not they have gone on second class rather than bear the expense of their lodgings?—The person to whom I have referred was not aware of it then, and it was too late. I do not think it would have been worth while; they might have got lodgings for 2s. or 3s. in the town, but the difference between the second-class fare and the third-class fare would have been more than that. This was attended with great delay and inconvenience. Then I may mention that a merchant can get his goods delivered in Carlow, *via* Dublin from Liverpool, within a very small sum, as cheaply as we can get them carried from Dublin to Carlow. In fact it only allows for cartage and the sea fare the sum of 2s. per ton, so that, in fact, the customers in Carlow, instead of coming to Dublin, are driven away from Dublin, and they go to Liverpool. The Liverpool market may be sometimes a little better for them, but this naturally turns the scale, and they are driven from us to Liverpool.

6996. (*Lord Stanley.*) That is the effect not so much of the railway charges as the nature of the market and the much greater trade that is carried on at Liverpool?—It is entirely the effect of the railway charges.

6997. (*Mr. Ayrton.*) Will you mention the charges upon which your statement is founded?—Indian corn is delivered from Liverpool *via* Dublin for 12s. into the town of Carlow, whereas the charge from Dublin to Carlow is 10s.

6998. (*Chairman.*) What is the freight from Liverpool to Dublin?—About 8s., besides cartage through the city.

6999. (*Mr. Ayrton.*) Can you give one or two other items?—Formerly goods were delivered in the town of Bagnalstown, also in the county of Carlow, and they were delivered from Dublin to Bagnalstown without classification for 7s., but since that time, in consequence of an arbitrary classification, they range from 8s. 6d. to 18s. 6d., and the company refused to supply classification lists, and there are no means of checking those bills, so that parties are completely at the mercy of the railway servants. Two days before I left Dublin I sent my clerk to two of the railway companies. I sent him first to the Great Southern and Western, to ask them for a tariff of prices, and I also sent him to the Midland Great Western Railway, which runs to Galway, for a tariff of prices, but they had none; neither of those companies had anything of the kind.

7000. (*Mr. Glyn.*) Have they no published tariff of prices?—No, we never can get proper tariffs of prices, and we are entirely at their mercy as to what they charge. If goods happen to be denominated by different names, they are often charged different prices, for instance, take the case of seed corn; if it is marked "corn" it is charged one price, but if it is marked "seed corn" it is charged a higher price. If it is marked "seeds" it is charged higher again, and it leads to what is not proper, *viz.*, the parties

sending seeds into the country mark them all "corn," and in consequence of that they go at a low rate. There is another matter of which we have greatly to complain, the inequality of rates for carrying small parcels. Some railways will not take any package under 56 lbs. weight without denominating it a parcel; some of them now have been taking 28 lbs.; and even within the last few weeks a new light seems to have broken in upon them, for they have reduced that, and the consequence is, that when we get an order for a small parcel of goods, and this applies to gentlemen in the seed trade, who are constantly written to by gentlemen in the country to send them certain portions of seed in a hurry, if the package should be under 56 lbs. it is charged a very high rate for the carriage; if it should be over 56 lbs., then it goes in as luggage, and the consequence is that we are obliged to do this,—if we get an order for a parcel that weighs 42 lbs., or 40 lbs., or 36 lbs., we make it into a package, and we put stones or bricks at the bottom of the package, so as to make it up to 56 lbs., and then it goes for 10d. or 1s., or 1s. 6d.; but if we did not put those stones in it would cost 3s. 6d., 4s., or 5s.

7001. (*Lord Stanley.*) What is the explanation of that difference in charge?—We never could get any, and we never can, hardly, get any explanation in Ireland; they give us a regular stereotyped answer, that they will take it into their consideration; they say that they must fix the weight at some point. This week I have learned that the Great Southern and Western Company have fixed their weight for packages at 28 lbs., and the Midland Great Western have fixed theirs at 56 lbs. These are the two railways running from Dublin, and they have a different system and different plan altogether; we are not obliged to use so many stones in the case of the Great Southern and Western as in the case of the other railway, and what we should like would be that there should be a proper tariff for the carriage of parcels commencing, say, at 7 lbs. and going on to 14 lbs. and 28 lbs., to be charged according to the distance carried. I should be glad if the system adopted in the case of the penny postage was carried out, so that they would carry for a short distance as for a long distance, or that it might be divided into 50 or 100 miles; but we have never been able to accomplish this; we can get no redress, and they will sometimes hardly listen to us. It would be a great advantage if our customers and the working classes could be brought to Dublin and be taken back again at low rates. I will take, for example, the rate charged upon the London and North-western Railway, and this is what we want in Ireland. A man can go first class from Dublin to Wigan for 6s., that is including the sea fare, 2s. 6d., across *via* Holyhead; then he can be carried through Chester to Wigan for 6s. The consequence of this is, that a number of working people, labourers and harvest men, go in this way; but in Ireland there is no such thing, for our people are shut up in the towns in which they were born, and they cannot get out of them; there they are mixed up, and there are no means of giving them improvement or enlightenment, or the means of earning their livelihood in any way. I made a memorandum in Dublin as to the inequality of the charges made on the same railway; for the sum of 5d. they carry for a distance of 25 miles a certain article of commerce, and they charge 5d. for 36 miles, and they charge 5d. for 51 miles, on the same railway.

7002. (*Capt. Galton.*) Do you mean on the same part of the railway?—Yes.

7003. At what places are these charges made?—From Newbridge 25 miles; from Maryboro' 51 miles; from Monastereven 36 miles; for a certain article of commerce they charge the same rate. I am now referring to a large soda water manufacturer, and this is the charge for a hamper of soda water.

7004. Would not the effect of that be, that the soda water would be sold at the same price at the different places?—It is a great drawback to trade, and the object of this is to show the inequality

Mr. J. Bagot.

28th June 1865.

of the charges upon the same railway for the same goods.

7005. Is not the effect with regard to the soda water this, that each retailer of the soda water who has it sent to him at the same price gets the same profit out of it at each place?—The price is fixed; there is no rule as to profit.

7006. The soda water is delivered at the same price at the three places?—Yes.

7007. If the railway company can afford to carry it at that price, the man who lives farthest off receives it for the same charge?—No; the three towns pay different rates of tariff for the same article.

7008. Different rates per mile?—For the same sum they will deliver a certain parcel, carried 51 miles for 5*d.*, also for 25 miles for 5*d.*, and also for 36 miles.

7009. Just as the post office will carry your letters?—Yes.

7010. (Mr. Ayrton.) And that is the system which I think you said you desired to see established?—One of the things that I understood this Commission required me to show was the inequality of the charges upon various kinds of goods; what use they may make of it, it is not for me to say.

7011. (Chairman.) I understood you to say that you were in favour of the adoption of the same system as to parcels carried by railway as that which is in force at the Post Office?—Yes, decidedly; but railway parcels come under the head of merchandise.

7012. (Mr. Horsfall.) Are you aware whether any of the Irish railway companies give a preference to particular parties?—I have heard that they do, and I think that is one of the reasons why they will not give a published tariff of prices; any person going and speaking to them, and making an interest with them, can often get things carried at a certain rate, and if he has a larger quantity of goods to send than another, he may be able to make a special bargain. What we desire is, to have a published tariff of charges.

7013. (Lord Stanley.) Do you think there is anything unfair in the same rule being adopted in railway matters that is adopted in other transactions, that the wholesale dealing should be done at a cheaper rate than a retail?—I do not think it ought to be so in railway carriage.

7014. Do you think that, in matters of trade, any customer who comes to buy a few ounces of sugar would have a right to complain because he or she paid for it at a higher rate than the man who purchased a hundredweight?—I think that if a man comes to buy a chest of tea, he should get it as cheap by the chest as if he bought six chests.

7015. (Mr. Ayrton.) Do you think that a man who sends a parcel has a right to have it carried at the same rate as the man who sends a whole truck load?—No. I do not indeed. What we want is a moderate rate for parcels to be settled according to weight, beginning at 7 lbs. and going on to 14 lbs. Of course they could not deliver a parcel weighing 7 lbs. at the same proportionate rate as a ton weight of pig iron, but we complain of the inequality, and the difference in the charges upon various lines. Then again we complain very much of the break in the railways; for example, if we want to go to Derry we must go over four lines, and sometimes the trains do not meet, and then you are left there for the night.

7016. (Mr. Ayrton.) Have you reason to believe that persons, under precisely the same conditions as to distance and quantity of goods, do by favouritism or intrigue get their goods conveyed at rates more favourable to them than other persons?—I should not like to go so far as that, but I believe that there are special bargains made with some parties, which I think is unfair to us traders. I think that there should be a tariff for every man to look to, whether he knows his business or does not, whether he is a stranger or any one else.

7017. (Mr. Horsfall.) You have spoken of the hardship upon parties who employ travellers to go

round particular districts. Do not the railway companies issue contract tickets for six months or a year?—It is very seldom, because the rates are so much; the amount is so large, and so much out of the way. I remember the case of a gentleman who wanted some time ago to obtain a yearly ticket to take him to Athlone, and I think he was asked 72*l.* for it. Supposing that he went every day, except Sundays, he might pay a comparatively small sum for each trip, but he could not afford to pay 72*l.* out of his pocket. We think that if the railway fares were reduced it would materially add to our business, and bring us much more in contact with our customers; and I have no hesitation in saying that the revenue, in the end, would not fall off; it might at first, but it would very soon be brought up.

7018. (Mr. Ayrton.) Can you give any other instance, besides the single one you have already given, of Indian corn being conveyed to Carlow, the rates from Liverpool being to the same place in Ireland less than from Dublin to that place?—There is a house in Dublin which gets one description of goods carried from Dublin to Cork for 5*s.* 4*d.* per hogshead, and the charge for another description of goods is 10*s.* 11*d.* per hogshead; one article is ginger cordial and the other is ginger wine. There is really no difference in the value, but one has a greater name than the other.

7019. What is the selling price of the article?—Perhaps 5*s.* a gallon each, but one has a nicer name than the other, consequently it comes under a different tariff, although of precisely the same value and weight.

7020. It comes, I suppose, under a different classification?—They put it under a different classification. On some of the short lines near Dublin they have been gradually raising the rates; in fact we pay more now for parcels on the Dublin and Kingstown line; in some cases double.

7021. Is it not the practice on that line to carry all the parcels free?—Yes, small parcels, such as marketing parcels for your own personal use. If you are a yearly subscriber, they will carry your market basket free. Running by the side of this Dublin and Kingstown line, there is a four-horse coach every day, which carries passengers cheaper than the railway; it has been running for two or three years, carrying parcels and passengers.

7022. (Chairman.) Does it run frequently in the course of the day?—Yes. It runs right along by the railway. They will carry you outside for 4*d.*, and the railway company charges 6*d.* third class.

7023. (Mr. Horsfall.) That coach probably picks up intermediate passengers?—It may get some, but it runs rather too close to the railway, I think, for for them to be of much value or avail. I think it arises altogether from the difference of the fare charged; to the poor people a difference of 2*d.* is a great consideration; they prefer to save the 2*d.*

7024. (Mr. Glyn.) What has been the increase in the rates charged between Dublin and Kingstown?—I do not know, but they do not carry much goods.

7025. You said, I think, that they had raised the rates lately?—Yes, but they do not carry many goods, the line is too short.

7026. (Mr. Ayrton.) Would you propose that the railway company should be compelled to charge a lower fare than the proprietor of the coach in order to prevent the latter from carrying on his business, or that the Government should make the railway charge less than that charged by the proprietor of the coach, and thus enable the company to stop the man's business?—I think that the general good that would arise from a very serious reduction in the railway fares would completely outbalance any small evil that might be done in other respects. I look upon it as a most popular movement, and that it would be of immense benefit even with regard to the feeling of the people of Ireland towards this country, and towards the Government. I think they would feel that the Government were in fact looking after

Mr. J. Bagot.
29th June 1865.

their interests, and were doing a thing that would substantially benefit them. We want them to enable the people to talk of other things than they do, to enable them to be industrious, and enable them to bring their little commodities from one town to another for sale. The article of fish is a very important one, and we want them to be able to carry their fish from the sea ports to all parts of the country inland.

7027. Have you any information to give the Commission to show that anybody is prevented from sending fish into the interior of Ireland?—I have not, except that I heard last week that the rates charged for the carriage of herrings from Arklow is 13s. 9d. per ton to Dublin.

7028. Does that prevent the people in Dublin from eating herrings?—No, I do not think it does, but we have a very large fishery in Howth. I think that a reduction of the rates charged would cheapen food.

7029. Would the difference in charge be appreciable in the consumption of herrings?—I think it might be; when herrings are put into barrels, they charge 2s. 4½d. per cask, which is equal to 1l. 3s. 7d. per ton; this is for a distance of 49½ miles. I am a partner in the house of Bagots, Hutton and Co. of Dublin. We are in the wine, spirit, and tea trade. The result of all these railway overcharges and discrepancies, and want of proper legislation is that we are obliged generally to pay half of the carriage on the goods to most of our customers. I dare say that affects our income to the extent of perhaps 200l. a year. We are obliged to do that, so as to be able to balance it; it is so enormous that we are obliged to balance it ourselves.

7030. That is in sending goods from Dublin?—Yes.

7031. Which you cannot bring into competition with the dealers in the country towns?—No; we come into competition with men who have more advantages in sending them from Liverpool, because they deliver in many places from Liverpool less than from Dublin.

7032. Can you give the Commission any further information beyond the single item you have given as to the different charges into the interior from Liverpool being less the charges into the interior from Dublin?—I know that the rates short of such places as Cork and Belfast are more than the rates to those towns.

7033. (Chairman.) Do you send goods to Cork at a lower rate than they are charged to such places as Templore and Mallow?—Yes, we do.

7034. You send at a lower rate to Cork than to places short of Cork?—Yes, and when we want to send goods to Londonderry and round the north to Belfast, we send them to Liverpool, which is some 120 miles round each way; and we find that we can deliver our goods cheaper at Londonderry by adopting that course than by sending them direct from Dublin.

7035. (Capt. Galton.) Are your railway companies aware of that?—They are perfectly aware of it.

7036. (Mr. Ayrton.) That is to say, the conveyance by sea is so very much cheaper than the conveyance by land?—We get the goods sent cheaper that way than if we sent them by rail. But I want to take the other ground; it is on account of the high rates on the railways, not the low rates by the steamers; we do not at all enter into competition with the steamers; we complain of high rates on the railways, we make no complaint against the steamers; but on account of the high rates charged on the railways we are obliged to send them round by Liverpool.

7037. (Capt. Galton.) You are enabled to do that because of the steamers conveying them at such a very low rate?—No doubt.

7038. (Mr. Horsfall.) What is the difference per ton in the two rates?—It varies; sometimes it is 2s., sometimes 3s., sometimes 4s., and sometimes 5s.

7039. What is the insurance by water?—It is almost nothing; we insure for 3s. per cent. We

send goods to Sligo in the same way, and to Ballina. A merchant buying a cargo of seeds or other goods in the Baltic, instead of bringing them to Dublin would bring them to Liverpool for the west of Ireland, and thereby deprive Dublin of a legitimate and fair traffic. We cannot get any orders from those people. We may write or talk to them, but it is of no manner of use.

7040. (Capt. Galton.) What is the remedy which you propose for that?—Expressing my own opinion, the remedy that I would propose is, that some great move should be taken by the State, that is, by the Government, in the way of taking possession or controlling the railways, so that the people may travel at about a farthing per mile third class.

7041. (Lord Stanley.) Have you at all considered how far that would pay the railway companies?—I can only give my own opinion from being a long resident, that it would pay them very well, judging from other things. I know harvest men are accommodated by cheap trains from Athlone for 2s., whereas before those cheap trains started they always went by the road.

7042. (Capt. Galton.) Do you think your customers would all come up to you instead of communicating by letter, provided they could come cheaply?—Much more; they are always anxious to come; we always like to get a knowledge of our customers. We have been dealing with customers for 25 years whom we never saw. A case was given to me by Sir Percy Nugent, who was at one time a member of the House of Commons, and he informed me on the 23rd of June, that having bought 65 head of cattle at the fair of Loughrea, to go to his farm, which was distant between 60 and 70 miles, they were driven along the road. He always drives his cattle along the road instead of sending them by rail, the charge by rail being so high.

7043. Where is his farm?—Multifarnham, near Mullingar.

7044. Did he inform you that he drove them because the charges are so high?—Yes; I told him that I was likely to come to London to give evidence before this Commission, and he gave me that information. I have heard of numbers of cattle being driven alongside railways, actually looking at the railway as they were going along the road.

7045. Did he inform you at what rate it would be worth his while to send them by railway?—No; he told me that it would have cost him 15l. 10s. if he had sent them by railway, whereas sending them by road it cost him less than half that amount.

7046. (Mr. Ayrton.) Then it would require a reduction of 50 per cent. in the rate in order to bring them upon the lines?—I think that less than that would induce them to be sent by the railways. I think the fare is too high. It is so high that they are debarred being sent upon the rail.

7047. Those would be store cattle?—Yes; but they send fat cattle also.

7048. Store cattle do not suffer through being driven along the road?—Not so much as the fat cattle. They send fat cattle a shorter distance, some 15 or 20 miles.

7049. (Chairman.) Are you prepared to enter more in detail into the nature of the great movement that you think should be made for a reduction of rates?—No; it being a movement that never has been made, I have no data to go upon. I can merely give my opinion. I can only judge from what I have seen done where people get facilities; and I can reasonably judge from that what we might do if we had the same facilities. We have no experience upon that point, and therefore we can only state what we think likely to take place. I know that gentlemen connected with railways tell you the very reverse of that; they say that if you take off a penny you will not make up a penny, but I differ with them *in toto*.

The witness withdrew.

Mr. JONATHAN PIM called in and examined.

Mr. J. Pim.

28th June 1865.

7050. (*Chairman.*) You are a merchant and manufacturer of Dublin?—Yes.

7051. Will you state what is the nature of the business which you carry on?—Our firm are general merchants, but chiefly what are called Manchester warehousemen, both wholesale and retail, and also manufacturers of cotton and linen.

7052. Are you prepared to make any statement to the Commission with respect to the effect of the present rates and charges upon Irish railways?—I wish merely to state my opinion that a large reduction of fares would be a very great advantage to the country. I do not attach so much importance to the question of charges upon goods as I do to the charges for passenger traffic; because I do not think it is so likely that there would be an increase in the quantity of goods by the reduction of rates as that there would be an increase in the passenger traffic. I think that there is probably nothing which could be done under present circumstances that would tend so much to the improvement of Ireland in every way as a large reduction in the fares. I have not thought much upon the subject until comparatively lately, because I did not see the practicability of it. I am not a director of a working railway, but I am of a railway which is leased. I do not see how the directors of a railway company can recommend or approve of such a reduction, which I think would diminish the receipts for some considerable time, certainly for two or three years, and probably for four or five years or even more. I think that the receipts would eventually recover, yet I do not feel such confidence of this recovery as would warrant me, as a director, in risking the property of the shareholders.

7053. (*Lord Stanley.*) You do not feel certain that even after a period of four or five years the temporary loss would be fully made up?—I think it would not. I do not feel that the case is so clear that I should be warranted in risking the property of the shareholders in the experiment.

7054. At the same time you think that a reduction of that kind would be very desirable?—I do not know anything that would so much, in every way, tend to develop the resources and improve the condition of the country.

7055. Who do you propose should bear that temporary loss?—The matter is an experiment, and I do not believe the experiment can be tried at any other risk than the risk of the nation generally. Perhaps the question might be asked, why should an experiment be tried for the benefit of Ireland at the risk of the whole nation? That would only arise from the peculiar circumstance that Ireland is so much smaller than Great Britain, that it could be tried at a less expense in Ireland than in Great Britain; because unquestionably if successful in Ireland it should be extended to Great Britain.

7056. Would you not propose then that any loss to the exchequer should be made up by a special tax levied on Ireland as long as the experiment was confined to Ireland?—As an Irishman I should be perfectly content that that should be so; but if you ask me the question as a subject of the Queen, I say, I do not think it would be a fair thing, because I think that the experiment should be tried for the benefit of all, and not merely for the benefit of Ireland.

7057. You do not represent it then as a special benefit to Ireland; but in that case why should we not try it in England?—I have no objection to try it in England, provided it should be afterwards extended to Ireland. The only reason why I think it can be tried in Ireland better than in England is, that it can be tried in Ireland at a less expense. I have no objection to its being tried anywhere, because I feel it will be successful anywhere; and if successful, of course it should be extended to the whole empire.

7058. (*Capt. Galton.*) Do you think, if it were successful in Ireland, that then the English railway companies would adopt it themselves?—Perhaps so.

I repeat, that a large reduction of fares I believe is a matter of great importance. Another matter of great importance is, that there should be such management, however it is to be achieved, as will prevent a want of concert between railway companies.

7059. (*Lord Stanley.*) It has been stated in evidence, that the number of directors of the Irish railway companies is enormous; that these directors, as a general rule, are paid, and that patronage is so valuable a consideration in a poor country that the companies would not be willing to lose the benefit of that by amalgamating; do you agree with that evidence?—I am not prepared to give any opinion upon that subject. I should rather think that railways have not been so much united in Ireland as they have been in England; for instance, as the North-western, and others in England.

7060. As far as your observation and experience go, do you think there would be any difficulty, in Ireland, in setting aside this system of paid directors of railway companies, and uniting the companies into two or three large companies in the same manner as they have done in England?—There is a great deal of mutual jealousy that causes a difficulty; but I do not think the difficulty is by any means insuperable.

7061. (*Mr. Roebuck.*) You do not think that there is much more jealousy between Irishmen than between Englishmen?—I am hardly capable of forming an opinion upon that subject; I know there is a great deal of jealousy in Ireland.

7062. (*Mr. Horsfall.*) You have stated that you do not consider it to be of so much importance to have a considerable reduction in the charges upon goods as upon passengers; why do you come to that conclusion?—Because I think there is far greater room for an increase in the passenger traffic than there is in the quantity of goods to be carried. There are certain charges upon goods which amount to a prohibition, and they are in fact not carried. The question in that case is whether it would pay to carry them or not.

7063. Take coals, for instance, would not a considerable reduction in the carriage of coals be a great boon to Ireland?—It would be a benefit, but I do not think it would be anything like the same benefit that a reduction of the fares, which would enable the lower classes to travel upon the railways would be. Connected with the charges there is just one subject I wish to mention. Every body is aware that Ireland is a poorer country than England taken generally, and that the wages of the common labouring classes are lower in Ireland than in England. The charge by the parliamentary trains on railways is the same in Ireland as in England, but compared with the wages of the people, it is certainly higher than in England.

7064. (*Lord Stanley.*) I suppose an Irishman costs as much to carry as an Englishman, does he not?—I think that either an Irishman or an Englishman can be carried with a profit at much less than the railways now charge. I understand in some cases they carry a ton of coals at $\frac{1}{2}d.$ per ton per mile, and if human flesh were reduced to the same rate per ton per mile they would be carried very cheaply. I am aware that they do carry harvestmen and other labourers on the Midland Great Western at very low rates. I believe they consider that it pays, but they only carry them under certain circumstances in order to prevent the general public making use of it.

7065. (*Mr. Horsfall.*) Do you not think it of considerable importance that a reduction should take place in the carriage of grain?—I have not turned my attention so much to the question of goods as to the question of passengers; it has not engaged my thoughts so much.

7066. (*Mr. Glyn.*) You think there is more likely to be a greater increase in passengers than in goods?

Mr. J. Pim.

5th June 1865.

—I do; and again, I think passengers are less expensive than goods in many respects; there is a heavy charge for loading and unloading the goods, whereas passengers walk in and walk out without any expense. I think a reduction in the charge for cattle would be of considerable benefit.

7067. (*Mr. Horsfall.*) What reduction would you propose in the rates for passengers?—I thought of a very large reduction, such a reduction as would make the third-class fare $\frac{1}{4}d.$ per mile, the second-class fare $\frac{1}{2}d.$ per mile, and the first-class fare $\frac{3}{4}d.$ per mile. That would be a very large reduction, and perhaps too large.

7068. (*Capt. Galton.*) Is that the relative proportion between the rate of wages in Ireland and England? You said that you thought the charge in Ireland was very much higher in proportion to the rate of wages in England.—I think that if the experiment succeeded in Ireland the charges ought to be reduced on the English lines to about the same rate.

7069. (*Mr. Glyn.*) You think that the experiment could not well be made unless there was such a large reduction as that?—I think the benefit to the country would be greater by a large reduction, and an experiment at that rate is as likely to be as successful as at any other.

7070. How many years do you think it would take to recover the receipts?—I have not thought so much of the question as to how long it would take to recover the receipts as of the benefit to the country that would result from the great increase that would be given to travelling and the means of intercommunication between the different parts of the country. I have been told that it would be recovered within three or four years; I scarcely think that it would. I think it would require the development of the resources of the country, so as to give not only greater facilities, but greater occasion for travelling than exists at present.

7071. You would rather say that it would take ten years than five to recover?—I think I should. The reduction that I suggest to $\frac{1}{4}d.$, $\frac{1}{2}d.$, and $\frac{3}{4}d.$ would be about one-third of the present rates. Adding them together, that makes $1\frac{1}{2}d.$ for three persons. The present rates are about $4\frac{1}{2}d.$ for three persons, taking the first, second, and third classes. In that calculation there is no arrangement for return tickets or excursion trains, or anything of that description, because the prices would be so low that there would be no need of further reduction. I think the want of concert between railway companies is a very serious injury at the present time. I do not pretend to explain how that can be avoided. Of course it can be done by the Government obtaining the railways and managing them, but I think that is liable to some objections. That want of concert affects us in a great many different ways, both as to traders with regard to goods, and as regards passengers. When passengers arrive at the end of one line, they do not find any means of getting on by another, and passengers having arrived in a third-class train find they cannot get on by anything but a first and second class train. Of course the interests of the railway proprietors must be protected, even independently of any great reduction of fares. I think there are two other questions with regard to which Parliament could interfere very properly. One is as regards third-class passengers. I think that every train ought to carry third-class passengers, that is to say, every train the speed of which does not exceed a certain limit, such limit being what might be considered to constitute an express train.

7072. (*Lord Stanley.*) Is that the rule in England or in Scotland?—I am of opinion that such a rule ought to apply to the whole of England, Scotland, and Ireland, that is, that wherever there are first and second class passengers, there ought also to be third class passengers.

7073. Quite irrespective of whether they would pay or not?—I have no doubt that they would pay. We know that upon the Irish railways, take the

Great Southern and Western, for instance, the receipts from third-class passengers from two trains a day are greater than the receipts either from the first or second class with five trains a day.

7074. (*Capt. Galton.*) Would you make every train, whether an express train or otherwise, carry third-class passengers?—Every train that is not an express train. I do not know what the speed might be. Every train that did not run over 30 miles an hour.

7075. For a higher rate of speed you would allow the railway companies to charge higher fares?—Where there was a higher rate of speed, I would allow them to have no third-class carriages.

7076. But you would compel them to take third-class passengers by all ordinary trains?—By all ordinary trains third-class passengers should be taken.

7077. Of what railway did you say you were a director?—I am a director of the Dublin and Kingstown; it is not a working line; it is leased.

7078. The whole of the working arrangements of the Dublin and Kingstown are under the control of the Dublin and Wicklow, are they not?—Yes.

7079. (*Chairman.*) Do I understand it to be your opinion that the railways should not be purchased by the Government?—I have not thought much about that. As regards Ireland, when railways were at first projected, I thought it very desirable that they should be made at the expense of the Government under some general system, as was then proposed. If that course had been pursued, I think some of the evils which have since resulted would not have arisen. But I am not prepared to give a decided opinion as to what ought now to be done. It seems to me that arguments might be adduced on both sides. If I am allowed to do so, I should like to read a short passage from an article in the Quarterly Review for 1839, vol. lxiii., upon this subject, which I think predicts the difficulties that have occurred from want of concert just about as well as they could have been described if it had been written after the evils were developed. "If all the great railroads in the country, instead of being disjointed into separate interests, belonged to one great body of capitalists, the latter desideratum, namely, their scientific management and responsible government, might be perhaps as perfect as if they were the property of the State; but it appears to us that one might as well expect that our blood, instead of receiving one noble impulse from the heart, could be healthily propelled throughout our body by a variety of little independent zig-zag forwarding authorities as that the mail and passenger traffic of the United Kingdom of Great Britain and Ireland can be successfully transported by a vertebation of railroads, no one bone of which professes even to think of any broader object, interest, or profit than its own marrow." That struck me very much as being just the position in which our railways are. I do not blame the railway directors; they naturally think of nothing but what will produce the largest dividend, and unfortunately they are in many cases in Ireland in that state of indebtedness that they cannot, even if they wished it, try the experiment of a reduction of fares, even if they were almost sure of future increase.

7080. (*Mr. Glyn.*) The state of things which exists in England is very much the effect of the amalgamation of the great lines that has taken place, is it not?—I believe so.

7081. Might not the same effect be produced in Ireland if there was a similar system of amalgamation?—There are four lines out of Dublin, and I do not know that there is much necessity for amalgamation among three of them. The Great Southern and Western have almost the whole of the south-west of Ireland, that is, the whole of Munster. There is a line across, which might very well join with it. Then there is the Wicklow branch, the district of which is very slightly separated from the Great Southern and Western. The Western line, which goes to Galway, might also be considered as another; but the northern

Mr. J. Pam.
28th June 1865.

lines are divided among a very large number, and there is no union of interests at all among them. The greatest difficulty as regards Dublin arises from the want of concert among the northern lines.

7082. We have been informed that they have made several attempts at amalgamation, and that it has been found nearly impossible to be carried out, either through the directors or some obstacle of that kind?—I am not aware of any very numerous attempts at amalgamation.

7083. You have heard of some attempt at amalgamation, have you not; for instance, between Belfast and Dublin?—Yes; but I did not take any particular notice of it.

7084. Are you aware that it failed?—I am quite aware that it failed. As traders, I know we suffer from want of concert.

7085. (*Lord Stanley.*) If there were either two or three great companies, say, for instance, three companies, one taking all Ireland south of the line between Dublin and Galway, the second taking the centre of Ireland from Galway up to Enniskillen, and the third taking all the north, would not that practically meet all requirements for amalgamation?—It would lessen the present difficulty very much, but still there is difficulty of the same character, though not so great; for instance, I know that even a short time since the train from Belfast arrived in Dublin just in time to be too late for the train that went to Cork; so that a passenger could not make the journey in the same day.

7086. Is not that a mere matter of accident, because there could be no object in arranging the trains in that way?—It is a mere matter of accident, no doubt. Where there are different interests they often pull very badly together.

7087. Do you not think that a great deal of the difficulty which you speak of arises from the fact that railroads have been made in districts where there are not the means of supporting them?—The only railway company in which I am a proprietor, not considering the Dublin and Kingstown Railway as a railway company, is what I call the Mayo line, which runs from Athlone to Castlebar and Westport; I forget the name of it. That was made by the promoters with the view of developing the resources of the district. The only reason that I am a proprietor in it is, that having a small property near Westport, I thought I was bound to contribute to that which would be a benefit to us all. There are several other railways of that sort which have been made in Ireland that may, perhaps, not pay in themselves, but which will greatly benefit the country through which they run. If the fares could be reduced they would benefit the country a great deal more.

7088. (*Capt. Galton.*) Would it not be worth the while of the people who were promoting those railways to reduce the fares. If they have made the railways for the public benefit of the country, and they consider that by a reduction of fares the country will be still more benefited, why has it not been worth their while to do so?—When people have invested their money and are expecting to get a dividend, they can hardly be expected to sweep it away by a reduction of fares which will deprive them of all dividend for five or six years.

7089. Are there any railways in Ireland which pay 4 or 5 per cent.?—I think the last dividend of the Mayo line was about $2\frac{1}{2}$ per cent., but the line is only partially completed, and therefore the dividend cannot be regarded really as a fair test of what it is paying.

7090. (*Mr. Horsfall.*) As a proprietor of that line, would you advocate a reduction of the fares on it looking to your own interests?—Yes, I think my interests would be eventually served, and I should be very well pleased if the fares were reduced; at the same time I think the result would be that I should get no dividend at all for several years. There is another difficulty, besides that which I have mentioned before; it is not even the mere absence of dividend, but many

of our lines are in a state of considerable indebtedness. In many instances there is a floating debt, and if the directors were to try an experiment of that sort it would frighten many of those people who have lent their money, and the directors would no longer be able to float the debt, so that it is absolutely impossible in many cases, even if the board of directors wished to do it.

7091. It is impossible without giving assistance?—It is in most cases impossible without assistance. Some companies perhaps could do it. I know the Great Southern and Western could do it. They are a solvent company and well off, and therefore they could do it if they liked but they are not likely to do it because they do not believe it would pay. I was considering what would be a possible reduction. I believe that the whole receipts from railways in Ireland may be taken roughly at a million and a half per annum. Of that, perhaps the fares for passengers might be taken at a million, but if they were reduced according to the proportions I have suggested, namely, a reduction of one third, I think that within one year from the time of the reduction the number of passengers would be doubled, and therefore that the receipts in that case instead of being a million would be 660,000*l.*, speaking in round numbers, and would leave a loss of 330,000*l.* I do not believe it would be possible to expend 330,000*l.* upon an experiment which would be so beneficial as that.

7092. (*Capt. Galton.*) But then this 330,000*l.* is a sum which may occur annually for some years?—I think it will be a diminishing sum. I do not think it would be entirely made up in the second or third or possibly fifth year, but still it would be a diminishing sum. The receipts of the first two or three years would show the probable result. If it did not show a tendency to recover speedily, I think the experiment would have to be given up. We know the result as regards the Post Office. It was commenced many years ago, it has been a constantly rising amount ever since. I think I have mentioned the subject of a third-class carriage by every train. That is a matter which costs nothing. I think when Parliament has given to a set of separate companies the whole control of the public roads of the country, which, in fact, railways are, that there ought to be some restriction put upon them, and a restriction for the benefit of the poorer classes of the community is one of the most reasonable. There have been some restrictions by the late Acts placed upon the London companies in the shape of being obliged to carry working men at certain hours of the morning and evening at low fares.

7093. There are restrictions already in the shape of maximum fares and Parliamentary trains?—The Parliamentary train is generally put on at a most inconvenient hour, of course for fear it should be made use of by any except the very lowest class of the population. Railway directors cannot tell the means of the persons who travel. There are persons who struggle with difficulty to keep a good suit of clothes upon their backs, who are little able to bear the expense, and who travel but occasionally. I am confident, if the fares were all reduced, according to the suggestion I have made, the result would be that some who now travel third class would go by the second class, and many who now go by the second class would go by the first class.

7094. (*Mr. Horsfall.*) Have you any complaint to make against the railway companies with regard to terminal charges upon goods?—I am not aware of any. The great complaint that we have to make is the disadvantage which the Dublin traders are under from the arrangements as regards through rates, by which goods in several cases are carried from Liverpool *via* Dublin to an inland town at lower rates than are charged from Dublin to the same place. Sugars, teas, and Manchester goods are carried from Liverpool to Limerick at lower rates than they are taken from Dublin to Limerick. That is a state of things which seems to be unfair, and which I think Parliament might very properly prevent.

Mr. J. Pim.
28th June 1865.

Perhaps I might say in passing, that a trader would scarcely be considered honest who was to make such a difference between his customers. If a man goes into a shop he expects to be put upon the same level with any other person who goes in to pay money. Of course we must expect that companies will manage their railways so as to promote their own interests, but there are certain kinds of competition which such companies ought to be prohibited from entering into. I do not know the rates, but I think that a railway company delivering a chest of tea for 2s. 6d. from Liverpool to Limerick, and charging 3s. from Dublin to Limerick, comes within a competition of the character I have referred to.

7095. (*Lord Stanley.*) Does not a trader make a difference between a customer on a very small scale and a customer on a large scale; does he not charge a lower price on wholesale dealings?—That is not the principle upon which it has gone, because the expense of carrying for 500 miles can never be less than the expense of carrying 400 miles.

7096. (*Chairman.*) Is it a thing which is quite unknown by merchants to sell at a lower price to persons at a distance, from that which they charge to persons close at hand; are they not in some cases willing to sell on lower terms to persons at a distance in order to get their custom rather than be without it altogether?—That is the case. That has more analogy than the other illustration; that is a case in point.

7097. That is just the same thing which the railway companies are doing?—But that is not the reason the railway companies adopt it.

7098. (*Capt. Galton.*) Do you not consider that is met by the fact that there is an open competition for the purchase of goods, because a person can buy goods from where he likes, whereas there is only one railway, and he must go by that one railway?—That is the case. I think there are modes of competition which are quite lawful for individuals in an open market which are scarcely lawful for a company that gets Parliamentary facilities, and a monopoly, for it is a monopoly in fact. At present the labouring classes do not travel by railway because it is cheaper for them to walk. I mean to say it is not their practice to travel by railway. When we compare the Irish railways with some other countries in which there

are much cheaper fares, I think they would travel by railway much more than they do if the fares were reduced, and that it would be a great benefit to the country that they should do so.

7099. (*Chairman.*) Are there any other matters to which you wish to draw the attention of the Commission?—No. I do not think it is worth while to go into the question of the overcharging of goods, or to the fact that the charges are to a certain extent a prohibition upon certain goods. I am sure that has been brought before your attention already. The charge for carrying cattle is, in many cases, so high, that people drive the cattle along the road instead of sending them by rail. The charge for carrying horses appears to be very high. I have been told by several gentlemen who wanted their horses carried, that they found it much cheaper to drive them along the road than to send them by rail. I believe the carriage of horses is really an expensive matter for the railway company, therefore I do not think that this is altogether a case in point.

7100. (*Capt. Galton.*) Do dealers send their horses by railway?—I should think not; I think no horses go by railway except gentlemen's horses.

7101. Is that on account of the rate being so high?—Yes. Since I have been in town I have asked my son to write me anything that he thought might be useful, and I have a letter from him, in which he says, "Robinson drives his horse regularly down to Moate, because the railway charge is between 4l. and 5l.; he does this regularly every year."

7102. What is his occupation?—He is the manager of our Manchester warehouse; he has a small property down at Moate, and spends his vacation there every year.

7103. What you lay stress upon is the reduction of fares, so as to enable the poorer classes to travel?—That is the point I lay most stress upon. A general reduction of fares would be of great value to the country, because it would enable all classes to travel; I believe it would give facilities, and afford accommodation to every class of people in the country, and it would have a great tendency to improve those parts of the country which are now most backward by promoting intercourse with them.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Thursday, 29th June 1865.

PRESENT :

THE RIGHT HON. THE EARL OF DONOUGHMORE.
THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
SIR ROWLAND HILL, K.C.B., F.R.S.
J. A. ROEBUCK, Esq., M.P.
T. B. HORSFALL, Esq., M.P.

ROBERT DALGLISH, Esq., M.P.
GEO. CARR GLYN, Esq., M.P.
A. S. AYRTON, Esq., M.P.
CAPT. DOUGLAS GALTON, R.E., F.R.S.
WILLIAM POLE, Esq., F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

J. Barrington,
Esq.
29th June 1865.

JOHN BARRINGTON, Esq., examined.

7104. (*Chairman.*) As Lord Mayor of Dublin you presided at a meeting to consider the subject of Irish railways?—Yes; the meeting was convened by myself, on a requisition from the citizens signed by some of the most influential men in Dublin.

7105. Have you paid attention to the question of Irish railways?—I have not given much attention to it, not being a railway director myself; but in my position I have heard a great deal of what has been said about it, and I have a general knowledge of the position of the country with regard to it.

7106. Are you of opinion that any alterations are required in the system pursued by the directors of Irish railways?—I think that some alteration is required, but it is very hard for me to suggest a

remedy; the matter seems so complicated, and there are so many points for consideration in it. I was about to remark that the result of the meeting which was held at the Mansion House was the appointment of a committee, which sat at the Commercial Buildings; and a circular was sent to the different towns in Ireland to obtain information from each place as to any complaints that they might have to make against the present railway system. The result was, that 18 letters were received from different parties, a list of which I have here. I have brought all the letters over, in case the Commissioners might wish to look over them, or have any of them read that would throw any light upon this matter.

7107. Have you examined these letters?—I have

read them all, and they consist mostly of complaints as to what the parties consider to be abuses in the system. Some complain of high rates, and others that no attention is paid to their goods; and various complaints of that kind are made.

7108. Can you mention to the Commission any abuses that are within your own knowledge?—Looking generally through the country, I think there is not sufficient inducement held out to the labouring classes to go about. I think the fares are too high. An experiment was tried in the last week or two, on the Midland Great Western line, of running an excursion train at a very low figure for third-class passengers, and the result was a very large increase in the receipts, as much as 1,000%; and it gave great satisfaction to the people who went by it. The train went through Connemara, and back by Castlebar, and in that direction.

7109. Was there an increase in the receipts to the extent of 1,000l.?—Yes; it was one of the directors of the Midland Great Western Railway who told me so, Sir Percy Nugent.

7110. Do you know what reduction was made on the fares previously charged;—There were return tickets issued at single fares, I believe, but I cannot speak positively to that, because it included Bianconi's car to bring the people from Galway through Connemara round through Westport and back by Castlebar.

7111. What class of persons travelled by the excursion trains?—The artizan class chiefly. The objection which the railway companies had to carrying people at these low fares was, that they thought the better classes would avail themselves of them and not travel first and second class.

7112. Do you know what the result has been?—This was the first time that it was tried.

7113. I mean as to persons in the superior ranks of life availing themselves of very low fares and travelling third class?—I do not think that they would do that. I think that they prefer not to mix with third-class passengers.

7114. (*Mr. Roebuck.*) Can you suggest any reason why the rich should not enjoy the benefit of the low fares?—No; but the directors want to keep up the income of the railway. I think it is false economy; I think they should have given more facilities.

7115. I think that you stated that the income of the railway was increased?—Yes; they find now by experiment that it has had a beneficial result, and in fact the system pursued on the Midland Great Western line has been completely altered lately; it has got into different hands, and there is considerable excitement about a reduction of fares, and they are now trying it. Whether they have been driven to it by the action of this Commission, I do not know, but they are evidently trying to improve matters.

7116. Do you know of any reason why a rich man should not travel at a cheap rate?—I do not think there is any reason why he should not if he chooses to go along with the others. I do not see why he should not, for he is only a man all the time; but I do not think it is likely they would do it.

7117. (*Chairman.*) Is that the only railway on which these cheap excursion trains have been organized?—They are running excursion trains for the Exhibition on the Great Southern and Western line.

7118. At low fares?—I think at a single fare, return tickets. Mr. Haughton, the chairman, told me the other day that they had rather lost by it. Whether the season had not rightly opened, I do not know, but they intended to try it again.

7119. (*Mr. Glynn.*) What reduction did they make from the ordinary rate charged?—The usual thing is a return ticket for a single fare.

7120. That is half?—Yes.

7121. (*Mr. Ayrton.*) Is there any difficulty in organizing excursion trains in Ireland from a want of conveniences and facilities for the amusement and entertainment of the people at the places to which the excursions might be made, as compared with what you see in England?—I do not think there is. There

are certain parts to which the railway communication is not yet complete, and where cars work in connexion with the railways, such as those excursions which I have mentioned round through Connemara.

7122. Is there the same provision in the way of hotels and places of entertainment where people can find every convenience and accommodation if they go on an excursion?—At Killarney there is very good accommodation. Connemara is in the far west, and is not so well supplied with hotels and accommodation of that kind.

7123. Is it difficult to get anything to eat in Connemara?—No, there is plenty to eat there; they have improved the hotel in Clifton. It is six or eight years since I was in the west; but I have heard that the accommodation now is on a better footing. If your Grace would like to look at this list of these letters I will hand it in, and I will leave the letters with the secretary. (*The same was handed in, headed, "Irish Railway Reform Movement. Statement, as submitted by the Right Hon. the Lord Mayor of Dublin to the Royal Commissioners on "Railways, showing cause of complaints on Irish "lines."—Vide Appendix AM.*)

7124. Have you observed any statements in the letters upon which you think you could furnish the Commission with any explanations of your own?—I do not think there are; they are nearly all complaints of overcharges, which I presume the other witnesses examined have spoken of.

7125. (*Capt. Galton.*) You mean complaints of charges which the parties consider excessive?—Yes; and this system militates against the shopkeeper in the country in this way, that parties living in the neighbourhood round these country towns find it more advantageous to go and buy direct in Dublin than to deal in the country towns for goods.

7126. It is therefore an advantage for Dublin?—In some cases it is, and many people go up; but it is the destruction of the small shopkeeper; the difference of freight very often makes his fair profit.

7127. The person who buys in Dublin has to pay for the carriage of the goods down?—No; they bring them down with them.

7128. They have to go by the train with their goods, and their own fare has to be added to the expense?—Yes; but they may be in Dublin on other business; this is an idea only of my own.

7129. (*Mr. Ayrton.*) Do you think that any system would prevent people, who are casually in Dublin, from availing themselves of the larger market in Dublin rather than deal with the small local shopkeepers?—I think that if the local shopkeepers could get the goods down at a low price so as at all to compete with the price in Dublin, the people there would deal with them; but if the local shopkeeper has to put on an extra profit, then he shuts himself out from the local market.

7130. Do you not think that these purchases in Dublin result from a person having a larger market to go to, and a better choice, instead of going to a small country shopkeeper who has but a very small stock, and very often sells a doubtful article?—I think it is so.

7131. (*Lord Donoughmore.*) I believe you carry on business in Dublin?—Yes, I am a soap manufacturer.

7132. I suppose you send your products all over the country?—Yes.

7133. Do you find in consequence of the different rates charged between Liverpool or other towns in England and the towns in Ireland, as compared with the rates between different towns in Ireland, that you are put to a disadvantage?—Yes, particularly as to Sligo. We have been obliged to ship goods over to Liverpool, and then they are taken round by sea to Sligo.

7134. You find that it is cheaper to send them by that route than to send them direct from Dublin to Sligo by railway?—Yes. The result is that we do send them now by railway as it is completed; but we

J. Barrington,
Esq.

J. Barrington,
Esq.

29th June 1865.

have to allow the shopkeepers their 10s. upon a ton of soap, which is nearly half our profit. The shopkeeper says, if you send the soap to me the other way the freight is so much less that we have to cut down that 10s. to compete with the Liverpool manufacturer.

7135. (*Lord Stanley.*) What is the relative cost of sending your goods from Liverpool and from Dublin to Sligo?—I do not know the charges; but I made an inquiry of my clerk just before I left town, about a month ago, as to what the practice of the house now was, and he said, "Previously, when I used to attend to the business, we invariably sent them round by 'Liverpool to Sligo.'" Then I said, "Is that practice continued now?" He said, "No, they send them direct now; but we have to allow the party the difference represented by the extra charge, which is equal to about 10s. a ton."

7136. How do the goods go from Liverpool to Sligo, by water or through Dublin?—No, not at all that way. They go round the coast; and they go that way to Ballina likewise.

7137. (*Mr. Ayrton.*) If the conveyance by sea is cheaper than the conveyance by land, what are you to do; how can you get over that natural difficulty?—I do not know, except by lowering the land carriage. I think the land carriage is too high; but still the railway companies say it will not pay to charge less. But they have not tried it, to see whether it would not lead to bringing an extra quantity of goods across.

7138. Suppose the rates to be lowered, would you send any greatly increased quantity of soap?—Decidedly, because there are a number of parties in Sligo still who deal directly with Liverpool, and if we could undersell the Liverpool men by 5s. a ton, we should get the preference; but the price of the article is brought down so low now that it is just a question whether we lose the profit; 5s. a ton just turns the market.

7139. Is not that the result of natural circumstances, that one manufacturer is in one port and another manufacturer in another, and the freight from one port is lower than the freight from the other?—Yes; but I think it injures the Dublin manufacturer.

7140. You can send your soap by sea from Dublin to Sligo, can you not?—No; there are no vessels for the purpose.

7141. That is a natural difficulty in trade, is it not?—I know that the Dublin people feel it very much as a difficulty, and as to a remedy for it, it is just a question whether, even if the fares were lowered on the railway, it would bring trade direct to Dublin, I think it would.

7142. It would be profitable to the railway companies, you think, to lower the rates?—I think they would have more to do if they did so.

7143. That being so, why cannot you make them understand that?—We have written frequently to the chairmen of these boards. I have written frequently to the directors of the Great Southern and Western line as to a lower tariff instead of the higher charges from Dublin to Cork, to enable us to compete with the Liverpool men, but they will not consent to it. The chairman stated that he should have to alter the whole tariff if he lowered the rate in one case, and the Liverpool people would cry out against him.

7144. You cannot persuade the railway directors that it would be a profitable thing for them to do?—I cannot; they will not yield; we could supply the Cork market with soap if they lowered the carriage of soap one-half. There again it is a matter of profit on the article, which is so very small.

7145. In Cork what is the competition against the railway that prevents your sending your soap by the railway; is it the sea carriage from Dublin to Cork?—Yes; and from Liverpool to Cork.

7146. They can get it cheaper at Cork by having it brought round by sea from Liverpool?—The

Liverpool parties can supply Cork with soap cheaper than the Dublin people can.

7147. That is to say, the freights from Liverpool to Cork are cheaper than from Dublin to Cork?—Yes. I have a table here which Alderman Mackie sent to me, showing the through rates from different towns in England to different towns in Ireland, showing the various relations of one to the other, and how they affect his trade. He is a seed merchant, and he intended to have accompanied me over to have given his evidence; but just as I was starting his young man came and handed this to me on board the steamer, but without any explanation. It is a very interesting table, and I dare say the Commissioners would like to look over it (*handing in the same. Vide Appendix AN.*)

7148. (*Capt. Galton.*) Do you consider that these various grievances which you have been detailing are sufficiently important to call for the intervention of the Government?—I think they are.

7149. In what way would you have that intervention exercised?—I think, with many others, that at the present time there is not a cordial understanding on the railway boards. For example there is the Waterford and Limerick Railway, and there is the Great Southern and Western Railway; they do not pull well together, and the result is that a passenger leaving Limerick for Dublin in the morning cannot return again on the same day. Then some of the northern railways do not pull well together, as I understand; and it struck me that if this Commission were to suggest that a committee should sit in Dublin or in Ireland, and go through the country and see the real position of the railway systems, some good might result from it. I think they might sit in Dublin.

7150. (*Mr. Roebuck.*) Could not all that knowledge be acquired by sitting in England? All we want to know is, the different rates charged on the different railways, and cannot that information be obtained through the railway companies without gentlemen sitting in Dublin?—I think that the fact of the Commissioners sitting in the country, or in the capital of the country, would make an impression on the minds of the inhabitants that the people here are perfectly alive to the state of the case. The people get quite excited, and if the Commissioners sat in Dublin the witnesses would be under examination on the spot, and they would begin to see probably that they had been going astray, and they would have to come to some understanding with one another.

7151. Do you think that there would be any difference in an examination carried on in Dublin and in London?—I do not think there would be, so far as that goes, but I think you could get much more evidence there than in London.

7152. But not better evidence; and the question is, whether the Commissioners are not able to obtain all the evidence they require by sitting here?—I have been speaking to a good many persons in Dublin upon this subject, who have more experience on the matter than I have, and they seem to think that it would be a good move to make and a beneficial one.

7153. Might not other people at Liverpool, for instance, say exactly the same thing, that they wanted a commission to come down to Liverpool; you want one in Dublin, and why should not they say the same thing at Liverpool?—I think there is a difference between the two things. I think that the Liverpool people are not in the same position as we are. I do not think that the railways in England have the same faults in them as they have in Ireland.

7154. Just as many claims are forwarded to the Government from Liverpool as from Dublin, but commissioners are not sent down to Liverpool to make inquiries?—My own opinion as to the Irish people, knowing as I do their habits and their feelings in every way, is that a commission sitting in Dublin, inquiring into the railway system pursued in Ireland, would have a very beneficial effect in the country; it would show the country that the English Government were exerting themselves to remedy the evils

which exist; and I may just mention to the Commissioners that the feeling over in Dublin, with regard to this inquiry, is this—they say, “Oh, it will end in nothing; the Commissioners will just bring up a report and it will end in nothing; what is the use of our going over to England to give evidence, there will be nothing done.”

7155. Might not the result be the same if the Commissioners sat in Dublin?—I think that you would get a great deal more evidence in Dublin as to the position of things. I think it is just the same as if a man wants to improve his estate; if he goes down and walks over it and examines the people who are living upon it, and comes in contact with them, he is a great deal more likely to find out the defects which exist upon that estate than if he held a court in London and heard it all through an agent.

7156. But this Commission hears evidence from Ireland; everyone who chooses to come is at liberty to come; the Commissioners are willing to hear them. If the evidence is worth anything it will come, as we have already had it, from Ireland, and the habits of the people, I take it, have nothing to do with the matter, or nothing more than could be explained by the evidence. How do the habits of the people affect the evidence?—I think it would be looked upon as a kindly move on the part of the Government towards Ireland, and the feeling would be reciprocated, and they would exert themselves to meet the views of the Government in every way and try to remedy the evil.

7157. Has not the Government evinced such a feeling by appointing this Commission to inquire into the state of the Irish railways?—Yes, to a certain extent it has, and to a certain extent it has been responded to by the people in Dublin. They have called a meeting, and they have got together such witnesses as they could, and they have sent them over to be examined, as you have seen, from the meeting that was held, but it would be carried to a greater extent than that, and in a beneficial way.

7158. In what way would it be beneficial?—I do think that the mere sitting of a committee in Dublin would remedy the thing; I think that the committee should have delegates appointed, in order to go through the different parts of the country, and draw up a report to be afterwards considered by the committee sitting in Dublin.

7159. You would have a roving commission over the whole country?—To certain parts of it.

7160. Do you not think that the people of England would be inclined to demand the same thing, and why should there not be an inquiry about Northumberland in the same way, and why should not a roving commission be sent there as you would propose from Dublin to Castlebar?—I think that if the Government had any serious intention of carrying out great railway reforms in Ireland, such as purchasing up some of the railways or lending money at a very low rate of interest with the view of reducing the fares and charges, it would be absolutely necessary, before they did that, that they should inquire more minutely into the state of the case in Ireland, and I think that naturally they would send delegates throughout the country to obtain information.

7161. How do you know that this Commission are not inquiring minutely into the whole subject at this moment?—I do not know. You may be doing so. I merely throw out these views as resulting from my knowledge of the country, and what I believe to be the feeling of the people in Ireland as to the Commission sitting here.

7162. (*Capt. Galton.*) You did not say, I think, that you thought it desirable the Government should interfere much in the railways?—I think that in the case of some of the railways it would be very beneficial.

7163. I understood you to say that all you thought it desirable to do at present was, that this Commission should pursue further inquiries, but do you consider it desirable that the Government should

lend their money to the Irish railway companies?—Yes, with a view to taking some steps to buy up some of the railways, or of lending them money at a very low rate of interest.

7164. (*Mr. Ayrton.*) In your communications with persons at public meetings, have you gathered that there is any definite desire on the part of the community that the Government should do anything in regard to the Irish railways?—I think there is a general feeling throughout the country that the railway directors are not liberal enough with the public.

7165. Have you ascertained whether there is any precise or definite wish on the part of the community in Ireland that the Government should do anything whatever as to the Irish railways?—I think there is a large section of the inhabitants who have expressed their opinions that it is necessary. On the other hand, I have met with a great number of those who are chiefly composed of directors of these lines of railway and of their friends, who would rather take the other course, that is, who are opposed to Government interference, and who think that such a step would interfere to a certain extent with private rights.

7166. What is the definite wish or the purpose of those who wish the Government to interfere? what is it that the Government are to do?—I have not heard them state or point out any very clear plan; in fact, I do not think that they see clearly what course the Government are to take. Mr. Galt has written a book on railways, and he has spoken at the meetings which have been held, but his views have been laughed at a great deal. His idea of travelling so cheap, and of treating a human being like a letter and transporting him along like a letter, has been laughed at; but there are many persons who go a good way along with him in thinking that the Government, by purchasing up the railways at a certain rent, might be doing something that would be very beneficial to the people by reducing the fares. And supposing that the Government lost by the transaction they might put a tax upon the country in the shape of a penny in the pound on the income tax so as to make up the difference; people think that that would not be felt all over the country.

7167. (*Mr. Roebuck.*) Do you mean confining that tax to Ireland?—Yes, that is one of those propositions that I have heard advanced by some people.

7168. (*Mr. Ayrton.*) Among the community or the persons with whom you have associated in connexion with this agitation have you found that proposition has met with general approbation and assent?—I have heard them speaking about it, and some very wise heads, or people who are considered to be very clever, have said that they thought it could never be carried out, but I do not myself think that it is impracticable.

7169. But it has not received general assent, or can you put it before the Commission as a proposition that meets with general approval in Ireland?—That really I could not give an answer to; I have no means of telling. I have never asked the question of a sufficient number of people, and received replies to enable me to answer the question. I have never called a meeting and submitted a resolution to it, saying, “Are you prepared to assent to such a system “being carried out, and as many as wish for it will “say Aye.” That has never been tried. However, I know many who think that it is feasible, but there are others who see great difficulties in the way.

7170. May I take it that you have not matured any plan that you wish to submit to the Commission?—Yes; I have never gone into the figures sufficiently to be able to suggest any plan.

7171. (*Mr. Horsfall.*) Although you state that you have not ascertained the opinions of others, would the plan you have just suggested in your opinion be generally acceptable?—I think it would if the present owners of the property would sustain no loss when the matter was adjusted; there are

*J. Barrington,
Esq.*

29th June 1865.

J. Barrington,
Esq.

29th June 1865.

many proprietors in some of the lines of railway who would not be satisfied to sell the lines at the present price of the shares; they think they will improve very soon.

7172. (*Lord Donoughmore.*) With respect to the proposed additional penny in the pound upon the income tax, I suppose you pay income tax under Schedule D. ?—I pay income tax on the profits made in my business.

7173. How would you like to have to pay an additional penny in the pound ?—I do not think I should mind it at all. I think that the benefit to the country should be looked at; the people being able to travel for two-thirds or one half of the present rates all through the country, and goods being carried at similarly low rates.

7174. Do you think that the increase in your business, from the greater facility which would be afforded, could be such as to recompense you for the additional penny in the pound you would have to pay ?—I think it would.

7175. How do you think that such an additional charge would be received by the owners of landed property; what would they say to it ?—Unless they could see clearly that it would bring them higher rents for their houses and for their land I do not think they would like it much, because they are not in business and would not profit as manufacturers would.

7176. I will take the case of Lord Pembroke, who is the owner of considerable landed property in Dublin; how do you think that he would like to have to pay an additional penny in the pound for this purpose; what benefit would he derive in return for it ?—I think he would hesitate before he would pay it. I think it is a nice question to look forward to see how it would benefit his property, but the country might be so improved, and the population might come back to it again, and there might be a demand for the houses in Dublin, where his property is, and they might fetch a higher rent than they do now, and there might be a greater demand for building ground from the increase of the population and the increased prosperity of the country; it is just a matter of calculation.

7177. (*Lord Stanley.*) I suppose you calculate upon the deficit to be made up in that way being only temporary, that is to say, you would not consider it fair, I presume, that passengers and goods should be permanently conveyed below a fair remunerating price, and the difference to be made up at the cost of the public ?—I look at it in this light, that after a time the increase of traffic upon the lines would be such that the penny in the pound would cease to be levied upon the country, but that for a time it would be required.

7178. (*Lord Donoughmore.*) Would not that be a tax upon the general community for the benefit of the merchants and traders, or are they not the class who would be principally benefited by the proposed reduction of the rates charged upon railways ?—In my opinion the whole community would in fact receive a benefit from it; they would be enabled to travel about. I often have to go down to collect some rents from a small property of mine in Kildare, and if I could go up and down for half the fare, and I calculated all the money that I should save, I believe it would amount to a great part of the increased income tax that I should have to pay. But still I consider that we must look to what would be for the good of the whole country in such a movement as this; it is very difficult to legislate for the mass of the people without injuring, to a certain extent, a certain class.

7179. (*Mr. Roebuck.*) Will you be good enough to read that resolution (*handing the same to the witness*), and state what you think would be the result if you were to put it to a public meeting in Dublin ?—“That the railways of Ireland be bought by the Government, and if any loss arise from such acquisition that loss to be repaid to the Government by an increased tax on income; such tax to be imposed

“on the people of Ireland alone.” I think it would be necessary, in order to carry that at any meeting, there should be a little addition made to it in this shape :—“That the railways of Ireland be bought by the Government with a view to lowering the rates “from the present day one third or one half, &c.” I think that that would be carried; but I do not believe they would consent to it, unless they had something in exchange for their increased income tax.

7180. (*Sir R. Hill.*) Have not the landowners of Ireland benefited largely by the construction of railways ?—I think that the whole country has been benefited.

7181. Would not that benefit be extended by a large reduction in the rates charged upon the railways ?—I think so.

7182. Supposing the rates to be lowered, would not all classes derive an immediate advantage from that lowering of the rates ?—I think so.

7183. Would they not, in addition to that, derive a further advantage from the improvement that would take place in trade, and from the increased value of land ?—I think so; and that is my reason for believing that the resolution, with my little amendment, would be passed in a meeting of the people of Ireland if it were put and thoroughly explained to them.

7184. That is to say, if they believed that the purchase of the railways by the Government would lead to an extensive reduction of the rates of charge ?—Yes.

7185. (*Lord Donoughmore.*) How would such a reduction in the rates of charge benefit the landowner whose land was let on long leases—he could not raise his rents ?—I think that the head landlord would have to wait until the lease was out before he could raise the rent.

7186. Do you not observe that in the meantime he would still have to pay the increased income tax ?—Yes. There are but few noblemen in the country, or landowners, who have all their estates set on long leases, and they would get plenty of their land relet at higher rates, owing to an improved railway system, and that would compensate them; and as the leases fell out in other places they could raise the rents.

7187. Is not a great deal of the land in Ireland held on perpetuity leases ?—I do not think there is. There may be in the case of building ground, perhaps, in the neighbourhood of Dublin, in fee simple.

7188. The owners of property held on perpetuity leases would be subject to the tax, and they could derive no benefit whatever, because they could not raise their rents ?—That is a nice point.

7189. Is it not a fact ?—It appears that it would be rather an injustice to that class of persons.

7190. (*Sir R. Hill.*) Would not the owners of the land travel upon the railways ?—Yes, they would. I do not think that a person would derive the same benefit who had set his land at a low rate in perpetuity that the landlord would who had not so set his land; but still, personally, he would derive a certain amount of benefit.

7191. (*Lord Donoughmore.*) Supposing him to be an absentee, would he not be equally subject to the proposed tax; and how would he derive the slightest benefit ?—I am very much against all absentees. I would recommend them to live at home, and then they would get the full value of the system. In many cases they would derive no benefit; but if a landlord was anxious for the welfare of the country, and of the people who lived upon his estates, he would look upon this as a national advantage. That is one of the difficulties in the case.

7192. (*Sir R. Hill.*) Does not an absentee landlord require to have a bailiff or some such person present ?—They always have an agent.

7193. Then those agents would derive an advantage ?—Of course they would from lowering the fares.

7194. And from the reduced prices of the articles they consumed ?—Yes.

7195. Also in reduced charges upon cattle carried to or from the estate, and upon the produce of the estate generally?—Yes.

7196. Indirectly therefore, would not the owner of an estate derive an advantage, although he might be an absentee?—He would no doubt.

7197. (*Mr. Horsfall.*) The landlord would derive a benefit to this extent, that the tenant would be placed in a better position to pay his rent?—Yes, no doubt he would, and he would feel that his tenant was a sure one; there are many landlords in Ireland who, I believe, have set their lands to tenants for perpetuity, and the tenants give them up when they find that they cannot make anything out of them, and go off to America; I think that there are such cases, whereas if this scheme was carried out it would not happen, as the tenant would have the advantage of a cheap mode of travelling and a cheap mode of conveying his cattle and bringing them to market.

7198. (*Mr. Ayrton.*) Everybody in Ireland would be benefited, but the persons who had to pay the income tax would pay for that benefit out of their own pockets?—Just so.

7199. Do you see any particular justice in that?—I think that if the community at large receives a benefit from the state, it is only fair that they should make a return for it.

7200. But the tax would be imposed on a very limited class in Ireland for the benefit of the whole?—I think I have already shown that the whole community would receive a benefit; some no doubt more than others.

7201. Do you think that if the whole community, not only those who pay income tax but those who consume whisky, had a per-centage of the tax put upon them, that any ordinary assembly would assent to the proposition that the loss should be distributed over the whole community by direct and indirect taxation?—I myself prefer indirect taxation; I would rather not see it at all, but pay it as a matter of course.

7202. What particular benefit is to arise from limiting the charge on the one hand, and of putting it on the community on the other. You first propose to benefit the community by taking 500,000*l.* off the charges they incur in travelling by railway, then you propose to put that 500,000*l.* again on the community in the form of taxation. What would be the particular benefit arising from that?—I think the great point that we want to arrive at is the thorough development of the railway system in Ireland, so as to make it most advantageous to the people. I hold that a reduction in the fares carried out on the principle that we have been talking of, after a year or two would have the effect of doing away altogether with this extra tax, that it would bring in a sufficient revenue, and in fact prove a benefit instead of a loss, and I say that it is better to take a step to attain that end rather than to do nothing and let things remain as they are.

7203. (*Lord Stanley.*) In the event of your expectation not being realized, and the deficit not being made up, for what period of time would you continue the subsidy to the Irish railways, or would you discontinue it at any rate after a few years?—I think that if the project is carried out by the Government it will have to be adhered to; I do not think they could ever go back again. If once they took up the railways they could not go back again to the old system; that could not be done. I may state that I think there would be one great advantage from the Government taking them up, and which would follow from concentrating the management of the different lines; a great saving would in this way be effected. Just consider the number of different companies which are to be found between Dublin and the Giant's Causeway. I suppose there are 20, and every one of them has a secretary, an assistant-secretary, and a staff of officers in the various towns, and there are the directors to be paid. All these directors have their friends to put in places, and they

become a charge on every one of these individual lines. If they were all concentrated in one head establishment I suppose that there would be 50 per cent. of those charges upon the railways saved, which would of course go as a set-off against the apparent loss that might take place.

7204. (*Sir R. Hill.*) If a large reduction in the rates of charge was made, a certain amount of gain would result to the public, first in the shape of reduced payments to the railways, and eventually probably in the shape of more frequent journeys; a larger quantity of goods would be transmitted by railway: would there be any chance whatever that the loss which would have to be made good from income tax would be as great in amount as the gain to the public?—I think that the gain to the public would be a great deal more than the loss eventually.

7205. Therefore the case assumed, viz., that a small class of individuals would have to compensate the Government by paying a sum equal to the gain distributed over a larger class, is not a possible case?—I think not.

7206. (*Mr. Gower.*) How would you deal with new railways, either those in course of construction, or to be made hereafter; would you deal with them in the same way as with the existing railways?—I think that if the Government took up the railways they would have to make the new ones, and carry them on on the same principle, to make the trade of the country harmonize together.

7207. Supposing additional lines to be made, and there was a loss consequent upon the reduction made in the charges, which was to be made up by income tax, that tax would have to be increased with reference to the new lines?—Of course.

7208. Would not those districts which are already accommodated by railways be adverse to any extension of railways in that or other districts?—It might so happen that an extension of railways in a district which had already been supplied with railways might improve that district even still more, and much more in my opinion than the amount of any tax they would be obliged to pay. It is a very speculative thing altogether; but that is my own private opinion about it, looking at the state of the country.

7209. (*Sir R. Hill.*) Railways could not be extended without the consent of Parliament?—Of course not.

7210. If the extension of railways had the effect of throwing an additional burden on those who contributed to the tax raised for the purpose of indemnifying the Government, would not that furnish a sufficient ground of opposition to the extension of railways?—I think that when the question arises of making a new railway all these matters must be calculated by the Government, and of course if there was a very great loss anticipated, or they did not think there was a fair chance of its paying in the end, they would not make the line.

7211. Is it desirable in the interests of the public at large that railways which are unremunerative should be constructed?—I think that in a properly constituted country railways should not be constructed unless they showed a fair likelihood of being remunerative.

7212. (*Mr. Gower.*) Might not a railway be constructed which would be remunerative if the Company was left to charge what fares it liked, but which would not be remunerative if you enforced a reduction of the fares?—High charges would militate against the trade in the district; the traffic would not go over the line, and I think it would be a suicidal policy to pursue if the charges were not lowered. I do not think that anyone would travel over the line except those who resided there, and had a local interest in the place, and were obliged to go.

7213. If the alternative was that the district should not have any railway at all, might not the inhabitants be willing to pay high charges rather than not be able to travel at all?—I think that in such a case I would

*J. Barrington,
Esq.*

let them take to the road until the country was sufficiently populated to make the railway pay.

7214. (*Sir R. Hill.*) Suppose such a case to arise, might not Parliament make an exception in favour of such railways?—Of course it might, but I think that if they made exceptions in that way it might lead to exceptions being made in other parts of the country, and it would upset the regular uniform traffic throughout the whole.

7215. I will suppose the present railways to come under the arrangement which you have in view; that they are to be bought by the Government, and the fares at present charged greatly reduced. If parties after that should think it desirable to construct a new railway, but were of opinion that it would be unremunerative unless higher charges were made upon it than upon the old lines, would there be anything to prevent Parliament taking that matter into their consideration, and if they were satisfied that the view taken by the projectors was a correct one, allowing that railway to be made with high maximum rates?—That is a question altogether for a Parliamentary committee to decide.

7216. (*Mr. Ayrton.*) Do you think that people would continue to pay taxes on account of the railway charges being reduced all over the country, and at the same time have to pay higher rates upon certain railways? Would it not be very difficult to carry out such a system as that?—I think it would. In legislating you must look to the advantage to be derived by the whole country, you cannot legislate to please all parties.

7217. (*Capt. Galton.*) What is the average fare per mile by the public cars in Ireland, in districts where there are no railways?—I think that Mr. Bianconi has a car running from Galway to Castlebar. The distance is about 40 miles, and I think the fare is 3s. 6d., which would be about a penny a mile; it is an outside car.

7218. (*Lord Donoughmore.*) If the Government were to take possession of all the existing railways in Ireland, do not you think it would be necessary almost, for the completion of the scheme, that all future railways should come into the hands of the Government?—I do, of course.

7219. Therefore it would scarcely do, when once the change had taken place, and the existing railways were placed in the hands of the Government, for Parliament to give authority to any private speculators to make new railways in the country?—I doubt whether it would, unless it was done on condition that after a certain time they were handed over to the Government to be put under the same system. There might be special legislation to suit a particular locality. In Belgium, I believe, all the railways are under the Government.

7220. (*Sir R. Hill.*) All this would depend upon the will of Parliament, would it not?—Yes.

7221. If Parliament was of opinion that to construct new railways would add to the burden of the Government or to the burden of the payers of income tax in Ireland, they might, if they chose, say, these railways shall not be constructed?—They might. There is one matter that I wish particularly to allude to, and that is the high charges for the carriage of coals. Mr. Goodbody, who is a large miller, in the centre of Ireland, in a letter which I have received from him this morning, alludes to it, and, with the permission of the Commission, I will read his letter.

7222. (*Chairman.*) Be so good as to read it.—“I think that coal, if carried more cheaply, would come into more general use; the advanced value of labour makes turf more expensive; and though it would take some time to change habits, I have no doubt that coal at $\frac{3}{4}$ d. per ton per mile would be a fruitful source of revenue.”

7223. (*Mr. Glyn.*) From what part of Ireland does he write?—From Clara, which is in the centre of Ireland and within 15 miles of the Shannon.

7224. (*Lord Donoughmore.*) That is in a country full of peat-bogs, is it not?—Yes. He says here that the habits of the people would change, and that they would buy coal, which would induce a large traffic in coals from England, that steam colliers would run from England to Dublin, that coals would be carried right down there, and that such traffic would produce a profitable return to the railways.

7225. (*Mr. Glyn.*) Does he mention the price at which he would wish the coal to be carried down to his station?—He means generally to be carried into the interior of the country. We have coal mines in Ireland; but it is anthracite, which is not suitable for domestic purposes.

7226. (*Lord Donoughmore.*) Do you not think that if coal was carried into Ireland in such quantities as completely to supersede the use of turf, it would deprive a very large class of people of employment, who now earn their living by making and saving turf, and selling it in the different towns?—I scarcely know the amount of the population that is engaged in that occupation; but I think the advantage of getting coal cheaply in the interior of the country would compensate the poor people for that, or that they would obtain employment in other ways.

7227. Do you think it would compensate those who now obtain their livelihood by cutting and saving turf?—I think that generally they would get employment elsewhere; some of them would suffer, no doubt.

7228. (*Mr. Roebuck.*) Is not the objection which is suggested to the introduction of coal the objection that was always made to the introduction of machinery?—Of course it is.

7229. If it has been proved to be futile as against the introduction of machinery, is it not very likely to prove futile in the case referred to?—Of course it is. The fact of getting coal into the interior of the country, and making it available for working machinery, would provide employment for those people much more profitable than that of cutting turf.

7230. (*Capt. Galton.*) Did you not state that one of the reasons why you thought it desirable to introduce coal was that the rate of wages was getting so high that it was no longer remunerative to cut turf?—That is what Mr. Goodbody says; the number of the population that used to cut turf is greatly diminished.

7231. (*Sir R. Hill.*) What is the distance of the place you have named from the nearest port?—About 80 miles; it is about half the width of Ireland.

7232. What is the present charge by railway for the conveyance of coals?—I do not know.

7233. It has been stated to be for a considerable distance about a penny a mile; your own information does not negative that statement?—No; Mr. Goodbody states that it is a penny a ton per mile.

7234. What is the present charge?—I do not know what it is.

7235. Of course any reduction in the railway charges would not affect the price of the coal at the port?—If there was a large demand springing up in the interior of the country for coal, the price would rise a little in the port, but the demand would very soon be supplied by screw steamers, and more collier vessels, and it would soon equalize itself.

7236. A reduction in the railway charges would not lower the price at the port?—I think not.

7237. Therefore the price at which coal would be sold at Clara would be reduced only by the difference of freight between the port and the town?—Just so.

7238. That is to say, about 80 times a halfpenny?—Yes, or 3s. 4d. a ton.

7239. Do you think that that would very materially increase the consumption of coal?—I think that 3s. or 4s. a ton is a large thing upon such an article as coal, where the price varies from 15s. to 20s.; it is about 25 per cent.

7240. Do you think it would bring coal into use in places where turf could be obtained in the neighbourhood?—Mr. Goodbody, who is the owner of large

landed property, seems to think so, and he is a better authority than I am. My opinion is that it is likely it would be so.

7241. (*Capt. Galton.*) Are not the facilities afforded for unloading coal in the port of Dublin very defective?—The port of Dublin is supplied now by colliers.

7242. But I am referring to the means afforded for unloading coal, are not they deficient?—It is done in the old style, filling the coal into bags, and carrying it off on men's shoulders, but there is a movement going on in Dublin, the object of which is to empty the ships by machinery.

7243. Do you think that will save much in the cost of the coal?—It is expected that it will make the price of coal uniform throughout the year. At the present time it varies 6s. and 7s. a ton, according to whether an easterly wind sets in, and there is a small stock only in the city. There is a monopoly in the hands of some parties, and they raise the price. I have known the price rise from 15s. to 20s. a ton.

7244. (*Mr. Ayrton.*) We have been told that the arrangements in the port of Dublin are so defective that the price of coal is increased by 3s. 4d. a ton, between the landing wharf and the railway, and is it not right that that the people of Dublin should exert themselves to reduce that 3s. 4d. in the price of the coal rather than that it should be contributed by the revenue, while they remain inactive on the subject?—I think that the people in Dublin ought to endeavour to bring coal in as cheaply as possible.

7245. Ought they not to do their share in the work before they call upon the Government to assist them?—We are doing it as fast as we can, but we are a little slow in Dublin, we have not so much public spirit in Dublin as in London.

7246. You are aware I suppose that in most parts of England the railway comes down to the landing place, and that the coal is unshipped at about 2d. or 3d. a ton?—Yes.

7247. In Dublin it costs about 3s. 6d.?—Yes, but an Act has been passed during this session to enable the Corporation of Dublin to lay down tramways along the quays which will enable trucks to be run alongside the coal vessels, and the coals will be emptied direct into them. In a few years time I have no doubt that the present system of discharging coals in Dublin will not exist.

7248. Then you will get coal at such a reduced price as to put an end to the use of turf, and stimulate the manufactures of Ireland without looking to the public revenue for assistance?—We shall get it in both ways, we shall have coals cheaper in Dublin, and the people in the interior of the country will also get it.

7249. You say that it will be necessary to effect a reduction of 3s. 4d. a ton to accomplish these objects, and that you will attain that reduction by the improved arrangements you are making in Dublin?—Yes; but we have not got to that yet; but it would be a great inducement to a poor man to use coal if he could get it for 2s. or 3s. a ton cheaper.

7250. Will not a man in Clara for instance be in an infinitely better position as to obtaining a supply of coal than a great part of the population in the south of England, when the people of Dublin choose to exert themselves and do what is necessary?—I do not know how the people are supplied in the south of England.

7251. Are not the people in the south of England further from the sources of supply than the people at Clara?—I doubt if they are, and I do not know what the charges for carrying coal over the railways in England are. There are coal mines in the centre of Ireland; but any seaport town can be approached by a vessel coming from Carlisle or from Newcastle.

7252. You have coal close to you on the opposite coast of England?—Yes.

7253. Therefore it could be brought by a short sea voyage, and sent for a distance of 80 miles into the interior; are not those conditions much more favourable for getting a supply of coal than in many parts

of the south of England?—I think they are, but in the south of England you have no turf.

7254. That is a further advantage which the people of Ireland enjoy?—Yes; but the poor people in the south of England are better off than the people in the interior of Ireland, and they can afford to pay a higher price for coal, so that it does not come to the same thing; wages are higher, and they are in a better position as inhabitants of the country.

7255. (*Mr. Dalglisch.*) Supposing that the Government took over the railways in Ireland, and during the first three years they sustained an average loss of a million per annum, and during the next three years, from increase of traffic on the railways, it turned out that there was no loss at all; would the people of Ireland be content with the railway rates as you would propose to reduce them, or would they not insist upon a further reduction of the rates?—I do not think they would; I think that if the rates were reduced down to what we have been talking about, it would satisfy the people, for it would bring them down as low as in any other country, lower I think than in any country in Europe.

7256. (*Capt. Galton.*) Are you aware that the rates for third-class passengers in India average $\frac{3}{4}$ ths of a penny a mile?—No.

7257. (*Chairman.*) I gather from you that it is an opinion very generally entertained in Dublin that it is desirable that this Commission or some of its members should meet in Dublin and elsewhere in Ireland; can you point out any kind of information that could be obtained by going over to Ireland, which we cannot obtain by examining witnesses here?—I think that if the Commission sat in Dublin or in Ireland evidence would come before them which it is not likely will come before them while sitting in London. I think that the Commissioners would be more likely to know the feeling of the people towards the movement by being present among them than by sitting here, by talking with them and coming in contact with them. This very resolution which was put into my hand by a member of the Commission could be spoken about among them.

7258. If the Commission sat there I suppose you would expect them to proceed in the same way as they do here, by examining witnesses?—Of course that would be the way; but what I thought was this, that you could go through the country, or appoint agents to go through the country, and ascertain the feeling of the people in certain districts, and see whether, in the north of Ireland for instance, they would be satisfied if their fares were lowered to what we have been talking about, and whether they would be willing to compensate the Government in the way we have been talking about.

7259. Is there any reason why the witnesses should not come here, and state their opinions in this room?—I do not suppose there is; but I do not think they are so likely to come. As I have explained before, there is a feeling over in Ireland that this Commission will all end in smoke, and there is not that interest felt in it, and they do not feel with regard to it as if it was likely to end in anything. If the sittings of the Commission were held in Dublin, and if the Government were to show the people that they were in earnest, and were going to do something for the railway system, it would be looked upon in a very different light. I say this from my knowledge of the people in general. I know that they look upon the thing in the way I have described.

7260. (*Capt. Galton.*) So far as the facts of the case are concerned, the Commissioners can surely obtain all the facts which they require just as well here as by going over to Ireland?—If you can get the parties to come forward to tell them as well here as in Dublin, of course you can; but I do not believe you will. If you want to legislate for the country, you are more likely to do it satisfactorily in the country and in connexion with the people than when you are away from it.

J. Barrington,
Esq.

29th June 1865

J. Barrington,
Esq.
9th June 1865.

7261. (*Mr. Horsfall.*) You do not think that the facts could be better elicited in Dublin than in London, but it is a matter of feeling on the part of the Irish people?—I think that you would be more likely to get more evidence upon the matter, and you would see exactly the feeling of the people towards it there better than you can here. Another view of the matter is that you might appoint agents to go through the country and hold meetings, and invite people to come, or send special commissions into the north, south, east, and west, and get people to come there and speak about it.

7262. (*Chairman.*) Do you think it necessary to go to Ireland to form an opinion as to whether a reduction of fares would, or would not, be a proper step to take in Ireland?—My opinion is that it would be a very proper step to take to reduce the fares.

7263. But is it necessary to go to Ireland to form an opinion upon that?—I do not think it is, as far as that goes, but I think, that in order to form an opinion as to whether it would be wise for the Government to take up the Irish railways and to carry out the scheme which has been suggested, the Commission would find more elements in Ireland to form an opinion upon, by being present in the country than sitting here.

7264. (*Lord Donoughmore.*) The point upon which I suppose you think we could obtain more information in Ireland is the proposed new tax?—Yes.

7265. You have suggested that public meetings should be held in various parts of the country?—That is one way of doing it.

7266. Is it not probable that at any public meetings which could be held in any town in Ireland, not 5 per cent. of the persons present would be payers of income tax, or a large proportion of the whole number?—I think you might say 20 per cent.

7267. Say 20 per cent.; do you not think that the other 80 per cent. would be glad to put the tax upon the 20 per cent.?—Yes, but I do not think that I would test their sentiments by a show of hands in a public meeting where there was only 20 per cent. of income-tax payers.

7268. (*Mr. Ayrton.*) You would propose that a tax should be put on the people of Ireland to compensate for the loss sustained by the experiment?—I am in favour of indirect taxation.

7269. What necessity is there for the Commission to go to Ireland; and as to these public meetings cannot they be held in the towns, and resolutions put to see whether the people are desirous that a tax should be levied?—That is what I have suggested, it could be done in that way. If the Commissioners did not like to go over they could delegate parties to find out the feeling of the people on that point.

7270. Could not the sheriffs convene meetings in the counties, and invite an expression of opinion from the inhabitants upon these points; and would it not be better that that opinion should be given spontaneously without the presence of the Commission?—You could obtain a very fair idea of it in that way, but still a meeting of the Commission in Ireland would be a popular thing; it would carry the people more with you than by conducting the inquiry here.

7271. Might not you set an example by calling a meeting of the inhabitants of Dublin, and passing a resolution expressive of their desire that a tax should be imposed upon the people to make good any deficiency in consequence of a reduction in the railway fares, without the presence of a Royal Commission?—I could, but at the same time it would be necessary to explain the matter to them.

7272. The Commissioners could not explain the matter to them; that must be done by gentlemen like yourself, who understand it?—Yes, but I think they could explain it. If the Commission were to sit openly, and the examination of the witnesses was in open court, and the questions put were heard, I think it would open the public mind as to the feasibility of the thing. But if I were to call a public meeting in

Dublin, and proposed a resolution to them, they would say, "No, we will not be taxed," and they would say that because they would not understand it; but when the matter was ventilated, and their minds were brought to bear upon it, they would see the good that would be eventually obtained for the country, and they would feel willing to bear the taxation.

7273. (*Mr. Dalglisch.*) Suppose that you called a public meeting in Dublin, and proposed that the deficiency should be paid out of the Consolidated Fund, do you think you could make them understand that?—There is such an anxious wish in Ireland to get things out of the Consolidated Fund, that I dare say that would get over a good deal of the difficulty. They do not see that they are actually paying into the Consolidated Fund, and that is why I say that indirect taxation would be better, because it would not be seen.

7274. (*Mr. Gower.*) Would there not be this danger, that expectations would be raised which never would be fulfilled?—I do not think so.

7275. Is it desirable that any expectations whatever should be raised as to what may be going to be done?—I think that the minds of a great many of the people in Ireland at the present time are turned towards this matter, and they expect that some result will take place, if not from the labours of this Commission, that the subject will occupy the attention of the people, and still further of parliamentary committees.

7276. (*Mr. Roebuck.*) And that it will not all end in smoke?—Yes. I say that a great number of the people are of that opinion; but there are a certain number also who will agitate the thing still, until it comes to something, and as I have said, the presence of the Commission in Dublin would give the people a certainty that something was intended to be done; the people will have it, and I think the presence of the Commission would have a good effect.

7277. (*Lord Stanley.*) Are you not mixing up two things, the one popularizing a particular scheme and agitating it extensively, as you seem to wish, and the other a business which the Government have put upon us to do, which is to inquire whether a particular thing ought to be done?—I think that if the thing is to be carried out by the Government, the Government would have to be compensated in some way, and therefore it seems to be necessary to bring in the popular element in order to meet the question of taxation.

7278. (*Chairman.*) The return which I hold in my hand was drawn up by Alderman Mackie?—Yes. He wanted to show the favourable position of the English merchant as compared with the country towns of Ireland, and as against Dublin.

7279. I see in this return the charges from Liverpool and other English towns to a variety of towns in Ireland, but I do not see the charges from Dublin to those towns?—I have observed that it is defective in that respect.

7280. Are there any other matters to which you wish to call the attention of the Commission?—Mr. Robert O'Brien intended to have been here to give his evidence as to the cattle traffic, but I have received a letter from him in which he states—"My Dear Lord Mayor,—I regret that other engagements prevent me from attending to give evidence. The railways have advanced the charges for conveying cattle and sheep fully 20 per cent. the last ten years, and in addition charge the drover on his return; this has caused great dissatisfaction, and the results are as follows:—Many drive their stock to market in place of railing; others have turned to other markets, for instance, parties from Tipperary and that district who prefer Dublin have, in consequence of the increased charges, turned to other markets, Waterford and Bristol, &c. I would write more fully, but am in haste to catch the post." He is one of the most experienced sales masters in Ireland. There is another matter with

regard to the Wicklow Copper Mining Company, who have large mines near Avoca, from which they produce pyrites, sulphur ore, and iron ore; this has been developed lately, but it is of such poor quality that unless the carriage to England is very low, the traffic will not be developed in the district. I hold in my hand a letter from the secretary of the copper mining company, addressed to Mr. Jackson, who is our secretary of the committee in the chamber of commerce:—"Herewith I send you the last half-year's report of the Wicklow Copper Mining Company with a paragraph marked, showing a decrease of 10,000 tons in iron ore in the half year's workings, in consequence of the unsatisfactory arrangements as to carriage of their ores with the Dublin, Wicklow, and Wexford Railway Company. The chairman or any of the board are quite prepared and willing to give evidence to the Royal Commission explaining this matter, and their carriage arrangements with the railway company, which appear to the directors very high and unsatisfactory." One

The witness withdrew.

Mr. JAMES HYNDMAN MACAULEY called in and examined.

7283. (*Chairman.*) You are the manager of a bank in Coleraine?—Yes.

7284. There are several railways, are there not, between Coleraine and other parts of Ireland?—Yes.

7285. Will you mention the different railways?—There is, first, the Northern Counties Railway, which comes into Coleraine.

7286. Where is that from?—From Belfast; one terminus is at Belfast and the other is at Coleraine. Then there is the Londonderry and Coleraine railway, having a terminus at each of these places.

7287. Is there not a third railway from Coleraine to Portrush?—That is part of the Northern Counties. I should have said that the termination of the Northern Counties is Portrush and not Coleraine; it passes through Coleraine.

7288. Is there much dissatisfaction in Coleraine at the manner in which these railways are managed?—There is, I have often heard, dissatisfaction expressed at the differential rates which are charged. There are no fixed charges.

7289. Will you explain more particularly what you mean by differential rates?—Some goods from Portrush, which is only seven miles from Coleraine, are charged as much as if they are brought from Londonderry, which is 35 miles from Coleraine. All heavy goods, such as coals, timber, slates, &c., are carted from Portrush; merchants do not avail themselves of the railways at all to bring them up; the charges are so high upon the railways that they can cart them for less.

7290. Can you get those descriptions of articles at a lower rate from Londonderry than from Portrush?—At the same rates.

7291. All descriptions of goods, in fact?—Not all descriptions. Coals are brought from Londonderry at a rate of about 2s. per ton. They charge 2s. for bringing them seven miles from Portrush, and the same for bringing them 35 miles. That is for the purpose of making Londonderry the port for Coleraine.

7292. (*Capt. Galton.*) Are any of the directors personally interested in the port of Londonderry?—No, I cannot say that they are; I think they are nearly all Belfast men. Our merchants get almost all their goods landed at Portrush. The grocers get their teas and sugars across from Glasgow, and they are landed there, so that we have very little goods traffic between Portrush and either Belfast or Londonderry. The Coleraine people are now making an application to the Board of Trade for a loan to improve the navigation of the river, and we hope, after some time, to have it made navigable so as to make Coleraine a sea port, and then we shall be more independent of the railway companies.

7293. The object, of course, of the Coleraine people is to receive their goods as cheaply as possible?—Yes.

of the directors of the same company wrote to me since I came to London, explaining the thing more fully; it is a very full account of the different rates charged. I will hand it in with the other letters (*handing in the same*). It shows that low fares induce people to go about. I do not know whether it is fair to compare districts, but I was about to refer to the district between Dublin and Bray and Kingstown, which is very much resorted to for pleasure. The railway company were charging so high that some persons set up an omnibus, and put on a steamer, by which passengers are carried for 2d. or 3d. less than by the railway, and the result is that they all get enough to do, plainly showing that lowering the fares encourages the people to go about.

7281. (*Mr. Ayrton.*) In that case there is a large population?—Yes, and I think it is scarcely fair to compare that district with others, as it is altogether a pleasure district.

7282. Is there any other point to which you wish to call the attention of the Commission?—I think not.

7294. Does it make any difference to them whether they get the goods that they require from Londonderry or from Portrush?—I think the journey from Londonderry deteriorates to some extent the value of goods, such as coals and slates.

7295. (*Lord Donoughmore.*) Do you mean that the mere travelling along a railway has the effect of making goods arrive in an inferior condition?—Yes; I think the shaking which they undergo by the long journey deteriorates them in value.

7296. Does the railway at Portrush communicate with the deep water?—Yes.

7297. And at Londonderry?—And at Londonderry also.

7298. Therefore, in that respect, they are precisely under similar circumstances?—Yes, exactly; there is a port at each place.

7299. The two railways belong to the same company?—They are worked by the same company. The Londonderry and Coleraine Company became insolvent, and it is now worked by the Northern Counties Company.

7300. Are there similar differences with respect to passenger fares?—Yes, to Castlerock, which is a sea bathing place near Coleraine, and is 28 miles from Londonderry, they have this rate of charge from Londonderry; they bring first-class passengers at 2s. 6d.; second-class at 1s. 6d.; and third class at 1s. If passengers have to go to Londonderry from Coleraine they are charged about three times that amount. They give a great many facilities to the Londonderry people which people in Coleraine have not; they charge them the highest figure possible. It is a system of management which the people find fault with.

7301. Are you aware of any instances in which this company charges different rates to different individuals over the same part of the line?—I have often been told, I cannot speak to it from my own experience, that some parties can make agreements with them on less terms than others.

7302. (*Capt. Galton.*) For the same quantity of goods?—By the same company for the same quantity of goods.

7303. Have the fares on the Londonderry and Coleraine Railway been the same as they now are for many years?—No, I think not. I am not prepared with the rates for goods traffic, but I can state that the passenger traffic rates have been increased on the Northern Counties line within the three last years.

7304. Is that the case between Londonderry and Coleraine?—On the Northern Counties line between Coleraine and Belfast I think they have been increased, the first-class fare by about 1s., and the second-class by about 8d. or 9d. more than what they were two years ago, and the parcels rates have also

J. Barrington,
Esq.

29th June 1865.

Mr.
J. H. Macauley,

Mr.
J. H. Macauley.
29th June 1865.

been increased. The rate on parcels from Belfast has been rather increased.

7305. Are parcels charged high, now?—They are.

7306. Have the fares on the Londonderry and Coleraine part of the line been altered within the last two or three years?—No, I do not think they have been altered on that part of the line.

7307. Are the fares lower upon that part of the line than on the Northern Counties?—Not in proportion. I have not come prepared to give the exact rates of charge for passenger and goods traffic not knowing that I should be examined to-day.

7308. (*Sir R. Hill.*) Have you not stated that the charge for a passenger going from Coleraine to Londonderry is greater than the charge for a passenger going from Londonderry to Coleraine?—I spoke of Castlerock, which is a sea bathing place within five miles of Coleraine.

7309. Between Coleraine and Londonderry the charges are the same?—Yes.

7310. Whichever way you are going?—Yes.

7311. What is the distance from Portrush to Coleraine?—Seven miles by rail.

7312. What is the charge by the railway for the conveyance of heavy goods?—2s. per ton.

7313. Can they be carried by cart seven miles for less than 2s. per ton?—The cartage from Portrush quay to any part of Coleraine is 2s. per ton, and if it is put on to the railway it is 2s.; then they have to pay an additional sum for getting it carted from the terminus of the railway to different parts of the town, perhaps 6d. more, which brings it to 2s. 6d. Of course they would have to pay something for putting it on to the line at Portrush.

7314. Is the distance seven miles by the common road?—No, five miles.

7315. Then the distance is less by the common road than by railway?—Yes. The line diverges a little towards another sea-bathing place called Port Stewart. It does not go direct, but there is not much variation.

7316. (*Chairman.*) Have you considered the question of the purchase of railways by the Government?—I have heard it discussed in our neighbourhood very often.

7317. Have you formed any opinion on the subject yourself?—My opinion is, that there would be more regularity in the charges, which perhaps might be at a lower rate. There would not be then so many of these differential rates.

7318. Is what you complain of the rates being differential and not the amount of the rates?—The amounts of the rates are high also. Probably they might be lower, and if they were lower I think the traffic could be very much increased. Very much of the traffic is taken off by other sources, which might go by the rail in case it was taken at a reasonable rate, or at a less rate than what it could be carted at.

7319. The rates from Londonderry to Coleraine are low, are they not?—From Londonderry to Coleraine they are; they give very low rates for the sake of encouraging trade in that direction.

7320. No goods go along the roads in that portion of the country?—No, it is too far; it is 25 miles by the road from Londonderry to Coleraine.

7321. Supposing the Government were to purchase the railways, and allow a universal tariff for passengers and goods to be adopted, and a considerable loss was occasioned thereby, should you see any objection to the loss being made up by taxation on Ireland?—The parties whom I have heard discuss the subject suppose that the increased traffic would prevent any loss occurring; but if there should be a loss there would be always two opinions upon that subject; those who travel often would say it might be better to have it levied by taxation, and those who do

not travel often might say that it was better not. I think the general impression is that the traffic could be greatly increased, and by the increased traffic there probably would be no loss.

7322. If there was a loss, how do you think the loss ought to be made up? Ought the Imperial Government to bear the loss, or should it be made up by Irish taxation?—I think the Irish people suppose that they pay sufficient taxation. I fear that most of them would object to it on that score.

7323. (*Lord Donoughmore.*) Do you think it would be fair or equitable to call upon the whole of the inhabitants of the United Kingdom to pay a tax for the purpose of cheapening the traffic upon Irish railways?—In the case of the Post Office it has proved that the increase of trade makes up for any deficiency of that kind.

7324. Assume that there would be a loss; in that event do you think it would be a fair or equitable thing to call upon the whole of the inhabitants of the United Kingdom to pay a tax in order to relieve the persons who travel upon Irish railways, or rather the railway companies themselves, of so much additional loss?—I think unless they could be made to pay that it would not be advisable to make a change.

7325. (*Sir R. Hill.*) Can you point out any means by which it can be arranged that the fares should not be reduced unless the reduction has proved profitable?—I think that the rates of fares are very different on different lines. Perhaps if they were all rearranged, it might be more suitable than some lines charging high and some low rates.

7326. Whatever change may be made, is there not a possibility of that change proving unprofitable?—Certainly there is.

7327. Perhaps this is not a point to which you have given much attention?—I have not heard that matter much discussed. The opinion I have heard expressed about it is, that the increase of traffic which will arise from taking the goods which are at present taken by other sources at a lower rate, should make up the full amount required to work the railways.

7328. (*Capt. Gulton.*) Has Coleraine canal or river communication as well as railway communication?—Yes, there is a river.

7329. Is that a navigable river?—It is the river Ban which goes into the interior of the country; it is navigable up to Lough Neagh.

7330. Do you receive goods from Belfast by means of that river?—No. There is a small steamer which trades upon the river. There is a canal from Coleraine to Lough Neagh, by which goods purchased from merchants in Coleraine are sometimes conveyed into the country. Our chief port is Portrush.

7331. Has the population of Coleraine much increased since the opening of the railways?—No, I cannot say that it has; however it is an improving town.

7332. (*Lord Donoughmore.*) Are there any manufactures?—There is only one linen manufactory; it is a power loom manufactory.

7333. (*Chairman.*) Is it within your knowledge that the traders experience much difficulty in recovering damages from railway companies when their goods have been lost or injured?—I have known two instances of merchants who have made applications to the companies, in consequence of their goods being lost. There are so many companies conveying goods between Coleraine and England and Scotland, that there is great delay and difficulty in getting compensation for losses.

7334. Are there any other points on which you wish to make any observations with reference to the railways coming into Coleraine?—No, I think not.

The witness withdrew.

Adjourned till Tuesday, November the 7th.

Tuesday, 7th November 1865.

PRESENT :

THE HON. E. F. LEVESON GOWER, M.P.
 THE RIGHT HON. ROBERT LOWE, M.P.
 SIR ROWLAND HILL, K.C.B., F.R.S.
 J. A. ROEBUCK, ESQ., M.P.
 T. B. HORSFALL, ESQ., M.P.
 GEO. CARR GLYN, ESQ., M.P.

A. S. AYRTON, ESQ., M.P.
 CAPT. DOUGLAS GALTON, R.E., C.B., F.R.S.
 J. R. MCLEAN, ESQ., PRES. INST. C.E.
 E. T. HAMILTON, ESQ., M.P.
 WILLIAM POLE, ESQ., F.R.S., *Secretary*.

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

WILLIAM GALT, ESQ., examined.

W. Galt, Esq.

7 Nov. 1865.

7335. (*Mr. Roebuck.*) You were, I believe, the author of a pamphlet entitled "Railway Reform," published in 1843?—I was.

7336. I think you gave evidence before the Committee appointed by the House of Commons in 1844 to investigate the subject of railway management?—I did.

7337. Will you state generally what was the purport of that evidence?—It was to show the desirability of the Government purchasing the railways of the country, placing them under one management, and adopting a very low tariff.

7338. What resulted from the appointment of that Committee?—Upon the recommendation of that Committee a Bill was introduced into Parliament, and ultimately passed into law, in which was recognized the expediency of Parliament at a future time considering the question of the purchase of the railways.

7339. By whom was that Bill introduced?—It was introduced by Mr. Gladstone, who was then President of the Board of Trade under Sir Robert Peel's administration.

7340. Was there much opposition on the part of the railway interest to its passing?—There was very strong opposition. Mr. Hudson was at that time at the head of the railway interest, he convened a meeting of directors of the several companies, and there was every possible opposition made to the passing of the Bill; but the Government were very firm and determined in the matter, and both Mr. Gladstone and Sir Robert Peel expressed themselves very strongly on the subject. Mr. Gladstone in introducing the Bill to the House said "The question of the whole Bill is the purchase, or option of purchase on the part of Government: if we agree about that," he said, "we shall not quarrel about the rest; on the other hand, if we differ about that, it will be a question for our consideration whether we will take the rest, or postpone the whole till a future period." Sir Robert Peel likewise took a warm interest in the success of the measure. He was not prepared, he said, on the second reading of the Bill, "to advise the immediate purchase of railways, nor did he wish to see the Government, or part of the Government, the directors of railway concerns; but, seeing that there was a monopoly with respect to conveyance and communication, the Legislature should have the power of purchasing, after a certain period, after giving due notice thereof to the parties concerned. They were about to say to the railway companies, 'You shall not have a permanent monopoly against the public, but after a limited number of years we give you notice we shall have the option of purchasing your property.'"

7341. Did the Bill receive much support from the public generally?—No, I cannot say that it did. At that time the railway mania had set in, and every one was more anxiously concerned about getting allotments, purchasing shares, and trafficking in them, than attending to railway legislation. Unfortunately at that time there were two opinions in respect to railway management which were prevalent, and had a very strong influence in preventing public attention from being directed to the subject. The one opinion was that as railways in this country cost so much more than they did on the Continent, there never could be a great reduction in the fares; that was one prevalent

opinion, and the other was that if the Government purchased the railways they necessarily must be under their direct management. I think it necessary, before we proceed further in this early stage of the examination, to dispose of these two questions. First, with regard to the alleged connexion between cheaper travelling on railways and their cost, there is really no connexion whatever. We find as a matter of fact that on those railways upon which the greatest expenditure has taken place, which have cost immense sums of money, some hundreds of thousands per mile, people are carried as low as on the railways that have cost very small sums. For instance, on the Charing Cross line, which cost a million and a half of money, the charges are less than on other railways that have not cost a fiftieth part of that sum. Therefore on that matter I do not think it is necessary to say anything more. The other matter is of still more consequence in reference to the idea that by the Act of 1844 the Government was to acquire the direct management of the railways, which opinion still prevails. It is universally assumed when speaking upon this question that if Government purchased the railways they would necessarily have the management of them. These two ideas, however erroneous they are, have I think prevented the public attention being directed to the subject as it otherwise should have been.

7342. What at that time was the extent of mileage and capital then vested in railways?—The amount of capital was about 70,000,000*l.* sterling, the amount of mileage was under 2,000 miles.

7343. Can you tell us what the amount of capital is now?—At the end of last year it was 425,000,000*l.*

7344. Can you also tell us the mileage at present?—The mileage is over 13,000 miles.

7345. Were railways at that time, in 1844, a profitable investment?—At that time they were a very profitable investment; the principal railways were paying 8 and 10 per cent. dividend.

7346. What were the chief arguments adduced by Mr. Gladstone in support of that Bill?—The principal argument he used was that from the magnitude and great extension that might be expected of the railway system during the next 15 or 20 years, it was most desirable that Government should reserve power to itself to take possession of them upon certain specified terms. He stated that it might be expected at the end of 20 years from that time that the amounts payable by the public would amount to about 15,000,000*l.* per annum, whilst we find, as a matter of fact, that it is considerably more than double the amount that he anticipated.

7347. Did Mr. Gladstone express any opinion on the expediency or the policy of the Government purchasing the railways?—No; he expressly stated at the time that he did not think that the Government or the country had sufficient experience of the working of railways to form any definite or clear opinion upon the subject; but he said, that at the expiration of 21 years we should have had full experience of the management and the working of railways, so that the public would be able to form an opinion as to whether it was desirable or not that the Government should purchase them and adopt a low tariff.

7348. Has that Act of 1844 much engaged the attention of the public from the time of its passing to

W. Galt, Esq.

7 Nov. 1865.

the present time?—No; very little. In fact, it has been almost forgotten, and it is only now that it is about to come into operation, or may be brought into operation, that it has at all engaged the attention of the public.

7349. What is the specific meaning which you attach to "Railway Reform"?—I mean thereby the purchase of the railways by the Government, their consolidation under one management, and a low and uniform tariff at one-third of the present average rates.

7350. Are the charges that are now made for the conveyance of passengers by railway more or less than they were formerly by coach?—Much less; I should say on the average that they are not more than one-half what they formerly were.

7351. Are the fares in this country by railway more or less than those on the continent?—They are much higher. I have prepared a table, which I will hand in, of the different fares charged in the different countries on the continent, and from that return we shall find that Belgium is at the top of the list with regard to the low tariff, and England at the very bottom.

The witness delivered in the following table:

TABLE No. 1.*

	Average Fares per 100 Miles.			
	1st Class.	2d Class.	3d Class.	4th Class.
	s. d.	s. d.	s. d.	s. d.
Belgium - - -	6 6	5 6	3 0	—
Spain - - -	11 9	8 10	5 9	—
Italy - - -	10 6	7 11	4 0	—
France - - -	13 4	10 0	7 0	—
Prussia - - -	13 0	10 0	6 6	4 0
Switzerland - -	13 6	9 4	6 9	—
Denmark - - -	13 0	8 6	6 0	—
Austria - - -	13 0	7 6	5 9	—
Norway - - -	13 4	9 0	4 6	—
Holland - - -	14 0	11 2	7 0	—
Portugal - - -	14 2	11 0	6 9	—
Russia - - -	14 5	10 10	6 6	—
The United Kingdom -	18 9	12 6	8 4	—

7352. Do you consider that the fares in this country should in any way be regulated by those on the continent?—I think not. My opinion is that England should choose and arrange what fares may be thought necessary for the public without any reference to any other country.

7353. How do you calculate the expense incurred in the conveyance of passengers; take, for instance, a first, second, and third class passenger for 100 miles, and show us what each costs?—Nothing can be more easy than to make up what the cost of conveyance of each passenger is from the very clear and ample returns published by the Board of Trade. For instance, they give every particular of expenditure, the cost of maintenance of way, locomotive power, repairs, and renewals of carriages and waggons, so that by these means we are enabled to show exactly what the cost of each train is.

The following table will show this very clearly:

TABLE No. 2.

AVERAGE COST OF CONVEYING A TRAIN PER MILE.

	s. d.
Maintenance of way and works - - -	0 5½
Locomotive power - - -	0 9
Repairs and renewals of carriages and waggons -	0 2½
General traffic charges - - -	0 9
Rates and taxes - - -	0 1½
Government duty - - -	0 1
Compensation for personal injury and damage and loss of goods - - -	0 0½
Legal and Parliamentary expenses - - -	0 0½
Miscellaneous working expenditure, not included in the above - - -	0 2
Total - - -	2 7

* See explanations in Mr. Galt's evidence on the 15th November.

We know likewise that a thousand passengers can be carried by an ordinarily loaded train, and by dividing that amount by the number of passengers conveyed, we arrive at the conclusion that a first class passenger can be conveyed 100 miles for sixpence, a second class passenger 100 miles for fourpence, and a third class passenger 100 miles for twopence halfpenny.

7354. That is when the train is full; do you assume, then, that under the system which you propose an ordinary train will always be full?—No; not one quarter full.

7355. What is the tariff which you propose for passengers?—I propose that it should vary from twopence a mile, by express train, down to a farthing for third class passengers by ordinary trains. I have drawn out a table more in detail, which I will hand in to the Commissioners.

The following table was delivered:

TABLE No. 3.

EXPRESS.

1st class, two-pence; 2nd class, three-halfpence per mile.
Fast trains, calling only at first-class stations:
1st class - One penny farthing per mile.
2nd " - Three farthings " "
3rd " - One halfpenny " "
Ordinary trains, calling at all stations:
1st class - Three farthings per mile.
2nd " - One halfpenny " "
3rd " - One farthing " "
Return tickets for all classes at a fare and a half; 2nd class carriages cushioned.

EXCURSION TRAINS.

1st class - Four miles for one penny.
2nd " - Six miles " "
3rd " - Ten miles " "
Annual and season ticket holders, one half the present average rates.
Horses, carriages, and dogs at one-half the present average rates.
The lowest payment, one penny.

7356. The first principle, then, of your system is the extreme low cost of conveyance, what is the next principle?—The next is the exceedingly small difference in profit that railway proprietors derive whether within certain limits there is adopted a very high, a very low, or a medium tariff.

7357. What are those limits?—From $\frac{3}{4}d.$ per mile up to $3d.$ for first class passengers, from $\frac{1}{2}d.$ up to $2d.$ for second class, and from $\frac{1}{4}d.$ per mile up to $1d.$ for third class passengers.

7358. There is a considerable difference, is there not, in the fares charged on the several railways in the United Kingdom?—There is a very great difference. They commence as low as $\frac{3}{4}d.$ per mile and they go up to $3\frac{1}{2}d.$ a mile for first class passengers and from $\frac{1}{2}d.$ to $1\frac{1}{2}d.$ for third class passengers.

7359. How do you account for this great difference in their charges?—Each company finds by experiment for itself what fares pay best. On some lines $\frac{3}{4}d.$ per mile pays best, on some $1d.$, on some $1\frac{1}{2}d.$, and so on up to $3d.$ per mile.

7360. Is the same system followed now which you have just described?—Not to the same extent. At the early period of railways the directors had great difficulty in knowing what fares would pay best, and accordingly they charged high. When they found that those did not pay well then they charged low, and then if they discovered they were too low they would raise the fares to nearly the first rate. But at the present time traffic managers have so much knowledge of the particular localities, and what fares are likely to pay best that they generally hit upon the right thing without much trouble, and therefore we have not the same variation and rapid changes, as we had at the early period of the existence of railways.

7361. Are there any particular instances which you would wish to give to the Commissioners?—When I was examined before the Committee in 1844 I arranged and classified a great number of cases showing the very little difference of profit that the

W. Galt, Esq.

7 Nov. 1865.

raising or lowering of fares made; but there is only one case that I will trouble the Commissioners with at present, it struck me as a most remarkable case. It was on the Glasgow and Greenock line. They shifted their charges several times for the lowest class passengers; they first charged $\frac{1}{2}d.$ a mile, they reduced that to $\frac{1}{4}d.$ a mile, and then they raised again to $\frac{1}{2}d.$ a mile. I drew the attention of the Committee to the remarkable fact that the difference between charging $\frac{1}{4}d.$ a mile and charging $\frac{1}{2}d.$ a mile only amounted to one shilling per cent. difference on the dividends. But, however, they made it a shilling more by adopting the $\frac{1}{2}d.$ charge in preference to the $\frac{1}{4}d.$ and therefore as a matter of course they let it remain at the $\frac{1}{2}d.$

7362. Do you know of any cases of late years in which exceedingly low fares have been charged?—There have been several cases of late years where there has been competition between companies, and where for a comparatively short time they adopted very low fares. For instance at the time of the Manchester Exhibition we had the London and North-western Company and the Great Northern Company running trains from London to Manchester carrying first class passengers, allowing them to stop there four days and bringing them back again for 7s. 6d. They carried in those trains about 600 passengers, it was said on an average the expenses of the train in the conveyance of those passengers amounted to 50 guineas, and their receipts at the time were calculated to amount to about 176l.; that was carrying 1st class passengers at $\frac{1}{4}d.$ a mile, and 2nd class passengers at half a farthing per mile. There was another very remarkable case of competition between the Edinburgh and Glasgow Company and the Caledonian Company. There was a quarrel between the two companies, and they suddenly reduced their fares to 1s. I believe it was, for first class, 9d. for second class, and 6d. for third class for a distance of 46 miles. That competition continued for about a year and a half. There was also the case of the South-eastern Railway Company which carried for more than a year passengers between London and Reading at $\frac{1}{4}d.$ a mile for first class, and half a farthing for second class. There was another case, the Brighton Company, in opposition to the South-western Company, carried passengers at exceedingly low fares, at about the same rate as the last case which I have mentioned. But in all those cases we find, when we come to look at their dividends, that it does not make at the very outside a difference of more than one per cent. It must be remembered, however, in reference to those companies, that they carried passengers at a ridiculously low charge. It is not a fair test of what may be called moderately low fares, carrying first class passengers in fast trains at $\frac{1}{4}d.$ per mile; that is a preposterously low fare for ordinary traffic, and cannot be considered as a fair experiment of low fares.

7363. Do you think that if the South-eastern Company had continued to charge $\frac{1}{4}d.$ per mile for first class, and half a farthing per mile for second class, they would have eventually recovered their ordinary receipts?—I doubt it very much; that fare is so exceedingly low that I doubt if ever they would make up their dividends at such very low fares.

7364. Are you of opinion that the experiment of low fares was made on such a scale as to afford a satisfactory trial of the working of a low fare system?—I think not, because, in the first place, those trials were made far below what the necessity of the case required, and far below what would be likely in any case to be adopted in this country, the fare by these fast trains should have been $1\frac{1}{4}d.$ per mile instead of $\frac{1}{4}d.$ In the second place the trials were not made for a long enough time, and did not extend over the whole of the lines, so that it is evident we have had no fair trial of a low fare system in this country.

7365. Does there appear any probability of such a low tariff as you have proposed ever being generally adopted under the present system?—I think not; there does not appear any likelihood of such a thing

taking place. Mr. Gladstone referred to the probability of the companies lowering their fares in his speech in 1844: he said, "I believe that the charges on the Belgian railways are not more than one third of our charges. We must look at this subject in all its vastness, and in all its bearings. It may be said that England is the richest country; but because this country is rich, it is no sound reason why it should pay the railway companies more than necessary, or that cheap travelling should not be provided for the public. But there is no likelihood that the great experiment of the greatest possible cheapness to the public will be tried under the present system." That was the opinion of Mr. Gladstone in 1844, and our experience has confirmed the truth of that proposition.

7366. Do you think it desirable that the fixed effect of a low tariff should be ascertained?—I think so, for this very reason, that it appears that the very basis of legislation on the subject is an accurate and clear knowledge of the effect a low tariff would have on the increase of passengers. You know exactly, for instance, the cost of transit, and you know precisely the fares that are paid in this country and abroad, but unless you acquire a knowledge of the number of passengers that would come under a low tariff, I think you are deficient in the very knowledge which is absolutely necessary to enable you to legislate properly upon the subject. If it should be the desire of the Commissioners to ascertain accurately the fiscal effect of low fares, nothing could be more easy than to have the experiment tried on a number of lines, and if it were recommended to Government, and the Government agreed in that view of the case, and recommended it to Parliament, in another year, or two, at the time when you may be prepared to make your final Report you would be able, definitely and distinctly, to say what was the effect of the low tariff, what increase of passengers it produced, and so be able to legislate satisfactorily upon the matter.

7367. That is to say upon a particular line?—Upon a number of particular lines.

7368. Do you think that this information would be of any use unless it were first settled that the railways should be purchased by the State?—I think it would be of every use. Assuming for argument's sake that the Legislature would deem such a change undesirable, but that they might think it necessary to make some arrangements with the companies for substituting a low tariff for the present high tariff, they would then have distinct and definite data to go upon, when it was ascertained what was the result of low fares, not for a short time, but for a lengthened period, and upon that data they might enter into arrangements with the companies without making any organic change in our railway system.

7369. On what lines would you recommend the experiment of low fares to be tried?—I would commence with the lines that I suggested to the Committee in 1844. I would take, for example, the London and Blackwall line. That line runs through a densely populated district, and omnibuses are running along side of the railway, and charge 3d., between the City and Blackwall, whilst the railway company charges 4d. for second class, and 6d. for first class passengers. Now, inasmuch as the railway company can convey passengers at a twentieth part of what the omnibuses can, and the omnibuses earn a living by carrying at so much less, that would be a case where it would be exceedingly desirable to have a low tariff tried. Again, I might take between Liverpool and Manchester; there the population of those two towns amounts to something like 800,000; the lowest fare between the two places is 2s. 7 $\frac{1}{2}d.$, which is the extreme charge by Parliamentary trains, and inasmuch as passengers between Liverpool and Manchester could be carried for 1d., the entire distance 31 miles, and they are not carried at less than 2s. 7d., there would be a good opportunity of seeing what the effect of low fares would be; and I should try the experiment in the agricultural districts as well. At a meet-

W. Galt, Esq.
7 Nov. 1865.

ing of the Social Science Congress in Sheffield a short time since Mr. Plimsoll went at great length into the subject, and advocated a trial on the Great Eastern line. According to his calculation, in two years, adopting a very low tariff, the revenue would make itself up again. I think it would be of the greatest importance to ascertain how far these theories would be borne out in practice, and to ascertain distinctly and clearly what the effect of a low tariff throughout the country would be. If a trial of this sort should be determined on care should be taken to select such lines as would not abstract traffic from other lines, so that the experiment could be fully and fairly tried.

7370. Would you guarantee the companies against loss during the time of the experiment?—As a matter of course they should be guaranteed by the Government against any loss.

7371. With regard to excursion trains what fares do you propose by them?—I propose first class, four miles for 1*d.*, that is $\frac{1}{2}$ *d.* per mile; second class, six miles, and third class, ten miles.

7372. What are the fares generally now throughout England for excursion trains?—They are generally about one-third of the ordinary traffic. I have prepared three tables which I will hand in, two show the different fares charged on the principal railways in the United Kingdom. The first is for ordinary traffic, the second for excursion traffic, the third table shows the loss arising from extremely low fares. The lowest express fare is on the South-eastern line, and their excursion trains carry third class passengers five miles for 1*d.*, and the first class for less than $\frac{1}{2}$ *d.* per mile.

The witness handed in the following tables:

7373. What reduction do you propose for the benefit of annual and season ticket holders?—I think it would meet all the necessities of the case if the charges were reduced to about one half of the present average fares.

7374. It would appear that travelling in Belgium is the cheapest on the continent; the railways there belong to the State, do they not?—They do.

7375. What is their financial position now?—At the time they were commenced the Government established a sinking fund for the purpose of paying off the debt that should be contracted in making them, and their financial position is so prosperous that in 21 years from the present time, in 1886, should their expenditure and receipts continue in their present state they will have cleared off the whole of the debt which was incurred in constructing them, so that the Government can either adopt a still lower tariff, which is less than one-half of what it is in this country, or continue the same tariff, and apply the overplus to the necessities of the State.

7376. What was the amount paid last year for passenger traffic in the United Kingdom?—15,684,040*l.*

7377. And what for goods?—18,331,524*l.*, making in all 34,015,564*l.* That is an increase over the year 1863 of about 2,850,000*l.*

7378. Are the charges for the conveyance of goods high?—The railway companies have permission to charge very high, and I believe that in most cases they do charge exceedingly high.

7379. There are different rates, are there not, for the several kinds of merchandise?—There are; they are generally divided into four classes. For the lowest class they are allowed to charge about 12s. 6d. per ton for each 100 miles; for the second class they are allowed to charge about 1l. 0s. 10d.; for the third class, 1l. 9s. 2d.; and for the fourth class, 1l. 17s. 6d. This classification is copied from an Irish Railway Act; the classification in English Acts is generally under five heads, but the rates are, I believe, essentially the same.

7380. Are these charges usually enforced?—That I cannot say; in many cases I believe they are; but I have no special knowledge of the charges that are made on merchandise, and that is a matter into which I do not intend to enter.

7381. What is the cost of the conveyance of goods on railways?—The cost may be taken at about 1s. 4d. per mile for 100 tons on railways of ordinary gradients.

7382. What remarks have you to make in regard to the coal traffic?—That is a very important traffic, especially for London. Coal can be conveyed from the northern counties up to London at the rate of from 1s. 6d. to 2s. 6d. per ton. The charge here in London is exceedingly high, about 28s. or 30s. per ton being the ordinary price, at this time of year, for the best coal, whilst the cost at the pit's mouth, in South Yorkshire, is not more than 6s. per ton, so that in fact it can be brought up to London for about 9s. per ton, and pay a good profit for carriage to the companies. It would be exceedingly desirable that the cost should be reduced in London to the public at large, and especially to the poor, who suffer great privations during the winter, owing to its extreme dearthness.

7383. Is there not competition between the railways and shipping for the conveyance of coals to London?—The actual cost of the conveyance of coal to London, without leaving any profit whatever to the shipowner, amounts to about 5s. per ton, whilst by railway it can be conveyed for less than one half of that price. Consequently, there can be really no competition when the railway can convey it at so much lower rates.

7384. You consider that the conveyance of coal to London at a low price to the consumers is a matter of great public importance?—It is undoubtedly a matter of very great importance to all classes except the very wealthy.

7385. Do the manufacturers in London complain of the high price of coal?—They complain very much, and that they are not able to compete with manufacturers in the North on account of the very high price that they are obliged to pay. If they could get their coal here for about 12s. or 13s. per ton, it would make all the difference to them in their manufactures.

7386. Does that price affect the steamers that take in their supply of coal in London or any of the southern ports?—It affects them very much indeed, here. I have received a letter from the firm of Messrs. Harrington & Co., in which they go into details showing the great grievance which the owners of steam ships that take their departure from London and the southern ports suffer on account of the high price of coal, and they also enter into considerable detail showing the benefits that would be conferred on the London steam shipping and all steam shipping in the southern ports, if they could get coals at a reasonable rate. I think this letter of such importance that I beg leave to read it to the Commissioners. —“27, Leadenhall-street, E.C., London, 3rd November, 1865.—W. Galt, Esq.—Dear Sir.—Having perused your very important work on Railway Reform, we may observe that among the many and varied public benefits which would accrue from the adoption of your system there is one which strikes us most forcibly, and which appears to have been partially overlooked by you, we refer to the great impetus which would be given to our manufacturing and steam-ship enterprises in Lon-

don and other ports of the south of England, where we are in the habit of paying 20 to 25 shillings per ton for coal; with that article reduced, say, to ten or twelve shillings per ton, the benefit which would accrue to the consumers of goods is incalculable. When we inform you that our fastest steam-vessels which are engaged in crossing the English Channel burn, on an average, from five to six tons of coal per hour, and that even with this enormous cost our French trade is increasing to a very great extent, we do not exaggerate the benefits which would be derived from the contemplated reduction. Our Mediterranean, North and South American, and West Indian trades are now nearly all carried on by steam, the increased cost in the transit of goods being entirely borne by the consumers. The immense subsidies, which are annually paid to the Peninsular and Oriental, the West India Mail, and other companies for carrying the mails, would be unnecessary if we could obtain coals in London at 12s. per ton, and hence would arise a very great saving under that head in our expenses. The varied attempts which have failed to carry out steam communication with India and Australia, have failed from the same cause; and although merchants are paying 70s. per ton by steam to Australia against 35s. per ton by sailing ship at the present time, this rate is not sufficiently remunerative to induce shipowners to place enough steamers on the berth. We are convinced that the whole of our foreign trade must be ultimately done by steam, and that sailing vessels will only be the carriers of coal, timber, &c. or other materials of a like value, and can sincerely wish you every success in your attempts to inaugurate a great public boon which cannot fail to be appreciated by the country at large; and in drawing your attention to this question of coal supply, we are only actuated by a desire of seeing all parties of the community alive to the general good which must result from a uniform management of a great national interest like the railway system, and remain, Sir, yours truly,

“G. H. HARRINGTON AND CO.”

7387. What is the annual supply of coal to London?—The annual supply is between 5,000,000 and 6,000,000 tons.

7388. How much of that comes by railway?—Last year about 2,300,000 tons came by railway.

7389. Referring back to the conveyance of general merchandise, are you of opinion that the same reduction should be made in the conveyance of goods as you recommend with regard to passengers, namely, to one third of the present average charges?—I think not. In my opinion it should entirely depend on the special case made out for each description of merchandise.

7390. Without any special knowledge of the subject, can you suggest any general principle which in your opinion ought to govern the reduction of charges?—I think that the principle ought to be this, in case it is shown that there would be a great increase in the quantity of merchandise sent for conveyance, there ought to be a reduction, that is to say, if the result of reducing the charges would cause a great increase of traffic; if, on the other hand, there could be no special case made out by which it could be shown that such an increase would take place, then I do not see what would be the necessity for making any reduction whatever, as it would prove very clearly that the cost of transit was no impediment at all to the trade; and if you show that then I do not see that in such a case there should be any change whatever made, unless there is some special hardship in regard to the trader.

7391. How do you propose dealing with parcels and packages?—I propose that a very considerable reduction be made in the charges for them, and a uniform rate of carriage established throughout the kingdom, something similar to the plan of the penny postage; that for a package of 3 lbs. there should be

W. Galt, Esq.

7 Nov. 1865.

W. Galt, Esq.

7 Nov. 1862.

paid 4d., of 7lbs., 6d., of 10 lbs., 10d., and of 14 lbs., 1s., to be forwarded by passenger trains.

7392. For what distance should that charge be made?—For any distance throughout the kingdom.

7393. (*Sir R. Hill*.) You mean any distance by railway, I presume?—No, I mean to any place in the united kingdom.

7394. Do you mean whether it is conveyed part of the way by railway, or the whole of the way by railway. Supposing it is a parcel addressed to some village 10 miles from a railway?—No, I do not mean that; I mean crossing the channel to Ireland, just in the same way as a letter would be taken. This table will give a general idea of the charges for parcels out of London; this includes the charge for booking, and may be taken as a specimen of the rates throughout the kingdom.

The witness handed in the following Table :

TABLE No. 7.

Charge for the smallest parcels on three of the principal railways out of London.

	London and North-western.		Great Western.		Great Northern.	
	s.	d.	s.	d.	s.	d.
Not exceeding 20 miles—	0	8	0	8	0	8
" 40 "	0	10	0	10	0	8
" 80 "	1	0	1	0	0	10
" 120 "	1	2	1	2	1	2
" 160 "	1	5	1	5	1	5
" 220 "	2	2	2	2	1	8
Exceeding that distance	2	8	2	10	1	8

7395. A letter would be taken, would it not, to the village?—Yes. But I would not take a parcel to any place beyond the delivery of the railway in the immediate neighbourhood.

7396. (*Mr. Roebuck*.) Do you consider the charges for packages, hampers, and heavy parcels high?—Yes, they are exceedingly high, and in most cases the rates are prohibitory in regard to merchandise, provisions, or commodities of no great intrinsic value. The carriage of a hamper from Dublin to London, not exceeding half a hundredweight, amounts to 5s. 6d., and from a distant part of Ireland to London, if that weight is slightly exceeded, the carriage will amount to 8s. or 10s.; the carriage of a hamper, not exceeding 28 lbs., if sent by a passenger train on the Great Western, when the distance exceeds 220 miles, is 4s. 10d., and heavier packages charged in proportion. The charges are about the same on other lines, more or less, as the case may be. I propose to make the maximum charges for parcels by goods trains throughout the kingdom, when not exceeding 28 lbs. 1s., not exceeding 56 lbs. 1s. 6d., not exceeding 1 cwt. 2s.; and when the distance does not exceed 50 miles, the charges to be one half of the foregoing rates.

7397. Do you think that the public would derive much benefit from such a tariff as you propose?—I think they would undoubtedly derive very great benefit if they could get everything carried for about one third of what they now pay.

7398. You have now enumerated the benefits which you consider would be derived from a low tariff upon passengers, merchandise, and parcels, would the country in any other respect derive benefit from the railways being in the possession of the State?—I think that one of the most important matters is with regard to the Post Office—to the carrying out fully of Sir Rowland Hill's plan with regard to the Post Office. "The subject (of the Post Office) was brought before the House of Commons on the 4th of April 1864, when Mr. Long moved for the appointment of 'A Select Committee on the Post Office, with an especial view to the improvement of existing arrangements for the transmission of mails in the provincial districts.' In many districts where railway communication exists, according to the statement of the honourable member, it had not

"been taken advantage of, and mails were still sent "by horse and cart, and even by messengers on foot. "In some cases it took three days to get an answer "to a letter sent 10 or 20 miles into the country, just "as it did 30 years ago. Although there had been "for many years a railway between the important "towns of Hereford, Ross, and Gloucester, the mails "were still conveyed by a horse and cart as they "had been 50 years ago. It was the same in South "Wales; Newport, Cardiff, Merthyr and other towns "were similarly situated. Between Shrewsbury and "Liverpool letters were still sent by a mail cart; "they were 24 hours in passing between the two "towns, whilst passengers by train went in three "hours. In Kent and Sussex the postal communi- "cation was very imperfect; in some places not more "than nine miles apart, it required four days to re- "ceive an answer to a letter. Mr. Long proposed "that the chief and central post office should be "removed from St. Martin's-le-Grand to Charing "Cross, that there should be letter boxes at each "railway station, and mails sent by trains to all "stations along the lines. In Cornwall and Devon- "shire Mr. Wyld stated that there was great cause "of complaint in regard to the conveyance of letters, "and that the First Lord of the Treasury and the "Postmaster General would soon be compelled to "find a remedy for the evil complained of. Mr. "Bentinck suggested that as the railway companies "enjoyed a certain monopoly it should be rendered "obligatory on railways to carry mail bags at a "reasonable rate; and in cases where the corre- "spondence was not sufficient to pay for increased "accommodation, the Post Office might be empowered "to charge additional rates," and so on. There "were a great many complaints of that sort, and it was "proposed that all those places should be attended to "and fitting postal accommodation given. "The "Chancellor of the Exchequer, whilst acknowledging "that the principle on which the Post Office was con- "ducted was fairly stated by Mr. Baillie, said if the "suggestion was acceded to, that a million and a "half should be laid out in providing additional "accommodation, the result would be, that there "would be a gap to that extent which should be "stopped by the laying on of a new tax, or the "augmentation of some tax already in existence."

7399. Do you know whether those statements are correct?—I do not know. I merely give them as they were given in the House of Commons, and I presume that they were correct, as they were un-contradicted. There are many other benefits besides the extension of post office communication the public would derive from the possession of the railways by the State; the large sums that are now paid for the conveyance of the military from one part of the kingdom to another, and the transport of military and naval stores, this expense would be almost entirely saved.

7400. The Act of 1844 comes into operation, does it not, on the 1st of January 1866?—It does.

7401. Do you propose that recourse should be had to the compulsory powers of that Act?—No; I do not think it is possible to carry it out by compulsory means, nor do I think it desirable, even if it were possible.

7402. You do not consider it practicable, then, to compel the shareholders to part with their property according to the terms of the Act, although both the Commission and the Legislature should desire it?—No; it would be impossible to deal with 400 millions worth of property by compulsory measures.

7403. Why do you think the attempt undesirable if it were practicable?—Because if the State thought proper it could, at a much lower cost than purchasing the railways, construct a few trunk lines radiating from the metropolis, charge a low tariff, and consequently all the other companies would be compelled to adopt it.

7404. Do you suppose it likely that in the event of the State wishing to possess the railways it would be driven to such an alternative?—No; I think nothing

more unlikely. There would not be the slightest probability of such a course being necessary.

7405. Do you think that the railways would be frightened into it?—No; I think that the railway companies would be exceedingly glad to part with their property on good terms.

7406. Are the shareholders satisfied with their present position?—No; they are greatly alarmed by their present position. In the next session of Parliament there are apparently as many new lines coming forward as there has been for many years. The great companies are attacking each other in different quarters, and the organs of the railway world seem to be in great dread of what the effect will be. For instance, *Herapath's Railway Journal*, in the last number, says that the London and North-western Company propose to make a new and competing line to connect Sheffield with Manchester, the Midland Company to make a line from Settle to Carlisle nearly parallel with the London and North-western and Carlisle; that the former intends to penetrate into the Midland district at Derby and Nottingham; and that if all which are projected shall pass, railway property in three or four years will be in a pretty plight. Under all those circumstances, I have no doubt that the railway proprietors would be exceedingly willing to part with their property.

7407. Have not the dividends and the prospects of the companies improved within the last few years?—The dividends have improved within the last year or two, but not their prospects.

7408. Have the promoters of new lines great advantages over the proprietors of old lines?—They have very great advantages in many respects. From the cheap way in which lines can now be constructed, the facilities in forming companies, the willingness of the public to contribute in making new lines, and the low terms on which landholders part with their property, all these changes give the promoters of new lines great advantages over the old companies.

7409. Is there any law or understanding, express or implied, between the State and the railway companies, by which there is any restriction placed upon the former with regard to granting competing lines?—None whatever. Whatever error the Legislature may have made in past times with regard to railway matters, they always took care to let it be clearly understood that they held themselves at perfect liberty to grant whatever competing lines they might think proper; and, indeed, from a very early time it was held out as a remedy against railway monopoly that the State would exercise the right of granting competing lines to mitigate the evils of monopoly.

7410. Was the right of the State to make competing lines mooted in the Committee of 1844?—It was. The President of the Board of Trade asked Mr. Hudson and Mr. Glyn if they considered the State had a right to construct competing lines. Mr. Glyn replied that unquestionably the State had a right to construct competing lines if it thought it necessary, and Mr. Hudson also admitted perfectly the right of the State to construct competing lines, but he qualified that admission by stating that it was first bound to buy up the old lines.

7411. Was there anything said as to the price at which they should be bought?—No; there was nothing said about that.

7412. Assuming that Parliament desired to purchase the existing railways, and that the proprietors refused to sell on such terms as Parliament might deem equitable, what course in such a case should Parliament pursue?—Either to give every facility for the encouragement of competing lines, or else the State to make a few lines itself.

7413. Is your supposition then, that the shareholders are willing to dispose of their property to the State, founded on the assumption that they have a dread of the interference of Parliament in such a way as you have described?—No; I do not think so. I believe that the shareholders, on account of the uncertainty of value attached to their property and its constant

liability to attack (this year it is likely to be attacked to as great an extent as ever), would be very glad to dispose of it.

7414. Will you state the grounds of your belief, why, without any extraordinary interposition on the part of Parliament, railway proprietors would be desirous of disposing of their property to the State?—For the reasons I have stated, namely, the exceeding uncertainty of its value at the present time, owing to the constant attacks, as they term them, which are made upon it from year to year, and the certainty, as far as we can form an opinion from experience, that the protection will be less and less every year, and probably the fear that the new Parliament may take a different view of the right to protection from the old Parliament, and withdraw that which has hitherto been granted, inasmuch as the protection that the companies have is entirely exceptional, and is not afforded to any other class or interest in the country, but is merely held upon sufferance, and may be withdrawn at any time that Parliament may think proper.

7415. If the shareholders would consent to sell, how would you propose that they should be paid?—I should think in three per cent. consols, by the creation of stock.

7416. How did the Act of 1844 provide for the payment of the shareholders; how was the value of their property to be calculated?—According to the Act of 1844, the value of the property was to be calculated at 25 years' purchase on the average of the dividends of the three preceding years. That was the plan proposed by Captain Laws. I suggested that a more sure mode of getting at the value was to take the market price. In addition the shareholders were to be allowed the privilege if they did not think the purchase on the dividends a fair price, to refer the matter to arbitration.

7417. Is it quite clear from the wording of the Act, that it was the intention of the Legislature to give a bonus to the shareholders on the market price of their shares?—I think, on the whole, it is pretty clear that such was their intention. At the time the Act was passed consols were at par, and investments in railway stock would pay about 4l. 7s. per cent. Calculating it on that percentage 25 years purchase would have given a bonus of about 8 per cent. to the shareholders on the price of their shares. On the other hand it might be argued that this 25 years' purchase was to be calculated without any reference to the price of consols, and in that case it would give, at the present time, a bonus of nearly 25 per cent., taking the investments in railways to pay 5 per cent.

7418. What do you consider to be the proper test of the value of a railway?—I think that the proper test of the value of a railway is what the shares bring in the market; assuming, of course, that the shares have not in Stock Exchange phraseology been operated on.

7419. And what bonus do you consider that the shareholders would be entitled to?—Many would contend that the most satisfactory way of settling the matter would be to make a fair division between the shareholders and the State of the profit that would arise by the transaction, but the prospect of the nation wishing to purchase the railways is too remote to require any immediate consideration as to what should be considered fair terms.

7420. Do you think that the directors would give their support to carrying out the Act of 1844?—I have no doubt that one class of the directors would, namely, those who have very large investments in railways. But I think that another class, who perhaps may be called professional directors, and are in half a dozen or more different companies, and either make a living or a fortune by the fees they receive from different boards and stock jobbing in shares, would very naturally be opposed to the purchase of the railways by Government.

7421. Are not the English people generally very much opposed to Government interference in mercan-

W. Galt, Esq.

7 Nov. 1865.

W. Galt, Esq. tile affairs and what is called centralization generally?—Very much indeed.
 7 Nov. 1865. 7422. They consider, do they not, that the system pursued by the continental governments in such matters is entirely opposed to the spirit of our constitution and the habits of our people?—Yes, they do.

7423. Do you coincide in those opinions?—Entirely so.

7424. But you do not consider that they have any reference to the subject of railway management?—Certainly not. That is entirely a different matter, inasmuch as railway management is virtually a monopoly; the principles of free-trade do not at all enter into the management of railways; and therefore it is a matter of which the State should have the supervision, and not trust to mercantile companies, by whom the interests of the public are entirely set aside.

7425. Do you, then, charge the directors of our railway companies with having abused the trust reposed in them by the Legislature; that, having got the control of the railways, they have broken faith with the public?—Nothing of the sort. I look at it merely on financial grounds. A railway director is in my opinion bound as a matter of duty to do the best he can for his shareholders, and charge that which he finds to be the best paying price. If he find, for instance, that by charging 3*d.* per mile to first-class passengers he can make $\frac{1}{4}$ per cent. more dividend for his shareholders than if he charged $\frac{3}{4}$ *d.* per mile, I consider that it is the duty of the director to look exclusively to the interests of his shareholders, and charge 3*d.* per mile in preference to charging $\frac{3}{4}$ *d.*, although the increased profit would be so insignificant.

7426. You consider that the companies have a monopoly; but does not competition exist to a considerable extent between them? There are three railways, for instance, between London and Liverpool; do they not compete for the traffic?—No, we cannot call it competition; they divide the monopoly, but they do not compete. They agree as to the fares, and all charge precisely the same, consequently there is still a monopoly. Competition can only exist where there is such a number of competitors in the market as to prevent combination. I cannot assent to the proposition that merely because there are two or three companies carrying passengers it is the less a monopoly, because they agree upon certain terms.

7427. Is not that mischief common to many other companies, such as gas companies; do not they contrive to cheat the public?—No doubt they do exactly the same thing.

7428. Would you consider the railway monopoly destroyed by making perfectly free trade in the construction of railways, or at least requiring that nothing more should be necessary for railway promoters than to receive the assent of the majority of the land-owners through whose property the line might pass?—No; I still think that it would be a monopoly, because the public could only make choice of a limited number of lines. If two or three lines were made and it was found that they ceased to pay, no more lines would be made, and the directors, not fearing further competition, would naturally agree to charge the highest paying fares, whatever those fares might be.

7429. You have referred to cases of competition for traffic between railway companies, in what respect would competition of that kind differ from competition between two rival lines of steamers?—The difference is this, that where there are two rival lines of steamers, each perseveres in maintaining a low tariff with the object of driving its opponent off, and one or other party is soon forced to submit; but in a competition between railway companies they know perfectly well that however long they may contend the lines still remain where they are; they soon see the absurdity and folly of competing when they can never drive each other away; and it is in that respect that railways must always in themselves be a monopoly, however much their traffic may be divided.

7430. You state, do you not, that if the directors

performed their duty in the most unexceptional manner towards their shareholders and the public, that would not alter in the least your opinion of the present system?—That is so. It appears to me that the main matter to be considered is the amount the public pay at the present time to the railway companies. Last year they paid 34,000,000*l.*, and this year they will pay more than 36,000,000*l.* Now if the fares and charges were reduced to one-third of their present amount, it is perfectly plain that such a procedure would be in all respects tantamount to a reduction of 24,000,000*l.* in taxation. Of course, against that gain there would have to be charged the direct loss incurred by diminished charges. Whatever it should cost the country by direct taxation would be so much deducted; but inasmuch as I apprehend that it is the same to a man whether he saves 1*l.* in his tea or sugar, or 1*l.* in his railway fares, or any other matter connected with railways, if you gave him by payment, or gave the public by payment 24,000,000*l.*, it would be the same in every respect as if the taxation of the country were reduced 24,000,000*l.*, and the same, in fact, as if you swept away the customs duties entirely.

7431. As the difference in receipt between the two rates of charge is so comparatively trifling, would not the same object be effected by guaranteeing to each company the difference between the high and the low fares?—The great difference would be this, that if you once guaranteed a company their dividends, the State would take upon itself the responsibility of paying the dividends, and all inducements to economy and good management would be taken away.

7432. Supposing that the Legislature should be willing to carry out the Act of 1844, and the Government and the companies agreed to the terms that you have suggested, what profit would the State derive from the transaction?—About three and a half millions sterling, so far as the issue of stock was concerned.

7433. Have you made any calculation as to what the loss would be to the Treasury?—I should say that to the three millions and a half might be added the saving that would be effected by the consolidation of the railways under one management; that saving has been differently calculated by traffic managers, but the general opinion appears to be that there might be a saving of about one million and a half. That would raise the reserved fund that the State would acquire to five millions, and this sum it is presumed would make up the loss incurred by the reduction of charges.

7434. Would such a large increase to the National Debt, as the purchase of the railways would involve, affect the national credit?—I should think not, because you would have not merely the property worth the full value of the debt, but there would be a profit to the State of five millions sterling.

7435. Is the railway reform which you propose analogous to that of the Post Office?—Yes it is, to a considerable extent. The Post Office reform has reduced the postage to one-sixth of its former rate. Previous to 1839 the average postage on a letter was 6*d.*, and a fraction more; that was reduced by Sir Rowland Hill's plan to 1*d.*, and the increase in letters has been something about ten-fold since. At that time the gross receipts were 2,400,000*l.*, and the gross receipts at the present time exceed 4,000,000*l.* I do not for a moment suppose that there would be anything like a corresponding increase in the number of passengers by railways as of letters in the post-office, but if it were even three times the number, that would be quite enough, I apprehend, to guard the Treasury against what is called the "loss;" that is to say, the five millions, more or less as it may be, would make up the deficiency occasioned by low fares and charges if we suppose that some necessity exists for the same reduction on the carriage of merchandise as exists for the reduction of fares.

7436. Is the country at the present time prepared for such a change as you propose?—I should say not;

some time must elapse before the principles contained in the Act of 1844 be fully known.

7437. In your opinion should the Government take the initiative, and bring in such a measure?—Not until the country is fully prepared for it, which it certainly is not at the present time. I look forward to the time when it will be discussed in Parliament, and brought fully before the country; when the leading statesmen of this country will have the opportunity of fully expressing their opinion, so that by these means and by means of the press, the project will be fully known, and the Act of 1844, and the country be able to appreciate the benefits of carrying it out.

7438. That is the way in which you think that the change in the public mind should be brought about? That in my opinion is the way in which it should be brought about, gradually by the dissemination of opinion and by the discussion which it would bring on in the House of Commons. By that means the public at large would be fully conversant with the facts of the case and with the details; the measure would be fully canvassed in all its bearings, and it would then be open either to make some arrangement with the companies, if that should be considered desirable, without producing the organic change which was shadowed forth by the Act of 1844, or, if it was found desirable, the Act could be fully carried out.

7439. Do you see any indications of the change which you desire in the public mind now?—I think so. Within the last year public attention has been directed to the subject, and it has been canvassed to a considerable extent. But public opinion is not sufficiently matured to permit of action being taken on it. We find in this country a movement made through the different towns in matters which were considered as belonging entirely to companies, by which the municipal bodies are taking them into their own hands. We find, for instance in Manchester, that as to gas companies they are putting them aside entirely, and that they are taking the matter into their own hands. They see that what is called competition between different gas companies is all hollow and insincere, and that it is necessary that the public should take such matters into their own hands. In the same way I think it is exceedingly likely that public opinion before very long will be matured with regard to railway matters, and it will be understood that railways are a great national institution, and that so long as they remain the property of the companies the monopoly, under whatever name it is, must continue. It is not at all necessary that the Government should take the management of the railways into their own hands, but by leasing them out to companies they could secure to the country such terms, and place the companies under such conditions as would secure to the country the full benefits of its railways.

7440. (*Mr. Ayrton.*) Are the Commissioners to understand you to say that you propose to abide by the Act of 1844, or that you propose to take the railways from the Companies upon some new principle?—I think that it would not be practicable to carry out the Act of 1844. The Act gives compulsory powers, but I do not think it possible to carry them into execution; to deal with the four or five hundred millions of railway property upon the compulsory principle is, I think, entirely out of the question.

7441. Upon your principle, then, do you propose any new scheme for purchasing the railways quite apart from that Act?—Not exactly a new scheme. I would go, so far as principle is concerned, upon the principle of that Act, but still I would make it an entirely voluntary agreement between the Government and the companies.

7442. For what reason do you suggest or suppose that the companies would sell their undertakings at a less price than the shareholders can now individually sell their shares for in the market?—I do not suppose so; I should think that they would require a bonus of 15 or 20 per cent., and the Government would make the best bargain it could with them. No man would sell his shares for less, and I think that the

Government could not procure them unless they would give a fair bonus.

7443. Your view is, that by voluntary arrangements between a railway company and the Government the company would sell its undertaking for its present value in the market, some bonus being given to it to do so?—Yes, with some 15 or 20 per cent. bonus, as the case might be, in the same way as all sales of the kind take place.

7444. When the Government has given this bonus, what do you propose to do with regard to the annual interest which would have to be paid by the public on the purchase money of the railway; how is that to be paid by the public; is it to be paid out of the general taxation?—It should be paid out of the general taxation. My idea is this, that all the railway property should be made the property of the State, and that they would lease it out to companies. There are different ways of managing it when once the State has acquired it, but following this plan of leasing the railways out to companies you make the terms first with reference to what the public require. You say to the company, You must carry the public on such and such terms; you must carry goods at such a rate, and you must carry parcels and whatever may be necessary, at a fixed tariff, and then you would lease it out to the company.

7445. But is the lessee to pay to the Government a rent for the railway equal to the interest which the Government would have to pay for the purchase money?—Yes, that is a matter of course.

7446. If the Government paid the bonus, the interest would be about equal, would it not, to the dividends that the shareholders now receive?—That is so.*

7447. The lease would be practically to pay to the Government a sum equal to the dividend that the shareholders now receive, and to carry at certain rates prescribed by the Government?—Yes.

7448. If they could get any one to take the railway on such terms?—Yes, if they could get any one to take it.

7449. If they could not get any one to take the railway when they had made the purchase what would happen then?—They could put it into a commission.

7450. Then they would manage it themselves?—No, they would not manage it themselves, but by a commission.

7451. Through an officer of the Crown?—No, not through an officer of the Crown. I do not think it would be desirable for the Crown to have anything whatever to do with it. But supposing that they could not succeed in letting the railway to a company at those rates, so as to secure the full benefit to the company, and supposing that it was necessary to put it into a commission, I should think that the commission should be nominated by the Crown, and be approved of by Parliament.

7452. Then you would establish a statutory commission directly responsible to Parliament?—Yes; responsible directly to Parliament, and at the head of that commission a man in the social position of our cabinet minister, and in the same way responsible to Parliament for the management of it.

7453. You would have in that case a body in the country not responsible to the Crown, but responsible directly to Parliament?—Yes, responsible directly to Parliament; the feeling of this country is opposed to the increase of Government patronage under these circumstances; if the railways could not be let out advantageously to companies it might be desirable to place them in the charge of a commission charged merely with executive powers, and Government say that they will have nothing whatever to do with the management of railways.

7454. It appears from the accounts of all the railways that with the existing charges and the existing system they pay their charges, and they pay the rent which you have just mentioned; how then do you

* See the first question in Mr. Galt's examination on the 14th November, No. 8413.

W. Galt, Esq.
 7 Nov. 1865.

make out that it only costs the railway companies one-fourth or one-fifth of the sum that you have mentioned to conduct their traffic, when it appears by the published accounts that the working of the traffic costs the railway companies the whole sum that they now charge?—No, they pay their dividends.

7455. You have stated, as I understand you, that the lease is to be on the condition of the rent being sufficient to pay the dividends?—It would not pay the dividends that they receive now.

7456. It would pay a sum equal to the dividends?—Yes.

7457. That being one of the charges of the railway, how then do you make out that it costs the companies the small sum which you have mentioned, when in point of fact the whole sum which they now receive at the existing rates only pays their working expenses, and pays the exact sum which you propose to reserve on the lease?—It must be remembered that the change to consols from railway stock increases the value of the railway property in the proportion of $3\frac{1}{2}$ to 5.

7458. What I understood you to say, was, that you had investigated the expenses of managing railways, and that you had discovered that a person could be conveyed (as is shown by the accounts) 100 miles first-class for 6*d.* I want to know how you discovered that, when it appears from the published accounts that the income of the railway companies at the existing rates only pays their working expenses, and pays the rent which you propose to reserve on lease?—Because the railway companies charge such rates that we find that they do not carry on the average more than 70 persons by each train, and consequently if they would carry treble the number of persons, there would be no more expense incurred in carrying 200 persons than in carrying 70 or 80.

7459. Your meaning is this, is it not, that it would be so, if their traffic could be made three or four or so many times greater than it is at present, without increasing their expenses?—Yes, without increasing their expenses.

7460. On that hypothesis, therefore, the charge is as you have stated?—That is so.

7461. Your statement was that in the existing state of things you had discovered that this was the cost?—What I meant to convey was this, that passengers could be conveyed at the rate I have stated, if a sufficient number were induced to travel, not that they actually were conveyed 100 miles for 6*d.* each.

7462. If I recollect rightly, your statement was, that you had examined the expenses, so that you had ascertained that that was the rate which it cost the companies to convey passengers?—No; my proposition was this, that they could be conveyed at that rate assuming that the trains were full.

7463. You mean this, do you not, that if full trains could be run and kept full all the way along the line, then that would be the expense?—Yes; they could be conveyed at that rate, but then I do not at all assume that the trains would be full, I do not at all assume that the trains would be more than a quarter full.

7464. Is your rate of 6*d.* upon the assumption that the trains would be a quarter full or quite full?—No; my assumption of 6*d.* for 100 miles for first-class passengers is merely showing what the cost is for which they could be carried.

7465. Under certain conditions?—Yes, under certain conditions.

7466. It is only an hypothesis?—Yes, it is only an hypothesis.

7467. And not likely to exist?—Not at all likely to exist.

7468. Then it was merely an abstraction?—Entirely so; except in the case of excursion trains. When the trains are full, then that state of things would exist when they carry their full number; but, of course, that does not at all apply, or would not apply, to the ordinary traffic trains, when there would not be more than one-quarter or one-fifth of that number.

7469. Upon what principle have you supposed that

the traffic on our railways generally in England could double or treble itself in the course of any given time, apart from the ordinary views that we have of the increase of commerce and business from the reduction of prices?—The only reason that we can have to think so is, that when the railways adopt low fares the public rush in.

7470. Is not that the result merely of there being a sudden and exceptional vacuum into which they rush?—No doubt there is a good deal in that, and these cases are only exceptional, and are not such as you can legislate on, they afford no clear and definite data; it is only by having a satisfactory trial that you can really form a definite opinion of the result of low fares.

7471. Looking at the basis of railway income for merchandise do you think that there is any prospect of the conveyance of the great staples of the country, which make up that income, doubling or trebling in any very short period?—I doubt that very much, and therefore my remarks apply only to the passenger traffic. I should say that with regard to the carriage of merchandise there would be no occasion to make any reduction unless it could be shown that an increase of traffic would follow, and a merchant says, "I pay so much for iron from London to Liverpool, I send so much, I pay a certain rate, and I require a certain reduction;" if he admits, however, that the reduction he desires will not increase the traffic no reduction in my opinion should be made.

7472. For example, with regard to rates upon raw cotton and manufactured goods, do you think that a reduction would affect the quantity of raw cotton and manufactured goods conveyed between Manchester and Liverpool to any appreciable extent?—That I have no knowledge of. I do not propose to enter on that department of railway business. The only principle I should lay down is this, that unless it is shown to the satisfaction of the Commissioners that an increase in traffic would follow a reduction in charge no necessity for a reduction in the tariff exists.

7473. You do not, therefore, proceed upon any scheme of an absolute reduction of rates as regards merchandise, but that each case must be dealt with as it arises?—Yes, each individual case must be dealt with as necessity arises; for instance, in one case you must say, there is a necessity in this case that that rate should be one half of what it is, and in another case you should say, I do not see any cause for reduction.

7474. That is just as the railway companies are now dealing with the matter. If they think that they can increase the traffic in any particular commodity by cheapening the transit, and improving their receipts, they do so, do they not?—Yes. The only difference would be this, that the commission would naturally regard the public good; they would not go so close as the railway company would, and look merely to the turn of a little profit. The commission would act in a liberal spirit, and say, It is most desirable that the rates should be lowered; and, although there might be a loss for some time, yet still if on the whole they thought it desirable, they would make the reduction.

7475. Still, the project depending upon a positive reduction of rates applicable only to passengers, we are not dealing with the 36,000,000*l.* which you propose, but with the 15,000,000*l.*?—Yes, that is all I deal with positively; and, it is obvious that if you make but a small reduction in the freightage, there would be a large amount of profit, so as to ensure the public against any loss by the passenger traffic.

7476. Still, the actual and positive proposal is limited to the 15,000,000*l.* of the passenger traffic?—Yes; I only undertake to deal with that. I am told, though I cannot speak from personal knowledge, that a reduction in the rates for goods would be a great benefit to the country; but that is a subject I cannot enter into beyond the article of coal, which I consider of great consequence.

7477. Do you think that the requirements of the

country are such, that the ordinary intercourse of the public, apart from excursion traffic, renders it necessary that there should be this stimulus given to everything?—I think it desirable that everything, not merely travelling but everything in the country, should be as cheap as possible.

7478. Do you see any necessity for it? Do you know of any class of the community which are seriously inconvenienced by their inability to travel at the present time?—I think every class is inconvenienced; for instance, the persons travelling from Ireland complain of the exceedingly heavy charge of coming from Dublin and back again. They pay five guineas for a return ticket, and they say, "We have constant occasion to come over to London on business, but we are over and over again prevented from coming on account of the high charges."

7479. Have you examined the question of the movement of passengers of this country as compared with their movement in other countries relatively to rates?—Our rates are far higher than those in any other country.

7480. Have you found, comparing the population and the number of passengers, that the movement of the people in this country is less than that of the people of other countries?—I have not entered into that part of the question.

7481. Your scheme proceeds entirely upon the assumption that the passenger traffic would increase in extent, so as to make good the loss that would otherwise arise from the reduction of the rates?—Yes, by the profit that would arise from the purchase of the railways, and their consolidation under one management.

7482. (*Capt. Galton.*) You stated that you would charge a uniform tariff; did you mean a uniform rate per mile?—Yes, a uniform rate per mile for each class.

7483. As applicable to passengers or to goods?—To passengers only.

7484. You would make no difference in the cases where there was steamboat competition carrying passengers?—No; I should make a uniform rate per mile over the whole country.

7485. If you carried at a low rate per mile, would you have any necessity for excursion trains?—I should have excursion trains.

7486. Why?—Because they carry the excursion traffic still lower than the ordinary traffic.

7487. Then you think that the principle of excursion trains is a good one?—I think it is. I think for large towns, say for such a place as London, it is a very great matter to allow the poor population an opportunity of going to the country.

7488. But you would carry your ordinary third or fourth class passengers at a farthing per mile?—Yes, at a farthing per mile.

7489. And you think it necessary to have excursion trains at a lower rate?—Yes, in order to enable a man to bring his family with him. The South-eastern Company carry at less than that now.

7490. You gave the Commission some examples of the small difference to the shareholders which a diminution of the passenger charge made, and you cited the case of the Edinburgh and Glasgow, and the Caledonian; is not it the fact that the portion of the traffic on which the low fare was charged has a very small proportion to the whole passenger and goods traffic that was carried on those railways?—I think that that was so on the Caledonian line; but I do not think it was so on the Edinburgh and Glasgow line.

7491. The distance between Edinburgh and Glasgow is nearly 50 miles, is it not?—Yes.

7492. Is not it the case that there are several towns of fair size on the line between Edinburgh and Glasgow?—Yes, there are.

7493. Between which a very considerable traffic arises?—Yes.

7494. And to those towns the reduction did not

apply?—No; still the great traffic was between the two capitals, Edinburgh and Glasgow.

7495. Have not your researches led you to see that the amount of traffic between two places diminishes very rapidly in proportion to the distance between the two places?—Yes.

7496. When two places are far apart the number of people that travel is very much smaller than between places six, eight, and ten miles apart?—Yes, no doubt. Those cases which I gave I do not put forward as a complete proof of the success of low fares. I merely put them in for what they are worth.

7497. (*Mr. Lowe.*) With regard to the governing body of those railways, who is to appoint it?—I should think that in the first instance it would be desirable to lease the railways out to companies, whatever Government or Parliament may do at a future time.

7498. Then you have changed your opinion with regard to that, because I understood you to say that a body was to govern them with the rank of a Cabinet minister?—In the event of the lines not being leased out to the companies.

7499. Do you contemplate that event as possible?—I only contemplate it in the case where there should be no lessees found to take the railways on terms satisfactory to the public.

7500. Who is to manage this letting of the lines?—The Government.

7501. What department of the Government?—The Board of Trade I should think would be the best.

7502. On what conditions? Is it to be left to the Board of Trade to fix the conditions?—No, the conditions would be fixed by the Legislature. The tariff for passengers and merchandise would be uniform throughout the kingdom, whoever should manage the railways.

7503. And then you would put the railways up to auction, or would you ascertain their value by tender?—It would be a very good way to do it by tender, and to take the lowest tender; but that is all matter of detail.

7504. And if the terms were such that no company could be found to take the railways upon those terms, then the Government is to work them themselves?—You can scarcely conceive it possible that you would not get a company to do it. Companies are always ready to do business.

7505. If the scale were fixed at such a limit that it did not pay the company's working expenses, that would be so, would it not?—It is impossible to suppose a case of that sort; for instance, if you take the London and North-western, one cannot suppose that you could reduce the scale so as not to pay its working expenses.

7506. Not if you reduced it to one-third?—No.

7507. (*Mr. Ayrton.*) Was not it your proposal that it should be let on these conditions, namely, that the rates should be one-third of the existing rates for passengers, and that the rent should be equal to the interest upon the purchase money?—Yes.

7508. And that if no company could be found to take it upon those conditions, then somebody else was to take it?—Yes.

7509. (*Mr. Lowe.*) A commission?—Yes; but it might be done in another way. If a railway, or a group of railways, was let out on a contract to parties, and it was found that the company would not give as much as would indemnify the Government, then the Government in such case might pay something to make up the loss, if such a course was thought desirable.

7510. They should pay the company for working the railway?—Yes; they should pay whatever was necessary to make up the loss.

7511. Out of the general revenue of the kingdom?—Yes; out of the general revenue. My view is this, that supposing a universal reduction of charges on our railways were made to the amount of two-thirds, there would be 24,000,000*l.* saved to the nation. From

W. Gall, Esq.

7 Nov. 1865.

W. Galt, Esq.
—
7 Nov. 1865.

that should be deducted what the Government would pay to the companies, and the difference would be the nett gain to the nation.

7512. That would be a subsidy out of the general revenue for the benefit of those who travel and who send goods by railway?—Yes, for all who derive benefit in any way from railways.

7513. And those who travel most and send goods most would gain most by that subsidy?—Yes; they would be the best contributors to the revenue.

7514. Which travel most and send goods most, the rich or the poor?—I think the poor would travel most.

7515. More than the rich?—Yes, because you find that the receipts from the third-class travellers are greater than from the first-class.

7516. Is that because the individual poor man travels more than the individual rich man, or because the poor are more numerous?—Because the poor are more numerous.

7517. Then the individual rich man travels more than the individual poor man?—Yes; but if you reduced the individual poor man from a penny a mile to a farthing a mile, you would find that there would be quite a different state of things.

7518. By your proposition the individual rich man would be the person who would gain the most?—No, because the tariff is not reduced to the rich man in the same proportion as to the poor man. At the present time if you travel by express train you pay $2\frac{1}{2}d.$ a mile, and if you travelled by the express train which I propose, you would pay $2d.$ a mile; so that the rich man does not gain much, whilst the poor man's fare is reduced from $1d.$ to $\frac{1}{4}d.$

7519. Is $2\frac{1}{2}d.$ a mile the usual fare by express train in this country?—I think it is.

7520. Is not it $3d.$?—No, only $2\frac{1}{2}d.$

7521. How do you propose to provide for the permanent way under this system?—The company that takes the railway would be bound to keep it up.

7522. And how do you propose to enforce that obligation?—The same as any other obligation is enforced at law; the company must give proper securities for keeping it up.

7523. It would not, of course, be the interest of the company to keep it up unless there was some special provision with regard to it?—It would not be their interest, but they would be bound by the security in the same way as any one is bound by a contract to fulfil a particular obligation.

7524. You think that in that way the thing would be kept up?—It would be the duty of the Government to take care that it was kept up, by requiring certain conditions, and getting proper securities, and dealing with solvent men.

7525. Although it would be the interest of the company not to fulfil that obligation you think that the Government would be able to get it performed?—I do not see why they should not. It would be the interest of the company, no doubt, to do as little as they could.

7526. Do you think that the Government would obviate that?—Yes, by taking proper securities.

7527. Supposing that improvements were required upon a railway; take, for instance, the case of the Great Western building a new station at Reading, which is to cost 40,000*l.*, who is to do that under your system?—The State should do it.

7528. What principle would you lay down for the guidance of the State in doing it?—That anything that was done extra, any permanent improvement, should be for the benefit of the public. It would be necessary that the company, who would lease the railways, should keep them in perfect and proper condition, and give them up in the same condition as they got them, but in case any improvement was required the State should pay for it.

7529. You consider that these railway companies, tenants of the Government, would expect to make something out of the railways?—Yes; of course they

would not take them unless they thought they would make a profit.

7530. Do you think that politics would have nothing to do with the letting of those lines?—Not if it is done by open contract.

7531. Would you bind the Government to take the highest bid in every case?—Yes, where there was proper security given.

7532. You would not look at the character of the persons tendering and their experience?—No; so long as it was a public company that gave proper security for the performance of the work, and they were in every way suitable.

7533. What do you mean by "in every way suitable"?—If they were able to carry out their contract and give proper security.

7534. That would be all that in your opinion would be required?—Yes, that would be all that would be required.

7535. Those railways have a great deal of patronage, have they not?—Yes.

7536. Do you think that you could make the Government the landlord without escaping at all events the suspicion, or probably the reality, of the Government using that patronage for political purposes?—I do not see what patronage they would have if they did not work the lines.

7537. But they would have power over those that did work the lines, would they not?—No; if they were leased out to companies, the company that got a lease for 21 years, or whatever time it might be, would be quite independent of the Government.

7538. I thought I understood you to say that the company undertook to fulfil definite obligations and gave security for their performance?—The company would undertake to carry at certain terms.

7539. And to maintain the permanent way?—Yes, to maintain the permanent way, and to pay the rent.

7540. Do not you think that those conditions would give the Government great power over the Company?—I do not see what the power is any more than if a tenant takes a lease from his landlord; he ought to be pretty independent of his landlord.

7541. But is he so?—He ought to be so.

7542. That is not the question that we have to deal with, the question is whether he is so?—I think he is.

7543. Are the tenantry of this country generally independent of their landlords?—Not tenants at will, but a tenant at will and a tenant having a lease are very different.

7544. Though the lease may contain very many burdensome covenants?—That is a different matter.

7545. That is the case here, is it not?—No, the covenant would be simply this, that the Company would engage to give up the line in the same condition as that in which they took it, and that they would engage to carry passengers and goods at a certain fixed tariff, and to pay a certain rent.

7546. Do not you think that a company which had the power of sending several members to Parliament would be dealt with more leniently by the Government on whose side it returned those members than a company which used its power the other way?—If you give no option, if you make it binding that you shall let the contract to whoever gives the most money, there is no option left in the power of the Government.

7547. When you have once got the company, supposing the company is letting the permanent way go out of repair, would not it be dealt with much more leniently by the Government if it supported the Government for the time being, than if it went against it?—If the Government break faith with the public and acts dishonestly, you can only go to Parliament for redress; you cannot provide against those things.

7548. You cannot provide against the Government using its powers for political purposes?—If the Government chooses to act dishonestly, then all the power of

Parliament would be employed to remedy that state of things.

7549. Do not you think that a very good reason for not adopting the system which you propose?—I do not think so.

7550. Do you think that the Government never do use their power improperly?—I would take such precautions that the Government should have no power in the matter.

7551. What precaution would you take?—The precaution in the first place that you should let the railway to whoever gives the most for it.

7552. I am supposing the lease already made, and the company working it under lease, what precautions would you take to prevent the Government being loose to one company and rigid to another, according to political influence?—I do not know what precautions you can take, except the precautions that exist at the present time against the Government doing wrong; you have an appeal to Parliament if they act wrongly, and that is the only remedy you can look to.

7553. If the Government happens to have a majority in Parliament (which I suppose it would have from the fact of its being the Government) then I suppose the appeal would not come to much?—It would come to very little, I suppose.

7554. (*Mr. Ayrton.*) Will you extend your answer with regard to the mode of dealing with the permanent way to the rolling stock, would the Government buy the rolling stock and lease the rolling stock, and have all the factories and the machinery under their control?—I would say that the Government should take everything as it is, and have a proper valuation put upon the rolling stock, a valuation agreed on between the two parties, and at the end of the lease the same sort of valuation should be taken, so as to have any difference made up.

7555. And take it back again at a valuation at the end of the lease?—Yes.

7556. What would you think would be a fair percentage to allow to the lessees for the risk and the responsibility that they would incur in agreeing to take a railway at a certain fixed rent for a given number of years?—That I cannot say anything about; I would merely put it up to public competition, whoever would give the best terms, let them have it.

7557. As you would often put very large sections of a railway or whole railways up to competition, would it not be so great an undertaking that practically there would be no competition, just as we see when Government want to borrow 20,000,000*l.*, that there is really no competition?—Then the question would be, whether it should not be put up in smaller sections.

7558. Then if it were put up in smaller sections would there not be a multiplication of the expenses of management, so that that great item of saving would not accrue?—*Mr. Watkin*, who is a very eminent man in railway management, suggested the idea that if England were divided into four sections, that might be made very manageable, and the scheme would work very well.

7559. Still the responsibility of one section would be 8,000,000*l.* a year?—Yes.

7560. That would be a very heavy transaction, would it not?—Yes, no doubt.

7561. Do you think that there would be much competition in such a transaction as that?—There is competition in everything.

7562. What do you think would be a fair percentage upon the 8,000,000*l.*, would you say five, six, or ten per cent. to allow the lessee for the responsibility that he would undertake in engaging to pay 8,000,000*l.* to the government yearly, and carry on the traffic?—That I cannot say.

7563. Would you allow him five per cent.?—I think he ought to have five per cent. profit.

7564. Supposing he were allowed five per cent., the allowance to the lessees on the whole 33,000,000*l.* would come to 1,500,000*l.* would it not?—Yes.

7565. Would not that be exactly the sum which you

say is now spent upon management?—I have not stated any sum for management, nor can I enter into those details. I should take the general principle that the railways should be let out to companies upon the best terms that could be procured, and would fix the tariff; but as to those minute details I can not at a moment's notice speak.

7566. Upon principle do you not think that the saving in the management would be absorbed in indemnifying the lessee for the risk that he would run in engaging to pay the Government absolutely a very large rent, and in engaging to carry on the traffic at fixed maximum rates of a very low character?—That must be the look-out of the lessee before he would take it.

7567. Would not that be the practical result of the transaction; do not you think that if he undertook to incur the risk that you would impose upon him, he would expect a rebate which would practically absorb all the saving in the management?—No; I think that there is such competition in England for works of that sort, that they would be willing to take it on terms that would not absorb the saving that I anticipate by carrying out that plan.

7568. (*Chairman.*) I understand you to say that although you think it desirable that the Government should purchase all the railways, your view is that public opinion is not sufficiently ripe on the subject for you to recommend such a transaction being carried out at present?—That is my opinion.

7569. And you think that the plan ought to be tried experimentally on particular lines?—I think that the experiment ought to be tried on particular lines.

7570. Do you mean to say that the Government ought to purchase a few lines such as those you have specified between Liverpool and Manchester?—No.

7571. Did I rightly understand you to say that if the Government were to guarantee the companies against any loss it would lead to extravagance, and there would be no interest in trying the experiment fairly?—I was speaking then of a permanent guarantee, I was not referring to a guarantee for merely a year.

7572. But would not a guarantee under all circumstances take away from the directors all motive to exercise economy, or to conduct the experiment fairly?—No doubt a guarantee for a long time would do so, but I propose it merely for a short time, say a year, in order to try the experiment, and when the directors would, as I have no doubt they would, enter fairly into the question for a year and make a fair experiment, the public can arrive at a knowledge of the extent to which low fares can be carried.

7573. You think that it ought to be tried on a few lines such as those you have named, and that the Government ought to guarantee the directors against any loss for a year or two years?—For a year at all events.

7574. Do not you think that a guarantee even for a year would prevent their giving the experiment a fair trial?—I think not. If the directors of any company would pledge themselves to give it a fair trial for a year, I have no doubt they would fairly carry out what they undertook to do.

7575. Are not all the lines in this country so intermixed with one another that it would be scarcely possible to find any lines upon which the experiment could be fairly tried?—There are many lines upon which it might be tried. Take for instance the London and Blackwall, or the Metropolitan line from the City to Paddington, or the North London, these do not interfere with other railways; or take the most of the Eastern Counties lines, or the two lines between Liverpool and Manchester, and many others that might be named; such lines as the Commissioners would, after due care and deliberation, select, not merely in the populous districts but also in the thinly populated districts, so that they may know what the effect of the low fares fairly tried throughout the country would be.

7576. Supposing the whole of the lines in the country

W. Galt, Esq.

7 Nov. 1865.

W. Galt, Esq.

7 Nov. 1865.

were purchased by the Government, it is your opinion, is it not, that a uniform scale of fares should be adopted throughout the country?—That is my opinion.

7577. Are not there a great number of lines through comparatively thinly-peopled districts in which it would be quite impossible to expect that the trains could ever carry one-tenth or even one-twentieth part of the passengers that a train is physically capable of carrying?—I do not expect that in ordinary cases the trains would be one-quarter filled; and in those lines that your Grace is speaking of, it must be remembered that the Government would buy them proportionately cheap where there is a small traffic. Take for instance the Eastern Counties, you would buy the Eastern Counties at less than half the price for the same distance that you would buy the Great Northern. Therefore the Government do not run a risk in that way, because just in proportion to the value of the line would be the amount that they would pay. In a densely-populated district, where the traffic is great, they would pay more than if it were in a sparsely-populated district where there is a very small population, and where the shares are exceedingly low there the Government would buy the line in the same proportion.

7578. Are there not lines in thinly-peopled districts which cannot be bought very low, and which are paying very tolerable dividends to their shareholders at present?—Whatever they pay to their shareholders at present, the increase in traffic would be in proportion if you reduced the fares.

7579. Although it may be quite possible in very thickly-peopled districts to carry passengers at a very low rate, do you think it equally possible in thinly-peopled districts to carry at the very low fare which you have named?—I do not think that the increase would be so great, but, as I said before, it is to be remembered that you would purchase low in the same proportion. For instance, on a line that would carry two the proportion would be doubled; it would carry four, and on another that would carry eight per mile it would carry sixteen, so that the proportion would be kept up; you would buy at a proportionate rate, and therefore there ought not to be any very great difference with regard to the loss.

7580. Do you know enough of the price of the different lines to say that the Government would be able to purchase exactly in proportion to the probable traffic on the line?—No. I know, in a general point of view, the value of the shares in the lines. For instance, if you look at the Great Eastern, that goes through a thinly-populated district, and the shares are not one half the value of what they cost; their 100*l.* shares are less than 50*l.*; but if you take on the other hand the Great Northern, the shares in that line are above 130*l.*; and in the one case you pay nearly three times as much per mile as in the other.

7581. (*Mr. Leveson Gower.*) In the case of the Blackwall Railway, you have told the Commissioners that there are omnibuses running alongside it; now if the experiment were tried on that railway, what would become of the omnibuses?—It would do them up pretty quickly.

7582. Should you propose any compensation to the owners of the omnibuses?—No, I never heard of such a thing.

7583. With what fairness would you give a bonus to the proprietors in the purchase of their shares, whilst in the same act by which you ruin the omni-

bus proprietors you would give them no compensation at all?—It would be only following the accustomed rule; there was never any compensation given to the coach owners when the railways were established, or to the omnibus proprietors on the line. We must take things exactly as they are.

7584. But would it make no difference whether the cheapness of conveyance is created by money contributed by the public, or whether it arises from individual energy?—In all these cases you must look only at the public good; and I consider that it would be a very great public good in densely-populated districts like the Tower Hamlets, where the population is exceedingly poor, if you could carry them for a penny where now they pay 4*d.*

7585. Supposing the collier trade from Newcastle is destroyed by the greatly cheapened conveyance of coal, do you think that no hardship upon them?—All these things are hardships, but they are hardships which cannot be helped. They must either be endured or the progress of civilization stopped.

7586. Have you ever considered the result of your scheme upon the further extension of railways?—Not to any very great extent.

7587. Do not you think that that is a very important element in the consideration of the subject?—No doubt it is a very important element, but I should like to see this question settled first.

7588. You stated that there were some small railways whose prospects were rendered uncertain in consequence of their having to fight by reason of the establishing of fresh railways. I suppose that if your scheme were adopted those railways would not be made?—If my scheme were adopted, or, I should rather say, if Mr. Gladstone's scheme was adopted, if the Act of 1844 was fully carried out, as a matter of course there would be an end to all private companies.

7589. (*Capt. Galton.*) And to all extensions of railways?—No, not to the extensions of railways.

7590. (*Mr. Leveson Gower.*) Mr. Gladstone's scheme did not comprise any diminution in the charges by railway, did it?—Yes. He stated that he contemplated a reduction to one-third of the average fares, but he said nothing about goods.

7591. (*Mr. Ayrton.*) Under your plan, what would be done with reference to new lines of railway; should they be constructed by the State, or by the lessees, or by new companies?—I think that they should be constructed by new companies and bought by the State. Let any project come before Parliament and receive the assent of Parliament, and let the lines be constructed by private individuals the same as they are now, and be taken at a valuation when they are completed.

7592. You mean that they should be taken by the State whenever they desire to do so?—Yes. I am assuming first that the project must receive the sanction of Parliament; let the railway then be constructed by the parties who have obtained the Act, and then let the State take it at a valuation when the line is completed.

7593. How soon after the line was constructed should the State take it?—As soon as it was opened, or as soon as the value was tested by the amount of traffic on it; that, I think, would be the fairest way—to test the value by the traffic on it, and then to leave to arbitration the price to be paid.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

Wednesday, 8th November 1865.

PRESENT :

THE RIGHT HON. LORD STANLEY, M.P., F.R.S.
THE HON. E. F. LEVESON GOWER, M.P.
SIR ROWLAND HILL, K.C.B., F.R.S.
T. B. HORSFALL, ESQ., M.P.

A. S. AYRTON, ESQ., M.P.
CAPT. DOUGLAS GALTON, R.E., C.B., F.R.S.
E. T. HAMILTON, ESQ., M.P.
WILLIAM POLE, ESQ., F.R.S., *Secretary.*

HIS GRACE THE DUKE OF DEVONSHIRE, K.G., F.R.S., IN THE CHAIR.

W. NEILSON HANCOCK, Esq., LL.D., examined.

7594. (*Chairman.*) You were formerly Professor of Political Economy in the University of Dublin, and Professor of Political Economy and Jurisprudence in Queen's College, Belfast, were you not?—Yes. I was so for five years in one professorship, and for four in the other, but I have ceased to hold either for some time.

7595. Have you recently been engaged in collecting statistics and in making official reports on various questions relating to Ireland?—Yes; I made an inquiry into the general statistics of Ireland with regard to the Supposed Progressive Decline in Irish Prosperity about two years ago, and I have inquired into the taxation of Ireland, and into the arrangements for local government, and recently into the importation of cattle, and into the conduct of the labouring classes, and also into the statistics of crime.

7596. Has your attention been directed to the present state of railways in Ireland?—Yes. I was requested by Right Hon. William Monsell, M.P., who took a very active part in the matter last session, to consider the subject, and to give my opinion on it to the Commissioners. That is the origin of my looking specially into it.

7597. Have you formed any opinion upon any part of the present railway system in Ireland, which you think requires the attention of the Commissioners?—I think that what has attracted my attention most in the present railway system of Ireland is the want of success of Irish railways as commercial speculations, as shown in the table which I hand in (*see Appendix AZ.*) It appears from this table that two of the companies have become actually bankrupt, the Banbridge Extension and the Bagnalstown Railway Companies. And an Act of Parliament was passed last session to prevent the application of the Irish Bankruptcy Act to other railways. In the second place, there are several railways at a standstill; that is to say, their works are stopped at present. I have not detailed information as to them all, but I find two that I may mention, the Athenry and Ennis railway and the West Cork railway. Then there are six railways which do not pay dividends to all their preference shareholders.

7598. Can you name the companies that do not pay dividends to all their preference shareholders?—There are the Belfast and County Down, the Irish North-western, the Limerick and Foynes, the Londonderry and Coleraine, the Londonderry and Enniskillen, and the Newry and Warrenpoint companies. I may mention that the mileage of those that are bankrupt is 33 miles. I have not the names of all those that are standing still, but the mileage of those that are not paying dividends to all their preference shareholders is 263 miles. Then I find that there are ten lines in addition to those six that do not pay dividends on their ordinary shares. There is the Banbridge Junction, which has not paid a dividend for the last year, and only one dividend in the three half-years before that; the Cork and Bandon has not paid for the last three years; the Cork and Kinsale has not paid for the last three years; the Dublin and Meath has not paid the last three years; the Finn Valley has not paid the last three years; the Limerick and Castle Connell, no payment stated the last three years; the Limerick and Ennis, no payment the last three years; the Newry and Armagh no payment the last three years; the Portadown, Dungannon, and Omagh, no payment for the last three years; and the Waterford and Kilkenny, no payment for the last three years.

7599. What is the mileage of those railways?—The mileage of that class that are not paying their

ordinary shareholders is 217 miles, and the mileage of the third and fourth class added together makes 480 miles of railway running trains and paying no dividends to ordinary shareholders. The next class of railways are those that pay dividends less than the rate of interest in the funds; that is, less than trustees' security; less than 3 per cent.

7600. (*Lord Stanley.*) When you say "less than 3 per cent.," do you mean the nominal value in the funds, or their real value?—The interest on the funds at present is 3*l.* 7*s.* 6*d.*, and I take the real rate of interest in the funds; the present rate of interest is 3*l.* 7*s.* 6*d.* at the last quotation. The Waterford and Limerick Railway has paid on an average 18*s.* 4*d.* per cent. per annum in the last three years. The Cork, Blackrock, and Passage has paid on an average 1*l.* 18*s.* 4*d.* per cent. per annum for the last three years. The Waterford and Tramore has paid only 15*s.* per cent. per annum on the same average. The Midland Great Western paid 5 per cent. in December 1862. The dividend fell to 4½ for two half-years. The dividend fell to 4 per cent. in June 1864, and in December 1864 to 2 per cent., and the last dividend was 2½ per cent. So that in the last year the dividends have fallen from paying a very respectable amount to paying 2 and 2½ per cent. I therefore take it as now paying less than the funds, although the average rate for three years is 3*l.* 14*s.* 2*d.*

7601. (*Mr. Horsfall.*) Do you mean at the rate of 2½ per cent. per annum?—Yes. I take those figures from the ordinary Brokers' Share List. I just take the statement in the market as to the rate of dividend. The Great Northern and Western, the last dividend was 2*l.* 5*s.* per cent. per annum, and the average of three years was 2*l.* 15*s.* 10*d.* The Athenry and Tuam pays a dividend of 3 per cent., and has done so for three years. They have leased their line to the Midland Great Western for a term of years, and as long as that term lasts they are secure of that dividend; but it is not necessarily a permanent dividend. The mileage of the lines paying some dividend last year, but less than the rate of interest in the funds, amounts to 441 miles. The sixth class of railways are those which pay above the funds, but pay less than what the shareholders believe to be true commercial interest. The way in which I measure that is this, that if the shares are at par at their existing dividends, the shareholders believe they are getting a fair interest for their money; but if the shares are below par at the dividends they are paying, then the shareholders do not believe that they are getting commercial interest for their money. The lines in that condition are the Dublin and Belfast Junction; their shares were, before 19th October last, 68*l.* per 100*l.* of shares, that is to say, they are 68 per cent., or 32 per cent. below par, of the value of their shares, and they paid 3*l.* 10*s.* per cent. the last dividend, and 3*l.* 13*s.* 4*d.* per cent. on an average of the last three years. The Belfast and Northern Counties paid 3*l.* 10*s.* per cent. the last time, and 3*l.* 16*s.* 8*d.* on an average of three years, and their shares were at 78, or 22 per cent. below par. The Ulster Railway is paying 4*l.* and an average of 4*l.* 13*s.* 4*d.* per cent.; the price of their shares was in October 84 per cent., or 16 per cent. below par. The Dublin, Wicklow, and Wexford is paying 4*l.* per cent., and 4*l.* 3*s.* 4*d.* on an average of three years; their shares were at 7½ the 10*l.* share, or 75 per cent., or 25 per cent. below par. The Dublin and Drogheda is paying 4*l.* 10*s.* per cent., 4*l.* 3*s.* 4*d.* on an average of three years, and their shares were at 82 per cent., or 18 per cent. below par. The Great Southern and Western are paying 4*l.* 10*s.* per cent. and on an average of three years 4*l.* 10*s.* 10*d.*, and their

W.N. Hancock,
Esq., LL.D.
8 Nov. 1865.

price before 19th October was 91 per cent. or 9 per cent. below par. That is the most prosperous and the highest-priced line of that class. The mileage of the lines paying above the funds, but less than commercial interest, comes to 768 miles. There is one railway in Ireland whose shares are very largely above par, and that is the Dublin and Kingstown Railway; they have paid 9 per cent. for the last three years, and their shares were in October at 195½ per cent., or 95l. 10s. above par.

7602. (*Chairman.*) Is that the only railway in Ireland whose shares are at a premium?—Yes.

7603. (*Capt. Galton.*) Does the Dublin and Kingstown line of railway go to Wicklow?—No; it is leased to the Wicklow company, but they are separate companies. The Dublin and Kingstown company have six miles of railway; they have leased it to the Wicklow company on a perpetual lease, and they divide 9 per cent., so that I presume they are earning it.

7604. (*Chairman.*) The shares of the Dublin and Kingstown Railway are in the nature of preference shares—are they not?—I think that it is a perpetual lease.

7605. What are the defects of the present railway system in Ireland, which you think require the attention of the Commissioners?—I think that the first view of the matter is, that the proposition that was stated by the Committee of the House of Lords in 1864 applies strictly to Irish railways. In the House of Lords in 1864 there was a special committee on railways, and they reported that when companies were not able to pay their ordinary shareholders, they were not in a satisfactory position for developing traffic or for working the railway successfully; and I find that that exactly coincides with my view, that if an undertaking is to be worked as a commercial speculation, the foundation of all commercial success is profit, and that where a commercial undertaking is really profitable, the public interests are really safe to a very large extent in the hands of persons who are working for a *bonâ fide* and large profit, but that when a commercial speculation is not successful as a commercial speculation there is not the same safety for the public interests in entrusting public functions to a railway company.

7606. (*Lord Stanley.*) Will you explain to the Commissioners what you mean by “the same safety to the public interests”?—In entrusting public functions to them they are not likely to develop the traffic or to manage their affairs with the same liberality; they are likely not to repair the line adequately; and they are likely to let it run out of repair; and they are likely not to try experiments with the traffic, if that were necessary, not to make useful extensions, not to amalgamate, not to do any of those things which companies might be expected to do, and which they would do if they were making large profits.

7607. You mean that if the speculation turns out a bad one, the Irish directors are not inclined to throw good money after bad?—Precisely; and not only are they not inclined to throw good money after bad, but they are not likely to manage what remains of the bad money prudently.

7608. (*Chairman.*) Can you give us any instances of serious losses to shareholders in railways?—The most recent instance I can think of is the Cork and Youghall Railway, which has been recently bought by the Great Southern and Western Railway Company for 300,000l. It was stated in that case that the sum expended on that line itself had been from 600,000l. to 700,000l. and of course that loss must have fallen to a large extent on the shareholders.

7609. Do you mean that the 600,000l. or 700,000l. was actually expended, or that that is the nominal capital?—That is what is stated to have been the nominal expenditure on that line.

7610. Do you object to the payment of contractors in shares?—I think that one cause of lines not paying well is that really solvent companies are afraid to carry out extensions, and then they are got up by what are called speculative companies, and in those

speculative companies it is very commonly stated that the contractors are largely paid in shares. I think that the payment of the contractor in shares is an objectionable thing in a public undertaking, because it is mixing two things together. The contractor has two divided interests. As a shareholder he ought to check the contractor, and as a contractor he ought to get the largest sum from the shareholders, himself and others. I do not think it is beneficial ultimately to the contractors; because if the rate of interest rises in the market, and if they have taken the lines as a matter of speculation, and are not regularly paid their money, they very often get embarrassed, so that I do not think it is beneficial to the contractors. I think that in the case of a public undertaking, when it is to be carried out by commercial men, it should be undertaken by real shareholders who are expending the money and checking the expenditure.

7611. Do you object also to the payment of landowners in shares?—I think that it puts the landowner in the false position of a man promoting a line that is not likely to pay. I think they ought to do what some proprietors do, and what is done in the case of all public roads, and that is, either not claim for the whole value of their land, or not claim for it at all: but if they do claim for it, the mixing up of the claim with the shares leads to lines being promoted which will not be likely to pay, and if they do not pay in the long run then I think that an amount of discredit frequently attaches to the parties concerned; for instance, in those bankrupt lines there are some very influential parties who appear as connected with them.

7612. (*Lord Stanley.*) What is your practical objection to landowners taking shares,—is it that they are likely to sell out, and therefore to throw a quantity of shares upon the market, and so to depreciate the capital?—I do not object to any landowner holding shares.

7613. But you do object to a man being paid for his land in shares?—I think that his being paid for his land in shares induces proprietors to promote lines that will not really pay in the long run. I think that parties are induced to take shares by hearing that the landowners are shareholders in the line, and thereby a loss happens to innocent parties; the landlord who takes shares in a railway does not really get paid in the long run, and he incurs the discredit of having induced other parties to take shares who would not otherwise have done so.

7614. You mean that people are induced to take shares by hearing that Mr. So-and-so is a proprietor in the line, and they think that he is not likely to go into anything that would not succeed, and they are not aware that the benefit to him is not in the direct return from the line, but through his land being opened up?—Yes; and that that leads to a loss of credit afterwards, that the landowners do not, I believe, think of when they agree to take shares for their land.

7615. Still, is it not a great help to a small line that may have a difficulty in raising its capital if the landowner consents to receive payment for his land in shares?—I think it should be taken into consideration that if there is a difficulty in raising the capital, the line is likely not to pay.

7616. (*Capt. Galton.*) Do you mean that no line should be commenced unless the money for the working of it is *bonâ fide* subscribed?—No line should be commenced on the commercial principle. I will state afterwards how I think those lines might be made; but I mean that on the commercial principle no line should be commenced by a company that started as a commercial company, unless it is a *bonâ fide* commercial company, with capital subscribed, and unless it pays its way.

7617. (*Chairman.*) You object to what you call “speculative lines”?—Yes; what I mean by speculative lines, are lines which may generally be stated in the form described in Lord Stanley’s words “lines that find a difficulty in raising their capital.” If a

line of railway is likely to be a profitable speculation it should have no difficulty in raising its capital. The fact that it has a difficulty in raising its capital shows that it is not likely to pay in the long run. But I think it very injurious, and I think that the list that I have given in shows that it is very injurious, to have those lines made on the commercial principle, when after a few years it turns out that they do not pay. Then there is very serious loss to the shareholders, who are induced by the great support that the line gets to take shares in it, and eventually find that they have lost their money.

7618. (*Lord Stanley.*) Do not you think that it is every man's business to look into the nature of his speculation before he embarks his capital in it?—Certainly.

7619. Do you think that a man has any right to complain if he puts his money into a losing speculation merely because other persons have also lost money in it, who are men of larger capital than himself?—He would be dissatisfied, nevertheless.

7620. (*Mr. Ayrton.*) Your view is that when a company is started on the commercial principle, the whole of the capital ought to be raised in cash?—No; I merely mean that it should be a sound commercial speculation, and that parties should not join in it for other objects than promoting the company. They may borrow, if they can borrow at 4 per cent. like solvent companies, upon debentures on a certain portion of their capital. There is no objection to that.

7621. Is it your view that as a test of a company being carried on upon the commercial principle, all the capital ought to be raised in cash, that is to say, brought to credit in cash?—Yes.

7622. You think that the capital ought not to be an aggregate of values suggested by various interests, but that the money ought to be brought in as cash for the shares, and then spent in the undertaking?—Yes, if it is to be conducted on the commercial principle.

7623. (*Chairman.*) To what causes do you attribute the state of things which you have pointed out with regard to the Irish railways?—I think that they have been too eager to make lines, seeing lines paying remarkably well in England. Some of the early lines in Ireland paid remarkably high dividends. The Kingstown line was the first line that was made in Ireland, and it paid very high dividends; and some of the English lines were realizing very large dividends indeed, and people were naturally led to make railways in Ireland, without calculating the exact extent to which the traffic would work out, and so it has turned out that the Irish lines have not paid so well as the best of the English lines. For instance, the London and North-western Railway, perhaps the largest in England, is paying 7 per cent. at this moment. After all its amalgamations, extensions, and everything, it is paying by the last accounts 7 per cent.; but amongst the Irish extensions a great number of lines were made that could not really be profitably made upon the commercial principle, and ought not to be made upon that principle.

7624. (*Lord Stanley.*) I understand your objection is that in Ireland a certain number of lines have been made which never ought to have been made?—Yes; on the commercial principle they ought never to have been made.

7625. And which never had a reasonable prospect of yielding a return?—They have never had a reasonable prospect of giving a dividend of 5 per cent. or paying the rate of interest that the directors had to pay for borrowed money, but they might have paid, if the land had been given by the proprietor and money advanced by Government at 3½ per cent.

7626. (*Chairman.*) Out of what fund are the county roads made and repaired in Ireland?—The county roads are made in Ireland out of the local taxation; the turnpikes have been abolished and the whole of the county roads are repaired out of the local taxation.

7627. Can the defects in the railway system in

Ireland, which you have pointed out, be remedied by competition?—I think that they cannot, for this reason, that in Ireland the traffic is not large enough to bear competition. The very fact that the traffic is of so small an amount shows that it will not bear the extent to which competition is carried in England.

7628. Can you give any instances where in your opinion competition has been injurious to Ireland?—I may mention that there was a line made from Portadown to Omagh; that line does not pay itself a profit, and yet it diminished the profit of three other lines. It diminished the profit of the Londonderry and Coleraine line, of the Northern Counties line, and also of the Dundalk and Enniskillen.

7629. (*Mr. Hamilton.*) But have not the public gained anything by the competition in the reduction of rates?—No doubt they may have done so.

7630. (*Chairman.*) Have you formed any opinion as to whether there can be any adequate checks upon railway companies where there is no competition?—I think that the great check on all enterprises as commercial enterprises is competition; and that in the absence of competition there is not the same source of security.

7631. Are we to understand you to state that the best check upon railway companies is competition, and that you think it applies to railway companies as well as to all other undertakings?—So far as you trust to the commercial principle of management so far the safest check is competition; indeed the only complete check is competition.

7632. Do you think that the present defects of railways in Ireland can be remedied by amalgamation?—I think that amalgamations in Ireland have gone on very slowly and will go on very slowly.

7633. Can you state why amalgamations go on so slowly in Ireland?—I believe that the fact that even the best lines are making small profits is a very great reason why amalgamations go on very slowly. If a line is making a return above commercial interest, the shareholders will tolerate the directors entering into new speculations and buying up lines, and they can give very liberal terms in buying them up; but if a company is not making full commercial interest then the directors are very slow to enter into any speculation in that direction.

7634. (*Lord Stanley.*) When one speaks about amalgamations, if it were a question of fusing all the Irish lines into one, or two, or three great companies, there are some of those small bankrupt or nearly bankrupt lines which nobody would take at a gift; those lines that are paying no dividends, and those lines which barely cover their working expenses, would not be received into any system of amalgamation, because they would represent no commercial value whatever?—The traffic may represent a commercial value, although the line pays no dividend to the shareholders, because it may pay interest on its preference shares, or interest on its debts. Whether a line is valuable or not, it depends upon whether the traffic will pay for keeping the line in order and pay the working expenses, and if it does more than that it will be profitable for a company to buy it.

7635. (*Chairman.*) Do you see any danger attending further amalgamations without the check of competition?—Yes, a commercial monopoly would be created, and there would be no satisfactory check on fares for passengers or rates for goods. The towns would be very jealous of having their trade so largely dependent on a board composed often of merchants in another town.

7636. Do you think that the Irish lines could, with advantage, be amalgamated with the English companies?—I think that the Irish local traffic is so much greater than the through traffic that there would be very great jealousy if any large portion of the Irish lines were amalgamated with English companies.

7637. What effect is the present system likely to

W.N. Hancock,
Esq., LL.D.

8 Nov. 1865.

W.N. Hancock,
Esq., LL.D.

8 Nov. 1865.

have on the extensions of railways in Ireland?—I believe that in the present state of the money market and the state in which it is likely to continue, it will put a stop to even legitimate extensions. I think there may be speculative extensions made for motives of competition with different lines, or from other objects which would be, in my opinion, injurious.

7638. You think that there are extensions which are legitimately required at present in Ireland?—I do not know whether any case might be made out of legitimate extension on the commercial principle, but owing to the discredit with which new lines are viewed now by the public, the difficulty in raising money would make it very hard to start any legitimate extension now.

7639. Do you ascribe much of the unprofitable condition of the Irish railways to the state of the country?—I do not; because I think that since the railways were made the country has been progressing in many respects very considerably. There was a temporary retrogression for three years, in 1860, 1861, and 1862, but since then the country has been improving again steadily. It is supposed by some persons that the state of the country is the cause of the unprofitable condition of the railways, but I may mention one or two facts: There have been about 1,900,000 acres of land reclaimed, which were reported unreclaimed in 1845, being more than one-half of what was reported by Sir Richard Griffith as then capable of reclamation, and there has been a very large amount of thorough drainage very successfully carried out.

7640. Do you take a hopeful view of the future prospects of railway traffic in Ireland?—I do; for I think that the really large questions to be looked at are how the different classes in the country are circumstanced that is to say, the landowners, the capitalists, and the labourers. The rent of land is rising, and the quantity of land under cultivation is increasing. The prices of the agricultural produce that forms the principal export to England are rising very rapidly and have been for a series of years, as for instance for cattle, butter, and other produce that are exported to England; therefore I think that the position of landlords is improving in that respect. Then with regard to capitalists, the amount of capital accumulated in Ireland has steadily increased for a number of years. It was ascertained by a return that was made two years ago that the quantity of deposits in the Joint Stock banks had increased from about five millions in 1841 to sixteen millions in 1859. It diminished for three years afterwards, but that was owing to temporary depression, and I have no doubt that the amount has gone on increasing since 1863. The principal manufacture in Ireland is the flax manufacture, and in that manufacture power looms have been extended to linen, and the number of power looms has increased from about 3,000 to 10,000 within the last few years. In the same way the number of woollen factories over the country has increased very considerably, and all those facts indicate that there is a great activity in whatever manufactures we have in the country, and therefore there has been no retrogression but a progress in that respect. With regard to the labouring classes their wages have increased upwards of 50 per cent. the wages are going on steadily increasing, and will go on increasing, and their education is improved to a very large extent. During the period from about 1844 up to 1862 wages have increased 50 per cent. and the education of the labouring classes has improved. Persons who were not educated before the national system was introduced are all dying out and a whole generation are growing up who are more extensively educated than perhaps is the case amongst the labouring classes in any country in the world. The amount of serious crime has diminished about one-third in ten years, and the conduct of the labouring classes, particularly with regard to crime connected with machinery, has improved. That is a matter which I had to examine specially last year, and it turned out that there

was almost a total absence of crime in connexion with any combinations or any opposition to the introduction of machinery. All these circumstances are very favourable, and I think that these are the lasting matters on which the traffic of the country depends, and if the different classes are increasing in wealth and there is a regular progress going on in the country, that is the lasting basis on which railways depend for payment.

7641. All those causes lead you to expect that railway traffic in Ireland will improve?—They do.

7642. As a matter of fact, the returns of this year are considerably better than the returns of last year, are they not?—Yes. There was a depression in the railways, in consequence of the three bad years which they had. It did not tell on the railways at once, because they had a profitable trade in what was evidence of suffering in the country, that is to say, they had a good trade in coals to supply the want of turf, and a good trade in importing foreign corn and Indian corn to supply the deficient harvest, so that they were really deriving benefit while the country was suffering. They were also benefited by the cattle being exported to pay the debts of the farmers; but when the people were better off the traffic in coal and corn diminished, and the cattle traffic diminished slightly also. The first year after the three bad years the farmers were paying their debts; the second year they were saving their money; and it is not until the present year that they began to get the full benefit of prosperity, and so the railways to get the benefit of it also. The three bad years were 1860, 1861, and 1862; then 1865 is the third year from that, and accordingly in the latter part of this year the traffic is increasing.

7643. What is your opinion of the effect of emigration on railway traffic?—I think that it has not affected the railway traffic, because it has been accompanied, and must necessarily be accompanied, in every case by a rise in wages, and the wages of the Irish population were so extremely low when they were numerous, that the former wages would scarcely admit of railway travelling by the poor at all. If the emigration were followed by a depression of the country, by a fall in wages, by a fall in profits, or by a fall in rent, then of course it would affect the traffic; but the railway development in Ireland has gone on ever since emigration began.

7644. Do you see any prospect of increased traffic in coals?—I do, for two reasons. The rise in wages for agricultural labour, I think, will go on faster in Ireland than it does in England. The tendency of Irish wages is to come up to the English level; because, by the great emigration to America and the great facilities for coming to England the tendency of their wages is to go up rapidly to the English level. Therefore, the rate of wages for making turf in Ireland will rise more than the rate of wages in the coal mines in England. Another reason is, that there is a great deal of land that has been drained and turned into pasture which has a turf soil, and farmers will be much slower to break up pasture now it is so valuable to make turf out of it than they were in former times.

7645. (Lord Stanley.) Has the coal traffic increased, and is it increasing?—It varies very much in different years. If a very dry year comes turf is cheaper than coal, but if a wet year comes the coal is cheaper than turf, so that unless you watch the statistics very closely for a series of years you would not have a correct view of the case; but the tendency generally is towards increase in the consumption of coal.

7646. (Chairman.) What remedy have you to suggest for the state of affairs that you have described, first as to bankrupt lines and lines where the works have stopped?—I think that where lines have become bankrupt, or where the works are stopped, Parliament should not give them extensions of time, or try to have them worked on the commercial principle. I do not think that such lines will succeed on the commercial principle. I think

W.N.Hancock,
Esq., LL.D.

8 Nov. 1865.

that those lines should be examined, and if the traffic would pay for the cost of completing them, supposing the money to be advanced at $3\frac{1}{2}$ per cent., then the Government might safely complete those lines. If the traffic will not pay for the cost of completing them at $3\frac{1}{2}$ per cent. then if the localities take such an interest in the matter as that they would guarantee any portion of the cost of either keeping the railways in repair or of making them, so as to reduce it to a profitable speculation for the Government to advance money at $3\frac{1}{2}$ per cent., then I think they might be completed and become public property.

7647. What would you do with respect to the money that has already been paid for them?—I would have the lines worked for about seven years, and if they realized any profit beyond what would pay the Government $3\frac{1}{2}$ per cent. on what they advanced on them, I would then give the value of that excess as compensation to the existing owners.

7648. You would have the Government take possession of all those lines that are either bankrupt or where the works are not proceeding?—Yes; but I wish it to be understood distinctly that I think the Government should only do it on the principle of the general taxes not losing. It is not a question of transference of burden but it is simply a question of management.

7649. (Mr. Ayrton.) By "general taxes" do you mean the national exchequer?—Yes. It is not a question of contribution from the general Government, but a question of management.

7650. (Chairman.) Do you think that they should be taken possession of by the Government without the consent of the shareholders?—If they became bankrupt, Parliament should not, I think, on their powers expiring, renew their powers. As long as any powers that they have exist they should not be taken possession of; but when their powers expire, as is often the case from their not making the line in time, instead of granting a new bill, and giving debentures to private parties, and giving preference shares to private parties that will take it up as a speculation, when it really has been a very doubtful speculation in the way that I refer to, the Government should then take possession of them.

7651. (Capt. Galton.) The lapse of powers would not make the line lapse at all; the company would still own what land it had purchased?—Yes; but I think that where companies are not able to carry out the undertaking with which they are intrusted by Parliament, Parliament should not continue their powers.

7652. But that was not made a condition under which Parliament gave the powers originally, that they were to lapse to the Crown if the company failed in carrying them out?—No, but the plan that I propose would not injure them in the least, because, from the Government purchasing at $3\frac{1}{2}$ per cent., while private parties would expect to realize at least 5 per cent., the nation would be giving them more than they could get from a private party.

7653. (Lord Stanley.) Does your proposal come to this, that the Government is to become the possessor of all the hopelessly bad lines, and that private proprietors are to retain all the good ones?—Not that the Government are to become the possessors of the lines, at least not on the present terms; that is to say, they are not to pay what has been expended upon them, but merely when a line will not succeed as a commercial speculation, instead of trying it with some new company, taking it up on preference shares, the line would be safer in the hands of the Government. And if any aid is to be given to the line by local taxation, as several counties have proposed, I believe that local taxation could not be brought in aid of the commercial principle. When it was tried at Galway by giving assistance to the Midland Great Western line, it worked unsatisfactorily. I believe that if the counties are anxious to have lines made, as the county of Kerry is stated to be, and to contribute a certain amount from the local taxation, it can only be wisely and prudently done where the line is

public property. You cannot mix local contributions with the private interests of a company.

7654. Do you mean by "local taxation" county taxation or the taxation of Ireland generally?—County taxation.

7655. Does it come to this, that if speculators have carried lines of railway through a county which cannot pay for keeping them up, you propose that the Government should take possession of them, and that the deficiency should be made up by taxing the population of that county whether they will or no?—No, certainly not; I merely said that the Government should only take up a line, if it would be a profitable speculation for them, at $3\frac{1}{2}$ per cent. on any Government advances, not otherwise.

7656. (Mr. Ayrton.) Do you mean if a county agrees to pay $3\frac{1}{2}$ per cent. on the capital?—No, not on the "capital expended;" what I mean is this, that if a line would pay at $3\frac{1}{2}$ per cent. on the Government advances necessary to complete it. The value of the line is what it is worth in the future, no matter what is spent upon it, if and it would pay to complete the line at $3\frac{1}{2}$ per cent., then the Government should complete it and take charge of it; but if it would not pay that the Government should not touch it at all, unless the locality interested guaranteed what would be equal to $3\frac{1}{2}$ per cent. on the sum they asked the Government to advance to complete the line.

7657. (Chairman.) Who is to be the judge as to whether it is likely to pay $3\frac{1}{2}$ per cent.?—The Government officers should inquire into that before they take it, and not take the line without local guarantee if there was any doubt about the advances being secure.

7658. (Capt. Galton.) If it would not pay $3\frac{1}{2}$ per cent. what would you do with it then?—The Government should not touch it unless the locality who were interested took it up, like the case of the Galway line, or the proposed Kerry line.

7659. Supposing the locality did not take it up, what then?—Then I would leave it to its fate.

7660. Would you leave it in the possession of the private shareholders?—Yes.

7661. And allow them to do what they like with it?—Yes; I would allow them to do what the law allows at present, I would not interfere with it at all, unless the line would pay $3\frac{1}{2}$ per cent. on the Government expenditure in completion.

7662. (Chairman.) How would you deal with the lines which only pay dividends to the preference shareholders?—I think that as the 21 years runs out on those lines (and it appears from the dates of the first Acts in the table I have given in that there are several of them very near the limit of 21 years, as fixed by the Act of 1844), the Government should take the lines, the traffic should be valued, and the lines purchased by the Government at $3\frac{1}{2}$ per cent.

7663. How would you deal with the lines that are paying no dividends to their ordinary shareholders?—As the 21 years run out, I would value their traffic, and purchase them at the same rate.

7664. (Mr. Hamilton.) What is this period which you have referred to?—The statutory period in the Act of 1844.

7665. (Chairman.) How would you deal with the lines which pay less than the rate of interest in the funds?—With regard to those companies, unless they were anxious to sell their lines, I would not interfere with them.

7666. With the remaining lines, those that pay above the interest in the funds, would you do anything?—Of course they are not wholly unsuccessful on the present system as commercial speculations; the commercial principle has not failed entirely with them, and there would be no occasion until the experiment of Government management had been fairly tried to interfere with them at all.

7667. You would have the Government purchase or take possession of the four first classes of lines; namely, those which are in a hopeless state of bankruptcy, those in which the works are stopped, those that pay no dividends to preference shareholders, and

W.N. Hancock,
Esq., LL.D.

8 Nov. 1865.

also those that pay no dividends to their ordinary shareholders?—Yes; and with reference to the fifth class, namely, those that are paying dividends less than the funds, if they were willing to sell them on the same terms as the other lines to the Government, their traffic should be valued, and the lines purchased, that they might have the option of selling, but it should not be compulsory.

7668. Supposing the Government had purchased any lines in the way you suggest, how would you propose that the traffic should be carried on?—I think that the traffic should be carried on by the Government entering into a contract with some of the existing solvent companies to keep the line in order, and to supply engines and carriages, and whatever was required at so much per train mile, but that the fares should all belong to the Government just as what is received for the post-office service belongs to the Government.

7669. How would extensions and new lines be made?—I think that all the lines that it would be really profitable to make on the commercial system in Ireland have been made; there may be one or two special bits, but in the main all the really profitable lines have been made, and I think that new lines should only be made like county roads, that is to say, the locality anxious to have them should offer to contribute a certain part of the expense or part of the maintenance of the way, or whatever was necessary to make the line really profitable, and then if the locality guaranteed what would make the line profitable in that way, the Government should advance the money to make it, and it should be public property.

7670. (*Mr. Hamilton.*) Then you consider that the Government should have the control of the rates?—Yes, in all cases. The Government should own the line and own the rates and tolls, and fix the rates.

7671. (*Chairman.*) Have you considered the effect which is likely to be produced by large reductions of fares?—I have no doubt, as a general proposition, that the tendency of very considerable reductions is to increase the traffic; at the same time I do not think that the traffic would be increased very rapidly; and I think that reductions of fares ought to be cautiously and tentatively tried, with a very careful consideration of the subject.

7672. Should you recommend that they should be reduced on any lines that are purchased by the Government without being reduced on all lines?—I think that the Government would be more likely to try successful experiments in the reduction of fares than commercial companies paying dividends from half-year to half-year, the directors of such companies being so much under the influence of the shareholders, who are alarmed at the slightest change in the dividend. I think that the post-office shows that a large reduction on a wide principle of calculation would be undertaken by the Government when private parties very often would not enter upon it, and that ultimately it would pay well, though temporarily it would not do so. I believe that it is only parties who have a very large and permanent interest in the railways, and the Government would be in that position, that would be likely to try the experiment to the full extent that would be desirable.

7673. (*Lord Stanley.*) You put it in this way, that the directors of companies being influenced by the shareholders, who are a fluctuating body, cannot afford to sacrifice and ought not to afford to sacrifice any present interest for a future gain?—They are very unlikely to do so. As a matter of fact the influence of the directors depends upon the dividends that they can declare.

7674. As a matter of fact a man who may be compelled by circumstances to sell out next year has fair ground of complaint if the company, in which he is a proprietor, has embarked money in that which, though it may bring them a considerable return at the end of 15 or 20 years, will in the meanwhile involve a loss?—Certainly; and I would mention that that is

particularly applicable to Irish lines, because as their dividends are below commercial interest their shareholders are more sensitive about the slightest difference of dividend than if they were making a very large profit. If a line is paying 10 per cent. or 9 per cent., or 7 per cent., as many English lines are, the directors are free to do very much what they please, because the shareholders are getting more than commercial interest for their money, and are not so sensitive about the fluctuations of dividends as where the shares are below par.

7675. (*Chairman.*) Have you formed any opinion as to the extent to which it would be advisable to make experiments in the reduction of fares?—I think the classes that it would be most desirable to make experiments on would be two classes, third-class passengers, and new branches of trade or manufacture. I believe that the greatest chance of any improvement is by increased accommodation and increased facilities of third-class passengers. I do not think it would have the effect to the full extent that the directors anticipate, of inducing second-class passengers to go by third-class carriages, because it would bring a poorer class into the third-class, which would prevent the second class going as much into third-class carriages as is anticipated. New branches of trade and manufacture might be encouraged by special reductions of fare for two or three years.

7676. (*Lord Stanley.*) Are you in favour of lowering the fare, so as to convey third-class passengers below the actual cost of conveyance?—No; that raises the question of making a present from one class of the community to another class, which is a most dangerous question to enter upon. I have thought of it as a successful speculation, like the penny postage, that if you carry for a lower fare, and make it pay by larger accommodations and larger arrangements, it is wise to do it; but if it does not pay it should not be done at all.

7677. (*Mr. Ayrton.*) Do you consider the interest on the capital in calculating the fare to be charged for the conveying of passengers?—I consider that the cost of conveying the passengers is simply the haulage and maintenance of the way. When once the line is made the mode of managing the line is wholly independent of what it has cost; it is simply what you pay for keeping the line in thorough working order, and what you pay for carrying the passengers; it does not depend in the least upon what the line cost. When once capital is laid out upon land it becomes a natural agent, and the way of managing a railway is like managing the rent of land, which does not depend upon the expenditure upon it.

7678. (*Capt. Galton.*) You mean that you would purchase the railway and get the maximum net receipt out of it when it is made?—Yes; and the way to do that is to calculate, not what you pay for your line, but the cost of working the train and keeping the line in perfect order, and the necessary establishment charges, and to see how for that cost you can work it so as to make the maximum out of it.

7679. And fixing such a charge as would induce the largest number of people to travel by it?—I think the more you accommodate people, and the larger the number that you induce to travel upon your line, the more it will pay, although it may lose for a year or two.

7680. According to your last suggestion if a line were to lose for a year or two you would not get the maximum net receipt out of it?—By the maximum I do not mean the maximum from day to day, or from half-year to half-year.

7681. You mean that it would pay the best in the long run?—Yes; that it would pay the best in the long run; that is the principle on which to manage it, to get the maximum net receipt. One advantage, however, that the public would get if the railways gradually belonged to the public is, that the public would not work with the sole purpose of profit. Provided it paid well they might reduce the fares, and not carry on the line with a view to realizing a large

W.N. Hancock
Esq., LL.D.

8 Nov. 1865.

revenue out of the people who used it, as the private companies now do.

7682. If the public made the railways, they would have to arrange to procure a certain sum of money for making those railways, and they would have to pay a certain rate of interest upon that money,—would they not, somehow or other?—Yes.

7683. And if it is not paid by the receipts from the railways, it must be paid out of the general taxation of the country?—Yes.

7684. Do you mean that if the public made the railways they should charge a sum which would induce as many people as possible to travel without reference to paying the interest upon the money which had been advanced for making the railways?—If the Government advanced money to make or purchase the railways, the fares should be regulated so as to pay $3\frac{1}{2}$ per cent. on the money.

7685. (Mr. Ayrton.) My question was whether the interest on the cost of making the railway was, in your opinion, a part of the expense which was to be covered by the fare?—In the case of the Government making the railway, it is.

7686. Is it not so in the case of any body making the railway?—The expense involves two things. For instance, one of those lines that is paying no dividend on its shares now costs perhaps 500,000*l.*, and Government buy it, say for 100,000*l.* I believe that the fare should pay the interest, not on the 500,000*l.* which has been wasted, but on the 100,000*l.* which is *bonâ fide* paid.

7687. The 100,000*l.* would be the cost of the railway to the person who bought it, therefore when you say that the fare ought to be such as would pay the expenses, one would wish to know whether in the expenses you include the interest on the cost of the railway to the person who then owns it?—Yes, I include it on the cost of the railway to the Government.

7688. (Mr. Hamilton.) Do not you adhere to what you said a few minutes ago, that the object of management should be to get the greatest possible net receipts from the railway?—That was rather a theoretic answer. If a person is the private owner of a railway, the policy on which he should manage it to make the greatest profit out of it, would be to consider what it cost him to carry each bit of traffic, and how he can make a profit out of it. And he should not consider the amount of money that he had spent on making the line.

7689. The object of management is to get the largest amount of net receipts, is it not?—The object of private managers is.

7690. And it is not the same thing as endeavouring to carry the largest amount of passengers?—No.

7691. (Sir R. Hill.) But in fixing the fare with the view of obtaining the maximum of profit, it is not necessary, is it, to take into account the cost of the railway?—No.

7692. That may be utterly disregarded, may it not?—Yes.

7693. And ought to be disregarded?—Yes, in calculating the maximum of profit.

7694. What you mean I conceive to be this, that if the Government become the proprietors of the railways, with reference to the general advantage, then they would be in a different position from an ordinary proprietor who regulates the fares simply with a view to his own advantage, and that the Government might make reductions in the fares so long as the revenue derived therefrom covered the cost of working and the interest of the capital, even though those reductions should to a certain extent reduce the net profits.—Yes, and that is one reason that the Government can do what no private parties can do. The Act of 1844 was founded partly on that policy, because it limits the profits of railways to 10 per cent., and the object of that was to prevent their realizing the maximum profit that they might realize; and that limitation I think has led in a curious way to extraordinary amalgamations and ex-

tensions in England, because when the companies found that the profits on a certain bit of line ran up above 10 per cent., they thought it much more politic to extend than to have the Government tempted by their high dividends; whereas in Ireland, we have had no such motive to stimulate us to extensions.

7695. (Mr. Ayrton.) Do you speak of your own knowledge that any railway has been amalgamated from that motive?—No, that is theoretic merely.

7696. It is not a conclusion from facts but is rather a logical suggestion?—It is a political economy conclusion of the natural result of putting a limit.

7697. (Chairman.) Have you any opinion to offer to the Commissioners as to the connexion between the liability of railway companies, in case of accidents, and the reduction of fares?—I think it is important to point out that one impediment to the reduction of fares which operates with railway companies is the very unlimited nature of their liability in case of accident, and I think that operates very strongly, particularly with companies that are barely paying, or making only a small dividend, for an accident with heavy loss will sweep away their whole profits for the half year. I think that if persons wish to be insured in a certain reasonable amount there can be no objection to that. There ought to be a certain amount to secure the good conduct of the company, and to provide a moderate compensation; but, assuming that prudent people have their lives insured, if persons wish to be extra safe it would be politic to have an extra fare. I think that the present system creates a risk to the company far beyond what the public get the benefit of. I would separate the insurance beyond a moderate sum. I think there ought to be a certain sum for the first-class passengers, a smaller sum for the second, and a smaller sum for the third class, with special provision for injury during life which a life insurance would not cover. The limit should apply fully in case of death, beyond that, if a person wishes to set a great value upon his life he should make a special arrangement, just as when you send valuable goods by railway, you have to declare the value of them, and make special terms. That matter has to be considered in any project for reducing the railway fares, because you have one element in the calculation which is not allowed for in the insurance. You do not alter the insurance, it remains constant, whereas if you limit the liability in case of a railway accident, you enable the fare to be reduced. The risk of liability is one cause of railway companies in Ireland having been afraid to try experiments of low fares; they say, if we develop the traffic we may get into an accident, and one accident will sweep away an immensity of profit while we are trying the experiment.

7698. (Mr. Hamilton.) Have you ever made a calculation of the proportion which the total amount paid in compensation by a railway company in any year bears to the total amount of passenger receipts on the line?—In Ireland it is very small; it is not the amount in the aggregate but the risk. That is the very thing that I want to call attention to, that whilst it is very small in amount in the long run, it frightens the companies, because it may be immense; for instance, if they were carrying a committee of bank directors, or take the case of a train carrying the bar on circuit, the amount of compensation might be very large indeed; I mean that the accident might involve a very serious expense for compensation if some special class of persons were in the train.

7699. (Sir R. Hill.) That has in some instances materially affected the dividends of railways, has it not?—It has.

7700. (Lord Stanley.) Have you considered at all the amount of saving that might be effected by a general amalgamation of all the railways into one or two, or at most three great systems?—My own feeling is very strongly against it, if they are, when amalgamated, intrusted to companies. I think it would give infinite dissatisfaction if there were an attempt made to put all the railways in Ireland under one company. I think

W. N. Hancock,
Esq., LL.D.

8 Nov. 1865.

that the only safety in railways, on commercial management is competition, and when you put an end to competition you are only safe in the hand of the State.

7701. But do you think that you can have competition where a single line is carried through a tract of country which barely suffices to support that line, and which, therefore, would not support a second?—No, we have not competition. Those are the very lines which would fall into the hands of the Government on the plan I propose, and those that would not be purchased at first would be principally those that are subject to competition at present.

7702. You do not think that on the whole much would be gained by a general amalgamation?—I think that a very great deal would be gained by a general amalgamation in one sense; that is to say, I believe that if the whole traffic of the country were worked on one uniform plan like the Post Office, a very much larger sum could be made out of the traffic, and if you handed it all over to one company they would make a large sum out of it, but the public would be very much dissatisfied.

7703. Are you speaking of the dissatisfaction of those very numerous persons who, as we have had it in evidence here, are employed as directors and otherwise upon the number of small railways now existing in Ireland?—No; I am not speaking of personal interests in the matter. I mean that the different towns would be dissatisfied if they had to go to a railway company in Dublin to decide how their trade was to be carried on; and if they were to be at the mercy of one company to decide whether particular arrangements should be made or not. The peculiarity of Ireland is, that it does not admit of a profitable competition.

7704. (*Mr. Ayrton.*) There are very few competitive lines in Ireland, I believe?—There are a good many. There are, for instance, two lines from Dublin to Athlone, then to Londonderry there are two distinct lines, and now there are practically two lines to Limerick, and there will very soon be two lines to Waterford.

7705. (*Capt. Galton.*) How do you make the second line to Limerick?—Through Roscrea and Castle Connell.

7706. The Roscrea and Castle Connell line belongs to the Great Southern and Western, does it not?—Yes; I mean that there are two lines for part of the way, not for the whole of the way.

7707. (*Sir R. Hill.*) Is that competition permanent in any case?—No, it generally ends in a compromise.

7708. Speaking as a political economist should you say that competition can ever be useful where the number of competitors is necessarily very restricted?—Its effect is diminished very much.

7709. You propose that the Government should become the proprietors of certain insolvent or semi-insolvent lines; those lines are scattered all over Ireland, are they not?—Yes.

7710. Do you make that proposition with a view to their being managed by the Government?—I do it on the simple principle that the commercial system of working those lines has broken down, and I believe that the only other system is that they must belong either to the local or the general government, and as most lines run through several counties they would naturally fall to the general government and not to the local government like the county roads. I may state that my view is that the Government should in process of time own all the railways.

7711. Your proposal is that they should take those unsuccessful lines as a step towards becoming the proprietors of all the lines in Ireland?—Yes, ultimately.

7712. (*Mr. Ayrton.*) Do you mean that the Government is itself to work the railways with a board of administration, or directors, or in what manner?—That they should work the railways as the Post Office is worked; that is to say, that they should enter into a contract for the trains and for the keep-

ing of the line in order; and for every work that is necessary to be done, and that they should receive the fares or tolls in the same way as they receive the Post Office revenue.

7713. That they should appoint all the officers on the lines, and supervise their state of repair and efficiency?—They should appoint whatever number of officers was necessary to check the contracting companies, but the bulk of the employees would belong to the companies.

7714. Do you mean that they should lease the lines in whole or in sections to the companies to administer, or that they should direct the administration of the lines through officers appointed by the Crown?—No; I think that they should not lease them; they should enter into a contract for supplying the trains and for keeping the line in order, and the Government should receive the fares.

7715. Then the general administration would be by the Government?—Yes.

7716. Do you think that there would be any difficulty in giving to those officers appointed by the Government the power of fixing the fares at their pleasure, or do you think that it would be necessary for Parliament absolutely to fix the fares?—The fares of course would be fixed by a department subject to the control of Parliament; but there would be a very vigilant watch exercised against any abuse of power by the public and the contracting companies on the one hand, and on the other hand there would be such jealousy on the part of Parliament that any officers who managed the department so as not to pay would not long be retained in office.

7717. Then all the station masters, and the persons connected with the general administration of the company, would be officers of the Government?—No, only those who were necessary to receive the money and keep a check.

7718. Those who were necessary for the general management of the traffic would also have to be appointed by the Government?—Yes.

7719. (*Sir R. Hill.*) Do you think that under such an arrangement as that there would be the necessary vigilance to seek traffic and promote it in the highest degree?—I do. I think that the Post Office proves that.

7720. Would not it be a better arrangement for the Government to grant leases, so as to create individual interests in promoting the traffic of the lines?—I think that the commercial system has not shown itself successful except where there is a very large profit made by it.

7721. You appeal to the case of the Post Office; are you aware that in Ireland the Post Office is not self-supporting?—I am not aware of that fact.

7722. (*Capt. Galton.*) If the lines were possessed by the Government, would not it be of necessity that there should be a uniform rate of charge over the lines everywhere?—No, not necessarily so.

7723. Would not one district complain if they found that their goods were being charged a higher rate than another district?—I do not know that that would necessarily follow.

7724. Do not you think that political influence would be brought to bear upon the rates which were charged; supposing, for instance, that the charge from Dublin to Limerick were a larger charge per mile than the charge from Dublin to Belfast, between which places there is a ship competition, if the line were possessed by the Government would not influence be brought to bear to induce the Government to reduce the charge in the one case or the other?—I think that that could be met by arrangement.

7725. Still you admit that it would take place, and that there would be that private influence brought to bear?—If you laid down a fixed principle applying to all parties it would not.

7726. Do not the present rates for goods traffic on railways depend very much on the amount that the railway company can get, in consequence of competition by other ways; for instance, between Dublin

and Belfast there is a very active competition by ships?—Yes.

7727. Therefore the railway company cannot charge a higher rate per ton for goods which are to go from Dublin to Belfast than is charged by the ships which go there, whereas in going from Dublin to Galway the competition by ship would be much more difficult; or we will take Dublin to Athlone, in which there can be no ship competition, and probably the company would then charge as high a rate as Parliament had allowed them to charge; if the lines were worked by the Government would not it be necessary either for the Government to charge a higher rate between certain places than is probably now charged where competition exists, or else would they not have to reduce their charges over the whole country to a uniform rate, and that the lowest charge; would not that be the result?—The present system is not free from defects. For instance, some trades complain that the railway company will carry goods through Dublin from Liverpool to Sligo at a lower charge than they will make for carriage from Dublin to Sligo.

7728. Would not the result of the Government taking possession of the lines be that they must charge uniform rates?—I believe that the public would submit more patiently to any regulation made by Parliament with regard to the lines than they would to what exists at present. Their complaint I think is very well founded. A merchant at Dublin is carrying on his business there, and the railway company enters into a contract by which they carry goods through Dublin from Liverpool to Sligo cheaper than they charge him for carrying them from Dublin to Sligo. The company have the monopoly of the line given them by the Government, and the public are dissatisfied if a thing of that kind is done by a private party. I do not believe that local parties are able to force Parliament to do what is wrong. We have instances in Ireland where attempts of that kind have really ended unsuccessfully, and I believe that if Parliament laid down what would be found to be a just and fair principle they could carry it out, and the public would be satisfied with it; but if private companies do the business there is no appeal, and the dissatisfaction exists.

7729. You stated that you would recommend that the board which should have the management of those railways when under the Government should decide upon what should be the special fares in each case, subject to some general regulation by Parliament.

7730. You do not intend Parliament to legislate for every detailed fare which is to be charged?—No; I am merely suggesting; I have not gone into all the details of the plan. I merely state this proposition, that the existing system of commercial speculation has failed, and it is bringing discredit upon many men of good position. When I see men of property in the bankruptcy court as shareholders, when I see a most solvent company subscribing to bankrupt lines, and when I see the amount of discredit that is occasioned thereby, I merely tell you that the present system has failed and is failing, and will not succeed excepting in the most profitable districts. Therefore I say that you are driven by that to some system of state management, it is inevitable if you want the thing properly done. I have not considered all the minute details, but in proposing that the state should have the management of it, I do want the general Government to take it up instead of the local Government, because where lines run into different counties they can be best worked by the Government as part of a general system.

7731. You are of opinion that a monopoly in railways is not a safe arrangement for the public?—That is my opinion.

7732. Do you think that competition in railways is possible as a permanent arrangement?—No, and therefore I think that ultimately they ought all to belong to the State.

7733. (*Mr. Ayrton.*) Your whole proposal appears to be based upon the theory that if a line is not paying what is called commercial interest, it is not well administered by the directors;—is that theory based upon any investigation of the conduct of directors or is it to be considered merely as a speculative opinion?—I am not going into the question of the individual conduct of directors; I was asked to look into the matter, and I merely give that as a speculative opinion.

7734. It is not a conclusion drawn from an investigation of the conduct of directors in the administration of lines in the condition which you have mentioned, but it is a speculative opinion upon the possible operations of the human mind?—It is a speculative opinion, which has been stated by the House of Lords' committee, that where railways do not realize profits they will not be well administered.

7735. Your opinion is based upon the conclusion of the House of Lords' committee?—No; it is an entirely speculative opinion of my own, but I mentioned that their lordships formed their opinion from an examination into the conduct of lines in issuing debentures and exceeding their Parliamentary powers. The House of Lords' committee arrived at it from a careful investigation of certain matters, with regard to certain lines in England exceeding their statutory powers in borrowing money. I arrive at it from theoretical considerations, that if an undertaking is to succeed as a commercial speculation it should be commercially successful.

7736. You think that the theoretical opinion which is so often broached, that people who are well off are disposed to let well alone, and are not the most active, and that the most active people in society are those who are always trying to better themselves, is an erroneous opinion?—I think that it applies to individuals, but I do not think that it applies to public companies.

7737. (*Sir R. Hill.*) Would not the undue influence that might be brought upon the Government to reduce the fares be neutralized if Ireland were bound to make good any loss that might result?—I think that it is a very difficult question to contemplate the effects of undue political influence; I am speaking as a political economist; as to the management of those lines, it is very hard to speak of the effects of undue political influence, or how it is to be corrected; I believe that Parliament is powerful enough to prevent undue political influence.

7738. If the railways of Ireland belonged to the Government, then the Government might be exposed to improper influence on the part of the inhabitants of certain districts of Ireland to reduce the fares; that is what is apprehended; but would not this danger be guarded against if any loss that might result from such reduction were borne by the parties who lived in the district?—Ireland has not a majority in the Imperial Parliament.

7739. Never mind whether it would be right or wrong to throw the loss upon Ireland, but assuming that the loss were to be thrown upon Ireland, would not that neutralize any undue influence upon the Government to reduce the fares?—It very likely would have that effect.

7740. (*Mr. L. Gower.*) Do I rightly understand you to be of opinion that the shareholders would never consent to a present sacrifice with a view to an ultimate advantage?—No, not that they would never do so, but that the tendency of shareholders, where the lines are paying a very moderate rate of dividend, is to be adverse to speculations of that kind.

7741. I presume if they were convinced that the sacrifice would be repaid, there would not be that disinclination?—Then we have to take into consideration what Lord Stanley has pointed out, that the shareholders are a fluctuating body, and not a permanent body, and that the same motive that actuates a private individual, who is always the same, does not actuate bodies that fluctuate by shares saleable from day to day.

W.N. Hancock,
Esq., LL.D.

8 Nov. 1865.

W.N. Hancock,
Esq., LL.D.

8 Nov. 1865.

7742. Are the railways kept in a good state of repair in Ireland?—The solvent lines are very well managed.

7743. In those instances, the expenditure which is incurred by keeping the line in repair is a present sacrifice with a view to ultimate advantage?—It is with a view to an immediate advantage, because if the line were out of repair, and they had to pay for accidents, there would be an immediate loss.

7744. Still a railway might be deteriorating without resulting immediately in accidents and present loss?—There is nothing which so soon involves the risk of immediate loss as letting a line get out of repair, because one accident would be a very immediate loss, and prudent companies look to that very closely, and I believe they keep the lines in very good order.

7745. You do not think that the shareholders are as good judges of what would ultimately be profitable to the line as the Government would be?—I think with regard to large and extensive changes, with more distant returns, the Government would be better fitted to judge than the individual shareholders.

7746. Although shareholders are too timid in your opinion with regard to experiments, would there be no danger of the Government being rash in their experiments?—I think that they would not be rash.

7747. Would they have the same motives for prudence in the experiments that they might make as a private individual would have?—I think that in the present day in Parliament there is no quality that has more importance attached to it than financial prudence. In the Government departments there is extreme vigilance exercised, and there is no branch of the Government proceedings that has more importance attached to it than the statement of the Chancellor of the Exchequer as to how the public affairs are managed, and there is the utmost economy endeavoured to be carried out in all the different departments. In former times, when finance was less considered or studied by the Government, they would not have been subjected to this vigilance; but in the present day, when the greatest amount of attention is paid to the subject of making the different departments the least expensive and the most profitable, I believe it could be done. If the commercial system had worked successfully in Ireland, and if there were no insolvent lines, I would not have suggested any change. Change is necessary, because of the present unsatisfactory state of affairs.

7748. Do you believe that the Government establishments in England are as prudently managed as private establishments?—I think that some of them are as prudently managed as some public companies' establishments.

7749. (*Mr. Hamilton.*) You have referred more than once to an opinion or conclusion arrived at in the House of Lords, what is it that you distinctly refer to?—It is the report of the committee of the House of Lords in July 1864, and it is quoted in *Hodges on Railways*, in the appendix to the last edition. It is the "Report of the select committee appointed to continue the inquiry commenced last session, and report as to what legislative measures are desirable for the purpose of restraining directors of railway companies from exceeding the limits fixed by their Acts of Parliament, and from evading those provisions of their Acts of Parliament which require that a certain portion of their authorized capital shall be subscribed and paid for before their borrowing powers can come into operation, and also to inquire and report what securities can be given to the holders of debentures as to the validity and legality of the issue of such bonds." In paragraph 7 of that report it says, "The committee see no reason why railway companies should continue altogether free from the adjusting process to which other trading companies are liable through proceedings in bankruptcy." Notwithstanding this recommendation there was an Act passed last session to prevent the Bankruptcy Act extending to Irish railway companies. "On the contrary, they are of opinion that

"the present practice by which the affairs of companies practically bankrupt are patched up by successive Acts of Parliament is injurious to the public, and too frequently of no real benefit to the shareholders. When a company pays little or no dividends on the original capital, the working expenses are often cut down injuriously, danger arises from insufficient service, and the risk of present loss attending any reduction of fares, even with the fairest expectation of future profit, is a bar to liberality of management. For the public advantage it is desirable that a railway should yield reasonable returns to those under whose control it is placed; and when a company becomes seriously embarrassed it is expedient that the concern should be transferred to others under whose management it may be efficiently conducted. The knowledge that such must be the result of mismanagement would probably have a most beneficial effect on the proceedings of directors, and subject the credit which they would be able to obtain to some useful restraint."

7750. I understand that that recommendation goes to this, that railways should be taken out of the hands of those who have proved themselves incompetent to manage them?—Yes.

7751. But it does not follow from that that the Government should take them up?—No, I did not quote it for that purpose; I quoted it for one part of the proposition, that the commercial system breaks down when there is not commercial profit.

7752. Then it only goes to the extent of recommending that the property should be taken out of the hands of those who have proved their incompetency to turn it to good account?—Yes.

7753. It does not go beyond that?—No, for they go on to say: "With the present facilities for forming companies, there would be no difficulty in finding purchasers under sound and just regulations to be provided in a public Act, whereby Parliament would be relieved from having to deal with a class of private bills which are very troublesome to settle, and are never of a satisfactory character."

7754. There is a principle now under discussion, namely, as to whether the Government should undertake the management of railways or not; do not you think that it would put it under great disadvantage that the Government should have to make its first experiment on this *corpus vile* of bankrupt railways?—No; I do not think so. I think that the public would be more satisfied with trying the experiment in a case of that kind than with breaking up or attempting to interfere with companies which are not wholly unsuccessful on the commercial principle.

7755. But you were obliged in a prior part of your evidence to guard yourself by saying that the Government must be guaranteed locally or otherwise against loss?—But the company would not be bankrupt in the hands of the Government; they are bankrupt now, but if the Government bought the railways at a price that the traffic would warrant, the undertaking into hands of the Government at that low price would not be bankrupt then.

7756. (*Sir R. Hill.*) You spoke of the railway revenue in Ireland for the present year as being larger than that of the previous year;—do you infer from that circumstance that the amount will now increase and continue to increase?—Yes.

7757. Is not the revenue of the present year enhanced by the circumstance of the exhibition in Dublin being open?—Yes, it is enhanced by that circumstance, but I do not think that it depends upon that alone.

7758. Are you able in any way to separate the revenue derived in consequence of the exhibition being opened from the ordinary revenue?—The materials that I have do not enable me to do so; my impression from what I heard was that that was part of the cause, no doubt, but that it was not dependent upon that. I have inquired into the matter, and I find that the goods traffic has increased, and that would not be affected by the exhibition.

7759. (*Chairman.*) As a matter of fact is there a large influx of people into Dublin from the provincial parts of Ireland and the towns in the provinces to visit the exhibition?—Yes, certainly.

7760. (*Sir R. Hill.*) You think that notwithstanding that circumstance the increase in the traffic is likely to continue?—I think so.

7761. (*Capt. Galton.*) You have stated that you would commence your experiment of the Government supervision of railways by taking those railways which were, as you say, bankrupt; that is to say, those which did not pay their preference shareholders, and those which did pay their ordinary shareholders, is that so?—Yes.

7762. On looking at the map, I observe, that of the railways you mentioned, the only one of any great extent seems to be the line which runs from London-derry through Enniskillen to Dundalk?—Yes.

7763. The other lines seem to be these: first, there is the Banbridge Junction; where is that?—That is the little bit of line from Banbridge to Scarva.

7764. Then there is the Cork and Bandon; and the Cork and Kinsale, which is a branch from the Cork and Bandon line; the Dublin and Meath; the Limerick and Castle Connell; the Limerick and Ennis; the Newry and Armagh; the Portadown, Dungannon, and Omagh; and the Waterford and Kilkenny; could not a number of those small lines which I have mentioned be advantageously worked in connexion with the Great Southern and Western Railway, and be amalgamated with it?—Some of them might be, no doubt.

7765. Would not that be much more advantageous for their working than for them to be taken possession of by the Government, and worked as separate schemes?—I think that they are very unlikely to be amalgamated. For instance, the Cork and Bandon line is in the hands of preference shareholders, and they think that they are safe enough, and they would not be very likely to sell the line; and all the real shareholders must be powerless in the matter, as it is in the hands of the preference shareholders.

7766. Do not you think that it would be a better arrangement for the Government, after it had obtained possession of those lines, to lease them to this large line, of which they form very appropriate branches?—What I recommend is, that the Government, instead of leasing those lines, in order to keep perfect control over the fares, so as to try any experiment or change that might be desirable, should contract with one of those existing large companies to work them, because the moment the Government lease them they deprive themselves of all control over the fares; but I think that those large companies should be employed to work them.

7767. Is not one of the reasons why railways do not amalgamate in Ireland, that almost all the railways are connected with special seaports, and each seaport has its own individual interests?—I think that that operates to some extent.

7768. For instance, especially in the lines to the north of Dublin?—No, it does not, I think, operate especially in the lines to the north of Dublin.

7769. Does not it operate with regard to Belfast and Newry and Dundalk?—No; I do not think that there is much rivalry as to the Ulster, Dublin and Drogheda, and Belfast Junction Railways. One of the reasons why those three lines do not amalgamate, I believe, is that the shares are at very different prices. For instance, the Dublin and Drogheda is 82 per cent., and the Dublin and Belfast Junction 68 per cent., and on the slightest mistake in amalgamating those two companies, or the slightest difference of value arising between them, one company would sacrifice its dividends. For instance, the one pays $4\frac{1}{2}$ per cent., and the other $3\frac{1}{2}$ per cent., and there are new lines being made, and they do not know the exact effect of them upon the traffic.

7770. Is it not the case that the directors of those several lines are each connected with the part to which the line runs?—No; the Dublin and Belfast Junction

line does not run from an inland district to any port, it is a line from Drogheda to Portadown; it runs parallel to all the ports. The line from Enniskillen to Dundalk runs to the port of Dundalk, and carries traffic going to England. The other line does not carry steamboat traffic at all, but traffic from Dublin to the north of Ireland. The lines that the steamboat interest is supposed to operate upon are the Waterford and Limerick, and the lines in connexion with it. The Great Southern Railway Company offered to amalgamate them, and they refused; and that arose partly, it is supposed, from the people in the port of Waterford and people in Limerick being afraid that all their traffic would be carried to Dublin.

7771. In the north, which you know best, do you consider that that reason does not operate at all?—Not between Dublin and Belfast. I believe that the interest of the different ports has led to a great deal of competition on the other northern lines. There is a great struggle between Belfast and Newry and Dundalk; and one effect of having companies worked upon the commercial principle is, that you cannot prevent their being very much influenced by those considerations.

7772. Is it not beneficial to the ports that they should be influenced by those considerations?—It leads very often to very unprofitable lines being made.

7773. Are not those unprofitable lines of advantage to the public?—I think not. I think that for a particular district if they have one good port of departure and one good line to it, it is all they want; and if there are two lines it is a very unsatisfactory state of things having lines that do not pay.

7774. If you have two lines to two ports you think that it is less advantageous to the public than having one good line and one good port?—On the present system of making railways with a view to profit it is very unsatisfactory, having a number of railways that do not pay.

7775. Is it unsatisfactory to the people who travel by them?—Yes, because the lines are not well worked.

7776. Is it not more satisfactory to people who travel to have a line which does not pay than to have no line at all?—I think that it would be better to have one line that paid rather than to have two lines that did not pay well.

7777. (*Mr. Ayrton.*) The two lines do not go side by side; they go through different districts, do they not?—Yes. If a line is made on the commercial principle, taking, for example, that very line from Dungannon to Omagh, it benefits that district slightly; but the main object of making that line was to get the Derry traffic and the traffic of a certain portion of that district of country for the Ulster line.

7778. (*Capt. Galton.*) It is more beneficial, is it not, for the public that they should have a line from Omagh through Portadown, to Belfast, and the line through Enniskillen to Dundalk, than that they should have only one of those lines, even though the line does not pay?—When they do not pay, then you get into bad management.

7779. (*Mr. Ayrton.*) They need not use the lines, therefore they would be exactly in the same position?—But that discourages railway enterprise generally, because no line is safe from a competing line being made which will destroy the profit of its traffic. There was a great contest about making the Drogheda line, whether it should go to Navan, or go by Drogheda; it was decided to go by Drogheda, and after the Drogheda line was paying a very fair dividend for several years, the Meath line was afterwards made against the first decision, and the making of it took about 1 per cent. off the Drogheda dividend.

7780. (*Capt. Galton.*) Still it is more beneficial

to the public living on the line, that the Meath line should be made, although it diminished the profits of the Drogheda company?—I think when a railway is made on the commercial principle, and it does not pay, its being made is an injury.

The witness withdrew.

Adjourned to Friday at half-past eleven o'clock.

Friday, 10th November 1865.

PRESENT :

J. A. ROEBUCK, Esq., M.P.
SIR ROWLAND HILL, K.C.B., F.R.S.

CAPT. DOUGLAS GALTON, R.E., C.B., F.R.S.
WILLIAM POLE, Esq., F.R.S., *Secretary*.

THE RIGHT HON. LORD STANLEY, M.P., F.R.S., IN THE CHAIR.

[*There not being a quorum present, the following evidence was taken provisionally; it was accepted at the next official meeting of the Commission.*]

EDWARD JOHN COTTON, Esq., examined.

E. J. Cotton,
Esq.

10 Nov. 1865.

7783. (*Chairman.*) You are connected with one of the Irish railway companies, I believe?—I am manager of the Belfast and Northern Counties Railway, which runs from Belfast to Portrush, Cookstown, and Carrickfergus.

7784. Has that company become connected with the Derry and Coleraine line?—We work that line at a mileage rate.

7785. I understand that you are here in order to give a contradiction to certain statements that were made in some former evidence which we have taken?—Yes.

7786. Have you seen the evidence of Mr. Roe?—I have.

7787. I think that the general purport of that evidence is, that upon the Derry and Coleraine line a very low rate of fares was adopted for a time; that at that low rate the line paid well, and there was a great increase of traffic; and that subsequently, when the line passed into the hands of the Belfast Company, that system was abandoned, and there was a return to the old rate of fares?—The tendency altogether of Mr. Roe's evidence, it is quite clear, is to lead the Commission to believe that the Belfast and Northern Counties Company upon taking up the line increased the fares, and that he, during the time of his lease, was charging some very low fares; indeed, I wish to state that when the line was handed over to us, all the fares and rates remained exactly as they were in Mr. Roe's time; the station-masters had no new instructions given to them, and the fares continued the same from the 10th of April 1861, which was the date that we took up the line, until the 1st of December 1863. The Northern Counties Company at that time increased their fares throughout their whole system 5 per cent. This also applied to the Derry and Coleraine line, and this is the only advance that has been made between the time of our taking up the line in 1861 and the present moment; but, as I stated before, for more than two years no deviation whatever was made; the only deviation now is an odd penny here and there. I beg to hand in a statement showing what the fares were in Mr. Roe's time as they were handed over to us, and as they continued up to the 1st of December 1863, and what we now charge.

The same was delivered in. Vide Appendix BB.

7788. Are the Commission to understand you to state that in no case has the increase exceeded 5 per cent. upon the rate of fares that prevailed in Mr. Roe's time?—No; that was the advance that was made throughout the whole line; but Mr. Roe would lead you to believe that immediately upon taking up the line we raised the fares from $\frac{1}{2}d.$, $\frac{3}{4}d.$, and $1d.$ per mile to $1d.$, $1\frac{1}{2}d.$, and $2d.$ per mile. I infer that from his evidence. He states, in answer to Questions 5740 and 5741, that he reduced the fares from $2d.$, $1\frac{1}{2}d.$, and $1d.$ to $1d.$, $\frac{3}{4}d.$, and $\frac{1}{2}d.$ per mile. This I state to be positively untrue. I will read to the Commissioners a statement made by Mr. Garrett, who was the ticket clerk in Derry and is a nephew of

7781. (*Sir R. Hill.*) The shareholders on the line are a part of the public?—Yes.

7782. Must not their interests be taken into account as well as those of the residents upon the line?—Yes, certainly.

Mr. Roe, and another statement made by Mr. Hamilton, the station-master at Newton Limavady, a very intelligent man indeed, and you will find by those statements that no alteration was made. Mr. Garrett says:—"I beg to say that I was better than a year at Derry station, while the Londonderry and Coleraine Railway was worked by Mr. Roe, during which time the ordinary passenger fares were quite the same as the succeeding year that I was there under the company's management; nor were there any labourers' tickets issued at reduced rates; the summer excursion arrangements were alike both years to the best of my knowledge." I wish to state that, with regard to the summer excursion arrangements, Mr. Roe had an arrangement for issuing very low fares from Derry and Newton Limavady to a place called Castlerock, a small seaside place, on two days in the week and on Sundays. When the Northern Counties Company took up the line, they carried on the very same fares, but they issued those tickets every day in the week, not only the two days on which Mr. Roe had issued them, but on every day in the week, and they also issued tickets at very low fares to Portrush, which is a more important watering-place in the neighbourhood. In fact, I have never heard any person on the line state that we have reduced the facilities in any way. I have heard many say how much better the line is worked, and how much better it is managed by the Northern Counties Company as compared with Mr. Roe's management, but I have never in any case heard the remark that Mr. Roe managed the line better or gave more facilities than the Northern Counties Company.

7789. Mr. Roe speaks in his evidence as having given special facilities to fourth-class passengers; that is to say, to harvestmen and others going in search of employment. Are those facilities continued?—He gave us no particulars of any such arrangement being made, nor can we find that any such arrangement ever existed on the line. With regard to that part of his evidence, I will read to the Commissioners the statement of Mr. Hamilton, the station-master at Newton Limavady, in one part of which he refers to this very subject. He says,—“Referring to the evidence of Mr. Roe as to the management of the Derry and Coleraine Railway, I beg to state that the same rates and fares were continued under your management from April 1861 until December 1863, which Mr. Roe speaks of as having increased the receipts on the line; with this exception in your favour, that you gave cheaper fares and greater facilities to excursionists, &c. during the summer months. II. I am not aware of any tickets ever being issued at $1\frac{1}{2}d.$ per day to labourers, nor of any extra facilities being granted them beyond this, that during spring or harvest, companies of labourers were granted return tickets at single fares, from station to station, but only upon special application; nor were labourers in the habit of going to any station from this, but Broughter and Newtown Junction, the ordi-

"nary single fares to which being 2d. and 3d. respectively; the total amount of traffic for these tickets not being 10l. per annum. III. In Mr. Roe's time fewer passenger carriages were in each train than have been since, which may account for the trains not appearing so full. Passengers now have proper accommodation; then they had often to go in cattle and goods waggons, when there was any over a limited number; and while some parties may grumble at the small increase in fares, not one in twenty of those who travel would wish to come back to the old system of slow trains and bad accommodation. IV. The rates for coal, grain, &c. are the same as Mr. Roe charged, any increase being in cartage at Derry. V. I state positively that any decrease which has taken place cannot be attributed to increase of fares or change of management, but to the depression in the markets for agricultural produce during the last three years, upon which produce the Derry and Coleraine line is wholly dependent. Your obedient servant, "D. HAMILTON." I may state that there are no labourers travelling about the line. I do not know whether your Lordship knows the line at all; but the district is not very largely populated, and there are no people travelling about in that way.

7790. Is there any other part of Mr. Roe's evidence concerning the line with which you are connected on which you desire to offer remarks?—I wish to hand in a time table of Mr. Roe's for January 1861, and also a time table of our company for this month, (*delivering in the same*) just to draw the Commissioners' attention to the fact that in Mr. Roe's time only first-class and second-class tickets were issued by some of the trains, whereas throughout the whole of the Northern Counties system we issue first, second, and third class tickets by all trains. I would also state that on the 1st of October 1862 the Northern Counties Board decided to issue third, second, and third class return tickets by all the trains. We had previously issued them on the Carrickfergus shore line, but had not carried it out throughout the whole system. We commenced to issue third-class return tickets on the 3rd of April 1859, and issued them throughout the whole Northern Counties system.

7791. That was in Mr. Roe's time?—Yes. At that time the line from Ballymena to Portrush belonged to Mr. Dargan; we have since purchased the line from him, but he fell into our view at once, and agreed to issue third-class return tickets in connexion with us with all our stations. I had a good deal of correspondence with Mr. Roe on the subject, and it was not until the 1st of May 1860 that we induced Mr. Roe to issue in connexion with us the third-class return tickets. With regard to goods, I may state that no advances have been made in the goods rates. In some cases we have made reductions to secure the traffic, and some slight adjustments have been made. I may mention that Mr. Roe carried grain from Newton Limavady to Derry at 120lbs. to the cwt., and charged 3s. per ton. This was contrary to our arrangement, and contrary to every railway arrangement, to carry at 120lbs. to the cwt.; we arranged with the parties to carry 112 lbs. to the cwt., and charged 2s. 9d. per ton, so that we gave them rather more than the allowance, and they were quite satisfied with the arrangement. The rates may have seemed raised to Mr. Roe, if he has got hold of any of the rates upon the line, because since the Derry Bridge was opened we have included the cartage at Londonderry, but in reality we have only added the cartage, we have not increased the rates. Mr. Roe mentions the Londonderry and Fleetwood rates as being lower in proportion than the local rates. Clearly they are, but then the Derry and Fleetwood rates have not been altered since Mr. Roe's time. The arrangement was made when he was there, and we have extended the system a good deal. We book now in connexion with the principal towns in England, but in most cases we get pretty nearly our local rate from Derry to Belfast. I may

say that we carry at low rates from Derry to Belfast, because we have competition by steam-boat, which has the effect, of course, of keeping down the rates; but we get in the case of the cross-channel traffic, in most cases, quite as much as our local rates. Mr. Roe comments upon our having no interest whatever in the Derry and Coleraine line now, inasmuch as we work it at a mileage rate. I would explain this, that since the 10th of April this year we have been working the line at a mileage rate. Previously we had a lease at 10,000l. per annum; but we found that we were losing money by that arrangement, and we offered to work the line at a per-centage, but the Derry and Coleraine Company preferred making an arrangement with us at so much per train mile for a stipulated number of carriages per passenger train, and for a stipulated number of waggons per goods train. I contend that we are interested in the traffic, because the heavier the traffic becomes the more trains we shall have to run, and the better it will pay us, and the more mileage we have the better it will pay us. A good deal of the traffic on the Derry and Coleraine line is in connexion with the Belfast and Northern Counties, and therefore we are in another way interested in securing the traffic to the line. I may say that our principal object in keeping a connexion with the Derry and Coleraine line is to keep up a proper system with our own company, which works from Belfast to Coleraine. When Mr. Roe had the management of the line there were three companies from Belfast to Londonderry. This did not work very well, and we then purchased from Mr. Dargan the line from Ballymena to Portrush, and we thought it advisable to lease the line from Coleraine to Derry, and since then I need hardly say that the trains have kept better time and been worked with more regularity than they were under the three managements. Sometimes one company would not wait for the other, and the trains were very often late on the Derry and Coleraine line, for Mr. Roe did his utmost to get all the traffic he could, and he did not object to stop at a great number of very small places which the Northern Counties Company thought it inadvisable to continue. I may say that I am very much in favour of systems like the lines from Belfast to Derry and Belfast to Dublin being worked under one management. I think that they are worked far better and far more economically. There are now three lines from Belfast to Dublin, but I think they would be worked far better if it was only one system.

7792. (*Sir R. Hill.*) You mean that there is one line under three companies, not that there are three independent lines from Dublin to Belfast, but that it is one line divided into three portions?—No, there are three separate companies.

7793. (*Mr. Roebuck.*) Are there three lines of railway from Dublin to Belfast?—No, only one line, but there are three companies.

7794. (*Chairman.*) Is there any other point in connexion with Mr. Roe's evidence which you wish to notice?—Mr. Roe attributes the reduction of the receipts to our advance of the fares and rates. I deny altogether that those fares and rates have been advanced; but I think it is as well perhaps for me to explain that we have had two or three very bad years in Ireland, particularly in the agricultural parts of Ireland; and in addition to that, very soon after we took up the lease of the Derry and Coleraine line a new line was opened, the Dungannon and Omagh, making a second line from Londonderry to Belfast. We used to get a large traffic from Strabane and Omagh in pork and flax, and we also got a good many passengers from that district as far down as Enniskillen. We lost all that upon the opening of the Dungannon and Omagh line; and in addition to that we have been obliged, to avoid opposition, to make an arrangement with the other companies to give them a proportion of the traffic, and of course that has tended to reduce the receipts. This year the traffic has a good deal improved, and the receipts upon

10 Nov. 1865.

the Derry and Coleraine line for the year 1865 are considerably more than they were. On the Northern Counties, for instance, we are at this moment up very nearly 10,000*l.* on the 10 months as compared with last year. The north of Ireland is in a very prosperous state at present. In Belfast the people are, I believe, coining money; never were they in so prosperous a state, and we are reaping the benefits of their prosperity. I will hand in a statement which shows the receipts on the Derry and Coleraine line from 1860 to the present time. I give the year before Mr. Roe left and the four or nearly five subsequent years.

7795. (*Sir R. Hill.*) Will you tell us what the receipts were in each year?—In 1860 the total receipts, which include the cartage in Londonderry, were 17,959*l.* 5*s.* 6*d.*

7796. Do these receipts include goods as well as passengers?—Yes, they include goods, passengers, and mails. We have made up the year ending the 3rd of November 1865, and the receipts are 17,274*l.* 17*s.* 6*d.* Also during that year we have had to pay considerably to the other companies, besides losing a very large traffic from the opening of the Dunganon and Omagh line.

7797. (*Capt. Galton.*) The sum you have mentioned is the total receipts?—Yes.

7798. (*Sir R. Hill.*) The total receipts after deducting the payments of which you speak?—Yes, after deducting those payments. The first year that we had the line our receipts were more than they were the last year that Mr. Roe had the line. Our receipts for the first year were 18,552*l.* Perhaps I had better state the receipts of each year, beginning with 1860. In 1860 they were 17,959*l.* 5*s.* 6*d.*

7799. At that time Mr. Roe had the line?—Yes, in 1861 the greater portion of the time we had the line, and the receipts were 18,552*l.* 14*s.* 8*d.* In 1862 we were beginning to feel the opposition a little, and the receipts were 18,369*l.* 8*s.* 6*d.* In 1863 which was a very bad year, we had no corn moving, and no potatoes being shipped, which seriously affected the Derry and Coleraine line, and the receipts went down to 17,791*l.*, which was not a very large decrease, but still it was a falling off. In 1864 the receipts were 16,206*l.* 7*s.* 1*d.* In that year we felt more severely the effects of the opening of the opposition line, and we paid to the other companies nearly 600*l.*

7800. Which 600*l.* is deducted?—Yes; everything is deducted.

7801. (*Capt. Galton.*) In what way did you pay it; was it as a share of the traffic?—The arrangement is this: that we put our traffic and their traffic into a common fund, and we give them a proportion of it in order to avoid opposition. I may say that we give them a proportion which is considerably more than they carry.

7802. And the result is that you carry a greater amount of traffic?—Yes, we carry nearly the whole of the traffic, and have to pay them over the net receipt.

7803. (*Sir R. Hill.*) Is it divided equally?—No, they get less than half of the receipts.

7804. You have such accounts as will show that you paid to the company 600*l.* out of your proper traffic?—Yes.

7805. (*Capt. Galton.*) Is it a proportion of the Londonderry traffic?—The 600*l.* is the Londonderry and Coleraine proportion of the whole amount.

7806. I mean, is the traffic that you divide Londonderry traffic?—Yes, the Londonderry and Belfast traffic; all traffic passing through Belfast; all traffic coming into England and Scotland from Londonderry; simply Londonderry traffic.

7807. I think you stated that this year, 1865, you have already received 17,274*l.*, as compared with 16,206*l.* last year?—Yes, about that.

7808. (*Sir R. Hill.*) I understood you to say that that was for the year ending at this time?—Yes, for the year ending the 3rd November 1865 we received

17,274*l.*; that was for the year beginning the 3rd November 1864.

7809. (*Capt. Galton.*) Are the receipts which you have been giving us all for the years ending the 3rd November?—No; the previous years are for the years ending the 31st December.

7810. Which would correspond, would they not, with the Board of Trade returns?—Yes, they should do so. I think it is very likely that in the Board of Trade returns they have deducted the Derry cartage. I have included that in this instance, because we could not arrive at what Mr. Roe's cartage was, and we thought that it was only fair to include the Derry cartage for that one year, as it was included in his statement. I also see by Mr. Roe's evidence, what we never heard of before, namely, that he includes profit on the coal traffic that he carried on the line. He not only includes the rates that he charged for the carriage of this coal, but, as I read it, he stated in his evidence that he included the profit which he made upon the sale of those coals. He never stated this to the Northern Counties Railway Company, and I may say that it was upon his figures altogether that they relied in taking up the lease of the line at 10,000*l.* a year. We also gave Mr. Roe an amount for giving up his lease.

7811. (*Sir R. Hill.*) Are you sure that Mr. Roe includes the profit on the coals?—I merely take his own words in answer to question 5877.

7812. In that question he was asked, "You were a coal dealer?" to which he replied, "I imported the coal, and gave a commission to the station-master to dispose of it. I charged the regular reduced rate over the line, and gave the line credit for it in the receipts." There is nothing there about profit from coals?—I read it in that way. I understood it to mean that he gave the line credit for the coal profit.

7813. You are aware now that that is a mistake?—Yes, I will take it so. I only saw this part of the evidence this morning.

7814. (*Capt. Galton.*) Will you explain about the Derry cartage. You included the Derry cartage, but now there is no charge for cartage. Is that because the bridge now connects the railways together at Londonderry?—No, the bridge makes it a further distance from our station into Londonderry.

7815. Is there no railway bridge?—No, there is no railway bridge at present; there will be a tramway underneath, and all traffic has now to be carted across the bridge over into the town of Derry. We are on the opposite side of the water.

7816. Any traffic going on by the other railway has a break in its communication?—Yes.

7817. (*Sir R. Hill.*) And that cartage you included in the receipts?—Yes, it was included by Mr. Roe. We would not have included it, but we thought, for the sake of comparison, it would be necessary to include it.

7818. Does it appear in Mr. Roe's evidence that it is included?—We have his books, and we know that everything was included. Mr. Roe publishes at the end of his evidence a statement of the traffic, where I see he also states that, during the year 1860, the first-class fare is 1½*d.* per mile, the second-class 1*d.*, and the third-class ½*d.* and a fraction, and in some portion of his evidence he states that he had only tried it for six months, but I can assure you that he never tried it at all, or, at least, I never heard of it, and he never gave us the information. He handed us over the fares when we took up the line, and those fares were acted upon up to the 1st of November 1863, when this small advance that I have mentioned was made.

7819. Will you state to the Commissioners what the fares were that he handed over to you; first, what was the charge for first-class passengers?—The first-class fare from Derry to Coleraine was 5*s.* 6*d.*, that is exactly 2*d.* per mile.

7820. And you say that he had always charged 2*d.* before you took the line?—Yes. I not only state

that that is so, but I corroborate it by a letter from the booking clerk in Derry, who was there some time before Mr. Roe left, and also from the station master of Newton Limavady, who has been there for some years.

7821. What was the charge for second-class passengers?—4s. for 33 miles, that is just about $1\frac{1}{2}d.$ per mile.

7822. Instead of $1d.$, as stated by Mr. Roe?—Yes, instead of $1d.$, as stated by Mr. Roe; and the third class was 2s. 8d. for 33 miles, or nearly $1d.$ per mile; it is now exactly $1d.$ per mile.

7823. Are we to understand that you directly contradict the statement which Mr. Roe made?—I do, most positively.

7824. (*Chairman.*) Have you formed any decided opinion as to the possibility of developing Irish traffic largely by greatly lowering the rates?—My impression is most positively that the Irish traffic is fully developed at present.

7825. Do the railroads take all that there is?—I do not say that if you were to reduce the fares one half you would not increase the number of people that travel. I think you would, but I feel quite certain that you would diminish the amount of receipts. I am speaking now generally of business lines. I am not speaking particularly of any short pleasure line. My impression is, that for a short pleasure line you cannot have the fares too low. In our system, during the summer time, we issue tickets at very low fares indeed to our watering-places. We take people to Portrush very often at $\frac{1}{2}d.$ per mile, and all our arrangements are very low in regard to anything in the shape of excursion traffic. We also issue from a great number of our stations market tickets at single fares, particularly for short distances; we had found that the people used, four or five, to club together and get one car, and it was necessary for us to meet that, and I introduced the system of market tickets upon the line, and I think that they have been advantageous to the company. Mr. Roe mentioned something about market tickets, but I cannot find that he ever had anything of the kind. We issue some now on the Derry and Coleraine line, which he had not when he was there; but generally on business lines, my impression is, that the present fares are considered very fair. I have heard very few complaints in the north of Ireland as to the present fares.

7826. (*Sir R. Hill.*) Will you state to the Commissioners what your present fares are?—Our fares are about $2d.$, $1\frac{1}{2}d.$, and $1d.$ per mile, some of the first class and second class are a trifle more, about 5 per cent. more in some cases, but the third-class fares are generally under $1d.$ For instance, the third-class passengers from Belfast to Ballymena form a very considerable portion of our traffic, and we carry them that distance, 33 miles, for 2s. 6d., and give them third-class return tickets at a fare and a half.

7827. (*Capt. Galton.*) Is not that a high charge for the labouring people in that part of the country compared with the rate of wages?—The actual labouring class who get 8s. or 9s. a week cannot afford to pay anything; they are working all their time, and they cannot afford to travel.

7828. But in this country the labouring classes travel, though in many parts of the country they do not get above 8s. or 9s. or 10s. a week?—They certainly travel very little in Ireland; they have very little to spare when they have paid for their living and the support of their families. The wages, in the north of Ireland particularly, are very much advancing, and I believe they will very soon get up pretty nearly to what they are in England, and then very likely they will travel more.

7829. (*Sir R. Hill.*) You gave us the total charge that was made between Derry and Coleraine during the time that Mr. Roe had the lease of the line, are the present charges made by your company the same?—No; I explained that they are 5 per cent. higher. They were the same up to the 1st of December 1863, but since that period the first-class single fare from

Derry to Coleraine, which is a distance of 35 miles, is 5s. 9d.

7830. What was it under Mr. Roe?—5s. 6d.

7831. It was raised from 5s. 6d. to 5s. 9d.?—Yes.

7832. Then as to the second class?—It has been raised from 4s. to 4s. 2d.

7833. And the third class?—It was raised from 2s. 8d. to 2s. 9d.

7834. (*Mr. Roebuck.*) What was the immediate consequence of that rise?—I believe most positively that the railway company have made the whole of the 5 per cent. that they put on the fares.

7835. Was that in consequence of your raising them 5 per cent., or in consequence partly of the improved condition of the people?—There is no doubt about this, that the increased receipts have been to some extent from the improved condition of the people, because our increase is considerably more than the 5 per cent.; but my impression is this, that a small advance of 5 per cent. would not stop any person from travelling. If we had advanced the fares considerably, then I think it would have affected the receipts very much.

7836. Supposing that you had not made an advance of 5 per cent. upon your traffic rates for passengers, and taking into consideration the improved condition of the country, would not you, without that raising of the 5 per cent., have obtained the same quantity of money?—I think not. I think we have made the 5 per cent.

7837. (*Sir R. Hill.*) You think that the advance of 5 per cent. did not in any degree check the traffic?—No; I should state that we did not advance this 5 per cent. on the short stations out of Belfast; it might have affected the short distances where there was a large traffic, but we only carried it out upon the longer distances. My impression is that we have received the whole of that 5 per cent. extra.

7838. If an advance of 5 per cent. did not check the traffic, would another advance of 5 per cent. check it, do you think?—Some years ago the Great Southern and Western Company added 10 per cent. to their passenger fares, which at that time were very similar to ours, I think, $2d.$, $1\frac{1}{2}d.$, and $1d.$, they added 10 per cent. to their receipts, and I always understood that they considered that they made the 10 per cent.

7839. Do you think that a third addition of 5 per cent. would not check the traffic?—I think that any advance requires to be done cautiously, and with a great deal of consideration. I gave the matter very considerable attention before I advised the directors to put 5 per cent. on the fares, and it was then done cautiously, and we made some exceptions.

7840. (*Capt. Galton.*) You think that a slight rise of 5 per cent. at a time by steps would have no effect in decreasing the traffic?—I do not say that. You may get up to a very large fare.

7841. On the first of December 1863 you raised the passenger fare 5 per cent.?—Yes.

7842. Then there is no comparison to be instituted from the Board of Trade returns?—No. I have a statement here of the receipts of the Northern Counties Company, and I can give you the figures.

7843. You raised the fares in November 1863, then the year 1863 and the year 1864 will afford a fair comparison of the results of the rise of the fares?—Yes, and I can give you 1865 also.

The same was delivered in. Vide Appendix.

7844. It appears from the Board of Trade returns that the number of passengers on the Londonderry and Coleraine line for the year 1863, when you had the lower fares, were 153,963?—I have not got an account of the number of the passengers. I have only got the money receipts.

7845. By the Board of Trade returns it appears that in 1863 there were 153,963 passengers, and that in the year 1864, after you made this rise, there were 148,000 and upwards, being a decrease of 5,000 passengers; but that in the money receipts the total

E. J. Cotton,
Esq.

10 Nov. 1865

E. J. Cotton,
Esq.
10 Nov. 1865.

receipts from passengers of all classes in the Derry and Coleraine line were 9,379*l.*?—My statement gives 9,817*l.* 6*s.* 5*d.* for 1863.

7846. The Board of Trade return for the year 1864 gives 9,083*l.*, therefore there is a falling off both in the number of passengers and in the receipts from passengers in the first year after the rise of the fares?—Yes; but in 1864 we had to pay a considerable sum to the Omagh route, which we had not done in 1863.

7847. But that would not affect the number?—No; it would not affect the number, but it affects the amount.

7848. To what extent does it affect the amount?—About 300*l.* My statement is this, that in 1863 the receipts were 9,817*l.* 6*s.* 5*d.*, and in 1864 they were 9,507*l.* 0*s.* 7*d.* I do not know whether some deductions may have been made in that amount, but this is the actual traffic as given to me by our audit superintendent.

7849. On referring to the Board of Trade returns, which divide them according to the different classes, we find that of the first class, in the year 1863, there were 19,872, as compared with 18,800 and some odd in 1864; of the second class there were about an equal number, namely, 29,000 and a few hundreds in the two years; and of the third class there were, in 1863, 104,530 as compared with 99,500 and odd in 1864. Therefore in the third-class passengers there was a falling off of about 5,000?—I can account for that pretty nearly in this way; that in 1864 a line was opened from Londonderry to Lough Swilly, and a large number of those excursion passengers who used to go to Castlerock went to Lough Swilly the first year that that line was opened. I think we did not lose so many this year. People are gradually getting back to the old place, but Lough Swilly being a new place of attraction, they went there. The number appears very large, but the money would not appear so large, because the fares were very low.

7850. The receipts from the third-class passengers were 4,345*l.* in 1863, and 4,100*l.* in 1864?—Yes; and I think that that would be accounted for to some extent by the allowance for the other routes, and the falling off owing to the number of passengers going to Lough Swilly instead of Castlerock and Portrush.

7851. (*Sir R. Hill.*) With those disturbing causes in operation, are you enabled to say that that advance of 5 per cent. on the fares did not injure the traffic, and that the actual falling off was not owing to the advance in the fares?—I think that is shown by this fact, that in the year ending November 1865 we have received 9,820*l.*

7852. (*Capt. Galton.*) Between the two years 1863 and 1864 you had realized very nearly the same amount of receipts from the traffic, although you did not carry so many passengers?—Yes.

7853. At any rate the increase in the fares has been an inconvenience to the public?—I have not heard much about that; it is not much talked of.

7854. It has been a practical inconvenience to the public, has it not?—I believe you have had no people coming from our district to make any complaint on that score.

7855. It is a general deduction from your figures; you considerably decrease the numbers, but you have got the same amount of money?—I state that there are those other causes in operation, namely, the Lough Swilly line opening, and also the allowance which we have had to make to the Omagh route, which we had not to make in 1863.

7856. (*Mr. Roebuck.*) That would not affect the number of passengers, would it?—Yes, it would, very much; because the number was very large that used to go from Derry to Castlerock, as compared with the money received, and those people went in 1864 to Lough Swilly, to this new place which was opened.

7857. Your payment to other companies would not affect the number?—I do not know whether it would affect the published number. They have not furnished me with the numbers in this return, but the money

amount which they have given me does not agree with the Board of Trade returns.

7858. (*Capt. Galton.*) The Board of Trade returns were given in by you, and therefore we may assume that they are correct?—I do not know by whom they were furnished; I suppose by us, not by the Coleraine Company.*

7859. (*Sir R. Hill.*) Will you give me again the total receipts for passenger traffic on that line for 1863; I understood them to be 9,817*l.* 6*s.* 5*d.*?—That is so.

7860. And in 1864, 9,507*l.* 0*s.* 7*d.*?—Yes.

7861. How much in the year ending the 3rd November 1865, which is just completed?—9,820*l.* 14*s.* 2*d.*

7862. Then we find that the receipts for the year just completed are practically the same as for the year 1863; is not that so?—Just about the same.

7863. But in the interval between those two years you raised the fares 5 per cent.?—Yes, we did.

7864. And you stated to the Commissioners just now that you gained the 5 per cent.?—In the interval we have had to pay a proportion to the other route, and we have also lost some of those passengers who used to go over our line to Castlerock, and who now go upon the Lough Swilly line.

7865. But the broad fact is, that you raised the rate 5 per cent., and got as much and no more after raising it than you did before. How then can you appeal to the facts of the case and say that you gained your full 5 per cent., whereas in reality you gained nothing at all?—In stating that we gained the 5 per cent., I referred more particularly to the whole system.

7866. We wish to confine your attention to this particular line between Londonderry and Coleraine, and to ascertain what was the effect upon that line of advancing the fares 5 per cent. It would seem by comparing 1863 with 1865 as though the effect was to leave the traffic receipts precisely in the same state?—There were those other causes which I think operated very considerably upon the receipts. I spoke more particularly with regard to the whole system, and I should like to give the amounts received throughout the whole system.

7867. We will confine your attention to this particular line. Mr. Roe's evidence had reference to the line between Londonderry and Coleraine, and you state in effect that that evidence was misleading?—Yes, certainly.

7868. We can only ascertain whether or not it was misleading by obtaining from you the facts confined to that line?—If Mr. Roe had stated in his evidence that we had raised the fares 5 per cent. since the 1st December 1863, I should not have come here to-day, because that is a fact. But he stated that the fares that he had charged were $\frac{1}{2}$ *d.*, $\frac{3}{4}$ *d.*, and 1*d.*, and that we raised them to 1*d.*, 1 $\frac{1}{2}$ *d.*, and 2*d.*, and that I say is certainly contrary to the facts of the case.

7869. That we understand; but in addition to that you tell us that the raising of the fares 5 per cent. did not in your opinion reduce the traffic, but that the company got the whole 5 per cent.?—I say that in that statement I referred more particularly to the advance of 5 per cent. throughout the whole system.

7870. Then are we to understand that upon the Londonderry and Coleraine line there was not any gain in consequence of the raising of the fares?—I think there was, because I think that the opening of the Lough Swilly line interfered with our receipts, and we also had to pay an amount to the other route which we had not to do in 1863.

7871. How much will you have to pay in 1865?—I suppose very nearly 400*l.* for passengers.

7872. And in 1863 you paid nothing, I believe?—

* Witness subsequently explained that there was in reality no discrepancy, the return furnished to the Board of Trade showed passengers as a separate item, whereas the return handed to Commissioners by witness included parcels, horses, carriages, and dogs.

*E. J. Cotton,
Esq*

10 Nov. 1865

In 1863 we paid 58*l.*; we commenced at the end of 1863, and we paid 58*l.* altogether that year for goods and passengers.

7873. In the meanwhile was not the population increasing, and does not the population of Londonderry increase very much?—My impression is that the population throughout the Derry and Coleraine district is less than it was in 1863. A great number have emigrated from that neighbourhood.

7874. Have you closed any of the smaller stations between Londonderry and Coleraine?—We closed a small place called Wilsborough, which was kept open for one gentleman named Major Scott; and we closed another place which was kept open only for two or three houses, a place near Magilligan. We closed them immediately on taking up the line.

7875. Do you know what were the earnings at those stations?—Something very small, or we should not have closed them. I may say that Mr. Roe advised us, on taking up the line, to close those and one or two others. One station which we thought of closing, and which he advised us to close, was Ballykelly, but we found that the Derry and Coleraine Company had some old arrangement with the Fishmongers' Company, so that we were unable to close that station. I may say that there is another station a mile from it, so that it was thought that one station would be sufficient.

7876. You work the Londonderry and Coleraine line at a mileage rate, do you not?—Yes we do.

7877. Have you any objection to state what that rate is?—None whatever. It is 2*s.* per mile up to 7,500 miles per month, beyond that 1*s.* 8*d.* per mile.

7878. And is there a limit to the length of the train?—Yes; the passenger trains are not to exceed seven vehicles, and the goods trains are not to exceed 25.

7879. Do you count the engine and tender along with the carriages?—No.

7880. The passenger trains are not to exceed seven carriages?—They are to be seven carriages, and if they exceed that number we have power either to put on an extra engine, or to run extra trains.

7881. And what expenses are included in that 2*s.*?—Everything.

7882. The repair of the roads?—When I say everything, I mean everything but the renewal of the line. The renewal is still in the hands of the Derry and Coleraine Company. They find rails and sleepers for renewing the line, and we find the station-masters and everything else.

7883. You find carriages and engines?—Yes.

7884. And police?—Yes, everything.

7885. And lighting?—Yes, everything but what we call the renewal of the line, that is to say, the rails and sleepers, which are to be found by the Derry and Coleraine Company.

7886. (*Capt. Galton.*) It would appear that you have diminished the number of trains on the line during the year 1864 as compared with 1863?—No, I think not; I think they are the same.

7887. The Board of Trade return gives 17,158 passenger trains in 1863 as against 16,000 and some hundreds in 1864?—I am not aware of that.

7888. And the miles run by the trains were 437,500 in 1863, as compared with 422,900 in 1864?—There must be the same number of trains. I do not remember any alteration.

7889. I am speaking now of the whole system?—I remember that we arranged to run a goods train as a passenger and goods train, and saved a train on the Northern Counties system. I thought that you were speaking of the Derry and Coleraine line. I think it is very likely we did reduce the mileage a little, but it will be very much increased this year. I can explain exactly how it was. In 1863 we ran an express train from Belfast to Portrush; in 1864 we did not run that train; but in 1865 we did run an express train, and we have decided to run that train next year also.

7890. (*Sir R. Hill.*) How many passengers will

each carriage convey?—I suppose we might take them upon the average as 35 or 40.

7891. Take a first-class carriage, how many compartments has it?—Four compartments; a full first-class carriage would hold 32 passengers.

7892. Your gauge is rather wider than ours, is it not?—It is; our gauge is 5 feet 3 inches.

7893. Do you doubt the accuracy of Mr. Roe's statement as to his having paid a rental of 10,000*l.* a year, and still obtained a profit from the line?—I have no means of knowing whether he made a profit or not; but he stated, when we were about taking up the line, that he had made a profit; and our company gave him 1,000*l.*, besides taking all his stores off his hands and everything he had at full cost.

7894. Since that time the line, I think you stated, has not produced a profit?—No; we considered that we lost money by working it; but it was not so much that that we felt as the renewal of the line; the line had run down a good deal, and a great portion of it required new rails and sleepers, and under the old lease we were bound to do everything that was necessary. Now under this new arrangement we are not bound to renew the line, which is a very serious matter. A very considerable portion of the line required almost immediate renewal. They have renewed one mile, and the rails are, I believe, in Londonderry at this moment for the renewal of rather more than another mile of line.

7895. Will you explain the mode in which the receipts upon the line are now disposed of; do you hand them over to the Derry and Coleraine Company?—We hand them over to the Derry and Coleraine Company, less our working expenses.

7896. And is the balance sufficient to pay the interest upon the capital expended on the line?—No, there is not sufficient at present to pay the bondholders, but the traffic has improved a good deal, still I do not think they will have sufficient to pay the bondholders.

7897. Then the ordinary shareholders, I should presume, get nothing?—I think they never expect anything.

7898. (*Capt. Galton.*) Who pays the whole staff of the line?—We do.

7899. Do you find the whole staff?—Yes.

7900. And you maintain the line?—Yes, we maintain the line at our own expense, but we do not renew it. We find everything that is required for the maintenance of the road, but we do not find the rails and sleepers, and the materials for renewing the line.

7901. (*Sir R. Hill.*) Do you re-ballast it when necessary?—Yes, for the ordinary maintenance of the line we do.

7902. (*Capt. Galton.*) In what way is that renewal of the line provided for?—It is expressly provided for in our agreement with the Derry and Coleraine Company, that if they do not renew immediately the different portions of the line that are worn out, we are to have the power to do it, and charge it to them, and deduct it from their receipts.

7903. Have you the sole decision as to whether the line is to be renewed or not?—We have.

7904. Could you, at your own will and pleasure, require that every part of it ought to be renewed?—No.

7905. Is there an arbitration clause in the agreement?—Yes, there is an arbitration clause, if they think that it does not require renewal. They have an engineer of their own, and they send him to our engineer, and then they arrange between them as to what is necessary to be done. We have sent them in an application now to renew some portion of the line.

7906. (*Sir R. Hill.*) Does your company determine upon the fares to be charged over the Derry and Coleraine line?—No. We have carried on the arrangement which was in force when we had the lease of the line, and the Derry and Coleraine Company have power to alter any fare or rate that they like, provided they do not go below 1*s.* a ton for goods,

E. J. Cotton,
Esg.

10 Nov. 1864.

that is the only restriction which we have made. They have it in their own hands to do anything they like. Mr. Tyrrell, who has just died, acted for them. He was a good deal in Londonderry, and he was their chairman, and every suggestion that he made during the summer was carried out. He was quite satisfied, and expressed himself very often as quite satisfied with all our arrangements.

7907. (*Capt. Galton.*) Is the Belfast and Northern Counties Railway connected with any other railway, besides the Derry and Coleraine Railway?—The only other line with which it is connected is the Carrickfergus and Larne, which is a short line that we work.

7908. It is not connected with any line to the south?—No, not at present. There is a line being constructed from Antrim to Lisburn, but it is not finished yet, and that will connect us with the Ulster Railway, and all the railways as far as Dublin.

7909. Do you suffer any inconvenience from the want of communication with the lines south of Belfast?—I think not.

7910. You think that it would be of no advantage to the public if the lines to Belfast were united together?—I think that it would be an advantage to the public if there was communication between the two lines. Our station is some distance from the Ulster railway station, and the Belfast Central Railway Company have a Bill for connecting the two lines.

7911. Do you think it would be convenient for yourselves if trains could run direct from Dublin to Londonderry by your line?—No, there is no chance of that, because the other is the shorter route.

7912. Do you not think it would be convenient either to yourselves or to the public?—Not from Dublin; but from Armagh, Portadown, and other places on the Ulster line it would be an advantage to run on one system: not perhaps to Londonderry, but to Ballymena. Ballymena is a large place, and the centre of the linen trade; it is about the best place in the north of Ireland, excepting Belfast, for the linen trade.

7913. Then you think that there is public inconvenience in the lines not being connected at Belfast? I think that it would be an advantage if they were connected, and Bills were passed last year and the previous session for that connexion.

7914. Why has it not been carried out?—It is in the hands of some financial company, I think, who have not yet carried it out. The shares are not taken in Belfast. In fact, I do not think the shares are issued. It is in the hands of a financial association.

7915. Has the Belfast and Northern Counties Company made any efforts to procure that junction?—We are to have a meeting on the subject with the Belfast Central Company, I think, next week.

7916. (*Sir R. Hill.*) You have had some experience of competition between railways, have you not?—Yes.

7917. Will you state to the Commissioners your opinion as to the advantages or disadvantages of competition between railways, so far as the subject has come within your experience?—I think, as far as Ireland is concerned, that there is not sufficient traffic to support competing lines; but in England, between some points I am sure that there is sufficient traffic.

7918. Confining your attention to the instance of competition which has arisen under your own notice, namely to the line between Belfast and Londonderry, which competes with you, what is your opinion as to the advantage of that competition?—I consider that a second communication is of no advantage in the world, so far as between Belfast and Londonderry is concerned. No doubt it is a great advantage to many places on the Irish North-western line to have communication across from Omagh to Dungannon, and through to Belfast that way; but so far as Londonderry is concerned, it is of no advantage, for hardly any one goes that route. I may say that 19-20ths more go by the Northern Counties' route to Belfast,

that is, our route. We have a better service of trains, and we have made such arrangements with the other company that they have never attempted to compete with us.

7919. The competition has not led to any reduction of the fares?—No, certainly not.

7920. Then it would appear from your statement that the instance of competition which has come within your knowledge has had no effect advantageous to the public, whilst it has been injurious to the shareholders?—Clearly so, as far as the communication between Belfast and Londonderry is concerned. I wish the Commissioners to understand that, because the making of the line from Dungannon to Omagh made this connecting link; but I do believe that the making of that line was of advantage to a number of people who live on the Irish North-western line, and who live between Omagh and Dungannon. You see that the making of that line formed a competing route, but in addition to that it gave a connexion with Belfast from all that district, which they very much wanted.

7921. There is no competition as between the intermediate stations on the one line and on the other line?—No.

7922. The competition is between the terminal points?—Although there is no competition, we lost very considerable traffic by the opening of that line not only from Londonderry, but from Strabane and Omagh, and even as far as Enniskillen. We used to bring pork and a very large quantity of flax from Strabane and Omagh, all of which we lost on the opening of this Omagh line.

7923. Still looking at the whole results, in your opinion there has been no advantage to the public living at the terminal towns from the possession of this competing line?—None whatever.

7921. While on the other side the competition has injured the shareholders of the Derry and Coleraine line?—Clearly, and of the Northern Counties line also.

7925. (*Capt. Galton.*) You think that there is not a sufficient amount of traffic in your part of Ireland to justify the establishment of competing lines?—I think there is not in Ireland at all.

7926. And you are in the richest part of Ireland?—Yes. I have been eight years the manager of the Belfast and Northern Counties line, and I was previously the manager of the Waterford and Kilkenny line, so that I know something of the southern district, and certainly there is no traffic to pay for competition. I know Ireland pretty well, having lived there for 12 years, and I certainly do not think that there is any room for competition.

7927. You think that the position of Ireland with respect to railway accommodation is different from that of England, in which there is a basis for competition?—I think there is room for competition between some particular points in England where there is a very large traffic.

7928. (*Sir R. Hill.*) That is to say, when there is traffic enough for two lines, you think it is well that there should be two lines?—Yes, that is my opinion; but that is not likely to exist in Ireland.

7929. (*Chairman.*) In fact, if two companies did begin to compete in an Irish rural district, it would probably come to this, that they would half ruin one another, and then they would combine?—Yes.

7930. (*Capt. Galton.*) And raise the fares?—Yes. In the session before last we opposed successfully a line that was proposed to be made from Armagh to Cookstown. We, in connexion with the Ulster Company, opposed that line, which would have had the effect of dividing the traffic from Cookstown to Belfast. The traffic as it exists from Cookstown to Belfast very little more than pays the working expenses, and to come and divide that traffic would be very serious to the Northern Counties Company.

7931. Did not you state that the line from Cooks-

town was going to be extended?—No; we threw out a Bill in 1863 to connect Cookstown with Armagh.

7932. What was the line that was to have a junction with the Ulster line?—That is from Antrim to Lisburn, and that line is partially made.

*E. J. Cotton,
Esq.*

10 Nov. 1865.

The witness withdrew.

Adjourned to Tuesday next at half-past 11 o'clock.

Tuesday, 14th November 1865.

PRESENT :

THE HON. E. F. LEVESON GOWER, M.P.
SIR ROWLAND HILL, K.C.B., F.R.S.
J. A. ROEBUCK, ESQ., M.P.
GEO. CARR GLYN, ESQ., M.P.

A. S. AYRTON, ESQ., M.P.
CAPT. DOUGLAS GALTON, R.E., C.B., F.R.S.
J. R. MCLEAN, ESQ., PRES. INST. C.E.
WILLIAM POLE, ESQ., F.R.S., *Secretary*.

THE RIGHT HON. LORD STANLEY, M.P., F.R.S., IN THE CHAIR.

FREDERIC HILL, Esq., examined.

F. Hill, Esq.

14 Nov. 1865.

7933. (*Chairman.*) I think you are assistant secretary to the Post Office?—Yes.

7934. Have you held that office for the last 14 years?—I have.

7935. And during your tenure of that office has your attention been directed to questions of railway management and legislation as regards railways?—It has.

7936. Have you had to do with the railway department of the Post Office?—I have.

7937. And with the making of contracts with the various companies?—Yes.

7938. Has your official experience in that position made you aware of any difficulties arising under existing arrangements in obtaining the postal facilities that are required?—Yes.

7939. Would you explain a little in detail what those difficulties are?—The difficulties consist very much in the want of a real power of obtaining the use of the railways upon what we may deem to be reasonable terms. In the present state of the law, in case we cannot come to terms with any railway company the case is referred to arbitration, and I need not say that the natural leaning of arbitrators would be in favour of the smaller power rather than of the greater. The general idea that the purse of the State is almost inexhaustible seems to have the effect of inducing arbitrators to award terms which, as far as we are able to come to a correct judgment on the subject, after taking the opinions of engineers, are often very much too high. This curtails the use of railways, and makes us fearful of entering into engagements concerning them, and of employing railways even where the public, and we believe the railways themselves, would be much benefited if we could so employ them. We are deterred by what we consider their generally excessive charges.

7940. When you say that the terms fixed by arbitrators in your judgment are too high, I suppose the arbitration is conducted in the usual manner, each party choosing one and the two choosing an umpire?—Yes, quite so.

7941. I presume that it does not appear that the business of conducting those arbitrations falls constantly or frequently into the same hands?—No.

7942. Therefore, what you complain of is the general tendency on the part of all that class of men to whom arbitration is referred to overcharge a Government department because it is a Government department?—Yes; we think that we stand very much towards railways, as railways stand towards private individuals. We apprehend that there is a similar tendency in juries to award excessive compensation in the case of railways, owing to the magnitude of the concern and the idea that the railway company is a wealthy body; and the same feeling acts injuriously towards the Government as represented by the Post Office.

7943. Then that feeling, whatever may be its force,

operates in every case where Government has to deal with individuals, and it would operate as in favour of individuals more strongly than as in favour of large railway companies?—We think so; at least it is my impression that it would be so.

7944. Are there any other inconveniences to which you wish to call the attention of the Commissioners, besides that of not obtaining sufficiently favourable terms in cases of arbitration?—No, excepting that that circumstance very much diminishes the use of railways, and the public might have many more mails carried by the railways than is the case under present circumstances. I believe that in Belgium, where the conveyance of the mails by the railways is not attended, under ordinary circumstances, with any expense to the Government, and in France also, a more frequent communication takes place between town and town in many instances than is the case with us, notwithstanding the far greater magnitude of the correspondence in England and the much greater necessity there is for frequent communication than exists upon the Continent.

7945. We hear sometimes complaints made that in places between which there is railway communication the mails are nevertheless sent by horse and cart, or in some other mode apart from the railway?—Yes.

7946. Ordinarily where that occurs, is it owing to the circumstance that the charge demanded by the railway company is too high?—Not always, nor necessarily, as frequently it happens that the communication, especially in the night, can be made quite sufficiently fast without the use of the railway. A mail from here to Brighton, for example, could be sent by a cart, if despatched at night, so as to arrive at Brighton and be in as good time for the first delivery at Brighton as if it arrived four or five hours earlier. It frequently happens that the mail would be merely lying useless in the office if it arrived earlier. Then it would be quite reasonable for a railway company to charge heavily for a special train to run in the night when there are few passengers to assist in paying the cost of the train. Consequently it is often the cheaper mode to send mails by carts, and the object is as fully attained as if they were travelling at the rate of 40 or 50 miles an hour.

7947. It happens, as a matter of fact, does it not, that you have very frequently to require railway companies to run special trains for the conveyance of the mails, that is to say, to run trains at hours at which they would not run them by their own choice?—I cannot say that that very frequently happens. We fix the times; but in fixing the times, of course, for our own advantage and for the saving of the public money, we endeavour to make the times tally as nearly as possible with those which would suit the public wants.

7948. But as a fact, I suppose you have to pay, not merely for the actual service which you command, but for the disturbance which you produce in the

F. Hill, Esq.

14 Nov. 1865,

time table by interpolating a train which the company is compelled to run whether it wishes or not?—Certainly; and an arbitrator would take that into consideration, and fairly so.

7949. You have stated that in some foreign countries, especially in Belgium, the mails are carried without cost to the State; is that because the railways are the property of the State?—Frequently because they are the property of the State. We know that in France they are not the property of the State, although the State has a reversionary interest in them, and ultimately they will all become State property; but there the general arrangement is that the mails and troops and some other things which I need not specify, shall be carried by the railway companies without charge; at least so far as letters are concerned that is the case. The question has arisen, whether the exemption from charge properly extends to patterns and some other matters; but as far as letters are concerned they are conveyed without charge by the railways as one of the terms upon which the concession of the railway is made, unless a special train is required. If a special train is required, even in France, a payment is made, but so long as the Post Office can make use of the ordinary trains, they pay nothing for the transmission of their mails.

7950. It, in fact, is a tax imposed upon those railway companies in another form?—It is so.

7951. And under our system, if Parliament had at any time thought fit to make it a condition of granting a concession to any new line that they should carry the mails gratuitously, there is nothing to prevent their so doing?—No.

7952. What I mean is this, that there is no necessary connexion, as I understand it, between the property of a line being vested in Government, and the fact of the mails being carried gratuitously?—No necessary connexion.

7953. (*Sir R. Hill.*) It is not the desire of the Post Office, is it, that the mails should be carried gratuitously?—No, it is not.

7954. The Post Office would prefer paying the companies a remunerative price, to having the mails carried for nothing, would they not?—Yes, so long as it is not more than a fairly remunerative price.

7955. And is it not for this reason, viz. that the Post Office are of opinion that the service would be better performed if paid for, than if it were not paid for?—Yes. We think that if it were paid for according to a reasonable tariff, then, in case we increase the service there would be no feeling of aversion to it, and no obstacles quietly thrown in the way, or anything of that kind.

7956. Are there not great difficulties in the way of the Post Office availing itself of the ordinary trains of companies, that is to say, of those trains which the companies run at their own times, and at their own speed, stopping where they please, and putting them on or taking them off as they please?—Yes; no doubt that is so.

7957. Is it not a condition under the law, as it now stands, that if the Post Office employs one of those trains, it must fix the hours of starting, so as to prevent the railway company from altering them, if it should desire so to do?—I am not aware of that interpretation of the Act.

7958. Such is the case, and that is one great obstacle in the way of the Post Office employing the trains to the extent that it would desire to do. I think I could call to your recollection cases in which the Post Office has had to pay very highly for sending a very light mail by trains which the company had established for their own purposes. There was an instance as regards the South Wales railway, was there not?—Yes.

7959. And did not the Post Office attempt to avoid that difficulty by including in their notices to the railway companies a permission to alter the trains whenever they pleased?—Yes; I now remember that it was so.

7960. And did not the companies assert that the Post Office must absolutely fix the hours, and that such a notice as that giving the companies permission to alter their hours was, therefore, of no avail, and consequently that the charge to be determined by arbitration must be one taking into account the fact that the company had not the permission to alter the hours of its trains, was not that so?—I believe that the particular contract that you are referring to was under your management rather than mine; and it is evident that you have a clearer recollection of the details.

7961. That is the state of the law; its restrictions have probably passed from your recollection from the circumstance that the Post Office has now for many years, acting very much under your advice in the matter, entered into contracts with the companies to have the use of all their ordinary trains?—Yes.

7962. (*Chairman.*) Do you think it would be possible to substitute for the system of separate arrangement in each case any system by which a fixed invariable payment should be made, and so doing away with the necessity of arbitration?—No; the circumstances are so very various that it would be impossible. Take the case of a swift train travelling by night to suit the necessities of the Post Office as compared to sending a mail by ordinary train travelling by day. The cost to the railway company and the sum, therefore, which we ought to pay is very different under such different circumstances.

7963. Will you allow me to ask what it is that you suggest; as I understand, you do not propose that the mails should be carried gratuitously, and you do not consider that the system of arbitration could be superseded in favour of one of a uniform invariable payment to be got at by any fixed rule?—I do not.

7964. What third alternative then remains?—I think that if the Government were entering into arrangements with any particular railway, there would be no difficulty in foreseeing the ordinary circumstances under which that railway would be used, and that it could be arranged that for sending mails by their own trains when we did not disturb their times, the charge should be so and so, and that if a train be made special, if it be by night, it should be so and so, and by day so and so; and that the varieties in the tariff would be sufficient to meet the case of any particular railway. The speed must of course be taken into consideration also.

7965. That is to say, you think that a system of fixed payments could be adopted, only that they must vary according to certain circumstances, which could be foreseen beforehand?—Yes, certainly.

7966. (*Capt. Galton.*) You would have a tariff for mails put in the Act of Parliament, as it were, just as they have for their first, second, and third class passengers?—Yes, supposing that the present system continues. Of course if the railways were the property of the State, and if they were to let them out, then it would become the subject of a clause in the lease.

7967. You are speaking now of the present system continuing?—Yes.

7968. But has not it always been within the power of the Post Office if they thought fit to propose it to parliamentary committees?—It has.

7969. Why have they never done so?—We have attempted it several times, but so much opposition on the part of the companies was apprehended that no measure has ever been carried into effect.

7970. Then the present system is really due to the fact that Parliament has not thought it right to require the conveyance of the mails at any fixed scale of charges?—I do not think the Treasury have ever gone so far as actually to bring a Bill into Parliament; but the matter has been one of frequent communication between the Post Office and the Treasury, and means have been taken to judge of the amount of opposition that would be offered to any such measure.

7971. (*Mr. Roebuck.*) Have you ever taken means to test the opinions and feelings of Parliamentary

F. Hill, Esq.
 14 Nov. 1865.

committees, because in their hands lies the power of determining that matter and of deciding upon the mails?—Of course, being a subordinate department, all that we can do is to represent our difficulties to the Treasury and leave it in their hands to take what steps for remedying them they think proper.

7972. Has the Treasury then ever taken the means of ascertaining the feelings and opinions of committees?—I think not; as I stated before, I think that the matter has never proceeded so far as to go before Parliament.

7973. (*Mr. Glyn.*) In the case of some of the late amalgamations that have gone on, have the Post Office ever attempted in them to introduce any tariff, or any proposition of the nature to which you allude?—No; we have not done it ourselves; we cannot do more than represent the difficulties to the Treasury, and suggest to them what to our minds is the best means of remedying them.

7974. (*Sir R. Hill.*) The Post Office has no representative in the House of Commons, has it?—No, certainly not.

7975. (*Mr. Glyn.*) Has it ever been represented to the Treasury that if such a thing was to be done, the case of an amalgamation of two railways would be a very opportune occasion for bringing the matter forward; has it gone as far as that?—No, I think not, and I am not quite sure that in equity an amalgamation would afford an opportunity.

7976. (*Chairman.*) It would hardly be fair, I suppose, to make the granting of power to unite conditional upon those companies making a financial arrangement more favourable to the Government than that which exists?—I think not; that is the impression on my mind.

7977. (*Mr. Ayrton.*) Are you not aware that it is a common practice in the House of Commons in granting any new powers whatever to a railway company to alter the terms upon which it conducts its traffic, to alter its rates, and to insist upon the alteration of its rates as a condition precedent to granting those powers?—I cannot say that I am positively aware of that. I have a strong impression that it is so.

7978. The Post Office would have the same appearance, would they not, as any other party might have before a committee of the House of Commons in proposing a new tariff?—Yes; but we cannot appear as the Post Office. As I stated, we are subordinate to the Treasury, and it is the Treasury which communicates with Parliament.

7979. Why cannot you appear before committees of the House?—We could appear before committees of the House if we were so instructed by the Treasury.

7980. Have you ever asked the Treasury to be allowed to appear before committees of the House of Commons?—No. What we have done with respect to the Treasury has been to represent the want of greater railway facilities, and to suggest that these should be obtained by the passing of an Act in which a tariff should be introduced.

7981. (*Sir R. Hill.*) Bills have been prepared with that view, have they not?—Yes.

7982. A Bill was brought into Parliament some years ago, was it not, having that among other objects in view?—I had forgotten that the matter had ever proceeded so far as the actual introduction of a Bill.

7983. It made some approach to it, did it not?—Yes.

7984. And was not that Bill met by the violent opposition of the railway companies?—I believe it was. That Bill was more under your care than mine; but my impression is that there was at any rate the indication of a very strong opposition.

7985. (*Mr. Glyn.*) That Bill was to get rid of the power of arbitration altogether, was it not?—I do not know that it altogether superseded arbitration. It was to give us the means of sending mails according to fixed charges.

7986. And for regulating the charge for convey-

ance without arbitration in many cases, if not in all?—If it was a fixed charge, of course the very object was to supersede arbitration.

7987. (*Chairman.*) I think that you have expressed an opinion that it is desirable that the State should become the proprietor of the railways?—I have.

7988. And at the same time that it is not desirable that the State should undertake the management of the lines?—That is my opinion.

7989. You do not contemplate, as I understand, that any railways should be purchased by the Government by the payment of a sum down, but rather by a fixed annual payment?—I think it is very important that that alternative should be kept in mind, that it is not necessary that the payment should be made at once by a fixed sum.

7990. In other words, the arrangement which you propose would be something of this nature, would it not,—that the actual shareholders of a company should have guaranteed them a fixed instead of a fluctuating dividend upon their shares?—Exactly.

7991. And that then all risks arising out of the management of the railway should fall upon the State?—Yes, such risks as would exist. I do not think myself that there would be risk; but if there should be a risk, of course the Government must bear it.

7992. Supposing the case of a line being made which only pays 3 per cent. under the new management, and suppose that the shareholders in that company had compromised their claims for a fixed payment of $3\frac{1}{2}$ per cent. upon their capital, in that case there would be a loss of $\frac{1}{2}$ per cent. to the State?—If the railway yielded in the shape of rent only 3 per cent., while the Government was bound to pay $3\frac{1}{2}$ per cent., so far as the share capital, in the ordinary sense of the term, is concerned, that would inevitably follow; but we all know that there is another, and very important part of the capital of a railway, which is not represented by shares, but by bonds; and as respects that portion of the capital, with the superior position of the Government for borrowing money, it would be quite possible that it should be even paying a higher percentage to the ordinary railway shareholders than the Government are receiving in the shape of rent, and still, by means of the other portion of the capital, they may recoup themselves.

7993. Then, as one source of profit, you look to the fact that the Government would be able to borrow its capital at $3\frac{1}{2}$ per cent. or thereabouts, while the railways are paying $4\frac{1}{2}$ per cent.?—Yes, certainly.

7994. On the other hand, have you considered what the amount of the loss to the State would be in the case of a compulsory purchase, or do you not contemplate compulsory purchase?—I do not contemplate compulsory purchase at all.

7995. Then you must offer a price which will induce existing shareholders voluntarily to surrender their property?—Yes.

7996. I presume you would lay it down that in such a case the majority of the shareholders in each company should have power to bind the whole?—Yes; as I suppose they have now in the decision of any other question.

(*Mr. Ayrton.*) They have not now the power to bind the whole of the shareholders in dealing with the railway; all that they have the power to do now is to give their assent or dissent to a proposed Act of Parliament; it is the Act of Parliament that binds the minority.

7997. (*Sir R. Hill.*) All that would be required would be to give that power of assent under Act of Parliament, is not that so?—Yes, certainly; whatever power may be requisite. If the power does not exist it would have to be supplied by Act of Parliament.

7998. (*Chairman.*) If your object is to induce a very numerous proprietary body to surrender property which they at present hold, must you not for that purpose offer them terms certainly higher than the market rate?—Yes, certainly.

F. Hill, Esq.
14 Nov. 1865.

7999. Then you must admit that in the first instance there must be a loss upon the purchase?—No, I should not call it a loss.

8000. That is to say, that the purchase would be made upon terms more costly to the purchaser than an ordinary bargain in the open market?—Yes.

8001. (*Sir R. Hill.*) But you expect that the Government would recoup itself through its power to borrow money upon better terms than the railway companies can borrow money?—That is one way. I expect that the Government would get a very great advantage in that way; but I expect that it would gain advantages in other ways.

8002. (*Chairman.*) I understand you to propose that each railway should be let upon lease, either for a number of years or terminable at moderate notice?—Yes.

8003. Would you put up a line to open competition?—Certainly.

8004. Imposing, I suppose, certain conditions as to charges, and also as to precautions for safety, and so forth?—Exactly.

8005. Do you consider that the bridges, viaducts, embankments, and general permanent way ought to be left to the leasing company to take care of, or should the care of them be left to the State?—That they should be left to the leasing company to take care of. The leasing company should be required to keep them always in good condition.

8006. And for that purpose it would be necessary, would it not, to have frequent inspection?—Yes, for that and other purposes, in order to see that all the terms of the lease are acted upon.

8007. Have you considered at all in what manner the very large amount of capital should be raised that would be necessary for paying off the charges upon those lines?—I stated, I think, in answer to a previous question, that I do not think it necessary to raise the capital at all. I believe that the fact of the Government, by undertaking to pay a certain dividend, and by succeeding, as I fully expect it would, in obtaining a rent for the railway fully adequate to meet its obligations, would render it unnecessary that any amount of capital should be raised.

8008. But in that former answer you were speaking of share capital, were you not?—Yes.

8009. In the question that I put to you now I speak of that which is invested in debentures?—I should expect that the rent would cover the payments for the debentures as well as for the ordinary shares. Then, as those debentures fell in, the Government would be able to reissue them upon much more favourable terms than the company could.

8010. You would simply as they expired offer the holders the option of taking a lower rate of interest, or of being paid off?—Yes.

8011. Have you considered at all what department, or whether any existing department would be capable of managing this enormous business of leasing lines from time to time?—So far as I have thought upon that point, it seems to me to be desirable to create a special department, of course, however, to be under one of the main departments of the Government; but I do not apprehend it to be necessary to create a large department, nor do I suggest that the Government should make any attempt to obtain immediate possession of all the railways, I think it is desirable to proceed gradually.

8012. You would buy them up gradually one by one?—One by one, or group by group, trying of course, as far as possible, to get railway possession of a whole district.

8013. If you propose that the purchase should proceed by voluntary means only, would it not come to this, that the State would be very soon in possession of all the worthless lines, and that all the lines giving a large return would remain in private hands?—No, I think not; I do not see that that follows at all. I think that the State must proceed in a very blundering way if it arrives at that result. The worthless lines may be supposed to have something like a worth-

less price; something exceedingly low; and if the value to the shareholders is exceedingly small, they will be but too happy to part with the railway for a very moderate sum.

8014. (*Sir R. Hill.*) You do not propose that this department should be required to purchase a railway, whether it thought it advantageous or not, do you?—Certainly not; the Government should act upon the ordinary principles of commerce.

8015. (*Chairman.*) Do you think, as a matter of fact, that you would find proprietors equally ready to part with what is known as an improving property as to part with one that yielded very small returns for some time past?—I should think that they would at a given price. I think that every railway would have its price. Of course, if a railway is improving, the proprietors will take that into consideration before they accede to any specific offer for its purchase.

8016. Have you considered the case of small lines situated in the centre of a group of lines which have been already purchased by the State? I am supposing your plan to have been some years in operation, and the principal lines of a district to have been bought up by the State, but the system of State management cannot be worked until the whole of the lines are in possession of the State; would not that give to any small company that held out longer than its neighbours a power of commanding almost its own price?—It would, undoubtedly; and I think that in such a case as that it might be necessary to obtain compulsory powers in the same way as a railway company obtains compulsory powers to compel any particular landowner to sell his land.

8017. I wished to see whether we were coming to that, whether in fact your plan is not optional purchase as long as the proprietors are willing to sell, and compulsory purchase if they are not willing to sell?—No, I do not say so. Your Lordship has put the case of a small line acting as an obstruction to a large organization; that seems to me to be a very different case from that of a great line where there is no such obstacle created. In the one case I think compulsory powers might fairly be applied, but in the other I should not propose them to be applied at all.

8018. Have you considered how the system which you propose would work as regards the construction of new lines?—Yes, I have.

8019. Clearly it would rest, would it not, with the Government to determine whether a new line should or should not be made?—Not with the Government, but with Parliament; as is the case at present.

8020. Supposing all the existing railways to be in the hands of the State, I presume that you would not then allow new lines to be made and to remain in the hands of individuals?—Yes, I would.

8021. (*Sir R. Hill.*) That is to say, if Parliament gave permission?—Yes, if Parliament gave permission. If Parliament, acting on behalf of the State, is of opinion that the State would be benefited by the construction of the proposed line, I should hope that Parliament would at once sanction its construction.

8022. (*Chairman.*) And those new lines would remain in private hands, while all the existing lines of the country were in the hands of the State?—They would not necessarily remain in private hands, because I should propose to apply the same principle to them as to existing lines. Suppose a desire for the formation of any particular line to arise, and a body of proprietors is formed for the purpose of making that line. They would apply as now for an Act, and I should hope that under the altered arrangements the sole consideration with Parliament would be, will the country, as a whole, be benefited or not by the construction of this new line—is it a mere contrivance for getting traffic from a very near line—is the mere object competition—or is it to provide for a want for which no provision exists at present; and is that want so imperative as to make it right for Parliament to grant the powers to take possession of a person's land? and so forth. Upon the

whole will the country be benefited by this new line or not?

8023. Are the Commissioners to understand you to put forth this as an expression of your opinion, that by the system which you propose the State would acquire property of greater value than the price which it gave for that property, and that at the same time the ex-proprietors of the railroads would have a dividend upon the average higher than that which they now receive?—Yes; I entertain that opinion decidedly.

8024. According to your proposal, everybody is to gain all round, the State as the purchaser, and the proprietors themselves are to gain?—Yes.

8025. In part that gain is to be made, as I understand, by the lower interest which is to be paid to the debenture holders?—In part.

8026. Have you at all considered what the effect of adding to the liabilities of the State to the extent of 150,000,000*l.* or 200,000,000*l.* would be upon the rate of interest at which the State can borrow?—I do not think that it would have any appreciable effect upon it.

8027. You think that whatever the amount of new liabilities contracted may be, the State will still be able to borrow at 3½ or 3 per cent., as it does at present?—Yes, so long as there is a valuable consideration for it; so long as there is property to show for the liabilities, I do not think that the State would at all suffer in its borrowing power by possessing the railways.

8028. (*Sir R. Hill.*) But you do not consider it an essential part of the plan that the State should borrow money at all, do you?—No; I have stated so.

8029. (*Chairman.*) You look forward to the very great economy in the working of those lines as another source of gain?—To a great economy.

8030. Will you explain in what way you think that great economy would arise?—I think that it would arise in various ways. First, from the greater facilities that would be afforded for securing a good organization among the railways generally. We will suppose for a moment that the Government is in possession of the railways. In letting out any particular railway it would secure by the terms of the lease that trains running upon that railway and then on to an adjoining railway should go under arrangements suitable to both railways; that there should be nothing of the kind which is known now to exist from time to time, namely, that positive obstacles instead of facilities are created with respect to the junction of railway and railway. Then all those obstacles would be removed, and facilities would be secured in place of them. Then I think that the persons who are likely to act as the lessees of railways would probably be a much smaller body than the large body of proprietors, and they would have a keener interest in the economical management of the railway than can be felt by gentlemen in the position of railway directors who have very many other avocations besides that of railway management, and who have not so large a stake as those lessees would have. I think that it would become a kind of profession. Persons who had an especial aptitude for administration of that kind would by force of competition obtain the lines, and the lines would, I think, be more economically and efficiently managed than by the present half-honorary boards.

8031. (*Mr. Ayrton.*) Does the answer that you have just given depend upon the assumption that the Government has possessed itself of all the railways in the kingdom?—No, not of all the railways in the kingdom. If it were in possession of only two railways, if those railways lock into each other the principle would to a certain extent come into operation.

8032. (*Chairman.*) Do you consider that there would be any saving of the present Parliamentary contests between companies?—A very great saving.

8033. I see that you have stated that; but I wish to understand in what manner that saving would arise, because, if I understand your plan clearly, you propose

that there should still be as at present power to new companies to create new lines?—Yes.

8034. There will, I presume, be the same power in landowners, and other persons interested in opposing them, to oppose them?—Yes.

8035. Those landowners, I presume, will as at present be supported directly or indirectly by great companies who would fear competition by the new projected lines?—No; if the property of the company became that of the Government, those great companies would of course cease to exist.

8036. But take the case of lessees having a 21 or 30 years' lease, for I presume you would make it a long lease; would they not be very much interested in the carrying of a new line parallel to theirs that might take away half their traffic?—I am of opinion that if any new lines be granted which could in any way injure the lessees of an existing railway, that railway would in equity have a claim to reconsideration as regards the amount of rent; and that such reconsideration should be provided for in the lease.

8037. Then if they lost by the competition of the new line Government is to recoup them?—I do not say so. If a new line is created, and they inform the Government that they consider that that line will injure them, they should have the right of referring to some tribunal or other to reconsider the question of the rent; whether their rent ought or ought not, under the circumstances, to be reduced.

8038. Let us see how that will work for the prevention of Parliamentary contests between companies. You have all the former elements of competition, you have landowners and the men who are interested who will oppose, and you have companies whose traffic will be threatened by the making of new lines. The only difference, as I understand, is this, that the State will also be a party interested, inasmuch as the State will be a loser if the traffic of the existing companies is taken away?—Yes; but I think that a very material difference; because Parliament, representing as it does the State, would feel, that if this line, which the necessities of the State do not require, were permitted, it would very much diminish the value of property belonging to the State.

8039. Passing from that, do you consider that a large reduction both in passenger fares and in the cost of the conveyance of goods, might take place without ultimate loss to the companies or to the State?—I do not presume to say so, other things remaining as they are. I have not that knowledge which would enable me to say that the railway companies could, without injury to themselves, reduce the fares; but my opinion is, that under the arrangements which I have described, the force of competition between those who offer themselves as lessees would bring about a large reduction of fares.

8040. They would compete one against the other by offering the lowest tariff?—Exactly.

8041. But does not that kind of competition exist at present wherever you have any two lines running between the same points?—Even where you have two lines running between the same points, in my opinion it does not exist. In my opinion, effective competition is impossible in railways, because you cannot admit an unlimited number of competitors. There are two railways, and as there are only two they have nothing to do but to come to an understanding, and the competition is knocked on the head.

8042. (*Sir R. Hill.*) Have you any objection to put in this paper which you have prepared as a summary of your evidence?—I will put it in with pleasure.

The same was delivered in, and is printed at the end of this Evidence.

8043. (*Chairman.*) You have stated that you would not consider the sum which the Government would pay by way of annuities to railway proprietors as a Government loan, but would not the shareholders so consider it; what would be the difference between an annuity payable to a body of railway proprietors

F. Hill, Esq

14 Nov. 1865.

F. Hill, Esq.

14 Nov. 1865.

and an annuity payable to the ordinary holders of consols?—No essential difference in my opinion, but I think that the effect upon the public mind would be very different. In the one case there is no necessity for creating a great mass of Government stock, and in the other case there would be.

8044. It would be a new form of permanent annuity differing only in a particular name from the other permanent annuities payable at the Bank of England?—Exactly.

8045. (*Mr. Ayrton.*) As regards the public who hold those shares it would be only a variety of permanent annuities payable at the Bank of England under different names?—Quite so.

8046. If the Government were paying permanent annuities they must either pay those permanent annuities at the rate of $3\frac{1}{2}$ per cent., their existing rates, or they would pay them at higher rates?—Yes.

8047. If the Government are borrowing money or paying annuities at higher rates of interest, would not that have the effect, if it were for a very large sum of money, say 400,000,000*l.* sterling, of depreciating the value of consols, out of which permanent annuities are now paid?—I think not.

8048. You think that you could go on creating permanent annuities to that extent without affecting the price of the annuities?—It may go on, I think, to any extent as long as you have productive power affording the means of paying those annuities.

8049. The parties who buy these annuities, you think, in estimating their market value are not guided by a consideration of the quantity of those annuities that exist in the market, and that that does not influence the price?—If a great quantity came into existence suddenly of that or any other article, the price would no doubt be affected; but the Government is merely stepping into the place of the railway directors who are at present making this payment, and it would be able, I think, to pay somewhat more; but the great mass is merely a substitution of one thing for another.

8050. But when the nature of these securities will have changed, they will then become Government annuities, will they not?—Certainly.

8051. Do you think that the fact of those annuities having 200 or 300 different names would not rather depreciate their value than increase it?—No, I think not at all.

8052. You do not concur in the opinion which has been generally expressed by financiers, that it is better to borrow annuities on the large security of consols than to borrow in small quantities under different names, and that small quantities always obtain worse rates than annuities in the larger stock?—That is a refinement that I do not pretend to have gone into or to be able to judge of; it seems to me that so long as the Government, when extending its obligations, can point to a substantial property possessing adequate productive power, the security of the Government is not injured at all by its possessing that property subject to those obligations.

8053. (*Sir R. Hill.*) The arrangement would not divert the capital from its present form of investment at all, would it?—Not at all.

8054. There would be no increased demand upon the capitalists of the country?—Not a shilling.

8055. (*Mr. Ayrton.*) You do not contemplate the annuities being a special charge upon the particular railway; you consider those annuities as part of the public debt, and all the annuities which the Government agreed to pay would be part of the public debt?—It would be under the responsibility of the Government and the security of the Government; the Government security would be attached to every portion of it.

8056. Would it be a debt chargeable specifically upon the particular railway with which it was originally connected, or would it become merely an annuity payable by the Government?—It would become an annuity payable by the Government.

8057. Then the Government would come back,

would they not, to the position which we were in before Mr. Pitt passed his celebrated Act for establishing the consols, when we had a great variety of debts of different denominations?—Your memory of the history of that time is superior to mine.

8058. Would it not be the case that instead of having one consolidated debt they would have a great variety of debts?—Their present debt would remain of course as it is at present, and in addition to that they would have at their disposal a great variety of annuities, or you may call them debts,—in one sense of the term they are debts, but they are debts for which there is substantial property; therefore in another sense I should say that it is no debt at all.

8059. As you have explained that the annuity is not to be charged upon the particular railway, what would the public, who hold the annuities, have to do with the railways?—They would have nothing whatever to do with them.

8060. Then would it not simply be a public debt chargeable upon the property of the nation generally, upon the taxes?—No. Of course, if the Government so blundered in its proceedings as to purchase those railways for more than their real worth, then it becomes a debt chargeable upon the taxes, but if they managed it as I believe they would, there would not be a shilling charged upon the taxes.

8061. As regards the holders of the annuities, they would simply have a claim upon the general resources of the nation?—Yes.

8062. You do not mean that those annuities are to be mixed up with the particular railway which the Government sanction originated?—No.

8063. Then it would be simply an addition to the public debt of a great many denominations of annuities?—As I say, it is a debt in one sense but not in another.

8064. As regards the holders, how would it be?—As regards the holders they would have the public security.

8065. Then the Government would have simply so much more power than they have at present?—Yes.

8066. (*Sir R. Hill.*) If it were thought by Parliament that any advantage would result from consolidating those claims by taking a step similar to that which Mr. Pitt took long ago, would there be anything to prevent Parliament taking that step?—Nothing whatever.

8067. Then that inconvenience, if it should prove an inconvenience, could be entirely put an end to whenever Parliament thought fit?—Most easily.

8068. (*Mr. Ayrton.*) With regard to the lease which you propose to grant, have you fixed in your own mind any particular term for which the lease should be granted?—I think that no term should be fixed. One can more readily speak of any matter by referring to the practice in another case with which one is familiar. In addition to my having had the railways in my department, I have the packet contracts, and it has devolved upon me to prepare the form of tender for those contracts; and, with reference to the particular point which we are now speaking of, I may mention that we never put down, This is a contract for five years, or for seven years, or for ten years; but it stands in this form:—For what sum will you engage to perform this service according to the stipulations now presented to you (going at a certain speed, leaving at a particular time, and so forth); for how much per annum will you perform this service? and how much will you strike off if the contract be made certain for five years, or for seven years, or for any other number of years that you choose to specify? When we get tenders it is generally found that while the service would be performed for a certain sum if the contract were terminable on a notice of 12 months, it would be undertaken for a smaller sum, if made certain for five or seven or ten years. Then when we have ultimately to decide which tender we will accept we balance matters in our minds and consider whether the disadvantage of being bound for a certain period is more than counterbalanced by the lowness of the subsidy

upon which the service would in such case be performed.

8069. In that case you generally find as a principle, I presume, that the longer the lease is the less the rate that you have to pay?—Yes.

8070. Do you think that there is an accurate analogy between your entering into a contract for the conveyance of the mails by a line of steamers and a contract for the entire use of a railway?—Yes; I am not aware of any fault in the analogy.

8071. Is there not this fault, that in the one case the servant has only a small part of the undertaking, and in the other case has the whole of the undertaking?—I do not know how you can say that it is a small part of the undertaking in the one case and the whole of the undertaking in the other.

8072. Would not the analogy be more correct if yours was a contract for the conveyance of the mails by railway than if it is for the conveyance of the mails by steam-boat?—I do not see it.

8073. Has not a steam-boat generally other objects in view besides the mere conveyance of your mails?—So have railways.

8074. In the one case it is the whole undertaking, and in the other it may be a very insignificant part of the undertaking?—I do not see that myself.

8075. You do not think that the conveyance of the mails, which may be only a tenth part of the earnings of a steam-boat, is a different thing from a contract regulating the use of the whole of the steam-boat and all its earnings?—I see no essential difference in the comparison.

8076. (*Sir R. Hill.*) It is a difference in degree only, is it not?—It is a difference in degree; I do not see any difference in principle.

8077. (*Mr. Ayrton.*) Do you see any difference in the circumstances of a railway and a steam-boat in this respect, that the steam-boat can be sold and moved about to other places when the contract is over, but that a railway cannot; do not you see that difference in the analogy?—I do not think that it affects the analogy, but there is no doubt that as a fact you are correct in making that statement.

8078. Is there not another distinction, that in the one case the crew are a class of people that may be shifted about from vessel to vessel, and in the other case the establishment must be in its character permanent?—I do not see how that affects the analogy.

8079. You do not think that a person making a contract would be likely to consider that matter?—No; but even if he did, it does not seem to me to affect at all the principle upon which the Government should proceed.

8080. Do not you think that the lessee of a railway, who would be responsible for the duties performed by his servants, would have to consider the fact whether he hired the servants himself or not?—Yes; I think that that is a most important thing for him to consider; but as a matter of course, he should make his own selection.

8081. In making a contract with a steam-boat he has the selection of his officers?—Yes, certainly.

8082. If a railway were let for a year only, would you grant to the lessee the power of selecting his officers on the railway; and would you have the officers liable to be turned out at the end of the year?—Yes, every one of them. He is responsible for the management, pecuniarily and in every other respect, and his responsibility would, in my opinion, fall to the ground if he had not the selection of his own officers.

8083. Do you propose that the Government should prescribe exactly the trains that are to be run?—No, not at all.

8084. Then who is to secure the correspondence of the trains that you have mentioned if the Government have not the power to prescribe the trains that are to be run?—Without prescribing all the trains, I would secure a controlling authority to prevent breaks.

8085. I was asking you whether the Government should possess the power of prescribing the trains that are to be run, and you say not at all?—I say that I do

not advise that the Government should prescribe the trains.

8086. How will they obtain any correspondence of trains by their leases?—By reserving the power. There is a great difference between having the power and using it, and using it in a small degree and using it in a great degree. They should reserve the power to prevent those breaks and those obstacles which are now created.

8087. You would reserve, to them, probably, the power that is now reserved to the Postmaster General with reference to the mail trains, that is to say, the liberty, if he thought that the public interest required it, to interfere and prescribe a particular train to be run; is that the power that you would reserve?—I am not prepared to go so far as that. I am prepared to say that there should be a controlling authority. If there is any discussion as to the propriety of using it in any particular case the question might be referred to a prescribed tribunal or to arbitration; but power should be secured to prevent that which now occurs, namely, the creation of obstacles to the union of the trains of one railway with those of another.

8088. What I want to know is this: How is the Government to obtain from the public by the lease the profit which you suggest? Is it by describing at the time of the lease all those profits as conditions of the lease; or is it by the Government reserving to itself the liberty of directing the lessees in the enjoyment of their lease to do anything that the Government may require, or what?—I propose, as regards the particular matter now under discussion, that the Government should reserve certain powers.

8089. Will you define the powers that it should reserve?—Among other powers, that of preventing the lessee of one railway so managing as to throw unnecessary obstacles in the working of an adjoining railway.

8090. The two lessees being competitors would naturally claim, would they not, the right of carrying on their business each of them as he might think most advantageous to himself?—He might claim it; but if specific powers are given in the lease he would claim in vain if he proposes to benefit himself by injury to his neighbour.

8091. Is it your experience in the Post Office that when the Post Office claims any of these rights of regulating trains, it is expected to pay very heavily for the exercise of the right?—When we exercise powers which compel railway directors to run trains at times when the public do not require these trains we certainly have to pay heavily for them.

8092. Whenever you insert that power they make you pay heavily for it?—Yes.

8093. If the Government reserve to itself that right, would it not be a material element in fixing the rent to be paid that the Government possessed that power, and do you not think that it would diminish very much the rent to be paid if there were such an indefinite power in the Government to interfere with the traffic?—I do not propose an indefinite power. And as regards the matter in question, it must be remembered that the power may just as likely be used for the benefit of the particular lessee as for his injury; while it would prevent his injuring his neighbour it would prevent his neighbour from injuring him; therefore I think that any person who thought of becoming a lessee would not object to the existence of such a power in the contract.

8094. Have you considered the area that should be granted to each lessee of railway property?—No; my general idea is, that if the principle be approved and adopted the railway property will gradually become the property of the State; and as each addition is made a lessee would be required to take the management of that particular line. Ultimately, if all the railways should become the property of the State, then the railway territory would no doubt be carved out in that way which, upon the whole, was found to produce the best working and the lowest tariffs.

8095. In the meantime you would merely lease out

F. Hill, Esq.

14 Nov. 1865.

F. Hill, Esq.
14 Nov. 1865.

the lines as they happened to be surrendered to the State?—Yes.

8096. Each separate line?—Yes, certainly.

8097. Are we to understand you that the option of surrendering the line is to be entirely with the Government, and not with the owners of the line at all?—Do you ask whether I suggest that the Government is to have compulsory power of purchase?

8098. No, that the option rests entirely with the Government whether they will accept the purchase of the line?—I cannot say, entirely, because it will rest equally with the proprietors; they may refuse to sell and the Government may refuse to buy.

8099. The Government is to have the power of refusing the offer, however reasonable the proprietors may think it?—Certainly.

8100. What reason have you for supposing that the lessees would be persons at all different from the present proprietors and directors of railways?—We know that in all other matters where companies of the kind are not formed, a person generally speaking chooses his profession according to his ability and his inclination. A man is not half a cobbler and half a blacksmith, but devotes himself to a single employment; and when that is the case we generally find, I think, the greatest amount of success. I think that if a few men of administrative power clubbed together and inspired others with sufficient confidence to advance them capital, and then gave themselves up entirely to the management of a railway, they probably would manage that railway very much better than an ordinary board of directors.

8101. Why are we to assume that the lessees would be individuals of this character rather than joint stock companies?—Because I think that they, with the prospect of an equal amount of gain, could underbid any joint stock companies in the tender. I think that able administrators giving their whole time and mind to the management of the railway would be able to conduct that railway so as to produce a given profit, though upon a lower tariff, than a body of ordinary directors.

8102. Do you find that that principle holds good in the tenders for the conveyance of the mails?—We have not an opportunity of judging.

8103. You offer tenders to the public to contract for the conveyance of the mails, do you find that those individuals whom you have described come forward to tender to convey the mails, or do you find that companies come forward to tender?—Generally companies; but sometimes an exceedingly small company. Take, for example, one of the best and largest contracts that we have had, namely, the one with Sir Samuel Cunard's company, I believe that there are only three or four persons, if there are so many, forming the whole company.

8104. Is not that now a joint stock company?—No.

8105. Do you think that you would find the individuals who would be requisite to carry on the business of lessees?—I think now that happily the law has been so amended as to enable persons to advance capital without the risks of partnership, such men as those I have referred to would have no difficulty in raising the necessary capital. Hitherto the law has interposed obstacles and given large companies special advantages.

8106. Have you observed at all the tendency recently, of commercial speculation to change from private enterprise to joint stock companies and large undertakings?—I have.

8107. Have you observed at all the general character of the direction of those joint stock companies that you see advertised in the papers?—I have observed that, in many cases, the boards of such joint stock companies are formed of most respectable men.

8108. Do you think that the character of those boards of directors offers any guarantee for better management than the character of the boards of directors of railway companies?—Yes; I think that in many cases it is so. In many cases I

think that the company is formed round about, as it were, an existing effective management, and that this management becomes the nucleus of the company. That has been so in many cases. Take, for instance, Mudie's Library. Mr. Mudie was a successful manager of a very large concern; a company is formed; but he is retained as manager. We know that was much the same in the case of Morrison, Dillon and Company.

8109. My question was with reference to the general character of the direction?—It is not a matter in which I have any very extensive knowledge. The cases that have fallen under my observation are very much of the kind that I have mentioned, in which there is an effective management and a company is formed round about it, the management remaining very much as it was.

8110. In the case of railway companies, would not a person who has been managing a railway be just as effective a manager as in the case you have put Mr. Mudie would be if he became a director of a new company?—If a particular railway was very ably managed under his direction, the probability is that those who might succeed as lessees would be only too happy to engage his services.

8111. (*Sir R. Hill.*) Would not the managers themselves frequently become lessees?—No doubt, they frequently would.

8112. (*Mr. Ayrton.*) That is to say, if they have the capital?—Or if they inspire capitalists with sufficient confidence to induce them to place capital at their command.

8113. But it would require considerable capital, would it not, on the part of the lessee of an undertaking which was to pay a rent of a million a year?—I do not think it would necessarily, because we know that the payments to a railway company are in ready money.

8114. Do you think it would be safe for the Government to lease property worth a million a year to a person of no capital?—I did not say so.

8115. Would not the Government expect the person to whom they were going to lease a property worth a million a year to have a considerable capital by way of guarantee to them?—The Government would expect that he should be able to afford them ample security that the terms of the lease would be acted upon. In our own contracts we require that security should be given to us in a certain sum, according to the magnitude of the service, that the contract will be really fulfilled.

8116. In that case the parties that make the contract produce all the property themselves for carrying out the contract, and own the property, do they not?—Not always.

8117. Ostensibly it is not their own property?—Not always. We require, as I say, security; but another person may give that security.

8118. Apart from the security in the case of the Post Office contracts, the parties who make the contract ostensibly own all the property that is required in order to carry out the contract?—Yes, generally they do.

8119. Therefore there is no analogy in that case, is there?—I beg to differ in opinion from you. I think there is.

8120. Is there not a great difference between owning a railway and not owning it. In the case of the lessee of a railway, the lessee would own nothing, whereas in the case of a contract with the Post Office he owns everything?—The circumstance which makes the things strictly analogous is this, that in both cases adequate security is required. Whether that security may arise from owning a particular property, or owning an estate in Australia, or having half a dozen of the leading merchants in London putting their names down for 50,000*l.* apiece, is a matter of indifference; we require in each case good security.

8121. Is it not a great difference, when one makes a contract, whether the person who is to fulfil it produces all the property for the purpose of fulfilling it, or whe-

ther you give him your own property to fulfil it with ?—Not so long as he gives you ample security ; that covers everything in my opinion.

8122. (*Sir R. Hill.*) Is there anything to prevent the lease requiring a weekly payment of the rental ?—Nothing at all.

8123. Then, in point of fact, all the security that would be required would be something sufficient to prevent the railway being thrown up by the lessees if they found that the lease was not profitable to them ?—Yes, and also for keeping everything in good working order and good condition.

8124. (*Mr. Ayrton.*) What would be a fair deduction to allow a lessee taking a lease of a railway, and who engaged to make an absolute payment of rent, for his own profits and risks ; what per-centage would you allow him upon his rent ?—The highest per-centage that competition would give him.

8125. In making an estimate, what per-centage would you allow ?—I do not pretend to say.

8126. If you lease the property the lessee expects, does he not, a certain rebate from its absolute value for his profits and the risks that he runs ; what would you allow him ?—I do not pretend to allow him anything ; I would allow him every farthing that competition would give him and nothing more.

8127. In making an estimate, how much would you allow ?—I do not require any such estimate.

8128. In making an estimate in your own mind of a transaction of that kind, you must make that allowance ; if you are going to buy property on the one hand, and to let it on the other, you must consider what you will allow from the absolute income for the lessee's profits and risks ?—It does not appear to me in the case now under consideration of the least use to make any such estimate. All the estimate that I have to make is, the amount necessary to meet the obligations incurred ; and that is rent.

8129. If you were going to buy property with the view of letting it again, how are you to insure that you will let it again so as to cover the interest on the purchase money unless you go into these considerations ?—You must judge as well as you can from all the kinds of evidence that you can collect, and you would consult persons well able to form an opinion as to the amount of rent that a third party would be willing to give for that particular property ; and before you strike your bargain you must be careful not to exceed in your purchase the sum which would be represented by the rent,—that is all.

8130. If you have not gone into this matter how are you able to suggest that the Government would let the property on a rent which would repay the interest that they would have to pay ?—I say that those who efficiently managed the department would make inquiries upon that subject before they made their purchase ; that they would satisfy themselves that they shall be able to obtain a rent corresponding with the amount of interest, and sufficient to pay the dividends that they engaged to pay before they say "aye" to the purchase.

8131. (*Capt. Galton.*) In what form would the security that you suggest should be taken for those leases be given ; is it to be a sum of money deposited in some particular funds or place ?—No ; all that I should require would be such a security as would satisfy any reasonable person that in case of defalcation the Government would be indemnified.

8132. I observe that you suggest that at the termination of the lease, or at any intermediate time, if either party desire it, the whole property should be assessed, and any falling-off made good by a money payment ?—Yes.

8133. If an insolvent company had undertaken a lease of the railway how would you get your money ?—You must have such security before you sign the lease as will satisfy you that that provision of the lease can be effective.

8134. In the same way I presume you would enforce that clause that any deficiency in a railway should be made good at any time ?—Yes.

8135. Then in letting those railways the lowest tender would not be the only thing that you would consider ?—No. In our own tenders we announce in every case that the Postmaster-General does not consider himself bound to accept the lowest tender or any tender.

8136. And you would therefore let the public department that was to make those contracts consider any circumstances connected with those different companies as to the responsibility of the parties and other conditions ?—Yes, certainly ; not only would I let them, but it would be their imperative duty to do so.

8137. Therefore do you think, in considering these sorts of questions, it would be possible that political bias could ever enter the judgment of the department and so have an influence upon its contracts ?—The responsibility to Parliament is such that I should think not.

8138. Has such a case ever taken place in the Post Office as regards contracts ?—No, certainly not, so far as the Post Office is concerned.

8139. Then you think that a Government department could be entirely freed from any bias of that sort, and that any contract made under a Government department of that sort might be made perfectly free from any political bias, and that is your experience of all contracts of which you have cognizance ?—No, I do not go so far as that.

8140. (*Mr. Ayrton.*) It does not rest with the Post Office, does it, to accept the tenders finally ?—No.

8141. (*Capt. Galton.*) If it was possible that such political bias could enter into the making of the contract, could not it also enter into the question of a strict enforcement of the contract, as for instance, if a company allowed the line to fall into disrepair and get badly worked, is it not as possible that the same influence might be brought to bear upon the Government to prevent the due conditions of the contract being enforced ?—Yes, in the same way that influence would be brought to bear still more strongly, I should think, upon any body of directors. But we see in countries abroad, where we believe there is certainly not more political honesty than at home, that the Government proprietorship seems to be very successful in its results, that the fares are low, and that the Government is not a loser thereby ; and we do not hear of those political influences.

8142. To what railways do you specially refer in regard to which the Government proprietorship produces those results ; have you cognizance of any railways, excepting the Belgian railways, or are there any others that you would refer to ?—I was referring chiefly to the Belgian railways ; bearing in mind those of France also.

8143. But in France is it not the case that the railways are practically in the hands of the companies just as they are in England ?—Yes, but there is a very important question that has to be decided from time to time about the concession of the railways. I do not pretend to be thoroughly versed in French politics, but I do not remember its ever having been alleged that a concession had been made from political or from private considerations. I should think that the very thriving character of the railways in France would show that the concessions have been honestly obtained.

8144. What are the advantages over the present system which you expect to derive from the purchase of the lines or the obtaining of the lines by Government, and then leasing them out to other companies ?—It involves many of the advantages that I have already had the honour of stating to the Commissioners.

8145. Are they stated in the paper which you have handed in ?—Yes, some of them.

8146. I presume that the principal of those great advantages is that you consider that a lease would afford a means of obtaining competition for the public at stated times which they cannot now obtain ?—Yes, that is so ; or rather I would not go so far as to say, which they cannot now obtain, but that a system of

F. Hill, Esq.
14 Nov. 1865.

leases opens a door to any amount of competition in the management and makes it a safe plan for the Government to hold the property. I should not consider it a safe plan if the Government undertook the management.

8147. Then you look upon it as a great advantage for the Government to have the possession of the railways, provided the plan could be made safe?—Exactly.

8148. (*Sir R. Hill.*) It is rather an advantage to the public, is it not, that the Government should have it?—Yes.

8149. (*Capt. Galton.*) Why is it an advantage, except that it can obtain a reduction of the fares at stated intervals by competition?—To go over a little again the ground that we have gone over, I believe that if the Government is the proprietor of the railways, the railway property will not be damaged from time to time as it is now by the creation of such lines as the Trent Valley line.

8150. As regards the shareholders?—No, as regards the public. If the State holds the property, it becomes a question of the public, not of the shareholders.

8151. The damage to the railway property which now exists is a shareholders question, is it not?—Not merely a shareholders question.

8152. Is it not for the advantage of the public that as many railways should be made as can be made?—No, I think not. I think that if you have two railways where one will serve the purpose, the staff of officers upon each will not be so strong as it otherwise would be, and their management will not be so good, and the fares will not be so low.

8153. You mean if you have two railways running close side by side?—Yes; so as to compete with each other without creating a large addition to the traffic sufficient to make up for the competition.

8154. Take for example the two lines from London to Birmingham, do you think that if one line could carry the traffic between London and Birmingham it would be an advantage to the public to have only that line rather than that they should have the second line which they now have?—Yes; supposing of course that that line is sufficient for the extent of the traffic, and that you have a sufficient number of rails and so forth.

8155. Still taking the case of London to Birmingham, the London and North-western line runs from London to Birmingham straight, and the Great Western line by means of a divergence, is not it a great advantage to the public in the district through which the Great Western runs that that line should be constructed?—As I say, there are two kinds of advantage; if the railway belonging to the Great Western Company is sufficiently distant from the other railway as to make it much more convenient for a large number of persons to travel by it than by the first railway, then the country is benefited.

8156. But let us go to every case of competition which we can find in the country, take for instance the London, Chatham, and Dover line as far as Chatham; there are two competing lines, one of which runs by the side of the Thames, and the other line runs six or seven miles inland; is not it a benefit to the inland district to have that second line, though perhaps one line might have carried all the traffic that goes from London to Chatham?—No doubt it is a benefit to that district.

8157. (*Sir R. Hill.*) Is there any competition in respect of the intermediate stations?—I think none whatever.

8158. The two lines are not competing lines in respect of places which are not served by both, are they?—No.

8159. (*Mr. Ayrton.*) There are no competing lines in that sense?—I do not think there are; I think that competition is a mere delusion.

8160. (*Sir R. Hill.*) There is competition, is there not, as regards the traffic between London and Birmingham, or as between London and Dover, but not

as regards the traffic between the intermediate stations?—Precisely so.

8161. (*Mr. Ayrton.*) If there is no competition there is no evil to correct, and if the evil does not exist, there is nothing to correct in that respect?—Yes, there is; because you may have lines unnecessarily multiplied, and the country, generally, injured.

8162. (*Capt. Galton.*) Can you mention any instances in which lines have been unnecessarily multiplied?—Yes; I think the second line to Hastings and the Trent Valley line are cases in point.

8163. Do you maintain that it is not an advantage to the public that the line which runs through Lewes and goes to Hastings, and which serves one district, should be made, and also that the South-eastern line, which goes through Tunbridge to Hastings, should be made; is not it a great benefit to the districts which those two lines occupy, that they should both be made?—It is a benefit to the district, no doubt, and it would be a benefit to the district if you were to multiply lines by scores; but the question is, whether there is a balance of benefit to the State as a State, and the country as a country. I think that if at the time that the South-eastern company came forward, asking for their Bill for a second line, the first line had belonged to the State, they would have refused the second line.

8164. Would not that have been a great inconvenience to the people who live between Tunbridge and Hastings?—It might have been; but to remove that inconvenience the price was far too great.

8165. Is not that part of the argument a shareholders question?—No.

8166. (*Sir R. Hill.*) Are not the shareholders of railways part of the public, just as much as the residents at the small towns and villages which are served by those second lines?—Certainly; they are a very important and very numerous part of the public.

8167. In considering the interests of the public at large, would not it be a very great mistake to omit the shareholders as part of the public?—Certainly.

8168. (*Capt. Galton.*) If the shareholders are willing to advance their money for the construction of those schemes, is it the business of the State to see that they should advance it advantageously to themselves?—I think that the State would act very wisely in so legislating that those who undertake to construct a railway should feel secure that if they get a prize they will be allowed the benefit of that prize, and that no line will be allowed to be constructed really for the purpose of plucking it from their hands. I think that if railway proprietors generally felt sure that if they undertook to construct a railway they should be allowed to enjoy a reasonable profit from it, and that no new railway will come into competition with them, unless the general interests of the State require it, we should have very many more railways made than we now have.

8169. (*Sir R. Hill.*) If a line having been made between two towns, a body of shareholders wish to construct a second line between the same towns, and those shareholders are damaged, they have no right to complain, have they?—Certainly not; the second body of shareholders have no right to complain.

8170. The first body of shareholders are no party to the construction of the second line?—No.

8171. And therefore it cannot be said that the shareholders, meaning the shareholders of both lines, are consenting parties to this competition?—No.

8172. (*Mr. Ayrton.*) Are they not consenting parties in so far as the first company makes its railway with a perfect knowledge that it is in the power of Parliament, and that it is the practice of Parliament to grant other lines whenever there is a reasonable requirement for them in the opinion of Parliament?—In a particular case that I have referred to, the two Hastings lines, I happen to know that, so far as Parliament could be pledged by a committee, an assurance was virtually made that if the Brighton railway would only undertake the construction of the railway to Hastings a second line would not be allowed. The

Brighton Railway Company said, "We believe there is traffic for one line, but there is not traffic for two; and we will have nothing to do with it unless we feel secure against the creation of a second line."

8173. But are not all the public perfectly aware that the only assurances that Parliament can give are those which are contained in Acts of Parliament?—If they are aware of it I say it is an unfortunate state of things, in my opinion. It would benefit the whole country, even as regards the number of miles of railway, if the country felt assured that no new railway would be allowed unless the general interests of the country required it.

8174. Has any new line been allowed without the general interests of the country requiring it?—I believe that the second railway to Hastings, and the Trent Valley line, were allowed without the general interests of the country requiring them.

8175. That is a thing upon which Parliament are by the constitution the judges, and their opinion is different from yours?—Yes, but you ask me for my opinion, and I give it you.

8176. I ask you whether Parliament allowed that railway to be made, knowing that it was not for the benefit of the public?—So far as I am able to judge of it, that was so.

8177. Then, though it was not for the benefit of the country that it should be constructed, Parliament per- versely allowed it to be made?—Yes.

8178. (*Capt. Galton.*) If the State had purchased the railways in the way which you suggest, 20 years ago, would the country, in your opinion, have had as large an extent of railway communication as it now has?—Yes. I think that we should have had more communication where the necessities of the State require it, and less where the necessities of the State do not require it.

8179. You state that the plan which you propose will be attended with certain advantages which you have mentioned; and amongst those you state, "Facilities for so arranging the traffic of the country that as far as practicable passengers and goods may be conveyed on different lines." What does that mean?—That is following Mr. Hawkshaw's suggestion, that given a large amount of communication between two places, then instead of having upon both lines of railway goods traffic and passenger traffic; keep one line for passenger traffic, and keep the other line for goods traffic, so that all the trains on each may be going at equal speed; that is what I mean.

8180. Then you would take away the advantages which the public living upon the one line which is to be devoted to goods traffic now have, and leave them without any railway communication at all?—That, of course, must depend upon the extent of the through traffic as compared with the local traffic. In some cases it would not be wise to attempt to have such a division, but where the through traffic is very great, and where great speed is required, then I think there can be no doubt that the public safety and the public benefit generally would be much consulted by a division between the two kinds of traffic.

8181. You think that the public who live upon the line which you would devote to goods traffic should be sacrificed for the general good of the State?—If the general benefit is greater than theirs, they should be sacrificed.

8182. (*Sir R. Hill.*) Without sacrificing those people who live upon the line, the goods traffic might be retained upon each line so far as the intermediate towns were concerned, but that which may be called the through goods traffic or through mineral traffic might be thrown wholly upon one line, might it not?—Yes, wholly upon one; but so far even as the immediate neighbourhood of what you may call the goods line is concerned, if the people are willing to travel at the same speed as goods you might have passenger traffic; the great objection is travelling at different speeds.

8183. (*Mr. Ayrton.*) You would have Parliament, for the sake of the public revenue, depriving the people

along one line of railway of all the advantages that they now enjoy?—That is not my proposition.

8184. If you are to regulate the traffic, and make one line a mineral line and the other a passenger line, would you not deprive them of all the advantages that they now enjoy with regard to traffic?—No; I have just pointed out that where you have a mineral traffic you may have with perfect safety a comparatively slow passenger traffic. If the advantage of the people in the neighbourhood of the goods traffic of travelling very rapidly is to be procured at the risk of the lives of a great number of people who, between those two points, are going upon the other line, I think that advantage is too dearly purchased.

8185. (*Mr. L. Gower.*) Is it not a fact that the goods traffic is chiefly carried on at night, and the passenger traffic by day at present?—I do not think it is. I think a great deal of the goods traffic is at night, but there is a great deal by day.

8186. The chief portion is at night, is it not?—We all know that the goods traffic has been increasing, perhaps in many cases even faster than the passenger traffic, and therefore there are more goods trains, I believe, both by day and by night.

8187. I presume that the arrangement of carrying on the goods traffic by night and the passenger traffic by day is because it is found most convenient; would not that convenience be lost, supposing you were to devote one line entirely to passengers and another entirely to goods?—I do not see any loss of convenience. There is one great objection to goods travelling by night, that it is just at night when the danger is greatest, arising from the darkness.

8188. (*Mr. Ayrton.*) If the traffic, as now arranged by the railway companies, may be assumed to be conducted in a manner most convenient to the public so as to bring on the lines the greatest amount of traffic, would it not be a loss to the public if it were re-arranged in order to increase the public revenue?—You say arranged so as to be supposed to be best for the public. I do not partake in that supposition.

8189. (*Sir R. Hill.*) If it were advantageous to the public that the traffic should continue to run as it now does, would an intelligent board regulating those cases disturb the arrangement?—No.

8190. (*Mr. Ayrton.*) With regard to the leases, you have stated, have you not, that the lessee is not to have a fixed time, but that the railway may be leased from year to year?—I beg your pardon, I did not say so; I said that I should so frame the tender as to bring offers upon various understandings, and you would then judge which upon the whole was the best offer and accept it.

8191. You contemplate then the leasing of a line from year to year, or upon a term terminable at a year's notice?—I contemplate leasing it upon the best terms for the Government and the public, whatever they may be; I do not pretend to say, until I have seen the tender before me, which upon the whole is best.

8192. What power would you give to the lessee to make engagements with third parties with regard to the use of the line; would it be a power in point of time only co-extensive with his own term in the lease?—His power altogether would of course cease with his own term.

8193. Then you would deprive the railway companies of the power which they now possess of making engagements with the public for the use of the railway?—I do not know what particular power you refer to.

8194. Supposing a person builds a house at the side of a railway, and he makes a contract with the railway company that he shall have, in consequence of doing so, a ticket for a certain number of years; would the lessee possess the power of giving that ticket, or would the Government have to give the ticket?—The lessee would have full power to give such tickets for the period to which his lease extends; but he could not go beyond that term without the approval of the department.

8195. Supposing that the lease were for 21 years,

F. Hill, Esq.

14 Nov. 1865.

F. Hill, Esq.

14 Nov. 1865.

when 10 years or 15 years of that term had run out he would only have power to make engagements for five years?—Not without the concurrence of the superintending department. If the superintending department says, "It is a good bargain, and the incoming tenant, we are quite sure, will approve of it, and we will give our concurrence," of course the engagement could be made.

8196. Then in all engagements extending beyond his own term he would have to obtain the sanction of the Government for the arrangement?—Yes, certainly.

8197. (*Capt. Galton.*) The next advantage you state would be, that the traveller has "greater securities against accidents, and also against assaults and robberies on railways by the establishment of a uniform system of signals, and by clauses in the leases imposing penalties for unpunctuality and other irregularities, and requiring that means should always be provided for enabling passengers to communicate readily with the guard." Why could not those advantages be secured equally at the present time if Parliament chose to legislate upon the subject?—It would depend entirely upon the nature of the legislation. We all know that as regards administration, the only safe kind of legislation, at least as far as my experience goes, is for Parliament to lay down certain principles and then give large discretionary powers to some administrative board; attempts to put details into an Act of Parliament are sure to fail.

8198. Have you contemplated that in those leases detailed arrangements for the management of the railways should be inserted?—Yes, as to certain matters; for instance, upon that very point to which you are now referring.

8199. To that extent you would diminish the responsibility of the parties who are working the line, the lessees, in matters of accident?—In one sense you may say that their responsibility would be diminished.

8200. In what way is it more desirable that the Government board who is to lease out the lines to those parties to work them should interfere in the details than that it is desirable that Parliament should interfere in the details?—As I say, it depends very much upon the nature of the legislation. If the Government choose to create a controlling power, giving them discretionary authority to impose this or that as an obligation with reference to security, that is one thing; if they attempt to put regulations into an Act of Parliament, which is not susceptible of correction with time, that is another thing; but there is also this distinction, that in the one case you would have no hostile feeling created; the matter would go into the consideration of the rent to be given, and the rent would be fixed upon those conditions. But if Parliament overrules everything, and says, for example, "From henceforth every railway train must have the means of communicating with the guard," you have at once a hostile feeling against you, and very likely in detail you will in some way be defeated.

8201. Are you not aware that Parliament puts into every railway Act of Parliament a clause stating that the railway company shall be subject to the provisions of any future general Act for regulating railways?—I was not aware of that. I take practical experience which shows us that no such interference is ventured upon.

8202. In fact, you do not see any reason why such means of ruling the traffic should not be put into an Act of Parliament as well as into a lease?—Yes, I do, for the reasons which I have stated.

8203. Except because it would incur hostility, you think?—That is one reason; the other would depend upon the nature of the legislation. If you attempt to insert detailed regulations in an Act of Parliament, I should consider it a most dangerous proceeding, and one which would be sure to fail. But if, laying down the proposition that railway travelling is at present too dangerous, and that it is necessary to make it less so, controlling power is

established to require certain specific things to be done, that is quite another thing.

8204. (*Mr. Ayrton.*) If the Government are to prescribe in the lease the rules under which the railway company is to act, what is the difference between that and an Act of Parliament, except that the one is a rule for a particular party, and the other would be the same law for all the lessees?—In the one case there is a power of alteration and correction always at hand, and if you find that you have made a mistake you can correct it at once; whereas in the other case the matter is fixed.

8205. How can you correct it when you have signed the lease?—You can provide in the very terms of the lease a power of altering it in any respect.

8206. Then it would be a reservation to the Government of the power of regulating the traffic from time to time?—Yes, upon certain specific points.

8207. (*Capt. Galton.*) I see that one of your methods of producing security is by the insertion in the lease of clauses imposing penalties upon unpunctuality and other irregularities; in what way would that be a minute interference. If Parliament were to pass a law saying that if trains were late there should be a penalty, that is not such a minute interference as you were suggesting, is it?—Yes, it is; particularly considering that the penalties ought to be so variable in magnitude.

8208. If you can enforce a penalty by a lease, why cannot you enforce it by an Act of Parliament?—In one case there would be the feeling of justice. There would be the feeling, "I have taken the concern upon this understanding. I have allowed for it in my rent, and therefore I have nothing to complain about." I think that it would be done with a very different feeling. There is all the difference between permissive and compulsory legislation.

8209. (*Mr. Ayrton.*) Considerable allowance would have to be made, would there not, in the rental, when a contract is penal, as compared with a contract that is not penal?—That would depend very much upon the reasonableness or otherwise of the regulations; if the regulations were judged to be reasonable and for the general advantage, bearing in mind the benefit that every railway has by every other railway being under good management, I do not think the regulations would cause much difference in the rent.

8210. Will not vessels carry the mails at a very trifling payment if there is no penalty, and do not they require a very heavy payment from the Post Office if there is a penalty?—Yes; but the penalty is imposed upon certain vessels under circumstances under which no penalty would be imposed at all upon other vessels. If we require that vessels shall start at certain times all the year round, whether there is traffic for those vessels or not, and that they shall go at a certain speed without reference to the state of the weather, and shall arrive at certain points in certain given times; of course, any one entering into such a contract as that, looks with a keen eye to the amount of penalties to be incurred if those obligations are not fulfilled.

8211. The amount that you pay depends, in fact, does it not, upon the nature and extent of the penalties imposed?—Not exclusively.

8212. What do you pay for letters conveyed in vessels without penalties, when you put the mails in them?—We pay them, generally, $\frac{1}{2}$ d. a letter, or to some ports 1d.

8213. What do you pay for the same letters when they are under strict penalties?—The sum varies as much as possible. I cannot mention any sum; it is, however, something very much higher.

8214. From 6d. to several shillings?—From 6d. to several shillings. I think, if I recollect rightly, in the Galway contract every letter that was carried cost 5s.

8215. (*Capt. Galton.*) The next point of advantage that you suggest is, "Facilities for obtaining, under comparatively safe arrangements, running powers, or yet better, for so adjusting the working of the

"different railways as to make the trains of every line coincide at the terminal points with those of its neighbouring lines." Why could not that be obtained under the present system if Parliament chose to pass a law?—Because so very many things must be and would have to be taken into consideration. If trains are within a few minutes of each other, then their not being made to coincide evidently arises from hostility on the part of one or the other.

8216. Is it always hostility; is it not sometimes the result of this, that the trains have to meet a very large number of trains at different junctions?—I dare say it is. All that shows that you must have a discretionary power which can take all the circumstances into consideration; and this cannot be done in an Act of Parliament.

8217. How can it be taken better in a lease; there would be those junctions to be made?—Yes. But in the lease you merely reserve the power to interfere; and under that power you can take all the circumstances into consideration and inquire, "why do you do so and so?" and "what is the object of this or that arrangement?"

8218. If Parliament gave the Board of Trade power to arbitrate upon the matter, could not that board take all the circumstances into consideration?—It could. Then I fall back upon my former position, that in the one case there has been a consideration for it that has told in the rent, and there is no feeling of unfairness; the thing is open and clear; whereas in the other case I think you would have hostility of every kind.

8219. Still it might be taken under the present system?—Not so well. Persons who are driven are not managed so easily as those who are led.

8220. (*Mr. Ayrton.*) Is not it the case at present that this want of correspondence between the trains merely arises from the mathematical impossibility of trains corresponding at so many different points?—No, that is not my belief; my belief is that in many cases it is intentional, in order to make the passengers travel by certain trains instead of by other trains.

8221. (*Capt. Galton.*) Another point that you mention is, "Facilities for abolishing the present varieties of gauge." How do you mean that to operate?—I mean to say, that if the property of the railways became invested in one body, the Government, and it should appear that the whole country would be benefited by having only one gauge, (perhaps even different from the existing gauges,) the Government would be in a position to provide for that.

8222. It would pay for altering the gauge, in fact?—It would have the power of judging of the matter, and determining, according to the result, whether it would or would not provide for its accomplishment.

8223. If the gauge was to be altered I presume the Government would have to pay for it?—Yes.

8224. In some way or other it would have to come out of the pocket of the Government, would it not?—Or it would tell in the rent. If lessees were satisfied that the traffic generally would be so much benefited that there would be a large increase, then the alteration in the gauge would of course tell in the rent.

8225. Still it would have to be paid for in one way or the other?—Yes.

8226. (*Mr. Ayrton.*) Why could not that be done without the Government interference?—Because at present you require that the proprietors of every separate railway should come into the arrangement.

8227. In fact, it is only in case you have a new gauge throughout the country?—If you had a new gauge throughout the country, or determined that either of the existing gauges should be made universal.

8228. (*Capt. Galton.*) Is it not a fact that the broad gauge now only exists in a very limited district?—I believe it is so.

8229. So that it would not affect more than that railway?—That depends entirely upon what might be the decision. As far as I am able to judge, it is a very unfortunate thing that the narrow gauge was adopted; and if it should be considered that even

now it would be well to widen the gauge, taking the country as a whole, then the Government would, I believe, come to that decision.

8230. (*Mr. Ayrton.*) If it would be profitable to the Government to change the gauge, it would be equally profitable to the Great Western Company to do the same?—Not necessarily, because the Great Western Company's interest is confined to its own particular line; nothing that the Great Western Company can do in that respect can affect the London and North-western or any other line.

8231. (*Capt. Galton.*) Are you aware that the Great Western railway has a mixed gauge on half of its line?—Yes. The inconvenience of different gauges must be very great. The broad gauge may essentially be by far the best, yet it would be a great inconvenience to have one railway different from all the others.

8232. After saying that you consider that the Government would have to pay a larger sum than the actual value of the railways in the market, how do you make out that one of the benefits would be the acquisition by the State of property of a greater value than the price of the railway?—For reasons which have been distributed through my evidence; but I will repeat them if you like.

8233. Will you briefly tell us why that is your opinion?—The circumstance that, as regards a large part of the debt upon the existing railways, Government is able to borrow money upon much lower terms, is one thing; and the circumstance that, owning the property, they would no longer be harassed by expectations of invasion from other railways, is another.

8234. (*Mr. McClean.*) Do you think that it is a sound commercial principle to use the general credit of the country for the purpose of purchasing any description of property at a higher price than its actual value, inasmuch as you say that there would be an acquisition by the State of property of greater value than its price, so that the State would purchase the property at less than its value?—It would purchase this property at less than its value to the State, but more than its value to the holder.

8235. Do you think that a sound commercial principle?—Yes, I do.

8236. And that it might be applied to other industries of the country, such as ship-building, or coal mines, or any other, and that in every case they might make a profit such as you have mentioned?—I do not think that they would. I think that if the Government undertook to build ordinary ships, or undertook to manage railways, they would not succeed.

8237. But might it be applied to the purchase of existing industries?—That depends entirely upon the character of the concern and how it is to be managed.

8238. Do you think it is a sound principle to use the same general credit to pay the shareholders more than their present dividends, or any profit derived from this source?—Yes.

8239. You think that that is a sound principle also?—I think so. I think that it would be such an advantage to the State to hold the railways, that it would be well worth while for it to offer an inducement to the proprietors to part with them; and this could be accomplished only by giving the proprietors something more than their present market value.

8240. (*Sir R. Hill.*) You do not anticipate any objection on the part of the shareholders, I presume, to their receiving larger dividends than before?—Not the least, judging from my own feelings as one shareholder.

8241. (*Mr. McClean.*) Taking the last paragraph of your memorandum, "Additional facilities for the conveyance of the mails, with a consequent increase in the number of posts," and so on; would you have any covenant that the mails should take precedence of the passenger traffic instead of being subservient to it?—I do not propose to insert anything of that kind; I propose to insert a moderate tariff, a tariff which I believe would pay the railways, and I would require that the mails should be carried according to that tariff.

F. Hill, Esq.

14 Nov. 1865.

8242. I mean as to the regulation of the trains, would the mails be of paramount importance?—I do not propose to give up the power which the Post Office now has of requiring that trains for mail purposes should run at certain times and at a certain speed.

8243. If all trains carried mails then all would be under the guidance of the Post Office and be regulated by it?—No, it would be as it is at present. I think that the adoption of a tariff in the leases would be sufficient as there is a general power now existing requiring trains for Post Office purposes.

8244. (*Capt. Galton.*) Could not such additional facilities for the conveyance of the mails be obtained now by an Act of Parliament, if Parliament thought fit, without the purchase of the lines by the Government?—Considerable additions could be made to the facilities, but as I have said, in my opinion it makes an immense difference in the working of any Act of Parliament whether those concerned are working it willingly or unwillingly.

8245. (*Sir R. Hill.*) Is there not very great difficulty in effecting any change in Acts of Parliament?—I believe there is great difficulty.

8246. (*Mr. McClean.*) The Post Office is worked at considerable profit at the present time, is it not?—It is.

8247. (*Mr. Ayrton.*) Have you not now all the facilities that you like for the Post Office if you pay for them?—Yes.

8248. And you would get the same facilities under a lease; you would in point of fact have to pay just the same, in consequence of the parties taking that circumstance into account in the rent, that they would pay for the use of the line as lessees?—No, I think not; I think that competition would prevent that.

8249. (*Sir R. Hill.*) But would not the Post Office obtain much greater facilities?—Very much greater facilities, I think.

8250. And at a moderate additional payment for the additional facilities?—Yes.

8251. (*Mr. McClean.*) Then you would obtain, would you not, larger profits out of the railway system than you do at present, because you say that the Post Office makes a large profit at the present time by carrying letters, and the whole of that is made out of the railway system?—No, it is made very much in spite of the railway system.

8252. (*Capt. Galton.*) Could you make a farthing of profit out of the Post Office as it is at present administered without the use of the railways? Taking the quantity of letters that you carry, would not the expense of the Post Office greatly exceed its means if there were no railways?—No, I do not think it would.

8253. (*Sir R. Hill.*) Is it not a fact that the Post Office pays the railway companies a much larger rate per ton per mile than it paid to the old coach proprietors?—Yes, very much larger. Our work that is done by other means than by the railways, say by stage coach or by mail carts, is done less expensively than that done by the railways.

8254. (*Mr. Gower.*) Do you propose that the Government should deal with canal companies in the same way as with railway companies?—No, I do not enter upon the question of canals.

8255. You may not have considered it, but would not it, in your opinion, greatly deteriorate canal properties, supposing the Government meant to make the same proposal with regard to them as with regard to railways?—No, not unless the practical result should be a very large multiplication of railways upon this system.

8256. What I understand to be the practical result of your scheme is, that the rates upon railways should be generally lowered; if that should be the case there would be greater competition, would there not, between railways and canals than at present exists?—Quite so.

8257. And in that way it would seriously injure the canal proprietors?—It is very possible that it would.

8258. Do you think that it would be any hardship upon them that the credit of the State should be so used as to raise up competition against them, and therefore cause great injury to them?—I do not think it would be any hardship at all; it appears to me to be a legitimate commercial proceeding. The Government does not claim any monopoly, and I do not suggest for a moment that there should be any hindrance to the conveyance of goods by canals.

8259. I understood you to say that it would be a hardship upon one railway company if another railway were made through the same district; that would be done by merely private enterprise, but here would be a case of the credit of the State, to which all the taxpayers contribute, being used to the detriment of one set of proprietors and to the advantage of the public; do you think that no hardship?—No, I cannot understand that it is any hardship at all. The Government make such arrangements that persons can travel at lower fares, and have their goods conveyed at lower rates than at present without contributing a shilling of the public money for the purpose; and I do not see that any hardship is created.

8260. Supposing the Government were to establish a manufactory for the production and sale of goods, publicly using the public credit in order to do so, and competing with private manufacturers; would not that, in your opinion, be considered a hardship upon the private manufacturers?—They very likely would consider it a hardship, but I should not myself.

8261. (*Capt. Galton.*) In dealing with railways, would you not have to deal with the case of those canals which are now guaranteed by the railway companies?—I have not considered that question.

8262. (*Mr. Ayrton.*) The Government, I presume, would take over every collateral obligation which the railway company would be under?—Yes, certainly, all the obligations of the railway company.

8263. (*Mr. McClean.*) Are you aware that in Austria the Government have sold all their railways to a company?—No, I was not aware of that.

8264. And in Italy the same, and in France the same?—Not in France, I think.

8265. All the railways that were made in the time of Louis Philippe were sold to companies?—With great deference, I do not think that there is any single company in France that owns a railway.

8266. I mean companies with an interest extending to a 99 years' lease?—Yes, but the Government has a reversionary interest.

8267. (*Sir R. Hill.*) You do not consider that we in this country are bound to follow the example of Austria and Italy and France, do you?—No. We know that Austria and Italy are in very needy financial circumstances, and, happily, we are not in that state in this country.

SUMMARY OF OPINIONS held by Mr. FREDERIC HILL on the subject of RAILWAYS.

1. That it is expedient that the State should purchase the railways, but that it is not expedient that it should undertake their management.

2. That while the purchase of the railways might be made in single payments by the creation of a corresponding quantity of Government stock, such creation is not necessary, since the purchase could be effected by means of a fixed annual payment, like the rent of a Scottish feu, and in the form of a dividend on the shares of each railway, and of interest on its bonds.

3. That the rate of dividend and of interest should, in each instance, be a matter to be freely agreed upon between the railway proprietors and the Government without resort to compulsion; any railway, in the event of a failure in the negotiation, to remain, so long as the failure continues, in the hands of the present owners.

4. That the Government should let each railway on a lease, as a landed proprietor lets a farm; such lease to be either for a number of years, or terminable at a moderate notice, as may, in each case, be judged most expedient.

5. That the rent to be demanded should, in each instance, be sufficient to pay the dividends, the interest on the bonds and all incidental expenses—in a word, sufficient to make the railway self-supporting.

6. That, other things equal, a railway should be let to those parties who, while undertaking to pay the required rent, will agree to adopt the lowest tariff of charges, as well for passengers as for goods.

7. That the leases should be so framed as to empower the Government to require that all due precautions be taken for safety, such as observance of punctuality, and affording means of communicating with the guard; and also for the conveyance, at a moderate rate of charge, of the mails.

8. That the leases should further provide for keeping the railway, bridges, viaducts, and embankments constantly in a good state, and for maintaining the rolling stock at its full value; and that to attain these and other objects, frequent Government inspection should be made, and the lessees should be bound immediately to make good any deficiency.

9. That at the termination of a lease, and at any intermediate time, if either party desire it, the whole property should be assessed, and any falling off made good by a money payment; while, on the other hand, the company should be indemnified for any increase in value, provided the consent of Government shall have been obtained to the measures causing such increase.

10. That if the increase in value be large, and it be deemed inexpedient to pay for it out of the National Exchequer, the necessary funds may be raised by the creation of additional shares in the railway.

11. That under a like arrangement for raising the funds, the Government should give their consent, from time to time, to the construction of new branch lines to a railway, or to a prolongation or other alteration in the main line.

12. That as respects the construction of lines altogether new, the Government might either agree beforehand on what terms (either by means of a single payment or in the form of a dividend) they will buy the line, provided the work be well done, or allow the business to proceed spontaneously, as at present, the proprietors being at liberty, when their railway is complete, either to continue their ownership, or, upon terms to be mutually agreed upon, to sell the railway to the Government.

13. That the plan described in this summary might be tried experimentally by the purchase, in the first instance, of some one railway, or, say, of all the Irish railways.

14. That the plan would be attended with the following benefits:—

(1.) The acquisition by the State of a property of greater value to it than its price.

(2.) The receipt by the proprietors of railways of a dividend somewhat higher than that of which, if the railways remained their own property, they could have any reasonable prospect; such dividend, moreover, being rendered certain in amount, and free, therefore, from its present liability to great fluctuation.

(3.) A cessation, to a great extent, of fierce struggles to obtain legal authority to construct new railways, with the consequent saving of the cost of such struggles, of the time and attention of Parliament and of the directors of railways and others, the saving of the expense of making railways which are not really needed, and the prevention of all unnecessary invasion of private property or of places set apart for public recreation.

(4.) A large reduction in the fares of passengers and in the freight of goods; with the consequent increased facilities for locomotion and for the further development of trade and agriculture, especially in the latter case, by the greater ease that would be created for the intermixture of different kinds of soil and for the conveyance of manure, including town sewage.

(5.) Facilities for obtaining, under comparatively safe arrangements, "running powers," or, yet better, for so adjusting the working of the different railways as to make the trains of every line coincide, at the terminal points, with those of its neighbouring lines.

(6.) Greater securities against accidents, and also against assaults and robberies on railways, by the establishment of a uniform system of signals, and by clauses in the leases imposing penalties for unpunctuality and other irregularities, and requiring that means should always be provided for enabling passengers to communicate readily with the guard.

(7.) Facilities for so arranging the traffic of the country that, as far as practicable, passengers and goods may be conveyed on different lines.

(8.) Facilities for abolishing the present varieties of gauge.

(9.) Additional facilities for the conveyance of the mails, with a consequent increase in the number of posts and in the celerity of communication, and removal of the chief difficulty for the establishment of a parcels post.

The witness withdrew.

Mr. THOMAS SHAW examined.

Mr. T. Shaw.

8268. (*Chairman.*) I believe you are the traffic manager of the Irish North-western Railway?—Yes, I am.

8269. Can you tell the Commissioners what has generally been the position of that company in point of finance?—I am sorry to say that our position is not very flourishing at the present time, although the traffic receipts are very much improved this current half year, and we are earning, as near as I can reckon, about at the rate of 2 per cent. on our preference stock, which is nearly the whole of our capital; but we are prevented from applying it in that way by the very heavy incumbrance of immediately pressing debts.

8270. Then, in point of fact, at present your ordinary shareholders are receiving nothing?—Nothing.

8271. And your preference shareholders are receiving nothing also?—Nothing.

8272. What is the length of your line?—The main line is 122 miles; there is a branch of nine miles, and there is another branch of $15\frac{1}{4}$ miles, which is partly owned by other companies.

8273. (*Mr. McClean.*) What was the cost of the line?—About 13,000*l.* per mile, including plant.

8274. Was it made by contractors?—No, it was made by the company in the usual way by share capital.

8275. What is the amount of the share capital?—The original share capital is very small, it is only 171,000*l.*

8276. Does that apply to the whole line or only to a portion?—To a portion of the present line. I should mention that the Irish North-western line,

as it now stands, is composed of two lines, the Dundalk and Enniskillen, and the Derry and Enniskillen. Those were two lines starting from the two ports of Derry and Dundalk, and terminating at the common point, Enniskillen.

8277. Then the capital that you refer to belongs to that line?—Originally our company was the Dundalk and Enniskillen, and we lease the Derry and Enniskillen line; we pay rent for it.

8278. You guarantee a certain rent upon the purchase as payment?—Yes; we pay 26,000*l.* per annum.

8279. At what rate upon your capital?—It pays them about 5 per cent.

8280. Are you able to pay that out of your resources?—We must do it; it is the first charge upon our revenue, next to interest on debentures.

8281. And have you paid it up to the present time?—We pay it every week, by a cheque for 500*l.* every week.

8282. (*Mr. Ayrton.*) What additional obligations have you of guaranteed capital or debt before the ordinary shareholders are paid dividends?—We have a bonded debt of 154,000*l.*

8283. What is the annual charge for your debt?—We have paid the last half year 6,000*l.* for interest upon it.

8284. Is there any other preference capital?—There is a Government loan of 69,000*l.*, the principal and interest of which is commuted to an annual payment of 5,369*l.*, to terminate in 1883.

8285. Have you any other preference capital?—There is debenture stock irredeemable, 54,000*l.*

Mr. T. Shaw.
14 Nov. 1865.

8286. What is the annual charge for that?—5 per cent.; that would be 2,700*l*.

8287. Have those branch lines any preference stock, or are they paid out of borrowed money?—Between Cavan and Clones it is preference capital, but there are four lines subscribing to that.

8288. How much have you to pay?—We subscribed 49,000*l*. to it.

8289. What is the annual charge for it?—It is subscribed out of our preference stock, and that is not receiving anything.

8290. That is, not in addition, it is part of the preference stock?—It is part of our capital.

8291. How is the other branch line paid for?—Also out of the preference shares of the company.

8292. Have you given the whole annual charge in preferential capital?—We have bonded debts that are due and coming to maturity at the present time, 23,000*l*. in this year; those we have to take up, and this sum we are actually making up out of our receipts on the line in preference to getting money at the rate at which we should have now to get it, 8 or 9 per cent.

8293. That is the floating debt?—It is an outstanding debt.

8294. (*Mr. McClean*.) What company has joined you in the subscription to the Cavan and Clones line?—The Ulster line subscribed 30,000*l*.; the Dublin and Drogheda, 20,000*l*., and the Dublin and Belfast Junction, 20,000*l*.

8295. Can you work in harmony with those three companies?—Yes. This is a line which is rather peculiarly circumstanced. It is a link line connecting the Midland Great Western system with our own and the Ulster systems, and inasmuch as it might have been made a medium of communication between Dublin and the north, in opposition to the Drogheda and Belfast Junction Companies, they participated in the ownership of it.

8296. And they assist in the obstruction that takes place to passenger traffic at Cavan, I suppose?—No; they do not interfere with the working of the line at all.

8297. What is the cause of the great difficulty in booking through between your line and the Midland Great Western?—The prime cause of it is the alteration that was made in the trains between Dublin and Belfast.

8298. By whom?—By the three companies forming the service; the Ulster, the Belfast Junction, and the Dublin and Drogheda.

8299. You gave the name of the Ulster line, did you not, as one of the lines which subscribe to your Cavan and Clones line?—Yes, but we work it; it is managed by a separate board, and we work it at 2*s*. a mile. In the year 1863, immediately after the Ulster line was made down to Clones, we framed a time table for the Clones and Cavan line, in concert with the manager of the Ulster Company, which suited very well, and it was working up to the 1st of June last, therefore it was in operation for about two years, and gave great satisfaction. But on the 1st of June last the coast lines, as we call them, between Belfast and Dublin, made such a serious alteration in their trains that we were obliged to alter our main line trains, joining them at Dundalk, because a great portion of our traffic is traffic in connexion with Dublin, and we must run our main line trains to suit their trains at Dundalk. The alteration of our main line trains necessitated an alteration on the Clones and Cavan branch, and with the limited number of trains on that line (and there are as many trains as the present traffic, ordinarily speaking, would justify, four trains each way per day,) we found it impossible to fix the hours of those trains, so as to complete the connexion with our main line, and also with the Ulster line. These things are very awkward to arrange.

8300. There was no intentional obstruction on the part of either company, was there?—Not the least.

8301. What is the nature of the traffic on your

line?—The passengers are principally third-class; the goods are agricultural produce, and such goods as the people of an agricultural district require. There is not much manufacture, it is not a manufacturing country at all.

8302. Do you think that the receipts would be improved if you lowered the rate for third-class passengers?—You might say if we lowered the rate for third-class passengers for long distances, say distances over 20 miles, we might have more passengers.

8303. Say from Dublin to Londonderry?—I have no doubt that a decrease of the fares would increase the number of passengers.

8304. Why do you not adopt that course?—I doubt very much whether an increase would follow immediately equivalent to the decrease of the fares.

8305. Does that prevent you trying the experiment?—We have tried the experiment in several cases. We have tried the experiment of market tickets to neighbouring market towns, and with the exception of one instance they are not a success.

8306. Have you tried any general reduction of rates for cattle or sheep or pigs?—Since I joined the company I have remodelled the cattle rates, and I think that probably they are as moderate as any cattle rates in Ireland. But the cattle traffic has been so seriously interfered with by the bad seasons that it is not so good as it was three years ago.

8307. There is no falling off in the number of cattle in Ireland, is there?—Yes, there has been a serious falling off, but it is now recovering.

8308. Can you state generally why you think that your line does not pay a dividend; is it owing to the great cost of construction, or to the large capital, or is it from the want of population in the district?—It is not a populous part of Ireland by any means. It is purely agricultural. There is not a single manufactory nor a single mill, except one that is a flax mill, on the whole line. Of course there are corn mills here and there, but even the corn trade is done mostly now by the port mills, and we carry the manufactured article instead of raw grain mostly.

8309. (*Capt. Galton*.) Has not the line been a very expensive work?—The line has cost about 13,000*l*. a mile, including plant, &c.

8310. Could not a line have been made through that district on a much more economical principle?—It was made very early, and I think at the time that our line was made probably they could not have done better than they did.

8311. (*Mr. McClean*.) Have you sufficient plant to work the line?—No, I think not; we are short of waggons.

8312. And have you too few trains?—No, I think the trains are ample to accommodate the traffic that we have.

8313. (*Capt. Galton*.) How many trains have you between Londonderry and Enniskillen?—On the Derry portion, between Derry and Omagh, which is the best portion of the line, we have seven trains each way per day.

8314. On the rest of the line how many have you?—Between Omagh and Enniskillen we have five trains per day, and between Enniskillen and Dundalk four trains.

8315. Is there not much traffic out of Dundalk?—Not so much as at the Derry end of the line, which is by far the better end.

8316. (*Mr. Ayrton*.) Is it a single line all the way?—Yes, it is a single line all the way, except about nine miles between Omagh and Newtown Stewart.

8317. (*Capt. Galton*.) How long did you try those market tickets of which you spoke?—They are in operation at present.

8318. When were they established first?—Some of them about twelve months ago; others of them about six months ago.

8319. Do not you consider that it requires fully twelve months before you can judge of the effect of tickets of that sort?—I think not.

8320. Have not the people to get accustomed to

travel by railway, instead of going in their own carts to market?—In the one instance that we have tried, from Inniskillen to Dundalk, the success was almost immediate. I should say that in two months' time, probably, or less than that, the success was as great as it has ever been since.

8321. What are the towns between which you issue them now?—We issue them to Enniskillen and back from three or four stations on each side, and also to Omagh and back, and we take them at a halfpenny per mile; it is a halfpenny per mile there and back; it is a single third-class fare.

8322. (*Mr. Ayrton.*) Have you ever had any proposal submitted to you by any person for bringing traffic on the line at reduced rates which you have refused?—Nothing beyond this,—that every railway manager is in the habit of receiving letters from the public, asking for reductions of rates, and a corresponding increase of traffic is promised. Of course he must exercise his judgment; he must make inquiries, and be guided by his judgment upon the information which he receives.

8323. I referred to specific proposals from persons engaged or desiring to engage in any particular business on your line, that they would bring more traffic on the line if you would give them a reduction of rates?—No, not that I am aware of.

8324. Have you any reason to suppose that any traffic is kept off the line by the rates that you charge?—No, certainly not.

8325. (*Capt. Galton.*) If a person came to you and said that he would guarantee you a certain quantity of traffic, you would then be prepared to give him a reduced rate, would you not?—The view that I should take of it would be this: if I saw that there was a particular traffic to be cultivated between any points, and if I found that the rate was obstructive, and that by making some concession an increase might be made, I should then take up the question as a general question, not in favour of an individual, and then of course every individual would get the advantage of it; but we do not, as a principle, make preference rates for individuals.

8326. (*Mr. McClean.*) Do you carry much coal on your line?—We do carry a good deal of coal, when we take into consideration that there is but little manufacture on the line. But our coal traffic is seriously interfered with by the local bogs; there are bogs all through the line. We reduced our coal rates fully 20 per cent.

8327. Why do you desire to give preference to coal over peat or bog?—That is at the option of the public.

8328. Merely for the purpose of getting traffic?—Yes, merely for the purpose of getting traffic.

8329. Do you book through with the London and North-western Company?—Yes, we do.

8330. From Dundalk?—From most of our stations to a great number of theirs. I have a list of stations here that we do book through from and to. On one side you will find our stations in Ireland, and on the other the stations in England.

8331. Both for goods and passengers?—Yes; both for goods and passengers.

8332. (*Mr. Ayrton.*) Is not your line rather different from all other lines with regard to its capital; that it has a very small amount of general capital as compared with the guaranteed and loan capital?—It has a very small amount of original shares, only 171,000*l.*

8333. What is the amount of the whole of the other capital?—The paid up preferential share capital is 469,000*l.*

8334. Therefore you are overwhelmed by your preference charges?—We are not paying them anything, therefore we are not draining our exchequer at present; but we are overwhelmed by our immediately pressing debts,—bonded debts, debenture debts, and floating debts.

8335. (*Mr. Glyn.*) Did I correctly understand you to say that you paid off 23,000*l.* worth of debts out of

your net earnings?—No; but we have during this year bonded debts coming due to the amount of 23,000*l.*, and as they are becoming due we are paying them off out of our present revenue. If we could be relieved of this dead weight, this excessively oppressive immediate weight of debt, we should then be in a position to do something.

8336. (*Mr. Ayrton.*) What was your surplus income over your earnings in your last statement of account?—The last half year the total receipts were 42,000*l.*

8337. What were your working expenses?—The working expenses were 22,000*l.*

8338. Then you had a net income for the half year of 20,000*l.*?—No, we have to pay the rent of the Londonderry line.

8339. Apart from the payments from capital you have an income upon the working of the line?—I should explain that part of our line is held under lease, and we must pay the rent upon it out of our net earnings before we can apply the revenue.

8340. That, in fact, is in the nature of preferential capital?—It is a debt which has preference before everything else except debentures; 42,000*l.* is the half-year's earnings, and out of that we have to pay 22,000*l.* for working expenses.

8341. How is it that the working expenses are so large in proportion to the earnings?—Because a large proportion of earnings is goods traffic, and we have done a great deal of repair to the permanent way during this half year, which has made the expenses rather heavier than they would have been otherwise.

8342. That is a special increase for the half year?—It may be an increase probably of a couple of thousand pounds. Then we had to pay the Londonderry Company 13,000*l.* for rent. That left about 7,000*l.*

8343. Then the rent that you pay is in the nature of a preference rent for that part of the railway, or do you think that your earnings upon that part of the railway which you have taken in lease are equal to the rent and working expenses?—Somewhere thereabouts; I think that there would be very little balance; it just about clears itself.

8344. If it were made a separate line and the amount were kept separate you would not have to pay anything out of the earnings of the other lines to make good the deficiency?—I believe that it just about clears its way and no more.

8345. (*Mr. McClean.*) Have you competition at any junctions with other companies?—Yes, we have very severe competition from the Ulster Company.

8346. For traffic between Londonderry and where?—For port traffic, cross-channel traffic. The Ulster Company taps us at two places, at half way on east of our two arms of railway, Clones and Omagh. Their object is to make Belfast the port for our district.

8347. Your object is, I suppose, to make Dundalk the port?—Our object naturally is to keep the traffic on our own line.

8348. (*Capt. Galton.*) And to take it either to Dundalk or to Londonderry?—The Scotch traffic to Derry, and the English traffic to Dundalk.

8349. (*Mr. Ayrton.*) You stated that your traffic had increased of late, what was the cause of that increase?—There has been an increase in both passengers and goods. The increase in the passenger traffic I attribute in a great measure to the fine season that we have had; I think that that has encouraged travelling very much, but I do not think that the Exhibition has done very much for us. We are rather out of the way of it. The increase in the goods traffic, I think, is attributable to the more prosperous state of the country generally, and the somewhat larger increase in the cattle traffic.

8350. Do you anticipate any further increase from year to year?—Yes, I hope so.

8351. (*Mr. Gower.*) Could you mention what the corresponding increase has been this year and the two last years?—Yes, I have a statement of the weekly receipts from the beginning of the year 1861

Mr. T. Shaw.

14 Nov. 1865.

Mr. T. Shaw.
14 Nov. 1865.

up to the present time. In the receipts of the present half year there is an increase every week, and the average weekly increase is 240*l*.

8352. (*Mr. McClean.*) On both passengers and goods?—Yes, on both passengers and goods; taken together it is about 15 per cent.

8353. (*Mr. Ayrton.*) Do you find that the board of directors, in consequence of the smallness of your net profits, pay very little attention to the affairs of the company, and look upon it as a hopeless concern, or do you think that they conduct it with as much activity as any other board of directors?—No, I think that the directors have great hopes of the concern working itself through in time; but it will take some time, it is so severely logged with debt.

8354. Do you find any activity in the management of the board, or do they take very little interest in the affairs of the company?—No, the board take great interest in the affairs of the company.

8355. Do they look after the company and do any share of the work?—A number of directors are residents in Dublin, who, of course, do not move down the line as frequently as those who live on the line.

8356. Do you think generally that they take an interest in the administration of the line, as much interest as other directors do on more profitable lines?—I think so.

8357. (*Mr. McClean.*) Have you ever tried to amalgamate your line with the Ulster Company, so as to prevent this competition which you say exists?—I am not aware of it.

8358. Do you think that it would be beneficial to the country to have an amalgamation with the Ulster system?—I think if the whole of the four lines north of Dublin were amalgamated it would be a great advantage, and I think that they might be worked together with advantage to the public as well as to the proprietors.

8359. (*Capt. Galton.*) Do you think that it would be an advantage to the proprietors?—I think so.

8360. (*Chairman.*) There is not business enough, I suppose, to bear competing lines?—No; there is not sufficient traffic in the country to warrant very low fares or experiments; and in such a state of things as where they oppose one another, the receipts must necessarily be not very much.

8361. (*Mr. McClean.*) If the companies were amalgamated I suppose the first thing would be to raise the rate and fares?—I think not.

8362. Then how would you pay better if the four companies were amalgamated into one concern?—I think that they might be worked more advantageously, and with greater economy.

8363. Where would the saving take place; would it be in the mere management?—In the management.

8364. That would be a very small item, would it not?—I think that the communication between Dublin and our own system might be very much improved if the railways were amalgamated.

8365. (*Capt. Galton.*) You mean all the lines north of Dublin?—Yes, all the lines north of Dublin.

8366. (*Mr. McClean.*) Including the line from Cavan to Clones?—Yes.

8367. Would you go further south than Cavan?—No, I think not. I think you might leave that to others. The Midland system does not interfere much with us nor we with them.

8368. What would be the effect of amalgamation upon the different ports?—I think that each port would take its legitimate traffic.

8369. How would you get the traffic; would it not be in the hands of the railway company to send the traffic to any one of the ports. Suppose, for instance, that the London and North-western Company made arrangements with your company, would they not try to get the whole of the traffic by Dundalk from Londonderry?—I think not; I think that they would try to take the traffic by whatever port was most convenient, and whichever was the most convenient port could be worked with the greatest economy. For

instance, take Clones as a point, Dundalk is the nearest port for that.

8370. Take Derry, would the traffic go to Belfast or to Dundalk?—I think it would go to Dundalk.

8371. (*Capt. Galton.*) Would not the effect be that the railway company would try to take the traffic over the longest route in order to charge the highest rate?—I think not. I think it would be very foolish for any railway company to try to force traffic out of its natural route.

8372. Is it not the case that it is tried to be forced practically on railways?—Not except where there is competition. When companies go to war with each other, of course they would try to do so.

8373. (*Mr. Ayrton.*) Would the adoption of one port rather than another depend upon the extent of the steam-boat communication?—No doubt the extent of steam-boat communication would greatly affect the railway traffic to any port.

8374. (*Capt. Galton.*) You stated that you thought that the advantages of amalgamation would be first a saving in the expense of management; what other advantages do you assume would accrue?—I think one of the immediate results would be a better communication between Dublin and our district. I do not think that the service between Dublin and our district is quite as good as it should be.

8375. And whose fault is it that it is not so good as it should be?—I think that it is from the fact of the line being under three different companies.

8376. How many companies are there between you and Dublin?—There are two between us and Dublin, and ours makes the third.

8377. Do not those companies run in connexion with each other?—Yes.

8378. Do not your trains run in connexion with theirs?—Yes, some of them do—three trains a day each way. I think that the charges are too high between Dublin and our line.

8379. You think that the aggregate of the local charges is too great?—Yes; I think that if it was all one line the rates would be modified, and a development of traffic would take place.

8380. (*Mr. Ayrton.*) Are their mileage rates higher than yours?—The through-fares between Dublin and our line were made up by adding the local fares together, and the line goes round an angle, almost a right angle, and of course in comparison with the distance actually traversed that makes the rates very high.

8381. (*Capt. Galton.*) Do the two companies charge their full Parliamentary rates?—No, I do not think they do. I think that they charge 2*d.*, 1½*d.*, and 1*d.* per mile for passengers, the same as we do ourselves.

8382. You think that the rates are too high to bring traffic on the line?—Yes; I think that there should be something allowed for that angle.

8383. Is there any other advantage which you would apprehend from uniting the railways together?—No, there does not anything strike me particularly.

8384. (*Mr. Ayrton.*) It is not apparent why the rates should be lowered if it is one company; why should not they continue to charge a mileage rate as they do now according to the distance round?—Because the traffic would be developed, and there would be more traffic between Dublin and our district if the rates were lower.

8385. Why should the rates be lower when the three companies are one than they are now, when they have to divide it amongst them?—Because the line being in one hand they would then have a greater interest in it, and they would have perfect unity of interest.

8386. (*Mr. McClean.*) Is there any competition now between Clones and Belfast; how does a passenger go at the present time from Clones to Belfast?—By the Ulster line. There is no competition whatever for traffic passing between Clones and Belfast; but there is competition for cross-channel traffic between Clones and England. For instance, there is the Newry and Armagh route lately opened, and

Mr. T. Shaw.

14 Nov. 1865.

there is our own Dundalk route, and the Belfast route. But for any traffic passing between Clones and Belfast proper there is no competition whatever.

8387. (*Capt. Galton.*) You stated that you suffer from competition at Omagh and Clones; where does that traffic go to?—To Scotland and England.

8388. Does that traffic obtain very reduced rates in consequence of the competition?—Their through-rates are about the same as our own.

8389. You have agreed, I suppose, between you, to charge certain rates?—No, they charge rates entirely independent of us; but they charge lower rates from Clones, in proportion to the mileage, than they do from other parts of the line.

8390. And you charge lower rates as well?—No, we do not. Our distance to the port is 40 miles and theirs is 64.

8391. They bring their rates down to yours, do they?—Not quite; but they bring them lower than the rates would be if carried out at the mileage charge upon other portions of the line.

8392. And your line does not communicate with any line at Londonderry, does it?—No.

8393. Is that a great inconvenience to you?—No; I do not know that it is.

8394. Have you any traffic on your line that would go through Londonderry, or to the Northern Counties line, if there was a communication made?—There would be some flax traffic, I have no doubt, from Strabane, that would go that way.

8395. (*Mr. McClean.*) Are there any very large mills on your line?—No.

8396. (*Capt. Galton.*) Was the flax that you were speaking of formerly carried by the Northern Counties line till the Omagh Junction was made?—No doubt it was, but it would go by canal from Strabane to Derry.

8397. Do you receive any payment from the Northern Counties line not to compete with them?—We have an agreement with the Northern Counties Company, by which they make a sort of common purse system of traffic between Derry and Belfast.

8398. The result is that they make a payment to you?—They make us a certain allowance of the receipts.

8399. That amounts to about 600*l.* a year, does it not?—About 800*l.* a year, I think.

The witness withdrew.

Adjourned to to-morrow at half-past 11 o'clock.

Wednesday, 15th November 1865.

PRESENT :

SIR ROWLAND HILL, K.C.B., F.R.S.

J. A. ROEBUCK, ESQ., M.P.

A. S. AYRTON, ESQ., M.P.

CAPT. DOUGLAS GALTON, R.E., C.B., F.R.S.

E. T. HAMILTON, ESQ., M.P.

WILLIAM POLE, ESQ., F.R.S., *Secretary.*

THE RIGHT HON. LORD STANLEY, M.P., F.R.S., IN THE CHAIR.

WILLIAM GALT, ESQ., further examined.

W. Galt, Esq.

15 Nov. 1865.

8413. (*Chairman.*) Before the Commissioners put any questions to you I would ask you whether there is any explanation or addition to your former evidence which you wish to give?—Yes, there is one explanation that I wish to give. If you refer to Question 7446, you will see that the question is, "If the Government paid the bonus the interest would be about equal, would it not, to the dividends that the shareholders now receive?" I assented to the correctness of that proposition. I misunderstood the question. The answer should have been, "No, the profits would have been divided between the shareholders and the Government, the shareholders having one-third and the Government two-thirds." To make that explanation more clear I will suppose a case, and then we shall see exactly how the account would stand. We will take a railway with a capital of

1,000,000*l.* sterling; viz., 10,000 shares of 100*l.* each, and paying 5 per cent. to the shareholders, would produce a profit of 50,000*l.* a year, and the shares would be bought in the market at about par. If the Government purchased the line and gave the shareholders a bonus of 15 per cent. they would pay 1,150,000*l.* To borrow that sum at 3½ per cent. they would pay 40,250*l.* per annum, whilst the Government would receive 50,000*l.* per annum, about one-third profit to the shareholders, and two-thirds profit to the State.

8414. (*Mr. Ayrton.*) Can you buy shares in the market giving a dividend of 5 per cent. at par?—Yes, that is the general price; sometimes it is a few shillings less and sometimes a few shillings more, according to the state of the money market, but generally for investment you buy to pay 5 per cent.;

W. Galt, Esq.
15 Nov. 1865.

and giving a bonus of 15 per cent. you would pay 40,000*l.* a year, and the Government receive 50,000*l.* That is the proposition I put forward, whether or not it would be assented to by the shareholders is another question. I have had a good deal of conversation with many shareholders on the subject, and some have said, "No; if ever this matter should become a practicable question (it is a mere theory at the present time), we think that there should be a fair division of profits between the shareholders and the State."

8415. (*Sir R. Hill.*) When you gave evidence on the 7th instant you put in certain tables, which were not seen by the Commissioners till they were printed, there has therefore been no opportunity, hitherto, of putting questions on those tables. I propose to ask you a few questions respecting them. Will you turn to Table No. 1, Question 7351, it is headed "Average fares per 100 miles," I presume that those are the fares by the ordinary trains?—Yes, the fares by the ordinary trains.

8416. Exclusive of the express trains, and also exclusive of the fares for return tickets?—Yes, they are the fares by the ordinary trains.

8417. Are they the ordinary single fares?—Yes.

8418. According to the table it appears, does it not, that the lowest fares are demanded in Belgium?—Yes.

8419. And the highest in the United Kingdom?—Yes.

8420. For the sake of brevity we will, if you please, confine our attention to the first-class fares, as the fares for the inferior classes are pretty much the same in proportion to the first class throughout the table. The cost of travelling 100 miles in Belgium in the first class is stated to be 6*s.* 6*d.*?—Yes.*

8421. And the cost of travelling 100 miles in the United Kingdom (we will say England), is 18*s.* 9*d.*?—Yes.

8422. I presume it is upon a comparison of those two items in the table that you arrived at the conclusion, which I think you stated, that the fares in this country were about three times as great as those in Belgium?—Not quite that, but they are, I believe, more than double.

8423. Can you inform me how the sum of 18*s.* 9*d.*, charged for 100 miles in England, is made up; what are the data?—On the principal railways throughout the kingdom you may take the average fares at about 2½*d.* a mile.

8424. I do not find that the average is so high as that. Turn if you please to Table No. 4, which you also put in; you there state the average fares per mile of a very considerable number of railways, selected I presume as a means of indicating the general average of the country?—Yes, it was for that purpose.

8425. I am aware that it is not strictly correct to take the average of averages, but it will not lead us much astray in this particular instance. I have added up your averages, and divided the total, which is 83·5, by the number of items, which is 42, and the quotient is 1·99, say 2. It would appear therefore from your own table, that the average charge for first-class fares by the ordinary trains in this country is about 2*d.* I have also taken out the average fares as stated in this document before me, (a return by the Board of Trade), which gives the averages upon the calculations of the several companies, and I find there again, that selecting the larger companies, those which have the greatest amount of traffic, and taking the average of the averages, they give exactly 2*d.* and $\frac{1}{10}$ th part of a penny, (which fraction we may disregard,) as the average fare?—Yes.

8426. May we not therefore assume 2*d.* to be the average first-class ordinary fare? Do you object to that?—I object to the principle on which you make it up. For instance, you add up all the fares, and then

divide them by the number of railways; but in taking an average you will at once perceive that you must also look to the amount of traffic, and not merely to the number of railways. I would take, for instance, the ten principal railways. In the late returns there may be some reductions. This table you refer to was made up two years since. It may be, as you say, that the fares have been reduced from 2½*d.* to 2*d.*

8427. I stated in my question that this would not give the result with absolute correctness; but I have done exactly what you suggest. I have selected those railways which last year carried, at least, 10,000,000 of passengers—they are 9 in number—and I have taken the average as returned by the company itself, and have added together the averages, and divided the total by 9. I at once admit that that is not quite correct; but, the numbers not varying very materially, it would be sufficiently correct for our purpose?—You have not, as I have always, included the express trains.*

8428. You have excluded them also. The companies that I have taken are,—the Great Eastern Company, their average first-class fare being 2·24*d.*; the Great Western, 2·03*d.*; the Lancashire and Yorkshire, 1·55*d.*; the London and North-western, 1·95*d.*; the London, Brighton, and South Coast, 1·95*d.*; the Metropolitan, 2·17*d.*; the Midland, 2·23*d.*; the North-eastern, 2·02*d.*; the South-eastern and Greenwich, one company, 1·96*d.* The average of them all being 2·01*d.* Seeing that those 9 companies carry about 130,000,000 of passengers out of a total of 197,000,000*l.*, we cannot, I think, object to taking them as a fair sample of the whole. The average, therefore, is 2*d.* Now, if we correct your estimate for the United Kingdom, 100 miles at 2*d.* would amount to 16*s.* 8*d.* Do you object to that modification, substituting 16*s.* 8*d.* as the average first-class ordinary fare for England?—No, I cannot object to what you state as a matter of fact; I only wish to make this explanation,—you make your calculations from the tables of the Board of Trade not yet published, and I only went on data that existed at the time I made my calculations two years since.

8429. Then you have no objection to our considering that item as 16*s.* 8*d.*?—No.

8430. Now, taking the first item in the table, the cost of travelling 100 miles first class in Belgium you have put down at 6*s.* 6*d.*?—All that is incorrect at the present time. There has been a considerable rise, I understand, in the fares of Belgium; and those I should have corrected in the same way, in accordance with the returns now about to be published.

8431. I do not think that there has been any advance in the fares, but rather, as we have been informed, a reduction?—I understood that there was an advance, because I had a note of those Belgian fares saying that they were higher than when I published my work.

8432. Perhaps I can explain your error. We have been favoured by the Director-General of the Belgian railways with a very full statement of the fares as charged; and he has also given the total charge for travelling first class 100 kilometres (a kilometre being about five-eighths of a mile), 8 francs; if you convert that into English money at the rate of 25 francs per *l.* it would be 6*s.* 6*d.*, and you have put that down as the cost of travelling 100 miles; whereas it is the cost of travelling 100 kilometres?—I know that the present charge is as nearly as possible 1*d.* per mile for first class.

8433. The charge for first class is 80 centimes per kilometre, is it not?—So it appears.

8434. That is much more than 1*d.* per mile, but we need not trouble ourselves about the excess; M. Fassiaux, the officer at the head of the department, has calculated the charge for travelling 100 kilometres, and he tells us that it is 8 francs, which come to

* Witness afterwards explained that this was so at the time he made up the tables.

* This answer afterwards altered by witness as follows:—"You have not excluded the express trains."

6s. 6d. Have you not made the mistake of putting down the cost for 100 kilometres as that for 100 miles?—I know that the fares on the Belgian lines are higher than when my tables were made out, but, as I mentioned, I only put in this list *pro formâ*, supposing that I should have an opportunity of correcting it, and thereby having it in entire conformity with the present fares.

8435. (*Chairman.*) Is the list which you have put in, in your evidence, the same as that which appears in your book?—It is. A messenger from the Board of Trade brought the new returns to me here the day I gave evidence; I had not time to change the figures, and I was under the impression that the proof sheets would pass under my hands for correction before they would be forwarded to the Commissioners.

8436. Be they accurate or inaccurate, this statistical statement which you have put in is that which you have deliberately adopted as the basis of your theory, is it not?—No; so far from founding any argument on the continental fares, I said expressly that we had nothing to do with them; that the charges on the continent should not influence the policy of England.

8437. (*Sir R. Hill.*) That list you are prepared to correct?—Undoubtedly.

8438. It must be advanced, must it not, from 6s. 6d. to 10s. 3d.?—To whatever I find the exact charge is.

8439. If you take 6s. 6d. as the charge for 100 kilometres, and then reckon upon that what should be the charge for 100 miles, you will find that it comes to 10s. 3d.; you do not dispute that conclusion, do you?—No; of course if you have it from the statistical return I cannot dispute it.

8440. This correction, by reducing the average charge for 100 miles in England to 16s. 8d. and advancing the average charge for the same distance in Belgium to 10s. 3d., very materially disturbs the proportions; instead of the English charge being three times as great as the Belgian charge, as you stated it to be, it is only one and two-thirds greater?—I am not aware that I said anything in my evidence about the fares, but I read a quotation from Mr. Gladstone's speech 20 years ago, when he spoke of the Belgian charges being one-third of ours.

8441. Then again, as you are well aware, a large proportion of the travelling in this country is by return tickets, is it not?—A considerable proportion is.

8442. And there are very few cases in which return tickets are allowed in Belgium?—I think there are some cases.

8443. There are some, but they are very few. Supposing that a person, instead of taking a single ticket in this country to travel 100 miles, takes a return to travel 50 miles out and 50 miles back, he would be charged, would he not, on most lines a fare and a half?—Yes.

8444. That would reduce the cost of travelling 100 miles in this country from what we just now calculated, namely, 16s. 8d., to 12s. 6d. in the ordinary state of things?—Yes, in those cases it would be so.

8445. It appears therefore that a person using a return ticket, and travelling 50 miles out and 50 miles back, would spend 12s. 6d., whereas if he made a similar journey in Belgium, paying full fare each way, he would have to pay 10s. 3d.; so that the comparison of the cost when return tickets are available is 12s. 6d. here against 10s. 3d. in Belgium for the same distance?—Yes.

8446. Then do we not arrive at the conclusion that the difference between the cost of travelling in this country and the cost of travelling in Belgium is not very great?—Assuming that the tables and the information that you have received are quite correct, it is so.

8447. Assuming the calculations which I have made to be correct, it is so; are you prepared to admit that?—The fares even according to that account are still higher in this country than in Belgium; but the difference is not so great.

8448. I will now examine the question a little further, if you please. In Belgium the practice appears

to be to charge in every case for luggage which is entrusted to the care of the administration?—It is so, I believe.

8449. I need scarcely ask you if that is the practice in this country?—No.

8450. That again tends to bring the charges in the two countries into still closer approximation, does it not?—Yes; I believe of late years the charges are much more equal than they were formerly.

8451. Then again, we find from M. Fassiaux's statement, that when a person travels first class in Belgium, however short the distance may be, he pays 80 centimes?—I was not aware of that regulation.

8452. If he travelled as a first-class passenger only a single kilometre, in every case he would pay for 10 kilometres as a minimum?—I do not know the recent regulations with regard to travelling in Belgium.

8453. That again, if taken into account, as it should be, will bring the charges in the two countries into still closer approximation, will it not?—It will.

8454. Then as regards luggage. If a traveller has ever so little luggage placed in charge of the administration, and for the shortest distance, he has to pay 50 centimes, say 5d., that again brings the charges into still closer approximation, does it not?—It does.

8455. Take now the charges in England; we have already considered the question of return tickets, if the return tickets entered into the calculation of the average charge per mile they would effect, would they not, a considerable reduction in that charge?—No doubt.

8456. They have no season tickets in Belgium, but we all know that a very considerable number of passengers in this country travel by what are called season or annual tickets, that again reduces the average in this country. And with regard to excursion trains they have them occasionally, but rarely in Belgium, and that again still tends to reduce the average cost in this country; do not all those circumstances tend on the one hand to enhance the average charge in Belgium, and on the other hand to reduce the average charge in this country?—No doubt, if we bring in the excursion trains it makes a great difference.

8457. Then may it not follow, and would it not follow, that as regards very short distances the charge in this country would probably be less than that in Belgium?—That may be.

8458. Would you have the kindness to look carefully into this matter and construct your table accordingly?—Yes; but I only wish to observe that with regard to those charges in Belgium the comparison is merely incidental. I found no argument upon it one way or the other. If the charges in Belgium were three times more than what I have put them at in my first table, that has nothing at all to say to my argument upon the matter.

8459. (*Chairman.*) Is not it part of your case that you say this:—"Here is England, the richest country in the world, and the country which first established railways, and yet which has the worst railway system existing;" and in order to support that case, you compare the English prices with those of all foreign countries?—Yes, so far as fares are concerned.

8460. In that sense is not any inaccuracy in this comparative statement as between English and foreign railway charges a very important part of your case?—No, I do not consider it very important in this way, that I say that no matter what the charges are abroad it is our object in this country to reduce the charges to the lowest possible point.

8461. (*Sir R. Hill.*) But if those facts do not bear upon the question, would it not have been better not to encumber the statement with them?—That is quite true, and I can only give the explanation which I have already given.

8462. But do they not very materially bear upon the question; if we can be satisfied that in Belgium, where, for the most part, the railways belong to the Government, and where we know they are very

W. Galt, Esq.

15 Nov. 1865.

W. Galt, Esq.
15 Nov. 1865.

profitable to the Government, the fares charged are not more than one-third of the fares we charge, would not that furnish an almost overwhelming argument in favour of placing of the lines under the Government here, and of reducing the charges very largely?—But it is not intended, as far as I know, or proposed by any one, to give the Government the management of the railways here.

8463. You admit the inaccuracy?—I admit the inaccuracy, of course. The tables made out two years since are not correct now.

8464. Now we will take, if you please, Table No. 6, Question 7372; this table is apparently intended to show that very large reductions have been made in the charges on certain important lines of railway with a comparatively small diminution of dividend; that is the object of the table, is it not?—That is the object.

8465. Are you sufficiently guarded in making it appear that those are very partial reductions; is not there a danger of your table being interpreted to mean that all the return tickets upon the London and North-western railway, for instance, were reduced from 60s. for 386 miles to 7s. 6d., first class?—No, I have stated fully the circumstances of the case, and I mentioned especially that the reductions only took place on a part of the line, and for a limited period.

8466. That does not appear, does it, in the table itself?—No, but I made the statement in my evidence.

8467. Will you refer to the statement, if you please?—At Question 7362 the question is asked, “Do you know of any cases of late years in which exceedingly low fares have been charged?” My answer is, “There have been several cases of late years where there has been competition between companies, and where for a comparatively short time they adopted very low fares. For instance, at the time of the Manchester Exhibition we had the London and North-western Company and the Great Northern Company running trains from London to Manchester carrying first-class passengers and allowing them to stop there four days and bringing them back again for 7s. 6d. They carried in those trains about 600 passengers generally, it was said, on the average, some more and some less, but the expenses of the train in the conveyance of those passengers cost about 50 guineas, and their receipts at the time were calculated to amount to about 176*l.*; but that was carrying at $\frac{1}{4}$ *d.* a mile for first-class passengers. There was another very remarkable case of competition between the Edinburgh and Glasgow line and the Caledonian line. There was a quarrel between the two companies, and they suddenly reduced their fares to 1*s.*, I believe it was, for first class, 9*d.* for the second class, and 6*d.* for third class for a distance of 46 miles. There was also the case of the South-eastern Railway Company which carried for a considerable time to Reading at $\frac{1}{4}$ *d.* a mile for first class and half a farthing for second class. And there was another case, namely, the Brighton Company, in opposition to the South-western Company, carrying at exceedingly low fares, at about the same rate as the last case which I have mentioned.” It is specially stated in all those cases that it was only for a short time and only on a part of the line. Therefore, any one reading the evidence would not at all be led to the conclusion that those fares which I mentioned were for the whole year, or that they extended over the whole line.

8468. (*Mr. Ayerton.*) You mentioned, afterwards in reply to some question of mine, that you considered the cases exceptional?—I did.

8469. (*Mr. Roebuck.*) Will you continue reading your answer in the former day’s evidence?—I go on to say, “But in all those cases we find, when we come to look at their dividends, that it does not make, at the very outside, a difference of more than 1 per cent., but it must be remembered, in reference to those lines, that they carried at a ridiculously low charge. It is not a fair test of what you would call moderately low fares carrying first-class passengers at $\frac{1}{4}$ *d.* per mile; that, in my opinion, is a prepos-

terously low fare for ordinary traffic, and I do not consider it at all a fair experiment.”

8470. (*Sir R. Hill.*) I think there can be no objection to your table, if you refer to that part of your evidence, but the table stands distinct and away from this evidence, and will probably be selected by some one who has not carefully perused the whole evidence, and be put forward as a proof of the great reductions which have been made upon lines with small injury to the dividends; perhaps you will take care so to put it that it may not be misunderstood?—Yes; I will do so. Perhaps I may be allowed to say, with regard to the Belgian fares, that it is within a very short time I heard that they were not so low as I have stated them to be. I intended to make all the alterations complete, in conformity with the returns which have just been made by the Board of Trade. I will put in fresh tables as part of to-day’s evidence.

8471. (*Mr. Roebuck.*) You have for some time past directed your attention, have you not, to the subject of Irish railways?—I have.

8472. Their construction was of a much more recent date, was it not, than that of the English lines?—It was. The first line, the Dublin and Kingstown line, was constructed in 1834, and until 1837 there was no further movement made in the construction of railways in Ireland.

8473. Did the Government intend at one time to take on itself the construction of railways in Ireland?—In 1837 there was a Commission issued by the Government for the purpose of investigating the subject of railway construction in Ireland, and the result was that they made a report to the Government, strongly recommending that the Government should lay out the lines to be made by companies, and assisted by Government on certain conditions. I would beg to read a short extract from the Commissioners’ report, in order to show the opinion of that Commission on the necessities of the case, and more especially their view that the Government should take a part in having the lines constructed. The report says, “The main avenues throughout the country cease to be the property of the State, and are handed over to the absolute possession of monopolists placed beyond the reach of rivalry or control. They are enabled to establish a monopoly in the most extensive sense, and to keep the intercourse of the country entirely at their command. The rate of speed, the choice of hours for departing, the number of journeys in a day, rest at their discretion; and, as they have the unlimited right of fixing the charges for the conveyance of both passengers and goods, then they have an opportunity of repaying themselves, not only for the legitimate cost of constructing and maintaining the railway, but for all the heavy expenditure incurred either through their own extravagance or in consequence of the various impositions practised upon them.” This Commission ended in nothing. From causes quite unnecessary to enter into, the Government could not carry out their views, and it was left to private speculation to make the railways in Ireland the same as in England.

8474. (*Sir R. Hill.*) Is not the report to which you refer the one popularly called Lieutenant Drummond’s report?—It is.

8475. (*Mr. Roebuck.*) Coming down to more recent times, will you state what progress has been made in the construction of railways in Ireland?—In 1844 the first movement was made for the construction of railways in Ireland. That year the Great Southern and Western Bill passed, and in the following year Bills were passed for the principal main trunk lines throughout Ireland, since then railway projects have gone on in the usual way.

8476. What is their present financial position?—It is exceedingly bad. They do not pay, I think, on the average more than 2 per cent. on the capital invested in them.

8477. (*Sir R. Hill.*) Do you mean upon the whole capital, including debenture and preference shares?—No, the share capital.

8478. (*Mr. Roebuck.*) Is the management by the companies popular in Ireland?—No, unfortunately it is not at all popular.

8479. What is the cause of that unpopularity?—The public think generally that the charges are much too high, and that the trade of the country is not developed in consequence of the high charges.

8480. Are the fares in Ireland higher than they are in this country or in Scotland?—They are higher than on many lines in England, and much higher than in Scotland.

8481. Can you give any instances of the fares in each country?—Taking the principal railways in England, Scotland, and Ireland, we find from the last returns of the Board of Trade that the charges on the average are higher on the principal lines in Ireland than they are in either England or Scotland. I will give a few instances: the London and North-western Company charge per mile 1·95*d.*, 1·43*d.*, and 0·95*d.*; the Caledonian charge 1·22*d.*, 1·14*d.*, and 0·69*d.*; the Lancashire and Yorkshire charge 1·32*d.*, 1·05*d.*, and 0·49*d.*; the London, Tilbury, and Southend charge 1·03*d.*, and for 2nd class 0·74*d.*; the South-eastern charge 1·96*d.*, 1·39*d.*, and 0·83*d.*. If you take the two great railways of Ireland, the Great Southern and Western and the Midland, which answer to the London and North-western and the Caledonian in England and Scotland, the Great Southern and Western charge 2·20*d.*, 1·65*d.*, and 0·99*d.*, and the Midland Great Western 2·24*d.*, 1·68*d.*, and 0·99*d.*

8482. Have you noticed what effect those high fares have produced on the travelling public in Ireland as compared with England and Scotland?—Yes. By the recent returns of the Board of Trade we find that the number of travellers in England and Wales for the last year was 197,014,661; in Scotland, 20,205,455; and in Ireland, 11,902,049. In fact little more than a twentieth part of the number of travellers in England, and very little more than half the number of travellers in Scotland.

8483. In that calculation do you pay any attention to the number of people in England as compared with the number of people in Ireland?—If we look at the population of the two countries we find that there is an enormous disproportion between the numbers carried in the two countries. Taking the population of Ireland at 6,000,000, and that of England and Wales at 20,000,000, that would be about three times the amount of the population in Ireland, whilst we find that the number of travellers is nearly twenty-fold. The population of Scotland may be taken at about one-half of that of Ireland, whilst we find that the number of travellers is nearly double.

8484. Do you spend much time in Ireland?—I spend a few months in the summer and autumn of the year in the north of Ireland generally.

8485. Then you speak from personal observation of the want of proper railway accommodation?—So far as seeing loaded carts travelling alongside the railway, I deduce from that fact that the railway companies do not carry merchandise on moderate terms. I would wish to draw attention to a letter I received from a gentleman in the north of Ireland, in which he enters fully into the question of the grievances they suffer there from the want of proper attention to railway management; the gentleman is a merchant, and carries on a large business in Coleraine, and for several years was the principal magistrate of the town. He writes in these terms:—"London, 14th Nov. 1865. Dear Sir, As I understand you have shortly to give evidence before the Royal Commission on Railways, I wish to draw your attention to some of the grievances under which we labour in this part of the country. You are aware that the Belfast and Northern Counties railway passes through this town to Portrush, seven miles distance, yet so far as the conveyance of goods is concerned from that port, we might as well have no railway at all. All heavy goods, such as timber, slates, iron, and coal, &c., are carted up to town alongside the railway, as we are able to bring them

up cheaper that way than by railway, the rates being lower. Last year, there was imported into Portrush between 9,000 and 10,000 tons of coal, of which fully two-thirds came into Coleraine, a small proportion only coming by railway, the great bulk being conveyed by the common road. In regard to differential charges, we suffer a great grievance in Coleraine. From Derry to Belfast, for instance, is 95 miles; our distance from Belfast is only 61 miles, but the charges on merchandise are fully 25 per cent. more for the lesser distance. This we feel to be a great grievance, that any company has it in its power to destroy the trade of a town if they think proper. The same arbitrary rule is followed with regard to passengers. It is utterly inexplicable. I reside at Castlerock, the distance to Derry is 28 miles, the fare is 4*s.* 4*d.*, first class; but persons coming to Castlerock from Derry will get a return ticket by the same class for half-a-crown; but if they go on to Coleraine, five miles further, they will lose their return ticket, and be charged the full fare of 5*s.* 6*d.* I only notice these absurdities, to show the entire mastery the railway companies have over the public. A uniform rate of fares at three farthings, a halfpenny, and a farthing, with return tickets at a fare and half, and necessary reductions on goods and cattle, &c. to one-half of their present rates would be the salvation of the country. As a matter of course, Ireland should pay whatever it would cost, and an addition to the income tax of a penny in the pound, or whatever might be necessary, no man in the country would object to.—I am, Dear Sir, Yours truly,—WILLIAM WARKE.

"William Galt, Esq."

8486. (*Capt. Galton.*) When you speak of differential rates, do you mean differential rates irrespective of distance?—No, on account of the distance; for instance, from Londonderry to Belfast the distance is 94 miles, and they charge less than from Coleraine to Belfast, which is only 61 miles. Therefore they have the power of undue competition, and they have the great advantage that they can do precisely as they like with the merchants in both towns. The same complaint, I believe, has been made in Liverpool. That the railway companies have it in their power to regulate the traffic to a great extent is, I think, proved by the differential charges on different parts of the line.

8487. There are, in Ireland, a great number of small and independent lines, are there not?—There are a great number of independent lines each having a separate management, and their own rules and regulations, quite independent of the larger companies.

8488. Why do not they amalgamate as they do in England?—The principal reason is, that the greater number of these lines pay nothing whatever to the original shareholders. The management is in the hands of the preference shareholders, and the preference shareholders have no interest beyond getting their preferential interest. They are, in fact, mortgagees in possession.

8489. You took some steps, did you not, last summer, in Ireland, to get up a feeling there for carrying out the Act of 1844?—Yes. I went over there shortly after Mr. Monsell's motion in the House of Commons, when the Government undertook to recommend to this Commission the investigation of the Irish system, I had interviews with many of the leading men in Dublin. Many of the principal merchants took the matter warmly up, and the result was that a public meeting was held, presided over by the Lord Mayor and attended by the most influential men in Dublin; there was an unanimous expression of feeling that it was desirable to have that section of the Act of 1844 carried out that authorizes the purchase of the railways by Government.

8490. Had you any communication with any of the railway directors?—Yes. I had a great deal of communication with them. I met the directors of the Irish North-western line, and also the directors of the Wexford and Wicklow line. I met them twice. They gave me two interviews, and they appointed a com-

mittee to talk the affair generally over with me, to see what possibly could be done in England with regard to having a change in the system.

8491. (*Mr. Roebuck.*) Have you prepared any definite and detailed scheme for the purchase of the Irish railways, or do you merely advocate the principles contained in the Act of 1844, leaving to the Government, should it think fit, to determine how they may be applied?—I have prepared a detailed scheme to submit to the Commissioners, for the purchase of the Irish railways.

8492. What do you propose?—There are 40 railways in Ireland in full working operation, besides many others in course of construction, of these I take no account. Of the former class, 14 pay dividends and 26 pay nothing whatever to the original shareholders. For the purpose of carrying out the scheme I propose, I have divided the railways into three classes. The first class are railways which pay dividends on the original stock, and consequently on their preference shares and loans; there are 14 railways in this class, viz., Belfast and Northern Counties; Cork, Blackrock, and Passage; Dublin and Belfast Junction; Dublin and Drogheda; Dublin, Wicklow, and Wexford; Dublin and Kingstown; Great Southern and Western; Cork and Limerick Direct; Midland Great Western; Athenry and Tuam; Great Northern and Western; Ulster; Waterford and Limerick; Waterford and Tramore. The amount of paid-up original and preferential capital in this class amounts in round numbers to 14,000,000*l.*, and the debenture loans amount to 2,500,000*l.* The second class are those which pay no dividend on the original stock, but pay their dividends on the preference and guaranteed stock; of those railways there are 16. The original capital in this class amounts to 2,036,000*l.*, and the preferential capital and funded debt, debenture stock, and loans amount to 2,350,000*l.* The third class are railways which pay no dividends either to the original or the preferential shareholders; they are 10 in number; the original and preferential capital amounts to 1,800,000*l.*, and the loans to 735,000*l.* With regard to the purchase of the first class, there would in my opinion be very little difficulty. I have had communication with some of the largest holders, and from the statements that all of them have made to me, I apprehend that there would be very little difficulty in coming to an agreement with this first class of shareholders.

8493. (*Chairman.*) Are you now speaking of those lines which pay?—Yes, I am taking them first, because any difficulty that might arise would be about the others. In Ireland, as in England, investments in railways pay about 5 per cent.; when a man invests money in a railway he expects to receive 5 per cent. interest. Compulsory sales of land and houses are matters of constant occurrence, and the holders of such property always are paid something beyond their market value; but I have found from the communications I have had with different parties, that a payment of 22½ years on the purchase money, instead of the present value, which is 20 years' purchase, would be considered a fair and proper payment. That would be an addition of about 10 per cent. to the market price.

8494. I presume that you do not pretend to fix an invariable price upon those lines without reference to their prospects?—No.

8495. You take the market price to start from, and you make some definite addition to that price according to some fixed principle?—Yes; I take the market price to start from. Each line varies according to circumstances; on some lines an addition of 10 per cent. would be too much, on other lines an addition of 10 per cent. would be too little. I apprehend that if this scheme should ever be carried out, of the Government purchasing the railways, they would appoint Commissioners who would look into all the circumstances of each line. I take an average of 10 per cent. as a bonus which the shareholders ought to receive on their shares. Assuming that to be the case,

we will consider how the account would stand for those paying lines. I am keeping as near as possible to round numbers, and avoiding going into details, so as to give the Commissioners a general idea of the scheme. I find in Class No. 1, that 14,000,000*l.* is the amount paid for the original shares, and allowing one-half per cent. profit on that sum, would yield a profit to the Government of 70,000*l.* per annum.

8496. (*Capt. Galton.*) Will you explain that profit to the Government?—In this way: the interest of 14,000,000*l.* at 5 per cent. would be 700,000*l.*, and a tenth part of that, that is the reduction from 5 per cent. to 4½ per cent., would be 70,000*l.*; there would be one-half per cent. profit, which would amount to 70,000*l.* Assuming that the management went on in the same way, and that it was a mere investment of Government money, the Government by borrowing money at 3 per cent. would make 70,000*l.* per annum by the transaction. Then the loan debentures amount to 2,500,000*l.* and the interest is on an average about 4½ per cent. Some are a little more and some a little less, but you may say 4½ per cent. If the Government would take these loans up, paying off that money at 3½ per cent., there would be a profit of 25,000*l.* Therefore, taking the first-class lines and assuming that the Government could borrow money at 3½ per cent., and be willing to pay 10 per cent. of bonus to the Irish shareholders on the present value of the shares, that, so far as that transaction was concerned, would give a profit of 95,000*l.* That is in Class No. 1. Now we come to Class No. 2. There are 16 lines in this list. The original shareholders get nothing whatever, but the holders of preference and guaranteed stock are paid in full. The amount of the original share capital in this class is 2,036,000*l.*

8497. As compared with the 14,000,000*l.* in the former case?—Precisely. There is nothing in a commercial sense to be made out of the original shares, as they pay nothing; the only profit the Government would have in this case, would be on the preferential capital, which, with the loans, amount to 2,350,000*l.* The preferential shareholders and loanholders are paid on an average 5 per cent. interest. The Commissioners will understand that this class of railways, whose credit is very low, are obliged to pay a higher rate of interest for their money than the railways in good credit, as the latter can get the money at 4½ per cent. Consequently on this second class the profit that the Government would have would be greater on account of the loans being at 5 per cent.; and still the Government would pay no more than 3½ per cent.

8498. Have you taken the amount that they pay on their loans from the half-yearly statements of the companies, or have you assumed it at 5 per cent.?—I have taken everything from the returns that are made to the Board of Trade, from which we find the actual payments that they make. All those 16 lines, paying nothing whatever to the original shareholders, and taking Government stock at 3½ per cent., the difference represents an annual payment of 34,000*l.*, that is the profit the Government would derive from the second class of railways.

8499. (*Sir R. Hill.*) Do you propose to pay anything to the original shareholders in that class?—I shall deal with that by and by. I first make up all the profits that the Government would have, and then we will look to what the Government on the other hand must pay.

8500. Do all the preferential shareholders in this class get their full interest?—Yes, their full interest. I have gone particularly into detail upon this point. These are the 16 railways which pay no dividend, but pay the preference stock in full; the Athenry and Ennis, the Belfast and County Down, the Carrickfergus and Larne, the Belfast, Hollywood, and Bangor, the Cork and Bandon, the Cork and Macroom, the Cork and Youghal, the Finn Valley, the Kilkenny Junction, the Kilrush and Kilkee, the Letterkenny, the London-

derry and Lough Swilly, the Midland Counties and Shannon Junction, the Portadown, Dungannon, and Omagh, the Waterford and Kilkenny, and the West Cork. Those are the railways in class No. 2. In class No. 3 there are ten, namely, the Cork and Kinsale Junction, the North-western, the Newry and Armagh, the Newry, Warrenpoint, and Rostrevor, the Banbridge and Belfast, the Banbridge Junction, the Dublin and Meath, the Limerick and Castleconnell, the Limerick and Ennis, and the Limerick and Foynes. Those pay nothing either to the original or to the preferential shareholders.

8501. (*Capt. Galton.*) Did you mention the Londonderry and Coleraine line?—That line has been taken possession of by the Loan Commissioners.

8502. It is now leased to the Belfast and Northern Counties Company, is it not?—That has been a recent transaction; it was worked by the Belfast and Northern Counties Company, but it has been taken possession of by the Loan Commissioners, for, I think, a debt of 200,000*l.* There is also another line that has been declared bankrupt, the Bagnalstown, which I have not brought into the account; it is omitted from the returns of the Board of Trade.

8503. (*Sir R. Hill.*) There certainly must be a class between that which pays the full interest on the preferential shares and debentures and that which pays nothing at all?—There may possibly be a few, but we have got no account of them, so far as we can gather from the returns. There may be some small difference in the case of some of them, but nothing to affect the general results.

8504. (*Mr. Roebuck.*) Will you proceed with your statement?—With regard to the original and preferential capital in the third class it amounts to 1,800,000*l.*, and the loans to 735,000*l.* The holders of those debentures are paid on an average 5 per cent., and taking the Government stock at $3\frac{1}{2}$ per cent., the difference represents an annual payment of 11,000*l.* The Bagnalstown line, as Captain Galton is aware, has become bankrupt, and I have passed it over as I have done with the Londonderry and Coleraine line. I have put them aside, not knowing exactly what their position is. I have made out a summary of what the profit would be. The profit on railways which pay dividends to their original and preferential shareholders, class No. 1, amounts to 95,000*l.* The profit on railways which pay dividends to preferential shareholders amounts to 34,000*l.*, and the profit on railways which pay no dividends to either class of shareholders amounts to 11,000*l.* The profits on the whole would thus amount to 140,000*l.* per annum. What we have now to consider I have found the greatest difficulty in dealing with; and I apprehend that the Commissioners must have found, if they have turned their attention to the matter, a great difficulty in dealing on equitable principles in regard to the purchase of those railways which pay no dividends. We find that out of those 40 railways, of which I have given a list, 26 railways do not return one single shilling to the original proprietors. The first view that would suggest itself of dealing with those companies would be to refer the matter to arbitration; but then on what principles are you to arbitrate? As a mercantile property it is utterly worthless; you cannot easily determine what the value of a thing is that brings nothing. On the other hand, no one could think of taking away this property from the shareholders, and giving them nothing whatever; and therefore we have to consider how they are to be dealt with. Let us suppose, for instance, that the Government would deem it desirable to take Waterloo Bridge. The 100*l.* shares are absolutely worth nothing in the market; the expenses of keeping up the bridge nearly equal its income; and therefore as a mercantile property it is valueless. If a company wished to purchase Waterloo Bridge, and if it were left to arbitration to determine its value, looking at it in a commercial point of view, the arbitrators would say, "The bridge is worth nothing." But on the other hand, suppose it were put to the

Government, "Is this bridge worth nothing?" I apprehend that the Government would look at it from a different point of view; they would not look at it merely as a money investment, and say, "This bridge is worth nothing, as we can make nothing by it;" but looking to the wants of London, and to the benefits its possession would confer on the metropolis generally, they would say, "Here would be a most important addition to the convenience of the community, and if it can be thrown open it would be a great public benefit." I wish therefore to impress, if I can, on the minds of the Commissioners, that in looking at the question of the value of the Irish lines, although as a matter of course they will not exclude the commercial element, yet they must not look at it entirely in a commercial point of view; they must bring into consideration the importance that those lines would be to the State, not looking at it as a company that were going to buy them, but looking at it in an enlarged point of view; they would consider that, however unfortunate the speculators who have made those lines have been, they have done a great public benefit to Ireland. Now, as to the market price, we cannot bring that element into consideration. I have here a list of Irish railways that are never mentioned in the market. They are worth nothing to anybody, and therefore the test of value which we look to in class No. 1, and which enables us to determine their price, gives us no assistance whatever with reference to the value of these lines. In this, as in very many other cases, you must look at the question with a view to a compromise, and inquire what advantage under all the circumstances would those lines be to the State, taking into consideration the value that they would confer upon Ireland, and looking to what extent they might be worked for the benefit of the country; and taking all those things into consideration you would arrive at a fair measure of what I would say is justice to the unfortunate shareholders.

8505. (*Chairman.*) The compromising of the question means paying something for a property which in the market is worth nothing?—Yes, in a certain sense, paying something for property which in the market is worth nothing, but which might be made of immense benefit to the State. That is the difference. A commercial company simply looks at what money it can make by any transaction, but the Government in dealing with the question looks at it in quite a different light; and without excluding the commercial element, they would see that those lines can be made of great use to the country, and therefore this would form an element in the consideration. Then we have some precedents for this in coming to a conclusion upon the subject. About a year since the Thames Tunnel was bought; the capital invested in the Thames Tunnel was about 400,000*l.* Every member of the Commission knows that commercially it was not worth a shilling, and that the shareholders never received a single penny, and never to the end of time would receive anything, unless something extraordinary should turn up, as that which has occurred, to give them a chance of getting something. A year since a railway company said "We can run a railway through this tunnel," and they made a bargain with the proprietors and gave them 100,000*l.*, they gave them 5*s.* in the pound on their original outlay as a sort of compromise of the question.

8506. Or rather, may you not put it in this way,—that the company which purchased or is purchasing the tunnel was a new railway company making its application to Parliament; that there were some competing schemes, and that they thought it desirable to buy the goodwill of the shareholders of this tunnel, and so to obtain not only their consent but their support to the project?—That is a very good way of putting it. So in dealing with the Irish shareholders in the same sort of spirit, considering that we have got no market price to go on, and the Government looking at what it may be worth for the development of the resources of the country, I should say that they might

W. Galt, Esq.

15 Nov. 1865.

W. Galt, Esq.
15 Nov. 1865.

follow the same example and give them 25 per cent. on the original stock, or 5s. in the pound. Assuming that proposition to be accepted, let us see how that could be worked out. I have already noticed that the profit Government would have by the purchase would amount to 140,000*l*. The loss of capital of the shareholders, in class No. 2 amounts to 2,036,000*l*., and in class No. 3 it amounts to 1,800,000*l*. Taking the two classes they amount together to 3,836,000*l*., but we will say in round numbers four millions sterling, and allowing 25 per cent. to the shareholders, the sum required would amount to 1,000,000*l*., which would require from Government an annual payment of 35,000*l*. If we deduct that sum, 35,000*l*. of loss from the 140,000*l*., it would leave a net profit of 105,000*l*. There has been considerable discussion with regard to the saving which would be effected by the consolidation of the Irish railways under one management. Some of the Commissioners will perhaps remember that the authority of Mr. Dargan was quoted in the House of Commons; that he thought taking all the different savings that could be effected by the Government purchase they would amount to 200,000*l*. a year; and by my calculations it is rather above that sum. The working expenses on the Irish lines amount to 47 per cent. on the gross receipts; and the opinion of Mr. Dargan and Mr. Forbes, which was come to separately without any communication with each other, was that a saving might be effected of 7 per cent. If the Commissioners will consider for a moment the peculiar position that Ireland is in with regard to the companies, they will, I think, come to the conclusion that a great saving can be effected in their management. There are more than 40 separate independent companies, there are some 300 or 400 directors to support, there are upwards of 40 secretaries, and engineers and lawyers in abundance, and if the Commissioners consider these matters they may come to the opinion that it is not an extravagant estimate to suppose that the expenditure could be reduced from 47 per cent. down to 40 per cent. Assuming then that such would be the case, their consolidation under one management would effect a saving of 110,000*l*. So that that would make the entire saving by a consolidation under one management, assuming for argument sake that I am correct in the data, amount in round numbers to 215,000*l*. That includes the purchase of those lines which in a commercial point of view are worthless, giving them 25 per cent. on the original price they paid for their stock. If the charges on the passenger traffic were reduced to two-thirds of the present amount, and on the merchandise traffic to one-half, that would be equal to a reduction of Irish taxation to the amount of a million sterling per annum, and the holders of non-paying stock, whether original or preferential, whose shares are in those cases entirely worthless, would be paid one-fourth of their original outlay. There exist no data by which any calculation can be made as to whether 215,000*l*. would meet the deficiency arising from the reduced charges which might be expected for a few years. But a very small addition to the income tax in Ireland, say of a penny in the pound, would amount to 100,000*l*., or in the event of the reduction of the income tax for Great Britain, a penny in the pound being still kept up for Ireland, would in my opinion more than meet the deficiencies that would arise. The question has been mooted as to whether or not it would be desirable that Ireland should pay any loss that would be incurred. That is a matter, in my opinion, placed beyond all debate whatever. If any reduction is made in the fares in Ireland, or if the Government should engage in any scheme for the purchase of the Irish railways, whatever the loss may be in carrying it out, it should exclusively be paid by Ireland. If the Commissioners see their way to a scheme of this sort, for carrying out the purchase of the railways, and at the same time be satisfied that Ireland would pay the deficiency, there can be no doubt that they would effect a great good for the country by recommending this scheme to be carried

out. With regard to this increase in the income tax of a penny in the pound, I have had communication with a great number of the gentlemen who have come from Ireland to give testimony here. I cannot tell, of course, what testimony they have given to the Commission upon this subject, but they told me without the slightest hesitation that they would pay the extra tax with the greatest satisfaction. Indeed, as a matter of common sense, they would do so, as, in fact, they receive a shilling on the one hand and pay back a penny on the other. If you reduce the taxation of the country by the amount of a million, and on the other hand ask the country to pay 100,000*l*., it is perfectly obvious that there could be no question whatever upon the subject.

8507. (*Chairman.*) Put it in this way: suppose that your scheme, which of course cannot be tested by experiments except upon a considerable scale, fails in the working so far as this, that those lines at the reduced rates are worked at a loss, so that this extra taxation has to remain upon them; do you think that the Irish community would, in that case, be satisfied to continue to bear the burden of extra taxation upon that account?—I have not the slightest doubt on the subject; I am certain they would be perfectly satisfied; there is considerable misunderstanding about the lines that pay no dividends, as many people are of opinion that those railways in which the original shareholders get nothing, are therefore worthless. There can be no greater error than that. Many of those lines which pay their original shareholders nothing, pay a large amount to the preference shareholders, and a considerable amount of debt. If all the shareholders were on the same footing, if the preference shareholders and the debt were all put together, they would all pay something, more or less. There is no line in Ireland, except those two or three lines that have been referred to, but pay more than their working expenses.

8508. (*Mr. Roebuck.*) How do you propose that the railways should be managed when Government acquire them?—I should manage them by a commission. I think that the management of public property in a country should always be in accordance with the feelings of the country. With reference to England it is quite a different affair. The ideas of the people of Ireland on the subject of Government interference are so entirely different from the feelings of the people of England, that the management of Irish railways must be treated quite differently from that of English railways.

8509. What appears to you to be the fundamental error of our railway system?—The fundamental error appears to me to be this, that you oblige the country to adapt itself to the railway system instead of adapting the railway system to the country; for instance, there are 300 persons, we will say, who wish to be carried between two points, from A to B. A commercial company looks merely to the point of profit, and says, "If we carry 100 persons at the highest paying price the railway will pay 5 per cent.; if we carry 200 persons at a much lower charge it will pay $4\frac{1}{2}$ per cent.; if we carry 300 persons at a still greater reduction in fares it will pay $3\frac{1}{2}$ per cent." According to the system of this country, the directors look at the multitude; and according as they may find the greatest profit they carry more or less. Now when a company says, "We cannot afford to carry those 300 persons, we carry them at a loss," they speak quite correctly; but that is a loss relatively, not a loss positively. Carrying the 300 persons they have only $3\frac{1}{2}$ per cent. profit, but carrying the 100 persons it gives them a larger profit, it gives them 5 per cent. profit; therefore the fundamental error in our railway system appears to be this, that instead of adapting the railway system to the wants of the country, you make it merely a commercial speculation, the directors having the power to charge what fare pays best, without any respect whatever to the wants of the country.

8510. Do you think it reasonable that in a great scheme of this sort, in which the national credit is so

largely involved, the benefits should be exclusively confined to one part of the kingdom?—I think not. It would be exceedingly desirable that the benefits of the system of low fares and the use of the national credit to carry out that object should be applied to England, and also to Scotland. But we must take into consideration the feelings of the country. England is very strongly opposed to all Government interference whatever. They dislike it; and the great bulk of the people, it is said, would sooner pay double or treble as much, and have nothing whatever to say to Government interference, than travel at a very low rate with Government interference. If the question, however, of Government interference were fully and fairly brought before the English people, and if they could be made to understand that by the use of Government credit, but not by Government management, a very large reduction could be made in the fares and charges; if those who take the lead in public matters, and to whom the British public look up with confidence in their judgment and opinion, could see their way clearly to recommend such a change to the people, I believe that they would be very happy to adopt it. I suggested on my last examination, if the experiment of very low fares were made on a few lines, the result would throw great light on the subject. Take, for instance, the London and Blackwall line; it is the first I recommended for trial in 1844. What do we see there? We see the trains on that line, running for the last 20 years, through a densely populated and very poor district, travelling backwards and forwards, carrying one-fourth of the number which the trains are capable of carrying. Two years ago the London and Blackwall Railway Company made a reduction in their charges of about 30 per cent., and they certainly found that they did not gain anything by the transaction; but they also found that they did not lose anything by it. If those trains carried passengers at a low fare they would be filled instead of going comparatively empty. So in the same way, between Liverpool and Manchester, where the people never get an opportunity of travelling at less than 2s. 7½d., whereas the cost of their conveyance only amounts to 1d. for each. Why should not they have an opportunity of trying the experiment? If this system is established, and if it is extended to Ireland, England ought to know what the benefit would be on a line where a sufficient number of people would travel to afford a fair opportunity of trying the experiment.

8511. (*Chairman.*) Have you any data upon which you rest as the basis of your hypothesis, that reducing the fares to one-third of their present amount you would treble the traffic?—No data exist, further than this, that where we see a large reduction made in the charges we see the public rushing in to travel.

8512. You have nothing to go upon beyond the general analogy of the reduction of the Customs duties and the reduction of the postage?—An occasional reduction of charges on railways is all. I have suggested that the Commissioners would select a certain number of lines upon which they would think it desirable that the trial of low fares should be made, so that at the end of two years, when you made up your report, you would have clear and distinct data to ascertain the result of very low fares. The data do not now exist. We are all groping our way in the dark, and at the end of the next 20 years, unless we do so we should be in the same position as we are now.

8513. You do not carry it further than that you think you make out a *prima facie* case for the experiment?—Yes, that is all.

8514. Do you consider that if the experiment is to be tried with a view to the general introduction of your system if successful, you are not doing yourself an injury by trying it first in Ireland, which contains undoubtedly the poorest population and the least amount of traffic comparatively, and we may say also the least amount of industrial enterprise?—No, the difference is this, that in Ireland we do not intend to make merely the trial; we purpose, if once we obtain it, to adopt it as a remedial institution. The great

benefit that I would anticipate to result from the experiment, and where it would probably be attended with the greatest success, would be between large towns with great populations, such as Edinburgh and Glasgow, and Liverpool and Manchester, and between other towns in Lancashire and Yorkshire, and such places. There is where I would anticipate the great success, but I frankly admit that there are no data to prove anything. I can only say what you all know, that in proportion as you reduce the charges, whether it refers to the customs or to the excise, or to travelling by railway, the same principle holds good, that a certain sum is required to make up the loss; at first I believe there would be a loss, the same as was the case in the post office and in every reduction of the same kind. I can only throw out a suggestion, that as proper legislation must, in my opinion, be founded on a correct knowledge of this most important matter, and it does seem that that knowledge can be acquired at a very small expense, I would submit to the Commissioners that it would be desirable if they could get that information.

8515. Quite admitting, for argument's sake, that you have made out a case for trying your system experimentally, do you not think it is rather premature to propose at the same time its adoption as a general and, as you say, as a permanent system for the whole of Ireland?—I do not see the force of the objection, if the Irish people who will be called upon exclusively to make up the loss, if it is carried out at all, (because if they refuse to pay for it then I would say that they should not have it,) are unanimous in wishing for it; if they say, "We are willing to take upon ourselves the responsibility; we are willing to pay the loss; we do not want to come upon the English treasury for it;" then, I submit, that they ought to have it.

8516. That is to say, you contemplate the possibility of the Irish railway reform being carried on below cost price and at a loss, the difference being made up at the expense of the general revenue of Ireland?—No, it would not be carried on at less than cost price. you carry a traveller at the rate of a farthing a mile, you do not carry him at less than cost price; if you have a train moderately loaded you carry him at an enormous profit. For instance, in the case I have mentioned, when the London and North-western Co. carried 1st class passengers at a 'farthing a mile by fast trains to Manchester and back again, they made a profit on the transaction of some 200 per cent., because the trains were well loaded. They carried at a farthing a mile, which I consider an absurdly low price for 1st class passengers by fast trains, but they charged a farthing a mile, whereas I propose to charge five farthings a mile for the same kind of travelling; yet it cannot be denied that they had on the transaction some 200 per cent. profit.

8517. Do you or do you not admit the possibility of this scheme as applied to Ireland turning out so far a failure that it would entail a certain permanent loss which must be made up by taxation?—Not at all. I think it is possible that for a year or two there may be a loss. We can only form an opinion in this matter by general statistics, and if you refer to any one connected with railway management they will tell you as they have said in Ireland, and the Irish directors have spoken very fairly upon the subject, that for two or three or four years low fares entail a loss, but that they recover themselves, and the revenue amounts to the same. The Irish directors say, "We would charge these low fares, but we have no right to sacrifice the interests of our present proprietors for two or three years; they would not submit to it. There would be unquestionably a loss, and it would take full three years before the revenue would recover itself."

8518. You contemplate, as I understand, that the Government should take and have worked by means of a board or a company, no matter which, every existing line in Ireland?—It is a matter of very little consequence how the measure is carried out in detail. If a company would take it, I should give it to a company

W. Galt, Esq.

15 Nov. 1865.

W. Gall, Esq.
15 Nov. 1865.

at the reduced tariff I have drawn out, but I would not do so as a matter of choice. I would much prefer putting it into a commission formed of three able practical men,—men that the country would look up to with perfect confidence that they would do the thing correctly,—and that the Government should have nothing to say to the management but have a general control.

8519. Without going into details of management, do you or do you not propose that every line, good and bad, paying and non-paying, should be equally taken up and worked by this company or board, whatever it may be?—But there is no line in Ireland that is non-paying.

8520. (*Capt. Galton.*) You mean, do you not, that there is no line which does not pay its working expenses?—There is no line that does not more than pay its working expenses.

8521. (*Mr. Ayrton.*) Except one?—Except the Bagenalstown, that is the only line.

8522. (*Chairman.*) Do you believe that any Irish railways have been made through districts which are too poor to furnish them a paying traffic whatever the rates may be, whether high or low?—There is only one line that I know of in that condition.

8523. (*Mr. Ayrton.*) Before the Loan Commissioners closed that line did it not pay more than its working expenses?—The Bagenalstown line is the only line that I know of that did not pay more than its working expenses.

8524. It paid its working expenses, did it not, before the Government Commissioners seized it and shut it up?—I believe it did; but it afforded very little profit, at all events.

8525. The experiment could not be made, could it, unless the Government took the whole of the Irish railways?—No.

8526. Otherwise there would be a reduction of rates on one line against others remaining at their present rates?—Yes.

8527. You made a comparison with respect to the Blackwall railway, which you stated was a railway which conveys a poor population. Are you aware that the population through which the Blackwall railway runs is relatively the wealthiest population in England; that is to say, as an industrial population it is in receipt of the highest wages, probably, of any population of the same amount in England?—I know that there are a vast number of poor people in the district; and I also know that there is a vast amount of property in it.

8528. But, as regards the industrial population, is it not a population receiving a higher rate of wages, probably, than any other population in England; and so far from the profits of the Blackwall railway depending upon a poor population, does it not get its profits from a very active and well paid population?—If you state that from your own knowledge, as a matter of fact, of course it is so.

8529. I ask you whether you know the rate of wages, and whether it is not a high rate of wages?—I believe they are very well paid; but at the same time I am quite certain that they would prefer paying 1d. and 2d. to 4d. and 6d. My proposition would extend to every place.

8530. Do you know the class of population that use the Blackwall railway?—I have been frequently on that railway, and I know that the poorer class are to a great extent prevented from using it by the high charges.

8531. Therefore the railway is not supported by a poor population, as I understood you to suggest, but by a population that can pay very well?—No, the class who use the Blackwall railway are a wealthy enough class; but my object in directing attention to that railway is that it goes through a very densely populated district, and that there are a vast number of poor people who travel alongside the line, and who would willingly use it if the fares were at one third of the present charges.

8532. With regard to the travelling population,

what do you conceive that the excess of the travelling population in England, as compared with Ireland, is based upon? Is it upon the greater amount of productive industry in England as compared with Ireland, or from what circumstance does it arise?—There are two circumstances; one is the greater wealth of the country in England, and the other is the high charges, as I have read such, on the different railways in Ireland.

8533. The proportion of the travelling population in England to the total number of inhabitants is much higher, is it not, than in Ireland?—No doubt it is much higher.

8534. To what do you ascribe that?—I ascribe it principally to the highness of the fares in Ireland compared with England, but more especially to the poorness of the population of Ireland as compared with that of England. In England excursion trains are much more frequent than in Ireland.

8535. Do not you think that it may be ascribed to the greater amount of industrial labour that is carried on in England than in Ireland?—That, no doubt, has a considerable effect.

8536. And to the greater amount of property per head of the population in England as compared with Ireland?—That is what I have stated.

8537. Do not you think that is the real element out of which the increased number of travellers in England arises?—Partly no doubt, and partly from the high charges in Ireland as compared with England; especially when we remember that the population of Ireland is exceedingly poor, and that the people of England, generally are, from their wealth, enabled to pay four times as much as the Irish people can afford.

8538. (*Mr. Roebuck.*) That is to say, that relatively the power of paying for travelling is all in favour of England?—Yes; it is all in favour of England, undoubtedly.

8539. And that where an Englishman can spend 4d. an Irishman can only spend 1d.?—That is putting the case exactly as I wish to do.

8540. (*Mr. Ayrton.*) Is not the relative necessity for travelling also very much greater in England than in Ireland from the nature of the occupations of the people and their being more largely manufacturing than is the case in Ireland?—I think that the Irish people would travel quite as much as the English people if the fares according to their circumstances were as low; but as was observed by the honourable member, 4d. to an Englishman is about the same as 1d. to an Irishman in the humblest class of life.

8541. Do you think that in order to arrive at a conclusion as to whether the fares are higher or lower, it would be necessary to go much further into an examination of the relative rates than you have gone, looking at the various charges upon the Irish and English railways?—No, I do not think it is necessary to go further into the charges, because I think that the charges should meet the wants of the population, of Ireland without any reference to what England may want or may not want, and that they ought to be at one-third or one-fourth of the present rate. It is the wish of the Irish people that it should be so, and they are willing to make up any loss that might arise from the deficiency, if any loss should arise, which would not be more than for a year or two probably at most.

8542. (*Mr. Roebuck.*) The Commissioners are to understand that when you recommend that this should be done in Ireland, you do not recommend it as an experiment to test the truth or the value of your proposition, but you recommend it as regards Ireland, because the people desire it?—I recommend it as a remedial measure for the wants of Ireland. I do not recommend that it should be taken as a test of the experiment in England, because in England I am sure that the experiment, if I may so call it, would be far more successful than it could possibly be in Ireland.

8543. (*Capt. Galton.*) You consider that the con-

ditions of Ireland are peculiar?—Yes; I consider that Ireland is in a state of great distress at the present time, that she wants her resources developed; and when we find, that some remedial measure is necessary, and that all who have considered the subject have come to the conclusion that nothing could be a greater benefit to Ireland, that nothing would promote her welfare more in every respect than adopting a low rate of charge, both for goods and for passengers; and if along with that the Commission find from the evidence before them that the Irish people, of their own resources, without calling upon the State for a penny, are willing to make up the deficiency, whatever that may be, then I submit to the Commissioners whether or not they would find it consistent with their duty to recommend it to the Government.

8544. (*Mr. Ayrton.*) Can you state any one resource of Ireland of which the development is obstructed or retarded or prejudiced by the present railway charges?—I may state, for instance, the mineral resources of Ireland.

8545. Where are they?—In the county of Wicklow and the county of Waterford.

8546. What are they?—There are copper mines. We find from the statements that have been made, and from what I have heard in Ireland, that the charges are so high on the lines in those counties, that the traffic is not fully developed, that carts are employed on the ordinary roads alongside the railways owing to the excessive charges by railway; and the directors say that they cannot afford to make less charges than they do, and therefore the resources of the country are not fully developed.

8547. Do you mean that copper is now being carried in the country in carts because it cannot be carried upon the railway?—Exactly so, and ores of different kinds.

8548. Which could be carried on the railway, and is not carried on the railway on account of the high charges?—Precisely so, on account of the high charges.

8549. Can you state where that is the case?—I may state that I have a document at home which will prove what I say, and I will put it in.*

8550. (*Capt. Galton.*) You refer to the Wicklow mines?—Yes.

8551. Is not it the case that the Company who work those mines are paying a very high dividend indeed?—I do not know what dividend they pay, but I know from the statement that was made by the secretary, that the charges were so high that they could not develop the resources of the mines.

8552. (*Mr. Ayrton.*) Do you know the cost of cartage in Ireland per ton per mile?—I do not.

8553. Do you know that it is estimated at 6d. per ton?—I know it is very low, but I know at the same time that it can be carried on the railways at a twentieth part at what they cart it at.

8554. Do you know the rate for carrying copper ore on the railway?—I do not know any of the charges; I merely look at the broad fact that carts are employed in carrying alongside the railways, and that the railways can carry at a twentieth part of the cost of cartage.

8555. You were asked simply whether you could mention any particular industry which was impeded or obstructed or prejudiced by the present railway rates that are charged?—I say with regard to developing the mineral resources of the country.

8556. Do you know of anything besides copper ore?—I do not know anything with regard to the particulars of the mines. But I will state another case with regard to cattle. Anyone travelling in Ireland will see droves of cattle going alongside the railway; what is the cause of that? The reason is that the

charges are so high that they are unable to send them by railway, and consequently they drive them along the road. One of the directors of the Midland Railway told me that his own cattle were driven to market or were driven on foot to the ports for exportation when he wanted to sell them, on account of the high charges that were made on the railway, and that he could send them a great deal cheaper on foot.

8557. (*Capt. Galton.*) Do you intend the purchase of those Irish railways to be a compulsory purchase?—There must necessarily be an Act passed before it can be carried out.

8558. To compel them to sell?—Yes.

8559. Upon the conditions which you have named?—Yes. Assuming they would meet with general assent from the parties interested.

8560. Do you propose that there should be a uniform tariff for both goods and passengers over the whole country?—Yes, a uniform tariff for both goods and passengers over the whole country.

8561. Without reference to water communication?—Without reference to anything. I would make a uniform tariff for passengers. I have already mentioned that it would be necessary to settle the tariff for goods according to the circumstances of each case.

8562. You are aware, are you not, that Ireland has already a system of water communication throughout the country which is very perfect?—I know that very well.

8563. It is more perfect than in England, is it not?—I know it is very good.

8564. And the roads?—Are likewise very good.

8565. Do you supplement the road and water communication by placing the railway system under Government as well?—I do.

8566. Your argument is based, is it not, upon the exceptional condition of Ireland?—My argument is based upon the exceptional condition of Ireland, and upon the fact that it would be a great boon for the country, and that it is wished by the Irish people, and that they are willing to pay any loss that might be incurred.

8567. How has it been ascertained that the Irish people are willing to pay?—I assume that before this project would be carried out it would be ascertained from the public feeling whether or not they were willing. I only speak from my communication with many influential gentlemen whom I have spoken to on the subject. I assume from that that they are willing. As a matter of course, if a project of this sort were proposed there would be such an expression of public opinion in Ireland on the subject as would put the question at rest one way or the other. I only go upon general grounds, that where the benefits would be so great and the contingent payment so small, there could be no doubt whatever as to the result of an appeal to the opinion of the people of Ireland; I consider it a matter of some doubt whether there would be in fact a necessity for any payment at all beyond this profit of 200,000*l.*, but in any case I consider that a direct tax would be only required for a few years.

8568. (*Chairman.*) But suppose that the result were that the people of Ireland expressed themselves very willing to have this reduction take place in the railway rates, and to have the railways transferred to the Government, but that they thought that the loss incurred ought to fall upon the whole United Kingdom, what would you say then?—Then I should not give it to them; certainly not.

8569. You think that as a matter of fairness it ought to be done at the cost of Ireland or not at all?—I think as a matter of fairness to all parties we are bound to look as much at justice to England and Scotland, as at justice to Ireland. If it should be found that the Irish people say "We want to travel at exceedingly low rates, and we want to pay nothing ourselves, but we want the English people and the Scotch people to pay for us," I should think there could be no two opinions about it, and that the Government would never entertain a proposition of the sort. But speaking as far as I know from my personal knowledge

W. Galt, Esq.

15 Nov. 1865.

* Extract from the report of the meeting of the Wicklow Copper Mining Company's shareholders, from the "Irish Times" of October 30th:—"Mr. Geoghean, 'The carts carry the ore for miles to Arklow, and when they can compete with the railway it shows something rotten in the state of Denmark.'"

W. Galt, Esq. on the subject, there would be no objection whatever on the part of the Irish people to pay whatever was necessary to indemnify the State.

15 Nov. 1865.

8570. Of course it would be impossible for you to answer for the Irish people as to that point?—No doubt; I can only speak as any other private individual.

8571. (*Capt. Galton.*) You are aware that at the present time the railways work principally in connexion with certain ports of Ireland, and that the competition which exists is a competition for drawing the traffic to those particular ports. If the railways were under one management, and that a Government management, do you anticipate any difficulty arising from the different interests of the several ports being brought to bear upon the Government, in order to obtain additional facilities for the port with which they are connected?—No; I do not see any difficulty that could arise on that score, because, the rates being perfectly equal to every port, there would be no unfairness to one port more than another. It appears to me that one of the great objections to the present system is, that railway directors are enabled to favour one par-

ticular port at the expense of another, and thus frequently exercise a very unfair and prejudicial influence.

8572. If you had a uniform rate, independent of any competition by sea or water carriage, might not the result to some extent be, that the traffic between certain places upon which the revenue of the existing companies depends, might be seriously diminished?—That might be. But in carrying out a great scheme of that sort we cannot help those slight difficulties that may arise.

8573. If that traffic were diminished, would not it to some extent upset the calculations upon which you base your opinion of the receipts?—No, I do not think so, because it extends over the whole of Ireland, and the deficiencies in one place would, I consider, be made up by the over proceeds in another place.

8574. But in fixing the rates between different places you would pay no attention to any competition which existed by other means of communication?—None whatever; I would have the same rates to every place, and give no favour to one party more than to another. It would open a door to great abuse, any departure from a uniform system.

The witness withdrew.

Adjourned.

The following statement was afterwards handed in by the witness:

IRISH RAILWAYS.

GOVERNMENT PROFIT and LOSS ACCOUNT by the adoption of the low scale of fares and charges on goods as given in evidence.

<i>Dr.</i>		<i>Cr.</i>
	£	£
To loss on passenger traffic	200,000	
To loss on goods traffic	- 100,000	
To interest on 1,000,000 <i>l.</i> at		
3½ per cent.	- 35,000	
To balance	- 15,000

By balance 15,000*l.*

APPENDIX.

APPENDIX F.

PROPOSAL of JUDGE LONGFIELD on the Subject of RAILWAY REFORM.

(*Referred to in his Answers to Questions 2932-5, 2936.*)

THE following plan is proposed as fitted to carry out the wishes of the public without injustice to the proprietors of railway shares. Let an experiment be tried on any great network of railways, for instance, on the great lines which connect the south of Ireland and the cities of Cork, Limerick, and Waterford with Dublin. Those lines belong to two companies, viz., The Great Southern and Western, and the Waterford and Limerick Railway Companies. Let the State guarantee to those companies for 10 years the profit which they are likely to make under the present system, say $4\frac{1}{2}$ per cent. for the Great Southern and Western, and 1 per cent. for the Waterford and Limerick Company.

In return for this, the Government is to have the right to appoint one director on each board, who is to be called the Official Director. He is to have the right to sit and vote on every board and committee, to inspect all the books and accounts, and to receive such information as he requires from all the officers of the company.

After consultation with the board of directors and the chief officers of the company, the official director is to have the absolute right to settle the tariff of fares to be charged for passengers and goods, and the times, and number, and speed of trains. The profits are to be applied, in the first place, to indemnify the State against the dividend which it guarantees to the railway proprietors, and if there should be any surplus, one half ought to be paid into the Consolidated Fund, and the other half distributed as dividend among the shareholders. If the increased accommodations provided for the public under this arrangement should create the necessity of building new stations, engines, or carriages, or of incurring any other expense that ought to be charged to the capital account of the company, the Treasury is to have the power of making the advances necessary for the purpose, and to receive interest on such advances at the rate of 4 per cent., before any of the profits beyond the guaranteed dividend shall be distributed among the shareholders. At the expiration of the 10 years of the guarantee it shall be left to the Board of Trade to determine what proportion of such advances shall be repaid by the company, and the certificate of the Board shall be sufficient authority to the company to increase its capital accordingly by the issue of new shares or bonds. If the official director shall be of opinion that there is anything in the expenditure of the company, or in its mode of keeping its accounts injurious to the interests of the public, or tending to reduce its profits and increase the burden of the guarantee, the question is to be left to the decision of the Board of Trade. The advantages of the proposed arrangement are, 1st, That it does not add materially to the patronage of the Government. No new office is to be created except that of official director, to which of course a competent salary must be attached. 2nd. The interests of the travelling and commercial public are protected, since the official director will have the power of ordering as much accommodation, and fixing as low a rate of charge as the Government may from time to time think proper to direct. 3rd. No injustice is done to the railway companies on whose lines the experiment is to be made, as they are guaranteed against any loss which might arise from the experiment. 4th. As the official director will necessarily acquire an intimate knowledge of all the details of railway management, and its receipts and expenses, he can order such reduction of fares and alteration of trains as will produce a benefit to the public far exceeding the expense which the guarantee will impose on the State.

It may be objected that this plan is a partial one, calculated to confer a benefit only on those parts of Ireland through which the railways flow that are the subject of the experiment. This is undoubtedly true to some extent, but it is not an essential part of the plan that the experiment should be confined to one network of railways. On the contrary, there is no difficulty in extending it to every railway in Ireland, although if the Government wishes to proceed cautiously it may try the experiment on a more limited scale. If it succeeds, it will at once become general. If the sanguine expectations of those who call for railway reform should be realized, and reduction of rates be followed by increased profits, there can be no doubt that the example will be readily followed by all other railways. I am not, however, very confident of this result. A more probable result may be that there will be a small loss, bearing no proportion to the benefits conferred upon the public. In

this event the experiment would be substantially successful, and the Government would have no hesitation in making similar arrangements with all other railway companies. Whatever may be the result, the nation will have the materials to enable it to decide whether it will procure the benefits of reduced fares and increased accommodation by paying the price which is necessary in order to procure them with justice.

Something like the above plan, although it may vary in details, seems to be the only course by which any great reform in railway management can be effected without injustice.

The principal facts are admitted by all parties. The railway companies have undertaken to make certain railways subject to conditions as to trains and fares imposed on them by various Acts of Parliament. The companies have fulfilled those conditions, and it is admitted that the country has derived immense advantages from the railways, although it is alleged that those advantages are not so great as they might have been if the railways had been differently managed. On the other hand, the railway companies have not made any extraordinary profits. Their profits are in fact less than the ordinary return to capital invested in any other trade. It would therefore be unjust to introduce any changes to reduce the profits of those who have already lost by the compact under which the railways were constructed, in order to increase the advantages given to those who have been exclusively gainers by the transaction. The public say to the companies, "Reduce your fares, and increase the accommodation you give us, and you will find that the traffic will increase so much that you will gain instead of losing by the change." The companies reply, "We are by no means sure of that, and therefore we do not wish to try the experiment, but as you say that you are confident that it will succeed, and as in any case you will gain considerably by it, you ought to run the risk which you think is so small."

This appears unanswerable, the public which is to profit by the experiment ought to encounter the risk: and the only point to be considered is, how to do this at the least expense.

It will also be the duty of the official director to take care that the reduction of fares shall be made in such a manner as not to interfere unduly with rival modes of conveyance, such as canal companies, or even other railway companies, if the experiment be partially made.

I believe that the experiment ought to be gradually and cautiously made, because it is impossible beforehand to form a reasonable conjecture of the effects which a considerable reduction of their rates may have upon railway companies.

Some of the calculations that I have seen are very wild. Thus one ingenious writer assumes that the rates through the United Kingdom may be reduced to one-third of their present amount, and that this would probably double the traffic without increasing the working expenses, and that the loss of net income might be estimated at five millions a year.

Now, taking the entire traffic of the United Kingdom to be at present 36 millions a year, which is a fair approximation to the truth, it is a matter of easy arithmetical demonstration that the annual loss on the above suppositions will be 12 instead of five millions.

It is also, I think, clear that the traffic of most railways cannot be doubled without a considerable increase in the working expenses. In the case of goods, the load is practically limited by the worst gradient on the line. This limit has been already reached in many instances; and, in such cases, if the traffic be increased, the working expenses must be increased in nearly the same proportion.

As to the passenger trains, when the number of passengers by any train exceeds the average of 70 for the whole distance (which implies that there will be a considerably greater number over particular parts and on special occasions), it is generally found to be more convenient to the public and to the railway company to meet additional traffic by putting on an additional train, instead of crowding the passengers into the trains already existing. The consequence is, that, whether the annual gross receipts of a railway be 1,000*l.* or 4,000*l.* per mile, the proportion of the working expenses to the gross receipts is found to be about the same. The proportion is generally between 40 and 50 per cent., and depends on the nature of the traffic, the rates, the gradients, and the state of the permanent way.

The modes proposed of avoiding or diminishing the loss of five millions (which ought to be computed at 12 millions) are, I think, fallacious. One is, that the saving by amalgamation of railways is calculated, or rather guessed, at two millions. To judge of the correctness of this guess, it is enough to observe that every penny of expense on each train mile is about equivalent to a total annual expense of half a million. Thus a total saving of two millions a year will imply a saving of 4*d.* per mile; and, on examining the items which compose the working expenses, it appears impossible that a mere amalgamation could cause a reduction of 4*d.*

On the most important items, and on the largest lines, it would have no influence whatever.

Another mode suggested of saving the loss is, that the State can borrow money on better terms than the railways. This seems an illusory source of profit. People are satisfied with less interest from the State because the security is better, and the transaction is not subject to any stamps. But it is not a legitimate financial transaction for the State to borrow money at low interest in order to lend it at higher interest on imperfect security, and no calculation of the profit of the proceeding is sound which leaves the insecurity entirely out of the question, especially when that insecurity is about to be increased by an experiment.

So far as the low rate of interest is caused by the exemption from stamp duty, the State cannot have much profit, for it losses nearly as much by the exemption as it gains by the low rate of interest.

It is probable that an issue of Government stock, to the

value of the railways of the United Kingdom, would lower the funds more than 15 per cent. There is a limit to the number of persons who are willing to accept the low rate of interest in consideration of the other advantages which the funds possess, and it is clear that railway shareholders are chiefly persons who, to the extent at least of their shares, prefer the higher, although less secure, income derived from railways to the lower and more certain dividends from the funds.

I have made the above observations, not as an argument against the reduction of railway fares, but in order that it may be made with a full knowledge of its effects. I believe that no considerable reduction can be made without a loss which will not be covered by increased traffic for several years. I believe that the loss must fall upon the national finances chiefly, and that the expedients proposed to prevent the loss are illusory, and that ample compensation will be found in the increased wealth of the country consequent upon the reduction. The gain to the customers of the railways will necessarily be far more than the loss of net income to the railways. The latter will be equal to the reduction of charges on the old traffic, minus the profit on the increase of traffic; the gain will be the reduction on the old traffic, plus half the reduction on the new traffic. The indirect advantages of a reduction are probably still greater, but they cannot be made the subject of calculation.

I beg leave respectfully to submit these remarks to the members of the Royal Commission on Railways.

W. LONGFIELD.

47, Fitzwilliam Square, Dublin,
May 1865.

APPENDIX H.

LETTER and ENCLOSURE sent by the COMMISSION to various CHAMBERS of COMMERCE, and other PUBLIC BODIES in the UNITED KINGDOM.

ROYAL COMMISSION ON RAILWAYS.

House of Lords,

Westminster, S.W., 1865.

SIR,

I AM directed to forward you the enclosed summary of Her Majesty's commands to this Commission, and to ask whether you are desirous of offering evidence on any of the subjects referred to therein.

If so, I shall be obliged by your sending me the names of the witnesses who propose to come before the Commission, and a short statement of the general nature of the evidence they would give.

I am, &c.

WILLIAM POLE, Secretary.

ROYAL COMMISSION ON RAILWAYS, 1865.

COMMISSIONERS:—

His Grace the Duke of Devonshire, K.G., F.R.S., Chairman.

The Right Hon. the Earl of Donoughmore.

The Right Hon. Lord Stanley, M.P., F.R.S.

The Hon. E. F. Leveson Gower, M.P.

The Right Hon. Robert Lowe, M.P.

Sir Rowland Hill, K.C.B., F.R.S.

J. A. Roebuck, Esq., M.P.

T. B. Horsfall, Esq., M.P.

Robert Dalglish, Esq., M.P.

Geo. Carr Glyn, Esq., M.P.

A. S. Ayrton, Esq., M.P.

Capt. Douglas Galton, R.E., F.R.S.

E. T. Hamilton, Esq.

J. R. M'Clean, Esq., Pres. Inst. C.E.

WILLIAM POLE, F.R.S., Secretary.

Five Commissioners to form a Quorum.

House of Lords,

Westminster, S.W., March, 1865.

SUMMARY OF HER MAJESTY'S COMMANDS TO THE COMMISSION.

1. To inquire into the *charges* now and heretofore made by the railway companies of Great Britain and Ireland, for the conveyance of passengers, parcels, goods, minerals, animals, agricultural products, and other merchandise.

2. And into the *equality* or *difference* of such charges under similar circumstances, whether as between different companies, or by the same company in different cases; and whether there are any special circumstances which render necessary such inequality or difference.

3. And into the actual *costs* of such conveyance.

4. To compare such costs and charges with those (relatively to the accommodation and service) on *Foreign Railways*.

5. To report whether (with a due regard to the progressive extension of the railway system) it would be practicable, by any changes in the law;

a. To effect a more convenient *interchange of traffic* between the several systems of railways; and

b. More economical arrangements for the working of railways; so as to make any considerable *reduction* in the *costs* of conveyance;

c. And in the *charges* to the public;

d. And to secure more effectually the *safe, expeditious, punctual and cheap transit* of passengers and merchandise;

e. With as near an approach as may be to *uniformity of charge, and equality of treatment* for all persons under similar circumstances.

APPENDIX P.

(IRISH INQUIRY.)

COPY of a LETTER from the CHANCELLOR of the EXCHEQUER to the PRESIDENT of this COMMISSION.

11, Carlton House Terrace,
 MY LORD DUKE, April 11, 1865.

MANY of the representatives of Ireland in the House of Commons have expressed in Parliament their desire that the examination into the Irish railway system and its operation, which is included in the general inquiry undertaken by the Royal Commission under your Grace's presidency, should not be postponed until after the case of the railways of Great Britain shall have undergone investigation.

Her Majesty's Government are under the impression that the case of the Irish Railways is comparatively simple, and that the facts connected with it might probably be collected at an early period, under the auspices and instructions of the Commission, but without interruption to that course of inquiry into more difficult and complex, as well as more extended, questions upon which the Commission may already have entered; and they accordingly entered into an

engagement to bring this matter under the consideration of the Commission.

I have therefore to request that your Grace will be good enough to consult with your colleagues in the Commission upon the question which I have submitted; and I have to express the readiness of Her Majesty's Government to co-operate with the Commission by providing, should it in their judgment be necessary, additional assistance with a view to the more speedy and convenient collection of the information which is desired.

I have the honour to remain,
 Your Grace's very obedient
 and faithful servant,
 (Signed) W. E. GLADSTONE.

His Grace
 The Duke of Devonshire, K.G.,

APPENDIX R.

(IRISH INQUIRY.)

STATEMENT of MR. G. W. SHANNON as to OBSTRUCTIVE POLICY followed by DIRECTORS of IRISH RAILWAYS.

Dublin, 13, Leeson Park,
 SIR, May 5, 1865.

REFERRING to your letter of 26th ultimo, I have now respectfully to submit for consideration of your Commissioners the following observations bearing upon the attainment of more extended and economical traffic by the Irish railway system, but in doing so details must be necessarily omitted, and only the results stated, lest the views of an individual shareholder may be unduly obtruded on the Commissioners' attention.

An Act passed in the year 1847 which contained powers for amalgamating the lines of railway between the city of Belfast, the distance being 113 miles, under upwards of 30 directors, but no action was taken on it by the directors of the respective companies, nor was any effort made to consolidate their service until the year 1863, when the shareholders raised the question and began to take a more active part in the management of their property, the discovery of the Act of 1847 followed, and its suppression for 17 years, but appeals to the directors to carry out the intention of the Legislature, to save working expenses, and to open up the resources of the northern districts were met by opposition from all the boards, to whose half-yearly reports for the years 1863, 1864, and 1865 on this subject the Commissioners are for convenience referred in the Appendix.

A Bill was, in December 1864, promoted by some of the dissentient shareholders, which was discussed at the general meetings in Dublin on 24th and 28th February 1865, when the directors of the Dublin and Drogheda and the Dublin and Belfast Junction Companies caused the Bill to be withdrawn, but finding the feeling of the shareholders strongly expressed, the directors undertook at length to carry out amalgamation themselves, if left in their hands.

At a general meeting held in Belfast on the 15th February 1865, by the Ulster Railway Company, a resolution was carried by the shareholders against the directors and in favour of amalgamation.

Looking, therefore, to the facts that for 18 years the powers given for amalgamating the lines have lain dormant, and the intentions of the Legislature have been frustrated, that notwithstanding its manifest advantages no effort of the shareholders has proved successful to accomplish it, I consider that to Government intervention alone can we look for this indispensable preliminary to large savings and developed trade, with much higher rates of dividend to the shareholders.

In the management of the Midland Railway (Dublin and Galway) I am more directly interested by reason of the propinquity of my stepson's estates in the county

of Westmeath and King's county, and I would invite attention to the management as evidence of how far a large existing traffic and the germs of very profitable carrying trade may be jeopardised.

The dividend paid by the board was five per cent. for some years, which induced investments, but in the year 1864 it was surmised by some of the shareholders that the management was improvident, and the accounts having been examined, it was conceived necessary to appeal to the proprietary on the subject, a committee of whom sat for several days prior to the general meeting of September 1864, and under the able direction of Lord Clonbrock, they were so well supported that after a contest with the directors a section of them presented for re-election were removed, and their report was rejected by the general meeting.

At the next general meeting a two per cent. dividend was offered instead of four per cent. of the preceding half year, and the chairman admitted that no dividend was justified, that the working expenses for the three preceding years had averaged 51 per cent., and that there was no fund reserved for renewals, although such was regularly stated in the reports annually presented; a committee of shareholders was thereupon moved by Lord Castlemaine, and only postponed to the next meeting pending the creation of 300,000*l.* of preference stock: the same course will probably be taken at the next September meeting as at the last, but from the expense and trouble thus entailed on the shareholders to check the management of the line, some intervention by Government would appear likely to prove salutary.

I take no exception to the management of the Great Southern and Western Railway Line (Dublin and Cork), nor am I aware that other proprietors do so, although the third-class service is rather limited; but the traffic accommodation provided by it and its branches is not at all what such extensive districts require as are traversed by them.

Having thus briefly touched on the condition of the lines in which I am interested, I have to add that the interests directly affected, and the nature of the questions which are indirectly influenced by the scope of the pending inquiry, render it scarcely subordinate in moment to any which has attracted the attention of Government in Ireland.

I have, &c.
 William Pole, Esq., (Signed) GEORGE WM. SHANNON.
 Secretary,
 Royal Commission on Railways,
 House of Lords, Westminster.

APPENDIX.

(NORTHERN LINES.)

No. 1. 1847. Act enabling the companies to amalgamate, &c.

No. 2. 1863, December 31st. Report of the Dublin and Belfast Junction directors states that—"Since the last half-yearly meeting amalgamation has engaged the attention of the directors, and negotiations have taken place between the boards of the three companies, which do not, they regret to say, indicate any prospect of accomplishing this object."

No. 3. 1864, June 30th. Report of same states that—"Amalgamation of the three companies would not have the assent of the Dublin and Drogheda and Ulster Companies, and that the subject of amalgamation of the three companies or any of them should not be pressed."

No. 4. 1864, June 30th. Report of the Dublin and Drogheda directors states that—"In pursuance of a resolution of the shareholders for amalgamation two meetings took place with the directors of the Belfast Junction Company, but without result."

No. 5. 1864, December 23rd. A Bill promoted by shareholders to oblige the directors of the Dublin and Drogheda and the Dublin and Belfast Junction Companies to amalgamate.

No. 6. 1865, January 6th. Circular letter of the Dublin and Drogheda directors objecting to amalgamation unless the directors of the Ulster Company should agree.

No. 7. 1865, February 10th. Report of the Dublin and Drogheda directors agreeing to amalgamate with the Belfast Junction Company alone.

No. 8. 1865, February 18th. Report of the Dublin and Belfast Junction directors agreeing to the amalgamation with the Dublin and Drogheda Company alone.

No. 9. 1865, February 15th. Report of the general meeting of the Ulster Company and of resolution carried for amalgamation of the three companies.

No. 10. 1865, January. Westminster Review and article on amalgamation of Irish northern lines.

(MIDLAND RAILWAY.)

No. 11. 1864, September 22nd. Report of the directors states 12,000*l.* reserved fund and four per cent. dividend.

No. 12. 1864, September. Circular letter of the shareholders to organize opposition to the directors, and (the Honourable Captain Gough in the chair) resolution passed "that the management of the Midland Railway has been attended with injurious results to the interests of the shareholders."

No. 13. Report of the general meeting.

No. 14. 1865, March 23rd. Report of the directors.

No. 15. Report of the general meeting.

APPENDIX U.

(IRISH RAILWAYS.)

REPORT of the COMMITTEE of the CHAMBER OF COMMERCE of the City of WATERFORD appointed to investigate into the present Working of the Railways to and from Waterford, and to bring the Result of their Inquiries before the Notice of the Royal Commissioners on Railways sitting in London.

YOUR Committee considers that the railway communications of Ireland are generally very defective, and that the interchange of traffic is much obstructed, and the convenience of the public is not sufficiently considered in the arrangements. The only parts of the country well served are those commanded by the lines running directly into Dublin. The interference of Parliament to secure a proper development and extension of the railway system is much required, and is essential to the well-being of the country.

The non-existence of railway communication between the north and south through the midland districts of Ireland is much felt, and attempts have been made from time to time to supply the want by parties interested therein, whose efforts have only very lately been partially successful, in consequence of the decided opposition given by existing railway companies to the bills sought for that purpose.

The absence also of due co-operation between the railways is very injurious to the trading and travelling public, by withholding from them those facilities to which they are fairly entitled. For instance, although the distance between Waterford and Dublin is only 112 miles, in consequence of the want of harmonious working between the Great Southern and Western and the Waterford and Kilkenny railways, the citizens of Waterford have no daily return communication with the metropolis, and we trust that the Royal Commissioners will see fit to recommend such arrangements as will ensure this required accommodation.

Furthermore, third-class passengers can only reach Dublin by leaving Waterford at 7.30 a.m., remaining in Kilkenny from 9.15 a.m. till 6.40 p.m., and not arriving in Dublin till 10.10 at night, thus occupying nearly 15 hours, and, when returning, must necessarily stop one night at Kilkenny (Sundays excepted, when a delay of 5½ hours occurs there), thus practically defeating the wise provisions of the Legislature relative to third-class passengers.

Another great inconvenience suffered by the public of the south of Ireland arises from defective arrangements at the Limerick junction, where passengers are delayed a considerable time before they can pursue their journey to the respective stations they are booked for, as will appear by the following memorandum.

UP TRAINS from Waterford via Limerick Junction to Dublin and intermediate Stations.

Leaving Waterford at	-	6.0 AM	9.45 AM	2.45 PM
Arrives at Limerick junction	-	8.35 AM	12.5 PM	5.15 PM
Leaves junction at	-	10.34 AM	1.57 PM	5.17 PM
		Delay— 2 hours.	Delay— 1 h. 52 m.	No delay.

TRAINS from Cork to Waterford.

Leaving Cork at	-	8.0 AM	11.40 AM	2.45 PM	5.30 PM	10.10 PM
Arrives at junction	-	10.34 AM	1.47 PM	4.57 PM	8.5 PM	12.8 AM
Leaves junction	-	12.22 PM	5.25 PM	5.25 PM	12.15 AM	12.15 AM
		Delay— 1.48 m.	Delay— 3 h. 38 m.	Delay— 28 min.	Delay— 4 h. 10 m.	

The Committee also considers that the postal arrangements are very unsatisfactory; time is most unnecessarily wasted on the railways, as by an acceleration of the trains from the Kildare junction to Waterford to a speed equal to that of those from that place to Cork, the mails would reach Waterford at 12.20 p.m., and need not be despatched till 1.50 p.m., the advantages of which to the traders of this city would be very great.

This Committee further considers that some steps might be taken by Government to benefit Ireland through the railway system, as a very effectual mode of developing the resources of the country, and we trust that the Royal Commissioners will especially turn their attention to this branch of the subject of their inquiries, and, in default of private speculation, that they suggest that Government might take steps to make such lines of railway as are essential to open up large and important districts, and to fill up such links of communication as are now incomplete.

Your Committee also wish to observe that a large amount of the capital of this country has become locked up in original railway securities, which have been rendered unprofitable owing to the large rate of interest required to be paid on preference shares and on debenture stock, and they would therefore respectfully recommend that Government should make to such railways as can show good and sufficient security permanent loans at a rate of interest not exceeding 3½ per cent. of sufficient amount to enable them to pay off their present bonded debts and preference shares.

The proprietary would thus be benefited to a very large extent, and Government would thereby obtain such right of control as would enable them to insist on proper facilities being afforded to the public.

All the foregoing is respectfully submitted to the Royal Commissioners on Railways by the Committee of the Chamber of Commerce of the city of Waterford appointed for such purpose.

(Signed) SAMUEL HARRIS,
President of the Chamber of Commerce and
Chairman of the Committee.

(Signed) GEORGE GIBSON,
Waterford, 15th May 1865. Secretary.

 " { " Hereford, Hay & Brecon." }
 " { " Oswestry and Newtown," }
 " { " and " Merthyr Tydfil," }
 " { " Hereford, Hay & Brecon." }

by which amounts the above Totals differ from the Total Receipts given in the "Traffic Returns" for 1862 and 1863.

† Including the Length of the "Carlisle and Silloth Bay," "Port Carlisle," and "Wansbeck" Railways.

‡ The Receipts from Passengers in Ireland are not subject to Government Duty.

§ Exclusive of "Oswestry and Newtown," "Cowes and Newport," "Brecon and Merthyr Tydfil Junction," "Cork and Kinsale Junction," "Dowlisa," and "Hereford, Hay, and Brecon."

Board of Trade, 1864.

JAMES BOOTH.

RETURN by the several RAILWAY COMPANIES of their authorized SHARE and LOAN CAPITAL, and of the Sums received in respect of their ORDINARY CAPITAL and PREFERENTIAL CAPITAL, and DEBTURE STOCK or FUNDED DEBT, on the 31st day of December 1863, specifying the Rate per Cent. of the Dividends for the Year 1863 on each of the said Capitals: showing also the Loans outstanding on the 31st day of December 1863, classified according to the several Rates per Cent. of Interest; and the CAPITAL authorized and CAPITAL paid up, for Subscriptions to other Undertakings, whether such Undertakings are on Lease to, or Worked by, the Subscribing Company, or are Independent.

NAME OF COMPANY.	Authorized Capital up to the 31st December 1863, including Subscriptions to other Undertakings, whether such Undertakings are on Lease to, or Worked by, the Subscribing Company, or are Independent.			Paid up Capital on, and up to, the 31st December 1863, including Subscriptions to other Undertakings.						Debenture Loans outstanding on the 31st December 1863, classified according to the several Rates per Cent. of Interest.			Total paid up on Shares on the 31st December 1863, and on Debenture Loans outstanding at that Date.		Subscriptions to other Undertakings, whether such Undertakings are on Lease to, or Worked by, the Subscribing Company, or are Independent.		REMARKS.

TABLE showing, for the RAILWAYS in IRELAND,—

1. The Capital authorized ;

2. The Capital raised on Ordinary Shares, Preference Shares, Debenture Stock and Loans, upon the 31st December of the Years 1861, 1862, 1863, and 1864 respectively ;

And as regards the Lines opened,—

3. The Receipts from Traffic and the Working Expenses during the Years 1861, 1862, 1863, and 1864 respectively ;

4. The Interest on Preference and Guaranteed Shares and Debenture Stock, and on Loans calculated on the Amounts paid up on 31st December in each of those years ; and

5. The Proportion per cent. which the Surplus Income bears to the Ordinary Share Capital, and the Proportion per cent. which the Net Receipts bear to Total Capital.

NAME OF RAILWAY COMPANY.	Year.	Miles long.	Total Capital raised on 31st Dec. in each Year, from Returns furnished to Parliament.				Receipts from Traffic and the Year as furnished by the Railway Companies to the Board of Trade.	Working Expenses during the Year, from the half-yearly Statements of the Companies.			Preferential Charges, calculated on the Amount standing on 31st Dec. in each Year, from Returns furnished to Parliament.			Total of Working and Preference Charges.	Amount of Surplus Income or Deficit.	Proportion per Cent. which the Receipts from Traffic bear to the Working Expenses during the Year, and the Preference and Guaranteed Charges, and Interest on Loan on 31st Dec., bear to the Ordinary Share Capital raised on 31st Dec.	Proportion per Cent. which the Receipts from Traffic bear to the Working Expenses during the Year, and the Preference and Guaranteed Charges, and Interest on Loan on 31st Dec., bear to the Ordinary Share Capital raised on 31st Dec.

APPENDIX AC.

SUPPLEMENTAL REPORT of the COMMITTEE of the CHAMBER of COMMERCE of the City of WATERFORD appointed to investigate into the present WORKINGS of the RAILWAYS to and from WATERFORD, and to bring the Result of their INQUIRIES before the NOTICE of the ROYAL COMMISSIONERS on RAILWAYS sitting in LONDON.

YOUR Committee think it advisable to bring under the notice of the Commissioners another matter which ought to be placed on a proper footing.

They allude to the differential rates made by railways with steamers engaged in the cross channel traffic on goods carried by them for traders up the country, thus enabling a through rate to be made, which materially injures traders in the seaport and intermediate towns where such through traffic arrangements do not exist.

Your Committee would, therefore, respectfully suggest that the Commissioners should obtain evidence on this point, or, should they think it needless to do so, should consider the propriety of recommending such regulations as would oblige all similar goods to be carried by railways at a

similar rate of charge from one point to another, whether those goods be committed to their care by or for local traders or on through rates from or to other railways or from or to steamers; such charge not to be altered by drawbacks or other means, except under special circumstances to be decided by the Board of Trade.

All the foregoing supplemental report is respectively submitted to the Royal Commissioners on Railways by the Committee of the Chamber of Commerce of the city of Waterford appointed for such purpose.

Geo. Gibson, Secretary,
Waterford, June 9, 1865.

A. DENNY,
Chairman of Committee.

APPENDIX AE.

MEMORANDA ON FOREIGN RAILWAYS, by Mr. W. K. SULLIVAN.

(Referred to under Question 2114.)

THE principal lines of railway in Belgium belonging to the State were completed in 1843. In the year 1844 there were 559 kilometres, or 347·3 miles, opened, of which 235 kilometres were double lines and 324 single. The total cost was 144,746,774 francs, being an average of 258,938 francs per kilometre, or 16,855 $\frac{1}{2}$ per mile. The total receipts in the same year were 11,230,000 francs, or 1,305 $\frac{1}{2}$ per mile, of which 712 $\frac{1}{2}$ per mile were derived from passengers, and 593 $\frac{1}{2}$ from the carriage of goods and miscellaneous sources. About 20 per cent. of the total receipts was derived from the carriage of goods through the Belgian territory from France or Prussia to the Belgian ports, or from the latter to the former. If we deduct this transit or international traffic, the receipts per mile derived from the internal traffic of Belgium itself were 1,032 $\frac{1}{2}$. The total number of passengers in 1844 was 3,382,000, or 10,513 per mile, and the number of tons of goods carried, including transit goods, 520,892 tons, or 1499·5 tons (metrical) per mile. The working expenses were 5,765,420 francs, or 670 $\frac{1}{2}$ per mile, being about 51·3 per cent. of the gross receipts. The Belgian State railway system in 1844 might, therefore, be compared with the Great Southern and Western of Ireland in 1864. The number of miles of the Great Southern and Western opened in 1864 was somewhat more than that of the Belgian system in 1864, being 387 $\frac{1}{2}$ miles, the gross receipts were 1,127 $\frac{1}{2}$ per mile, which is a little more than the Belgian receipts derived from internal traffic. The number of tons of merchandise per mile carried on the Great Southern and Western line was, however, only 802, while the internal traffic alone of Belgium in 1844 was 1,200 tons per mile. While the Belgian lines carried 10,513 passengers per mile in 1844, the Great Southern and Western carried in 1864 only 2,425. These numbers show that the receipts of the Irish line are derived from passengers travelling long distances at high fares, while in Belgium there existed in 1844 a considerable local traffic.

From 1843 to 1852 the traffic on the Belgian lines increased very rapidly, as the following table shows:—

	1843.	1852.
Passengers -	308,534	4,451,304
Goods -	368,107 tons.	1,490,284 tons.
Receipts -	9,031,519 francs.	18,639,758 francs.

In ten years the passengers increased 44 per cent., the goods 305 per cent., and the gross receipts 106 per cent. A considerable part of the increase in goods, and con-

sequently of receipts was due to the development of the transit traffic. In 1836 the value of the goods sent through Belgium was estimated at 20,730,000 francs, and in 1857 at 386,566,000 francs, so that in 20 years this trade had increased 1,764 per cent.

The traffic of the Belgian railways appears to have steadily increased up to 1856, during which time there appears to have been no alteration in the fares or goods rates. Indeed by the law of the 12th of April 1851 the power of the Administration to make any such changes was expressly limited to two categories—emigrants and public fêtes, and similar occasions. In 1856, however, the internal traffic received a check, the carriage of heavy goods declined by 104,000 tons, and the receipts by 303,000. It was found that this declension was due to the rates of carriage being too high. The competition in some articles was so close that the rates became prohibitive. To meet the difficulty the Administration entered into contracts with manufacturers to carry certain quantities of goods, and made special rates for such articles as coal, pig iron, &c. Although these measures were very objectionable in principle they relieved trade. In the four years from 1856 to 1860 the traffic increased by 1,133,000 tons, and the receipts by 3,306,300 francs.

The experience gained during these four years led the Belgian Government to modify completely the principle upon which their rates were based. Hitherto the rates increased in the direct proportion of the mileage. This supposes that the expense increases in the same ratio, that is, that it costs fifteen times as much to convey one ton of goods 50 miles as it does to convey it one, which is not the case. The Belgian Government accordingly proposed to reduce the rate for conveyance of goods according as the distance increased. This reform was introduced in 1861, and was applied to coal, coke, or other fuel, pig iron, building and paving stones, and lime. The result of this reform was remarkable; the whole traffic increased by 427,000 tons, or 11·61 per cent., and the receipts by 1,635,000 francs, or 10·93 per cent., while the tonnage of the articles carried at the reduced rates increased by 70·42 per cent.

Goods were classified in Belgium for railway purposes into three categories or classes. The articles for which the special rates above mentioned were made belonged to the third class. In 1862 the special rates were extended to all the articles of the third class, and the principle of reducing the rate in proportion to distance was applied to the second class, and the special rate for transit goods,

to which allusion shall be made presently, was applied generally. The results of these modifications during the years 1862, 1863, and the first half of 1864 were very successful, notwithstanding the commercial and industrial crisis brought about by the American war, and which was very severely felt in Belgium. The traffic increased by 621,000 tons, and the receipts by 892,000 francs.

In 1864 a new classification of goods was made; all the articles of the third class were put into a fourth class, and the rates lowered considerably. The greater part of the goods hitherto included in class 2 were transferred to class 3; many articles of class 1 also were transferred to classes 2, 3, and a few even into class 4; and lastly, the rates according to distances, were greatly reduced in classes 2 and 3. The following selections will show the character of the goods included in each class.

1st Class. Coffee, sugar, and other articles usually included under the terms groceries, tobacco, cotton, linen, hempen, woollen, silken, and other woven fabrics, drugs, leather, artistic bronzes, Nuremburg toys, millinery, earthen and glass ware, paper, books, and printed matter generally, &c.

2nd Class. Commercial acids, ammonia, sulphur, alum, bleaching powder, and other chemical products used in large quantities, raw cotton, hemp, flax, jute, &c., flax straw, grain, oil cake, starch, dried fish, bone black, red and white lead, rags, anvils, springs, wheel tires, anchors, nails, iron hollow ware, scythes, raw and hammered steel, pig lead, zinc, window glass in boxes, &c.

3rd Class. Wood of all kinds, except ornamental and dye woods, which belong to class 1, slates, tiles, empty bottles, jars, carboys, &c., rock and sea salt, hay and straw in bundles, cullet or broken glass, fresh or dried chickory roots, millstones, bar iron, tanning bark, &c.

4th Class. Coal and coke, furnace cinder, kelp, zinc and iron ores, barytes, quartz, sand, manganese, marl, lime, gypsum, pyrites, bone black, poudrette, slaughter-house offal, soot and other manures, building stone, paving stones, turf, peat, charcoal, china clay, brick, gravel, bones, oxide of zinc, pig iron, beetroot, beetroot pulp, iron castings, iron pipes, rails, rivets, &c.

Several of the articles included in classes 3 and 4 are only carried at reduced rates when there is a complete waggon load of five tons.

The effect of these important modifications was to do away with the necessity of special rates or contracts, because the new general rates were as low, and in many cases lower, than the special rates. Only two special rates still exist; the first applies to coal, coke, and patent fuel sent to Ostend or Antwerp for exportation by sea; the second applies to armour plates, fine iron plates, locomotives, tenders, and waggons, machines, and tools of iron, iron bridges, iron pillars, ornamental iron castings, axles, wheels and tires, anvils, vices, springs, iron wire, chains, nails, braces, &c. The special rates of the first category are about the same as the general rates for class 4 for long distances, but are somewhat lower for shorter distances. The same observation applies to the second special rate, that is, for long distances they are about the same as the general rate for class 3, and for shorter distances somewhat cheaper. As, however, there are several articles belonging to class 2 to which the second special rate is applicable, that rate has still some advantage over the general rates.

The results of the reforms of 1864 surpassed all expectation. From June to December the tonnage of heavy goods increased by 525,000 tons, which would give for an entire year 900,000 tons, a number which is equivalent to the mean increase of three years. The receipts for the same period increased by 578,000 francs, which would represent for a whole year 990,000 francs.

According to the Minister of Public Works, M. Vanderstichelen, in his speech before the Belgian Parliament on the 7th of March last, the goods traffic on the Belgian State railways has increased since 1856 in the following proportion:—

—	Tons of Merchandise.*	Increase in Tons.
1856	2,545,000	—
1857	2,783,000	238,000
1858	3,190,000	407,000
1859	3,315,000	125,000
1860	3,678,000	363,000
1861	4,105,000	427,000
1862	4,276,000	171,000
1863	4,479,000	203,000
1864	5,251,000	772,000

It thus appears that in eight years the goods traffic increased by 2,706,000 tons, or 106·32 per cent.

The gain of the public is represented by M. Vanderstichelen as follows:—

—	Total Reduction in Francs.	Per-centage Reduction upon the Fares of 1856.
	Francs.	
1857	668,000	5·240
1858	893,000	6·113
1859	1,060,000	6·987
1860	1,876,000	11·135
1861	2,217,000	11·790
1862	3,164,000	16·157
1863	3,762,000	18·340
1864	6,670,000	27·729
Total	20,310,000	

There has been consequently a mean abatement of the cost of transport in eight years of nearly 23 per cent., while the abatement in the rates for some articles is as much as 80 per cent. Notwithstanding this great reduction, the receipts for heavy goods rose in eight years, from 1856 to 1864, from 10,971,000 francs to 16,738,000 francs, that is an increase of 5,767,000 francs, or 52½ per cent. The receipts from passengers, parcels, and miscellaneous sources increased from 12,183,000 francs in 1856 to 16,940,000 francs in 1864, or an increase of 4,757,000 francs, or 39 per cent. The total increase of receipts from all sources of traffic was therefore 10,524,000 francs, or an increase of 45·4 per cent.

Let us now see in what proportion the working expenses increased with this increase of traffic. In 1856 the working expenses were 14,811,000 francs, and in 1864 18,000,000 francs, the increase being 3,189,000 francs, or 21½ per cent.; that is, the working expenses only increased in somewhat less than half the ratio of the gross receipts. From 1856 to 1864 the sum of 31,078,000 francs was expended upon the capital account, chiefly on account of work which had nothing to do with the modification of the rates. The interest upon this sum at 5 per cent. would be 1,554,000 francs. The total increase of working expenses, inclusive of this outlay upon permanent works, was 4,743,000; this sum deducted from the gross increase of income leaves the net profit of 5,781,000 upon the whole increase since 1856, or 1,024,000 francs upon the increase of the traffic in goods alone. In a word, not only did the increase of traffic cover the loss from the reduction of rates upon the conveyance of goods, and which in 1864 represented nearly 23 per cent. of the gross receipts, or 6,670,000 francs, but it also yielded the sum of 4,743,000 francs to cover increased working expenses and interest upon capital expended upon permanent works, and left a surplus net revenue of 1,024,000 francs.

The following table enables us to compare the rates of 1856 with the new ones of 1864, and to better understand the reduction in the mileage rate, which is made according to distance:—

Distance in Leagues = 5 Kilometres.	1st Class. Rate per Ton per Mile.		2nd Class. Rate per Ton per Mile.		3rd Class. Rate per Ton per Mile.		4th Class. Rate per Ton per Mile.	
	1856.	1864.	1856.	1864.	1856.	1864.	1856.	1864.
5 [=15·5 miles]	d.	d.	d.	d.	d.	d.	d.	d.
10 [=31 miles]	2·2	2·2	1·88	1·88	1·57	1·57	1·57	1·25
15 [=46·5 miles]	1·88	1·88	1·56	1·56	1·25	1·25	1·25	0·94
20 [=62 miles]	1·78	1·78	1·47	1·47	1·15	1·15	1·15	0·78
25 [=77·5 miles]	1·73	1·73	1·41	1·17	1·09	0·90	1·09	0·62
30 [=93 miles]	1·69	1·69	1·38	1·0	1·06	0·75	1·06	0·52
35 [=108·5 miles]	1·67	1·67	1·36	0·89	1·04	0·65	1·04	0·46
40 [=124·2 miles]	1·65	1·65	1·34	0·80	1·02	0·57	1·02	0·41
45 [=139·7 miles]	1·64	1·64	1·33	0·74	1·01	0·52	1·01	0·38
50 [=155·3 miles]	1·63	1·63	1·32	0·69	1·0	0·48	1·0	0·35
	1·63	1·63	1·32	0·65	1·0	0·44	1·0	0·33

It must be borne in mind that there was not a fourth class in 1856, and that the articles now included in it, as has been mentioned above, were then in the third class, hence the

* Metrical tons = 1,000 kilogrammes; British tons = 1,015 kilogrammes.

reason why the column of fourth-class rates for 1856 is the same as that of the third class for 1856. In considering the reductions which have been made in the rates since 1856, it is essential to bear in mind the changes which have been made in the classification. Thus, for example, beet-root was formerly classed in the first class, and paid from 3·50 francs to 26 francs per ton for distances varying between the minimum distance of 5 leagues, or 15½ miles, to 50 leagues, or 155 miles; it is now in the fourth class, and pays for the same distances only from 2 francs to 5·50 francs. Lime, which in 1856 was in the second class, and paid from 3 francs to 21 francs, is now in the fourth class, and pays from 2 francs to 5·50 francs.

By the bill of the 7th of March 1865, Mr. Vanderstichelen proposes to apply the same principle of reduction, according to distance, to passenger fares. M. de Macar, the reporter of the committee on the bill, reported favourably upon the measure, and recommended the chamber to unanimously grant to the Minister of Public Works the vote of confidence which he asked for the reforms which he had effected in railway rates. He also stated that the parcel rates very much required reforming. At present those rates are better than ours, inasmuch as they are based upon the same principle as the postage of letters, namely, of charging the same sum for all distances. Thus, parcels weighing—

Under 2 kilogrammes pay for any distance	0·50
Above 2 „ and under 5 kilogrs.	0·75
„ 5 „ „ 10 „	1·00
„ 10 „ „ at the rate per kilogr. of	0·10

These rates include delivery within three hours after the arrival of the train.

The Belgian Government have also endeavoured to make international contracts upon the principle of reduction according to distance. Rails, bar iron, sheet iron, &c., made at Liège, Charleroi, and other centres of the Belgian iron trade, have always been exported to Switzerland, but previous to 1860 Belgian coal does not appear to have ever been exported to that country. The cost of carriage per ton of coal from Charleroi to Basel, a distance of about 615 kilometres, was fixed at 37 fr. 80 c., or about 0·95*d.* per ton per mile. It would appear that this rate was prohibitive. By a contract made between the Belgian Government and the directors of the Grand Luxembourg, the Gillaume-Luxembourg, and the French line de l'Est, the rate has, however, been reduced to 31 fr. 80 c., or about 0·80*d.* per ton per mile. By similar contracts the rates for pig iron and rails have been reduced about 27 per cent.

The rates at which transit goods are carried upon the line from the Prussian frontier town of Herbesthal to Antwerp are different from the internal traffic rates which have been described. Up to the year 1863 all goods were charged 1·03 fr. per 100 kilogrammes between the towns just named; but in 1863 the rate was reduced to 0 fr. 63 c. This rate was established upon the basis of 0 fr. 20 c. per ton-league, or 0·04 fr. per ton-kilometre without distinction of weight or class, or about 0·62*d.* per ton per mile.

The French lines upon which reductions as great as those which have been made in Belgium have been partially tried are,—Paris to Bordeaux, Paris and the Mediterranean, the line de l'Ouest. On the Paris and Bordeaux line, and the Nord. On the latter, coal is carried at the rate of 3½ centimes per ton per kilometre. On the Paris and Bordeaux line plaster of Paris is carried 577 kilometres at the rate of 0·021 fr. per ton per kilometre, or about 0·33*d.* per ton per mile. On the Paris and Mediterranean line it is carried from Charenton to Auxerre, 171 kilometres, at the rate of 0·023 fr. per ton per kilometre, or about 0·36*d.* per ton per mile. On the line de l'Ouest plaster of Paris, iron ores, &c. are carried from Argenteuil to St. Lô, a distance of 313 kilometres, at the rate of 0·022 fr. per ton per kilometre, or about 0·34*d.* per ton per mile.

It may be useful to add here the mean rates per mile at which goods and passengers are conveyed in some of the German States. They are calculated from those given in the Report of the French Railway Commissioners, published in 1863:—

RATES FOR GOODS.

	1st Class.	2nd Class.	3rd Class.
	<i>d.</i>	<i>d.</i>	<i>d.</i>
Grand Duchy of Baden -	2·20	1·67	1·41
Wurtemberg -	2·20	1·67	1·09
Bavaria -	3·47	3·05	1·09
Austria -	3 63	2·68	1·67
Eastern Prussia -	2·20	1·67	1·41
Hanover -	2·83	2·20	1·09
Rhenish Prussia -	2·36	1·67	1·25

The first class comprises manufactured articles generally, colonial products, fish, manufactured tobacco, &c.; the second class, crude metals, ordinary machinery, wine, spirits, raw cotton, &c., leaf tobacco, &c.; the third class, coal, ores, and other minerals, building materials, pig iron, manures, &c.

PASSENGER FARES.

	1st Class.	2nd Class.	3rd Class.	4th Class.
	<i>d.</i>	<i>d.</i>	<i>d.</i>	<i>d.</i>
Grand Duchy of Baden -	1·39	0·93	0·59	—
Bavaria -	1·33	0·74	0·59	—
Austria -	1·83	1·39	0·91	—
Prussia -	1·55	1·16	0·77	0·38

It may also be useful to add the following facts taken from the same report, because they show in a striking way that whenever the rates are lowered the traffic increases.

During the ten years between the 1st January 1852 and the 31st December 1861 the number of kilometre tons (that is, one ton carried one kilometre) for each kilometre of railway opened increased from 145,308 per annum to 452,442, and the corresponding receipts from 12,411 francs to 30,060 francs. During the same period the mean rate per ton per kilometre fell from 0·0854 fr. to 0·0664 fr. Previous to the introduction of railways the mean rate per ton per kilometre for the carriage of goods was according to M. Marqfoy, 0·249 fr.

During the same period the number of kilometre passengers (that is, one passenger carried one kilometre) per kilometre opened, per annum, increased only from 262,866 to 315,427, and the corresponding receipts from 16,814 francs to 17,980 francs. The mean passenger fare in 1852 was 0·0639 fr. per kilometre, and in 1861 0·0570 fr. This diminution in the mean fare was, however, entirely due to an increase in the number of second and third class passengers, the rate-fares for each class having remained sensibly constant since the introduction of railways, and are,—

0·10 fr. per kilometre for first class.
0·075 fr. „ „ second „
0·055 fr. „ „ third „

These fares scarcely differ from those which were formerly charged by the Messageries for the *Coupé*, *l'Intérieur*, and *la Rotonde*. If we represent the kilometre goods traffic and the kilometre passenger traffic in 1852 each by 100, we shall find that while the former rose to 312, the latter only increased to 120. In the same way, while the receipts from goods traffic rose from 100 to 242, the passenger receipts only increased to 107; that is, while the goods traffic, upon which a considerable reduction had been made, increased 142 per cent. the passenger traffic, upon which no reduction was made, increased only 7 per cent. No doubt the goods traffic would have increased even if no change had been made in the rates of carriage; but there can be no doubt that a considerable part of the increase has been due to the reduction of the cost of transport.

APPENDIX AF.

COMMUNICATION from the LORD MAYOR of DUBLIN.

Mansion House,
Dublin, June 19, 1865.

The ROYAL COMMISSIONERS on RAILWAYS.

MY LORDS AND GENTLEMEN,

The attention of the citizens having been called to the communication made from the Commission to our Chamber of Commerce on subject of the present railway rates and

charges in this country, I was presented with a requisition from a highly influential portion of the community to convene a public meeting to take into consideration the best mode of aiding the objects of the Royal Commission, and which requisition I deemed it my duty to comply with.

The meeting having been held on the 1st instant, I have the honour to enclose the resolutions passed at it, and beg to call your particular attention to the fifth resolution.

I am now requested by the Committee emanating from the public meeting above referred to and organized as the "Irish Railway Reform Committee," to state for the information of the Commissioners, that they have taken active means to aid the Commission, having held daily meetings in order to obtain and organize evidence, and also addressed circular letters to all the commercial bodies throughout Ireland, calling upon them to furnish evidence of the statements openly made as to the disabilities which surround and depress mercantile dealings, owing to the high rates and charges for goods and passengers on our railways, the same cause tending to retard the development of the resources of the country.

The foregoing action of the Committee has enabled them to furnish evidence to the Royal Commission, and the Committee respectfully submit, on the opposite side, the names and occupations of the gentlemen who are prepared to be examined in favour of a reduction of the railway tariffs, leaving it in the hands of the Commissioners to make such a selection from them as may be essential for the purpose of the inquiry, and I shall be glad if the wishes of the Committee can be assented to.

Permit me, in conclusion, to assure the Commissioners that the subject of railway reform has excited intense interest in this country, it being, in my opinion, and that of the Committee, one of the most important social questions that any Government could entertain, with a view to effect for Ireland (especially) the immense advantages of a cheap and well ordered system of railway transit, and its concomitant results.

I have the honour to remain,
My Lords and Gentlemen,
Your most obedient servant,
JOHN BARRINGTON,
Lord Mayor.

JOHN BARRINGTON (Lord Mayor of Dublin), merchant and manufacturer.

ALEXR. PARKER, wholesale merchant, Dublin.

JOHN GEORGE BOILEAU, do. do.

ALDERMAN J. W. MACKAY (Lord Mayor elect), Dublin, wholesale seed, &c. merchant.

JOHN BAGOT, Esq., Dublin, wholesale wine and tea merchant.

MARCUS GOODBODY, Tullamore, millowner and landowner.

HENRY R. PERRY, Dublin, grain, &c. merchant.

H. J. MACFARLANE, Dublin, Chairman of the North Dublin Union, and extensive landowner.

ROBERT O'BRIEN, Dublin, cattle salesmaster.

J. D. MELDON, Dublin and Galway, solicitor and extensive landowner, in his own hands.

EDWARD FOX, Dublin, stock and share broker of thirty years' standing, largely interested in railway property.

IRISH RAILWAY REFORM MOVEMENT.

At a highly important and influential meeting, held by requisition, at the Mansion House, Dublin, on Thursday, 1st June instant, in order "to aid the Royal Commission now sitting in London, and receiving evidence in regard to the charges, rates, and management of Irish Railway Companies, and to adopt such measures as may be deemed advisable for carrying out the principles of the Railway Act of 1844 (7 & 8 Vict., c. 85.), now about to come into operation, in such manner as the state of Ireland so urgently demands."

The Right Hon. the LORD MAYOR in the chair.

It was moved by Francis Codd, Esq.;

Seconded by Alexander Boyle, Esq., and resolved:—

"1st. That it is the opinion of this meeting that no measures would be better calculated to develop the resources of Ireland, and improve the social condition of the Irish people, than one whereby the present fares and railway charges would be reduced to a low and uniform rate, and unity of action be effectually established; provided, however, that any arrangement of the kind shall provide ample protection for the property of railway proprietors."

Moved by Jonathan Pim, Esq.;

Seconded by S. M. Greer, Esq.:

"2nd. That that the General Railway Act of 1844 (7 and 8 Vict. c. 85.), by which the Government is enabled, on certain terms and conditions, to deal with or purchase all railways thereafter to be constructed, presents one method of carrying out the above object."

Moved by Alexander Parker, Esq.;

Seconded by J. G. Boileau, Esq.:

"3rd. That the increased traffic which would be created by a uniform system of low rates, together with the con-

siderable reduction of charges which would be effected by a less oppressive rate of interest on railway debt and by a consolidation of railway management, would, in the opinion of this meeting, more than compensate for any temporary loss arising from reduced rates."

Moved by Professor Sullivan;

Seconded by Edward Fox, Esq., J.P.:

"4th. That Her Majesty's Government having appointed a Royal Commission to institute inquiries with reference to the railway system of Ireland, it behoves the public to afford the Commission every possible assistance and information."

Moved by J. BOYCE, Esq., High Sheriff of the City;

Seconded by JOHN BAGOT, Esq.:

"5th. That the chairman, the secretaries, and the movers and seconders of resolutions, together with such other gentlemen as they may invite to join them, be appointed a committee to carry out the objects of this meeting."

The Lord Mayor was then moved from the chair, and the High Sheriff having been called thereto, on the motion of P. M'Evoy Gartlan, Esq., seconded by Mr. D'Arcy, T.C., the thanks of the meeting were given to his lordship for his kindness in presiding on that occasion.

The following provisional committee was appointed to carry out the objects of the meeting, viz.:—

The Right Hon. the Lord Mayor, Mansion House.

Francis Codd, Esq., Fleet Street.

Alexander Boyle, Esq., College Green, banker.

Jonathan Pim, Esq., 22, William Street.

J. G. Boileau, Esq., Bride Street.

Professor Sullivan, Cecilia Street.

Edward Fox, Esq., J.P., Dame Street.

J. Boyce, Esq., D.L., High Sheriff, 52, Upper Mount Street.

Alexander Parker, Esq., 46, Upper Rathmines.

J. Bagot, Esq., 28, William Street.

John Neville, Esq., C.E., Dundalk.

P. M'E. Gartlan, Esq., Mountjoy Square, East.

Sir John Gray, *Freeman's Journal*.

Alexander M'Clintock, Esq., 2, Rutland Square, West.

J. U. Burke, Esq., Farmers' Club.

Hugh Harris, High Sheriff, Armagh.

Captain Knox, *Irish Times*, Abbey Street.

John Collum, Esq., 40, Sackville Street, and Ennis^a Killen.

Edward Pardon, Esq., T.C., *Farmers' Gazette*.

M. R. Ryan, Mayor of Limerick.

Henry Maunsell, Esq., M.D., *Evening Mail*.

Michael Dwyer, Esq., *Evening Post*.

H. J. MacFarlane, Esq., Hunstown, Mulhuddart.

Archibald M'Comas, Esq., Exchequer Street.

Alderman J. W. Mackay, Lord Mayor Elect.

Henry Robert Perry (Perry, Pim, & Co.), Burgh Quay.

The Committee having held a meeting at the Chamber of Commerce, on Wednesday, the 7th inst., the following resolution was passed:—

"That, for the purpose of defraying the necessary expenses incidental to the movement, a subscription list be opened, to which the public is invited to subscribe, in sums not exceeding 1*l.* each, to enable the Committee to promote the objects contemplated, and that public attention be called to the vast advantages of inducing the Government to interfere in whatever manner may seem best to them, to give the public the advantage of cheap, safe, and punctual transit for persons, goods, and cattle."

The following were appointed the Bankers to the movement:—

National Bank, Dublin, and its Branches;

Royal Bank, Forster Place.

Messrs. Boyle, Low, and Murray, College Green.

Alexander Boyle, Edward Fox, and John George Boileau, Esqrs., were appointed Treasurers.

E. BULLEN, } Honorary Secretaries.
S. M. GREER, }

R. JACKSON, Assist. Sec.

Commercial Buildings,
12th June 1865.

IRISH RAILWAY REFORM.

The Committee organized for the above object sit daily at the Commercial Buildings, at 3.30, and invite co-operation from all parties capable of giving reliable information on the above subject.

Commercial Buildings.

R. JACKSON, Assist. Sec.

APPENDIX AG.

(Given in by the Earl of Clancarty, Question 6319.)

ABSTRACTS from the HALF-YEARLY REPORTS of the MIDLAND GREAT WESTERN RAILWAY, from July, 1851, to June, 1856, both inclusive, showing the Amount realized from Passengers, Goods, and Cattle Traffic, in each Half-Year, distinguishing between the Returns for 1st, 2nd, 3rd, and 4th Class Passengers. Also Returns of Passenger Traffic and Revenue in each Year.

APPENDIX AL.

PORT AND TRADE OF WATERFORD.

(Referred to by Mr. Delahunty in his Answer to Question 5036.)

Town Hall, 10th February 1865.

The Mayor of Waterford requests a meeting of the citizens, merchants, traders, and others interested in the trade and port of Waterford and the preservation and development of the traffic with England and Wales, on Thursday, the 19th February next, at one o'clock, to receive the report of the Committee appointed at the meeting held at the Town Hall, on the 23rd of December last, to inquire into and report to a future meeting as to the best means that should be adopted to promote, protect, and develop the trade and commerce of Waterford, and to take the necessary action thereon.

REPORT OF COMMITTEE.

At a meeting convened by the Mayor, and held at the Town Hall, on Friday, the 23rd December 1864, of the merchants, traders, and others interested in the trade and port of Waterford, to consider the effect the traffic arrangements of our local railways and steam-boats may have on the trade and commerce of Waterford,

The MAYOR of WATERFORD in the Chair.

The heads of through traffic arrangements entered into by the Great Southern and Western Railway, the Waterford and Limerick Railway, the Cork and Limerick Direct Railway, the London North-western Railway, the Waterford Steamship, the Cork and Liverpool Steamship, and the City of Dublin Steamship companies, for carrying goods at equal rates from the Limerick and Tipperary districts, by the ports of Dublin, Cork, and Waterford, to Birmingham and all parts of England north of Birmingham, *viâ* Liverpool or Holyhead, were read, and which arrangements are as follow:—

- “1. Agreement to carry goods.
- “2. Rates to be the same by all routes.
- “3. Through rates to be available by all the routes, viz., *viâ* Cork, *viâ* Dublin and Liverpool, *viâ* Waterford, and *viâ* Dublin and Holyhead.

- “4. Receipts derived from traffic to and from the following places, viz.: Limerick, Limerick Junction and Tipperary, with Liverpool and stations in England north of Birmingham (Birmingham inclusive), to form a common fund, to be dealt with as under:

“As respects traffic through Liverpool, the proportion due to the railway distance in England to be paid to the London and North-western Company.

“As respects traffic *viâ* Holyhead, after deducting from the gross receipts the proportions on the Irish mileage, and 138 miles of the distance from Dublin to destination, the remainder to be paid to the London and North-western Company.

“The residue, that is to say, the earnings by all the routes, as between the three places mentioned, and Liverpool by the steam-packet routes, and a point 138 miles from Dublin *viâ* Holyhead, say Holywell station, such earnings to include the proportions due upon any through traffic carried by any of the parties hereto in connexion with any other companies or carriers in England, *viâ* Liverpool and *viâ* Holyhead, and also the earnings upon the carryings of the City of Dublin Company, or London and North-western Company, in connexion with the Grand Canal Company of Ireland, to be divided amongst the companies in manner following, it being understood that the Cork route has an interest in the traffic to and from Limerick only:

“The companies carrying the traffic to be credited with 40 per cent. of the earnings, as working expenses.

“50 per cent. of the remainder to belong to the railway and steam companies owning the routes *viâ* Waterford and *viâ* Cork, to be sub-divided between them in such proportions as they may agree upon.

“50 per cent. to the companies owning the routes *viâ* Dublin and Liverpool and *viâ* Dublin and Holyhead, to be sub-divided between them as follows; viz., 50 per cent to the railway companies up to Dublin; 25 per cent. to the City of Dublin Company, and 25 per cent. to the London and North-western Company, in respect of their mileage upon the before-mentioned 138 miles.

“Settlements in the Irish clearing house.

“Unconsigned traffic from Great Southern and Western Line, for Liverpool, to be given City of Dublin Company; other places common to City of Dublin Company and London and North-western Company to be divided; the City

of Dublin Company handing such traffic, and all other unconsigned traffic, to the London and North-western Company at Liverpool.

“The Cork and Waterford Steam Companies to hand to the London and North-western Company at Liverpool all traffic not specially consigned. In like manner, City of Dublin Company and London and North-western Company to give all unconsigned traffic to the Great Southern and Western Company.

“No allowance to be given to induce any party to send by a particular route.

“The through rates in no case to exceed the sum of the local rates.

“In the division no company to get more than their local rate for the time being for similar traffic.

“Waterford and Limerick Railway Company, Cork and Limerick Direct Railway Company, undertake that all traffic consigned through them by other routes than *viâ* Liverpool or Holyhead, between places in England and the places in Ireland to which this agreement refers, shall not be booked through, and shall be charged the local rates.

“The London and North-western Company, upon the demand of the Great Western Company, or of any of the parties to this agreement, will concur with the Great Western Company in making through rates to stations upon that railway.

“Arrangements to be in force for twelve months certain, and to continue after, until three months' notice by one of the parties.”

N.B.—These arrangements came into operation in September 1864.

It was thereupon proposed by James Delahunty, Esq., seconded by John A. Blake, Esq., M.P., and unanimously resolved:—

“That a committee be appointed to inquire into and report to a future meeting as to the best means that should be adopted to promote, protect, and develop the trade and commerce of Waterford, viz., the mover and seconder, the Mayor, Messrs. William Malcolmson, Edmond Power, J.P., John Mackesy, J.P., Samuel T. Grubb, J.P., Henry F. Slattery, T.C., Pierce Cox, Ald., Joseph Fisher, F. G. Bloomfield, J.P., John O'Brien, John Hudson, William Johnson, J.P., Patrick J. Dowley, T.C., Patrick A. Power T.C., Thomas F. Strange, T.C., Thomas B. Prosser, T.C., Abraham Denny, Ald., Daniel Carrigan, with power to add to their number.

“The following were subsequently added to the committee:—The Earl of Bessborough, Rev. J. T. Medleycott, Messrs. Joseph O'Dwyer, T.C., Richard O'Donnell, J.P., Andrew Ryan, Ald., and Charles Newport, J.P.”

At a meeting of the committee, held on Thursday, the 5th of January 1865, the Mayor in the chair, the following resolutions were unanimously agreed to:—

“That the directors of the Waterford and Limerick Railway Company be asked to furnish to this committee a copy of all existing through traffic arrangements made by them with the London and North-western and other railway and steamboat companies, and also copies of any through traffic arrangements made in and since the year 1857, with their dates.

“That a deputation, consisting of the Mayor, Messrs. John A. Blake, M.P., Edmond Power, John Mackesy, James Delahunty, Daniel Carrigan, F. G. Bloomfield, and S. T. Grubb, do wait upon the Board of Directors in reference to same, and inquire how far the company are at liberty to make through traffic arrangements with the Great Western Railway Company.”

A copy of the foregoing having been sent to the railway company, the following reply was received on Monday, the 30th of January:—

“Waterford and Limerick Railway, Secretary's Office at Limerick Terminus, January 28th, 1865.

“PORT AND TRADE OF WATERFORD.

“SIR,—With reference to the resolutions received from you herein, I now beg to advise that my directors will have pleasure in receiving the deputation named on Wednesday next (1st proximo), at our Waterford Terminus board-room, at noon, say, for the purpose of discussing with them the best practicable means of developing the trade and commerce of Waterford. As to furnishing copies of all our through traffic arrangements, made in and since 1857, my

board regret having to decline until they are in a position to know how far such divulging of affairs pertaining to management of a private property may be acceptable to the general body of shareholders.

"I am, sir, your obedient servant,

"T. AINSWORTH, Secretary.

"The Right Worshipful the Mayor of Waterford."

The deputation waited upon the board at the time appointed, and at the interview they were informed,

"That the board of directors did not deny the correctness of the heads of arrangements as read at the Town-hall meeting.

"That they were in operation and acted on since January 1864, although not regularly executed and signed for some months later.

"That the board did not consider these arrangements as injurious to the port and trade of Waterford, and it was stated in evidence thereof, that the traffic for the half-year ending the 31st December 1864, showed a carrying in goods of 49,000 tons, as against a similar traffic in 1863 of 45,000 tons; and further they would join in trying to develop and increase the traffic and commerce of Waterford."

The committee having again met on Friday, the 10th of February, the Mayor in the chair, and having taken the several matters into consideration are of opinion, from the information received, that the heads of through traffic arrangements, as read at the meeting of the 23rd December last, are true and correct, and have been in operation during the year 1864.

That this committee, with all respect for the opinions of the directors, considers these arrangements to be well calculated to divert the traffic of the districts to England, *via* Dublin, and vitally injure the trade and commerce of Waterford and the southern communications.

The committee submit that in 1859, when a measure also calculated to divert the traffic was proposed by the then Waterford and Limerick railway directors, it was strenuously and effectively resisted by Waterford and the south, and they recommend that resolutions similar to the following, which were then agreed to, should now be adopted:—

"At a public meeting of the citizens of Waterford, held in the Town Hall on Friday, the 9th day of December 1859, convened by the Mayor on requisition, for the purpose 'of considering the effect of a Bill respecting the sale of the Waterford and Limerick Railway to the Great Southern and Western Railway Company, about being introduced in the next session of Parliament,' the Right Worshipful John Mackesy, M.D., Mayor, presided, and the following resolutions were unanimously adopted:

"Moved by Joseph Fisher, Esq., and seconded by Dr. Wm. Carroll, T.C.:

"Resolved, That James Delahunty, Esq., do act as secretary to the meeting."

"Moved by William Malcolmson, Esq., and seconded by John A. Blake, Esq., M.P.:

"Resolved, That finding the Directors of the Waterford and Limerick Railway Company have, by the casting vote of their chairman, agreed to recommend the sale of that line to the Great Southern and Western Company, we hereby express our decided conviction that such a measure, by placing a monopoly in the hands of one powerful company, would prove injurious to the port and trade of Waterford, as well as to the interests of the south of Ireland generally, tending as it manifestly does, to the centralising of the trade to Dublin."

"Moved by Thomas W. Jacob, Esq., and seconded by Thomas Murphy, Esq. (mayor elect):

"Resolved, That any Bill introduced into Parliament for this object shall, for the reasons above stated, receive our strenuous opposition, and that a committee be now appointed to obtain the requisite funds for defraying the necessary expenditure; and that they solicit grants for this purpose from the corporation and other public bodies in the city, whose interests will be affected by the proposed measure, and that they report to an adjournment of this meeting; the committee to consist of the following gentlemen:

The Mayor.
The Mayor elect.
General Roberts.
W. Malcolmson.
James Delahunty.
John A. Blake, M.P.
Sir H. W. Barron, Bart.

J. D. Lapham.
T. W. Jacob.
Ald. Mackesy, J.P.
Ald. Ryan.
Ald. Davis, J.P.
Colonel Roberts.
Doctor Carroll, T.C.

Edward Roberts.

Henry White.

John Power, J.P.

J. S. Richardson.

Charles Ambrose.

P. Cox, T.C.

A. Denny.

H. Gallwey, T.C.

J. Fisher.

C. Redmond, T.C.

T. B. Prossor, J.P.

Capt. Johnson (City High Sheriff elect).

Edmond Power, J.P.'

"Moved by James Delahunty, Esq., and seconded by Col. Roberts:

"Resolved, That the Bank of Ireland be requested to act as treasurer to the funds to be subscribed."

"Moved by J. S. Richardson, Esq., and seconded by Henry White, Esq.:

"Resolved, That the members for the city of Waterford, Michael D. Hassard and John A. Blake, Esqrs., and the members for the county, the Hon. Walter C. Talbot and John Esmonde, Esq., and other members for the south of Ireland whom the committee may think proper to address, be requested to afford their assistance in giving strenuous opposition to the proposed measure."

"Moved by Abraham Denny, Esq., and seconded by Henry Davis, Esq., J.P.:

"Resolved, That the committee be requested to communicate, either by deputation or correspondence, with the other towns connected with the Waterford and Limerick Railway, and also with the Great Western Railway Companies of England and the South Wales Railway, asking them to co-operate in opposing a measure so injurious to our common interests."

"JOHN MACKESY, M.D., Mayor, Chairman.

"JAMES DELAHUNTY, Secretary."

They further recommend that a permanent standing committee should now be appointed to take immediate action for the preservation and development of the traffic of the southern routes, and invite, for that purpose, the co-operation and combination of all parties interested therein at both sides of the channel.

(Signed) JOHN LAWLER, Mayor, Chairman.

PRESERVATION AND DEVELOPMENT OF TRAFFIC BETWEEN GREAT BRITAIN AND IRELAND BY THE SOUTHERN COMMUNICATIONS.

At a Meeting of the Directors of the Waterford and Kilkenny Railway Company held on Tuesday, the 10th of January 1865,

JAMES DELAHUNTY, Esq., in the Chair,

It was moved by EDMOND SMITHWICK, Esq., Mayor of Kilkenny, seconded by MICHAEL CAHILL, Esq., and resolved:—

That the through traffic arrangements lately made by the London and North-western Railway Company with Southern Railway and Steam Boat Companies, are eminently calculated to divert and draw the traffic of the south of Ireland to and from England, *via* Dublin, and thence by Liverpool and Holyhead, and thereby damage and eventually destroy the direct communications between the south of Ireland and these ports.

That such diversion and withdrawal of traffic from the southern routes is effected by the facilities afforded in conveying traffic to all the principal manufacturing and business towns in England, *via* Dublin, there being at least an average sailing from that port of four steamers per day with goods traffic to Liverpool or Holyhead, and which facilities obtain and secure a preference for the Dublin line when goods are carried by all routes at equal rates.

That the preservation and development of the southern traffic communications between Great Britain and Ireland equally affect the interests of the trading communities at both sides of the Channel, particularly the south and south-east of Ireland, South Wales, and the west and south-west of England, and we therefore deem it necessary to call upon the municipalities, the railway and other companies interested, to adopt such timely measures as may be considered necessary to preserve the existing traffic, and also open up and develop other channels of trade and traffic that are now closed to the southern ports.

That a copy of these resolutions be forwarded to all parties interested, and their co-operation and assistance be respectfully and earnestly solicited.

That the Waterford and Limerick Railway Board be solicited to unite with us in promoting and effecting the foregoing objects.

JAMES DELAHUNTY, Chairman.
WILLIAM WILLIAMS, Secretary.

APPENDIX AM.

IRISH RAILWAY REFORM MOVEMENT.

STATEMENT as submitted by the Rt. Hon. the LORD MAYOR of DUBLIN to the ROYAL COMMISSIONERS on RAILWAYS, showing CAUSE of COMPLAINTS on IRISH LINES.

(Referred to by Mr. Barrington in his Answer to Question 7123.)

No.	Name of Complainant.	Calling.	Address.	Railway referred to.	Nature of Complaint.
1	U. McDonnell - -	Merchant -	Galway -	Midland Great Western of Ireland.	Too high rates for beverages.
2	John Tate & Co. - -	Distillers -	Belturbet -	Irish North-western.	Excessive rates for corn on short distances.
3	James Forbes - -	Rope Maker -	Galway -	Midland Great Western.	Railway rates cannot be paid so high.
4	G. Rutledge - -	Merchant -	Do. -	Do. -	Ditto.
5	J. Harrison - -	Do. - -	Do. -	Do. -	Ditto (special).
6	H. J. Banon - -	Do. - -	Do. -	Do. -	General complaint of the whole system.
7	F. McNamara - -	Do. - -	Do. -	Do. -	Excessive rates on sugar, &c.
8	George Ledlie - -	Do. - -	Do. -	Do. -	General statement against rates for goods and passengers (special).
9	Town Commissioners - -	- -	Longford -	Do. -	Resolution against railway system.
10	Town Commissioners and Inhabitants.	- -	Bagenalstown Co., Carlow.	Great Southern and Western, Ireland.	Ditto as above (very special statements).
11	John Wilson - -	Town Clerk -	Longford -	Midland Great Western.	Comparative rates on railway and canal, showing excess on railway.
12	Henry Darcus - -	Mayor of Londonderry.	Londonderry -	Irish North-western and lines to Dublin.	General statement against present system. (Important, see paragraph No. 4.)
13	Wicklow Copper Mining Company.	Mining Company	45, Dame Street, Dublin.	Dublin, Wicklow, and Wexford.	High and unfair rates for ores.
14	H. M. Darcy Irwine -	Landed Proprietor.	Enniskillen -	Irish North-western and to Dublin lines.	Exorbitant rates for timber, coals, &c. (Special.)
15	Francis Mulligan - -	Provision Merchant.	Dublin -	Irish Railways -	General statement. (Very special.)
16	H. Kinahan - -	Timber Merchant	Do. - -	Do. - -	Exorbitant rates.
17	Capt. Maxwell Harte -	- -	United Service Club.	Do. - -	Malarrangements for passengers.
18	George H. Pentland -	Landowner -	Drogheda -	Dublin and Drogheda.	Overcharges on all classes of produce.

Average Interest (taking the lowest rate in the cases where the interest is reduced), 3·97 per cent.

No proceedings have been necessary to enforce payments except in the case of the Londonderry and Coleraine Railway, as above stated. When borrowers are in arrear, urgent letters demanding payment are sent by the Board's Secretary, and if not attended to, then by the Solicitors, which have resulted in the arrears being arranged.

Public Works Loan Board, 12th June 1865.

W. W. WILLINK, Secretary.

APPENDIX AP.

LETTER FROM IRISH NORTH-WESTERN RAILWAY COMPANY.

Irish North-western Railway Company, Offices,
43, Lower Gardiner Street, Dublin,

June 15, 1865.

SIR,

I HAVE the honour to submit, for the consideration of the Royal Commission on Railways, the following resolutions which were unanimously agreed to by the Board of this Company to-day.

- 1st. Resolved, that if the Government should feel disposed, when the Commissioners appointed to inquire into Irish railways shall have made their report, to advance at a low rate of interest a sum sufficient to discharge the bonds and debentures of this company, this Board will be prepared to reduce the passenger fares as may be hereafter agreed upon.

- 2nd. Resolved, that the Board of this Company would feel disposed to, at once, make a reduction in their present rates, if any inducement were now held out by the Treasury in relation to the existing Government loan, pending the Report of the Railway Commissioners.

- 3rd. Resolved, that copies of the foregoing resolutions be forwarded to the Royal Commission on Railways, and to the Right Hon. the Chancellor of the Exchequer.

I have, &c.

To the Secretary, Royal Commission on Railways, Irish Inquiry, House of Lords,
London, S.W.

W. EYKELBOSCH,
Secretary.

APPENDIX AT.

OFFER from the WATERFORD AND LIMERICK RAILWAY to reduce their FARES on certain CONDITIONS.

Waterford Terminus,
19th July 1865.

SIR,
REFERRING to the evidence given by our chairman before the Royal Commission on Railways, (duly reported to my board by Mr. Malcomson), I am directed to submit the subjoined proposition for consideration, as one mode of giving needful relief to that district of country in the southern part of Ireland traversed by our railway which this company would be willing to adopt, by way of giving effect to the object aimed at, and of testing the experiment how far such a reduction of fares will eventuate.

Your obedient servant,

William Pole, Esq., Secretary,
Royal Commission on Railways.

THOS. AINSWORTH,
Secretary.

ROYAL COMMISSION ON RAILWAYS.

(IRISH SECTION.)

The Waterford and Limerick Company offer to reduce their Passenger Toll powers to the extent of one-third, say—

1st class, 3d. to 2d. per mile.
2nd „ 2d. to 1½d. „
3rd „ 1d. to ¾d. „

provided the Government finds funds at the Harbours Improvement Act rate of 3¼% interest, to take up the Company's bonds and preference capital as same become available.

J. P.

APPENDIX AV.

MEMORIAL from SCARIFF, as to BOATS on the SHANNON.

To the COMMISSIONERS OF INQUIRY INTO IRISH RAILWAYS.

The humble memorial of the inhabitants of Scariff and its neighbourhood in the county of Clare,

Sheweth,

That direct steam navigation on the river Shannon, from Killaloe to Lough Allen had existed for nearly forty years.

That the Midland Railway Company, by establishing steamers and conveying passengers without any payment between Killaloe and Athlone, compelled the other boats to cease plying, and established a monopoly in 1858.

That afterwards they entered into a contract by deed under seal, with the Great Southern and Western Railway Company, not only to put an end to such steam passenger traffic, but actually not to permit the making of any railway west of the Shannon, for a distance of 80 miles, forming one-eighth of this kingdom. Which from the position of these two railways they are effectually able to do.

That said injurious contract is fully acted on. The magnificent steam-boats are all rotting in the harbour of Killaloe.

That only lately, since the Commission of inquiry was proposed, a wretched tug-boat was put on, being the only steamer on the finest river in Europe for the length of eighty miles.

That there are many other important facts connected with this contract, too long to detail to the Commissioners, but most injurious to the public, to petitioners, and even to the railway companies themselves, which memorialists are ready to prove, if required by the Commissioners.

Memorialists pray for an inquiry by the Commissioners into these facts, directly affecting the railways, and the

public interests, and particularly injurious to your memorialists.

And memorialists will ever pray, &c.

RETURN No. 2.

LIST OF AGREEMENTS MADE WITH OTHER COMPANIES, giving their dates, periods, and a short sketch of the nature of each.

BELFAST AND COUNTY DOWN.

Belfast, Holywood, and Bangor.—Sale of the Holywood Branch to the above Company under 28 & 29 Vict. (Sess. 1865) by a payment of 50,000*l.* in cash, and an annual rent of 5,000*l.*, subject to redemption within ten years at 4½ per cent.

BELFAST AND NORTHERN COUNTIES.

Carrickfergus and Larne.—Agreement dated 23rd February 1863, terminable at six months' notice, for general working of the line at a mileage rate, varying according to the number of trains per day.

Londonderry and Coleraine.—Agreement dated 11th April 1865, terminable at three months' notice, for general working of the line at a mileage rate, according to the number of trains required.

Irish North-western and Ulster.—Agreement, expires 10th July 1865, for a division of all through traffic between Belfast and Londonderry.

CORK AND BANDON.

Cork and Kinsale Junction.—Haulage agreement from June 1863 for five years, at a rate of 30 per cent. off traffic receipts.

CORK, BLACKROCK, AND PASSAGE.

Does not apply.

DUBLIN AND BELFAST JUNCTION.

Banbridge Junction.—Lease of line for 21 years from 23rd March 1859, subject to 2,000*l.* a year rent, less income tax and tenant's proportion of poor's rate.

Dublin and Drogheda.—Agreement for station services and accommodation at Drogheda station, 1,000*l.* a year, liable to be terminated at six months' notice by either party.

Ulster.—The like at Portadown station, 675*l.* a year for three years, from 1st July 1865.

DUBLIN AND DROGHEDA.

No Agreement.

DUBLIN AND MEATH.

Midland Great Western.—Award between the Dublin and Meath and Midland Great Western Companies, dated 29th July 1861, whereby it is arranged to exchange for a period of 10 years the traffic between Dublin and Dublin and Meath stations; four trains each way to be run on week days, and two trains each way on Sundays.

Dublin and Drogheda.—Award between the Dublin and Meath and Dublin and Drogheda Companies, dated 30th October 1862, under which the Dublin and Meath Company pays certain tolls and station rents, junction signal expenses, &c., for making the Dublin and Meath's running powers over the Navan and Kells section of the Dublin and Drogheda railway.

DUBLIN, WICKLOW, AND WEXFORD.

Dublin and Kingstown.—The only "agreement" to which this return refers can, as regards the Dublin, Wicklow, and Wexford Company, only embrace the lease of the Kingstown railway and agreements with the Kingstown Company, all of which are by agreement for a lease of the line for 999 years from the 1st January 1865 cancelled, the latter may be said to be the only agreement. The lease is not yet perfected.

GREAT SOUTHERN AND WESTERN.

Cork and Limerick Direct.—Agreement, dated 6th September 1862, for five years for working at 40 per cent. of the receipts.

Cork, Youghal, and Queenstown.—Agreement, dated 11th February 1865, to purchase that line for 310,000*l.* of Great Southern and Western original stock, upon obtaining an Act for that purpose.

Meantime, by agreement for lease, dated 1st April 1865, the Great Southern and Western work the line for three years, at 13,950*l.*, being 4½ per cent. on 310,000*l.*, or in case of a higher dividend being paid on such stock, then the rate of such dividend.

IRISH NORTH-WESTERN.

1. *Londonderry and Enniskillen.*—Agreement, dated 17th March 1860, for a lease of the Londonderry and Enniskillen Railway, plant, rolling stock, &c., for 35 years, from 31st December 1859, to be perpetually renewed for successive terms of 35 years each, rent 26,000*l.* a year, and if after 1862 the Irish North-western Company's receipts (exclusive of its receipts from the Clones and Cavan Branch) exceed 95,000*l.* in any year, then the rent to be increased by 20 per cent. of such excess. If the rent for any year shall reach 33,000*l.*, that sum to be thenceforth the fixed yearly rent.

2. *Enniskillen, Bundoran, and Sligo.*—A provisional agreement, at present undated, for working, and maintenance, and conduct of traffic at 2s. per train mile, for 10 years from the opening for public traffic.

3. *Finn Valley.*—Provisional agreement, dated October 1861 and 5th September 1863, for working, and maintenance, and conduct of traffic, for 35 per cent. of the traffic earnings of the Finn Valley for 10 years from 1st November 1862.

4. Heads of a provisional agreement, dated 11th May 1865, with the Dundalk and Greenore, and London and North-western, for through booking arrangements, and for working, management, and maintenance of a proposed line between Dundalk and Greenore.

MIDLAND GREAT WESTERN.

Grand Canal Company and Great Southern and Western Railway Company.—Lease of the canal dated 1st August 1853, for 10 years, from 1st July 1853, at a rent of 19,565*l.* 11s. 11d.

Great Southern and Western.—Reference dated 23rd September 1859 as to disputes with that company.

Grand Canal Company and Great Southern and Western Railway Company.—By deed of submission dated 23rd February 1860 a certain sum was agreed to be paid to the canal company by the two railway companies, subject to procuring an Act of Parliament. The award of the arbitration settles the terms of purchase. The Bill for purchase of the canal was promoted in 1860, but was not passed.

Great Northern and Western.—Agreement dated 22nd June 1857 to withdraw oppositions to Bills then in Parliament. The Midland Company to subscribe to the Great Northern and Western line, and to work its traffic. Terms to be ratified by subsequent Act of Parliament.

Agreement dated 1st August 1859 as to the mode of constructing the Great Northern and Western line and terms for conducting the traffic by the Midland Great Western. This agreement was assented to by the shareholders and approved by the Board of Trade 16th August 1859.

Athenry and Tuam.—Agreement dated 15th June 1858 to abandon opposition to the Bill in Parliament for this line. Power to be taken to lease the same by the Midland Company. Proviso not to extend the Athenry and Tuam line to Castlebar and other towns.

Agreement dated 26th April 1859 to lease the Athenry and Tuam line for 10 years at a rent of 4,000*l.* per annum. The line not to be extended to certain towns north of Tuam.

Magnetic Telegraph Company.—Indenture of 1st January 1859 for 14 years to reconstruct the Midland Company's line of telegraph from Dublin to Galway, with new lines to Cavan and Longford.

Dublin and Meath.—Agreement dated 3rd April 1861 for withdrawing by the Meath Company a certain Bill then before Parliament, and referring to arbitration the terms on which the traffic of the Meath line should be carried over the Midland line.

NEWRY AND ARMAGH.

Newry, Warrenpoint, and Rostrevor.—Agreement, dated 22nd May 1863, for working the Junction (Dublin Bridge), each company paying a moiety (on their traffic) of the expenses.

Ulster.—Agreement on the award of Captain Rich, dated 12th February 1865, for working this Company's traffic at Armagh.

Traffic agreements have been made at different periods between this Company, the Dublin and Belfast Junction, the Ulster, the Irish North-western, the Dublin and Drogheda, and the Newry, Warrenpoint, and Rostrevor Companies for the section of the line from Newry to Goraghwood. The Dublin and Belfast, and Ulster Companies refuse a reciprocity of arrangement with this Company on that section of the line from Goraghwood to Armagh.

NEWRY, WARRENPOINT, AND ROSTREVOR.

Newry and Armagh.—Agreement, dated 15th March 1859, by which that Company admitted its repudiation of agreement of 1857, to lease the Warrenpoint line, and agreed to form a junction between the two lines at joint expenses. But after such junction was made the Newry and Armagh Company promoted an opposition line running parallel with the Newry and Warrenpoint Company's line, called the Newry and Greenore Railway, and otherwise impede the developing of the traffic.

Dundalk Steam Packet Company.—Agreement, dated 31st August 1859, for loading and discharging all English traffic at Warrenpoint, paying 1s. per ton.

ULSTER.

1. *Portadown, Dungannon, and Omagh.*—Lease for 999 years at 5,250*l.* half-yearly rent till the gross receipts amount to 11,500*l.* half-yearly. When gross receipts shall exceed 23,000*l.* per annum and shall not exceed 25,000*l.* per annum, the rent shall be 10,500*l.* per annum, and half of receipts above 23,000*l.*, payable half-yearly. When gross receipts shall exceed 25,000*l.* per annum and not exceed 30,000*l.*, the rent shall be 47½ per cent. of the receipts, payable half-yearly. When gross receipts shall exceed 30,000*l.* per annum and shall not exceed 36,000*l.*, the rent shall be 50 per cent. of the receipts, payable half-yearly. When gross receipts shall exceed 35,000*l.* per annum, the rent shall be 55 per cent. of the receipts.

2. *Banbridge, Lisburn, and Belfast.*—Lease agreed on but not yet executed. The line is worked by the Ulster Company in accordance with the terms of such lease for 21 years, from 13th July 1863. Rent payable half-yearly according to a schedule in such lease, which regulates the payments by a scale rising from 20 per cent. so long as the half-yearly receipts do not exceed 3,000*l.*, to 55 per cent. when the half-yearly receipts reach or exceed 7,000*l.*

3. *Dublin and Belfast Junction.*—Agreement for three years from 1st July 1865, to render station services, &c. at Portadown station to the Dublin and Belfast Junction Company for 675*l.* per annum, payable half-yearly.

4. *Newry and Armagh.*—Under the awards of Captain Rich, R.E., of 17th June and 25th August 1865, and of the Board of Trade dated 20th June 1865, the Newry and Armagh Company to make, repair, and maintain the junction with the Ulster line, and points, signals, &c., paying 100*l.* a year for attendant at points and signals and incidental expenses for such junction, points, and signals. For goods loaded or unloaded for the Newry and Armagh Company at the Armagh station of the Ulster Company, 7*d.* per ton, and for minerals 2*d.* per ton, to be paid to the Ulster Company by the Newry and Armagh Company. The Newry and Armagh Company to pay the Ulster Company for the use of the portion of the Ulster Railway near the junction, 22*l.* 10*s.* annually, and for the use of the Armagh station 23*l.* 6*s.* 8*d.* annually, and towards the expenses of working the Armagh station 180*l.* annually.

5. *Irish North-western.*—This Company is paid by the Ulster Company 245*l.* 16*s.* 4*d.* per annum as rent for the use of the Omagh joint station, the Ulster Company

bearing a proportion of the expenses of working the traffic, &c. at the station by both companies jointly.

6. *Irish North-western.*—This Company is paid by the Ulster Company 430*l.* per annum for transacting its passenger and parcel traffic, for the use of engine shed and turntable, and for working signals at the Clones station. The Ulster Company pay for traffic services 6*d.* per ton on first-class goods, 1*s.* per ton on general goods, and 1*s.* per waggon for cattle.

7. *Belfast and Northern Counties.*—Agreement, dated 12th August 1865, determinable at three months' notice, for through traffic between Belfast and Londonderry, via Omagh and via Coleraine. From the receipts by both routes 12½ per cent. to be allowed to either route for working expenses for passengers, parcels, horses, carriages, dogs, &c. From the receipts for goods and cattle 33½ per cent. to be allowed to either route, together with cartage of goods. The division of the balance for passenger traffic is 75 per cent. by Coleraine route, and 25 per cent. by Omagh route; for goods traffic 66⅔ per cent. for Coleraine route, and 33⅓ for Omagh route.

WATERFORD AND LIMERICK.

Working Agreements.

Limerick and Foynes.—From 1st November 1863, for 3,700*l.* a year, to find three trains in summer and two in winter each way daily, except specials and Sundays, for which 2*s.* per train per mile is to be paid.

Limerick and Castleconnell.—From 20th July 1860 to 12th April 1868; haulage 1*s.* 11*d.* per train per mile.

Limerick and Ennis.—From 23rd April 1861, for 20 years, at 45 per cent of the receipts.

Waterford and Kilkenny.—From 31st January 1863, for five years at 43 per cent. of the receipts.

Kilkenny Junction.—From 1st March 1865, temporarily; 2*s.* 3*d.* per train per mile for a two train service, and 1*s.* 11*d.* per train per mile for a three train service.

Athenry and Ennis Junction (line not open).—From 27th May 1863, for 20 years, at—

s. d.	
2 6	per train per mile for 1 train.
2 0	" " " 2 trains.
1 10	" " " 3 "
1 9	" " " for more than 3.

Rathkeale and Newcastle Junction (when opened).—From 19th December 1863, for 20 years—

s. d.	
2 3	per train per mile for 2 trains.
1 11	" " " 3 "

until receipts reach 10*l.* per mile per week in any year ending 31st December, then working to lapse into 45 per cent. of receipts for term out. Option of ultimate purchase by the Waterford and Limerick Company reserved on giving four per cent. on ordinary capital.

RETURN No. 4.

PARTICULARS OF GOODS TRAFFIC.

N.B.—The Questions were—

“State the following particulars respecting the ten principal items of your goods traffic.

“The weight carried, and the amount of earnings each way, up and down the line, for the last five years.

“Also the rates per mile and terminal rates charged, with all changes in the rates during that period.”

As, however, many companies stated it would be impossible to make such a comprehensive return, they were requested to give the best information in their power.

BELFAST AND COUNTY DOWN.

—	1862.		1863.		1864.	
	Tons.	£	Tons.	£	Tons.	£

General merchandise -	19,500	4,950	—
	61,000	9,500	—

With respect to the rates charged this company has not been able to attain the desirable simplicity of charges calculated at uniform rates per mile, owing to the competition by road to which it is exposed at different points of its system, but those quoted may be taken as a fair average for the line.

No material change has been made in this company's rates since 1861.

		103,503 25,417	96,201 24,229

Exceptions.

Belfast and Cookstown, Indian meal, Indian corn and wheat 6*s.* 9*d.* per ton = 1½*d.* per ton per mile.

Belfast and Newtownlimavady, flour 10*s.* per ton = 1½*d.* per ton per mile.

Belfast and Newtownlimavady, potatoes 7*s.* 6*d.* per ton = 1½*d.* per ton per mile.

Belfast and Londonderry, grain, 5 tons and upwards, 6*s.* per ton = ¾*d.* per ton per mile.

Cartage of linens, yarns, flax, and flaxseed, butter and eggs, at Belfast and Londonderry is included in the rate.

There has been so little deviation in these rates for the last five years, that it is not necessary to furnish the charges during that period.

The terminal expenses are included in the rates.

CORK, BLACKROCK, AND PASSAGE.

No goods traffic on this line.

DUBLIN AND BELFAST JUNCTION.

The ten principal items carried are, breadstuffs, ale and porter, whiskey, timber, coals, flax, linen, yarns, bale goods, and provisions.

GROSS TRAFFIC.

—	—	Revenue.
	Tons.	£
1860	113,444	20,661
1861	125,000	21,759
1862	131,678	24,012
1863	120,149	21,421
1864	122,602	20,858

The rates charged between Drogheda and Portadown, a distance of 56 miles, are, for—

—	Per ton.	Per ton per mile.
	<i>s.</i> <i>d.</i>	<i>d.</i>
1st class -	7 2	1·54
2nd „ -	10 3	2·20
3rd „ -	11 4	2·43
4th „ -	14 6	3·10
5th „ -	17 0	3·64
6th „ -	20 0	4·29
Breadstuffs -	8 6	1·82

These rates include terminal charges.

When large lots of goods offer, and are conveyed in full waggon loads, reductions are made to meet the particular cases as they arise.

DUBLIN AND DROGHEDA.

TOTAL GOODS TRAFFIC.

—	Tons.	Receipts.
		£
1860	82,062	23,324
1861	88,874	22,947
1862	88,938	24,459
1863	85,155	23,407
1864	80,044	22,871

The ten principal items are grain, groceries, bale goods, hardware, whiskey, ales, chandlery, oils, tobacco, provisions. It may be assumed that these items would form about three-fourths of the above tonnage.

The rates from Dublin to Oldcastle are—1st class, 6s. 8d.; 2nd class, 9s. 6d.; 3rd class, 11s. 2d.; 4th class, 14s. 3d.; 5th class, 16s. 10d.; smalls, 1s. 6d. These rates are never exceeded, but reductions are frequently made for quantities. When several waggon loads can be sent at once, the next lower class rate only is charged.

We have also special rates from Dublin to stations on the seaboard, where competition makes it impracticable to obtain the ordinary rates.

The rates between Dublin and Belfast are—1st class, 8s. 4d.; 2nd class, 10s.; 3rd class, 12s. 6d.; 4th class, 15s.; 5th class, 20s.; 6th class, 30s.; also a special classification for small quantities. These rates include terminals.

DUBLIN AND MEATH.

Only been open three years.

Rates are as follow, and have been so since the opening of the line with some slight exceptions:—

Per ton per mile.

	d.
1st class, Draining tiles, lime	1.44
2nd „ Flour, grain, timber	2.25
3rd „ Grocery, ale and porter, heavy drugs	2.81
4th „ Drapery, drugs, cutlery	3.46
Cattle, Meath Stations to Broadstone	6.37
Coal	1.00

DUBLIN, WICKLOW, AND WEXFORD.

—	Down.				Up.			
	May 1864.		Sept. 1864.		May 1864.		Sept. 1864.	
	Class.	Tons.	£	Tons.	£	Tons.	£	—
Ale and porter	3rd.	234	82	216	76	28	1	—
Butter	4th.	1	1	1	1	37	29	33 22

		1,292	369	1,333	331	1,040	278	944 320

2nd Class. Grain, raw and manufactured, manure, and potatoes are calculated at a uniform rate of about 1½d. per mile, which covers terminal charges.

3rd class. Ale and porter, sugar, and timber, about 2½d. per mile, which covers terminal charges.

4th class. Butter, fish, groceries, wine and spirits, and wool, about 3½d. per mile, which covers terminal charges.

The goods rates generally have undergone little or no change within the last five years.

GREAT SOUTHERN AND WESTERN.

Five Years' Return on 11 principal Items.

—	Tons.	Receipts.
		£
1860	284,542	107,588
1861	319,966	119,677
1862	334,333	124,011
1863	305,310	115,100
1864	290,961	115,695

The eleven principal items are (1) grain, (2) drink, (3) provisions, salt and fresh, (4) timber, (5) manure, (6) groceries (including wines and spirits), (7) bale goods, (8) bricks, (9) ironwork, (10) potatoes, and (11) coal.

Rates charged.

	d.
1. Grain	1½ per ton per mile.
2. Drink	1½ „ „
3. Salt provisions	1½ „ „
4. { Pitwood	0½ „ „
{ Cut timber	1½ „ „
5. Artificial manure	1½ „ „
6. Groceries	2½ „ „
7. Bale goods, including wool	2½ „ „
8. { Bricks, tiles, slates, stone	0½ „ „
{ Drain pipes	1½ „ „
9. { Iron castings and machinery	2½ „ „
{ Iron agricultural implements	4½ „ „
10. Potatoes	1½ „ „
11. Coal and coke	¾d. to 1 „ „

No terminals are charged.

The special rates are numerous; all persons obtain the same reduction; the reduction ranges between 15 and 22 per cent. under the ordinary rates.

No alteration in the ordinary rates during the five years, but the number of special rates has been much on the increase.

IRISH NORTH-WESTERN.

This Company cannot make even an approximate return.

APPENDIX AX.

In accordance with a resolution of the Commission, extracts were made of portions of the Evidence which affected several of the Irish railways, and sent to the respective companies with a letter asking if they had any explanations or remarks to make on the same.

The following are the answers received:—

The Midland Great Western Company sent no reply.

The Belfast and Northern Counties Company expressed a wish that their manager, Mr. Cotton, should be examined in explanation, and his evidence will be found in the proper place.

No. 1.—CORK AND BANDON RAILWAY.

Extracts of Evidence sent to the Company.

2090. (*Chairman.*) Can you name any other description of traffic which you think would be developed in Ireland by low fares?—I would say generally that there might be a large traffic in most articles of agricultural produce. More cattle, for example, would be sent upon the railways than now. On the Bandon line no cattle are now carried; they are all walked from Bandon to Cork.

2091. (*Capt. Galton.*) Have they ever been carried on that line?—They have to some small extent.

2092. Is the fare higher now than it was then?—Much higher.

6384. Have you had abundant opportunities of forming an opinion as to the system under which the Cork and Bandon railway has been managed?—Yes, for years.

6385. Will you state your opinion to the Commission as to whether that railway has been managed in a manner either most profitable to the shareholders or most advantageous to the public?—My opinion is that it has not been so managed, which has been very much owing to the great original cost of the railway. The shareholders have no direct interest, and they feel that they have none in the line. It has consequently got into the hands, I believe, of the preference shareholders, who cannot increase their profits from it beyond a certain point. I believe that that is the cause very much of the inefficient manner in which the railway is worked.

6386. Do you think that the directors have no interest whatever in endeavouring to increase the traffic beyond its present amount?—No, I think that they have no interest, and no hope of getting more on their original shares, which are a 5 per cent. security, and they have no object in working it up beyond that very much.

6387. Is it your opinion that there are sources of traffic which are undeveloped and which traffic might be brought into that railway?—I think so.

6388. Of what character is it?—General agricultural produce. The town of Bandon is within 20 miles of Cork, and it is a very common practice for the farmers there to send their farm produce by their own conveyances to Cork, and I feel certain that if there was a better system of management a great deal of that produce could be brought on to the railway.

6389. Are complaints made that the charges for the carriage of agricultural produce on the Cork and Bandon line are so high as to prevent the farmers from sending their produce to market?—Certainly. They want a system in Cork for the purpose of conveying agricultural produce to the markets, and there should be an organized system for bringing the produce to the markets from the railway station. The railway company have not a good system at work; they have for the butter, but I do not think they have for the corn; and even with the butter it is a general complaint that it is rather late in the market.

6390. Have you ever considered whether, if that railway were in the hands of parties who leased it, they could work it with advantage and profit, and whether there are means by which the traffic upon the line could be largely increased?—I have not the slightest doubt of it.

6391. (*Lord Donoughmore.*) There are some extension lines, I believe, in the course of construction from the Cork and Bandon line towards the western counties?—Yes.

6392. Can you give any evidence as to the effect which the condition of the Cork and Bandon Company has had upon those extensions, or is it the fact that the condition of the Cork and Bandon Company has had the effect of impeding the construction of further extensions towards the western counties?—I have no doubt of it; they have not entered heartily into those extensions as they would do if their interest was directly in the line.

Replies received.

2090. We carried for the year 1864, 1,286 cattle, 2,125 sheep, 33,896 pigs; our charges are moderate and no complaints; but on short lines such as the Cork and Bandon Railway light cattle are seldom carried, the distance being by road only about 13 miles.

6385, 6386. This is not the fact, as the directors (seven) hold over 400 original shares, besides preference.

6388. Every facility is given, but the bulk of the farmers living adjacent or beyond Bandon sell in that town, there being several buyers who again ship at Collier's Quay, a small creek within three or four miles of Bandon, or send by railway to Cork, as may be their convenience. Our rate is low, only 3s. 6d. per ton; we conveyed for the year 1864, 2,868 tons inwards.

6389. This is not the case, the corn in Cork is not generally taken to the market, as it is sold there by sample, and when sold carted from railway terminus to the corn stores of buyer. Butter on the contrary must go to the market to be qualified. Charges as low as any other line (20 miles in Ireland) and cheaper than some.

No. 1.—Cork and Bandon Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

6393. Are the shareholders quite content to leave the management of the line in the hands of those representing only the preference shares?—I suppose that they have no hope of getting anything for their shares, as they are unsaleable in the market, and there is very little hope of their getting anything like a dividend on the original shares, and they therefore take no interest in the thing.

6394. (*Mr. Hamilton.*) Do you think that the directors derive their qualification from the preference shares only?—No, I do not think that; I suppose that they are qualified by being holders of original shares, although they are so worked that a gentleman holding 1,000*l.* worth of them can qualify any person he pleases.

6397. (*Mr. Horsfall.*) You have spoken of the original cost of the line as being very heavy, can you state what it was per mile?—I cannot say, but I believe it was between 17,000*l.* and 20,000*l.* a mile for a single line, and carried through a country giving hardly any business, as between Cork and Bandon.

6398. (*Lord Stanley.*) Is it not the fact that this is a line of railway that never ought to have been made, and for which there was not sufficient traffic to maintain it?—I can hardly say that, but if it were made now, I believe that it could be made for 6,000*l.* or 8,000*l.* a mile.

6401. (*Sir R. Hill.*) What was the cause of the excessive expenditure upon the line?—It is taken over a mountain, and they had an immense deal of cutting and viaducts, and all sorts of tunnels, and it was a very expensive line to make.

6402. Was there any waste of money beyond that which arose from taking an improper route?—There were two or three competing lines, and there was much money wasted in engineering and law expenses.

6403. (*Lord Donoughmore.*) Was not the engineer a very incompetent man?—I believe so. He had had no experience in railway work.

6466. What was the original cost of the line?—The whole cost of the line was about 325,000*l.* for 20 miles of railway, and that was about 18,000*l.* a mile.

6467. For a single line?—Yes; that was the amount of share capital that was made away with. But it was in endless difficulties before it was opened. It was for many years almost an insolvent concern. The chairman committed suicide, and the shareholders gave it up, and it was at last taken up by the preference shareholders only, who obtained some exclusive powers enabling them to appoint directors, and they contrived to get the line opened.

6468. The railway is at present managed by persons who are preference shareholders?—By the first preference shareholders, who hold 48,000*l.* of capital. They have the entire management of the whole thing.

6469. Where do the directors reside?—They reside in Dublin chiefly. Mr. Valentine O'Connor, one of the directors of the Great Southern and Western Railway, is the chairman, and Mr. Greere, I think, is vice-chairman; but none of them are local people. I believe there are one or two local directors in Cork, but it is only as directors appointed by the preference shareholders that they manage things as they are managed.

6476. I suppose those shares representing 175,000*l.* of original capital have no price in the market?—Only about 10*l.* for a 50*l.* share, the want of any extensions very much influencing the value of them. I believe that the greater part of them are now held by persons who have bought them at the rate of from 10*l.* to 12*l.* for a 50*l.* share, and very few original shareholders remain in the company at all.

6480. Your complaint, I understand, is this; that the present managers of this railway, from the fact of being interested only in 48,000*l.* of preference capital, upon which they receive a dividend, have no interest in developing the traffic?—That is the real source of our difficulty in the western parts of the county. If there was a solvent company, having the management in its hands, inasmuch as the whole of the traffic from additional extensions must pass over the line, they would promote extensions to a much greater extent for that purpose.

6481. Has the policy of the present managers been to prevent, or stand in the way of extensions?—Not at all; it is only because they are in a dead lock; they say "we have no money;" that is the regular answer that is given.

6490. I perceive in an account rendered from the Exchequer Loan Commissioners that the company is in arrear to them, both with regard to principal and interest. Do they not take care to have the first charge paid?—I have watched the accounts for many years, and I have never observed that the first preference shareholders have not got their dividends. The second preference shareholders have been many times without them.

6491. (*Mr. Horsfall.*) Do not the Exchequer Loan Commissioners take precedence of the preference shareholders?—I think the Exchequer Loan Commissioners have got their interest.

6394. None of the directors have a fictitious qualification, each of the seven directors holding from 50 to 60 originals each, besides preference shares.

6397. Though this line is only laid for a single line, it is to be borne in mind that we have purchased land for a double line, and that all our works, such as tunnels, bridges, with the exception of the Innoshannon viaduct which is iron work, are made for a double line.

6398. The traffic receipts have increased from the opening of the line 8*l.* 5*s.* per mile to nearly 20*l.* per mile.

6401. The railway panic set in when the line was at its commencement, shareholders became frightened, transferred to paupers, calls were not responded to, financial embarrassment consequent thereon and credit contract at ruinous prices to furnish the line, and litigation.

6402. There was no competing line before Parliament, there was opposition by landlords of course, one of whom had to be paid 1,000*l.*

6467. The preference shareholders have obtained no exclusive power.

6468. The directors are original shareholders, as well as preference, 415 original shares being in their hands.

6469. There are four directors in Dublin, and three in Cork; it is incorrect the statement of their being appointed by preference shareholders, 78,000*l.* preference, against 240,000*l.* originals.

The former form the board, and the latter a committee to attend to the traffic and working of the railway.

The directors hold 20,750*l.* original stock, and 11,825*l.* No. 1 and 2 preference.

6476. There are a good many shareholders who took those shares originally and paid 50*l.* per share on the register; the price for the last four or five years varied from 14*l.* to 18*l.* They are now 14*l.*

6481. The directors were always most anxious to extend, and invariably received great opposition from the landed gentry. The various attempts cost the company 11,740*l.*

6490. The Exchequer Loan Commissioners have been paid both principal and interest to last May; the amount of loan was 31,000*l.* out of which they have been paid by yearly instalments, 18,911*l.*

One year's interest due to the No. 2 preference shareholders.

6491. The interest paid with each instalment four times a year.

No. 1.—Cork and Bandon Railway—*continued*.*Extracts of Evidence sent to the Company.*

6492. (*Mr. Glyn.*) According to the return I have before me, they certainly appear to be in arrear. The total advance made by the Exchequer Loan Commissioners to the Cork and Bandon Company amounts to 35,000*l.*; the company have repaid part of that amount, but there is a balance outstanding, and there is an arrear upon the principal and also upon the interest. I therefore cannot understand how the preference shareholders could have received their dividends?—I can state as a fact that I have watched the accounts very closely, and that there has never been for years past any statement that the first preference shareholders did not receive their interest somehow; the second, or number two, preference shareholders have continually gone without their interest. In the account that I obtained, it did not distinguish between the amount owing to the Exchequer Loan Commissioners and what they called mortgage loans; they were all put together, and they amounted to 71,000*l.*

6494. Who elects the directors?—I believe the preference shareholders exclusively.

6509. You would deal with the preference shareholders?—Yes, exclusively. If it was a landed proprietor's estate which had had a first mortgage upon it for 15 years, it would be wound up.

6510. You mean that you must buy them up?—No doubt.

6511. You must pay them off or deal with them at the price at which they will sell?—Yes; but I imagine that they have never been well pleased with their bargain, and I do not think that it has been looked upon as a very valuable security.

6512. And you would improve the security by the fact of paying them off?—Yes.

6513. (*Chairman.*) What price do the preference shares fetch in the market?—I do not know; they are so seldom sold, being in so few hands, and representing so small an amount, 48,000*l.*

6514. (*Mr. Glyn.*) Are the directors selected exclusively from the preference shareholders?—I believe so. I wish to add that the present actual traffic on the Cork and Bandon of 20,000*l.* per annum proves clearly that the traffic of the West Riding would be sufficient to pay a fair interest on all extensions that are required to give full railway accommodation to the whole district. If such extensions were made at a moderate cost, say 6,000*l.* per mile, and if the incubus of the extravagant cost of the existing lines could be arranged.

Replies received.

6492. The amount of loan to be paid to the Loan Commissioners, 12,676*l.* 10*s.* 0*d.*, in yearly instalments of 1,882*l.* 7*s.* 0*d.*, with interest on loan.

INTEREST STATEMENT, 30th JUNE, 1865.

	Amount.	Rate of Interest.	Annual Interest.
	£ s. d.	Per cent.	£ s. d.
By amount borrowed from Public Works Loan Commissioners on Mortgage -	12,676 10 0	4	507 1 2

By amount received for 831 Perpetual Debenture Shares of 10 <i>l.</i> each, being part of the Debenture Debt, and bearing interest at the rate of 4 <i>l.</i> per cent. per annum -	8,310 0 0	4	332 8 0
By Balance Debentures, or Debenture Shares on hand for issue -	79,986 10 0	—	3,904 19 2
	13 10 0	—	—
	80,000 0 0	—	—

6494. No such thing; the shareholders generally.

6511. The No. 1 preference shares excellent security, 5½ per cent. per annum; always at a premium in the market.

6513. The No. 1 preference shares are 6*l.* 5*s.* paid in full; sell from 6*l.* 12*s.* 6*d.* to 7*l.* per share.

6514. They are not; nor could it be done.

No. 2.—DUBLIN AND BELFAST JUNCTION RAILWAY.

2074. (*Mr. Horsfall.*) Have you heard any complaints in Ireland as to the unequal rate of charges between town and town?—Yes; as an instance I may mention the case of the Mining Company of Ireland. We have only one smelting works in the whole country, namely, the smelting works for lead and silver near Dublin. Considerable quantities of sheet and pipe lead, shot and red lead are made there. The margin for profit must be very narrow, considering that we have to import the coal, and have to pay for labour, labour being dearer in Ireland than it is in England, although, and indeed because, the wages are so much lower. The rate from Dublin to Newry by rail is 15*s.* per ton for lead, and the rate to Belfast is 12*s.* by rail. It is cheaper to send it the whole of the way to Belfast than to the intermediate station of Newry.

2075. What is the mileage to Newry?—It is very nearly 70 miles to Newry, and 113 miles to Belfast.

2076. (*Mr. Glyn.*) Is that inequality caused by the competition of the railways?—There are three lines in that distance. It is carried 113 miles for 12*s.*, and by steamer for 10*s.* 1*d.*, and it is carried to Newry, which is not quite 70 miles, by rail for 15*s.*

4964. (*Chairman.*) You are, I believe, the secretary of the Newry and Armagh Railway Company?—Yes.

4965. Have you any statement to make with reference to the traffic on your railway?—Our traffic is very seriously interfered with by the competitive measures of the companies with which we are connected. The Ulster Company, which joins us on the north, has possession of a line from Belfast to Monaghan and Clones; and then the Dublin and Belfast Junction Company, which is one of the lines between Dublin and Belfast, joins us at the southern end; and between those two companies a system has been pursued for the purpose of diverting the traffic from our line. The existing lines between Newry and Armagh may be described as a triangle, of which our line forms the hypothenuse, there being communication *via* Portadown by the other two sides. Of course we have the opportunity of carrying the traffic at much lower rates than the other

2074. The rates for street and pipe lead from Dublin to Belfast by sea is 10*s.* per ton, exclusive of charges for landing, &c.; and by rail it is 12*s.* 6*d.* per ton.

The rate from Dublin to Newry main line is 14*s.* 10*d.* per ton for lots under three tons, and 12*s.* 9*d.* for lots of three tons and upwards.

2075. The distance from Dublin to Newry main line station is 69½, and to Belfast 113 miles.

2076. For several years after the railway was opened through to Belfast there was a very keen competition between the railway companies and the City of Dublin Steam Packet Company for the traffic, during which goods were carried at little more than nominal rates by both sea and rail. Ultimately an arrangement was made, and the rates were increased, but still remained considerably under those to other places by rail. There being no competition of this nature between Dublin and Newry, the ordinary rates were not disturbed, and hence the difference between them and the rates to Belfast.

No. 2.—Dublin and Belfast Junction Railway—*continued*.*Extracts of Evidence sent to the Company.**Replies received.*

companies, and if we were not interfered with we should, I may say, command the entire of it. We have applied to them for through rates over our system to the various stations with which we do business, but that has been refused, with the exception of to and from the town of Newry. They agreed upon through rates with us in reference to Newry, but upon the new section of our line, which is between Goragh Wood and Armagh, which was opened in August last, they have refused us.

4966. (Mr. Glyn.) They will take any traffic from you which you give them which goes from Newry to Armagh, but they will not give you any traffic at Armagh to take to Newry?—No, except that which they cannot avoid. They will send it round by the old route, that is by Portadown. Our business communications and the trade of the port of Newry lie very much in the Monaghan and Clones districts, to which we have no independent access. The Ulster Company wish to draw the trade to Belfast, and they do that by giving low rates to merchants in that locality, and refusing the Newry and Armagh Company.

4967. What is the class of traffic that comes from Monaghan and Clones?—That is chiefly inwards traffic from Newry. There is not much export trade from that district to Newry. The trade consists chiefly of importations from Newry.

tion of that line there has been through rates and arrangements, and a free interchange of traffic, for the last ten years.

Traffic from Newry for Armagh and other stations on the Ulster Railway was sent *viâ* Portadown, the only route open until August 1864, when the line between Goragh and Armagh was opened.

As the Dublin and Belfast Junction and the Ulster Company had afforded facilities for developing the traffic of Newry by charging the same fares *viâ* Portadown to Armagh as if the direct line was made, they, prior to the opening of the shorter line, proposed, to prevent any unnecessary competition, to carry at the same fares and rates by both routes; but this was declined by the Newry and Armagh Company, except on terms which would have the effect of giving them the whole of the traffic.

4968. Of what sort?—Coals, grain, timber, and iron.

4969. Is there much coal traffic?—It varies.

4970. Will not they give you through rates for that coal traffic to Monaghan and Clones?—They refuse through rates, and of course the coal traffic is included. There is a great deal of traffic in grain and bread stuffs in that district, and there are some extensive mills. There is also a traffic in slates, timber, and agricultural produce.

4971. Do they want to force you to amalgamate with them?—They do not want us to amalgamate, but they want us to agree to a proposition which they made, that the two routes, namely, the direct route between Newry and Armagh, which belongs to our company, and the route through Portadown, which belongs to the two companies I have spoken of, should be placed on terms of equality as regards fares and rates.

4966. Traffic from stations on the Dublin and Belfast Junction Railway for Armagh or stations beyond, and intended to pass over the Newry and Armagh Company's line, has been booked to Goragh Junction at the local rates, and the waggons allowed to go through.

4967. The Dublin and Belfast Junction Railway forms a portion of the trunk line between Dublin and Belfast. It is joined at Goragh Junction by the Newry and Armagh line $3\frac{1}{2}$ miles from Newry; and over this por-

4971. So far back as 1857, when the Newry and Armagh Company obtained powers to extend their line from Goragh to Armagh, the distance from Newry to Armagh was stated to be 22 miles by the direct route, and *viâ* Portadown 29 miles.

The fares were arranged on the basis of the shorter distance, and stood thus :—

	s.	d.	
First class - - -	3	8	} From Goragh Junction {
Second „ - - -	2	9	
Third „ - - -	1	10	
			{ 3 2 2 5 1 7

From the Dublin and Belfast Junction Company's main line station, which is a mile from the town of Newry—

First class, 3s. 4d.	Second class, 2s. 6d.	Third class, 1s. 8d.
----------------------	-----------------------	----------------------

Before assenting to the proposition of booking by both routes at equal fares and rates for other portions of the through traffic, the Newry and Armagh Company required the Dublin and Belfast Junction and Ulster Companies to charge the same mileage rates for the long distance that they charged on the direct route, the effect of which would have been to make the fares from Newry main line and Goragh 1s. 2d., 10d., and 7d. higher than they had been for the previous seven years.

4972. That the charge should be equal for the long distance and the short distance?—Yes.

4973. And that you should divide the traffic?—Yes, practically.

4974. (Mr. Glyn.) How many miles do they carry their railway in competition with you?—29 miles, and the direct route is 21 miles, so that there is nearly a difference of one third in our favour. So far as passenger traffic is concerned, we should get it, but with regard to goods traffic, the distance does not tell materially in our favour.

4975. You do get passenger traffic?—So far as Armagh is concerned, but not as far as Monaghan and that district is concerned.

4990. When did you open your line?—We opened the section from Goragh Wood on the 25th of August last. Since then we have been completely without through traffic, nothing but the local traffic of the district, which hardly pays working expenses. The southern portion of the line from Newry to Goragh Wood has been opened since 1854.

4973. The charges being equal, each party would do their best to obtain a share of the traffic; and the public would have a choice of routes, the Newry and Armagh Company having the advantage of the shorter distance.

4974. The distance *viâ* Portadown is 29 miles. The Ulster Company's trains from Armagh meet the through trains between Dublin and Belfast at Portadown; and the two companies wish to afford the public facilities for the use of their lines at the same cost as by the shorter route, both for traffic to Newry and to stations south of Goragh Junction.

4990. The two companies have always been willing to afford facilities for through traffic to the Newry and Armagh Company, and are even now endeavouring to effect an arrangement with that company on the basis of equal fares and rates, and leaving it to the public to make their choice as to the route by which they will travel or forward their goods.

No. 3.—DUBLIN AND DROGHEDA RAILWAY.

*Extracts of Evidence sent to the Company.**Replies received.*

2074. (*Mr. Horsfall.*) Have you heard any complaints in Ireland as to the unequal rate of charges between town and town?—Yes; as an instance I may mention the case of the mining company in Ireland. We have only one smelting works in the whole country, namely, the smelting works for lead and silver near Dublin. Considerable quantities of sheet and pipe lead, shot and red lead are made there. The margin for profit must be very narrow, considering that we have to import the coal, and have to pay for labour, labour being dearer in Ireland than it is in England, although, and indeed because, the wages are so much lower. The rate from Dublin to Newry by rail is 15s. per ton for lead, and the rate to Belfast is 12s. by rail. It is cheaper to send it the whole of the way to Belfast than to the intermediate station of Newry.

2075. What is the mileage to Newry?—It is very nearly 70 miles to Newry, and 113 miles to Belfast.

2076. (*Mr. Glyn.*) Is that inequality caused by the competition of the railways?—There are three lines in that distance. It is carried 113 miles for 12s., and by steamer for 10s. 1d., and it is carried to Newry, which is not quite 70 miles by rail, for 15s.

2074. The rate for sheet and pipe lead from Dublin to Belfast is 10s. per ton by sea, this rate does not include the charge for loading. The rate by rail is 12s. 6d. per ton.

The rate from Dublin to Newry main line is 14s. 10d. per ton.

2075. Newry main line is distant from Dublin 69½ miles, and Belfast 113 miles.

2076. The steamers compete with us to Belfast and do not admit of our getting remunerative rates. No such competition exists between Dublin and Newry.

No. 4.—DUBLIN, WICKLOW, AND WEXFORD RAILWAY.

1929. Do you consider that the fares and rates of carriage for goods and parcels charged in Ireland are injurious?—I do.

1930. Do you consider that the produce of the mines and quarries and agriculture generally would be greatly benefited by a cheap scale of fares and rates?—Certainly.

1931. Are you of opinion generally that cheap rates and fares would stimulate trade?—Yes.

1932. Will you state your opinion as to the effect which you think will be produced by the diminution of fares?—I believe that the first effect would be a considerable development of mining; I also think that agriculture would be very considerably benefited, especially in the portions of the country which are most backward because most distant from the markets; I believe, as there is now a tendency to engage in manufacturing industry in Ireland, more than perhaps has existed for 20 or 30 years, that it will greatly stimulate that tendency.

1933. Are there any facts upon which you ground your opinion, that a diminution of fares would be accompanied by a large increase of traffic?—I will first direct the attention of the Commission to two cases in connexion with mining, which will show what is the influence of the present rates of transport upon that branch of industry; I may observe that although we have a great number of mines in Ireland, they are not very rich and they are scattered through the country, many of them only giving produce of a low value, as, for example, sulphur ore, iron ores, and zinc ores. The present rates which are charged upon these products are exemplified in the case of the Wicklow Copper Mining Company. The Vale of Avoca is the centre of the largest sulphur mining operations perhaps in Europe. Formerly copper was extensively obtained there, but latterly, say for about the last 20 years, the sulphur ore has been the chief product, and from 80,000 to 120,000 or 130,000 tons annually have been exported. Iron ore is also found there in great abundance, and is now extensively worked. The distance from the Vale of Avoca, where the mines are situated, to the station at Kingstown is 39½ English miles, and the charge for the sulphur ore to that point is 4s. 3d. per ton, making consequently a rate of something more than 25 per cent. of the total value of the product, which is 16s. per ton free on board.

1934. (*Earl of Donoughmore.*) That includes terminal charges?—Yes; the railway charge upon the iron ore is 3s. 9d. per ton.

1935. (*Chairman.*) Where is that from?—From the same locality to Kingstown. I take Kingstown, in the case of the sulphur ore, rather than the Harcourt Road Station, because practically very little except the local consumption of Dublin itself would be delivered there; 3s. 9d. per ton upon iron ore is very nearly 50 per cent. of the total value, because they have to pay, besides the 3s. 9d. for the carriage of it to Kingstown, a charge of 5d. per ton for taking it from the depôt at the mine to the station itself; so that virtually the charge is 4s. or exactly 50 per cent. upon the total value. Independently of the more valuable ore, there is an article called "smalls," which are the broken pieces, the value of which is only 6s. per ton, delivered free on board. They cannot send that at all, because the charge would be the same for that as upon the ordinary sulphur ore. It would be 4s. 3d. per ton to Kingstown, leaving, therefore, only 1s. 9d. as the margin for cost of production and profit. So that the present charge would be 72 per cent. of its actual value. The produce of this one mine for the year ending the 1st of March, 1865, was, of common pyrites, 30,600 tons; and of iron ore 15,164 tons. The total produce being 56,576 tons.

Is too general a statement to answer.

The propositions are self evident.

To carry out the theory put forward in this reply, the greater the distance an article has to be carried the less should be the price charged for carrying it.

4s. 3d. per ton is the rate for carriage of sulphur ore. The service performed for this sum is as follows:—The ore is brought by horse power on a tramway a distance of nearly an English mile, it is taken out of the tramway waggon and put into the railway waggon, it is then drawn by locomotive to Kingstown station. The locomotive is here detached and the waggons are drawn by horse power over about half-a-mile of private railway to the shipping wharf, it is then put on board the ship; all this work is done by the railway company and has to be covered by the 4s. 3d. besides which even the accounts of the shipments and correspondence respecting orders for ore, transmission of bills of lading, &c., are managed by a clerk paid by the railway company; of course the empty waggons both tramway and railway have to be brought back for nothing.

4s. per ton is the rate for iron ore. Exactly the same work has to be done by the railway company with respect to this as in the case of the sulphur ore. The ton in each case consists of 21 cwt. and the waggons are all the property of the railway company. I don't think the prices quoted free on board are correct in either case; but I don't think that should form an element in calculating what is a reasonable rate for the railway company to charge. Even with the present rates the Wicklow Copper Mining Company are able to divide very large profits. At the meeting of the shareholders of the Wicklow Copper Mine Company, held on 28th October ultimo. The Chairman Mr. Wright stated, that their raisings in 1855, were only 12,500 tons, and that for the present year 39,000 tons. The railway was not open in 1855, now it is. In 1862 the Wicklow Copper Mine Company did not pay any dividend, in 1864 they paid 24 per cent., and in the September half of 1865, 32 per cent.

The rate from Avoca to Arklow by tramway is 2s. per ton of 22½ cwt. On the 12th May

1936. Then you include some other item?—I have included all the other varieties of ores which have a higher value, and therefore do not

No. 4.—Dublin, Wicklow, and Wexford Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

come under the categories which I have mentioned. I have included the copper ore, and a portion of the deposit of copper; which make a total of 56,576 tons. That produce could, were it not for the charges paid, have been raised to a very great extent. The company had, I am informed, contracts for this year which would have enabled them to sell 80,000 tons altogether of ores from that single mine, but they could not fulfil them, owing to the difficulties with the railway company. The "smalls" are of course not sent at all. There is one other port to which ores are sent, which is only $6\frac{1}{2}$ miles distant, namely, the Port of Arklow, which is only available in the summer months in consequence of the bar.

1937. (*Earl of Donoughmore.*) In point of fact it is not a port at all. It is only an open roadstead?—It is an open roadstead. The charge to that place is 2s. 6d. per ton for the $6\frac{1}{2}$ miles, or about 4'8 pence per mile. On the 9th of May, in consequence of those charges, and the difficulties with the railway, the mining company had 120 carts carrying ore to Arklow, having thrown the railway company overboard altogether, finding it cheaper to deliver it in that way at Arklow, than to take it to Kingstown.

1938. (*Mr. McLean.*) Is there a tramway to Arklow?—The tramway was made originally by Mr. Hodgkin, but it has been sold to the railway company.

1939. (*Mr. Horsfall.*) Which railway company is it?—The Dublin, Wexford, and Wicklow Railway Company. I may add that that is not the only loss which the Vale of Avoca as a mining centre suffers, because we lose the advantage of return freights from the coal trade. The coal vessels coming into Dublin are obliged to return chiefly in ballast; of course they do not go to Arklow, and so the mining company loses the advantage of that return freight which the delivery in Dublin or Kingstown would give them; and now that we are to have a line of screw colliers, the advantages of return freights would be more certain.

1940. (*Chairman.*) Do you know whether the Wicklow Copper Mining Company have ever made a representation to the railway company upon the subject of their charges?—Yes.

1941. (*Mr. Glyn.*) Have they refused to make any reduction?—They have refused the offer made to them by the mining Company.

1942. (*Mr. McLean.*) Do not the mining company pay a very high dividend?—They do.

1951. (*Chairman.*) Are there any other mines that you wish to call the attention of the Commission to?—I should say that the limit of production in those mines will not be reached for very many years. I have been down in the mines myself, and I know what the extent of their production is; and I must say that if there were facilities of transit given at a cheap rate, say at half of the present rate, I am sure the quantity of ore which would be sent would be certainly three times what it is at present.

2058. (*Mr. Glyn.*) If the third-class fare were reduced would it not give an opportunity to the people to go to market and sell their produce themselves instead of selling it to hucksters on the road?—I think so; and that such a reduction, coupled with a reduction of parcels rates, would greatly assist the development of trade in Ireland. At present persons who send butter from the counties of Wexford and Wicklow to Dublin, are charged as much for three cools of butter (a cool is a sort of tub in which they send it) as for one; and the same rule applies to return empty cools. A large trade has sprung up between Cork and Dublin in butter, and those who send it are small farmers. It is a very peculiar trade, and being unsalted butter it will not keep very long. The day before I left a person who is a farmer, and who first established the trade, came to Dublin to see whether he could do anything with regard to the rates at which it was carried, and he found it impossible to get any reduction from the company.

2059. (*Chairman.*) Is the butter trade restricted in consequence of the high fares on the railway?—It has a great effect upon the price in Dublin.

5112. With respect to cattle?—Yes; and for poultry, provisions, butter, and eggs, and bacon, and all that kind of traffic. Then there is the Cork and Limerick direct railway, with which we have no through rates. I believe Mr. Pike is the chairman of that company, and he is a steam-packet owner at Cork. With the Cork, Blackrock, and Passage railway we have no through rates, nor have we any such arrangement with the Cork and Youghal Company. We have through passenger fares with the Dublin, Wicklow, and Wexford Railway Company, but we have to pay them 50 per cent. higher fares than they charge for their local traffic between Dublin and Kingstown out of the through fare.

5113. (*Capt. Galton.*) Speaking of passengers going from London to Dublin, do you mean that the fares you have to pay them between Kingstown and Dublin are higher than they actually charge the passengers travelling on that line?—Yes, in addition to which we pay rent for a station in Dublin, and keep our own clerks there.

1865, the mining company, finding that their cartage did not answer their purpose, entered into an arrangement with the railway company for three years at the rates above quoted. The work done in respect of ores sent by tramway to Arklow is as follows:—The railway bring it upwards of half an English mile by horse-power from the mining company's incline to Avoca Station. The waggons are then brought $5\frac{1}{2}$ miles by locomotive, when they are again brought by horses about 2 English miles to the quay of Arklow. The ore is loaded at the incline by the railway company. Of course the empty waggons have to be brought back for nothing when their load has been discharged.

It is simply absurd to talk of the present rates for carriage of minerals being reduced to one half. The work could not be done for the price. Not to speak of profits, the railway company never paid more than five per cent. on their original shares, while the mining company pay 30 per cent. The question of increase of production depends on the mining company themselves. If they were satisfied with a more moderate profit per ton, they could so much increase their business as to very much enlarge their gross profits, while at the same time the additional employment given would improve the condition of the country.

A large quantity of market butter is brought to Dublin from the counties of Wicklow and Wexford. The rates have never been complained of, and from the fact that the most of this butter is brought up by persons who purchase it through the country and travel back and forward by rail for the purpose, single firkins or cools are scarcely ever sent. The charge is from 6d. to 1s. for single cools, the former being for distances under 30 miles, and the latter over 30 miles; but when two or three cools are sent together they are charged at the tonnage rates, which will not amount to more than half the above.

The through traffic between Dublin and Kingstown Pier, in connexion with England, is totally different from the local traffic. It is a special service worked by special trains, which do not stop at intermediate stations on the Kingstown line. Special locomotives and carriages and extra staff are employed for this purpose. The trains run alongside the steamboats. A sum of about 6,000*l.* has not long since been expended in alterations of the station at Westland Row, Dublin, for the purpose of accommodating the English traffic. The proportion of fares charged to the London and North-western Railway covers all terminal expenses in Dublin, and these are very heavy from the large quantity of luggage which has to be attended to. The London and North-

No. 4.—Dublin, Wicklow, and Wexford Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

5116. (*Mr. McClean.*) You have not equal mileage rates with them?—No, they receive their full local rates on goods. We had no sooner made an arrangement with them, than some of the parties interested in the steam packets interfered. The secretary gave us notice of their intention to withdraw from them; we remonstrated, and eventually they agreed to continue them, and they are continued now. I am referring to the Wicklow and Wexford Company.

6804. As another instance of the want of liberality of a great company, the Dublin and Kingstown Railway Company have been compelled to reduce their fares owing to the opposition caused by the river steamers, and by the omnibus which leaves Dublin every hour and runs to Kingstown alongside the railway. The company were frequently solicited to extend their liberality, and did not do so until the opposition was firmly established. The frequent changing of the time-table on the Dublin and Wicklow line has been loudly complained of, inasmuch as people who have taken property along the line have done so on the good faith of every facility being afforded, and if a morning or evening train is taken off it must prove a serious inconvenience to many whose arrangements may have been formed.

6979. (*Capt. Galton.*) Do you know of any instances in which people travel by car, even where there are railways, because they can go at a cheaper rate?—I might give a very striking instance. Between Dublin and Kingstown, on one side of the railway, there are omnibuses running every day profitably, I believe, from Dublin to Kingstown in competition with the railway; by the omnibuses the fares are 4d. and 6d.; by the railway the fares are 6d. and 8d.; that is, for second and third class; inside the omnibus it is 6d., and outside the omnibus the fare is 4d. from Dublin to Kingstown. Then on the other side of the railway here are two steamers plying backwards and forwards at the same rates as those charged by the omnibus, 4d. and 6d.

7020. It comes, I suppose, under a different classification?—They put it under a different classification. On some of the short lines near Dublin they have been gradually raising the rates; in fact we pay more now for parcels on the Dublin and Kingstown line; in some cases double.

7021. Is it not the practice on that line to carry all the parcels free?—Yes, small parcels, such as marketing parcels for your own personal use. If you are a yearly subscriber, they will carry your market basket free. Running by the side of this Dublin and Kingstown line, there is a four-horse coach every day, which carries passengers cheaper than the railway; it has been running for two or three years, carrying parcels and passengers.

7022. (*Chairman.*) Does it run frequently in the course of the day?—Yes. It runs right along by the railway. They will carry you outside for 4d., and the railway company charges 6d. third class.

There has been no increase in parcel-rates on the Kingstown line. The following are the ordinary parcel-rates:—

LIGHT PARCELS.	Up to 7 lbs.	8 to 14 lbs.	15 to 28 lbs.	29 to 56 lbs.	57 to 84 lbs.	85 to 112 lbs.	Every further 1½ lbs. or part of 1½ lbs.	Dogs.	EXCESS LUGGAGE.		HEAVY PARCELS.	
									First ½ cwt.	Every further ½ or part of ½ cwt.	Above 1 cwt., every fraction of ½ cwt. being charged as ½ in proportion, after the first cwt.	
Not exceeding 12 miles -	0 3	0 4	0 5	0 6	0 8	0 10	0 1	0 6	0 6	0 3	0 8	per cwt.
Above 12 and under 30 ditto -	0 4	0 6	0 8	1 0	1 2	1 4	0 1	0 6	0 6	0 4	1 0	do.
30 and under 50 ditto -	0 6	0 8	0 10	1 4	1 6	2 0	0 2	1 0	0 9	0 6	1 6	do.
50 and under 80 ditto -	0 9	1 0	1 2	1 6	2 0	2 6	0 3	1 6	1 0	0 9	2 0	do.
Dublin and Wexford, including collection and delivery -	1 0	1 4	1 8	2 0	2 6	3 6	0 4	2 0	1 6	1 0	2 6	do.

Season ticket holders' parcels are carried for 1d. each irrespective of distance, and, practically, without limit as to number.

7023. (*Mr. Horsfall.*) That coach probably picks up intermediate passengers?—It may get some, but it runs rather too close to the railway, I think, for them to be of much value or avail. I think it arises altogether from the difference of the fare charged; to the poor people a difference of 2d. is a great consideration; they prefer to save the 2d.

7024. (*Mr. Glyn.*) What has been the increase in the rates charged between Dublin and Kingstown?—I do not know, but they do not carry much goods.

7025. You said, I think, that they had raised the rates lately?—Yes, but they do not carry many goods, the line is too short.

7026. (*Mr. Ayrton.*) Would you propose that the railway company should be compelled to charge a lower fare than the proprietor of the coach in order to prevent the latter from carrying on his business, or that the Government should make the railway charge less than that charged by the proprietor of the coach, and thus enable the company to stop the man's business?—I think that the general good that would arise from a very serious reduction in the railway fares would completely outbalance any small evil that might be done in other respects. I look upon it as a most popular movement, and that it would be of immense benefit even with regard to the feeling of the people of Ireland towards this country, and towards the Government. I think they would feel that the Government were in fact looking after their interests, and were doing a thing that would substantially benefit them. We want them to enable the people to talk of other things than they do, to enable them to be industrious, and enable them to bring their little commodities from one town to another for sale. The article of fish is a very important

western Railway have an office at Westland Row for which they pay rent, but it is an error to say that they pay for a station there.

Through traffic with the London and North-western Railway is now paid for by equal mileage rates.

The fares on the Dublin and Kingstown Railway have not been reduced in consequence of opposition from steamers, which in fact is no opposition. Steamers run for three or four months in summer and give the railway quite as many passengers as they take from it. The omnibuses run a little inland of the railway, and accommodate persons who do not live near the railway stations. They are a failure, and do not pay their expenses, or very little more. The frequent changes in the time-bills (and they have been too frequent) were made at the request of residents in the district, and with a desire on the part of the directors, if possible, to please every one.

Mr. Horsfall is quite correct. The omnibuses are supported by intermediate passengers if they can be said to be supported at all. The omnibuses do not give return tickets, and from 6 to 7.30 a.m. and from 6.30 to 11.30 p.m. passengers by railway are carried 3rd class for 3d. each.

The question as to the amount of good to the country, which would result from very cheap or even free travelling on railways belongs more to political economy than railway management.

Large quantities of fish, chiefly herrings, are carried over the Dublin, Wicklow, and Wexford railway every season; hundreds of tons.

No. 4.—Dublin, Wicklow, and Wexford Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

one, and we want them to be able to carry their fish from the sea ports to all parts of the country inland.

7280. There is another matter with regard to the Wicklow Copper Mining Company, who have large mines near Avoca, from which they produce pyrites, sulphur ore, and iron ore; this has been developed lately, but it is of such poor quality that unless the carriage to England is very low, the traffic will not be developed in the district. I hold in my hand a letter from the secretary of the Copper Mining Company, addressed to Mr. Jackson, who is our secretary of the committee in the Chamber of Commerce:—"Herewith I send you the last half-years' report of the Wicklow Copper Mining Company with a paragraph marked, showing a decrease of 10,000 tons in iron ore in the half-year's workings, in consequence of the unsatisfactory arrangements as to carriage of their ores with the Dublin, Wicklow, and Wexford Railway Company. The chairman or any of the board are quite prepared and willing to give evidence to the Royal Commission explaining this matter, and their carriage arrangements with the railway company, which appear to the directors very high and unsatisfactory." One of the directors of the same company wrote to me since I came to London, explaining the thing more fully; it is a very full account of the different rates charged. I will hand it in with the other letters (*handing in the same*). It shows that low fares induce people to go about. I do not know whether it is fair to compare districts, but I was about to refer to the district between Dublin and Bray and Kingstown, which is very much resorted to for pleasure. The railway company were charging so high that some persons set up an omnibus, and put on a steamer by which passengers are carried for 2d. or 3d. less than by the railway, and the result is that they all get enough to do, plainly showing that lowering the fares encourages the people to go about.

The remarks upon questions 1933, 1935, 1936, 1937, 1951, 6804, 6979, and 7023 apply to this.

No. 5.—GREAT SOUTHERN AND WESTERN RAILWAY.

1651. Can you give any particular cases in which applications have been made by any of the companies in England to any of the companies in Ireland asking for through rates?—The London and North-western, the Manchester, Sheffield, and Lincolnshire, the Lancashire and Yorkshire, and the Great Northern Companies have been for the last seven years pressing upon the Irish companies, the Midland Great Western, and the Great Southern and Western, to come into such an arrangement, and they have only just succeeded, after great negotiations with them, in inducing the Irish companies to adopt a system of through rates, but they have still done it in a very imperfect manner, for the Irish companies insist upon having their local rates, and that of course has tended to retard the negotiations; but things are very much better now than they have been, and I think that they will improve, for they begin, I believe, to see the desirability of these through rates, the public begin to find the advantage of them, and I think the subject of through rates is very much considered now. Neither the railway companies in England nor in Ireland are responsible for the want of through cattle rates, for there is an anomalous state of the law as to the liability of railway companies as compared with steam packet companies in the transit of goods and cattle; there are no through rates as yet (except from Dublin in connexion with the Midland Great Western,) from the Midland Great Western or the Great Southern and Western system, for cattle, and that is mainly attributable to the fact that the steam packet companies who carry the cattle and goods between the Irish ports and Liverpool are protected by their bill of lading; whereas if a railway company makes a rate it engages itself in the contract to carry the goods or the cattle to their destination; but if they are lost by the act of God or by the Queen's enemies, or if they founder at sea, the railway company is liable for it.

1683. Do they issue to third-class passengers return tickets?—On some of the Northern lines they do, but not on the Great Southern and Western, or the Midland Railways.

2083. (*Mr. Horsfall.*) Are you aware of any complaints of unequal rates upon any line where there is not a sea competition?—Yes; on the line between Cork and Limerick; for instance, from Bruree to Limerick butter costs 9d. per firkin, and to Cork, which is about double the distance, only 5d. I have an instance upon the same line with regard to the carriage of turf and coal. One truck with 5 tons of coal costs 17s. 1d. from Cork to Bruree, and a single ton 6s. 3d., and it costs nearly as much from Limerick. For turf brought from the Rathmore station on the Killarney line to Bruree, about the same distance as from Cork, they charge 17. 7s. 6d. for a box, which would be about three tons weight of turf; and as three tons of turf is not more than the equivalent for heating purposes of 24 cwt. of coal, it is a perfect prohibition of that important source of industry.

2093. (*Mr. Glyn.*) What distance is that?—Twenty miles. In the neighbourhood of Dublin, which is of course the great centre of the cattle traffic, being close to the English market, nearly all the cattle are walked to market. The Honourable Mr. Massey, who grazes a large

1651. Not correct, for since the year 1854 the Great Southern and Western Company has been in communication with the London and North-western Company to endeavour to establish through rates with England, and numerous meetings were held upon the subject. The Great Southern and Western Company hold a letter from the London and North-western Company to the effect that as there were so many competing interests on the English side they (the London and North-western Company) were unable to bring about a system of through rates and would leave the Irish companies to do what they thought best; and as through arrangements could not be made with the interior of England the Irish companies made through rates with Liverpool, *via* the ports of Dublin, Cork, and Waterford, and this arrangement continued in force for some years, when the London and North-western Company again reopened the question of through rates with the interior of England, and after protracted negotiations, owing to so many interests being involved, a contract was entered into by which a system of through rates was brought into operation on the 1st June 1864, and it was not until after that time that the other companies referred to ever raised the question of through rates; when raised they were given the same through arrangements as were made with the London and North-western Company.

1683. Correct.

2083. Quite incorrect, as the charge for butter, Bruree to Limerick, is 2½d. per firkin, and not 9d. per firkin as stated.

Turf from the Rathmore district will load five tons to the truck, which at 27s. 9d. per truck, is equal to 5s. 6d. per ton for 46½ miles. There is no loading to Rathmore, consequently the trucks travel in one direction empty.

2093. The only portion of this statement applicable to the Great Southern and Western Company is that referring to drovers' tickets, which were formerly given free; and the prac-

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

number of cattle, says that he buys a great many cattle in Tipperary and distant fairs, and he finds that he can always drive them by road for half what it would cost him to send them by rail. At the last fair of Ballinasloe he found that it was better to send the cattle by boat to Dublin, although there is a railway station on the line to Dublin a quarter of a mile from the town. A person who is most largely connected with the cattle trade of Dublin has given me the following information, which I am also able to substantiate myself. That "in October 1863 the Midland and Great Western Railway Company raised their cattle rates at all the intermediate stations between Ballinasloe and Dublin. The following May the number of cattle and sheep conveyed, as compared with May 1863, fell off considerably, and in October 1864 the great proportion of the store cattle were walked home. Within the last two years the cattle traffic of the Grand Canal has risen from a mere nothing to from ten to twelve boat loads of live stock weekly." That bears out what Mr. Massey stated with regard to the last Ballinasloe fair. One of the chief objections urged by owners of cattle against the management of the cattle traffic of the Great Southern and Western, which, upon the whole, being a very long line of railway, is well conducted, is, that the drover who has to go with a whole waggon is charged half a fare with the carriage of the cattle, and will have to pay third-class fare upon his return. In addition to that, they make a distinction at certain stations between half a waggon and a whole waggon. A whole waggon is supposed to hold eight beasts, and they allow three for half a waggon; but if the drover puts four into it they charge him the price of a whole waggon. I would like to mention here another instance of the effect of high fares connected with the herring fishery in the neighbourhood of Dublin, which has grown to be a most important trade. The poor persons engaged in the local trade walk from Dublin to Howth, a distance of nine miles, because the cost of a third-class ticket would be often as much as their profit for a day. The consequence is, that any traffic which would be derived from that source is lost.

2128. (*Chairman.*) Are there any other points which you wish to direct the attention of the Committee to in connexion with Irish railways?—I intended especially to have drawn attention to the undue proportion which the cost of carriage of the agricultural produce of our poorer lands bears to its value. Considering that Irish agriculture has now to compete with the entire world, and that we are transferring part of our population from the poor lands of Ireland to the richer ones of Illinois and other portions of America, that, in fact, in the case of a large number of poor farms, the rates of carriage to the markets amount to nearly the rent in some cases, any substantial reduction of fares on the lines, especially with differential rates such as I have alluded to, would be one of the greatest advantages which could possibly be bestowed upon Irish agriculture.

2129. (*Earl Donoughmore.*) Are you aware that it costs less money to transport a fat bullock from Normandy to London than it does from the pastures of Limerick to London?—Precisely. A friend of mine was actually disposed to go to Holland and buy store cattle and take them to Galway to fatten, and he expected a very considerable profit upon them.

2314. Will you state generally to the Commission on what points you have to make complaint; first as to the passenger traffic?—With respect to the passenger traffic, it is generally complained that the charges are too high, which prevents that intercourse with the western districts of Ireland that we would otherwise have if we had a lower rate upon the traffic from the metropolis and a lower rate of passenger charge.

2365. (*Mr. Horsfall.*) Are the fares, in your opinion, considerably too high between Limerick and Dublin?—Yes. I have heard it generally complained of, that the fares are high, and that if they were reduced it would increase the trade and business of the city of Limerick, as well as give greater facilities for travelling, and many more persons would travel.

2396. Before that you could have gone to Dublin and have returned the same day?—Yes; but you cannot do that conveniently since the four o'clock train has been taken off.

2397. Then what is the good of a return ticket?—I suppose no one would take one now. I have not done so myself.

2398. Practically a return ticket is of no great value?—None whatever.

2399. (*Chairman.*) Have the fares been the same as they are now for many years?—They have been so.

2400. Has there been no alteration made, either in raising them or lowering them?—I think they have been advanced; three years since I think the fare was 21s., I am not certain, and it was advanced to 23s. 8d.

2411. Will you be good enough to state the nature of those complaints?—Some time since the different railways into Limerick, the Great Southern and Western and the Waterford and Limerick, carried goods through from Liverpool to Limerick at a through rate of 15s. per ton.

2412. (*Mr. Dalglish.*) What class of goods do you refer to?—Heavy goods, iron, tallow, palm oil, sugar, and such heavy goods, and within the last two or three years they advanced the rates to 27s. and 30s. a

tice was discontinued solely on account of the frauds practised upon the company by the subdivision of cattle into small lots for the purpose of multiplying the free passes, which the drovers afterwards sold.

2396 to 2400. This was not caused by any act of the Great Southern and Western Company, but by notice from the Waterford and Limerick Company, who refused to work to the first train from the Limerick Junction to Dublin, or from the last train from Dublin.

No change has been made in the fares during the last ten years.

2411–2413 and 2422. The low rates referred to were in force for a period when the railway companies and the steam packet companies between Dublin and Liverpool were working in opposition to the direct steamers between Limerick and Liverpool.

The Limerick people have still the opportunity of getting their goods conveyed by the

No. 5.—Great Southern and Western Railway—*continued*.*Extracts of Evidence sent to the Company.*

ton, something equal to from 80 to 100 per cent., and we consider that that has done very considerable injury to the trade of our locality.

2413. (*Chairman*.) Are you able to state that the traffic of that description has fallen off since the raising of the charges?—It has.

2422. You stated, I think, that the railway companies charged 15s. a ton?—Yes, but now they charge 27s. When the railway companies were charging 15s. the Limerick Steamship Company charged but 12s. 6d. a ton.

2428. Referring to the articles which you have mentioned, do you suppose that that increased charge of 7s. a ton interferes with the consumption of goods in Limerick?—It interferes with the trade of Limerick, but whether it interferes much with the consumption of goods there I cannot say.

2429. Have you any reason to suppose that the consumption of those articles is diminished in Limerick by reason of the charge made for conveyance being increased to the extent you have stated?—I do not go the length of saying that.

2430. Sugar, for instance?—I cannot say.

2431. How then does it interfere with the trade?—It enables the merchants of Dublin and Waterford and of Cork to import goods at a freight I think of 10s. or 15s. into those places, and then they can send them within a very short distance of Limerick to some of the smaller towns, to the disadvantage of the Limerick import merchants.

2434. Do you propose that the rates should be adjusted with a view to placing a more distant port on the same footing as a port nearer to the place of production?—The increase in the charge by the railway company to 27s. has been attended with this disadvantage as regards Limerick, that it has compelled our local companies or it has induced them to advance their rates to 20s., whilst goods of the same class are imported into Dublin, Cork, and Waterford at 10s. or 15s.

2435. If the increase of the rate does not interfere with the consumption of the articles, the reduction would simply have the effect of making you a present of so much per ton to enable you to carry on your business in competition with the merchants of Waterford and Dublin?—We should have equal rates with them.

2436. But it would in effect be asking the railway companies to give you a sort of bounty or present to enable you to compete with the merchants of Waterford and Dublin?—Not to make it a present; the fact is the goods now do not come by the railways; in fact the rate is a prohibitory rate, for since they advanced it to 27s. the goods have scarcely come by the railways at all.

3315. (*Chairman*.) It will be hardly necessary to read extracts from every Report of the Fisheries Commissioners, but you can read from some of the more important ones.—The extract which I am about to read is from the Report of 1855: "They also complain of being in a great measure deprived of the advantage of the market of the metropolitan by the increased rate for conveyance charged by the railway company from Cork to Dublin, which, added to the cost of transit from Kinsale to the former place by cart, a distance of 20 miles, absorbs the very small profit on fresh fish, in consequence of which the Dublin market has been wholly deprived of any supply from that important district."

3316. (*Mr. Glyn*.) Was there an increase in the rate for that year?—Yes. They speak of the increased rate in that year. The charge was 10s. a ton on that coarse fish. The charge on cod in 1853 was only 1s. per cwt., and in 1855 it was 30s. a ton. I find that in 1851 it was only 16s. a ton, so that the charge had been nearly doubled in 1855, as it was only 16s. in 1851.

3317. There appears to have been a great increase in the rate since the opening of the railways?—Yes, a great increase, and it has been also most fluctuating, for in almost every year the rates have varied.

3357. (*Chairman*.) Have you any suggestion to make as to the remedies which you think ought to be applied with respect to the deficiencies on the Irish railways, both as to the passenger and goods traffic?—As to the passenger traffic we labour, no doubt, under a great many difficulties in the way of getting from place to place in consequence of the trains not running in connexion with one another; for example, if you want to come from the west to the south you have a delay at Athlone probably of one or two hours; you also have a delay at Portarlington of one or two hours before you can catch the train on the Great Southern and Western Line. Then if you want to go to Belfast you must remain for four hours at Portadown before you can get a train to go on. And in the same way, if you want to come from Limerick to Dublin you are obliged to stop at the Limerick Station, which is a very bad station, for two hours or two hours and a half before you can get on to Dublin; and there is no accommodation whatever at the Limerick Junction, that is in consequence of the Waterford and Limerick Railway and the Great Southern and Western Railway not running in connexion with each other.

3706. (*Mr. Ayrton*.) Have you been able to ascertain the cost of driving cattle from the western part of the county of Limerick to Balinasloe Fair as compared with the charge by railway?—An instance occurred the other day to myself. I bought 20 cattle at Killarney, and I wished to bring them to a station between Charleville and Limerick. I inquired the rate, and it would come to 4s. a head. I drove them on the road for 1s., when I would rather have paid 2s. to have sent them by a train.

Replies received.

steamers plying direct between Limerick and Liverpool, and the rates are very low. The owners of the steamers are the traders of Limerick.

2428 to 2431, 2434. The statement put forth is sufficiently answered by the question subsequently put by the Commissioners in No. 2436.

The rates by direct steamer between Liverpool and Limerick are—

For bacon	-	-	15s. per ton.
„ sugar	-	-	16s. „
„ tallow	-	-	16s. „
„ palm oil	-	-	14s. „
„ guano	-	-	16s. „
„ sugar (refined)	-	-	18s. „
„ oil (liquid)	-	-	18s. „

3315 and 3316. Present rates for fish by passenger trains—Cork and Dublin—

Prime fish, such as turbot,		
john dory, soles, &c.	-	2s. per cwt.
Lobsters, crabs, and		
oysters -	-	1s. 6d. „
Herrings, mackerel, &c.	-	1s. „

No change has been made in these rates since 1st May 1852, except for prime fish, which was reduced 1s. per cwt.

3557. Every possible care has been taken to make the branch trains correspond with those on the main lines as far as it can be done with the limited number of trains the companies can afford to run on the branch lines. The traffic on most of the branch lines is very limited.

3706. The cost of carriage in this case would have been 3s. per head, the distance being 60 miles.

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.*

3717. Will you be so good as to state any facts within your knowledge upon that subject?—The charge on corn is 12s. a ton from Limerick to Dublin, and they take it by boat to Liverpool for 6s. The charge from Cork to Limerick is 7s. a ton for corn, and if it breaks the journey it costs 1s. 6d. more.

3728. The distance from Cork to Limerick is nearly 61 miles, is it not?—Yes.

3729. And the charge is 7s. a ton?—Yes. Then the drovers also complain that a whole truck holds 30 sheep, and that they are only allowed to have 12 as a half truck instead of 15, and further that they are only allowed three horned cattle in place of four, eight being the number for a whole truck; they also complain that if they take four horned cattle they are charged for a whole truck; they also say that they are not allowed to have a van for the drovers to travel in, and that the drover must travel in the cattle truck and he is often injured and bruised; they charge them half a fare in a cattle truck and a full fare back, and then if they want to come back again in the evening there is no third-class train for them, they have to wait till the next day, and they are charged a full third-class fare back again; they complain greatly of that. In England I believe the drovers are not charged. Then the number of tolls on common roads in Ireland makes walking there more expensive. In England sheep pens are placed over each other, but not in Ireland.

3743. (*Chairman.*) If it is so much cheaper to drive store cattle by the road than to send them by railway, how do you account for any store cattle in Ireland being sent by the railway?—There are some of the larger buyers who do not walk with their own cattle themselves, and they do not like to trust those cattle for four or five days at a time in the hands of drovers, and they would therefore rather pay three or four times as much to have them go by the train, but they are often stopped at the junctions for three or four hours, and that is a great objection. Coming here, a gentleman with his family got into the carriage with me at Maryboro', on the Great Southern of Ireland, he was going to Roscommon; at Portarlington, 10 miles on, he was detained 2 hours 20 minutes, again he must remain at Athlone 2 hours 35 minutes, in all 4 hours 55 minutes; whereas he was in motion only 2 hours 30 minutes from Maryboro' to Roscommon. Again the Limerick to Dublin passengers are, by a new arrangement, obliged to wait nearly two hours at the Limerick junction, or travel 1 hour 30 minutes round by the Great Southern *via* Charleville. A special cattle train I had, of 20 waggons, on two occasions, went from Limerick to Kildare, 100 miles, in six hours; showing, that with larger trade, companies are willing to increase the speed.

3747. And the charge would therefore be proportionately high for the short distances compared with long ones?—Perhaps so. Then with respect to parcels, I constantly get parcels of exactly the same size and the charges are not the same.

3748. Do you mean by different lines of railway?—No; I mean on the same line. Since I received a summons to attend the Commission, I have had three boxes, and those boxes came from Dublin, and one of them was charged 1s. 7d., another was charged 2s. 1d., and the other was charged 1s. 1d., and yet they were exactly of the same size.

3749. (*Capt. Galton.*) Were they of the same weight?—I cannot say, but they held in them the same articles.

3750. (*Chairman.*) Have you made any inquiries as to the reason why these different charges have been made?—I inquired about it and they could not explain it.

3751. Do you imagine that the charges are pretty much in the discretion of the station master at each place?—I do not know, but he said that they had a scale of charges for parcels. I asked him if it was often changed, and he said it was. I then asked him to give me one of his scales, and he said that they only printed one for the use of the office.

3752. (*Capt. Galton.*) They do not publish lists of charges?—No.

3758. (*Chairman.*) If you desired it would they not send a small parcel by the slower train at a lower price?—No, unless I made it up to weigh 56 lbs., and some persons, by adding stones, do make up a parcel to weigh 56 lbs. With regard to horses, the charge to Dublin for three horses is 5l., that is from Limerick, and the traders in them say that the charge ought to be 3l. These horses are put in stalls, and those that go in trucks are charged 16s. 6d. each; seven horses in a waggon from Limerick to Waterford cost 11s. each, not including drover.

3759. (*Mr. Hamilton.*) Have you ever made any comparison between those rates and the rates charged on English railways?—No, I have not. A passenger second class return ticket, from Charleville to Limerick, costs 4s. 9d., two persons will drive this 20 miles, per road, for 10s., and a horse will carry four or five persons on the Irish cars.

5011. Have you any statement to make with reference to the railway traffic of the south of Ireland?—The statement that I wish to make is this, that as far as Waterford is concerned, being the place I am connected with, there is a great difficulty in approaching the interior of Ireland from the want of railway communication, and there is even great difficulty in approaching Dublin, from the indisposition of the Great Southern and Western Railway Company to work in harmony with the

Replies received.

3717. The rate for corn—Limerick to Dublin—is 12s. per ton, including terminals, or a fraction over 1d. per ton per mile. The rate—Cork to Limerick—is 7s. per ton, including terminals, or a fraction under 1½d. per ton per mile for 62 miles, as against 1d. per ton per mile and a fraction over for 129 miles. There is no such thing as a break on the journey—Cork to Limerick—for goods or cattle.

3728, 3729. See answer to 2093.

3743. It must be the exception for such delays at junctions as are referred to, as cattle are mostly carried by special trains to markets, or from fairs, and such delays are thus avoided. For delays to passengers at junctions see reply to 3357.

The delay to passengers, Limerick to Dublin, was occasioned by a change in the running of the mail trains by the Postmaster-General, but this only lasted a few weeks pending negotiations between the Post Office and the Waterford and Limerick Company, and it has since been remedied.

3747 to 3752. The parcels referred to may have been the same size but certainly were not the same weight, if charged differently. All parcels are charged by weight and not by bulk. The Company's rates for carriage of parcels are given on every time-table printed for the Company, and issued to the public.

3758. The limit for parcels conveyed by goods trains is 28 lbs. weight and not 56 lbs., and then only when brought as distinct parcels, not when brought with other goods.

5011 and 5012. This statement is incorrect, as there is no indisposition, nor ever was, to give accommodation between Waterford and Dublin. There are three trains a day, Kilkenny to Dublin, quite ample for the traffic. The first leaves in time to bring passengers from our own line to allow of their arriving in

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

Waterford and Kilkenny, so as to give trains that will conduce to the public convenience. I also wish to state that the public of the south of Ireland are, in my opinion, very much injured by the determination of the Great Southern and Western in connexion with the London and North-western to subsidize the local lines and steam packet companies to allow the traffic to be brought to England *via* Dublin. They pay 30 per cent. for that, and such diversion of traffic, in my opinion, not only is injurious to the southern cross channel communications, but very injurious to the public in the several localities.

5012. I understood you to say that there was an indisposition to give accommodation from the junction at Kilkenny up to Dublin; to what do you ascribe that indisposition to forward traffic?—They do not wish the traffic of the middle of the country should find its way to England by Waterford, they would rather it should go by Dublin, and they will not run trains so as to suit the convenience of the Waterford public either going up or down. For instance, if you want to go from Waterford to Dublin and back in one day, you cannot do so. They run their train from Kilkenny at so early an hour in the morning that it would be useless for the Waterford and Kilkenny Company to send trains to meet it, because no one would go. They run a train at 6.15 from Kilkenny to Dublin; the Waterford and Kilkenny Company would have to send a train at 4 o'clock, or a quarter past 4 o'clock, in order to catch that. In the same way the evening train coming down arrives at Kilkenny at such a late hour that no one would come by a train to Waterford if such was running.

5013. What remedy do you propose for that?—I think there should be some power which would compel railway companies to work harmoniously, so that the public interests might not be injured. Whether that power should be given to the Board of Trade, or some other party selected by Parliament, it will be for them to say; but there must be some power outside the railways. I know the Waterford and Kilkenny Company have always been disposed to run in such a way as will serve the Waterford public, but they have always been refused similar action by the other side.

5014. You say you have given more accommodation than you have received?—If the Great Southern and Western ran trains at convenient hours we should run trains in connexion with them. If they ran the trains at such hours as to suit the Waterford public, more passengers would go. In fact, they inconvenience the district altogether. Third-class passengers going from Waterford to Dublin lose a great deal of time either going up or coming down. They have to stop a night in Kilkenny, although the whole distance is but 112 miles.

5015. (*Capt. Galton.*) Do you say that passengers from Waterford to Dublin cannot go by way of Kilkenny and return the same day?—Not the third-class passengers, nor, in fact, any class passengers. Third-class passengers cannot go through the same day.

5016. Then they must take two days to get from Dublin?—To come to Dublin. If they go third class they must stop a night at Kilkenny.

5018. Your complaint is, that the Great Southern and Western do not give any proper facilities at the junction at Kilkenny?—Yes; they will not run trains at an hour that will suit the public; they run the morning train from Kilkenny at 6.15, arriving in Dublin at 9.30.

5019. (*Mr. Glynn.*) That is the through train of the Great Southern and Western?—It is the through train from Kilkenny; that is their Kilkenny line through train.

5020. It is their through train on the main line?—It is not a through train from Waterford.

5021. What train do you wish to join on the Great Southern and Western?—We want a train that will allow parties to leave Waterford at 6 o'clock in the morning and arrive at Dublin in proper time for business, and then enable the parties to leave at 4 or 5 o'clock p.m., so as to arrive in Waterford at 10 o'clock at night.

5022. Do you wish them to put on particular trains to accommodate you?—I wish to alter the hour of the trains which they do run.

5023. The trains, you say, that do run now are their trains to other parts of their system?—No; they are trains which no other part of their system is connected with; they run from Kilkenny to Dublin, and *vice versa* without reference to any other train.

5024. (*Capt. Galton.*) Does the train which runs from Dublin to Kilkenny run as far as Kildare Junction with the train going to Cork?—No.

5025. (*Mr. Glynn.*) Then they start from Dublin a particular train for their service, which does not suit the public?—It does not, although we would make ours suit theirs if they started at an hour the public could travel at. If we ran trains now in connexion with theirs, parties would have to start from Waterford between 4 and 5 o'clock in the morning, and could not get back till 11 at night.

5026. (*Mr. Hamilton.*) Does that line belong to the same company as the line from Limerick to Waterford?—No.

5027. Is Mr. Malcolmson a director of your line?—He is; but it does not belong to the Limerick Company. The Waterford and Limerick

Dublin sufficiently early for the markets, &c., and to return same day. The second is the mail train, leaving Kilkenny at 2.30 p.m., to which the Waterford and Kilkenny Company work; and the third train leaves at 6.40 p.m., to which train the Waterford and Kilkenny Company also work, giving two through trains in the day. The passenger traffic between Waterford and Dublin is very limited, and some years ago arrangements were made which enabled Waterford people to return from Dublin the same day, but the number of passengers who availed themselves of it was very small indeed, certainly not sufficient to justify this company in continuing the arrangement to the prejudice of their local traffic.

The trains from Dublin to Kilkenny are, 7 a.m., 8.35 a.m., 12 noon, and 5.30 p.m. The two first work on from the junction at Kildare together, having 1st, 2d, and 3d class passengers, and the train reaches Waterford at 1.20 p.m. The passengers with the 12 noon train reach Waterford at 5.35 p.m. The Waterford and Kilkenny Company do not run from the 5.30 p.m. train, which reaches Kilkenny at 9.10 p.m.

The complaint of forcing the through traffic with England, *via* Dublin, is answered by the fact that one portion of the arrangement between the companies is, that the same through rates should exist between stations in England and Ireland, whether the traffic is sent *via* Waterford or *via* Dublin, and the public are left to make their selection of route, and it is to the manifest interest of each route not to allow the traffic to be diverted, inasmuch as each company is allowed 40 per cent. expenses before the division is made between the companies interested.

5014–5016. Third-class passengers can leave Dublin at 7 a.m., and arrive in Kilkenny at 11.35 a.m., and leave Kilkenny at 6.40 p.m., arriving in Dublin at 10.10 p.m. To both these trains the Waterford and Kilkenny Company work, but do not provide 3d class accommodation.

5018–20. See reply given to 5011 and 5012.

5027, 5031, 5032. The statement is quite untrue that the Great Southern and Western

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.*

Company work the Waterford and Kilkenny, but it is only under working arrangements; they have no interest in it more than that. The Great Southern and Western have always set their faces against any sort of effort being made to the northern and midland districts of Ireland with Waterford. In 1846 a Bill was obtained to make a line from Kilkenny to Maryborough, and I understand that the Great Southern and Western people at that time bought up the shares in order that the line might fall through. With much difficulty, in 1860, a similar bill was brought in, which the Great Southern and Western opposed most violently, but it was obtained in spite of their opposition. A portion of that line is now made; it has served the traffic of the district to this extent, that for eight weeks, ending 19th May 1865, the traffic of the line from Kilkenny to Waterford has increased over and above the traffic of last year 33 per cent.

5028. The traffic between what points?—Between Kilkenny and Waterford.

5031. I understand you to say that the Great Southern and Western opposed the communication between Waterford and what you call the Midland district?—Yes.

5032. What object could they have in opposing that?—The object they had was this: there is not the slightest doubt that the whole of the towns in the midland districts of Ireland, such as Maryborough, Mountmellick, Phillipstown, Tullamore, Mullingar, and Parsonstown would be served if they were put into direct communication, *via* Waterford, with the South of England and South Wales. The agriculturists in those districts would find a ready market for their produce in the mining, iron, and coal districts, and, *vice versa*, they would require coal and iron and other articles from the English and Welsh districts. Direct communication is at the present moment stopped altogether. It is so managed that the traffic must come round by Dublin, which is both tedious and expensive, and the consequence is, that the localities are all anxious for a direct communication; but the Great Southern and Western has at all times opposed that in Parliament, and when a Bill at one time was obtained, they bought up the shares and allowed the Bill to drop through.

5033. (*Mr. Glyn.*) Is not Mr. Malcolmson a great steam-packet owner in Waterford?—He is.

5034. He did not say anything about this in his evidence?—I do not know what he has said in his evidence, but this I know, that the London and North-western Railway Company and the Great Southern and Western Railway Company have lately entered into an arrangement with him, by which the railway and steamboat interests are served to the prejudice of the locality. There has been an arrangement entered into, which was before the citizens of Waterford, and which was condemned by all parties, the effect of which is, that the traffic of the district will be brought to England by Dublin, *via* Liverpool and Holyhead, and that Mr. Malcolmson for the steamers and the Limerick Railway Company will get 30 per cent. of the traffic thus brought to Dublin to allow it to go by Dublin.

5035. (*Mr. Hamilton.*) When you say that "they" get, who do you mean gets the 30 per cent.?—The Limerick Railway to Waterford and the Waterford Steam Packet Company.

5036. Who makes the arrangement?—The North-western and the Great Southern and Western. I have the heads of arrangement which I can hand in if the Commission wish (*the witness handed in the same, vide Appendix A.L.*). In one of the heads, which struck me very much as most injurious to the southern routes, is this:—

"Waterford and Limerick Railway Company, Cork and Limerick "Direct Railway Company" (being another railway company that is subsidized) "undertake that all traffic consigned to them by other routes "than *via* Liverpool and Holyhead between places in England and the "places in Ireland, to which this agreement refers, shall not be booked "through, and shall be charged the local rates."

No through traffic from the districts to which the agreement applies can, under that arrangement at all, come by the Great Western or English Midland systems to England; it must all go by the London and North-western. In that way the traffic of the country is interfered with, and interfered with so as to inflict an immense loss on the localities, and when the North-western and the Great Southern and Western are paying 30 per cent. on all goods for the purpose of making them go in a particular way, they are sure to repay themselves by putting on increased rates.

5037. (*Mr. Glyn.*) In what shape is that 30 per cent. paid. Is it by a reduction of rates, or what?—It is 30 per cent. of the monies received for traffic which is allowed to go by Dublin.

5038. Is it in the shape of rates, or tolls, or what?—It is in the shape of money or direct payment; it is in the shape of a direct subsidy. Suppose 100 tons of goods are to be sent from Limerick or Tipperary to Birmingham for which 100% is paid for the transmission, although the Waterford and Limerick Company will not carry 1 lb. of it, and although the Waterford Steam Ship Company will not carry 1 lb. of it, they will get 30% out of it in order to allow it to go by Dublin, so that the company who actually carry it will only get 70%.

5039. (*Capt. Galton.*) The company who carry it giving to the other companies a bonus of 30 per cent.?—Yes, although they do nothing to earn it.

Replies received.

Company ever bought shares in the line from Kilkenny to Maryborough. When the original Bill was deposited in 1859 and 1860 the Great Southern and Western Company presented a petition against it to secure proper junction clauses, but they did not appear on their petition. In the Session 1860-61 they presented a petition in the Commons against the alteration to abandon the junction at Mountrath, and to make junctions at Ballybrophy and Maryborough. Counsel attended to watch the case, &c., but no evidence was given against the Bill. The company did not petition against the Bill when in the Lords.

5034. The witness by his replies either does not understand the nature of the agreement or he endeavours to mislead the Commission. No subsidy of any kind exists, but there is an arrangement at three stations where the Waterford and Limerick Company and the Great Southern and Western Company come into competition. By this agreement the rates by either route are the same, the public being allowed to select their own route, and the receipts of those stations for English traffic are thrown into a common purse and divided in certain proportions.

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

5041. Then I understand your statement to be this, that the Great Southern and Western Railway Company, being interested in the traffic of Dublin, has made some arrangement with the North-western Company to secure all the traffic of that part of Ireland going by way of Holyhead?—Yes.

5042. And in order to secure this they have made some arrangement with the Limerick and Waterford Company and with Mr. Malcolmson's steamers, so as to provide that no part of that traffic shall be diverted by way of Waterford into South Wales?—They have made this arrangement, that upon all goods brought through Dublin to the North-western system in England at Liverpool or Holyhead, and consigned to Birmingham, and places north of Birmingham, that 30 per cent. off the receipts will be paid to the Waterford companies to allow it to go that way.

5043. That has the effect of diverting the traffic from Waterford to Dublin into South Wales?—It has the effect of diverting the traffic of the district to England from Waterford to Dublin, and thence *via* Liverpool and Holyhead, and in fact injuring the communication between the southern parts of Ireland and England.

5044. How does it affect the southern parts of Ireland?—Because the traffic that originally belonged to Waterford, and would come to Waterford, is diverted the other way.

5045. It goes north by Dublin?—Yes. In Dublin they have communications two and three times a day with Liverpool and Holyhead, but between Waterford and Liverpool the steam ships only sail twice a week, therefore people who have produce to send will naturally, when they pay equal rates, send all their goods by Dublin, and none will come by way of Waterford. Therefore the diversion of traffic will injure communications between Waterford and England, as the number of steamers will be lessened when they must depend upon the local traffic alone.

5046. This arises from a sort of understanding between the London and North-western Railway Company, the Great Southern and Western of Ireland, the Limerick and Waterford, and Mr. Malcolmson, the owner of the Steam Company?—And also the Cork Steam Shipping Company.

5047. What remedy do you propose for that?—As I said before, there should be some tribunal, such as the Board of Trade, to prevent railways using what I may call a very illegitimate mode of dealing with a public matter, and to forbid them doing such things as would prevent the traffic from flowing in the channel through which it would naturally flow, and not to allow any large company to subsidize a small one to the prejudice of the public interests.

5051. There is nothing illegal in this arrangement?—No, I am not aware that there is anything illegal; but although it may not be illegal, it is highly detrimental.

5052. (*Capt. Galton.*) You think, although not illegal, it is exceedingly injurious to the public interests that such an arrangement should be made?—Yes, and the public have decided so. Here is a resolution which was adopted with reference to it: "That this Committee, with all respect for the opinions of the directors, considers these arrangements to be well calculated to divert the traffic of the districts to England *via* Dublin, and vitally injure the trade and commerce of Waterford and the southern communications." That resolution was adopted at a meeting of a Committee appointed by the merchant traders and citizens of Waterford, the mayor of Waterford being in the chair.

5055. Has there been any extensive system of through booking between the North-western Company and the Irish railway companies?—We have had for a considerable time through fares for passengers between the principal stations on the North-western lines and the principal stations on the Great Southern and Western line; we did try for many years to get through booking for goods also, but we could not succeed in getting that until about two years ago, and then only to a limited extent.

5056. At the present time is there a general system of through booking for goods?—Only to a limited extent.

5057. Have difficulties been experienced by the London and North-western Company in bringing a system of through booking into operation?—Yes; I may say that we have had very considerable difficulty even with the Great Southern and Western Company, which is a line especially connected with the London and North-western system *via* Holyhead and Dublin; for instance, we have now got a system of through booking for goods between stations north of Birmingham, and including Birmingham, and the Great Southern and Western system down to the Limerick Junction. From Limerick Junction to Cork we have also through rates for goods to the same district; but there are 15 per cent. higher charges than by the steamers from the same district, the railway route being much shorter and in every way a much better route to the North-western system than the sea route is to Liverpool, and thence by railway. But the steam-packet interest was so great that the Great Southern and Western company could only consent or rather could only succeed in making arrangements with us, by charging a differential rate of 15 per cent. in favour of the sea route from Cork, which commands a very large traffic. The differential rate against the railway route from the city of Cork is 20 per cent.; but the booking to the North-western system from a great

5055, 5056. The Great Southern and Western Company have through arrangements for goods traffic to and from all their chief stations to all similar stations on the London and North-western, the Lancashire and Yorkshire, the Great Northern, and Manchester, Sheffield, and Lincolnshire Railways, and they have lately agreed to make through rates with the Bridgewater Canal Company.

5057. See reply to 1651.

It is not from any fault of the Great Southern and Western Company that some places on the Waterford and Limerick line are not in connexion with stations on the London and North-western Line south of Birmingham. The Waterford and Limerick Company are the objecting parties. Such arrangements were in force at one time, but were put an end to by that company.

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

portion of the best traffic district of the south-west of Ireland was limited to stations north of Birmingham, they would not make the through rates south of that place at all.

5058. Are the Great Southern and Western Railway Company of Ireland connected with any large shipping companies?—I believe that some of their directors are; and there are a number of lines in the district—cross lines—down to Waterford, and other ports, that appear to have some control over the Great Southern and Western board, either by competition, or by some other means, so that we could only get an arrangement made, such as I have stated, by making a joint purse, in which the steam packets were interested as well as the railway companies; and in fact, we were compelled, in order to get an arrangement made, to sacrifice a portion of our railway distance, which we had to make over to the steam packets. Our mileage, in fact, does not really commence until we reach Holywell on the Holyhead railway; the distance between Holyhead and Holywell being given to the sea route.

5059. (*Mr. Glyn.*) How many miles is that?—About 70 miles; it is the difference in the distance between Dublin and Liverpool, and Dublin and Holyhead.

5060. Practically, is there very little through booking from Cork *via* Dublin on to your system?—There is scarcely any, in consequence of the differential rate of 20 per cent., which throws the traffic on to the water; and it was intended, as I believe, to do so.

5071. Do those steam-packet companies do more than fairly compete with the railway companies?—In the instances that I have already given, there is a differential rate, that is owing to the Great Southern and Western Company being so mixed up with the steam-packet interest that they enforce this differential rate, which therefore entirely prevents the development of the traffic upon the railways.

5076. The division of the money which is received into a common purse is not per mile, but it is a division made by the companies in which the larger portion is claimed by the Irish company?—Yes, and that very much cramps the through arrangements; the tax upon the English company is too great.

5076. (*Mr. Horsfall.*) Does your answer apply equally to goods as to passengers, or are your rates not higher on cattle in England than in Ireland?—I think not; I think in most cases they are lower. In cases of through rates of that kind we always endeavour to meet them by making such rates as will develop the traffic of the Irish railways, while, on the other hand, they adhere to their local rates in all cases, which of course prevents the traffic being brought.

5078. (*Chairman.*) Is it your opinion that some of the Irish railways are managed with a view to the profit of the steam-packet companies rather than the profit of the railway companies?—Yes, I think so; there is also another difficulty which we have experienced, and that is, as to the question of the sea risk. Several of the Irish companies object to make through rates in consequence of the risk which they think is incurred by the railway companies in booking through. I believe, as the law stands now, a steam-packet company is only liable for a comparatively small sum in case a vessel should be lost; whereas, if a railway company books a passenger through, they might be held liable, as a railway company under Lord Campbell's Act; and therefore some of the Irish railway companies refuse to incur that risk, and to join in through rates. That I believe is a very serious obstacle to the development of the through traffic between England and Ireland.

5082. (*Chairman.*) What reason is given by the Irish railway companies for limiting the through booking to the district north of Birmingham?—I really cannot tell; we get no direct reason for it, except that they object.

5083. If it be advantageous to them to book through to places north of Birmingham, why should it not be equally advantageous to book through to places south of Birmingham?—In the instance that I have referred to, it was the steam-packet interest that prevented it. To some extent we have through rates with the Great Southern and Western Company to London for goods, but it is not to a large extent, because on other parts of the line through rates to London, or south of Birmingham were entirely refused. We had been trying for so long a time to get a through arrangement made, that we were at last quite glad to accept the thing upon any terms, being in hopes that as things went on, the Irish railway companies would at last extend it.

5086. You stated, I think, that you thought the fact of there being a steam-packet interest on the Irish Railway Boards prevented the development of traffic on the railways, but why should that interest be adverse to the development of that traffic?—If a board is composed of persons who are partly interested in steam packets, they will endeavour to get the rates fixed, so as to take the traffic down to the port in which they are interested, and not to come through by railway to Dublin.

5087. They prefer giving differential rates, which shall carry the traffic towards the port in which they are interested, instead of encouraging traffic generally over the line?—If you take those lines of railway from Limerick and Tipperary to the coast, the rates down to Waterford would be so arranged as to take the traffic down to that port, and to be shipped and taken from thence by steamers, instead of being taken to Dublin, and sent on from thence.

5058–5060. Not one of the directors of the Great Southern and Western Company is in any way connected with the steam packet interest between Ireland and England, nor have the steam packet companies the slightest control over the Great Southern and Western Railway.

5076. The division under the *common purse* arrangement is confined to *three stations* in Ireland, viz., Limerick, Limerick Junction, and Tipperary, and from all other stations on the Great Southern and Western line the division is by *mileage*.

5077. Not applicable to the Great Southern and Western Company, who have no through rates for cattle; and for goods traffic *see* reply to 5076.

5078. The first portion of this answer is quite incorrect. The latter part, referring to the state of the law in regard to sea risk when the company entered into arrangements for through booking for cross channel traffic, is correct; nevertheless it has not prevented the directors from making through rates.

5082, 5083. This is a mistake, as the Great Southern and Western Company has through rates to and from all their chief stations, except Limerick Junction, with similar stations south of Birmingham.

5086, 5087. Answered already.

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

5268. Have you attempted to make arrangements with any other large Irish companies, such as the Great Southern and Western and the Great Midland of Ireland?—We have. I have frequently requested them to make through booking arrangements, but we have hitherto failed. They have given us the general reply, that their arrangements were already made by agreements with other companies, and when those agreements expired they would consider the question of making arrangements with the Midland.

5269. Have those arrangements of the Ulster Company been of long standing?—We have no agreement whatever; it is merely a temporary arrangement from day to day. I believe the Ulster Company has an agreement, which I have never seen, by which a considerable portion of the traffic is diverted by the Dublin route; we have never pressed it upon them, waiting till they themselves were in a position to arrange with us.

5270. Do you think it is possible that if more complete arrangements could be carried out between the English companies and the Irish companies any large amount of, or any traffic at all could be developed which does not at present exist?—I have no doubt of it; I think the Irish railways ought to be thrown open to every English company who can book through, if it is a reasonable route. I may state that from Belfast to some of the very largest and most important manufacturing districts of England the Midland route is the nearest and best. We have met with great difficulty, and we have persevered with the communication between Morecombe and Belfast for many years at a very great loss; but we have now turned the corner, and the boats are paying better than they did.

5916. (*Mr. Hamilton.*) Do the directors of the Great Southern and Western Company refuse to give you through booking arrangements?—I have not personally asked for through booking arrangements until a few weeks ago, and then they refused them; but I have understood from other parties in the south of Ireland that they have been always anxious to obtain through booking; however, I cannot speak of that from my own knowledge.

6435. On the Great Southern and Western Railway, for instance?—I have no doubt of it.

6436. (*Mr. Hamilton.*) What freight did you pay from the south of Ireland to Belfast?—I think I paid at that time 30s. a ton from Cork, the through freight to Belfast.

6437. What would be the direct distance by railway?—164 miles to Dublin and about 100 to Belfast.

6438. (*Capt. Galton.*) Is there a large quantity of flax sent from that part of Ireland to Belfast?—Ten years ago there was rather a large supply, and there will be again, I expect. We are erecting a large spinning mill in Cork, and if we do not send the flax it will be sent as yarn or as linens.

6439. Do you think that that would be a remunerative traffic for the railway company?—Yes.

6440. Would it be sent in sufficiently large quantities to make it remunerative?—It will be, I think, in time; it has not been hitherto.

6441. When you say that large quantities were sent some time ago, have you any idea of the actual quantities? Can you give in tons the quantity sent per annum?—No, I cannot; but I sent myself the produce of about 500 or 600 acres.

6442. To what would that amount in tons?—I suppose over 100 tons. It was the scutched flax. I cannot say exactly. I was merely one. There were several other mills working at the same time.

6443. Do you think that flax will continue to be grown to a large extent in the south of Ireland?—I hope so.

6444. It is a remunerative trade?—Yes, a great number of persons grew it last year. Some were disappointed who did not understand it, but a great number were satisfied.

6445. Does the rain affect it?—Yes, it does. It cannot get too much rain in the growing time from May to June; and in that way we have great advantages, for we have plenty of rain.

6446. (*Lord Donoughmore.*) In what part of the county of Cork is the flax grown?—Generally in the west part of the county of Cork.

6447. (*Mr. Hamilton.*) If you could send the flax to Belfast by railway at the same rate as round by sea, would it not be a great convenience to you?—Yes, decidedly.

6448. It is only the excessive charge that prevents you?—Yes; when I was doing it, there was great inconvenience in corresponding with parties in Dublin and Belfast.

6741. (*Capt. Galton.*) Might not one railway company borrow rolling stock from another?—I am sorry to say that they do not do so; there is not that feeling existing between them that there ought to be and they do not borrow from each other. The Great Southern and Western line is connected at Athlone with the Midland, and they could if they pleased supply to Ballinasloe a superabundance of trucks, and if they did that, and carried the cattle a shade cheaper, all the cattle bought and sold at Ballinasloe would be brought to and taken from Ballinasloe by railway.

6802. (*Chairman.*) You are a wholesale merchant of Dublin?—I am.

6803. Has your attention been directed to the system pursued upon the Irish railways, with respect to rates and charges?—It has for a considerable time.

5268 to 5270 and 5916. No such application ever made by the Midland Company to the Great Southern and Western Company.

6435 to 6448. Not more than 2 to 2½ tons of flax can be put in a truck, and the rate for it from Cork to Belfast is 30s. per ton, including terminals and cartage in Dublin.

6741. The Great Southern and Western Company do lend rolling stock to every company with whom they are connected, and they to us, on application; and there is no exchange of goods or cattle at Athlone. All go forward in the trucks in which originally loaded.

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

6804. Have you formed any opinion with regard to the possible improvement of that system?—The opinion I have formed for a considerable time has been, that the proper development of the commerce of the country can only be effected by cheap rates, both for passengers and goods traffic. Railways, as the great highways of the country, are necessarily the great monopolists of passenger and goods traffic; and as such should in every possible way give every facility for cheap, safe, and expeditious travelling, whereby the trade of the country would be extended, and the resources developed. In this country the very opposite is the policy pursued, and the interests of the poor are not considered; and the rich, although heavily taxed, and even willing to pay, are seriously inconvenienced when travelling from any distant part. The very germ of success to commerce is facility, and if facilities are not afforded, it then amounts to an obstacle which is exceedingly disheartening when the very opposite should be afforded. In illustration, one of the articles of commerce we largely deal in and manufacture is white paint. This article is most extensively used; but our trade is seriously curtailed by the high rate of carriage by the Great Southern and Western line charging 20s. per ton to Cork, whereas the same article can be brought by steamer from Liverpool and Bristol at the rate of 10s. per ton. It is perfectly plain that we must either forfeit 10s. per ton in our price or get the trader to pay us 10s. per ton more, which is not at all likely he will do.

I have prepared a short tabular statement showing the charges on articles in large daily consumption, and which in my opinion are excessive.

This tabular statement is merely intended to show that the charges for conveying many articles of commerce is excessive, and in most cases considerably in excess of freights from any English port, in some cases double, thereby precluding the possibility of trading, owing to the high rates.

6819. Are you prepared to make any statements upon the subject?—I am intimately acquainted with the corn and flour trade of Ireland. As the means of transport is essential to the carrying on of this branch of trade profitably, I have given the railway system of Ireland, its rates, charges, and facilities of transit, my especial consideration. I have found each and every company I came in contact with disposed to exact the extreme rate of remuneration for the services they perform, and it was only by having the means of transit by the Grand Canal kept open that they were prevented from advancing their rates of freight still further, and thus materially interfering with the trade and commerce of the interior. That was with reference to a Bill that was promoted by the two principal companies, the Midland Great Western and the Great Southern and Western, in the year 1860, for the purchase of the Grand Canal, with the view of buying it up as a competitive means of communication. They ultimately failed, and the canal reverted to its original owners, and is now worked by them with great advantage to the districts that it serves. The result of a combination between the Great Southern and Western and Midland Great Western entered into some years since, by which the rates and fares are fixed and healthy competition is precluded, is, in my opinion, prejudicial to the development of the natural traffic and trade of the country, and calculated to retard materially commercial enterprise. The further extension of the railway system into districts unaccommodated already is postponed inevitably; and it is a part of the agreement entered into that no encouragement, even so far as the haulage of traffic by either of these two companies, be given to branch lines in a certain territory understood to be the property or right of the other company. That agreement was confirmed by an award.

6820. (*Mr. Glyn.*) How did the award arise:—There were two arbitrators chosen and an umpire. There had been a great deal of competition going on between them for some years.

6821. Then the conditions of that agreement were settled by an arbitration?—Yes; they both work the traffic under that agreement, and are bound to observe the conditions of it. The rates being fixed is obviously detrimental to the interests of the districts. That award is signed by "Edward Watkin" and "Mark Huish."

6822. (*Chairman.*) Will you call attention to the material points of that award?—It recites the circumstances of the case under which the arbitrators were chosen, the differences which had arisen, and that they had been chosen to settle the matters at issue.

6823. (*Mr. Glyn.*) What were the matters at issue?—Competition of rates at points at which they touched. What set it going more particularly was this, the Grand Canal had been leased by the Midland Great Western, one of the lines, for a series of years, whereby the Great Southern and Western felt themselves aggrieved. A considerable degree of competition was carried on by means of the Grand Canal, which was the bone of contention between them, therefore it was a matter of serious consideration by the arbitrators. This is their award upon the subject: "And we further award and adjudge that in anticipation of and until the authority of Parliament shall be obtained for such purchase, and with a view to the objects thereof, and in order that the benefits to the public and the said companies expected to be derived therefrom may at once be obtained, so far as an harmonious system of working and arrangement of the undertaking of the said canal and railways can effect the same, an interim agreement for the joint working and

6804. Some of the rates shown are incorrectly quoted. Limerick rates are all wrong, being much in excess.

6819 to 6828. The award referred to had for its object the termination of hostilities then raging between the two companies, and which had its origin in the Midland Company obtaining possession of the Grand Canal, a navigation running through a large portion of the line of the Great Southern and Western Company.

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

"management of the said canal by the said two railway companies shall be entered into between them and the said Grand Canal Company; and that the said canal shall, as far as practicable, be conducted and managed as part of the undertaking of the said two railway companies by the joint committee herein-after mentioned, as and from the 2d day of July 1860."

6824. Did you not say that the Grand Canal is quite independent now?—That was the result of the opposition on the part of the public. So far as regards the canal the Bill was before Parliament, and it was passed with such a rate of toll as the railway companies did not deem it their interest to accept, therefore they objected to the Bill. So far as the canal is concerned it comes out of the arrangement altogether, and the remainder of it only stands good. Perhaps it will be as well not to refer to that part of it any further. Then they go on: "And we further award and adjudge that after an Act of Parliament shall have been obtained containing the necessary powers to the said two railway companies respectively, they shall enter into such agreement or agreements as may be necessary to carry out and render legally binding the provisions of this award, or any of them; and the form of such agreement or agreements shall, in case of difference, be settled by arbitration, under the provisions of the said Act; and that such agreement shall be made to take effect in perpetuity, if so authorized by the said recited Act; and in order to settle and define the district of country within which the system of railways and canals belonging or attached to or worked for the benefit of the said companies respectively shall be considered as between themselves, and having regard to the permanent advantage of the public, and the objects of the said submission and this award to belong, we have laid down upon a map or plan of Ireland attached to this our award, and signed by us and our umpire, the said George Leeman, such a division line of the country traversed by or to which the said railways respectively and the canal or water communication contiguous thereto, either directly or remotely, afforded accommodation, as, in our judgment, to represent the district served, or which ought to be hereafter served, by means of each of the said two railway companies, or parties in connexion with them, or promoting branches to or from their respective lines, or to or from the said canal. And we further award and adjudge that neither company shall make, promote, assist, or encourage any lines of railway to any point beyond the boundary line now awarded or intended to join a portion of a line in contravention of such boundary; nor in the event of any lines being made by other parties shall either of the railway companies, directly or indirectly, enter into any alliance or arrangement with such parties to or from any point which can fairly be considered and declared by an arbitrator, if disputed, as within the scope and intention of this award." It was to that particular point that I wish to direct attention, in order to show that they have parcelled out the country, as I may say, between them, and allowed of no interference on the part of any branch lines, or any traffic coming from them. Of course they had the country completely under their control, each in their own territory.

6825. (*Chairman.*) Without going through the whole of that award is not the result this, that in consequence of an agreement between the two parties they agreed not to compete with each other, but to divide the traffic in certain proportions?—Yes.

6825. (*Mr. Horsfall.*) Was the object of the two railway companies to do away with the opposition of the canal?—Yes, that was the principal object.

6827. In which they failed?—Yes, they had the object of dividing the rates at the two places at which they came into competition, namely Clara and Athlone. At those two places they put the receipts into one common purse and divided them.

6823. But still they have the competition of the canal against the two railways?—They have. The principal point that I wish to draw attention to is that according to that agreement no branch lines were to be promoted in a district which each considered as their own. The rates for freight are unequal, and in my opinion considerably higher than the trade can afford; and I am satisfied that a moderate reduction would speedily induce an increased traffic over the lines of the greater part of Ireland. I am of opinion that any arrangement which could be effected whereby the railways of Ireland could be worked as one general comprehensive system, and the rates and fares lowered to a point analogous to those of Belgium and the continent, would more speedily develop the resources of the country, and induce the investment of capital in trade and manufactures than any other measure that has yet been put forward, and that it would speedily result in increasing the receipts derived from the Irish system of railways, making 20,000,000*l.* of capital at present invested yield a fair and reasonable return instead of the miserable dividend at present paid upon the average of Irish railways. I am strongly of opinion that, in order to make railways fully remunerative, you must fix the rates they receive in proportion exactly to what the circumstances of the country are in which they are situate. This has never been done in Ireland yet on any extended scale, and yet the railway authorities complain that there is no traffic, and their receipts gradually dwindle down and the rates are kept up to fully, if not beyond, the English maximum. The existing traffic is thus literally passed by and not fostered, while trains run comparatively empty, and as a con-

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

sequence shareholders receive no dividend. Railway companies must be satisfied to take for their remuneration the amount that is forthcoming, and not demand what cannot be complied with.

6830. (*Chairman.*) Are you able to state that your own trade in grain could be materially increased if the charges were lowered?—Decidedly.

6831. (*Mr. Glyn.*) It would move more up and down the country with a reduction of charge?—Yes; we should cover a greater district of country; for instance, the rates in our particular case have been advanced since the canal competition has actively ceased. I should have mentioned that one result of the canal reverting to its original proprietors has been that they have now made an arrangement by which they compete at certain rates without conflicting, and the rates of the railways have been raised nearly 25 per cent. in many particular instances since that occurred.

6832. (*Chairman.*) The rates upon the canal have been raised?—Yes, both the canal and the railways have advanced their rates nearly 25 per cent. Three or four years after the canal had reverted to the canal proprietors, they worked in fair competition only.

6833. (*Mr. Horsfall.*) Then the directors of the railways and the canal have arrived at a right understanding?—Yes.

6834. (*Mr. Glyn.*) Do you think that the high rate upon grain prevents speculation in that article, that is to say, where a party buys grain at one port at a low price he cannot forward it to another port where the price is higher, on account of the high rate of carriage?—I do not think it has that effect; it does not stop speculation.

6835. It does not stop bargaining in fact?—No, but it prevents an equalization of price to the fullest extent which there might be. It is high in some districts and low in others.

6836. (*Mr. Horsfall.*) What per-centage of reduction of the rates upon grain would you consider necessary to confer any appreciable benefit upon the trade?—I think from one half to one third would be a very fair reduction.

6837. Do you think that that would pay the railways equally well through the increased traffic that there would be?—Not for some time, certainly not; for perhaps two years, or a sufficient time to allow of the development of the traffic that would be created by the lower rates. There must be sufficient time to put the new system upon its trial, not immediately, certainly.

6838. Do you think it would after a lapse of two or three years?—I should say so.

6839. (*Mr. Glyn.*) You say a reduction of one third; what would be the actual figures?—The present rate of grain is about $1\frac{1}{2}d.$ per ton per mile. That is the lowest rate on any quantity.

6840. You wish it to be fixed at that?—I think $1d.$ per ton per mile would be a very fair rate.

6841. (*Mr. Ayrton.*) Where is the increase of traffic to come from; from what source?—I do not know that in grain there would be so much increase created by the lower rates, but in other articles there certainly would, such as manures and many other goods, and in grain to a certain extent, but not to the same extent as other articles.

6842. The diminution of the charge would be at the rate of $\frac{1}{2}d.$ per ton per mile, you say; that would be, on the average of 50 miles, $2s. 1d.$ on the ton?—Yes.

6843. That would be about $6d.$ on the quarter?— $5d.$

6844. Do you think that the economy of $5d.$ on the quarter would lead to any increased growth of grain in Ireland?—I am certain that it would; to what extent I cannot say, but I am certain that it would lead to some. I know many mills which are at this moment idle by reason of the rates of freight rendering them not able to be worked profitably.

6845. You think that the difference of $5d.$ per quarter would set them into activity?— $5d.$ a quarter would be a very great consideration to men of business.

6846. Do you think that an additional charge of $5d.$ per quarter is the cause of their inactivity?—In some instances decidedly so.

6847. Can you mention one?—There is a mill at Athlone, and another at Clara, to which that remark applies.

6848. Take the Athlone mill; in what way does the additional charge of $5d.$ per quarter prevent that mill from working?—A miller situate at Athlone must buy his grain either at Galway or Dublin. Home-grown wheat is almost out of cultivation, at least in the district about Athlone, and in all districts with the exception of Cork, Kilkenny, Carlow, and the south. As regards Athlone, home-grown wheat is hardly known. Therefore a miller must buy his wheat in either of those ports, and bring it down to Athlone, and grind it there, and supply the markets in the immediate vicinity. Therefore it must be patent that any saving whatever is of material assistance to him.

6849. If he must bring his grain, how does the $5d.$ per quarter prevent his bringing it, if there is grain in the country to compete with him?—But the country is supplied with mills which are on the seaboard; for instance, Galway and Dublin supply the market, and they have an advantage in supplying the markets because they are able to send more directly. They only send the exact quantity of flour that is required. Whereas the miller at Athlone might bring the whole of the wheat down, and perhaps be able to sell one portion to an advantage, and another portion not to an advantage; and therefore there is that against him.

6850. Do you not think that the injury to the Athlone miller results

6830–6855. The sole cause of the decline in the milling trade, in the interior of Ireland, was the repeal of the Corn Laws. Ireland formerly supplied the manufacturing districts of England with flour from Irish wheat. This trade has nearly ceased, and owing to the erection of steam mills in the seaport towns, which manufacture wheat, the mills in the interior of Ireland are now principally employed in supplying the local demand.

To talk of $5d.$ per quarter affecting the quantity consumed is simply an absurdity.

No station short of Cork has a higher rate for carriage of grain than between Cork and Dublin, $12s. 6d.$ per ton.

6837. This is purely a matter of opinion, from which we entirely dissent.

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

from the fact that he comes in competition with the miller of Dublin, which is the place of import?—No doubt; but then he would be much better able to compete with a moderate rate of freight than with this rate of freight. The rates I have given have been increased materially.

6851. The only result would be that the trade would be transferred from one part of the country to another?—That would be one result, and I would say that a larger trade would be done to some extent.

6852. If the corn went the flour would not go?—No.

6853. Therefore the railway company would not have any more traffic?—The railway company would not have any more traffic than what would be created by the increased business that would be induced by the moderate rates of freight. There might be some points at which the rates of freight would prevent business, and another point at which rates of transit would induce business.

6854. There would be no increase of traffic to the present railway companies?—Not if only the same quantity were carried; but I think a larger quantity would be carried to some extent; to what extent I am not prepared to say.

6855. You think 5*d.* per quarter would seriously increase the consumption?—I think 5*d.* per quarter on oats would, for instance, allow an increased profit to the grower. I wish to allude to the rates charged by the railways generally; they are very unequal; they are not governed by any equal system at all. I have made out a table of the rates on grain, and I find that the governing point is the contiguity of the seaboard in nearly all cases. As between Dublin and Cork, which is a distance of 166 miles, they have a rate of 12*s.* 6*d.* per ton, because the steam competition interferes and reduces it; while to many stations short of Cork they charge a higher rate. The same principle holds good with the northern rates; for instance, the rates to Belfast, Londonderry, Galway, and Sligo; and it will be found that the intermediate rates are considerably higher than the through rates. The whole principle which regulates the making of those rates by those companies is, what they can get, not what is a fair and regular rate.

6856. (*Mr. Horsfall.*) What is the extent of the difference in the mileage rates between the two extremes?—The fare from Dublin to Belfast is 10*s.*, the distance being 113 miles; and the fare from Dublin to Banbridge is 15*s.*, the distance being 87 miles. That is only two-thirds of the distance, and yet the rate is one-half more.

6857. (*Mr. Glyn.*) On the same line?—On the same line, but for a portion of the way.

6858. Not the whole way?—No.

6859. Do you know the respective fares charged by each Company?—I do not. This is the table I refer to:—

6859, 6860. Scale of rates for grain herewith:—

DUBLIN to				DUBLIN to			
	<i>s.</i>	<i>d.</i>	Miles.		<i>s.</i>	<i>d.</i>	Miles.
Balbriggan -	-	4 2	22	Clara -	-	9 0	68

* Competition.

6860. (*Chairman.*) Can you give any comparison of rates of the Great Southern and Western?—I have none of the Great Southern and Western; they are increased, I know, for some of the shorter distances in considerably higher proportions, but none in which the increase is so

No. 5.—Great Southern and Western Railway—*continued.**Extract of Evidence sent to the Company.**Replies received.*

very great as that. There is Lisburn, 13s. 4d.; that is on some lines 10s., as between Belfast and Dublin; Lisburn is a shorter distance than Belfast by eight or 10 miles. Passenger fares have also been advanced 10 per cent. during the past 10 years on both the Midland and the Great Southern and Western railways.

6861. (*Mr. Glyn.*) On all classes of passengers?—Yes.

6862. In the same proportion?—Yes.

6863. (*Chairman.*) Have you any other suggestions to offer?—Many of the present existing smaller companies are burdened with capital by reason of the difficulties which they had to contend with in their construction; consequently, a large portion of their capital is lost, and the original shareholders receive no dividend whatever. The Streamstown and Clara line originally passed by Parliament as a central through north and south link; it is not now used by reason of the want of arrangement as to times and communication between the Great Southern and Western Railway and the Midland Railway; the traffic is consequently turned back and driven round through Dublin, and the outlay on the part of the Midland Company remains unproductive. The award by division of traffic between the two companies at Clara and Athlone has completely taken away the inducement to either company to develop or induce the traffic at either of these points, as it is manifest when the receipts are thrown into a common purse neither company has the inducement there would be if such were not the case. Steamboat navigation on the Shannon between Athlone and Killaloe had been previously carried on by the Midland Great Western Railway, but has since for the same reasons been abandoned, and the traffic diverted. The Great Southern Company bought the steamers for the purpose of keeping them idle.

6962. If they were willing to be taxed for the purpose, why not try the experiment there?—Ireland is a much poorer country, and therefore the effect would be more striking. England can afford to pay while I do not think the poor people of Ireland can pay. I am persuaded that the true source of profit in Irish railways is to be found among the third-class passengers; but the directors of Irish railways throw every difficulty they can in the way of conveying third-class passengers. On the Great Southern and Western line there are five trains which leave Dublin daily, carrying first and second class passengers, and the result is, that by those five trains they carried in half a year 148,000 passengers, and the income was 60,900*l.* in round numbers. They run but two trains daily by which they carry third-class passengers, and yet by those two trains, running at most inconvenient hours, they carried 243,000, and the income was nearly 35,000*l.* as against 60,900*l.* derived from the carriage of first and second class passengers in five trains.

6963. I will put this to you:—Suppose the experiment to be tried as you have suggested, and suppose that it answered, in so far as it was a benefit to the country, which it no doubt would be, and that it produced a considerable increase of traffic; but suppose that that increase of traffic was still not sufficient to make up, or nearly so, the deficiency produced by the reduction that had been made, do you not think that, in that case, there would be a very heavy pressure put upon the State still to continue those low rates, although the railways would be thereby worked at a permanent loss?—I think that such a pressure, if I can imagine such a contingency occurring, would be put upon the Legislature; but I cannot imagine the possibility of such a contingency in the long run. I should like to mention to the Commission a circumstance which occurred about three years ago, and which I think illustrates this matter. I was travelling with some members of my family from Glengariff in Bantry Bay. I was posting to Cork in the afternoon of a summer's day, and we stopped at Macroom, which is a miserable little town about 24 miles from Cork, to change horses. After leaving the town we met with one of the long cars which are common in the south of Ireland, and this was crowded with passengers. I was astonished to see such a crowd standing round the driver, and I asked our driver the cause of it, and he said that there was an opposition started, and that we should meet in a few minutes another car just as much crowded as the other, and so in fact we did. There were no fewer than 72 passengers coming out from Cork on that summer's evening to Macroom, which of itself was a miserable place, all of them having gone into Cork in the morning, and the driver informed me that before the opposition had been started there had not been a sufficient number of passengers to give profitable employment to one car.

6964. (*Capt. Galton.*) At what rate were they carried?—For 1*s.* for 24 Irish miles, or 30 English miles. Our driver said if any old woman wanted to buy a petticoat, or a man wanted to buy a pair of brogues, they would go into Cork to buy them, as they would have a wider range for selection.

6965. (*Mr. Dalglish.*) Did you make any inquiries as to whether the opposition proved profitable to the car owners?—I only spoke to our driver.

6966. Did you learn from him whether it was successful?—Yes. Every day it was the same.

6967. Was it profitable to the proprietors?—Yes; indeed they could not carry all the persons who applied to be carried. They were carrying the passengers at the rate of about one-third of a penny per mile.

6968. (*Capt. Galton.*) And that was remunerative to the car proprietors?—Yes.

6861, 6862. The increase referred to was not put upon third-class passengers.

6863. If the Streamstown branch line of the Midland Great Western Railway is not more used it is because the traffic is so extremely limited. The line does not earn 17*s.* per mile per week, and it is doubtful if any number of trains would improve it.

The steam packets on the Shannon were worked by the Great Southern and Western Company and the Midland Great Western Company jointly and separately, but always proved a loss to the owners. So also did a loss result to the City of Dublin Steam Packet Company when steamers were worked by them upon the Shannon, and all parties merely ceased working them because they would not pay.

6962. There are three third-class trains a day in and out of Dublin on the main line, and on the branch lines every train carries third-class passengers. Therefore the conclusions relative to the earnings of the different class of trains are fallacious.

6963 to 6969. The fares charged for conveyance of passengers between Cork and Macroom are for the mail car 2*s.* each, and by other cars 1*s.* 6*d.* each, and the distance is 24 miles (statute). These fares have not varied for some years.

The fares by Mr. Bianconi's cars generally are 1½*d.* per passenger per mile.

No. 5.—Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

6969. (*Mr. Glyn.*) Does the same system of running cars prevail in other parts of Ireland?—Yes; they are very general over the south and western parts of Ireland.

6994. Will you proceed to do so?—One thing that we complain very much of as merchants is the great inequality in the charges, and also that the through rates are most injurious to our trade in Dublin; in fact, the parties can get *via* Dublin or through Dublin goods delivered in the inland towns of Ireland as cheap or cheaper than they can get them delivered from Dublin to those towns. We consider that that is most injurious to us, and that it saps and undermines our trade, in fact, we frequently are obliged to send our goods to other ports in England and have them stored there and reshipped in order that they may be delivered to the western parts of Ireland cheaper than we can have them delivered from Dublin. Our direct import trade or foreign trade is undermined. We have to complain of the very high rates that are charged on the railways in connexion with our travellers, they are a great bar to more frequent visits being paid to various towns in Ireland; many towns they would visit three, four, and five times more than they do if the railway charges were more moderate than they are. We also have a very serious drawback in not being able to have our customers more frequently up from the country towns to visit us for the purpose of selecting their own goods, to judge for themselves, and to be able to come and return quickly. At the present time, in some cases they are not able to come and return on the same day. A case came under my own notice only the other day; a gentleman engaged in business in Dublin wanted to send a number of men down to Tralee in order to set up a brewery, but they found, when he got as far as Mallow, his men could not get on any farther, and they were obliged to lodge in the town and get on the next day; although there were first-class and second-class trains running from Dublin to Tralee on the same day, yet there were no means for the third-class men to go on, and it was a great loss to the men in consequence.

6995. (*Capt. Galton.*) Could not they have gone on second class rather than bear the expense of their lodgings?—The person to whom I have referred was not aware of it then, and it was too late. I do not think it would have been worth while; they might have got lodgings for 2s. or 3s. in the town, but the difference between the second-class fare and the third-class fare would have been more than that. This was attended with great delay and inconvenience. Then I may mention that a merchant can get his goods delivered in Carlow, *via* Dublin from Liverpool, within a very small sum as cheaply as we can get them carried from Dublin to Carlow. In fact it only allows for cartage and the sea fare the sum of 2s. per ton, so that in fact, the customers in Carlow, instead of coming to Dublin, are driven away from Dublin, and they go to Liverpool. The Liverpool market may be sometimes a little better for them, but this naturally turns the scale, and they are driven from us to Liverpool.

6996. (*Lord Stanley.*) That is the effect not so much of the railway charges as the nature of the market and the much greater trade that is carried on at Liverpool?—It is entirely the effect of the railway charges.

6997. (*Mr. Ayrton.*) Will you mention the charges upon which your statement is founded?—Indian corn is delivered from Liverpool *via* Dublin for 12s. into the town of Carlow, whereas the charge from Dublin to Carlow is 10s.

6998. (*Chairman.*) What is the freight from Liverpool to Dublin?—About 8s. besides cartage through the city.

6999. (*Mr. Ayrton.*) Can you give one or two other items?—Formerly goods were delivered in the town of Bagnalstown, also in the county of Carlow, and they were delivered from Dublin to Bagnalstown without classification for 7s., but since that time, in consequence of an arbitrary classification, they range from 8s. 6d. to 18s. 6d., and the company refused to supply classification lists, and there are no means of checking those bills, so that parties are completely at the mercy of the railway servants. Two days before I left Dublin I sent my clerk to two of the railway companies. I sent him first to the Great Southern and Western, to ask them for a tariff of prices, and I also sent him to the Midland Great Western Railway, which runs to Galway, for a tariff of prices, but they had none; neither of those companies had anything of the kind.

7000. (*Mr. Glyn.*) Have they no published tariff of prices?—No, we never can get proper tariffs of prices, and we are entirely at their mercy as to what they charge. If goods happen to be denominated by different names, they are often charged different prices; for instance, take the case of seed corn; if it is marked "corn" it is charged one price, but if it is marked "seed corn" it is charged a higher price. If it is marked "seeds" it is charged higher again, and it leads to what is not proper, *viz.*, the parties sending seeds into the country mark them all "corn," and in consequence of that they go at a low rate. There is another matter of which we have greatly to complain, the inequality of rates for carrying small parcels. Some railways will not take any package under 56 lbs. weight without denominating it a parcel; some of them now have been taking 28 lbs.; and even within the last few weeks a new light seems to have broken in upon them, for they have reduced that, and the consequence is, that when we get an order for a small parcel of goods, and this applies to gentlemen in the seed trade, who are constantly written to by gentlemen in the country to send them

6994. The number of passengers between Dublin and Tralee do not average over two per train per day. The traffic is with *Cork*, and the trains are arranged accordingly. There are three trains a day each way between Tralee and Cork, and two through trains a day between Tralee and Dublin.

6995 and 6997. The rate.—Liverpool to Carlow is 12s., and Dublin to Carlow is 7s. 6d. per ton, not 10s. as stated.

6999, 7000. The Company do not issue published rates to the public, as they are numerous and complicated, and are subject to constant changes; but all information relative to rates can be had on application to station masters and others.

Corn and seeds are charged differently. The former is conveyed in large quantities, the latter in very small, and the value of the former is much higher than the latter, and the risk much greater.

The minimum weight per goods' train has been 28 lbs. for years, and even this minimum does not apply except when parcels are brought to the company as separate packages, not when accompanying other goods.

No. 5. Great Southern and Western Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

certain portions of seed in a hurry, if the package should be under 56 lbs. it is charged a very high rate for the carriage; if it should be over 56 lbs., then it goes in as luggage, and the consequence is that we are obliged to do this,—if we get an order for a parcel that weighs 42 lbs., or 40 lbs., or 36 lbs., we make it into a package, and we put stones or bricks at the bottom of the package, so as to make it up to 56 lbs., and then it goes for 10d. or 1s., or 1s. 6d.; but if we did not put those stones in it would cost 3s. 6d., 4s., or 5s.

7001. (*Lord Stanley.*) What is the explanation of that difference in charge?—We never could get any, and we never can, hardly, get any explanation in Ireland; they give us a regular stereotyped answer, that they will take it into their consideration; they say that they must fix the weight at some point. This week I have learned that the Great Southern and Western Company have fixed their weight for packages at 28 lbs., and the Midland Great Western have fixed theirs at 56 lbs. There are two railways running from Dublin, and they have a different system and different plan altogether; we are not obliged to use so many stones in the case of the Great Southern and Western as in the case of the other railway, and what we should like would be that there should be a proper tariff for the carriage of parcels, commencing, say, at 7 lbs. and going on to 14 lbs. and 28 lbs., to be charged according to the distance carried. I should be glad if the system adopted in the case of the penny postage was carried out, so that they would carry for a short distance as for a long distance, or that it might be divided into 50 or 100 miles; but we have never been able to accomplish this; we can get no redress, and they will sometimes hardly listen to us. It would be a great advantage if our customers and the working classes could be brought to Dublin and be taken back again at low rates. I will take, for example, the rate charged upon the London and North-western Railway, and this is what we want in Ireland. A man can go first class from Dublin to Wigan for 6s., that is including the sea fare, 2s. 6d., across *via* Holyhead; then he can be carried through Chester to Wigan for 6s. The consequence of this is, that a number of working people, labourers and harvest men, go in this way: but in Ireland there is no such thing, for our people are shut up in the towns in which they were born, and they cannot get out of them; there they are mixed up, and there are no means of giving them improvement or enlightenment, or the means of earning their livelihood in any way. I made a memorandum in Dublin as to the inequality of the charges made on the same railway; for the sum of 5d. they carry for a distance of 25 miles a certain article of commerce, and they charge 5d. for 36 miles, and they charge 5d. for 51 miles, on the same railway.

7002. (*Capt. Galton.*) Do you mean on the same part of the railway?—Yes.

7003. At what places are these charges made?—From Newbridge 25 miles; from Maryboro' 51 miles; from Monastereven 36 miles; for a certain article of commerce they charge the same rate. I am now referring to a large soda water manufacturer, and this is the charge for a hamper of soda water.

7004. Would not the effect of that be, that the soda water would be sold at the same price at the different places?—It is a great drawback to trade, and the object of this is to show the inequality of the charges upon the same railway for the same goods.

7005. Is not the effect with regard to the soda water this, that each retailer of the soda water who has it sent to him at the same price gets the same profit out of it at each place?—The price is fixed; there is no rule as to profit.

7006. The soda water is delivered at the same price at the three places?—Yes.

7007. If the railway company can afford to carry it at that price, the man who lives farthest off receives it for the same charge?—No; the three towns pay different rates of tariff for the same article.

7008. Different rates per mile?—For the same sum they will deliver a certain parcel, carried 51 miles for 5d., also for 25 miles for 5d., and also for 36 miles.

7009. Just as the post office will carry your letters?—Yes.

7018. (*Mr. Ayrton.*) Can you give any other instance, besides the single one you have already given, of Indian corn being conveyed to Carlow, the rates from Liverpool being to the same place in Ireland less than from Dublin to that place?—There is a house in Dublin which gets one description of goods carried from Dublin to Cork for 5s. 4d. per hogshead, and the charge for another description of goods is 10s. 11d. per hogshead; one article is ginger cordial and the other is ginger wine. There is really no difference in the value, but one has a greater name than the other.

7019. What is the selling price of the article?—Perhaps 5s. a gallon each, but one has a nicer name than the other, consequently it comes under a different tariff, although of precisely the same value and weight.

7033. (*Chairman.*) Do you send goods to Cork at a lower rate than they are charged to such places as Templemore and Mallow?—Yes, we do.

7142. It would be profitable to the railway companies, you think, to lower the rates?—I think they would have more to do if they did so.

7143. That being so, why cannot you make them understand that?—We have written frequently to the chairman of these boards. I have written frequently to the directors of the Great Southern and Western line as to a lower tariff instead of the higher charges from Dublin to

7001 to 7009. The rates for soda water from Dublin are,—

	s.	d.	
To Newbridge	- 4	6	per ton.
To Monastereven	- 5	9	
To Maryboro'	- 7	6	"

7018, 7019. This is wrong. The rate for ginger wine, Dublin to Cork, is 15s. per ton. Ditto for cordial.

7033. This is not the case; witness is in error.

No. 5.—Great Southern and Western Railway—*continued*.*Extracts of Evidence sent to the Company.**Replies received.*

Cork, to enable us to compete with the Liverpool men, but they will not consent to it. The chairman stated that he should have to alter the whole tariff if he lowered the rate in one case, and the Liverpool people would cry out against him.

7144. You cannot persuade the railway directors that it would be a profitable thing for them to do?—I cannot; they will not yield; we could supply the Cork market with soap if they lowered the carriage of soap one-half. There again it is a matter of profit on the article, which is so very small.

7145. In Cork what is the competition against the railway that prevents your sending your soap by the railway; is it the sea carriage from Dublin to Cork?—Yes; and from Liverpool to Cork.

7146. They can get it cheaper at Cork by having it brought round by sea from Liverpool?—The Liverpool parties can supply Cork with soap cheaper than the Dublin people can.

7147. That is to say, the freights from Liverpool to Cork are cheaper than from Dublin to Cork?—Yes. I have a table here which Alderman Mackie sent to me, showing the through rates from different towns in England to different towns in Ireland, showing the various relations of one to the other, and how they affect his trade. He is a seed merchant, and he intended to have accompanied me over to have given his evidence; but just as I was starting his young man came and handed this to me on board the steamer, but without any explanation. It is a very interesting table, and I dare say the Commissioners would like to look over it (*handing in the same. Vide Appendix AN.*).

7148. (*Capt. Galton.*) Do you consider that these various grievances which you have been detailing are sufficiently important to call for the intervention of the Government?—I think they are.

7280. Are there any other matters to which you wish to call the attention of the Commission?—Mr. Robert O'Brien intended to have been here to give his evidence as to the cattle traffic, but I have received a letter from him in which he states—"My Dear Lord Mayor,—I regret that other engagements prevent me from attending to give evidence. The railways have advanced the charges for conveying cattle and sheep fully 20 per cent. the last ten years, and in addition charge the drover on his return; this has caused great dissatisfaction, and the results are as follows:—Many drive their stock to market in place of railing; others have turned to other markets, for instance, parties from Tipperary and that district who prefer Dublin have, in consequence of the increased charges, turned to other markets, Waterford and Bristol, &c. I would write more fully, but am in haste to catch the post." He is one of the most experienced sales masters in Ireland.

7144. The rate for soap, Dublin to Cork, is 15s. per ton. Ditto, Liverpool to Cork, 15s. per ton.

7280. The increase on Great Southern and Western line was 10 per cent., not 20 per cent.

The lowest rate ever charged for cattle was an average of 5³/₁₀d. per truck per mile, owners taking risk; the highest rate ever charged was 5⁷/₁₀d. per truck per mile, the company taking the risk.

No. 6.—IRISH NORTH-WESTERN RAILWAY.

6331. To whom should you look to prevent the multiplication of lines which from want of traffic cannot pay?—The object would be to prevent the formation of injudicious lines or any lines of railway that would not pay. My belief is that the network of railways would be very extensive, and I firmly believe that a well-regulated system would pay immensely, and cause an enormous amount of traffic to be developed. The next benefit would be this, that there would be a great deal of saving to the shareholders, for the results of the present system of railway management by separate boards has been most disastrous. The Commission may be aware that the Irish North-western Railway is in a state almost of bankruptcy or utter insolvency, even with respect to its preference shares, and some other lines are altogether stopped. This state of things arises partly from the want of a properly responsible body to regulate the accounts, for the object of the railway directors has always been to raise a dividend at almost any sacrifice, little considering what might be the result of the steps taken for the immediate purpose of raising a dividend. The auditors as at present established are of no use in controlling the expenditure or in certifying the correct state of the accounts. All that is submitted to them under the Acts of Parliament, or at least under the Acts of Parliament relating to the railways with which I am connected, is limited to their looking through the papers which are submitted to them by the railway directors themselves.

6332. (*Capt. Galton.*) Are you speaking of the auditors appointed on behalf of the Baronies?—I mean the auditors who are appointed by the shareholders; they are no security whatever to the shareholders.

6333. But the shareholders have it in their power to require an efficient audit to be made?—Yes; but the shareholders are very well pleased if at the half-yearly meetings a good dividend is announced, and they are not at all curious to ascertain whether the auditors have exercised a sufficient control. The auditors cannot do that because they have not the power to call for all the papers that they may want, and it is no part of their duty to determine what is for capital and what is for revenue. The result is that a great deal of money is appropriated to capital which ought to be appropriated to revenue.

6334. (*Lord Stanley.*) You put it in this way, that many of the Irish railway boards are incompetent or are unwilling to conduct the affairs of their company in a business-like manner?—I think, from the circumstance of their constitution, they are almost compelled to study how to create a dividend, in order to raise the price of the shares in the market.

6331. A copy of the last balance sheet of the company is sent herewith, which the directors are willing to submit to any test or verification that the Royal Commission may be pleased to apply to it.

It is submitted that there is no ground for the statement that the company is "insolvent."

No. 6.—Irish North-western Railway—*continued*.*Extracts of Evidence sent to the Company.**Replies received.*

6335. (*Lord Donoughmore*.) To keep the shareholders in good humour?—Yes.

6336. (*Mr. Ayrton*.) May we infer from this that they conduct the business in the most profitable manner?—I do not wish to impugn the conduct of the directors. I believe that they have been appointed to perform a certain duty, and they have to consult what they think are the interests of their constituents.

6337. Do you think that they are deficient in intelligence in arriving at the proper mode of doing it?—I think that they are not under due control, and not under the control they ought to be to make these establishments permanently beneficial; there is a continual increase of charges upon capital which there ought not to be.

6338. (*Lord Donoughmore*.) Is there not also this to be taken into consideration, that a board of directors which is not very prosperous in the way of earning revenue is very much tempted to starve a line, and to postpone necessary repairs and expenditure of that sort, which ought to be current expenditure, to be carried on every year in order to increase the permanent revenue?—I believe that to be so. The company that I am connected with has suffered severely, whether rightly or wrongly, from the imputation that such was the case. A severe accident occurred in which some lives were lost, and the company was put to a very heavy amount of expense. That was owing to the line having been, in some degree, starved; undoubtedly the line did require more repairs than it had received, and that is, at this moment, the cause why I believe the line will pay a very bad dividend if it pays any.

6358. (*Mr. Ayrton*.) Speaking of purchasing the Irish railways, have you considered the basis or the principle upon which the purchase should be made?—That, I think, is laid down in the Act of 1844, according to which there are averages to be taken over three years upon the value of the shares, and to 25 years' purchase upon that is to be tendered, but that an option shall be given to the shareholders, if dissatisfied, to go to arbitration; and I think that that is equitable, although there might be some cases in which the arbitration might be on the side of the shareholders where the railway was under a temporary depression, and there might be circumstances to justify something more being done. But to have some guarantee for this large property in Ireland, upon which about 20,000,000*l.* have been invested in share capital, is of the utmost importance, and the want of some proper arrangement for the security of that property has been most severely felt. In one railway company, with which I am connected, the Irish North-western, as to the entire of the preference shares, which were supposed to be such an undoubted security that even large charitable trusts might avail themselves of them, they have become perfectly insolvent; the interest was to have been 5 per cent., and the whole thing was thought to be as sure as the funds of England, when all of a sudden, for the want of a proper audit and proper control, it appears that there was nothing with which to pay a dividend.

6530. Is the fare that you pay for a return ticket from Omagh to London, three guineas, the ordinary fare, or only the fare paid for a summer excursion?—It is the ordinary fare. I believe you can get it at any time of the year. I was lately in Londonderry, and I was talking of coming to London, and my friend said, "You had better get your ticket here, go to Strabane, come back again, and pay us another visit, instead of going to Dublin, and you will save a few pounds."

6531. (*Capt. Galton*.) But that would have been by a longer, sea passage than the other way?—Yes.

6532. In consequence of the longer sea passage, passengers might be induced to go that way by charging them smaller fares?—I suppose that is an element in the matter.

6533. Is not this an analogous case: a passenger may go from London to Paris by two routes; if he goes by Newhaven and Dieppe he will pay 30*s.*; but if he wishes to go by the shorter sea passage he will have to pay twice as much?—There is something in that, no doubt; but I think the case I have put is a stronger one, although I admit the principle is somewhat the same.

6534. (*Chairman*.) To go back to the question of goods, a merchant at Liverpool who received an order to send goods to Omagh would bring them to Omagh on cheaper terms than a merchant in Dublin?—Yes.

6530. The fares vary between Omagh and London according to route; the most expensive route is that via Kingston and Holyhead, but it is the most desirable, having the shortest sea passage, and the most efficient service both by sea and land.

The through fares decrease in amount as the route becomes more northern and circuitous.

6531. The route possessing the shortest sea passage will always command a preference and in most cases a higher fare, provided other things are nearly equal.

6532. Passengers may from motives of economy be induced to travel by circuitous routes by charging them smaller fares.

6533. The answer to last query will apply to this also.

6534. There are no rates quoted nor description of goods referred to quoted; and as the rates for goods vary somewhat according to the description of them, it is necessary to know this in order to give a correct explanation; but it may be stated that Omagh is distant from Dublin by rail 144 miles, whereas it is distant from its nearest port, namely, Londonderry, only 34 miles, and there are steamers plying between Londonderry and Liverpool direct at exceedingly low rates of charge. The rates for goods between Dublin and Omagh by railway are very moderate.

6535. Which no doubt the Dublin merchants consider very unfair?—Yes, they think so. The facilities afforded to travellers from the north-west parts of Ireland to Dublin are very bad. I reached Omagh some

6535. There is very ample and sufficient train service between Omagh and Dublin. There are two routes, namely, *via* Enniskillen

No. 6.—Irish North-western Railway—*continued.**Extract of Evidence sent to the Company.**Replies received.*

time ago about one o'clock in the day, and unless I should sleep a night on my way to Dublin I could not get to Dublin until five o'clock in the afternoon on the following day.

6536. Will you be good enough to explain that?—There is no train from Omagh after about half-past 11 or 12 o'clock in the day. I reached Omagh about one o'clock, after that train had departed that would have taken me to Dublin, but it would not reach Dublin before half-past five o'clock on the following day.

6537. Is there not a night mail train?—No, nothing goes through. You must sleep on the road.

6538. Is that by the Portadown route or by the Enniskillen route?—By either route.

6539. Although there is competition?—Yes. You cannot go from Omagh to Dublin, and spend a day in Dublin, without being three days absent from Omagh. One of the directors on the Irish North-western line told me that if there was a facility for going from Omagh to Dublin, which is only a distance of 86 Irish miles north of Dublin, there would be six times the traffic in passengers, he thought, upon that line, for people would continually go up to Dublin; but the having to spend two nights in Dublin is so expensive that they are obliged to consider how they shall avoid that expense, and they will wait for a fortnight, or even three weeks, in order to do their business on one trip, instead of going up weekly or fortnightly.

6540. Did that director tell you the reason why the railway company did not grant proper facilities to the public?—Although a director, he told me that he could not understand it. He stated that he had advocated it, but that he was outvoted in the direction; and more than that, he stated that he was a director on the line *viâ* Enniskillen to Omagh from Dundalk, and he said that if a train run into Dungannon in the after part of the day it might go on to Omagh and come back again the next morning; and he also said that as long as that train came on he would continually go by it, although he had a free passage on the other line. He has been anxious about that, seeing that the advantage from it would be so great.

6541. I am afraid that the Irish North-western line is the great difficulty just now?—It is the general impression that the directors are attending more to financial questions than to the development of the traffic. I may mention what I think is rather a curious illustration showing how they do not develop the traffic. I have been asked whether I could not get on at night to London. I was in company with a noble lord who wished to get on, and I said to him, "I suppose your lordship will not do what I shall do; I shall take a post car to Mullingar, and I shall get on to the steam engine, and so get on to Portadown." They would not take me in a carriage, and I cannot find out what the reason is. I got on to the steam engine. It was important to me to get to Dublin that night, and there was no other mode; I therefore got on to the engine, which took me to Portadown. I then got into the mail train from Belfast, and so on to Dublin. It appears strange that they should employ an engine to carry the mails and not to carry the passengers. This has been going on for some time; it is not an accidental thing.

6542. Is that engine despatched at such an hour that if there were a train it is not likely passengers would go by it?—When there was a mail coach on that line it was used very much; but when the railway was opened it had the effect of doing away with the mail coach. They try to induce all the passengers to travel by the day mail, in order that they may have a greater number going in the day time, instead of dividing them between the day and the night.

6543. Then since the opening of the railway the amount of accommodation given to the public has been diminished?—It is very much less, because before they had coaches both in the day time and at night, and now they have only one mode of conveyance in the day, which would not reach Dublin at a sufficiently early hour to enable them to transact the ordinary business that arises. The train from that country to Dublin does not reach the city until about half-past five.

6555. How would you propose to remedy that inconvenience?—At that particular point the company have to pay the wages of two keepers. It was a most awkward crossing, and two or three years ago this same gentleman, Mr. Senior, assisted in making the crossing better at an expense of 300*l.* or 400*l.* If a tunnel could have been put under the line there, which the present engineer of the line stated would only have cost 1,500*l.*, the 1,500*l.* capitalized at 5 per cent. would not come to so much as the cost of the two keepers; it would only be about 75*l.* a year, which I believe would hardly pay the two gatekeepers. Again, at Blanchard's Town, they might have an over crossing at about the same cost.

6556. You are of opinion that either the Board of Trade or some Government authority should have a general power to oblige railway

and *viâ* Portadown, and each of these routes has two day trains through.

6536. Considering there is no through passenger train during the night, 3.30 p.m. is by no means an early train to commence so long a journey as from Omagh to Dublin. Passengers leaving Omagh at 3 o'clock would reach Dublin at about 10 o'clock at night, which the public consider quite late enough.

A prior through day train leaves Omagh at about 11.30 a.m., and reaches Dublin at about 5.45 p.m. This train is well adapted for the generality of passengers, and for passengers going to England *viâ* Kingstown and Holyhead.

6537. Not to carry passengers.

6538. There is no night mail train by the Enniskillen route. This is considered by the people of a large district of country in the north-west of Ireland to be a serious defect in the mail service.

6539. A person going from Omagh to Dublin on business and back, and wishing to have one clear day in Dublin, from midnight to midnight, must necessarily be occupied for three days more or less, but a person can go from Omagh to Dublin on one day, have the whole of the next day up to 2 p.m. in Dublin, and return from Dublin by the train at 2 p.m. which runs through direct to Omagh and Derry.

6540. See answer to Query 6535.

6541. The statement about the post car to Monaghan, to catch the night mail train from Monaghan, has no reference to the Irish North-western line, except so far as to show the want of a night mail service over that system.

6542. At the time the mail coaches were running no doubt there was, comparatively speaking, a good deal more travelling during the night, for it was a matter of necessity from its tedious nature. The introduction of railways has, however, wrought a great change in the habits of the public in respect to travelling.

6556 and 6558. Up to the 1st June last there was a very efficient through train service

No. 6.—Irish North-western Railway—continued.

*Extract of Evidence sent to the Company.**Replies received.*

companies to make alterations in their works if they were considered necessary for the safety of the public?—I am. I believe that at the present time their financial difficulties stand very much in the way of what they themselves see ought to be done. There is hardly a railway now that has not fallen into a state of financial difficulty, the Midland line particularly. I was on the line myself about a fortnight ago, going from Mullingar towards Cavan, and there was a gentleman in the train, a friend of mine, going to the North-western, and he said, "It is too bad; this train will be just too late for the Cavan train, so that I may be detained, and not get to my destination to-night." I said, "How can you remedy this?" He said, "If I can get the engine driver to put on the steam, I shall be in time for the Cavan train," that is, the train going to the North-western.

6558. Do you know that the little line from Cavan to Clones belongs to the Irish North-western Company?—I think it is the Ulster Company. I think that the Ulster line meets the Irish North-western line at Clones. In this morning's paper I observed a letter which alludes to the very thing which occurred to myself about three weeks ago, and which is quite illustrative of the arrangements in the part of the country to which it refers, and which I will, with the permission of the Commission, read:—

"Through traffic between the West and North of Ireland. Sir, I arrived at Cavan on Monday last from Westmeath *via* Midland Great Western Railway at 4.50 p.m., fully expecting to be taken, as heretofore, by the Irish North-western line to Dundalk. This company had, however, without any public notice that I could discover, (except some placards hastily posted at northern stations,) a few days previously altered their train to start from Cavan 15 minutes before the arrival of the Midland Great Western train, and (as one of the latter company's officials stated to me) without giving them more than a day's notice or so of the intended change. I was obliged to remain in Cavan until 11.15 a.m. next day. Was brought to Clones junction 20 minutes behind time, and five minutes late for the train to Dundalk, which they profess to meet, and was obliged to remain there two hours. Such treatment of the public is disgraceful.

"I remain your obedient servant,

"THOMAS W. WEST.

"Rath, 16th June 1865."

6736. (*Capt. Galton.*) But the solicitor who acts for two railways I presume gets double profits?—He does, no doubt; and therefore it strikes me that one or two solicitors, paid liberally, who should give their whole time to the work, under a commission similar to one that I would suggest, and which I hope eventually to see, would do all the work of the 56, and do it better, as they would have their whole minds devoted to it. As I have before said, there are 56 secretaries, and upwards of a 100 engineers. Some of them have but one, but some have three. There is the engineer in chief and the managing engineer, and of course, if the Government worked them under a commission, they would require a staff of engineers, but only as many as were essential to keeping up the lines. I cannot give you the amounts, but they could easily be ascertained, and I think the commission would find that an enormously large sum of money is disposed of; of course it is taken out of the receipts of the railways before the proprietors come to be paid any dividend. It follows, as a matter of course, that these people must all be paid, and I believe you will find that a very large amount of the receipts go in that way, and that is one reason for saying that I am satisfied if the 56 railways were under the management of one board a vast saving of expense would be the result, and harmonious action would ensue. The railway companies do not pull very agreeably together; for instance, between Galway in the west and Belfast there are three distinct lines of railways, and last season I grew a large quantity of flax, and I got my tenants to grow a good deal, and I found it almost impossible to get it forwarded to Belfast. I could find no market for it in Galway, and I applied to the Midland Company to know what rate they would charge me per ton to Belfast, and although the lines are united, as far as having junctions with each other, from some misunderstanding the Midland Company could only book the flax as far as Cavan, where their line stopped, and to Cavan I had to send my steward to get it booked from Clones on to Belfast. There are two or three lines between Cavan and Belfast, and I am told it often happens that the train leaves Cavan for Clones on the Belfast line a few minutes before the arrival of the Midland train, and the passengers have to stop at Cavan for the night, and this arises from the want of unity of action between the companies.

6737. (*Lord Stanley.*) Does that arise from any proceedings on the part of persons locally interested in the town?—It is a misunderstanding between two companies; they do not afford accommodation to each other. The lines are, however, united, and they might, if they pleased, very easily work conveniently. The result of this state of things is that the Galway people actually go to Dublin, and then go to Belfast from Dublin, a distance of upwards of 50 miles, although they have a direct communication. There is a want of thorough through traffic arrangements between the companies. Between Belfast and Dublin there is a very large traffic indeed, and yet there are three companies separate and distinct upon that part of the line. All this would be avoided if the whole of the lines were worked under one management.

6829. I may also mention that there is hardly any point to which a

each way daily between the Midland Great Western system and the whole of the south of Ireland on the one hand, and the whole of the north of Ireland on the other hand, *via* Cavan and Clones; but on the 1st June last alterations were made in the train service between Dublin and Belfast which were of such a nature as to compel the Irish North-western Railway Company to remodel almost the whole of their time tables, and as the times of their main line trains were altered, the branch line trains were of necessity altered to correspond.

This entailed an alteration of the trains between Cavan and Clones, without which the trains on the Cavan line would have been to a serious extent disconnected from those on the main line. This change has altered the trains from Cavan so that they are not in immediate correspondence with the Midland trains arriving there.

The natural remedy for this is an alteration (which would not be a considerable one) of the Midland Great Western Company's down train to Cavan. The Midland Great Western Company have been repeatedly requested to make this necessary change, but although they admit the necessity of it they have not as yet carried it out. A reference to the time tables of May and September last (enclosed herewith), which are the time tables prior and subsequent to the 1st of June, when the alteration was made, will shew this matter clearly. All railway companies are occasionally necessitated to make changes in their time tables. The Irish North-western had to do this in consequence of alterations on the coast lines; and it is for the Midland Great Western Company to explain why they have not altered their train to Cavan.

In the direction from north to south there is a very good continuous train service *via* Clones and Cavan, as will be seen by the time table.

The Irish North-western Railway Company has always endeavoured to give to the public the fullest possible amount of travelling accommodation. They give third-class accommodation by all their trains, and they issue by all their trains third-class return tickets at about a fare and a half, allowing one, two, and three days for return according to distance. Besides this, they give third-class market return tickets on some portions of the line at single fares, and they give during the summer months a great amount of facilities for excursions.

They are, however, greatly impeded by the want of co-operation on the part of the companies with whose lines they are compelled to work in connection.

The directors take the opportunity of stating that in their opinion it would greatly benefit the public, increase the traffic, and lessen expense, if all the lines north of Dublin were amalgamated.

No. 6.—Irish North-western Railway—*continued*.*Extracts of Evidence sent to the Company.**Replies received.*

third-class passenger can go and return in the day; at some points he cannot make even the direct distance in one day. Facilities are not granted; branch lines worked by small companies prove a serious obstruction to traffic by want of unity of management and antagonistic interests conflicting. They are consequently frequently used as block lines, and to impede the traffic, as, for instance, the Clowes and Cavan line, which was passed by Parliament with the view of carrying the through central traffic between Belfast and the south, and in consequence now it is very rarely used for that purpose, because the trains are so timed that the passengers cannot use them at all. When they get to Cavan they find that the train from Cavan has just left.

No. 7.—ULSTER RAILWAY.

Observations by Ulster Railway Company on Replies of Secretary of Newry and Armagh Railway Company to Questions 4964 to 4984 inclusive.

4964. (*Chairman*.) You are, I believe, the secretary of the Newry and Armagh Railway Company?—Yes.

4965. Have you any statement to make with reference to the traffic on your railway?—Our traffic is very seriously interfered with by the competitive measures of the companies with which we are connected. The Ulster Company, which joins us on the north, has possession of a line from Belfast to Monaghan and Clones; and then the Dublin and Belfast Junction Company, which is one of the lines between Dublin and Belfast, joins us at the southern end; and between those two companies a system has been pursued for the purpose of diverting the traffic from our line. The existing lines between Newry and Armagh may be described as a triangle, of which our line forms the hypotenuse, there being communication *via* Portadown by the other two sides. Of course we have the opportunity of carrying the traffic at much lower rates than the other companies, and if we were not interfered with we should, I may say, command the entire of it. We have applied to them for through rates over our system to the various stations with which we do business, but that has been refused, with the exception of to and from the town of Newry. They agreed upon through rates with us in reference to Newry, but upon the new section of our line, which is between Gorah Wood and Armagh, which was opened in August last, they have refused us.

4966. (*Mr. Glyn*.) They will take any traffic from you which you give them, which goes from Newry to Armagh, but they will not give you any traffic at Armagh to take to Newry?—No, except that which they cannot avoid. They will send it round by the old route, that is by Portadown. Our business communications and the trade of the port of Newry lie very much in the Monaghan and Clones districts, to which we have no independent access. The Ulster Company wish to draw the trade to Belfast, and they do that by giving low rates to merchants in that locality, and refusing the Newry and Armagh Company.

4967. What is the class of traffic that comes from Monaghan and Clones?—That is chiefly inwards traffic from Newry. There is not much export trade from that district to Newry. The trade consists chiefly of importations from Newry.

4968. Of what sort?—Coals, grain, timber, and iron.

4969. Is there much coal traffic?—It varies.

4970. Will not they give you through rates for that coal traffic to Monaghan and Clones?—They refuse through rates, and, of course, the coal traffic is included?—There is a great deal of traffic in grain and bread stuffs in that district, and there are some extensive mills. There is also a traffic in slates, timber, and agricultural produce.

4971. Do they want to force you to amalgamate with them?—They do not want us to amalgamate, but they want us to agree to a proposition which they made, that the two routes, namely, the direct route between Newry and Armagh, which belongs to our company, and the route through Portadown, which belongs to the two companies I have spoken of, should be placed on terms of equality as regards fares and rates.

4972. That the charge should be equal for the long distance and the short distance?—Yes.

4973. And that you should divide the traffic?—Yes, practically.

4974. (*Mr. Glyn*.) How many miles do they carry their railway in competition with you?—29 miles, and the direct route is 21 miles, so that there is nearly a difference of one third in our favour. So far as passenger traffic is concerned, we should get it, but with regard to goods traffic, the distance does not tell materially in our favour.

4975. You do get passenger traffic?—So far as Armagh is concerned, but not as far as Monaghan and that district is concerned.

4984. So that practically they shut you out from all that traffic?—Yes; some of the merchants in the grain trade carry on a very extensive business, and would send a large quantity of traffic over our line if there was a through rate, and there are also minerals in large quantities to be carried.

4988. (*Chairman*.) I suppose when you made a railway of your own, you expected to be able to make arrangements with the other com-

The Ulster railway line, extending from Belfast to Clones, 64½ miles, was opened to Armagh in the year 1848. In the year 1852 the Dublin and Belfast Junction Company's line, extending from Drogheda by Newry to Portadown, 55½ miles, was opened to the latter town. In the year 1854 the line of the Newry and Armagh Railway from Newry to join the Dublin and Belfast Junction Railway at Gorah Wood, 3½ miles, was opened for traffic, and the line between Gorah Wood and Armagh was opened about 12 months ago, prior to which all the railway traffic from Armagh, and westward to and from Newry, was carried by the Ulster Company's line to Portadown, and thence by the Dublin and Belfast Junction line.

It is not true that the Ulster Company have refused through booking on the new section of the Newry and Armagh Company's line between Gorah Wood and Armagh, as stated in reply to questions 4965, 4966, and 4970, the fact being that the Ulster Company offered to through book between all stations on their line westward of Armagh to Newry, over the entire of the Newry and Armagh Railway Company's line, and to make the rates equal by both routes, so that the public could select whichever they pleased; but the Newry and Armagh Company insisted that a higher rate should be charged by the old route in order to force the traffic over the new one, to the great disadvantage of the companies who constructed their lines in the confident reliance of having the traffic which the Newry and Armagh now desire to obtain, not by that legitimate competition (tending to the public advantage) which was fairly offered to them. In answer to 4974, the witness practically admits that by conveying the goods traffic over the longer route the public suffer no inconvenience, but asserts that his company should get the passenger traffic; if so, why do they not avail themselves of the offer to book through to their line, and let the public have the benefit of the advantages they claim to possess.

In reply to the answer given to question 4988, under the Newry and Armagh Com-

No. 7.—Ulster Railway—*continued*.*Extracts of Evidence sent to the Company.**Replies received.*

panies?—Certainly. Another point which has been a great disadvantage to us is, that we have been obliged to use the Ulster Company's station at Armagh, when we expected to have an independent station, and the result is that, the lines being unquestionably competitive, they have learnt all our rates and special arrangements, and it has been impossible for us to compete or hold our ground.

In conclusion, it is submitted that instead of unfair pressure on a company coming into a district already supplied with railway accommodation, and admittedly basing its expectations of profit on what they expected to divert from the old route, that the old companies met them in a liberal spirit.

pany's Act of 1859, that Company were authorized to use the Ulster Company's station at Armagh, and the terms and conditions of and payments to be made for such use have been settled by award of the Board of Trade, probably since Mr. Fearnly's evidence was given, or he would have stated the fact.

No. 8.—WATERFORD AND LIMERICK RAILWAY.

2053. Will you state what the fares were then?—The fares were raised to Rathkeale, which is an important market town, from 2s. 6d. first-class, 1s. 10d. second-class, and 1s. 1d. third-class, to 2s. 10d. first-class, 2s. 2d. second-class, and 1s. 5d. third-class. The total numbers carried to Rathkeale in 1862 were 87,256; in the year afterwards, when the increased fares came into operation, they fell to 71,383; and in 1864, to 63,046. A little steamer connected with the line and carrying passengers from Foynes to Kilrush, which was called the Kelpie, during the four and a half months of the summer of 1853 was plying at opposition fares of 1s., from Limerick to Kilrush, and she carried 14,047 passengers, producing 1,358*l.*, which would give for the half-year 18,729 passengers, or 1,810*l.*

2054. What season of the year was that?—The summer season; the traffic of that line is chiefly a pleasure traffic. Kilkee, to which the passengers repair from Kilrush, is a considerable bathing station.

2055. (*Earl Donoughmore*.) A sort of Ramsgate?—Exactly. The numbers for the half year ending 31st December 1859, which is the next season after the opposition fares had been in operation—the fares were raised to 3s., 2s., and 1s.,—were 14,997 passengers, producing 1,702*l.*; and in the two last seasons, the fares being 4s., 3s., and 2s., the numbers were for the half-year ending 31st December 1863, 8,304 passengers, producing 959*l.*, and for the half year ending 31st December 1864, 10,362 passengers, producing 1,133*l.*, so that it would thus appear that a reduction of more than one-half produced exactly the same amount as did the very highest fares that they charged.

2123. (*Chairman*.) Are there any other points which you wish to direct the attention of the Committee to in connexion with Irish railways?—I intended especially to have drawn attention to the undue proportion which the cost of carriage of the agricultural produce of our poorer lands bears to its value. Considering that Irish agriculture has now to compete with the entire world, and that we are transferring part of our population from the poor lands of Ireland to the richer ones of Illinois and other portions of America, that, in fact, in the case of a large number of poor farms, the rates of carriage to the markets amount to nearly the rents in some cases, any substantial reduction of fares on the lines, especially with differential rates such as I have alluded to, would be one of the greatest advantages which could possibly be bestowed upon Irish agriculture.

2129. (*Earl Donoughmore*.) Are you aware that it costs less money to transport a fat bullock from Normandy to London than it does from the pastures of Limerick to London?—Precisely. A friend of mine was actually disposed to go to Holland and buy store cattle and take them to Galway to fatten, and he expected a very considerable profit upon them.

2314. Will you state generally to the Commission on what points you have to make complaint; first as to the passenger traffic?—With respect to the passenger traffic, it is generally complained that the charges are too high, which prevents that intercourse with the western districts of Ireland that we would otherwise have if we had a lower rate upon the traffic from the metropolis and a lower rate of passenger charge.

The directors submit that their passenger fares present a favourable contrast with those in force on English lines of railway for similar distances, as instances of which they beg to call attention to the following:—

	1st Class.	2d Class.	3d Class.
	s. d.	s. d.	s. d.
Limerick to Limerick Junction, 22 miles	4 0	3 0	1 10
Limerick to Clonmell, 49 miles	9 2	6 10	4 1
Limerick to Waterford, 77 miles	14 6	11 0	6 5
Waterford to Tipperary, 52 miles	10 0	7 6	4 5
Waterford to Limerick Junction, 55 miles	10 4	7 10	4 8

These charges give a sufficiently accurate idea of the general scale, and it will be thus perceived that the average is practically as follows:—

1st class, 2*½*d. per mile; 2d, 1*½*d. per mile; 3d, 1d. per mile.

The Commission is reminded that the secretary of the Waterford and Limerick Railway Company proposed on the 19th July last that the authorized tariff of passenger rates should be reduced one-third, the Government advancing funds at the rate of interest charged under the Harbours Improvement Act, to redeem the company's bonded debt and preference capital, as such redemption should become from time to time available. This proposition gives evidence of their desire to make every reasonable concession in favour of the travelling public without materially depreciating the value of their property by a serious diminution of income.

To accommodate the rural and agricultural population of the southern provinces of Ireland market tickets are issued at all seasons from stations on the main and branch lines to the principal market towns of the district. These tickets are third class, and are always issued at a fare and a half, which is generally equivalent to a mileage rate of less than three farthings, and never exceeds that limit.

Since the beginning of the summer season, in this and previous years, excursion trains have been very frequently run on the main line and on the several tributaries worked by this company at extremely moderate rates. The following may be quoted as an example:—

From Waterford and Limerick and back, a distance of 154 miles, 1st class, 5s.; 3d class, 2s. 6d.

Detailed particulars can be obtained on reference to the printed notices furnished herewith.

No. 8.—Waterford and Limerick Railway—*continued*.*Extracts of Evidence sent to the Company.**Replies received.*

2323. In the opinion of business people at Limerick is there a sufficient number of trains each way daily?—We want a four o'clock train from Dublin to Limerick; the train at present leaves at one o'clock and arrives at half-past six, and the persons engaged in trade travelling from Dublin consider it a very great inconvenience to be obliged to leave so early, or they must wait till a late hour.

2340. (*Chairman.*) Do you believe that any large number of persons in Limerick are prevented from going to Dublin for want of sufficient railway facilities?—Yes; I think that a great many persons would travel to and from Dublin if there was a lower rate of charge.

2411. Will you be good enough to state the nature of those complaints?—Some time since the different railways into Limerick, the Great Southern and Western and the Waterford and Limerick, carried goods through from Liverpool to Limerick at a through rate of 15s. per ton.

2412. (*Mr. Dalglish.*) What class of goods do you refer to?—Heavy goods, iron, tallow, palm oil, sugar, and such heavy goods; and within the last two or three years they advanced the rates to 27s. and 30s. a ton, something equal to from 80 to 100 per cent., and we consider that that has done very considerable injury to the trade of our locality.

2413. (*Chairman.*) Are you able to state that the traffic of that description has fallen off since the raising of the charges?—It has.

2434. Do you propose that the rates should be adjusted with a view to placing a more distant port on the same footing as a port nearer to the place of production?—The increase in the charge by the railway company to 27s. has been attended with this disadvantage as regards Limerick, that it has compelled our local companies, or it has induced them, to advance their rates to 20s., whilst goods of the same class are imported into Dublin, Cork, and Waterford at 10s. or 15s.

2435. If the increase of the rate does not interfere with the consumption of the articles, the reduction would simply have the effect of making you a present of so much per ton to enable you to carry on your business in competition with the merchants of Waterford and Dublin?—We should have equal rates with them.

2436. But it would in effect be asking the railway companies to give you a sort of bounty or present to enable you to compete with the merchants of Waterford and Dublin?—Not to make it a present. The fact is, the goods now do not come by the railways; in fact, the rate is a prohibitory rate, for since they advanced it to 27s. the goods have scarcely come by the railways at all.

2531. At what price could you get coals delivered in Limerick through Waterford?—I will give it you to Tipperary, that is within 22½ miles of Limerick and 55 miles from Waterford.

2532. At what price is the coal sold in Tipperary?—I will give you the rate of charge first to Tipperary. The rate to Tipperary is 4s. 9d. per ton from Waterford. I believe the distance is 55 miles. Then from Limerick to Tipperary I find they charge 3s. 3d. a ton, and the distance is 22½ miles, and that is a very great disadvantage to Limerick in sending coals into the interior.

2533. Has the railway company ever been remonstrated with with respect to that disadvantage?—Yes, I have remonstrated with them, and as to another article in which I deal largely, salt, they did advance the rate, and then they reduced it again.

2534. What is the rate at the present time?—At the present time it is 4s. 9d. to Tipperary, and 3s. 3d. from Limerick to Tipperary; that is, for a distance of 55 miles they charge, as I said, 4s. 9d., and for 22½ miles they charge 3s. 3d., which gives a great advantage to Waterford over Limerick.

2655. Will you be good enough to state what opinion you have formed as to the effect of the present passenger rates?—I think that they have prevented a great deal of traffic which would otherwise have taken place. The people are very poor, and they have not got much money to pay for railway transit, and I think that if third-class trains were placed more within the reach and circumstances of the people they would be more available; but there is another matter which I think operates upon the traffic as much as the high prices—the want of a better arrangement as to keeping time between our principal lines of railway and the tributary ones. We have six lines of railway coming into Limerick, and by some extraordinary arrangement they do not at all keep time for the third-class passengers.

2656. Do you mean that they do not keep the time as published in their time tables?—No; they keep that time, but they do not hit off the trains which arrive; that is to say they do not correspond. There is only one third-class train in the course of a day out of Limerick to Dublin; it leaves at 7.30 a.m., and there are no other means or opportunity for third-class passengers to travel until the following morning; and all the country trains, those five or six trains of which I have spoken, arrive in Limerick after the departure of that train, and the passengers have consequently to remain at Limerick all that time and during the night, in order to get off the following morning. If I may be allowed I will quote from a few memoranda which I have put down in writing upon this subject. What I am about to state will show the inconvenience and delay to the public, the result of the present railway system, particularly arising from small local companies. There are in connexion with the city of Limerick no less than six railway companies, namely, the

This four o'clock train connexion has been resumed as from 1st July 1865.

Doubtful. The present charges are considered reasonable.

The 15s. was a competitive and unremunerative rate.

This is an extreme instance quoted out of a general re-arrangement of rates.

Our traffic superintendent reports that such is not the fact.

The question of equal rates for competitive traffic is a very difficult matter for companies to arrange to satisfaction of rival ports. What tends to procure most traffic, and augment the company's income, is the policy pursued; and when traffic cannot be obtained at fair rates a lower tariff must be sometimes fixed of necessity.

This question gives a significant reply to the previous answer. Limerick, being situated on the western coast of Ireland, is 77 miles more distant from Liverpool than Waterford, on the south-eastern coast.

The distance from Limerick to Tipperary is 25 miles (not 22, as appears in evidence); and bonding expenses reasonably influence a higher rate for shorter distances.

For reason see last answer.

See answer 2532.

At the time this evidence was given, and for years previously, the Great Southern and Western Railway Company ran their third-class train to Dublin at so early an hour as to render it incumbent on the Waterford and Limerick Company to start their train as early as 7.30 a.m., thus precluding the railways converging in Limerick (having regard to their local traffic) from running their trains to correspond therewith. However, an alteration of the Great Southern and Western trains to a later hour has subsequently enabled the local lines to get their trains into Limerick before the departure of the 9.25 a.m. third-class train to Dublin.

As to Sunday trains, they were discontinued simply because the receipts therefrom did not leave a profit. (See Parliamentary return.)

During the past summer excursion trains have been regularly run on the Waterford and Limerick, Waterford and Kilkenny, and Limerick and Castleconnell lines. (See timetable annexed, pages 20 to 24.)

No. 8.—Waterford and Limerick Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

Great Southern and Western, the Waterford and Limerick, the Cork and Limerick direct, Limerick and Foynes, Limerick and Ennis, and the Limerick, Castleconnell, and Killaloe. The passenger traffic between Limerick and Dublin is carried on by the Waterford and Limerick and the Great Southern and Western *viâ* the Limerick junction, also by the Limerick, Castleconnell, and Killaloe, and Great Southern and Western *viâ* Nenagh, and Roscrea and Parsonstown junction *viâ* Limerick junction. There is only one third-class passenger train from Limerick to Dublin by this route. This train leaves Limerick at 7.30 a.m., and arrives at the Limerick junction at 8.35 a.m. Passengers, &c. are here detained until 10.44, over two hours, and then proceed by the train on the Great Southern and Western line by the train which left Cork at 8 a.m. This train arrives in Dublin at 3.35, whereby passengers, &c. going from Limerick to Dublin, a distance of 129 miles, are detained over eight hours on the road. This journey in the old coach times was performed in 12 hours. The next train for Dublin by this route is a mail train which carries the principal English mails, leaving Limerick at 11 a.m., and arriving at the Limerick junction at 12 at noon; passengers and mails are here detained until 1.57 p.m., nearly two hours. This train arrives in Dublin at 5.35. If this train did not start from Limerick until 12.40 p.m. it would give the citizens of Limerick 1 hour and 40 minutes additional time to answer English letters received in the morning, and would also be a great convenience to passengers. There is no train from Limerick to Dublin on Sundays except the mail train at 10.45 p.m. In fact there is no train into or out of Limerick on Sundays except the night mail train, and an excursion train to Cork and Killaloe *viâ* Nenagh and Roscrea. There is no third-class train by this route. The first train by this route leaves Limerick at 10.15 a.m., and arrives in Nenagh at 11.30. Passengers are detained in Nenagh until 2.0 p.m., two hours and a half, and arrive in Dublin at 5.35 p.m. 7 hours and 20 minutes on the road; whereas if this line was in the hands of one company, or the Government, the journey could be easily performed under five hours. The second train by this route leaves Limerick at 2.0 p.m., and arrives in Nenagh at 3.15 p.m.; again passengers are delayed until 5.15 p.m., two hours, and arrive in Dublin at 9.30, seven hours and a half on the road. This line of railway is about five miles shorter than the one *viâ* Limerick junction, the distance by this route being 124, by Limerick junction 129. This route from Limerick to Dublin clearly exemplifies the evil of allowing railways to remain in the hands of rival and short companies. This railway is handed by lease from the Limerick, Castleconnell, and Killaloe to the Limerick and Waterford Company as far as Birdhill, 14 miles, and of course the Waterford and Limerick Company throw every impediment in the way of passengers, &c., proceeding by this line, in order that they should go by the Limerick junction on their own line. The Great Southern and Western own this line from Dublin to Birdhill, 110 miles, the Limerick, Castleconnell, and Killaloe from Birdhill to Limerick, 14 miles. Passengers can leave Nenagh, an unimportant town and only a few miles from Limerick, at 6.40 a.m., arrive in Dublin at 11.0 a.m., leave Dublin at 4.0 p.m., and arrive at their homes at 8.30 p.m. This line being in the hands of one company the public at Nenagh have the advantage of leaving their homes in the morning, have five hours to transact their business in Dublin, and can return same evening to their homes; and if the entire of this line was in the hands of one company or the Government the Limerick public would have the same advantage as Nenagh. The first train from Limerick arrives in Dublin at 3.35 p.m.; the last that leaves Dublin for Limerick is at 1.0 p.m. From the present railway system, so far as Limerick is concerned, the several companies connected with Limerick seem to throw every obstacle in the way of the public and put them to every possible inconvenience, and it is no great wonder their receipts should be so low. The Waterford and Limerick Company paid no dividend for many years; the last was about one per cent. The Limerick and Foynes, Limerick and Ennis, and the Limerick, Castleconnell, and Killaloe have paid no dividend since opened. The Government should by all means purchase up all railways, but more particularly small and non-paying ones, as they are great obstacles to large and extensive undertakings by running their trains at such times as are most inconvenient to them.

2659. Has the traffic between Limerick and Dublin diminished in consequence of that delay?—I should certainly think so, because persons who would otherwise go to Dublin more frequently do not wish to remain for a space of two hours in one of the most unpleasant places imaginable—the Limerick junction.

2662. Do you think there would be a large third-class traffic between Limerick and Dublin?—Yes, not of the labouring class, but certainly of the shopkeeping class or the trading class. They obtain their supplies both from Dublin and from Cork, and they cannot travel to either of those places third-class and return on the same day.

2663. Not from Limerick to Cork and back on the same day?—I think not. I know that to Dublin they cannot do so. We had very great hopes when the Great Southern and Western Company were permitted to extend their line from Roscrea to Limerick, and they promised at that time to give us great facilities, to have a continuation of their line to Dublin, and that would have given us the same facility which they formerly gave us when a train started at 6 o'clock from Limerick, leaving Dublin at 4 o'clock again, so that the Limerick people had time to transact their business in Dublin and return to Limerick.

See above.

This delay does not now exist.

Matter of opinion.

This experiment tried, and found not to answer. The train having to leave Limerick so early as 5.45 a.m. was only availed of by a few people, and local traffic requirements were interfered with. By the present service, a third-class passenger can leave Ennis at 7.45 a.m., and reach Dublin, after having travelled 154 miles, at 3.35 p.m. He can return from Dublin at 7.0 a.m. on the following morning, reaching Ennis at 2.30 p.m.

No. 8.—Waterford and Limerick Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

2669. Did they issue return tickets for third-class passengers?—No, they charged full fares for them.

2670. (*Mr. Ayrton.*) What class of persons travelled by that train?—The persons, I think, were cattle dealers, and even poor shopkeepers—country shopkeepers—persons not in very good circumstances, who went to Dublin and selected their articles and then came back again. By the present arrangements a shopkeeper in Ennis, which is the capital of the county of Clare, and a very important town, as a third-class passenger, requires, in order to give him one day in Dublin to transact his business, four days to accomplish his journey.

2671. (*Capt. Galton.*) How do you make that out?—In this way; a third-class passenger must leave Ennis at 3 o'clock in the afternoon, that is, by the third-class train from Ennis, and remain in Limerick, which is distant only 25 miles, all night, and then proceed by the morning train to Dublin, which arrives at 3.35.

2672. At what time does the morning train leave?—At half-past 7; there is no train from Clare.

2673. That train does not correspond at the junction with another train?—No; and it waits at the Limerick junction for the train from Cork, which leaves Cork at 8 o'clock. The passenger must come the night before to Limerick, there being no train from Clare, and the passenger is 24 hours on the road, the distance being 154 miles by this arrangement. It takes the same time to return, as to go from Ennis to Dublin, and transact one's business. In the old coach times the journey would have been accomplished in the same time.

2674. This of course very much limits the third-class traffic between the district you have referred to and Dublin?—It entirely precludes it.

2675. (*Mr. Ayrton.*) Is there no afternoon train from Limerick to Ennis?—Yes, but it goes at a most inconvenient hour. It leaves before the arrival of the other local trains.

2678. Every impediment seems to be thrown in the way of third-class travellers?—I think so.

2685. (*Chairman.*) Do you wish to state any facts as to passenger fares on any other lines besides those between Limerick and Dublin?—I can state in general terms that the railways about Limerick are not doing the work of the country; carriers are still numerous on all the roads where railways are. I must state that we have not much experience on the subject; it has not been tested. The public think, from what the traffic managers tell them, that things are as low as they can go to pay, and those who are inexperienced in railways take that as the state of circumstances, and they have not pressed the matter; but my own impression is that when one sees the traffic of our own country "*all going by road*" by a route running parallel with railways, that the cattle are driven long distances, having been bought in the west of Limerick and Clare, and going up through Dublin on to Meath, where they are fattened—it strikes me that that being our principal traffic, as we have not got any manufactories, the attention of railway directors ought to be called to the matter to see how they could manage to get that traffic on to their lines; they say that it will not pay them to carry them under a certain rate, but the railway waggons go empty, and there is no prospect of filling them, when, if they even tried the experiment of taking them at a very considerable reduction, such a reduction as would pay the breeder of the cattle to rear them, I think that it would pay the railway companies something.

2691. (*Mr. Hamilton.*) Is it not the fact that the present high fares have compelled many persons to walk who would otherwise travel by the railway train?—There is no doubt of it, and in my own district. I am a shareholder in the Limerick and Foynes Railway; it has never paid one shilling dividend, and I do not expect that it ever will. The line runs parallel to the road leading to Askeaton and all that district; but the people never think of going by the railway, although the distance is very little more, if anything, than by the main road; the railway and the road are nearly parallel lines.

2692. (*Capt. Galton.*) I believe the fares are very low on that railway?—They have advanced them recently, but this is an instance of the effect; in April 1863 a considerable increase was made in the passenger charges of 10 or 12 per cent.; in the year previous to the change the number of passengers was 87,000, and in the year after the change the numbers fell to 63,000, showing a falling off of 24,000. So likewise there was a similar falling off in the traffic of the "*Kelpy*" steamer, working in connexion with the Foynes line, in which there was a similar raising of the fares, the falling off of passengers being from 15,000, making a receipt of 17,000*l.*, to 8,300, bringing 9,060*l.* That was the effect of increasing the rate.

2717. What is the object of that?—The fact is, that the chairman of the company is also the proprietor of the steamships going out of Waterford, and of course by getting the trade to Waterford the vessels earn freights which they would not earn if the trade came, and probably to a better market, in Limerick.

2718. You think that in order to drive the traffic into Waterford he actually allows the passengers to travel for nothing if they bring their firkins of butter with them?—Yes, he allows them to travel for nothing to Tipperary, which is nearer to Limerick than to Waterford.

Neither Great Southern and Western Company, nor Waterford and Limerick Company, issues third-class return tickets.

See reply to No. 2663, explaining alteration in train service.

See 2663.

See 2663.

Not the fact.

Not the fact, for if all the traffic were conveyed by road, as appears in the evidence of this witness, the Waterford and Limerick Railway would be really carrying nothing.

With respect to store cattle, it is well known that the dealers prefer driving by road for short distances, however low the railway rate may be; and we presume this witness is speaking of the short lines around Limerick.

Facts disprove the testimony of this witness, as we find that in the year 1864 there actually travelled from Askeaton to Limerick, 54 first class, 125 second class, and 705 third-class passengers.

It is necessary to bring under notice for consideration of these answers that there is a direct steamer running between Limerick and Kilrush, carrying third-class passengers the entire distance for 1*s.* each; a rate of charge obviously not remunerative for a railway to carry 26 miles, and steamer, in connexion, 20 miles, and this opposition cheap service, it is submitted, accounts for the diminished numbers using the quicker route.

Not the fact. No passengers allowed to travel free.

No. 8.—Waterford and Limerick Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

2757. It is more than 2*d.* per ton per mile, and do you say that that is not an exceptional rate for the carriage of turf over Irish railways?—I am not aware that it is, it was lower some months since, probably some five or six months since; there was a large quantity of turf coming into Bruree; since that time it has been advanced, and a gentleman informs me by a letter I have received this morning, what I know to be the fact. He says, "The charge for a box of turf to Bruree had been 18*s.* 6*d.*, and it is now 1*l.* 7*s.* 9*d.*; great complaints are made of the want of fuel, and particularly among the dairy farmers, who were in the habit of getting turf at Bruree. You must know that the poor people must feel it also."

2759. Is it for the interest of the Great Southern and Western to carry coal rather than turf?—I do not know, indeed, but it is the interest of the steamboat proprietors to carry it, and there is a very large amount of steamboat influence exercised in the directory of this company, and it is the interest of the large steamboat proprietors to get freights for their ships, to the exclusion of our own fuel.

2760. (*Capt. Galton.*) The charge for the coal is a halfpenny per ton per mile, and the charge for turf is about 2*d.* and one-fifth per ton per mile; it used to be 1½*d.* per ton per mile?—Yes.

2769. (*Chairman.*) Have you given much consideration to the question whether any great alteration could be introduced into the railway system in Ireland with advantage?—I have always considered that if we could have all our railways placed under one management the interests of particular towns and particular districts would not be interfered with from any interested motives, particularly as we are circumstanced on the west coast of Ireland; we have no directors there, the railways that run to Limerick are centred either in Waterford, Cork, or Dublin, and the eastern ports of shipment, and I think that those three directors vie with each other to see which port shall get the greatest loading for their steamers, and the port of Limerick does not get a fair mileage rate in consequence of that. As an instance, butter, per firkin, Bruree to Cork, 41½ miles, is 5*d.* per firkin, while from Bruree to Limerick, 19 miles, it is 9*d.*, being double the distance for half the price; that is, the charge to Limerick is fourfold in proportion to that of Cork. Again, timber from Cork to Bruree is charged 6*s.* 3*d.* per ton, while from Limerick to Bruree it is 4*s.* per ton. The proportionate charge, according to mileage, ought to be 2*s.* 10*d.* from Limerick.

2770. (*Lord Donoughmore.*) Is it not the fact that Sir David Roche was for many years a director of the Great Southern and Western Railway?—Yes.

2851. (*Lord Donoughmore.*) Have the earnings of the Waterford and Limerick Company, since that offer was made and declined, been at all equal to the terms offered by the Great Southern and Western Company?—No; neither since that time nor before it, but whenever a negotiation is pending the public necessarily know it, and that raises the price of the line that is to be bought, and then the shareholders think that that rise in price is part of the intrinsic value of the line, and they insist upon something more, and all these things cause delay.

2914. (*Mr. Ayrton.*) Has it come under your notice that the traffic from Tipperary to Waterford, and from Tipperary to Limerick, is regulated by other considerations than those of the distance?—Yes; it is very well known that the most influential proprietor in the Waterford and Limerick Company has a very considerable interest in the port of Waterford, and that he does his best to develop the traffic to Waterford.

2915. Has that been a source of embarrassment to your company in making traffic arrangements to go from one line on to the other?—That has been our opinion, but whether just or not I cannot say.

3357. (*Chairman.*) Have you any suggestion to make as to the remedies which you think ought to be applied with respect to the deficiencies on the Irish railways, both as to the passenger and goods traffic?—As to the passenger traffic we labour, no doubt, under a great many difficulties in the way of getting from place to place in consequence of the trains not running in connexion with one another; for example, if you want to come from the west to the south you have a delay at Athlone probably of one or two hours; you also have a delay at Portarlinton of one or two hours before you can catch the train on the Great Southern and Western line. Then if you want to go to Belfast you must remain for four hours at Portadown before you can get a train to go on. And in the same way, if you want to come from Limerick to Dublin you are obliged to stop at the Limerick station, which is a very bad station, for two hours or two hours and a half before you can get on to Dublin; and there is no accommodation whatever at the Limerick Junction, that is in consequence of the Waterford and Limerick Railway and the Great Southern and Western Railway not running in connexion with each other.

3358. Can you make any suggestion to the Commission as to how these inconveniences can be remedied?—No, I can hardly do so, except that I think the public are suffering by not being able to carry one through continuous route from place to place in consequence of all these opposing interests on the part of the Waterford and Limerick Company, the Great Southern and Western Company, and the Northern lines, for they are all running, as it were, almost antagonistically to one another, and not suiting each other in any way. If these opposing interests were united in some way it is clear that the public would be very much benefited by it, not alone with regard to facilities being

This refers to the Cork and Limerick line, worked by the Great Southern and Western Company.

For Great Southern and Western Company's reply.

See previous replies.

No. 8.—Waterford and Limerick Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

afforded, but probably the necessary expenditure would be very much reduced.

3359. (*Mr. Ayrton.*) In your opinion is the third-class accommodation sufficient in Ireland?—No, it is very bad in Ireland. A third-class passenger, for instance, on the Great Southern and Western line cannot go to Limerick in a third-class carriage, he must stop at the junction and must book second-class. Then again, a third-class passenger, if he wants to come to Dublin to attend the market, must start early in the morning, although he cannot get back at night, and he does not come up in time for his market in Dublin, but he must remain there till the next day, and then he can get no train back the next day, he must remain there until the third morning, so that in point of fact he pays more than a first-class passenger in consequence of the delays which take place. The number of the third-class passengers is most enormous compared with the first-class; they are four times as many as the first-class passengers in Ireland.

2771. If he had any local interest it was in Limerick, was it not?—Yes, but he never shipped any produce from Limerick; he had a large flour mill in Limerick, but he never exported. I am glad that you referred to Sir David Roche, he has recently died, but his son, the present Sir David Roche, is now the owner of the very large mills there, and I am satisfied that there are very few men in the country who could give more information to this Commission as to the inconvenience which is suffered from the present state of things than the present Sir David Roche. I have known him complain very sadly with respect to his mills; he has one at Croome, and he does not use the railways at all; he keeps a stud of horses on the road, and he does not send a pound weight by the railways.

2772. (*Capt. Galton.*) On account of the high rates which are charged?—I suppose so.

2792. (*Chairman.*) Can you give any other instances of cars competing successfully with railways?—I believe there are other instances, but those I have given are the most familiar to me. I witnessed the other day a very curious thing; some people were coming from Kilrush to the other side of the Shannon; there were about 70 emigrants going to Cork and Dublin, and coming from the west of Clare by Foynes; they arrived in the afternoon at Limerick, and those 70 persons had to remain in Limerick all night, there being no third-class train after that time to take them on to their place of embarkation. Some were going to Cork to embark by steamer for America, and others were going to Liverpool *via* Dublin. There was no means to convey them, and it was most pitiable to see those poor people disappointed in that way, being of course put to very great expense.

2842. (*Mr. Glyn.*) It has been stated that there is no possibility for a first-class passenger to get from Limerick to Dublin and back again conveniently in the same day; is that so?—I cannot say; but looking at the time table I think it is not improbable, and I think it is likely they would not much care for the privilege, for there is some little disadvantage in consequence of it, for in going from Limerick to Dublin they have to pass over two lines of railway not belonging to the same company, and which are not always working harmoniously.

2843. (*Mr. Ayrton.*) Are they at present in harmony, or is there much discord between them?—Not so much harmony as I should wish.

2844. Have you any joint committee to manage the traffic that is required to be worked through?—No.

2845. (*Lord Donoughmore.*) Was there not some time ago a proposition made on the part of your board of directors to amalgamate with the Waterford and Limerick Railway Company?—Yes.

2846. And that proposition was refused by the directors of the Waterford and Limerick line?—By the shareholders. I do not know whether the directors were favourable to it or not, but it was refused.

2847. Do you believe it would be a great advantage to the public if those two railway companies could be amalgamated?—Certainly.

2848. Would it facilitate the traffic arrangements all through that country?—Yes.

2849. (*Chairman.*) You could not offer terms to the Waterford and Limerick Company that they would accept?—No; and with regard to the terms that were then rejected, I thought they were a great deal too high, and I opposed them.

2850. (*Mr. Gower.*) The negotiation failed as to the terms?—Yes. We offered what I considered were too high terms, and they thought that they would be better by standing out for a time.

3710. (*Mr. Ayrton.*) Can you give us any other instances?—I have been told by a trader in cattle, in Waterford, that he walks them from Clonmel and Caher for less than half the charge by the train; and a dealer in them at Cork, who sends over here largely, has told me that if there was a third taken off, he would never send a cow along the road; and have also been told by an extensive grazier in Clare, that he would send at reasonable rates a thousand sheep to Dublin annually, which now he sends to Ballinasloe to sell; others in his locality do the same for identical reasons.

5011. Have you any statement to make with reference to the railway traffic of the south of Ireland?—The statement that I wish to make is this, that as far as Waterford is concerned, being the place I am connected with, there is a great difficulty in approaching the interior of Ireland from the want of railway communication, and there is even great diffi-

For Great Southern and Western Company's reply.

For Great Southern and Western or Cork and Limerick Company's reply.

A first or second-class passenger can leave Limerick any week-day at 9.25 a.m., reach Dublin at 3.35 p.m., and return same evening at 7.45 p.m., arriving back in Limerick at 1.20 a.m.; thus he is only 15 hours absent on a journey of 258 miles, and has four hours to spare in Dublin.

Amicable working relations continue to exist.

Give authorities, and assertion can be dealt with.

No subsidy exists. See Traffic Arrangement before Commission, which provides for division of receipts and equality of charge between the competitive routes. Some such arrangement has been for years in force.

No. 8.—Waterford and Limerick Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

culty in approaching Dublin, from the indisposition of the Great Southern and Western Railway Company to work in harmony with the Waterford and Kilkenny, so as to give trains that will conduce to the public convenience. I also wish to state that the public of the south of Ireland are, in my opinion, very much injured by the determination of the Great Southern and Western in connexion with the London and North-western to subsidize the local lines and steam packet companies to allow the traffic to be brought to England *via* Dublin. They pay 30 per cent. for that, and such diversion of traffic, in my opinion, not only is injurious to the southern cross channel communications, but very injurious to the public in the several localities.

5019. (*Mr. Glyn.*) That is the through train of the Great Southern and Western?—It is the through train from Kilkenny; that is their Kilkenny line through train.

5020. It is their through train on the main line?—It is not a through train from Waterford.

5021. What train do you wish to join on the Great Southern and Western?—We want a train that will allow parties to leave Waterford at 6 o'clock in the morning and arrive at Dublin in proper time for business, and then enable the parties to leave at 4 or 5 o'clock p.m., so as to arrive in Waterford at 10 o'clock at night.

5022. Do you wish them to put on particular trains to accommodate you?—I wish to alter the hour of the trains which they do run.

5023. The trains, you say, that do run now are their trains to other parts of their system?—No; they are trains which no other part of their system is connected with; they run from Kilkenny to Dublin, and *vice versa*, without reference to any other train.

5024. (*Capt. Galton.*) Does the train which runs from Dublin to Kilkenny run as far as Kildare Junction with the train going to Cork?—No.

5025. (*Mr. Glyn.*) Then they start from Dublin a particular train for their service which does not suit the public?—It does not, although we would make ours suit theirs if they started at an hour the public could travel at. If we ran trains now in connexion with theirs, parties would have to start from Waterford between 4 and 5 o'clock in the morning, and could not get back till 11 at night.

5026. (*Mr. Hamilton.*) Does that line belong to the same company as the line from Limerick to Waterford?—No.

5027. Is Mr. Malcolmson a director of your line?—He is; but it does not belong to the Limerick Company. The Waterford and Limerick Company work the Waterford and Kilkenny, but it is only under working arrangements; they have no interest in it more than that. The Great Southern and Western have always set their faces against any sort of effort being made to the northern and midland districts of Ireland with Waterford. In 1846 a bill was obtained to make a line from Kilkenny to Maryborough, and I understand that the Great Southern and Western people at that time bought up the shares in order that the line might fall through. With much difficulty, in 1860, a similar bill was brought in, which the Great Southern and Western opposed most violently, but it was obtained in spite of their opposition. A portion of that line is now made; it has served the traffic of the district to this extent, that for eight weeks, ending 19th May 1865, the traffic of the line from Kilkenny to Waterford has increased over and above the traffic of last year 33 per cent.

5028. The traffic between what points?—Between Kilkenny and Waterford.

5033. (*Mr. Glyn.*) Is not Mr. Malcolmson a great steam-packet owner in Waterford?—He is.

5034. He did not say anything about this in his evidence?—I do not know what he has said in his evidence, but this I know, that the London and North-western Railway Company and the Great Southern and Western Railway Company have lately entered into an arrangement with him, by which the railway and steamboat interests are served to the prejudice of the locality. There has been an arrangement entered into, which was before the citizens of Waterford, and which was condemned by all parties, the effect of which is, that the traffic of the district will be brought to England by Dublin, *via* Liverpool and Holyhead, and that Mr. Malcolmson for the steamers and the Limerick Railway Company will get 30 per cent. of the traffic thus brought to Dublin to allow it to go by Dublin.

5035. (*Mr. Hamilton.*) When you say that "they" get, who do you mean gets the 30 per cent.?—The Limerick Railway to Waterford and the Waterford Steam Packet Company.

5036. Who makes the arrangement?—The North-western and the Great Southern and Western. I have the heads of arrangement which I can hand in if the Commission wish (*the witness handed in the same, vide Appendix AL*). One of the heads, which struck me very much as most injurious to the southern routes, is this:—

"Waterford and Limerick Railway Company, Cork and Limerick "Direct Railway Company" (being another railway company that is subsidized) "undertake that all traffic consigned to them by other "routes than *via* Liverpool and Holyhead, between places in England "and the places in Ireland to which this agreement refers, shall not "be booked through, and shall be charged the local rates."

This refers to the agreement before Commission.

See agreement.

No. 8.—Waterford and Limerick Railway—*continued*.*Extracts of Evidence sent to the Company.**Replies received.*

No through traffic from the districts to which the agreement applies can, under that arrangement at all, come by the Great Western or English Midland systems to England; it must all go by the London and North-western. In that way the traffic of the country is interfered with, and interfered with so as to inflict an immense loss on the localities; and when the North-western and the Great Southern and Western are paying 30 per cent. on all goods for the purpose of making them go in a particular way, they are sure to repay themselves by putting on increased rates.

5037. (*Mr. Glyn.*) In what shape is that 30 per cent. paid; is it by a reduction of rates, or what?—It is 30 per cent. of the monies received for traffic which is allowed to go by Dublin.

5038. Is it in the shape of rates, or tolls, or what?—It is in the shape of money or direct payment; it is in the shape of a direct subsidy. Suppose 100 tons of goods are to be sent from Limerick or Tipperary to Birmingham for which 100*l.* is paid for the transmission, although the Waterford and Limerick Company will not carry one pound of it, and although the Waterford Steamship Company will not carry one pound of it, they will get 30*l.* out of it in order to allow it to go by Dublin, so that the company who actually carry it will only get 70*l.*

5039. (*Capt. Galton.*) The company who carry it giving to the other companies a bonus of 30 per cent.?—Yes, although they do nothing to earn it.

5041. Then I understand your statement to be this, that the Great Southern and Western Railway Company, being interested in the traffic of Dublin, has made some arrangement with the North-western Company to secure all the traffic of that part of Ireland going by way of Holyhead?—Yes.

5042. And in order to secure this they have made some arrangement with the Limerick and Waterford Company and with Mr. Malcolmson's steamers, so as to provide that no part of that traffic shall be diverted by way of Waterford into South Wales?—They have made this arrangement, that upon all goods brought through Dublin to the North-western system in England at Liverpool or Holyhead, and consigned to Birmingham, and places north of Birmingham, that 30 per cent. off the receipts will be paid to the Waterford companies to allow it to go that way.

5043. That has the effect of diverting the traffic from Waterford to Dublin into South Wales?—It has the effect of diverting the traffic of the district to England from Waterford to Dublin, and thence *viâ* Liverpool and Holyhead, and in fact injuring the communication between the southern parts of Ireland and England.

5044. How does it affect the southern parts of Ireland?—Because the traffic that originally belonged to Waterford, and would come to Waterford, is diverted the other way.

5045. It goes north by Dublin?—Yes. In Dublin they have communications two and three times a day with Liverpool and Holyhead, but between Waterford and Liverpool the steam ships only sail twice a week, therefore people who have produce to send will naturally, when they pay equal rates, send all their goods by Dublin, and none will come by way of Waterford. Therefore the diversion of traffic will injure communications between Waterford and England, as the number of steamers will be lessened when they must depend upon the local traffic alone.

5046. This arises from a sort of understanding between the London and North-western Railway Company, the Great Southern and Western of Ireland, the Limerick and Waterford, and Mr. Malcolmson, the owner of the Steam Company?—And also the Cork Steam Shipping Company.

5047. What remedy do you propose for that?—As I said before, there should be some tribunal, such as the Board of Trade, to prevent railways using what I may call a very illegitimate mode of dealing with a public matter, and to forbid them doing such things as would prevent the traffic from flowing in the channel through which it would naturally flow, and not to allow any large company to subsidize a small one to the prejudice of the public interests.

5051. There is nothing illegal in this arrangement?—No, I am not aware that there is anything illegal; but although it may not be illegal, it is highly detrimental.

5052. (*Capt. Galton.*) You think, although not illegal, it is exceedingly injurious to the public interests that such an arrangement should be made?—Yes, and the public have decided so. Here is a resolution which was adopted with reference to it: "That this committee, with all respect for the opinions of the directors, considers these arrangements to be well calculated to divert the traffic of the districts to England *viâ* Dublin, and vitally injure the trade and commerce of Waterford and the southern communications." That resolution was adopted at a meeting of a committee appointed by the merchant traders and citizens of Waterford, the mayor of Waterford being in the chair.

5109. Minerals are not included?—We have not been asked for rates for minerals. Then by the Waterford and Limerick Company's line we have a few rates for passengers, not many, and goods rates from Limerick and Tipperary only; but those are limited to Birmingham, and places north of Birmingham. For a few weeks we had goods rates with them

See agreement.

By the agreement the company carrying the traffic receives 40 per cent. of the full rate. The balance is divided, half to Dublin route, half to Waterford route; and it is the interest of the companies forming either route to obtain the greatest amount of traffic. No traffic is allowed to go by Dublin which can possibly be sent *viâ* Waterford, the object being to secure the 40 per cent. for working; and as a proof of this, the Waterford route, although the longest, and with only alternate sailings, has obtained the largest amount of traffic.

If they can get it. *See previous replies.*

The traffic between the south of Ireland, South Wales, and all places south of Birmingham, is provided for by a daily communication by mail boats *viâ* Waterford, and is not affected by the aforesaid agreement, except by the reservation for places south of Birmingham, which is in favour of Waterford.

No. 8.—Waterford and Limerick Railway—*continued.**Extracts of Evidence sent to the Company.**Replies received.*

to London, but they withdrew them, and we have never been able to get them to renew them since.

5110. (*Capt. Galton.*) What was their reason for withdrawing them? —That I do not know. I believe that line pays no dividend; it would appear to be worked entirely in the interest of the steam-packet proprietors. The Waterford and Limerick Company work the Limerick and Ennis, and the Limerick and Foynes railways, and, I think, the Waterford and Kilkenny line. We have no through rates with any of those.

I have prepared a short tabular statement showing the charges on articles in large daily consumption, and which in my opinion are excessive.

This tabular statement is merely intended to show that the charges for conveying many articles of commerce is excessive, and in most cases considerably in excess of freights from any English port, in some cases double, thereby precluding the possibility of trading, owing to the high rates.

APPENDIX AY.

LETTER from MR. DARGAN ON IRISH RAILWAYS.

SIR,

Dublin, 6th November 1865.

SINCE my examination before the Royal Commission on Railways in June last, I have very carefully considered and studied the entire subject of Irish railways, and being much interested in this class of undertaking, as well as in the general prosperity of Ireland, I venture to state very briefly the course that in my opinion would be productive of most benefit as well to this country generally as to the proprietors of its railways in particular.

I think, then, that the taxation of railway property in Ireland is excessive, and ought to be reduced either by altering the basis upon which the valuation of such property is made out, or by adopting a different kind of assessment with respect to railways from what is applied in other cases.

In order to show the unfairness of the mode in which taxation is imposed, it is only necessary to point out that while a railway relieves the traffic upon a county road, and consequently reduces the expense of keeping such road in repair, the same railway is charged with county cess in proportion to its excess of receipts over working expenditure; and while a railway, by giving and creating employment, diminishes pauperism in a poor law union, it is obliged, nevertheless, to contribute to poor rates in the same proportion.

I am of opinion that the Government should advance to the Irish railway companies a sum of, say 6,000,000*l.*, at the rate of 2,000,000*l.* annually for three years, at 3½ per cent., to enable them to pay off money at present borrowed from private sources at higher rates of interest.

In consideration of the reduction in working expenditure which would be effected by the foregoing means and in proportion to its amount, I think the railway companies should reduce their rates of charge in respect of third-class

passengers and of the lower and less valuable classes of goods, cattle, &c.

The advantage to Ireland generally would not only consist directly in the benefit of cheap travelling and cheap transport of goods, but inasmuch as the money borrowed by Irish railways is almost exclusively Irish money, the paying off of so large a sum as 6,000,000*l.* would induce or compel its being applied to purposes that could not fail to develop many industrial operations that now lie dormant for want of capital to set them in motion.

I am convinced that, beyond what I have suggested nothing is necessary to be done for Irish railways, but that they may be safely left to work out their own mission.

I adhere to the opinion I expressed in the course of my evidence before the Royal Commissioners, that an amalgamation of Irish railways under one general management would lead to a large saving in working expenses, but as in my judgment this ought not to be compulsory, and would take a considerable time and cost some 22,000,000*l.* to effect, I think the course I have suggested would be most expedient and most easy of accomplishment.

I should wish particularly to impress upon the Royal Commissioners the desirability of existing railway projects in Ireland being allowed to establish themselves before any new schemes shall be authorized; or at any rate that promoters of new undertakings should be obliged to give very satisfactory proof both of their *bona fides* and of their financial ability to carry out what they undertake.

I am, &c.
(Signed) WM. DARGAN.

W. Pole, Esq.,
Secretary, Royal Commission on Railways,
House of Lords, Westminster.

APPENDIX BC.

EXPLANATION from MR. FISHBOURNE.

(Extracts of questions and answers Nos. 1824 to 1828, and 4563 to 4572, were sent to Mr. Fishbourne, and the following is the essential part of his reply.)

London and North-western Railway Company,
via Holyhead, L. Fishbourne, Agent.
SIR, Bachelor's Walk, Dublin, 1st July 1865.

I HAVE the honour to acknowledge the receipt of your letter of the 1st inst. this day on my return home from the continent, enclosing me extracts from the evidence given by Messrs. Haughton, Murland, and Forbes, before the Royal Railway Commission; the evidence of the latter gentleman, reflecting on my conduct as a railway agent in this city, contains statements which I beg to give the most unqualified contradiction, and I challenge Mr. Forbes to produce one single case.

My rates for cartage as arranged by agreement are distinct from the railway charges, and are published by the railway companies for the information of the public in their goods stores, so that when they wish me to cart their goods, they know beforehand what they have to pay for cartage, and the goods when carted by me are in all casses accompanied by a delivery note (made out by the railway companies), setting forward a full description of the goods, the weight, the rate for railway charge and amount, together with my own special charges for cartage. The public have at all times the option of employing any other carrier or of using their own carts.

William Pole, Esq.,
House of Lords,
Westminster, S.W.

I have, &c.
I. FISHBOURNE.

Mr. Fishbourne subsequently transmitted the following copy of the notice referred to in his letter.

COLLECTION AND DELIVERY IN CONNEXION WITH THE GREAT SOUTH-WESTERN RAILWAY OF IRELAND.

If the goods be collected or delivered they will be subjected to an increased charge according to the following rates. All goods brought to the receiving offices, 15, Duke street, and 26, Bachelor's walk, will be conveyed to Kingsbridge Station at the rate of 2d. for each article or lot of goods up to 112 lbs. weight; 3d. for 168 lbs., and so on, 2d. per cwt., up to 12 cwt., and from that quantity to 1 ton, the charge will be 2s. The same prices will also be charged for the delivery of packages or goods from Kingsbridge Station to places within the Circular Road, and when that distance shall be exceeded, an additional penny per cwt. per mile, will be charged. For any quantity of goods exceeding 20 tons, the charge will be 1s. 9d. per ton, and if exceeding 30 tons, 1s. 6d. per ton. Carts may be employed specially for the collection or delivery of goods at the rate of 2s. for any quantity up to 10 cwt., above which, the usual rate will be charged, and goods will be collected from any part of Dublin, on notice being sent to the offices, 15, Duke street, or 23, Bachelor's walk.

In like manner, the charges and arrangements stated above apply to all distances within 3 miles of the chief stations on the line. A list of the country receiving offices will be found on the other side.

All goods forwarded on the line will be delivered by the company, unless otherwise directed.

The delivery of goods will be considered complete when the same are unloaded out of the waggon, dray, van, or cart, and placed at the door of the consignee; the cellaring or warehousing of them afterwards will be at the owner's risk, so also will be the removal of goods from the sender's premises into the cart or waggon.

APPENDIX BD.

LETTER from MR. HENRY OLDHAM of DUBLIN, in respect to the Through Charges for Passengers between England and Ireland.

LONDON AND DUBLIN TRAFFIC.

SIR, 42, Fleet Street, Dublin,
9th November 1865.
AM I in order or in time in directing the attention of the Commissioners to the unequal charges imposed on the City of Dublin in reference to the passenger traffic to and from London, and the route of the London and North-western Railway? The complaint applies as well to the Liverpool as the Holyhead route. I quote first-class fares, second-class being in proportion.

By Holyhead mail:—	£	s.	d.
1st class single ticket to Dublin	-	3	2 0
" " " Cork	-	3	15 6
" " " Belfast	-	3	5 0
1st class return, Dublin	-	5	3 0
" " " Cork	-	5	6 6
" " " Belfast	-	5	7 0

The consequence is that mercantile travellers coming to Dublin only book to Belfast or Cork, and on arrival here sell the ticket to Cork or Belfast at a reduction. Such tickets are constantly on sale at the leading hotels. Fare, Dublin to Cork 30s., Belfast 20s.

By Holyhead and North Wall:—	£	s.	d.
1st class single to Dublin	-	2	6 0
" " " Cork	-	3	0 0
" " return to Dublin	-	3	9 0
" " " Cork	-	4	10 0

By Liverpool, until very recently, in consequence of the combination of the City of Dublin Steam Packet Company and the London and North-western Railway, there was not any through booking. Within the last month passengers may book through by steam ships of a new company con-

nected with the Great Northern Railway, but not by the London and North-western or by the Great Western.

Belfast passengers can book through by Liverpool, Fleetwood, or Morecambe, and from Liverpool by either of the three lines to London, at following rates:—

Belfast to London:—	£	s.	d.
1st class single	-	2	0 0
" " return	-	2	10 0
2nd class single	-	1	10 0
" " return	-	2	0 0

Dublin passengers can book through only by the Great Northern Railway, and are charged—

Dublin to London:—	£	s.	d.
1st class single	-	2	6 0
" " return	-	3	9 0
2nd class single	-	1	19 0
" " return	-	2	13 6

While the steam-boat fare from Belfast to Liverpool and distance are more than from Dublin to Liverpool. These fares from Dublin are the same as those from Dublin River by Holyhead, and must have been arranged in concert with the London and North-western Railway. The injustice of the charges is self-evident. The London and North-western Railway Company should be bound to place Dublin and Belfast on the same footing in relation to their traffic by Liverpool.

Your obedient Servant,
R. Jackson, Esq., Secretary,
Railway Inquiry Commissioners,
Leinster Chambers, Dublin.

APPENDIX BE.

MR. ROE'S REMARKS in reply to MR. COTTON'S EVIDENCE before ROYAL COMMISSION.

On 25th July I wrote Mr. Cotton asking permission to inspect the books which I left with him for the purpose of informing the Royal Commission as accurately as possible the particulars of the traffic receipts, number of passengers, and fares charged during the time I worked the line.

He replied as follows:—

(Copy of letter.)

"DEAR SIR,—Your evidence has been submitted to my board, and I am to give evidence upon it as soon as the Royal Commission meets again. It appears to me you will *perhaps learn from my evidence the information you require.*

"Yours truly,
"E. J. COTTON."

Mr. Cotton's Statement.

7788. Are the Commission to understand you to state that in no case has the increase exceeded 5 per cent. upon the fares that prevailed in Mr. Roe's time?—No, that was the advance that was made throughout the whole line.

Mr. Roe states, in answer to Questions 5740 and 5741, that he reduced the fares. This I state to be positively untrue. He then gives in proof a statement made by Mr. Garrett.

7789. Mr. Cotton puts in a letter from Mr. Hamilton, Newtownlimavady, and states there are no labourers travelling over the line.

7791. Mr. Cotton states, respecting third-class fares, I had a good deal of correspondence with Mr. Roe on the subject, and it was not until the 1st of May 1860 that we induced him to issue, in connexion with us, the third-class return tickets.

No advance made in goods rates.

THROUGH RATES TO ENGLAND.

In most cases he says we get our local rates from Derry to Belfast.

7794. Mr. Cotton denies any advance of fares, and attributes the falling off in receipts to bad harvests and the opening of the Dungannon line.

7799. Mr. Cotton states, in 1860 my receipts were 17,959*l.* 5*s.* 6*d.*

7810. Mr. Cotton states that in Mr. Roe's receipts cartage was included.

7818. Mr. Cotton states, I publish at the end of my evidence a statement of fares, and that he, Mr. Cotton, acted upon them after I left, and that he never heard of any other fares.

7819. Mr. Cotton states the fares to Coleraine correctly, but does not give the fares to stations between that and Derry.

7823. Mr. Cotton directly contradicts my statement.

7824. Mr. Cotton states, that in his opinion the Irish traffic is fully developed at present without any reduction of rates.

7825. Mr. Cotton states, I did not issue market tickets, and that he never heard complaints in the north of Ireland as to his present fares.

7829. Mr. Cotton, in giving fares, states, at present the increase is about 5 per cent. over the original fares in Mr. Roe's time.

7853. Mr. Cotton states the increase in the fares has not been much talked of.

7873. Mr. Cotton states the population of Derry and Coleraine is decreasing.

7875. Mr. Cotton states, that on his taking up the line I advised him to close several stations.

Mr. Roe's Reply.

The fares third class between Newtownlimavady and Derry were increased from 1*s.* to 1*s.* 4*d.*, or 33 per cent.

Mr. Garrett was asked to write this particular style of letter under pressure; and not knowing the object in view by Mr. Cotton, the boy did as he was told. He now states he is not quite sure about it; he did not issue all the tickets.

Mr. Hamilton, in his letter lauding Mr. Cotton's management, omits to state that the traffic to and from his station is considerably more than the traffic of *all* the other intermediate stations between Derry and Coleraine; yet the third-class fares are 33 per cent. higher than in my time. He also omits to mention that the rate for goods, delivery in Derry included, is from 1*s.* to 1*s.* 6*d.* per ton more than I charged.

I have had frequently as many as 50 in one day between Derry, Eglintown, and Culmore; return fare, 3*d.*; distance, 12 miles there and back.

The very reverse is the fact. It was I who urged upon Mr. Cotton the importance of issuing return third-class tickets between Belfast and Derry. I was always in favour of cheap fares.

I delivered goods in Derry in *many cases free*, and never charged more than 6*d.* to 9*d.* per ton. Mr. Cotton charges 1*s.* 6*d.* per ton delivery.

This is not a fact. The local rate from Derry to Newtown, a distance of 18 miles, for flour is 4*s.* 6*d.* delivered; and for the same goods from Derry to England, *via* Fleetwood, the mileage proportion for this distance is about 1*s.* 4*d.*

As I have already stated, the fares have been increased in one instance at least 33 per cent.

Bad harvests is another name in Ireland for *bad management*. The value of the Omagh traffic, about 150*l.* per annum, was known to Mr. Cotton when he took up my lease.

My receipts, in 1860, were positively over 18,200*l.* If Mr. Cotton's receipts were so much more than mine in 1861, how is it that both himself and his chairman stated openly they were losing 2,000*l.* per annum by the line? If so, the management must have been extravagant.

This is not the case; I kept a separate cartage account. A good deal of my Derry goods were delivered free.

Every person in and around Derry knows that I had special fares and rates, and in giving the Commission the rates I charged, I took as fair an average as I could without the assistance of my books.

I never reduced the fares (except on the occasion of an excursion) to Coleraine; it was a joint station; but to the stations between that and Derry I reduced them as circumstances warranted.

It will be for the Commission to form an opinion whether he is justified in doing so.

The Irish traffic is not half developed at present.

A reduction of 30 per cent. on present rates would increase the traffic 50 per cent.; I have proved it, and I will prove it again at my own risk.

I did issue market tickets, and gave *buyers free* tickets.

At present, and for a considerable time, complaints are loud and numerous of the increased rates and fares on this line.

In some instances the increase is 20, 25, and 33 per cent. higher than in my time.

Any person who comes in contact with the traders of Derry, Coleraine, and intermediate stations will not verify this statement.

"I say it is not."

"See Thom's Almanack."

This is, to use his own words, **POSITIVELY UNTRUE**. I actually advised him to keep them open, and used my influence with him to keep at least two of them open, and letters passed between us upon the subject. It paid me very well to stop at those stations.

PETER ROE.

Received with letter dated 25th November 1865.

APPENDIX BG.

STATEMENT of IRISH RAILWAYS, classified according to the DIVIDENDS PAID.

* * The Dividend Columns are taken from the Dublin Weekly Stock and Share List, of 10 to 16 Nov. 1865. All the other Columns are from the Board of Trade Reports for 1864.

	Two last Half-Years' Dividend per Cent. per Annum.		Ordinary Capital paid up, 31 Dec. 1864.	Pre-ferential Capital.	De-benture Stock.	Net Receipts for 1864.	
	1864.	1865.					
1st Class. Paying no Dividend on some Class of Preference Stock for 1864 :—							
Banbridge, Lisburn, & Belfast	—	—	£ 86,082	£ 40,000	- -	- -	See Ulster.

APPENDIX BH.

ABSTRACTS of RETURNS from IRISH RAILWAYS on CHARGES for GOODS TRAFFIC.

INQUIRY No. 1.,

Containing various Questions in regard to Railway Charges on various kinds of Goods stated in the List.

This Form of Inquiry was sent to the various Railway Companies, with the following Letter :

LETTER sent by the COMMISSION to the RAILWAY COMPANIES of the UNITED KINGDOM asking for RETURNS of CHARGES.

ROYAL COMMISSION ON RAILWAYS.

SIR,

House of Lords, S.W., 1865.

I AM directed by the Royal Commission on Railways to inform you that they are desirous of obtaining accurate information respecting the actual charges made by the several railway companies for the conveyance of certain classes of articles upon the lines under their management, or over which their trains run.

With this object they have caused the enclosed form of inquiry to be drawn up, and they will feel much obliged by your answering the questions contained therein as fully as possible, and returning it to me as early as you can conveniently do so.

I am, &c.

WILLIAM POLE,
Secretary.

1 a.—What is the Minimum charged per Ton for each Article for the shortest Distance?

ANSWERS TO QUESTIONS 2c to 9.—TRAFFIC IN COMPANIES' WAGGONS.

	Belfast and County Down.	Belfast and Northern Counties.	Cork and Bandon.	Cork and Kinsale Junction.	Cork and Youghal.	Cork, Blackrock, and Passage.
2c. What is the charge per ton for terminal or station accommodation?	No charge made - - -	No defined charge - - -	Nil.	—		
2c. Is it included in the foregoing charges?	Yes - - -	Terminal and station accommodation is included in charges given.	—	—		
2d. What is the charge for loading and unloading when done by the Company?	We would not load or discharge a larger quantity than a portion of a wagon load. Smaller quantities than wagon loads (5 tons) when loaded by the company are charged at the rate of goods of the next higher class, which, as well as I can average our rates, would be a fourth more than the rates quoted.	We never load or unload this description of traffic.	—	—		
2d. Is it in addition to the foregoing charges?	Yes.	—	—	—		
3. Are the above mileage charges uniformly applied between all stations on your system of railways?	(See below)* - - -	I have endeavoured to give a fair average, but the rates given will not apply in all cases.	Yes, with the following exceptions.	Yes.		
4. If not, state the nature of the exceptions.	(See below)* - - -	The following are a few of the exceptions : <i>cods</i> , Londonderry to Coleraine, 33 miles, 2s. per ton ; Belfast to Ballymoney, 54 miles, 4s. per ton ; <i>gravel</i> and <i>sand</i> , Toome to Belfast, 36 miles, 2s. per ton ; <i>freestone</i> , Cookstown to Belfast, 54 miles, 3s. 6d. per ton ; <i>broken stones</i> , Castlerock to Londonderry, 28 miles, 1s. 9d. per ton.	The rates between Cork and Kinsale for 24 miles are the same as those between Cork and Bandon for 20 miles, on which distance the rates were originally struck.	—		
5. Is the traffic of this class conveyed at the owners' risk, or otherwise?	Conveyed at owners' risk if in 5 ton lots, loaded and unloaded by themselves.	At owners' risk - - -	Yes (owners' risk) - - -	At owners' risk.		No return. No goods' traffic. Pleasure line.
6. If not, state in what respects you depart from this condition?	Small quantities under 5 tons which are charged for at the higher rate are conveyed at the risk of the company.	—	—	—		
7. Do you undertake to deliver this class of traffic within a specified time?	Yes ; within 24 hours, unless we guard ourselves against liabilities for delay in the receipts given for the goods.	No - - -	Yes ; but at the stations only - - -	Yes.		
8. What time is allowed at the stations for loading and unloading this class of traffic.	24 hours nominally is the time allowed ; but we cannot enforce demurrage. The unreasonable detention of our wagons is one of the chief difficulties we have to contend with.	24 hours is the time allowed ; but it is generally detained longer, and it is with great difficulty we can obtain any charge for demurrage.	24 hours - - -	24 hours.		
9. What charge do you make for demurrage of wagons?	—	3s. per diem - - -	Our regulations allow us to charge 3s. per day or part of a day.	Our regulations allow us to charge 3s. per day or part of a day.		

* The distances over which goods traffic is carried on the Belfast and County Down line are so short, and the line itself is so circuitous, that our goods rates have not been calculated at any uniform rate per mile, but have been struck to meet the competition by road. The rates quoted per mile will therefore not work out exactly correct for all our stations, an average mileage rate having been deduced as nearly as practicable from the arbitrary rates charged to the different stations. Goods are frequently conveyed at rates less than those quoted by special agreement. We have generally to make a bargain for large consignments. We frequently take coarse traffic, such as the articles named in this list, for a minimum charge of 5s. per 5 ton wagon for distances under 10 miles, and 10s. per wagon for 27 miles, and intermediate distances in proportion, but always in such cases with an understanding as to the quick discharge of our wagons.

ANSWERS TO QUESTIONS 2c to 9.—TRAFFIC IN COMPANIES' WAGGONS.

	Dublin and Belfast Junction.	Dublin and Drogheda.	Dublin and Meath.	Dublin, Wicklow, and Wexford.	Great Southern and Western.	Irish North-western.
c. What is the charge per ton for terminal or station accommodation?	Included in charges	-	None	No charge beyond the mileage rate.	1s. 6d. excepting on draining pipes and tiles (agricultural).	Nil.
2c. Is it included in the foregoing charges?	The terminal is in the charges	Additional -	Yes	No charge beyond the mileage rate.	Yes.	---
2d. What is the charge for loading and unloading when done by the Company?	Not done by this company	Not done by this company	Done in all cases by owner- ptions:— <i>Iron ore</i> , 9d. per ton in addition to mileage charge. 9d. per ton is the charge for haulage for $\frac{1}{4}$ mile on tramway; transfer of load from tramway wagon to railway wagon, unloading at port, and for shipping. <i>Sulphur ore</i> , 1d. per ton loading, and 1d. per ton unloading.	This company does not load or unload, with the following exception:— <i>Iron ore</i> , 9d. per ton in addition to mileage charge.	Not done by this company. As respects <i>peat</i> and <i>salt in bulk</i> , is included in terminal.	Nil.
2d. Is it in addition to the foregoing charges?	Nil	Nil	Owner does all	In respect to <i>iron ore</i> and <i>sulphur ore</i> it is in addition to mileage charge.	As respects <i>peat</i> and <i>salt in bulk</i> , it is included in the terminal.	---
3. Are the above mileage charges uniformly applied between all stations on your system of railways?	Generally they are -	Yes, as a general rule, but with occasional exceptions.	Yes, as nearly as possible	Yes	No	Yes, as near as may be.
4. If not, state the nature of the exceptions.	When there are two routes the public have the advantage of being charged for the shortest.	When the route per rail is circuitous we give the public the advantage, and charge only for the direct distance.	<i>Coals</i> are carried in most cases at very little beyond 1d. a mile a ton.	---	Vary where distance by rail is greater than that by road, and at competitive points.	---
5. Is the traffic of this class conveyed at the owner's risk, or otherwise?	Nominally at owners' risk, but there is little risk in carrying this class of traffic.	Nominally, but there is little or no risk.	At the owners' risk	Risk of company	Except <i>peat</i> and <i>salt</i>	At owners' risk, except in the case of <i>manufactured salt</i> .
6. If not, state in what respects you depart from this condition?	Nil	Nil	No departure	---	---	---
7. Do you undertake to deliver this class of traffic within a specified time?	Within 48 hours, unless there is some arrangement to suit circumstances.	Within 48 hours, unless otherwise arranged.	No specific understanding, but as a rule we deliver nearly with as great regularity as if ordinary goods.	No	No	We undertake to convey it on the railway in reasonable time, but not to collect nor deliver it to or from the station.
8. What time is allowed at the stations for loading and unloading this class of traffic?	One day for loading; two days for unloading.	24 hours	24 hours, but a much longer space is allowed in practice.	24 hours	24 hours	No limit is, in practice, made.
9. What charge do you make for demurrage of waggons?	3s. per day is the charge, but it is seldom enforced.	None in practice; nominally 3s. per day per wagon.	3s. a day, but in no case exacted up to this date.	3s. per day, but rarely or ever charged.	3s. per wagon per day	We have never as yet charged demurrage.

NOTE.—The Irish North-western district is almost exclusively agricultural; there is very little manufacture, and very little mineral traffic.

ANSWERS TO QUESTIONS 2c to 9.—TRAFFIC IN COMPANIES' WAGGONS.

	Midland Great Western.	Newry and Armagh.	Newry, Warrenpoint, and Rostrevor.	Ulster.	Waterford and Limerick.	Waterford and Tramore.
2c. What is the charge per ton for terminal or station accommodation?	Nil	6d. at each end	6d. to 1s.	Included in the foregoing charges, but is varied according to circumstances.	The foregoing rates are inclusive of terminal accommodation.	—
2c. Is it included in the foregoing charges?	—	Local; yes, for one end only 2 companies; no, 3 companies; no.	Yes	Included in the foregoing charges, but is varied according to circumstances.	Yes.	—
2d. What is the charge for loading and unloading when done by the Company?	6d. per ton	3d. per ton at each end	3d. to 8d.	Loading and unloading are performed by the sender and consignee. If done by this company, only actual payments for this service are charged.	The loading and unloading are not performed by this company, except under special agreement, and vary from 3d. to 6d. per ton.	—
2d. Is it in addition to the foregoing charges?	Yes	Yes	Yes, in the case of the 9d. rate; i.e., compost, gravel, manure in bulk, materials for road repairs, scoria, and slag.	(See preceding reply)	Yes.	—
3. Are the above mileage charges uniformly applied between all stations on your system of railways?	No	No	This company has only terminal stations.	No	They vary according to circumstances.	Yes.
4. If not, state the nature of the exceptions.	The rates quoted are in general use; but reduced rates are made for certain quantities under particular conditions, and to suit the requirements of particular districts.	Competition by road, canal, and other railway lines.	—	The exceptions are so very numerous that it is impossible to enumerate them in this return.	The exceptions are when it is found necessary to obtain the traffic at special lower rates than the ordinary tariff, but this applies principally to cargoes or large quantities.	—
5. Is the traffic of this class conveyed at the owner's risk, or otherwise?	Owners' risk	At owners' risk	No	At owners' risk in all cases	As a rule, it is carried at owners' risk.	Company's risk.
6. If not, state in what respects you depart from this condition?	By increasing the rates 20 per cent.	—	—	—	According to circumstances; and in respect to damage where it proceeds from circumstances beyond the control of senders.	—
7. Do you undertake to deliver this class of traffic within a specified time?	No	No	No	No	Lowest specific time for delivery; but generally 24 hours.	Within the day.
8. What time is allowed at the stations for loading and unloading this class of traffic?	24 hours; Sundays, Christmas Day, and Good Friday excepted.	24 hours	Two clear days; and the company assists to load and unload all traffic and generally does all the portage duties to avoid demurrage.	A clear day; unless under special circumstances, when a further reasonable time is allowed.	24 hours.	—
9. What charge do you make for demurrage of waggons?	3s. per waggon per day	3s. per diem	3s. per day	3s. per day, under clearing house regulations; but it is rarely enforced.	3s. per day after 24 hours.	—

	Irish North-western.	Midland Great Western.	Newry and Armagh.	Newry, Warrenpoint, and Rostrevor.	Ulster.	Waterford and Limerick.	Waterford and Framore.
TRAFFIC IN OWNERS' WAGGONS.							
10. State in the following table the charges on your own line for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement.							
10 <i>g</i> . Do the charges include returning empty waggons?							
11. Are the above charges uniformly applied between all stations on your system of railways?							
12. If not, state the nature of the exceptions							
13. Is the traffic of this class conveyed at the owners' risk, or otherwise?							
14. Do you undertake to convey this class of traffic within a specified time?							
15. And to return the empty waggons within a specified time? And if so, in what time?							
16. Do you allow demurrage on owners' waggons when not returned within the specified time?							
THROUGH TRAFFIC.							
17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions?	17. Yes -	17. Yes, in company's waggons.	17. Yes, where permitted. Otherwise, this is specially brought before the committee.	17. Yes -	17. Yes -	17. We have through rates for this class of traffic with other companies.	-
18. Are the junctions considered as stations for this class of traffic?	18. All our junctions with other lines are situate at stations.	18. Yes -	18. Not always -	18. Yes -	18. The junctions are at stations in all cases.	18. Yes.	-
19. If not, state the exceptions	-	19. See reply 18 -	19. When accommodation not suitable for loading or unloading of goods.	-	-	19. None.	-
20. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?	-	20. Each company delivers at the junction of the other company. A wagon with more than two tons is sent through to destination of its contents.	20. The goods are re-booked at local rates, and waggons sent forward under railway clearing house regulations.	20. Goods booked to the most distant through station in either direction to destination, and thence re-booked.	20. Local charges are made to the junction stations, and goods are either passed by transshipment or sent by the company convenient for the companies.	20. If there is a ton weight or upwards, the wagon is passed on to the foreign company's line, then less than that quantity it is passed at the junction where the first charge becomes a "paid on," on the foreign line.	
CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.							
21. Have you any scale of charges applicable to contracts? If so—	21. No -	21. No -	21. No -	21. Neither -	21. -	21. None -	21. No.
a. Is the charge based on a minimum annual payment, or on the quantity carried?				a. That all the traffic shall be sent by the contracting party, and settlements monthly.	a. No -	a. None.	
b. Or how otherwise?						b. None.	
22. Have you any special contracts independent of the foregoing scale of charges or conditions?	22. No -	22. No -	22. Special rates are made upon certain staple articles of transit, and on certain quantities of same.	22. Yes -	22. No -	22. None.	-

APPENDIX BL.

MEMORANDUM on the COAL TRADE of IRELAND.—By WILLIAM K. SULLIVAN, Ph. D., Professor of Chemistry to the Industrial Museum of Ireland.

AMONG the probable sources of a prospective increase of goods traffic upon Irish railways, coal undoubtedly holds the first rank. In order to determine the value of this source, or in other words to ascertain whether the use of coal in the interior of Ireland will so far increase as to materially affect railway traffic, we have to consider the following points. 1. What is the present coal importation into Ireland, and has it materially increased within the last 20 or 30 years? 2. What is the relative cost of peat and coal, and what probability is there of peat being largely used in manufactures? 3. What are the relative proportions of the coal consuming and peat consuming portions of Ireland? This subject has not attracted the attention it deserved, and consequently it is not easy to procure accurate statistics respecting some points of the inquiry; much however of what I shall give in this memorandum will be found to be based upon very accurate data not hitherto brought together.

In the year 1825 the amount of coal imported into Ireland was estimated to be 738,253 tons. The Irish Railway Commissioners estimated the import in 1835 to be 1,001,378 tons. According to a return made by the local officers of customs, and moved for at the end of the last session of parliament by Mr. Monsell, the importation in 1864 was 2,113,209 tons. The following table shows the quantities imported through the different ports in the years 1835 and 1864 respectively:—

EASTERN PORTS.*			
Name of Port.		Number of Tons of Coal and Coke imported in	
		1835.	1864.
Ardglass and Kinlough	- -	4,088	—
Arklow	- -	4,186	—
Balbriggan	- -	11,373	—
Ballycastle	- -	148	—
Belfast	- -	141,250	562,767
Coleraine and Portrush	- -	3,777	13,994
Cork	- -	115,614	264,199
Donaghadee	- -	5,186	—
Drogheda	- -	37,000	48,465
Dublin	- -	349,230	675,055
Dundalk	- -	25,363	72,066
Dungarvan	- -	9,877	—
Larne	- -	9,185	—
Londonderry	- -	13,966	—
Newcastle Creek	- -	2,987	—
Newry	- -	26,627	100,852
Ross	- -	24,550	25,670
Strangford	- -	13,133	40,503
Waterford	- -	64,630	120,014
Wexford	- -	29,000	45,010
Wicklow	- -	7,296	—
Total	- -	898,466	2,042,301

WESTERN PORTS.			
Ballina	- - - -	600	1,500
Ballyraine	- - - -	518	—
Ballyshannon	- - - -	1,225	—
Baltimore	- - - -	697	—
Bantry	- - - -	205	—
Berehaven	- - - -	2,066	—
Clare	- - - -	1,671	—
Donegal	- - - -	598	—
Galway	- - - -	4,879	9,499
Killala	- - - -	284	—
Kilrush	- - - -	88	—
Kinsale	- - - -	13,500	—
Limerick	- - - -	29,638	36,974
Skibbereen	- - - -	—	8,434
Sligo	- - - -	6,184	6,606
Tralee	- - - -	1,675	5,792
Westport	- - - -	2,533	2,103
Total	- -	66,379	70,908

The returns for 1864 are not as complete as those of 1835, as they do not include the small quantities imported through such small ports as Balbriggan, Bray, Youghal, &c. The total amount thus imported is however small, and though it would help to increase the quantity of coal now consumed compared with that used in 1835, it would not change the general conclusions deducible from the preceding table. Of those conclusions I shall only here mention one, namely; that while the import of coals through the eastern ports has more than doubled, and that with few exceptions the quantity imported through each port has considerably increased, the total quantity of coal imported through the western ports on the other hand has not much increased, and no marked increase has taken place in the import of any port.

The great increase in the consumption of coal which has taken place since 1835 is partly due to the increase of manufactures, but chiefly to the substitution of coal for peat. The increase has been more rapid within the last 15 years than in the period from 1835 to 1850; the substitution of coal for peat is to be attributed to the exhaustion of bogs in certain districts, and the diminution of population, and the consequent rise of the rate of wages in the districts supplied by the eastern ports. The substitution of coal for peat which the increase of the coal trade shows, proves that the cost of peat fuel must be as high as that of coal in the districts where the substitution has taken place. This brings me to the second point I have to consider; namely, the relative cost of coal and peat.

The coal used in Ireland is almost wholly derived from four districts, Scotland, Cumberland, Lancashire, and South Wales. The price of coal depends upon the locality from whence it is obtained, and upon its special quality.

Scotch steam coal can be imported into Dublin at from 10s. to 11s. per ton. Workington and other Cumberland steam coals of good quality cost from 12s. to 12s. 6d. The inferior qualities of South Wales coal could be imported at from 10s. 6d. to 12s. 6d. The best Whitehaven picked coal for domestic purposes may be imported at from 14s. to 14s. 6d.; and Wigan coal for 1s. more. The best picked South Wales coal costs about 16s. per ton, that being the contract price paid last year by one of the great railway companies. The prices in Cork and Waterford for South Wales coal are about the same. The railway company just alluded to paid only 3d. per ton less for the portion of their contract coal delivered at Cork. Three or four years ago this company paid only 14s. 6d. per ton for the same kind of coal for which they are now paying 16s. The freights are usually about 6s. to 6s. 6d. per ton from South Wales to Cork or Dublin; but when back freights of ore or other heavy goods can be regularly shipped to the coal exporting port, the freight per ton of coal, from, say Swansea to Waterford, is sometimes not more than 2s. 6d.

There being no coal wharves connected with the Irish railways, and the stations of the railways in Dublin, with one exception, being at a considerable distance from the quays, any coal sent by railway must be carted from the ships to the stations. This costs at least 1s. 6d. per ton. Two of the railway companies get their coal by canal to their coal depôts. The depôt of the Great Southern and Western Railway is about 1½ miles from their terminus; the cost by canal and a small branch line from the port to this depôt is, I am told, about 1s. 9d. per ton. We have therefore to add to the cost of the coal as delivered at the quays 1s. 6d. for cartage, and at least 6d. for loading at the station. The following table will afford an idea of the cost of a few of the different kinds of coal imported into Dublin, when carried to different railway stations in the interior of the country.

* I include under this head all ports along the northern, eastern, and southern coasts between the ports of Londonderry and Cork. Under "Western Ports" I include all the ports of the southern, western, and northern coasts west of Cork and Londonderry.

I have given Knocklong as an example of very nearly the extreme distance that coal need to be carried by railway from a port in Ireland. As Knockling is only about 48 miles from Cork it would be supplied with coal from the nearer terminus.

The average rate per ton per mile charged upon the Irish railways appears to be somewhat above one penny. Taking it at one penny the minimum charges upon one ton of coal carried from the quays of Dublin to a station 50 miles distant amount to 6s. 2d. If there were a central station in Dublin connected with a proper coal wharf a saving of at least 1s. 6d. per ton would be effected; and if a reduction in the present rates of carriage on the railways to one half were made, the total saving in the carriage of coal to a station 50 miles from Dublin would be 3s. 7d. The following table will show approximately what the cost per ton of the principal kinds of coals imported into Dublin would be at stations 50 and 100 miles distant respectively from Dublin, supposing the existence of a central station and coal wharf, and the rate of carriage 0·5d. per ton per mile, including termini.

Cheapest Welsh coal -	13 1		15 2	
Scotch steam coal -	12 7 to 13 7		14 8 to 15 8	
Workington steam coal -	14 7 to 15 7		16 8 to 17 2	
Best Whitehaven house coal.	16 7 to 17 1		18 8 to 19 2	
Wigan - - -	17 7 to 18 1		19 8 to 20 2	

These prices are to be looked upon only as approximations, and are exclusive of waste and importers' profit; they represent, in fact, the cost of coal to a manufacturer who directly imports at least a cargo, and are in all cases the prices actually paid during the last eighteen months. I know of at least one case where, under favourable conditions as to freight, and by a special arrangement with a railway company, the best Welsh coal has been imported into the interior of Ireland to a station about 70 miles from the port for 17s. 6d. per ton.

In order to determine the cost of peat or turf I shall have to make some brief observations on the different kinds of peat bogs found in Ireland and the different qualities of fuel obtained from each.

Peat bogs are found in every county of Ireland and are more or less used everywhere as sources of fuel. They may be divided into three categories,—1, the great flat bogs which lie in hollows of the central plain of Ireland, chiefly in the counties of Kildare, King's, Queen's, West Meath, Galway, &c.; 2, the mountain bogs, which covers

the flanks and table lands of all or nearly all the mountains; 3, isolated bogs, of more or less extent, scattered through the whole country. The central bogs are often very deep, being in parts from 36 to 40 feet deep, and yield peat of three kinds,—1, that from the upper layer, consisting of a light spongy mass, chiefly composed of moss, in which the vegetative structure is still more or less perfect, and the remains of heath and bog plants, and having, when air-dried, a specific gravity of about 0·300, but being sometimes as low as 0·220; 2, that from the middle layer, consisting of a more or less brown compact peat, in which the vegetable structure is more or less obliterated, and which, when air-dried, varies in density from about 0·400 at the upper part, to about 0·700 at the bottom, the average density being about 0·500; 3, that from the under layer resting on the marl, clay, or gravel, and consisting of black compact peat, in which the vegetable structure is almost obliterated, and varying in density from 0·700 to 0·950. Generally speaking, the mountain peat belongs to the black or dense brown varieties, and has a specific gravity of from 0·600 to 0·800 when air-dried. Here and there, however, deep bogs, containing light and brown peat like the flat central bogs, are found on the table lands and in parts of mountain valleys. The peat of the isolated bogs partakes of the character of both the central and mountain bogs. Some yield more or less light peat, but generally they yield good brown or black peat.

In the deep bogs all the turf is "slane-cut," that is, it is cut off a bank in the form of bricks. When fresh cut, the average brown peat contains from 80 to 85 per cent. of water; or, in other words, fresh cut turf contains from four-fifths to five-sixths of its weight of water. The amount of water in air-dried turf varies according to its quality, age, and how stored. Out of 27 specimens of peat of different kinds and from different localities, but all from the great flat bogs, I found the amount of water to vary from 16·39 per cent. to 19·70 per cent. in 10 specimens of old wall-dried peat, and from 20·32 to 29·73 per cent. in 15 specimens of average turf in use in the country. In one specimen of turf stored under cover for three years the amount of water was only 10·44 per cent., while in another used on the Shannon steamboats it amounted to 33·27 per cent.

A good deal of black peat of wet bogs is taken up as pulp and formed into bricks. This kind of turf is called "hand" turf, and is usually very dense (from 0·700 to 0·900 or even 1·000), and contains less water when well air-dried than "slane" turf. The usual percentage of water in such turf varies from 10 to 15. The average amount of water, however, in all the turf consumed in Ireland may be taken at from 20 to 25 per cent.

The small isolated black bogs are rapidly disappearing, and in any case could not give rise to a large and steady production of fuel. It is only to the great flat bogs and to a few well situated mountain bogs that we can look for a supply of fuel to compete with coal. In estimating

the cost of turf, we must accordingly base our calculations upon data obtained during operations conducted upon the flat bogs. Considering the importance of the method, it seems strange that no trustworthy estimate of the cost of producing peat in Ireland has been published, at least so far as I know. All the statements I have seen are mere guesses, and not based upon actual results. Turf being sold by measure and not by weight, the cost must necessarily vary very much, not merely on account of the price of labour, the distance carried, the scarcity or abundance of bog in the district, &c., but also and especially on account of the variation in density of turf cut even on the same bog. This is no doubt the reason why no one has undertaken the task of directly determining the cost of peat.

A few years ago I had an opportunity of determining on a great scale the relation between the volume and weight of different qualities of peat, and the cost of cutting and stacking it on the bog. The bog upon which the experiments were made was one of the deep flat bogs of the central plain. The following table contains the average results of these experiments :

	Number of Cubic Feet of air-dried Turf to a Ton.	Price of cutting and thrashing per Ton.
		s. d.
Lightest upper moss peat weighed	369·60	7 8·4
Average light moss peat -	254·20	5 4·5
Average brown peat -	147·00	3 7·5
Compact black peat -	131·28	2 9·
Densest peat weighed :	99·36	2 0·84

In measuring the peat a basket locally termed a "kish," of 24 cubic feet was used, the labourers being paid at the rate of so much per kish of stacked air-dried turf. Great care was taken in filling the kish so as to make it contain the same number of bricks or "sods" as would be in 24 cubic feet of a well built turf stack.

As the greatest part of the peat of the flats, and indeed of all the large bogs in Ireland available for fuel, would come under the category of "brown" peat, it may be well to give the results of two weighings, one of average upper brown turf, and the other of lower or compact brown turf. The following table contains the results :—

Quality of Turf.	Quantity of Turf weighed.	Number of Cubic Feet which it measured.	Average Number of Cubic Feet to a Ton.	Actual average Price per Ton for cutting and stacking.
	Tons.			s. d.
Average upper brown turf.	426	80,310	188	3 11
Moderately compact lower brown turf.	338	52,644	155·5	3 2·8

The average cost of about 4,000 tons of peat of all qualities cut, dried, stacked, and delivered on the margin of the bog, exclusive of the rent of the bog and some large drainage operations, was about 5s.

The peat or turf generally used throughout Ireland has not in practice more than one-third the heating power of good Workington or second quality Welsh coal. Some of the better qualities of peat would have a higher heating power, about 2½ tons to one ton of the same class of coal, but as usually consumed the actual heating power of almost any peat cannot be estimated at more than one-third ordinary coal. Taking the average brown peat of 147 cubic feet of stacked turf to the ton as the standard, the quantity of turf equivalent to one ton of coal would cost according to my estimate, given alone, 10s. 10·5d. But if we take the average price of all the turf cut upon the bog, the equivalent of one ton of coal delivered on the margin of the bog would be 15s. The experiments were made when wages were comparatively low, and under circumstances which enabled the workmen to work continuously, and in either case the cost of drainage and rent of bog were not included. It is right, however, to remark that as a bog is drained the cost of cutting diminishes and the quality improves; so also does the cost diminish and the quality improve as the upper layers of the bog are cut away.

There can be no doubt, then, that on the margin of a good deep bog the quantity of turf equivalent in heating power to one ton of coal could be obtained at a cost very much less than that at which it is likely we could ever hope to import coal. I think I may assume that under proper management, the turf equivalent of one ton of steam coal could be obtained for 10s. or even less, perhaps as low as 8s. So that if certain branches of manufacture were carried on near the margins of our deep bogs they could obtain their fuel on as economical conditions as in most parts of Great Britain. But those economical conditions cease when the turf has to be transported to a distance. As piled or stacked ordinary turf has very little more than one-third the density of coal, while it has only about one-third its heating power, it follows that the turf equivalent of one ton of good steam coal occupies nearly nine times the volume of the latter, and would consequently cost at least three times as much in carriage, even supposing that properly constructed carts capable of carrying the turf equivalent of a load of coal were employed. In practice the cost of carriage is much more.

The variation in the quality of turf which I have pointed out above has hitherto prevented farmers from determining the real cost of their fuel. If there be a peat bog on a farm and that the farmer uses the labour of himself and of his children, when not otherwise engaged in summer, in cutting turf, he will consider that his peat costs him nothing. The farmer who has not peat bog on his farm and buys his supply, carts it home himself, and as very few keep accurate accounts, he does not add the cost of his own or his horse's labour to the cost of the turf at the bog. It thus happens that many farmers continue to burn turf under the impression that it is cheaper than coal. But as the supply derived from the isolated bogs diminishes (and it is now rapidly doing so) and wages rise, farmers will soon find that unless on the margin of bogs or in very remote districts turf is dearer than coal, and the latter will be gradually substituted for the former. This substitution would be very rapid if the agriculture of the country generally improved, and this would do so, if the land laws and social relations between landlords and tenants were improved.

If any cheap effective process could be devised for compressing peat it might no doubt continue to be largely used, and form the basis of considerable inland traffic. The structure of peat, however, offers almost insurmountable difficulties in the way of its economical compression. And no matter how compressed it may be its heating power is not much increased, so that the volume of the equivalent of one ton of coal of compressed turf would still be three or four times greater than that of coal. I have not yet seen any compressed peat produced at a cost which would enable it to compete with peat cut by the ordinary method. The problem to be solved in the compression of peat is not the production of a fancy article, but of one which can compete economically with coal, and in this sense it has not in my opinion been yet solved.

I think the legitimate conclusions deducible from the preceding facts, are—1. That the cost of turf delivered on the margin of bogs is less than that of the equivalent of coal, even under the most favourable circumstances. 2. That the cost of carriage of peat is so much higher than that of coal that the difference in favour of the former on the margin of the bogs is more than counterbalanced at even short distances from them, and that consequently, unless the country becomes waste, coal must generally supersede turf in the greater part of the country where the latter is still exclusively used, according as the population diminishes and wages rise.

I have next to consider what portions of the country use peat more or less exclusively, and the relative population, or rather the relative number of houses in the coal and peat consuming districts.

It is not easy to determine accurately the relative extent of the districts using coal and peat, because some peat is used in many coal importing localities, while a good deal of coal finds its way into the interior. Coal is chiefly used in the greater part of Londonderry, part of Tyrone, part of Antrim, Belfast, in most parts of Down, Armagh, Louth, Meath in part, Dublin (county and city), part of Wicklow, part of Wexford, City of Waterford, part of the county Waterford, City of Cork, part of the East Riding of the County of Cork, and here and there in the West Riding of the same county, the City of Limerick in part, and some districts of the county of Limerick. A part of the coal imported into the eastern ports finds its way along the canals, navigable rivers, and railways into the inland counties. From 60,000 to 80,000 tons of Irish coal are also used in the counties of Kilkenny, Queen's, Tipperary, Cork

Leitrim, Tyrone, &c. Turf is chiefly employed in the counties of Donegal, part of Tyrone, Fermanagh, Cavan, Longford, West Meath, Kildare, King's, Queen's, Leitrim, Roscommon, Sligo, Mayo, Galway, Clare, Kerry; part of Limerick, Tipperary, Carlow, Kilkenny in part, West Riding of Cork, and some districts of the East Riding; great part of Waterford, part of Wicklow, part of Antrim, part of East Meath, and part of Wexford. It is scarcely necessary to remark that in the neighbourhood of all considerable ports, and along the lines of canals and railways, as I have above observed, a little coal is always used in most of the turf-burning districts. If we take the number of inhabited houses in Ireland at 1,000,000 (according to the census of 1861 the number in that year was 998,835), about 450,000 burn coal, and 550,000 burn peat. These numbers are of course only approximative; I think, however, that the number of coal-consuming houses would be found by absolute enumeration to be a maximum.

Having now considered as fully as I was able the three points, upon the study of which I rested the determination of whether coal traffic could be looked upon as a source of future goods traffic upon Irish railways, it only remains for me to show the probable increase in the importation of coal which would follow a more or less complete substitution of coal for peat, and what probability there is that this increased quantity would be carried into the interior, and to the West of Ireland by the railways.

The poorest cottier would require 15 cwt. of coal per annum; a single fire used for cooking for a small family and warming sufficiently an apartment would consume at least 23 cwt. of average coal. Considering that in large towns several families live in the same house, and that people of moderate income keep at least two fires, we may fairly assume that the minimum average consumption of coal for each house, exclusive of lime burning, malting, gas making, railways, steam boilers, &c., would be 1 ton 10 cwt. per annum. So that if coal were to completely supersede turf for domestic purposes, 825,000 tons of coal would have to be imported in addition to our present import. This, as I have said above, would be the minimum, and as the substitution of coal for peat would naturally first take place in the better classes of houses, where the consumption would be far more than the average, I have no doubt that the importation of coal will in the next ten years, if the country does not become waste, increase by at least 1,000,000 tons in consequence of the substitution of coal for peat, and the introduction of gas lighting into many towns. This is independent of any increase due to the development of manufacturing industry, and is based upon the supposition that the rates of carriage be reduced to the extent I have assumed in my calculation. If the country were really to become prosperous, and that the linen and other manufactures spread to the midland and southern counties the total import would soon reach 5,000,000 tons. But as the factories would in the first instance be chiefly established in the neighbourhood of ports, the increase due to manufacturing industry would not be directly beneficial to the railways.

From the table (p. 2) of the imports of coal into Ireland, it appears, as I have before remarked, that while the quantity imported into the eastern ports has more than doubled, that brought in by the western ports has only very slightly increased. It is also evident from that table that there is a tendency in the coal trade to concentrate in a few ports, or in other words, that the quantities imported through certain ports increase in a greater ratio than through others. Thus in 1835 the three ports of Cork, Dublin, and Belfast imported 605,864 tons, or 60·5 per cent. of the whole importation. In 1864 the same ports imported 1,502,021 tons, or 71 per cent. of the whole importation. In 1835 the following eight principal eastern ports, Cork, Waterford, Dublin, Drogheda, Dundalk, Newry, Belfast, and Londonderry imported 773,450 tons, and in 1864 1,917,124 tons, or 77·2 and 90·7 per cent. of the whole importation in each year respectively.

This concentration would become still more marked if the railways in Dublin, Cork, Belfast, and other principal ports had central railway stations connected with coal wharves. Even as it is we can see that the gradually spreading use of coal is proceeding westwards from the eastern ports, and that the limited quantities brought in through the western ports may be looked upon as the return cargoes of vessels carrying corn and other produce from the west of Ireland. The following table shows in a striking way the difference between the coal trade of the great eastern ports and the western ones.

TOTAL NUMBER OF COLLIERIES ENTERING THE IRISH PORTS during 1864; NUMBER CLEARING WITH CARGOES; and NUMBER CLEARING IN BALLAST.

EASTERN PORTS.

Names of Ports.	Number clearing with Cargoes.	Number clearing in Ballast.	Total Number of Colliers.
Belfast - - -	784	3,815	4,599
Coleraine and Portrush -	28	133	161
Cork - - -	462	990	1,452
Drogheda - - -	43	327	370
Dublin - - -	789	3,159	3,948
Dundalk - - -	37	580	617
Londonderry - - -	155	393	548
Newry - - -	261	660	621
Ross - - -	121	96	217
Strangford - - -	66	383	449
Waterford - - -	686	152	838
Wexford - - -	348	154	502
	3,780	10,842	14,622

WESTERN PORTS.

Ballina - - -	14	1	15
Galway - - -	41	7	48
Limerick - - -	157	23	180
Skibbereen - - -	31	42	73
Sligo - - -	36	41	77
Tralee - - -	18	30	48
Westport - - -	*24	-	24
	321	144	465

From this table it appears that while only 25·3 per cent. of the vessels clear with cargoes from the eastern ports, 69·0 per cent. clear from the western ports. It is true the total number of vessels entering the western ports is small in comparison with the number entering the eastern ones, and that as the coal trade increases, the number of vessels clearing in ballast must necessarily increase. Nevertheless it is evident that the freights for coal to the western ports must be greatly influenced by the chance of returned cargoes, and that any great increase of coal trade through those ports would send up the freights, as there would not be a corresponding increase of export trade. If reduced rates, central stations, and coal wharves facilitate the carriage of coal to the west of Ireland, there can be no doubt that a large part, at least 40,000 tons, of the produce exported through the western ports would find its way by railway to the eastern ports.

I shall take the carriage of coal along the Great Southern and Western Railway with branches as the basis upon which to calculate the receipts of an increased coal trade of 1,000,000 tons, because that system of lines passes through an agricultural district having little or no manufactures, and therefore representing the part of Ireland in which the substitution of coal for peat is expected to take place better than a northern line. The carriage of coal as goods commenced in 1848 with 70 tons, and reached 49,392 tons in 1864, producing a revenue of 9,318*l.*, or an average of 3*s.* 9·2*d.* per ton. At 1*d.* per ton per mile this would give the average distance to which the coal was carried to be 45 miles, but as the table at p. 3 shows that the rate per ton per mile for distances under 50 miles is sensibly more than 1*d.*, the mean distance carried was perhaps not much over 40 miles. If we assume the rates for coal to be reduced to an uniform rate of ½*d.* per ton per mile, carried on an average 50 miles, which would be much below the truth if the whole of the coal to be consumed in the midland and western parts of Ireland were to be imported through the eastern ports, 1,000,000 tons of coal would produce an annual revenue of 104,166*l.* This, however, would not be the whole profit, as ores and other goods, not now carried at all, might be brought back in the returning coal waggons.

If a great coal trade is to be developed in Ireland, depôts must be formed along the lines so as to enable the trains to carry full loads and to import the coal at the most favourable times; but I shall not discuss this branch of the subject here.

* The Parliamentary return only gives the total number of colliers but I have learned that all are cleared with cargoes.
